Jamaica Weather Report, 1965-1966

BEING A SUMMARY OF OBSERVATIONS COMPILED FROM RETURNS OF OFFICIAL STATIONS AND VOLUNTARY OBSERVERS

CONTENTS

1. Map of Jamaica
2. List of Rainfall Stations in Jamaica 1965–1966
3. Summary of Observations for the Year 1965
4. Summary of Parish Rainfall for the Year 1965
5. Histogram of Mean Island Rainfall—1965
6. Summary of Observations for the Year 1966
7. Summary of Parish Rainfall for the Year 1966
8. Histogram of Mean Island Rainfall—1966

INTRODUCTION

The West Indies Meteorological Service, which was a department of the now defunct Federal Government of the West Indies, was dissolved at the end of 1962. In its place a Caribbean Meteorological Service was established with a Jamaica Division, which is a part of the Jamaica Government's Ministry of Communications and Works, maintaining meteorological services for Jamaica and being responsible for publishing the Jamaica Weather Report.

The list of stations provides the most recent available information on the locations and elevations of stations. It would be appreciated if any errors can be notified to the Director, Meteorological Office, Palisadoes, under whose supervision the Report is prepared and published. Also included are the names of Authorities and private persons responsible for the operation and maintenance of stations. The extent and diversity of this list gives an indication of the considerable efforts made by a number of individuals in providing the basic data from which the final tabulations are derived. The Meteorological Division is also indebted to all the various observers, both official and voluntary who regularly make weather observations and submit the data to the Meteorological Office.

EXPLANATORY NOTES

1. Local time, that is Eastern Standard Time, which is five hours behind Greenwich Mean Time, is used throughout this Report. The usual arrangement at climatological stations is for observations to be taken twice daily at 07h (7 a.m.) and 16h (4 p.m.) while at the synoptic stations at Morant Point Lighthouse, Negril Point Lighthouse, Palisadoes Airport and Montego Bay Airport (the last named station was established during March, 1962), observations are taken at 7 a.m., 1 p.m. and 7 p.m. and at other times but the summaries of some of the observations are not published in this Report.

2. Rainfall is measured in inches at 7 a.m. and the total for the previous 24 hours is regarded as having fallen on the previous day. A "day of rain" is a day on which at least 0.01 inch is recorded. The mean monthly rainfall for each Parish included in the summary of Parish Rainfall is obtained by taking the total reported from all stations within the Parish and dividing by the number of stations from which data have been used in this connexion. The published Island rainfall is the mean of all the corresponding Parish rainfall averages.

3. Atmospheric pressure readings are converted to equivalent readings at mean sea level under conditions of standard temperatures and gravity and expressed in millibars, 1,000 millibars being equal to a pressure of 29.53 inches of mercury.

4. Cloud amounts are expressed in 'oktas', an 'okta' being one-eighth of the sky.

5. So far as is possible all instruments are sited in a manner aimed at giving fully representative readings, for example, all published temperature data are obtained from thermometers housed in louvered screens.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

JANUARY, 1965

Summary

Fair periods interrupted by occasional rain showers, dominated the weather during the month. Strong, gusty winds were experienced in various localities.

Moist unstable air masses associated with weak troughs of low pressure accounted for showery weather, while fair periods were mainly occasioned by the influence of the semi-permanent Bermuda high pressure system which extended to well within the Carribbean area.

A cold front situated off the east coast of Jamaica brought overcast and showery conditions over the island during the third week of the month.

Temperature

Temperatures were about 1 °F to 3 °F below the normal in low southern coastal and hilly regions. However, warmer conditions existed along the eastern and northern districts where temperatures were about 1 °F above normal.

Rainfall

Mean island rainfall was 88% of the normal for the month. The northern parishes of Trelawny and St. Ann and the southern ones of Manchester and St. Elizabeth experienced above-normal rainfall. Of the remaining parishes, all except Portland with normal conditions had deficient rainfall. Swift River in Portland reported 5.43 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

FEBRUARY, 1965

Summary

Generally fair weather with strong, gusty winds prevailed throughout the month. However, local showers were reported from various localities through the island.

Rides of high pressure from the Atlantic dominated the weather during the month.

Temperature

In some eastern coastal regions temperatures were 1°F to 2°F above normal, but fell similarly in the eastern hilly regions. Otherwise, temperatures were normal.

Rainfall

Mean island rainfall was 49% of the normal for the month. Except for the parish of Trelawny with above-normal conditions, rainfall was deficient throught the island. Buff Bay in Portland reported 3.80 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

MARCH, 1965

Summary

The weather was mainly fair and sunny during the month but with scattered local showers and brief cloudy periods in some districts. Strong, gusty winds were experienced especially along coastal areas on some days during the month.

A cold front was associated with showers on the 5th and 6th of the month. Otherwise, there were no significant features.

Temprature

Temperatures were between 1 degree and 3 degrees Fahrenheit above normal in eastern coastal and in hilly regions. Normal tempreature conditions provailed elsewhere.

Rainfall

Mean island rainfall was 55% of the normal for the month. The pattern of rainfall was similar to that for the previous month in that deficient rainfall was experienced in all parishes except Trelawny where rainfall was well above the normal for the month. Liandovery Estate in St. Ann reported 3.40 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

APRIL, 1965

Summary

Apart from isolated, scattered showers, fair weather persisted throughout the month.

A weak trough of low pressure in the western Caribbean area was associated with scattered showers on the 26th and 27th, especially in the western districts of the island. There were no other significant features.

Temperatures

Temperatures were normal in low coastal regions, but varied 1 degree to 3 degrees Fahrenheit above and below normal in different hilly regions.

Rainfall

Mean island rainfall was 50% of the normal for the month. The parish of Manchester alone reported above normal rainfall. All other parishes experienced, in general, well below normal rainfall. Balcarres in Portland reported 5.00 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

MAY, 1965

Summary

The month started with numerous showery activity over the entire island. Throughout the month there were generally cloudy conditions with showers and thunderstorms.

Surface and upper atmosphere troughs of low pressure in moist unstable air masses over the Caribbean area accounted mainly for the showery type of weather throughout the island during the month. There were, however, a few showers due to local convection.

Temperature

Highest deviations, of the order of 1 degree to 3 degrees Fahrenheit above normal, occurred along low coastal regions throughout the island. In hilly regions temperatures fell 1 degree to 2 degrees Fahrenheit below normal. Elsewhere temperature conditions were normal.

Rainfall

Mean island rainfall was 162% of the normal for the month. Rainfall was well distributed throughout all parishes. Apart from the parishes of Hanover and St. James where conditions were about normal, rainfall was well above normal. especially in the parishes of St. Ann, St. Mary and Portland. Fruitful Vale in Portland reported 13.53 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

JUNE, 1965

Summary

The weather was mainly fair, apart from local showers and thunderstorms mainly on mountain ridges during the afternoon. Moderate to strong easterly winds were experienced on several days throughout the month.

A trough of low pressure situated west of Jamaica was assicoated with showery activity in the western districts of the island.

An unnamed tropical storm developed over the north-western Gulf of Mexico from a trough in the westerlies, but this storm did not affect the weather in Jamaica.

Temperature

Districts in the north-western sector of the island experienced above normal temperatures, of the order of 1 degree to 2 degrees Fahrenheit. In low mountain regions in the east-central districts, temperatures fell as much as 2 degrees Fahrenheit below the normal. Normal values occurred elsewhere.

Rainfall

Mean island rainfall was 66% of the normal for the month. Rainfall, though well distributed was below the normal in all parishes except Westmoreland where conditions were normal. Darley in Portland reported 7.07 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

JULY, 1965

Summary

Bright, sunny periods prevailed on several days. However, showers and thunderstorms occurred in various localities throughout the month. Also, strong easterly winds were reported on a few days.

Easterly wave features apart from local convection were associated with some showers and thunderstorms. The Bermuda high pressure system contributed to fair weather generally.

Temperature

Temperatures were generally normal throughout the month. However, in exposed coastal areas located in extreme eastern and south eastern regions, temperatures rose 1 degree to 2 degrees Fahrenheit above the normal, but fell similarly in some low mountain regions.

Rainfall

Mean island rainfall was 60% of the normal for the month. The normal relative drop in the Island's rainfall for the month was reflected in the Parish rainfall which was deficient generally. Only the more western parishes of St. Elizabeth and Westmoreland experienced above normal rainfall. Hardwar Gap in St. Andrew reported 5.45 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

AUGUST, 1965

Summary

Variable weather occurred throughout the month. There were periods of fair weather broken by isolated showers and a few thunderstorms on several days.

Significant features were the widespread showers and thunderstorms which affected the east and south-east areas of the island in association with a moist unstable air mass throughout the entire Caribbean area.

A weak easterly wave was located between Haiti and Puerto Rico between the 8th and 11th of the month, but this did not directly affect the weather in Jamaica.

Two hurricanes, Anna and Betsy formed in the Atlantic during the month, but none of these affected the weather in Jamaica.

Temperature

Temperatures were generally normal throughout the island. North-western districts, however, experienced above normal temperatures, of the order of 1 degree to 2 degrees Fahrenheit.

Rainfall

Mean island rainfall was 89% of the normal for the month. Deficient rainfall was experienced in all except the three western or north-western parishes of St. Elizabeth, Westmoreland and Hanover. Coley Farm, Seaforth, in St. Thomas reported 7.40 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

SEPTEMBER, 1965

Summary

Fair periods with local showers and thunderstorms characterised the weather throughout the island during the month. Towards the end of the month, however, there were numerous showers and occasional periods of rain along parts of the north coast of the island.

Significant feature was a poorly organised depression in the Western Caribbean area during the last week of the month.

One hurricane, Carol and one tropical storm Debbie formed during the month. Carol had its beginning in a weak low pressure area off the African coast on September 15th. Tropical storm Debbie was associated with a weak tropical depression which was observed off the coast of Honduras near Swan Island.

Temperature

Normal temperature conditions prevailed generally, but in both the eastern and western extremities of the island temperatures rose 1 degree Fahrenheit to just over 2 degrees Fahrenheit above the normal.

Rainfall

Mean island rainfall was 84% of the normal for the month. Rainfall though somewhat deficient was well distributed throughout the parishes. However, only the parishes of Portland, usually the wettest, and St. Elizabeth among the driest, experienced above-normal rainfall. Little Windsor in St. Catherine reported 9.52 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

OCTOBER, 1965

Summary

Local showers and thunderstorms occurred on several days throughout the month.

Active easterly wave features in the vicinity of the island and a cold front which extended from the Atlantic across eastern Cuba to south of Jamaica were significant in producing some cloudy conditions with much showery activity in various parts of the island.

Hurricane Eleana formed in the Atlantic where it developed from a very weak initial circulation.

There was no known loss of life or damage attributed to this hurricane on its track.

Temperature

Temperatures were either normal, or above normal of the order of 2 degrees at 4 degrees Fahrenheit, especially in lowlands and exposed coastal regions.

Rainfall

Mean island rainfall was only 75% of the normal for the month. All except the parishes of Hanover and St. James experienced deficient rainfall. Though usually the second wettest month the mean rainfall was very close to that for November. The usually heavy falls for October seemed to have been distributed between these two months. Wait-a-bit in Trelawny reported 6.00 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

NOVEMBER, 1965

Summary

The weather was characterised by brief showery activity and periods of extensive cloudiness with moderate to heavy rains in various parts of the island. There were, however, periods of fair weather.

Two cold fronts, one on the 9th and the other on the 20th, were significant features of the weather during the month.

Temperature

Temperatures were generally normal, but fell as much as 2 degrees below normal in some hilly districts.

Rainfall

Mean island rainfall was 108% of the normal for the month. Excess and deficit rainfall amounts were about evenly distributed throughout the parishes. North-eastern and central-southern parishes generally experienced above normal rainfall. Cedar Valley in Portland reported 12.28 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

DECEMBER, 1965

Summary

Fair weather prevailed on several days throughout the month. However, showers, sometimes widespread occurred in association with nearby frontal activity during the first and third weeks of the month. Strong northerly winds were experienced in various localities.

Temperature

Temperatures were about 1 degree Fahrenheit above normal in eastern and south-eastern coastal districts, but generally normal elsewhere throughout the island.

Rainfall

Mean island rainfall was 122% of the normal. Above-normal rainfall was experienced in all northern and north-eastern parishes and in Kingston, St. Andrew and St. Catherine. All other southern parishes received deficient rainfall. However, rainfall was well distributed throughout the island during the month.
