# Monthly Weather Report

# JANUARY

Published by authority of the Government of India

**Chief features** :

(i) Intensification and movement of last month's cyclonic storm in the Bay of Bengal;

(ii) Spells of good rainfall in northeast and central India and in north Peninsula;

(iii) Unusual hailstorms in north Interior Mysore towards the end of the month causing loss of lives and damage to crops; and

(iv) Deficit precipitation over northwest India due to feeble activity of four western disturbances.

The cyclonic storm which was lying over the south Bay of Bengal on the last day of December 1965 recurved northwards and further intensified into a severe cyclonic storm by the evening of 2nd January with centre about 150 kms east of Nellore. Moving northnorth-eastwards it crossed the north Andhra coast near Vishakhapatnam on the morning of 3rd. Thereafter it rapidly weakened into a low pressure area by the morning of 4th and moved away northeastwards across Assam by 5th. Under its influence, heavy rains and gales occurred in north coastal Andhra Pradesh. Northeast India, east Madhya Pradesh and east Uttar Pradesh also received widespread rainfall with a few heavy falls in coastal Orissa. Some of the noteworthy amounts of rainfall recorded were: Vishakhapatnam 8 cm and Kalingapatnam 7 cm on 3rd and Puri and Gopalpur 7 cm each on 4th. Vishakhapatnam recorded a maximum wind speed of 128 km p.h. when the storm was crossing the coast on the morning of 3rd.

An upper air trough developed in the Arabian Sea off north Maharqshtra and south Gujarat coasts on 8th. Moving slowly eastwards it became well marked by 10th but later weakened over the central parts of the country and adjoining north Peninsula by 14th. Under its influence a spell of unusual rains occurred in Gujarat State, south Rajasthan, the central parts of the country and north Peninsula during the second week. Sironcha recorded 7 cm of rain on 12th and Khammam 8 cm and Bhadrachalam 5 cm on 13th. There were a few spells of rainfall in the south Peninsula during the second fortnight. North Peninsula also received another spell of good thundershowers towards the end of the month in association with an upper air trough. This trough developed over the north Peninsula on 27th and shifted westwards to the east central Arabian Sea off Maharashtra coast where it persisted till the end of the month. Sholapur recorded 5 cm of rain and Gadag 3 cm on 31st. According to press reports, 11 persons lost their lives, a few heads of cattle were lost and standing rabi crops were damaged due to hailstorms in Dharwar district on 30th.The following extracts from the report of the Deputy Commissioner, Dharwar is of interest in this connection :-

"on 30.1.1966, at about 3.30 p.m. there was a heavy storm which was followed by rain and hailstones which fell on a tract covering about 8 villages in Mundargi Taluka (Tahsil) and two villages in Gadag Taluka (Tahsil) in this district. The area affected is a strip, a few furlongs wide and 4 to 5 miles in length. The hailstones fell for about 25 minutes and were reported to be of the size of lime fruit. Local reports also indicate that the hailstones fell so fast that several fields were covered to the height of 3 to 4'. The rain stopped at about 5.30 p.m. and was followed by clear sunshine. 11 people lost their lives. The cause of death was injury from the falling of hailstones and freezing in the case of those who sat in the fields in the hope of avoiding direct hits. No damages to dwelling houses have been reported and no case of loss of life due to falling of structures. There has been considerable loss of animal life, to the extent of about 400 heads of cattle, sheep, fowl, etc. Many of these were reported to have been buried in heaps of hailstones. The crops have been completely damaged over an area of about 6,000 acres".

Four western disturbances affected northwest India during the month; but most of them were feeble and hence the precipitation over these parts were highly deficient. The first disturbance lying over West Pakistan on 2nd moved away eastwards across the Western Himalayas by 4th causing a few light showers in west Uttar Pradesh. Another feeble western disturbance which was lying over Afghanistan and adjoining West Pakistan on 15th moved away eastnortheastwards across the extreme northern parts of the country by 17th causing

a few light showers of rain or snow in Jammu and Kashmir. The third disturbance was also feeble and moving eastwards across the extreme north of the country caused isolated very light showers in Jammu and Kashmir on 22nd. In association with the last western disturbance which followed immediately, a low pressure area formed over south Rajasthan and adjoining Gujarat State on 24th. Moving eastwards, it weakened and became unimportant over northeast India by 28th. Under its influence, thundershowers occurred at most places in north and central India in the course of the last week.

Night temperatures were below normal in the central parts of the country, Gujarat State and northwestern parts of the Peninsula on most of the days during the first week, being appreciably to markedly so in northwest Peninsula. They were also below normal during the third week over Uttar Pradesh and northeast India and from 12th to 23rd over northwest India. Night temperatures were generally above normal over Gujarat State and over most parts of the Peninsula after the first week and over the central parts of the country from 10th to 19th.

The total rainfall for the month was in large excess in West Bengal, Orissa and Bihar Plateau, Madhya Maharashtra, Vidarbha, Andhra Pradesh and North Interior Mysore, in moderate excess in South Assam, Bihar Plains, Marathwada and Coastal Mysore and in slight excess in the Bay Islands. It was normal in East Madhya Pradesh, in slight defect in North Assam, in moderate defect in East Uttar Pradesh, Saurashtra and Kutch and Madras State and in large defect over the rest of the country outside Himachal Pradesh and Konkan where there was no rain.

Mean maximum temperature was above normal in Uttar Pradesh, Punjab, Himachal Pradesh, Jammu and Kashmir, Rajasthan and Gujarat State and below normal in Orissa, Bihar Plateau and Marathwada and normal over the rest of the country.

Mean minimum temperature was above normal in Gujarat Region, Telangana, Rayalaseema, and south Interior Mysore and below normal in West Uttar Pradesh and Himachal Pradesh. It was normal over the rest of the country.

Mean Relative Humidity in the morning was above normal in Orissa and North Interior Mysore and below normal in Punjab, Himachal Pradesh, Rajasthan, West Madhya Pradesh and Gujarat Region. It was normal over the rest of the country. Mean Relative Humidity in the evening was above normal in South Assam, Gangetic West Bengal, Orissa, Bihar Plains, Telangana, Rayalaseema, Madras and Interior Mysore and below normal in West Uttar Pradesh, Punjab, Himachal Pradesh, Jammu and Kashmir, Rajasthan, West Madhya Pradesh and Gujarat. It was normal over the rest of the country.

Mean cloud amount in the morning was above normal in South Assam, Sub-Himalayan West Bengal, Orissa, East Madhya Pradesh, Maharashtra State, Andhra Pradesh, Madras and Mysore States and below normal in North Assam, Uttar Pradesh, Punjab, Himachal Pradesh, Jammu and Kashmir and Rajasthan. It was normal over the rest of the country. Mean cloud amount in the evening was above normal in South Assam, Gangetic West Bengal, Orissa, Madhya Pradesh (East), Konkan, Madhya Maharashtra, Marathwada, Vidarbha, Coastal Andhra Pradesh, Telangana, Rayalaseema, Interior Mysore and Kerala and below normal in North Assam, West Uttar Pradesh, Punjab, Himachal Pradesh and Rajasthan. It was normal over the rest of the country.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 31 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. IST of the date noted in the succeeding column; similarly the heaviest rainfall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hrs. IST of the date given in the succeeding column.

## MONTHLY MEANS OF UPPER WINDS

During the month, observations of velocity and direction of upper winds were made at 54 stations in India. Out of these, at 40 stations all the observations were taken by means of pilot balloons and at 14 stations some observations were made by means of pilot balloons while the other observations by the radiowind method. In the case of Bangalore, the observations were taken by following radiosonde balloon by means of an optical theodolite. Particulars of these stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the table overleaf. All radiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data upto 9.0 km. above mean sea level are given under Table IV and data above 9.0 km. above mean sea level under Table V.

In Tables IV and V :

N = represents the number of observations;

S = represents the mean wind speed in metres per second irrespective of direction;

V = represents the resultant mean velocity in metres per second;

D = represents the direction of the resultant mean wind in degrees East of North.

Means and resultant winds are given in this publication for the following heights :-

Surface, 0.15 km. a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0 and 36.0 km. above mean sea level. Of these the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0 and 30.0 km. above mean sea level are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150, 100, 70, 50, 30, 20 and 10 mb. respectively.

# INDIA WEATHER REVIEW, 1966

## Monthly Weather Report

## FEBRUARY

Published by authority of the Government of India

Chief features :-

i) Movement of four western disturbances across north India causing spells of good precipitation.

and ii) Deficit rains in the Peninsula.

Mainly dry weather prevailed over the country during first five days of the month. A western disturbance which was lying over Afghanistan on 5th moved slowly eastwards and passed across Jammu and Kashmir by 10th. Under its influence there was good precipitation over the Western Himalayas in the early part of the second week. Banihal recorded 7 cm. of rain and Quazigund 5 cm. on 9th. This was followed by another western disturbance in its immediate wake. This disturbance lay over Baluchistan and adjoining Afghanistan on 10th. Moving eastwards, it persisted over Jammu and Kashmir and the Punjab till 14th and finally moved away eastwards across the Western Himalayas by 16th. An induced low formed over south Rajasthan on 12th. It also moved eastwards across north India, passing through Assam by 17th. In association with these developments, a prolonged spell of good precipitation was experienced over most parts of north India during the second week. Some of the noteworthy amounts of rainfall recorded were : Jammu 8 cm, Dalhousie 6 cm. and Banihal and Quazigund 5 cm. each on 12th, Dalhousie 7 cm. and Srinagar, Jammu, Najibabad and Joshimath 5 cm. each on 13th and Garbyang 6 cm. and Dalhousie 5 cm. on 14th.

Two more western disturbances affected north India during the last week. The former disturbance lying over Baluchistan on 20th moved into the Punjab on 21st and was fairly active. It moved away eastwards across the Western Himalayas by 22nd causing good precipitation there. Banihal recorded 5 cm of rain on 22nd. The last western disturbance of the month was lying over Baluchistan and adjoining parts of Afghanistan on 24th. Moving eastwards it lay as a trough of low pressure over Bihar State and Orissa on 28th. Under its influence, there was good precipitation over the Western Himalayas. Parts of northeast India also received thundershowers towards the end of the month.

The weather over the Peninsula remained mainly dry throughout the month except for a short spell of thundershowers in Kerala during 14-15th. Punalur recorded 7 cm. of rain on 15th.

Night temperatures were above normal over Gujarat State during the entire month, over northwest India during the first three weeks, over Uttar Pradesh during the second and fourth weeks and over northeast India, central Parts of the country and the Peninsula during the second week, being markedly so over northwest India from 4th to 12th and over Uttar Pradesh from 10th to 14th. They were below normal over the central parts of the country and the north Peninsula during the first week.

The rainfall for the month was in large excess in Punjab, Himachal Pradesh, Jammu and Kashmir and in Rajasthan; normal in west Uttar Pradesh and Kerala; in moderate defect in north Assam, Bihar Plains, east Uttar Pradesh and in large defect in the Bay Islands, south Assam, West Bengal, Orissa, Bihar Plateau, Madhya Pradesh, Konkan, Rayalaseema, Madras State, Interior Mysore and Arabian Sea Islands. There was no rain over the rest of the country.

The mean maximum temperature was normal in Marathwada, Andhra Pradesh, Madras and Mysore States, Kerala and the Arabian Sea Islands and above normal over the rest of the country.

The mean minimum temperature was above normal in the Bay Islands, Sub-Himalayan West Bengal, Uttar Pradesh, Punjab, Himachal Pradesh, Jammu and Kashmir, Rajasthan, Madhya Pradesh, Gujarat State and Kerala and normal over the rest of the country.

The mean relative humidity in the morning was above normal in Rayalaseema, below normal in Himachal Pradesh, Madhya Pradesh, Gujarat Region, Marathwada and Vidarbha and normal over the rest of the country. The mean relative humidity in the evening was above normal in Gangetic West Bengal Bihar Plains, Uttar Pradesh West, Punjab (including Delhi), Jammu and Kashmir and West Rajasthan, below normal in Bihar Plateau, Madhya Pradesh, Marathwada, Vidarbha, Telangana, Rayalaseema and South Interior Mysore and normal over the rest of the country.

The mean cloud amount in the morning was above normal in west Uttar Pradesh, Punjab and Rajasthan; below normal in south Assam, Gangetic West Bengal, Bihar Plateau, Himachal Pradesh, Madhya Pradesh, Gujarat Region, Maharashtra State, Telangana, Rayalaseema, Coastal and north Interior Mysore and normal over the rest of the country. The mean cloud amount in the evening was above normal in West Uttar

Pradesh, Punjab (including Delhi), Himachal Pradesh and Rajasthan, normal over Bay Islands, North Assam, Sub-Himalayan West Bengal, Bihar Plains, East Uttar Pradesh, Jammu and Kashmir, Saurashtra Cutch, South Interior Mysore, Kerala and the Arabian Sea Islands and below normal over the rest of the country.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 32 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. I.S.T. of the date noted in the succeeding column; similarly the heaviest rainfall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hrs. I.S.T. of the date given in the succeeding column.

## MONTHLY MEANS OF UPPER WINDS

During the month, observations of velocity and direction of upper winds were made at 54 stations in India. Out of these, at 40 stations all the observations were taken by means of pilot balloons and at 14 stations some observations were made by means of pilot balloons while the other observations by the radiowind method. In the case of Bangalore, the observations were taken by following radiosonde balloon by means of an optical theodolite. Particulars of these stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the table overleaf. All radiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data upto 9.0 km. a.m.s.l. are given under Table IV and data above 9.0 km. a.m.s.l. under Table V.

In Tables IV and V :-

n = represents the number of observations;

V = represents the mean wind speed in metres per second irrespective of direction;

v = represents the resultant mean velocity in metres per second;

D = represents the direction of the resultant mean wind in degrees East of North.

Means and resultant winds are given in this publication for the following heights :-

Surface, 0.15 km. a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0, and 36.0 km. above mean sea level. Of these the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0 and 30 km. above mean sea level are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150, 100, 70, 50, 30, 20 and 10 mb. respectively.

## RADIOSONDE DATA

During the month, observations of upper air temperature, pressure and humidity were made at 14 stations in India as given in the list below. For detailed description of the instruments used, a reference may be made to the I. M. D. Scientific Notes Nos. 112 and 113 ( Volume IX )

### List of Radiosonde Stations in India

| S.No. | Name of Station | Type of instrument used | Date of starting | Hours of routine observations in GMT during the month | Remarks |
|---|---|---|---|---|---|
| 1. | Ahmadabad | Fan type | 20th July 1961 | 00 and 12 | |
| 2. | Allahabad/Bamhrauli | Clock type | 1st October 1964 | 00 and 12 | |
| 3. | Bangalore | Fan type | 10th March 1961 | 00 and 12 | |
| 4. | Bombay/Santa Cruz | Clock type | 7th September 1954 | 00 and 12 | |
| 5. | Calcutta/Dum Dum | Clock type | 13th December 1946 | 00 and 12 | Fan type used from 13.12.1946 to 30.11.47. |
| 6. | Gauhati | Clock type | 22nd July 1955 | 00 and 12 | |
| 7. | Madras/Minambakkam | Fan type | 29th June 1946 | 00 and 12 | |
| 8. | Minicoy | Fan type | 12th May 1963 | 12 | |
| 9. | Nagpur/Sonegaon | Fan type | 1st October 1946 | 00 and 12 | |
| 10. | New Delhi/Safdarjung | Clock type | 3rd December 1943 | 00 and 12 | |
| 11. | Port Blair | Fan type | 4th December 1949 | 00 and 12 | |
| 12. | Srinagar | Clock type | 1st August 1962 | 00 and 12 | |
| 13. | Trivandrum | Fan type | 1st July 1947 | 00 and 12 | |
| 14. | Vishakhapatnam | Fan type | 8th December 1946 | 00 and 12 | |

# INDIA WEATHER REVIEW, 1966

## Monthly Weather Report

## MARCH

Published by authority of the Government of India

Chief features :-

i) Sub-normal activity of western disturbances, with four of them moving across northwest India;

ii) Scanty rainfall over northeast India; and

iii) A spell of good thundershowers over the northwestern parts of the Peninsula during the second week.

The trough of low pressure lying over Bihar State and Orissa on 28th February moved away eastwards across Assam by 2nd March causing isolated showers in Assam. Four fresh western disturbances affected northwest India during the month. The first disturbance, which was fairly active, was over Baluchistan on 2nd. Moving eastnortheastwards it passed across the Western Himalayas by 6th. Under its influence, there was good precipitation over the Western Himalayas during the period 4th to 6th. Banihal recorded 6 cm. of rain, Quazigund 5 cm and Srinagar and Simla cm each on 5th. The second western disturbance, which appeard over north Afghanistan on 15th, was also active. It moved slowly eastwards across the Western Himalayas by 20th. In association with it, there was another spell of good precipitation over most parts of northwest India. Quazigund recorded 7 cm of rain, Banihal 6 cm and Srinagar (IAF) 5 cm on 18th,and Dalhousie 6 cm and Joshimath 5 cm on 19th. The next western disturbance moved eastwards from south Afghanistan to the northern divisions of West Pakistan and thence away across the Western Himalayas during the period 21st to 24th. In association with it,fairly wide-spread precipitation occurred in Jammu and Kashmir, Quazigund reporting 8 cm of rain on 23rd. The last western disturbance following immediately lay over south Afghanistan and adjoining West Pakistan on 25th. It moved away, eastwards across the Western Himalayas by 28th causing some precipitation there and the adjoining plains.

Weather remained dry over northeast India except for two spells of isolated thundershowers in Assam. The first spell occurred in association with a low pressure area moving eastwards from Bihar Plateau across Assam during the period 5th to 7th. Kailashahar and Silchar recorded 3 cm of rain each on 7th. An upper air trough developed over West Bengal on 18th and became well marked the next day. Later, it weakened and moved away eastwards across Assam by 22nd. Under its influence, there was fairly widespread thundershowers in Assam on 20th and 21st and isolated thundershowers over West Bengal and Bihar Plateau.

An upper air trough,which developed over Gujarat Region and west Madhya Pradesh on 9th,persisted there with no appreciable movement till 12th. Later it became unimportant. In association with it, there was a spell of good thundershower activity over the central parts of the country and the north Peninsula during the middle of the second week. Yeotmal recorded 3 cm of rain on 11th.

A few troughs of low pressure moving westwards across the south Peninsula caused spells of isolated or scattered thundershowers in the south Peninsula. The first trough appeared over Comorin area and adjoining south Peninsula on 2nd. It persisted there the next day also and moved away westwards across Maldive area by 5th causing isolated thundershowers over the extreme south Peninsula. This was followed by another trough of low pressure which formed over Ceylon and adjoining area on 5th. It was over the south Peninsula on 6th and 7th and later shifted slightly northwards. Two more troughs developed in the southwest Bay of Bengal on the 9th and 13th respectively. The former moved westwards initially but later extended northwards to coastal Mysore on 13th and became unimportant by the next day. The latter trough was active and caused good thundershower activity in the south Peninsula. Coonoor recorded 6 cm of rain and Atiramapattinam 4 cm on 13th and Tuticorin 4 cm on 14th. During the second fortnight weather remained dry over the Peninsula except for isolated thundershowers on 24th and 30th. Punalur recorded 5 cm of rain on 24th.

Night temperatures were below normal over the country outside the south Peninsula from the end of the first week to the middle of the month, being appreciably to markedly so at a number of places in north and central India. They continued to be below normal during the third week over northeast India whereas over the other parts of north India and the central parts of the country they were below normal for the

last 12 days of the month. Night temperatures were above normal over northwest India during the third week and over Assam during the first and last weeks.

Day temperatures were above normal over the country out-side Gujarat State during the first four days of the month and again over north and central India from 13th to 17th, being appreciably so in northwest India. A third spell of above normal day temperatures was reported from most parts of the country during the last week. Day temperatures were below normal over the country outside the Peninsula during the period 4th to 8th. While they continued to be below normal over northeast India and the central parts of the country and adjoining Peninsula till 13th, they became below normal over the remaining parts of the country during the second half of the third week. During the last four days of the month also day temperatures were below normal except over northeast India and the Peninsula, being markedly below normal over northwest India.

## MONTHLY MEANS OF UPPER WINDS

During the month, observations of velocity and direction of upper winds were made at 54 stations in India. Out of these, at 40 stations all the observations were taken by means of Pilot Balloons and at 14 stations some observations were made by means of Pilot Ballons while the other observations by the radiowind method. In the case of Bangalore, the observations were taken by following radiosonde balloon by means of an optical theodolite. Particulars of these stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the table overleaf. All radiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data upto 9.0 Km. above mean sea level are given under Table IV and data above 9.0 Km. above mean sea level under Table V.

In Tables IV and V :-

n - represents the number of observations;

V - represents the mean wind speed in metres per second irrespective of direction;

v - represents the resultant mean velocity in metres per second;

D - represents the direction of the resultant mean wind in degrees East of North.

Means and resultant winds are given in this publication for the following heights :-

Surface, 0.15 Km. a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0, and 36.0 Km. above mean sea level. Of these the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0 and 30.0 Km. above mean sea level are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150, 100, 70, 50, 30, 20 and 10 Mb. respectively.

# INDIA WEATHER REVIEW, 1966

## Monthly Weather Report

## APRIL

Published by authority of the Government of India

Chief features :-

i) Movement of five weak western disturbances across Northwest India. Subnormal precipitation over Northwest India except over the extreme northern parts;

ii) Deficit rainfall in Northeast India;

iii) A few spells of good thundershowers over the Peninsula; and

iv) Development of a severe cyclonic storm in the Bay of Bengal.

Five western disturbances moved eastwards across Northwest India during the month, but none of them was active and only light to moderate precipitation occurred over Northwest India in association with them. Consequently, the precipitation was subhormal over Northwest India except over the extreme northern parts. The details of the movement and activity of the various western disturbances are given in the accompanying statement.

Assam received rainfall almost on all days of the month, but the rainfall was mostly scattered or isolated. There were, however, a few spells of good thundershowers which extended to the remaining parts of Northeast India also. During the first spell when scattered or isolated thundershowers occurred in Assam in the middle of the first week, Silchar recorded 3 cm. of rain on 3rd and 4 cm. on 4th. Most parts of Northeast India received rainfall during the first half of the second week. Haflong recorded 6 cm. of rain on 8th and Silchar and Mohanbari 4 cm. each on 9th. In association with the movement of an induced low from Rajasthan across Assam during the middle of the month, Pasighat and Majbat recorded 7 cm. of rain each, Sibsagar and Darjeeling 5 cm. each and Tezpur 4 cm. on 16th. The last spell of good thundershower activity occurred at the beginning of the last week. Goalpara reported 6 cm. of rain on 22nd, Silchar 5 cm. and Cooch Behar 4 cm. on 23rd. The total rainfall for the month over Northeast India was, however, deficient.

A few spells of good thundershowers occurred over the Peninsula. A trough of low pressure moving westward across Ceylon, Comorin and the adjoining south Peninsula caused a few thundershowers in the extreme south Peninsula at the beginning of the month. Pamban recorded 9 cm. of rain and Punalur 4 cm. on 1st. Another trough of low pressure moving similarly caused a second spell of thundershowers over the same area during the period 4th to 7th. The seasonal trough of low pressure established itself over the Peninsula at the beginning of the second week and isolated thundershower activity continued over the Peninsula during the rest of the month with a few good spells. Under the influence of an upper air trough moving westwards across the extreme south Peninsula during the period 17th - 20th, there was good thundershower activity over the Peninsula. Kanya Kumari recorded 6 cm. of rain and Tuticorin 4 cm. on 20th. Later the seasonal trough of low pressure over the Peninsula became more marked leading to fairly good rainfall in the south Peninsula and light to moderate thundershowers over the central parts of the country. Salem recorded 7 cm. of rain on 22nd and Punalur 5 cm. and Kallakkurichchi 4 cm. on 24th.

A trough of low pressure lying over the south Andaman Sea on 25th moved westwards into the south Bay of Bengal on 26th. It concentrated into a depression by the morning of 28th with centre near Latitude 8.0°N and Long. 88.0°E. Moving northwestwards, it further intensified into a cyclonic storm by the morning of 29th with centre near Latitude 10.0°N and Long. 85.0°E and into a severe cyclonic storm by the next morning when it was centred near Lat. 11.0°N and Long. 84.0°E. In association with this development, there was good rainfall in the south Bay Islands during the last week and also over the south Peninsula towards the end of the month.

Day temperatures were generally above normal over Northeast India and the Peninsula during the first fortnight. They were also above normal over the central parts of the country and Uttar Pradesh during the first week and again from 12th to 15th and over Northwest India and Gujarat State during the first four days of the month. Day temperatures over Northwest India were below normal from 5th to 18th and again during the last week. Over Gujarat State also day temperatures remained below normal during the last ten days of the month.

Rainfall was in large excess in Vidarbha, normal in North Assam, Orissa, Bihar Plateau, Jammu and Kashmir and Madras State, in slight defect in South Assam and in East Madhya Pradesh and in moderate defect in Bay Islands, Gangetic West Bengal, Interior Mysore and Kerala. It was in large defect over the rest of the country.

The mean maximum temperature was above normal in Sub-Himalayan West Bengal, Gangetic West Bengal, Bihar, East Uttar Pradesh, East Madhya Pradesh and Interior Mysore and below normal over Jammu and Kashmir. It was normal over the rest of the country.

The mean minimum temperature was above normal in Himachal Pradesh and East Madhya Pradesh and below normal in Saurashtra and Kutch. It was normal over the rest of the country.

The mean Relative Humidity in the morning was below normal in Marathwada and normal over the rest of the country.

The mean Relative Humidity in the evening was above normal in Himachal Pradesh and Jammu and Kashmir and below normal over Sub-Himalayan West Bengal and Arabian Sea Islands. It was normal over the rest of the country.

The mean cloud amount in the morning was above normal in Jammu and Kashmir, East Madhya Pradesh, Madhya Maharashtra, Marathwada and Vidarbha and below normal over Sub-Himalayan West Bengal, Gangetic West Bengal, Bihar, Himachal Pradesh and Rayalaseema. It was normal over the rest of the country.

The mean cloud amount in the evening was above normal in Orissa and East Madhya Pradesh and below normal in Konkan and Rayalaseema. It was normal over the rest of the country.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 32 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. I.S.T. of the date noted in the succeeding column; similarly the heaviest rainfall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hrs. I.S.T. of the date given in the succeeding column.

## MONTHLY MEANS OF UPPER WINDS

During the month, observations of velocity and direction of upper winds were made at 54 stations in India. Out of these, at 40 stations all the observations were taken by means of pilot balloons and at 13 stations some observations were made by means of pilot balloons while the other observations by the radiowind method. In the case of Bangalore, the observations were taken by following radiosonde balloon by means of an optical theodolite. Particulars of these stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the table overleaf. All radiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data upto 9.0 km. above mean sea level are given under Table IV and data above 9.0 km. above mean sea level under Table V.

In Tables IV and V :-

n = represents the number of observations;

V = represents the mean wind speed in metres per second irrespective of direction;

v = represents the resultant mean velocity in metres per second;

D = represents the direction of the resultant mean wind in degrees East of North.

Mean and resultant winds are given in this publication for the following heights :-

Surface, 0.15 Km. a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0, and 36.0 Km. above mean sea level. Of these the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0 and 30 Km. above mean sea level are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150, 100, 70, 50, 30, 20 and 10 Mb. respectively.

## Monthly Weather Report

## MAY

Published by authority of the Government of India

Chief features :-

i) Movement of last month's severe cyclonic storm in the southwest Bay of Bengal into the Peninsula causing a spell of heavy rains there.

ii) Good thundershowers over northwest India due to four western disturbances moving eastwards across the area.

iii) Sub-normal seasonal thundershower activity over northeast India with two main spells of activity.

iv) Formation and movement of a depression in the Bay of Bengal in the third week.

v) Advance of the southwest monsoon into the southern parts of the Bay of Bengal and of the Arabian Sea during the last week; and

vi) Moderate heat wave conditions over coastal Andhra Pradesh.

The severe cyclonic storm which was lying over the southwest Bay of Bengal on 30th April moved westwards and crossed the north Madras coast just north of Cuddalore on the morning of 1st May. It immediately weakened into a depression and moved northwestwards till the morning of 3rd. Thereafter it took a northerly course and recurved eastnortheastwards and weakened into a low pressure area by the morning of 5th over north Telangana and Vidarbha. Weakening further, the system continued to move eastnortheastwards as an upper air trough to West Bengal where it became unimportant by 10th. Under its influence, widespread rainfall with a number of heavy to very heavy falls occurred over the Peninsula, Cuddalore recording an exceptionally heavy fall of 35 cm. of rain on 1st. The central parts of the country also received fairly widespread rainfall, whereas the thundershower activity over northeast India increased considerably. Some of the noteworthy rainfalls recorded were : Kallakkurichchi 10 cm. and Madras 9 cm. on 1st, Palghat 10 cm. and Bangalore and Hassan 9 cm. each on 2nd, Honavar 19 cm., Belgaum and Panjim 15 cm. each, Goa 14 cm., Karwar 11 cm., Kolhapur 10 cm. and Gadag 8 cm. on 3rd, Panjim 16cm., Belgaum 15 cm., Goa 10 cm., Miraj and Mahabaleshwar 9 cm. each and Sholapur 8 cm. on 4th, Jabalpur 9 cm. and Silchar 8 cm. on 5th, Jalpaiguri 10 cm. on 7th, Silchar 9 cm. on 9th and Kailashahar 9 cm. and Agartala 8 cm. on 10th. According to press reports, normal life at many places was affected due to the heavy rains in the states of Madras, Mysore and in south Maharashtra State. Rail and air traffic services were also disrupted in the Madras State.

Four western disturbances moved across northwest India causing spells of good precipitation there. The first western disturbance lay over the northern divisions of West Pakistan on 7th and was feeble. It moved away eastwards across the Western Himalayas by 9th. The next western disturbance which followed immediately behind, lay over the northern divisions of West Pakistan and the adjoining Punjab on 11th. It was quite active and persisted over the Punjab and neighbourhood on the next two days. It finally moved away eastwards across the Western Himalayas by 14th. Under the influence of these two systems, there was good precipitation with duststorms at a number of places over northwest India and Uttar Pradesh during the second week. Gujarat State also received isolated thundershowers on two days. According to press reports, Simla, Mussoorie and Jullunder were hit by hailstorms, causing damage to standing crops. The Delhi-Srinagar flight of the IAC had to be suspended for 4 days due to bad weather. The remaining two western disturbances of the month appeared during the last week. Of these, the earlier disturbance was feeble and moved eastwards across the Punjab and Western Himalayas during the period 25th-26th causing a few light showers over the extreme north of the country. The last western disturbance appeared over the northern divisions of West Pakistan on 28th and was lying over the Punjab and Jammu and Kashmir on 31st. It was fairly active and caused well distributed light to moderate rainfall over most parts of northwest India.

The seasonal thundershower activity over northeast India was subnormal till about 20th. After the initial spell of thundershowers during the first ten days of the month as mentioned earlier, a spell of dry weather followed over northeast India, which was broken by the middle of the third week by a depression from the Bay of Bengal.

A low pressure area developed over the Andaman Sea on 16th and concentrated into a depression by the morning of 17th with centre near Lat. 14°N and Long. 96°E. Moving northwestwards, it weakened into a trough of low pressure over the east central and adjoining northeast Bay of Bengal by the evening of 18th. Later, the trough moved away northeastwards across central Burma. Under its influence, there was good rainfall in the Bay Islands during the third week with heavy rains on one or two days. Port Blair recorded 11 cm. of rain on 17th and 7 cm. on 18th and Long Island 7 cm. on 17th.

The seasonal thundershower activity was quite good over Assam and Sub-Himalayan West Bengal during the last week. The remaining parts of northeast India also received isolated thundershowers during this period. Some of the noteworthy amounts of rainfall recorded were : Jalpaiguri 7 cm. on 21st, Tura 8 cm. on 22nd, Mohanbari and Pasighat 7 cm. each on 25th, Silchar 11 cm. on 26th, Cooch Behar 12 cm., Silchar and Kailashahar 11 cm. each, Majbat 9 cm.and Goalpara 7 cm. on 27th, Rangiya 16 cm. and Haflong 13 cm. on 28th, Silchar 17 cm. on 29th and Pasighat 7 cm. on 31st. According to press reports, the level of the Brahmaputra began to rise due to the persistent heavy rains in the upper reaches.

After the spell of rainfall that occurred in the early part of the month in association with the movement of the severe cyclonic storm from the Bay of Bengal, the seasonal thundershower activity over the Peninsula and the central parts of the country remained below normal for the rest of the month.

The southwest monsoon advanced into the Andaman Sea and over most parts of the south Bay of Bengal by 26th. The Arabian Sea branch of the monsoon also advanced upto Lat. 8°N by the end of the month.

As a result of the good rainfall activity caused by the severe cyclonic storm from the Bay of Bengal, day temperatures remained markedly below normal over the Peninsula and central parts of the country till 5th and later over northeast India till 9th. They were as much as 10-17°C below normal over the northwestern parts of the Peninsula and Vidarbha on 3rd-5th.

Another spell of below-normal day temperatures occurred during the period 10th-15th when the entire country outside the south Peninsula was affecfted, with temperatures markedly below normal over northwest India and west Uttar Pradesh. The Punjab and adjoining areas experienced day temperatures as much as 10-15°C below normal from 11th to 13th. Day temperatures were above normal over northwest India and Gujarat State on a number of days during the first week and over northeast India in the earlier part of the first week and again at the middle of the month. They were markedly above normal over Gujarat State from 15th to 17th. From 18th to 28th, day temperatures were above normal over practically the entire country except the northwestern parts of the Peninsula on a few days. Moderate heat wave conditions prevailed over coastal Andhra Pradesh from 21st to 28th. According to press reports, 14 people died due to sunstroke in Khammam district. A few deaths were also reported from Sambalpur in Orissa and from Kanpur.

Rainfall was in large excess in west Uttar Pradesh, Punjab,Himachal Pradesh, Rajasthan, Konkan, Madhya Maharashtra, Marathwada, Vidarbha and north Interior Mysore. It was in moderate excess in Jammu and Kashmir and East Madhya Pradesh; in slight excess in Bay Islands and Madras State; normal in South Assam, Bihar Plains and South Interior Mysore; in slight defect in North Assam, Sub-Himalayan West Bengal, Coastal Andhra Pradesh, Rayalaseema and Coastal Mysore and in moderate defect in west Madhya Pradesh. It was in large defect over the rest of the country.

The mean maximum temperature was above normal in North Assam, Sub-Himalayan West Bengal, Gangetic West Bengal, Orissa, Coastal Andhra Pradesh and Madras State; below normal in Madhya Maharashtra, and normal over rest of the country.

The mean minimum temperature was above normal in Himachal Pradesh, below normal in Bihar Plains, West Uttar Pradesh, Punjab, Jammu and Kashmir, West Rajasthan, Madhya Maharashtra, Marathwada and Vidarbha. It was normal over the rest of the country.

The mean Relative Humidity in the morning was below normal in Gangetic West Bengal, Bihar, Saurashtra and Kutch, Coastal Andhra Pradesh and Telangana and normal over the rest of the country.

The mean Relative Humidity in the evening was above normal in Jammu and Kashmir, and below normal in Assam, Sub-Himalayan West Bengal, Gangetic West Bengal, Bihar Plateau, Coastal Andhra Pradesh, Telangana, Kerala and Arabian Sea Islands. It was normal over the rest of the country.

The mean cloud amount in the morning was below normal in Sub-Himalayan West Bengal, Gangetic West Bengal, Orissa, Bihar, East Uttar Pradesh, East Rajasthan, East Madhya Pradesh, Saurashtra and Kutch, Madhya Maharashtra, Marathwada, Vidarbha, Telangana and Rayalaseema. It was normal over the rest of the country.

The mean cloud amount in the evening was normal in Bay Islands, South Assam, Gujarat, Konkan, Coastal Andhra Pradesh, Madras State, Coastal Mysore and Arabian Sea Islands. It was below normal over the rest of the country.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 32 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. I.S.T. of the date noted in the succeeding column; similarly the heaviest rainfall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hours I.S.T. of the date given in the succeeding column.
