## METEOROLOGISKE STASJONER, INSTRUMENTER OG OBSERVASJONER

Bortsett fra nedbørstasjonene var det 210 meteorologiske stasjoner i drift i 1953, heri er også medregnet værskipet på stasjon M, de 4 radiosondestasjonene og de 5 arktiske stasjonene. Av stasjonene sendte 176 værtelegrammer til forskjellige tider, mens 34 bare sendte månedsrapporter. På de telegraferende stasjonene ble hovedobservasjonene tatt kl. 7, 13 og 19 M.E.T., på de ikke telegraferende kl. 8, 13 og 19 M.E.T. Den klimatologiske statistikken i Årboken er basert på observasjonene tatt kl. 8, 13 og 19, henholdsvis kl. 7, 13 og 19 M.E.T.

Årboken for 1953 inneholder forskjellige klimatologiske data fra 160 stasjoner. Dessuten inneholder den tilsvarende data fra de arktiske stasjonene Isfjord Radio, Hopen, Bjørnøya, Jan Mayen og Myggbukta for 1952.

I Årboken 1953 er tatt inn en ny stasjon, Vinjeøra, som var flygeværstasjon i årene 1936—52.

Med hensyn til de enkelte stasjoner er følgende å bemerke:

*Tynset:* Stasjonen ble utstyrt med barograf 25. september, med barometer 26. september og med ny vindfløy M.I. 47 28. september 1953. Den nye $H_s$ verdien skyldes bedre nivellement. $H_s$ skal være 483 m fra stasjonens opprettelse i 1947.

*Drevsjø:* Stasjonen fikk ny vindfløy M.I. 47 16. september 1953. Instrumenthytten ble ombygget til modell M.I. 46 17. september 1953.

*Fokstua:* Stasjonen fikk hygrograf 16. september 1953.

*Vollen i Slidre:* Termografen ble inndratt 2. november 1953.

*Lillehammer:* Instrumenthytten ble ombygget til modell M.I. 46 22. april 1953. Ny vindfløy M.I. 47 ble montert 46 m SSE for den gamle 23. april 1953.

*Åmot:* Termografen ble inndratt 26. november 1953.

## METEOROLOGICAL STATIONS, INSTRUMENTS AND OBSERVATIONS

Not including rainfall stations, 210 meteorological stations were in operation during the year 1953, including also the ocean weather ship at station M, the 4 radiosonde stations and the 5 arctic stations. Telegraphic reports were received at various hours from 176 stations, the remaining 34 stations furnishing monthly reports only. At the stations furnishing telegraphic reports the hours of observation were 7, 13 and 19h E.M.T., at the remaining stations 8, 13 and 19h E.M.T. The climatological statistics in the Year Book refer to the observations made at 7, 13 and 19h and 8, 13 and 19h E.M.T., respectively.

The Year Book for 1953 contains various climatological data from 160 stations. In addition it also contains similar data from the arctic stations Isfjord Radio, Hopen, Bjørnøya (Bear Island), Jan Mayen and Myggbukta (Greenland) for 1952.

In the Year Book for 1953 one new station has been included, Vinjeøra, which was an aerological station in the period 1936—52.

With regard to the individual stations the following should be noted:

*Tynset:* The station was equipped with a barograph on September 25th, a barometer on September 26th and a new wind vane pattern M.I. 47 on September 28th 1953. The new $H_s$ value is due to a better levelling. $H_s$ should be 483 m from the establishment of the station in 1947.

*Drevsjø:* The station got a new wind vane pattern M.I. 47 on September 16th 1953. The thermometer screen was rebuilt to pattern M.I. 46 on September 17th 1953.

*Fokstua:* The station was equipped with a hygrograph on September 16th 1953.

*Vollen i Slidre:* The thermograph was removed on November 2nd 1953.

*Lillehammer:* The thermometer screen was rebuilt to pattern M.I. 46 on April 22nd 1953. A new wind vane was put up 46 m SSE of the old one on April 23rd 1953.

*Åmot:* The thermograph was removed on November 26th 1953.

*Vang på Hedmark:* Stasjonen fikk termograf og hygrograf 15. september 1953.

*Kuljern:* Ny vindfløy M.I. 47 ble montert 30 m SW for den gamle 27. august 1953. Samme dag fikk stasjonen nytt barometer. og instrumenthytten ble ombygget til modell M.I. 46.

*Fornebu:* Stasjonen fikk termograf og hygrograf 13. oktober 1953.

*Geilo (Strand):* Instrumenthytten ble ombygget til modell M.I. 46 13. juni 1953.

*Dagali:* Instrumenthytten ble ombygget til modell M.I. 46 18. juni 1953. Ny vindfløy M.I. 47 ble montert ca. 30 m E for der vakeren var plasert 19. juni 1953.

*Svene:* Instrumenthytten ble ombygget til modell M.I. 46 21. juli 1953. Ny vindfløy M.I. 47 ble satt opp 22. juli 1953.

*Stokke:* Instrumenthytten og nedbørstolpen ble flyttet ca. 115 m sørover 24. juni 1953.

*Kalnes:* Instrumenthytten og nedbørstolpen ble flyttet ca. 215 m i østlig retning 20. mars 1953. Ny vindfløy M.I. 47 ble satt opp 15. juni 1953.

*Ferder:* Termografen ble inndratt 9. november 1953.

*Jomfruland:* Ny vindfløy M.I. 47 ble montert cå. 1.5 m fra der den gamle sto 1. januar 1953.

*Torungen Fyr:* Stasjonen fikk ny instrumenthytte modell M.I. 33 10. oktober 1953.

*Kjevik:* Anemometeret ble flyttet 175 m mot ESE 6. mai 1953.

*Lista:* Termografen ble inndratt 21. november 1953.

*Utsira:* Termografen og hygrografen ble inndratt 23. november 1953.

*Slåtterøy:* Barometeret og barografen ble flyttet fra 1. etasje til kjelleren 13. oktober 1953.

*Vang på Hedmark:* The station was equipped with a thermograph and a hygrograph on September 15th 1953.

*Kuljern:* A new wind vane pattern M.I. 47 was put up 30 m SW of the old one on August 27th 1953. On the same day the thermometer screen was rebuilt to pattern M.I. 46, and the station got a new barometer.

*Fornebu:* The station was equipped with a thermograph and a hygrograph on October 13th 1953.

*Geilo (Strand):* The thermometer screen was rebuilt to pattern M.I. 46 on June 13th 1953.

*Dagali:* The thermometer screen was rebuilt to pattern M.I. 46 on June 18th 1953. A new wind vane was put up about 30 m E of the old wind sleeve on June 19th 1953.

*Svene:* The thermometer screen was rebuilt to pattern M.I. 46 on July 21st 1953. A new wind vane was put up on July 22nd 1953.

*Stokke:* The thermometer screen and the rain gauge were moved about 115 m southward on June 24th 1953.

*Kalnes:* The thermometer screen and the rain gauge were moved about 215 m towards E on March 20th 1953. A new wind vane pattern M.I. 47 was put up on June 15th 1953.

*Ferder:* The thermograph was removed on November 9th 1953.

*Jomfruland:* A new wind vane was put up about 1.5 m from the old one on January 1st 1953.

*Torungen Fyr:* The station got a new thermometer screen pattern M.I. 33 on October 10th 1953.

*Kjevik:* The anemometer was moved 175 m towards ESE on May 6th 1953.

*Lista:* The thermograph was removed on November 21st 1953.

*Utsira:* The thermograph and the hygrograph were removed on November 23rd 1953.

*Slåtterøy:* The barometer and the barograph were moved from the first floor to the cellar on October 13th 1953.

*Slirå:* Termografen og hygrografen ble inndratt 26. oktober 1953.

*Myrdal:* Stasjonen var ute av drift til 1. juli 1953. Instrumenthytten ble ombygget til modell M.I. 33 5. juni 1953.

*Voss:* Instrumenthytten ble ombygget til modell M.I. 46 2. juni 1953.

*Syfteland:* Stasjonen ble flyttet ca. 200 m mot NE 18. juni 1953. Samme dag fikk stasjonen instrumenthytte, modell M.I. 1930.

*Hellisøy Fyr:* Termografen ble inndratt 13. november 1953.

*Vangsnes:* Nedbørstolpen ble flyttet ca. 9 m mot N 22. desember 1953.

*Lærdal (Tønjum):* Ny instrumenthytte modell M.I. 46 ble satt opp på samme sted som den gamle 4. august 1953.

*Leikanger:* Instrumenthytten ble ombygget til modell M.I. 46 7. august 1953.

*Fortun:* Stasjonen fikk hygrograf 21. september 1953.

*Fanaråken:* Vindstyrken males fra 28. august 1953 med skålkorsanemometer, som er montert ca. 0.5 m lavere enn den gamle Dines-måleren.

*Tafjord:* Stasjonen fikk nytt barometer og instrumenthytten ble ombygget til modell M.I. 46 21. april 1953.

*Ona:* Stasjonen fikk termograf og hygrograf 26. oktober 1953.

*Værnes:* Stasjonen fikk hygrograf 14. desember 1953.

*Sulstua:* Stasjonen ble flyttet ca. 100 m i sørlig retning 24. september 1953, fra gården Brenna til gården Brendmo.

*Majavatn:* Instrumenthytten ble ombygget til modell M.I. 46 8. august 1953. Den nye $H_s = 352$ m skyldes bedre nivellement, og gjelder fra stasjonens opprettelse i 1935.

*Slirå:* The thermograph and the hygrograph were removed on October 26th 1953.

*Myrdal:* The station was out of operation until July 1st 1953. The thermometer screen was rebuilt to pattern M.I. 33 on June 5th 1953.

*Voss:* The thermometer screen was rebuilt to pattern M.I. 46 on June 2nd 1953.

*Syfteland:* The station was moved about 200 m towards NE on June 18th 1953, and was at the same time equipped with a thermometer screen pattern M.I. 1930.

*Hellisøy Fyr:* The thermograph was removed on November 13th 1953.

*Vangsnes:* The rain gauge was moved about 9 m towards N on December 22nd 1953.

*Lærdal (Tønjum):* A new thermometer screen was put up in the same place as the old one on August 4th 1953.

*Leikanger:* The thermometer screen was rebuilt to pattern M.I. 46 on August 7th 1953.

*Fortun:* The station was equipped with a hygrograph on 21st September 1953.

*Fanaråken:* The wind force has since August 28th 1953 been recorded with a cup-anemometer, which is put up about 0.5 m lower than the old Dines-recorder.

*Tafjord:* The station got a new barometer and the thermometer screen was rebuilt to pattern M.I. 46 on April 21st 1953.

*Ona:* The station was equipped with a thermograph and a hygrograph on October 26th 1953.

*Værnes:* The station was equipped with a hygrograph on December 14th 1953.

*Sulstua:* The station was moved about 100 m southward on September 24th 1953, from the farm Brenna to the farm Brendmo.

*Majavatn:* The thermometer screen was rebuilt to pattern M.I. 46 on August 8th 1953. The new $H_s$ value is due to a better levelling. $H_s$ should be 352 m from the establishment of the station in 1935.

*Bodø V:* Stasjonen ble flyttet ca. 500 m i sørlig retning 12.—13. januar 1953. Den nye stasjonen kalles Bodø VI. Stasjonen fikk nytt barometer 2. juli 1953, og termograf 7. desember 1953.

*Fauske:* Stasjonen fikk barometer og barograf 22. september 1953. Den nye $H_s$ = 15 m skyldes bedre nivellement, og gjelder fra stasjonens opprettelse i 1935.

*Grøtøy:* Ny nedbørstolpe ble satt opp ca. 2 m SW for den gamle 22. desember 1953.

*Narvik II:* Stasjonen ble utstyrt med barometer og barograf 27. august 1953. Den nye $H_s$ skyldes at stasjonshøyden nå er nivellert, og den gjelder fra stasjonens opprettelse i 1951.

*Offersøy:* Termografen og hygrografen ble inndratt 30. november 1953.

*Skomrør Fyr:* Stasjonen fikk termograf og hygrograf 12. november 1953.

*Borge i Lofoten:* Instrumenthytten ble ombygget til modell M.I. 33 9. september 1953.

*Gibostad:* Instrumenthytten ble ombygget til modell M.I. 46 8. september 1953.

*Bardufoss:* Ny anemograf ble satt opp 330 m SE for den gamle 14. juli 1953.

*Skattøra:* Termografen og hygrografen ble inndratt 30. november 1953.

*Alta (Elvebakken):* Stasjonen fikk nytt barometer og ny barograf 26. august 1953. Instrumenthytten ble ombygget til modell M.I. 46 27. august 1953. Forandringen i $H_b$ skyldes dels bedre nivellement, dels at barometeret ble flyttet til et annet rom i samme etasje 17. desember 1952. $H_b$ skal være = 4.7 m fra nevnte flytning. Hygrografen ble inndratt 2. november 1953.

*Helnes Fyr:* Instrumenthytte modell M.I. 33 ble satt opp 10 m E for instrumentburet 12. august 1953. Nedbørstolpen ble flyttet ca. 15 m i østlig retning 13. august 1953. Den nye $H_s$ skyldes dels

*Bodø V:* The station was moved about 500 m southward on January 12th—13th 1953. The new station is called Bodø VI. On July 2nd the station got a new barometer and on December 7th 1953 a thermograph.

*Fauske:* The station was equipped with a barometer and a barograph on September 22nd 1953. The new $H_s$ value is due to a better levelling. $H_s$ should be 15 m from the establishment of the station in 1935.

*Grøtøy:* A new rain gauge was put up about 2 m SW of the old one on December 22nd 1953.

*Narvik II:* The station was equipped with a barometer and a barograph on August 27th 1953. The new $H_s$ value is due to the levelling of the station. $H_s$ should be = 32 m from the establishment of the station in the year 1951.

*Offersøy:* The thermograph and the hygrograph were removed on November 30th 1953.

*Skomrør Fyr:* The station was equipped with a thermograph and a hygrograph on November 12th 1953.

*Borge i Lofoten:* The thermometer screen was rebuilt to pattern M.I. 33 on September 9th 1953.

*Gibostad:* The thermometer screen was rebuilt to pattern M.I. 46 on September 8th 1953.

*Bardufoss:* A new wind-recorder was put up 330 m SE of the old one on July 14th 1953.

*Skattøra:* The thermograph and the hygrograph were removed on November 30th 1953.

*Alta (Elvebakken):* The station got a new barometer and a new barograph on August 26th 1953. The thermometer screen was rebuilt to pattern M.I. 46 on August 27th 1953. The new $H_b$ value is partly due to a better levelling, partly to the moving of the barometer to another room on the same floor on December 17th 1952. $H_b$ should be = 4.7 from the date mentioned. The hygrograph was removed on November 2nd 1953.

*Helnes Fyr:* The station was equipped with a thermometer screen pattern M.I. 33 on August 12th 1953. The thermometer screen was put up 10 m E of the old window screen. The rain gauge was moved

en bedre høydebestemmelse, dels flytningen av nedbørstolpen.

*Gamvik:* Termografen ble inndratt 2. november 1953.

*Vardø:* Stasjonen fikk hygrograf 10. november 1953.

*Karasjok:* Instrumenthytten ble ombygget til modell M.I. 46 24. august 1953. Stasjonen fikk termograf og hygrograf 30. november 1953.

*Isfjord Radio:* Ny vindretningsregistrator ble montert på taket av hovedbygningen 30. august 1952.

*Hopen:* Stasjonen fikk ny hygrograf 10. juli 1952.

*Myggbukta:* Den nye $H_s = 3$ m skyldes bedre nivellement, og gjelder fra stasjonens nyoppretelse i 1946. Nytt anemometer ble montert 23. august 1952. Under inspeksjonen i august ble vindretningskorset dreiet 30° mot E, fra magnetisk til geografisk N. Vindobservasjonene for 1952 er korrigert i overensstemmelse med dette.

Lufttrykket ble i 1953 observert på 96 stasjoner, men lufttrykksobservasjonene er bearbeidet klimatologisk bare for 42 stasjoner. Stasjonsbarometrene er kvikksølvbarometre av Fuess- eller Kew konstruksjon. Av stasjonene er 86 utstyrt med barograf.

Lufttemperaturen ble observert på 176 stasjoner. Alle disse målte også minimumstemperaturen og 104 maksimumstemperaturen. Mens lufttemperaturen blir observert kl. (8), 7, 13 og 19 M. E. T. på de fleste stasjonene, blir ekstremtemperaturene avlest bare kl. (8), 7 og 19 M. E. T. Termometrene er hovedsakelig av tysk type, inndelt i $^1/_5$° C. De fleste maksimums- og minimumstermometre er inndelt i ½° C. 36 stasjoner er utstyrt med termograf av Fuess- eller Richard typen.

175 stasjoner er utstyrt med instrumenthytte av tre, 1 med vindusbur og 5 stasjoner har slyngetermometer. 5 stasjoner er utstyrt med aspirasjons-

about 15 m eastward on August 13th 1953. The new $H_s$ value is partly due to a more certain determination of height, partly to the moving of the rain gauge.

*Gamvik:* The thermograph was removed on November 2nd 1953.

*Vardø:* The station was equipped with a hygrograph on November 10th 1953.

*Karasjok:* The thermometer screen was rebuilt to pattern M.I. 46 on August 24th 1953. The station was equipped with a thermograph and a hygrograph on November 30th 1953.

*Isfjord Radio:* A new wind direction recorder was put up on the roof of the main building on August 30th 1952.

*Hopen:* The station got a new hygrograph on July 10th 1952.

*Myggbukta:* The new $H_s$ value is due to a better levelling. $H_s$ should be = 3 m from the reestablishment of the station in 1946. A new anemometer was put up on August 23rd 1952. During the inspection of the station in August 1953, it was found that the arm N was pointing towards the magnetic instead of the geographical N. This was put right, and the wind observations for 1952 have been corrected accordingly.

Atmospheric pressure was observed at 96 stations in 1953, but only the observations from 42 of these have been included in the climatological statistics. The station barometers are mercurial barometers of the Fuess or of the Kew pattern. 86 stations are supplied with barographs.

The air temperature was observed at 176 stations. All of them recorded the minimum temperature and 104 the maximum temperature. Whilst the air temperature is read at (8), 7, 13 and 19h E. M. T. on most of the stations, the extreme temperatures are observed only at (8), 7 and 19h E. M. T. The thermometers are mostly of the german type, graduated in fifths of degrees Centigrade. Most of the maximum- and minimum thermometers are graduated in half degrees Centigrade. 36 stations are equipped with thermographs of the Fuess or Richard type.

175 stations are equipped with louvre-boarded thermometer screens, 1 station have a small screen of sheet metal with window exposure and 5 stations

psykrometer. 19 stasjoner er ikke utstyrt med instrumenter, og utfører bare visuelle observasjoner for flygeværtjenesten.

Temperaturen i havoverflaten ble målt hver dag kl. 13 M. E. T. på 14 representative kyststasjoner.

Luftens fuktighet ble målt på 144 stasjoner, hvorav de fleste er utstyrt med Russeltvedts torsjonshygrometer. 19 stasjoner er også utstyrt med Fuess- eller Richard hygrograf. Fuktighetsmålinger foretas på de stasjoner som har instrumenthytte, og der er fuktighetsinstrumentet anbrakt i hytten, og dessuten på de 4 radiosondestasjonene og på værskipene på stasjon M.

Vindens retning og styrke observeres på alle stasjonene, og likeså noteres også den maksimale vindstyrke mellom observasjonsterminene. På 97 stasjoner bedømmes vindretningen etter vindfløy eller vaker, den registreres på 19 stasjoner og 5 stasjoner har indikator. På de øvrige stasjonene bedømmes vindretningen etter skjønn. Vindstyrken registreres på 21 stasjoner, 8 stasjoner har indikator, og på de øvrige bedømmes vindstyrken skjønnsmessig etter Beauforts skala.

Nedbørmengden (smeltevannet når det er snø eller hagl) blir målt på samtlige stasjoner kl. (8) 7 M.E.T. I den årstid nedbøren vesentlig faller som snø, benyttes en snømåler. Både regn- og snømålerne har en samleflate på 225 cm². 100 stasjoner er utstyrt med Nipher vindskjerm. 7 stasjoner er også forsynt med pluviograf. Når det er snø på bakken, observeres snødybden og snødekket hver dag kl. (8) 7. M. E. T.

Været, skydekket, synsvidden og nedbørslags samt været mellom observasjonsterminene observeres på samtlige stasjoner.

Av registreringene er bare verdiene fra Oslo (Blindern) tatt inn i Årboken.

use whirling thermometers. 5 stations are equipped with aspiration psychrometers. 19 stations are not equipped with instruments, and furnish only visual observations for aviation reports.

The temperature of the sea surface was observed daily at 13h E. M. T. at 14 representative coastal stations.

Humidity observations were made at 144 stations, most of which are equipped with a Russeltvedt torsion hygrometer. 19 stations are also equipped with hygrographs of the Fuess or Richard type. Humidity observations are made at stations equipped with a thermometer screen, and also at the 4 radiosondestations and the ocean weather ships at station M.

The direction and the force of the wind are observed at all stations, and so is also the maximum wind force occurring between the standard hours of observation. 97 stations are equipped with a wind vane or a «wind sleeve», 19 stations with dial recorders, 5 stations with dial indicators, the remaining stations estimating the wind direction. 21 stations are equipped with wind recorders, 8 stations with dial indicators, the remaining stations estimating the wind force according to the Beaufort scale.

The amount of precipitation (melted when snow or hail) is measured at all stations at (8) 7 E. M. T. During the time of the year when the precipitation is mainly falling as snow, a snow-gauge is used. Both the rain-gauge and the snow-gauge have a collecting surface of 225 sq.cm. 100 stations are equipped with a Nipher wind shield, 7 stations are also supplied with a pluviograph. When snow is present on the ground, the depth of the snow and the snow cover are observed daily at (8)7h E. M. T.

Observations of weather, cloudiness, visibility, type of precipitation and past weather are made at all stations.

Only data obtained from the recording instruments at Oslo (Blindern), are included in the Year Book.

## FORKLARINGER TIL TABELLENE

Tabellene er satt opp i overensstemmelse med de vedtak som ble gjort av den Internasjonale Meteorologiske Organisasjon på møtene i Warszawa 1935 og i Salzburg 1937. Interpolerte verdier er angitt ved et $^{x}$, de andre symboler som er benyttet er forklart på side *XV*.

**Registreringene i Oslo (Blindern).** — Verdiene i tabellene på side 1—14 er tatt ut for hver annen time av registreringene og påført de nødvendige korreksjoner. Vindhastigheten representerer den midlere hastighet i m/sek. i 10 minutter forut for det anførte klokkeslett. Verdiene for de øvrige elementer er momentanverdier. Ekstremverdier er trykt med fete typer. Følgende registrerinstrumenter har vært benyttet:

Sprung-Fuess kvikksølvbarograf.
Fuess termograf nr. 172446.
Fuess hygrograf nr. 114634.
Skålkorsanemometer M.I. 48/250 nr. 1 og anemograf Fuess nr. 217289.
Hellmann—Fuess pluviograf nr. 11791.

**Ekstensotabellene.** — Tabellene på side 16—39 inneholder observasjonene kl. 8, 13 og 19 M.E.T. fra Oslo (Blindern) og Tromsø og for kl. 7, 13 og 19 M. E. T. fra Bergen (Fredriksberg) og Trondheim (Voll) for 1953. Tabellene på side 103—133 inneholder observasjonene kl. 6,30, 12,30 og 18,30 M.E.T. fra Isfjord Radio, Bjørnøya, Jan Mayen og Myggbukta, og kl. 6.40, 12,40 og 18,40 M.E.T. for Hopen for 1952.

Regnet fra venstre til høyre inneholder rubrikkene:

1. *Datum.*
2. *Lufttrykket* (P) i millibar i stasjonens nivå.
3. *Lufttemperaturen* (T) og ekstremtemperaturene (Max og Min) i Celsiusgrader.
4. *Relativ fuktighet* (U) i prosent.
5. *Vindretningen* (D) i skalaen 01—36 og vindstyrken (F) etter Beaufort-skalaen.
6. *Synsvidden* (V) i skalaen 0—9, hvor 9 betyr synsvidde større enn 100 km.
7. *Skydekket* (N) i skalaen 0—8, og været (w) ved observasjonsterminene uttrykt ved symbolene på side *XV*.
8. *Nedbørhøyden* (R) i mm.
9. *Snødybden* ($h_s$) i cm.
10. *Værforløpet* (W) i døgnet uttrykt ved symbolene på side *XV*.

**Måneds- og årsoversikter.** — Tabellene på side 40—103 og 136—137 inneholder måneds- og årsmidler og

## EXPLANATORY NOTES TO THE TABLES

The tables are arranged in accordance with the decisions made by the International Meteorological Organisation at the meetings in Warsaw 1935 and Salzburg 1937. Interpolated values are indicated by superscript x, other symbols used are defined on page *XVI*.

**Data obtained from recording instruments at Oslo (Blindern).** — The values given in the tables on pp. 1—14 are obtained from the bi-hourly readings of the self recording instruments appropriately corrected. The values for wind speed represent the mean values in $^{m}/_{sec}$ through a period of 10 minutes prior to the time indicated. The other elements represent instantaneous values. The extreme values are printed in bold face type. The following recording instruments have been used:

Sprung-Fuess mercury barograph.
Fuess thermograph No. 172446.
Fuess hygrograph No. 114634.
Cup anemometer M.I. 48/250 No. 1 and anemograph Fuess No. 217289.
Hellmann—Fuess pluviograph No. 11791.

**Tables of individual observations.** — The tables on pp. 16—39 contain observations made at 8, 13 and 19h E.M.T. at Oslo (Blindern) and Tromsø and those made at 7, 13 and 19h E.M.T. at Bergen (Fredriksberg) and Trondheim (Voll) for 1953. The tables on pp. 103—133 contain observations made at 6,30, 12,30 and 18,30h E.M.T. at the stations Isfjord Radio, Bjørnøya, Jan Mayen and Myggbukta, and at 6.40, 12.40 and 18.40h E.M.T. at Hopen for 1952.

The contents of the columns from left to right are as follows:

1. *Date.*
2. *Pressure* (P) in millibars at station level.
3. *The air temperature* (T) and the extreme temperatures (Max and Min) in degrees Centigrade.
4. *Relative humidity* (U) in per cent.
5. *Wind direction* (D) on the scale 01—36 and the wind force (F) according to the Beaufort scale.
6. *Visibility* (V) on the scale 0—9, where 9 signifies visibility in excess of 100 km.
7. *Cloud cover* (N) on the scale 0—8, and the weather (w) at the time of observation represented by the symbols given on page *XVI*.
8. *Amount of precipitation* (R) in mm.
9. *Depth of snow on the ground* ($h_s$) in cm.
10. *Sequence of weather phenomena* (W) during the 24 hour period, expressed by the symbols defined on page *XVI*.

**Monthly and annual summaries.** — The tables on pp. 40—103 and 136—137 contain monthly and

summer av de forskjellige elementer. Regnet fra venstre til høyre inneholder rubrikkene:

1. *Måned.*

2. *Lufttrykket i stasjonens nivå* ($P_m$) og lufttrykket redusert til havets overflate ($P_{om}$) eller til nærmeste standard-geopotensial flate. Her er gjort en unntakelse for lufttrykket på Røros og Dombås som er redusert til havet. Siden 1. januar 1944 har Eliassens[1]) reduksjonstabeller vært benyttet, og disse tabeller gir verdier som for enkelte stasjoner er litt forskjellige fra dem en fikk av de tabellene som ble brukt tidligere. Lufttrykket på kyststasjonene reduseres (som før 1. januar 1944) på grunnlag av en konstant temperaturavtagen med høyden på 0.6° C pr. 100 m. For innlandsstasjonene Røros, Dombås, Nordli II og Karasjok benyttes den samme konstante temperaturgradient, og dessuten tilføyes en temperaturkorreksjon[2]) når lufttemperaturen er under 2° C.

Reduksjonen til havet av lufttrykket på Dalen i Telemark og på Vollen i Slidre utføres i overensstemmelse med Eliassens 4. metode (loc. cit. p. 10).

3. *Lufttemperaturen* (i Celsiusgrader). — Månedsmidlene (Dies) er beregnet av formelen[3])

$$M = n - k(n - \text{Min.})$$

hvor n er midlet av observasjonene kl. (8) 7, 13 og 19 M. E. T., k en faktor som varierer med årstiden og fra stasjon til stasjon,[4]) og Min. er den midlere minimumstemperatur. Temperaturekstremene gjelder for døgnet regnet fra kl. 19—kl. 19.

4. *Vindfordelingen.* — Vindstyrken er gitt etter Beaufortskalaen. Vindretningen er gitt i skalaen 01—36 og henført til den nærmeste retning delelig med 3, nemlig:

N (36), N30°E (03), N60°E (06), E (09)
E 30°S (12), E60°S (15), S (18), S30°W (21)
S60°W (24), W (27), W30°N (30), W60°N (33).

Den første tallkolonnen under hver retning gir antall tilfeller med vind fra vedkommende retning, og den andre kolonnen gir den midlere vindstyrke.

5. *Relativ fuktighet* (i prosent). — På stasjoner hvor Russeltvedts torsjonshygrometer blir brukt, tas den relative fuktighet ut av tabeller som er beregnet for hvert instrument. Fuktighetene som

[2] Jahrbuch des Norwegischen Meteorologischen Instituts für 1944 S. XI.

[3] H. Mohn: Mitteilungen aus dem Norwegischen Meteorologischen Institute II. Die Temperatur der Luft. Met. Zeitschr. 1891 S. 253.

[4] B. J. Birkeland: Mittel und Extreme der Lufttemperatur. Geof. Publ. XIV. 1, Oslo 1936 S. 9—10.

[4] Jahrbuch des Norwegischen Instituts für 1938, S. VIII und 35 og Norsk Meteorologisk Årbok 1949, S 134 og 138.

annual means and sums of the different elements. The contents of the columns from left to right, are as follows:

1. *Month.*

2. *Atmospheric pressure at station level* ($P_m$) and atmospheric pressure reduced to mean sea level ($P_{om}$) or to the nearest standard geopotential surface, the latter with the exception that the pressures observed at Röros and Dombås are reduced to mean sea level. Since January 1st 1944, Eliassen's[1]) reduction tables have been in use, and these tables render results that, for some stations, differ slightly from those obtained from the tables previously used. The pressure observed at coastal stations are reduced (as prior to January 1st 1944) on the assumption of a constant lapse rate of temperature equal to 0.6° C per 100 m elevation. For the inland stations Röros, Dombås, Nordli II and Karasjok the same constant lapse rate is used, and, in addition, a temperature correction[2]) is applied when the air temperature is below 2° C.

The reduction to mean sea level of the pressure observations at Dalen i Telemark and Vollen i Slidre is performed according to Eliassen's fourth method (loc. cit. p. 10).

3. *Air temperature* (in degrees Centigrade). — The monthly means are computed from the formula[3])

$$M = n - k(n - \text{Min.})$$

where $n$ is the mean of the observations made at (8) 7, 13 and 19h E. M. T., $k$ a factor appropriate for the station and season,[4]) and Min. is the mean minimum temperature. The extreme temperatures refer to the 24-hour period from 19 to 19 hours.

4. *Wind distribution.* — The wind force is given according to the Beaufort scale. The wind direction is given on the scale 01—36, reduced to the nearest direction divisible by 3, viz:

N (36), N30°E (03), N60°E (06), E (09)
E30°S (12), E60°S (15) ,S (18), S30°W (21)
S60°W (24), W (27), W30°N (30), W60°N (33).

The first column of figures under each direction gives the number of cases of winds from the direction indicated, and the second column of figures gives the mean wind force.

5. *Relative humidity* (in per cent). — At stations where Russeltvedt's torsion hygrometers are used, the relative humidity is obtained from tables computed for each instrument. Humidities observed by

observeres med psykrometer blir omregnet til relativ fuktighet ved hjelp av Jelineks tabeller når temperaturen er over frysepunktet, og ved hjelp av Birkelands[5]) tabeller når temperaturen er under frysepunktet. Den relative fuktighet refererer seg alltid til metningstrykket over vann.

Månedsmidlet er beregnet av Køppens formel

$$M = q + c(p - q)$$

hvor q er midlet av morgen- og aftenobservasjonene, $p$ midlet av middagsobservasjonene og $c$ er en faktor som varierer med stedet og tiden.[6])

6. *Skydekket* (i skalaen 0—8). — Månedsmidlene beregnes særskilt for morgen-, middags- og kveldsobservasjonene.

7. *Nedbøren* (i mm). — Nedbørhøyden blir målt kl. (8) 7 M. E. T., og gjelder for de foregående 24 timer. Månedssummene er gitt på nærmeste hele mm, og det samme er også tilfelle med de maksimale nedbørhøyder (Max).

8. *Antall dager med visse fenomener.* — Når det gjelder nedbørmengden, regnes døgnet fra kl. (8) 7 til kl. (8) 7, i forbindelse med andre fenomener regnes det fra kl. 19 til kl. 19.

Som nedbørdager regnes alle dager når nedbørhøyden er 0.1 mm eller mer. Dager med sludd telles opp for seg og tas dessuten med i kolonnene under dager med regn og dager med snø. Likeledes telles også antall dager med yr opp som dager med regn når nedbørmengden er 0.1 mm eller mer. Til antall dager med yr, hagl og tordenvær regnes alle dager da slike fenomener har forekommet, uten hensyn til nedbørhøyden. Dessuten skjelnes mellom tåke og tåkedis ettersom den tilhørende synsvidden er mindre eller større enn 1 km. Hvis tåke og tåkedis har forekommet på samme dag, regnes dagen som tåkedag. Som solskinnsdag regnes alle dager da solskinn har forekommet, uten hensyn til varigheten. Som klare dager regnes dager på hvilke summen av skydekketallene kl. (8) 7, 13 og 19 M. E. T. er 4 ($^4/_8$) eller mindre. På samme vis regnes hver dag når summen av skydekketallene kl. (8) 7, 13 og 19 M. E. T. er 20 ($^{20}/_8$) eller mer, som en overskyet dag. Dager med snødekke er dager når $^3/_4$ eller mer av bakken er dekket med snø.

[5]) B. J. Birkeland: Neue Feuchtigkeitstafeln für das Psychrometer unter dem Gefrierpunkt, Christiania, 1907, Vorwort.

psychrometers are converted to relative humidity by the aid of Jelinek's tables when the temperature is above freezing and by aid of Birkeland's[5]) tables when the temperature is below freezing. Throughout, the relative humidity refers to saturation over water. The monthly means are computed from Køppen's formula

$$M = q + c(p - q)$$

where $q$ denotes the mean of the morning and the evening observations, $p$ the mean of the midday observations and $c$ is a factor appropriate for the station and the season.[6])

6. *Amount of cloud cover* (on the scale 0—8). — The monthly means are computed separately for the morning, midday and evening observations.

7. *Amount of precipitation* (in mm). — The amount of precipitation is measured at (8) 7[h] E. M. T. and refers to the preceding 24-hour period. The monthly sums are given to the nearest mm and so are also the maximum amounts (Max).

8. *Number of days with certain phenomena.* — Insofar as the amount of precipitation is concerned, the «day» is reckoned from (8) 7 to (8) 7 hours, in connection with other elements the «day» refers to the period from 19 to 19 hours.

As a day with precipitation is counted any day on which the amount of precipitation is 0.1 mm or more. Days with sleet are counted separately and are also included in the columns referring to days with rain and snow. Likewise the number of days with drizzle is included in the number of days with rain when the amount of precipitation is 0.1 mm or more. As days with drizzle, hail and thunderstorm are reckoned any day on which such phenomena occurred, regardless of the amount of precipitation associated with them. Furthermore, differentiation is made between fog and mist according to whether the associated visibility is lower or higher than 1 km. If fog and mist have occurred on the same day, the day is counted as one of fog. As a day with sunshine is counted any day on which sunshine has occurred, regardless of duration. As clear days are counted days on which the sum of the amount of cloud cover at (8) 7, 13 and 19[h] E. M. T. is 4 (i.e. $^4/_8$) or less. Similarly, as an overcast day is taken any day when the sum of the cloud cover at (8) 7, 13 and 19[h] E. M. T. is 20 (i.e. $^{20}/_8$) or more. Finally, a day with snow cover is a day on which $^3/_4$ or more of the ground is covered by snow.

[6]) Jahrbuch des Norwegischen Meteorologischen Instituts für 1920, S. XI og Norsk Meteorologisk Årbok 1949, S. 135 og 139.

**Avvikelser fra normalene.** — Tabellene på side 15 gir avvikelsene i det midlere lufttrykk ($\Delta P$) og i middeltemperaturene ($\Delta T$) i 1953 fra middelverdiene for perioden 1901—1930.

**Sjøtemperaturen ($T_1$).** — Måneds- og årsmidler for temperaturen i havoverflaten 1953 på 12 representative kyststasjoner finnes på side 15.

**Pentademidler av lufttemperaturen.** — Tabellene på side 104—105 viser temperaturmidlene i perioder på 5 dager for 37 utvalgte stasjoner i 1953. Midlene er beregnet av formelen

$$M = n - k(n - \mathrm{Min})$$

hvor $n$ er midlet av observasjonene kl. (8) 7, 13 og 19 M. E. T., $k$ en faktor som varierer med årstiden og fra stasjon til stasjon[7]) og Min den midlere minimumstemperatur i 5-dagers perioden.

Oslo i september 1954.

[7]) Jahrbuch des Norwegischen Meteorologischen Instituts für 1943, S. 96—97 og Norsk Meteorologisk Årbok 1949, S. 136—137 og 140—141.

**Departures from normals.** — The tables on p. 15 give the departures of the mean pressures ($\Delta P$) and the mean temperatures ($\Delta T$) for 1953 from the mean values for the period 1901—1930.

**Sea surface temperatures ($T_1$).** — Monthly and annual means of the sea surface temperature 1953 at 12 representative coastal stations are given on p. 15.

**Five-day means of temperature.** — The tables on pp. 104—105 give the mean temperature for consecutive periods of 5 days for 37 selected stations in 1953. The means are computed from the formula

$$M = n - k(n - \overline{\mathrm{Min}})$$

where $n$ is the mean of the observations at (8) 7, 13 and 19h E. M. T., $k$ a factor appropriate for the station and season[7]) and $\overline{\mathrm{Min}}$ is the mean minimum temperature during the 5-day period.

Oslo, September 1954.

# SYMBOLER

## Symboler som forekommer i rubrikkene «Skydekke og vær» og «Værforløp» (Ekstensotabellene).

∞ Ølrøyk.
= Tåkedis.
≡ Tåke.
, Yr.
• Regn
* Snø.
⁂ Sludd.
△ Kornsnø.
△ Iskorn.
↔ Isnåler.
▽ Regnbyer.
▽ Snøbyer.
▽ Sluddbyer.
* Sprøhagl.
△ Hagl.
▲ Ishagl.
⸜ Kornmo.

⊙ Solskinn.
⊕ Halo (værgard).
◐ Krans.
◠ Regnbue.
⌓ Nordlys.
n om natten.
a om formiddagen.
p om ettermiddagen.
na etter midnatt (før morgenobservasjonen).
np før midnatt (etter kveldsobservasjonen).
i med avbrytelser.
( ) blir satt omkring værfenomener som forekommer innen synsvidde (men ikke på selve stasjonen).
0 og 2 som øvre indeks betegner intensitetsgraden, 0 svakt eller lett, 2 sterkt eller tett.

## Andre symboler.

P Lufttrykk.
T Lufttemperatur.
$T_1$ Sjøtemperatur.
U Relativ fuktighet.
D Vindretning.
v Vindhastighet.
F Vindstyrke.
C Vindstille.
V Synsvidde.
R Nedbørhøyde.
N Skydekke.
w Vær.
W Værforløp.
$\varphi$ Geografisk bredde.
$\lambda$ Geografisk lengde.
g Tyngdens accelerasjon.
$\Delta$ G Forskjellen mellom den benyttede tid og Greenwich tid.
$H_s$ Stasjonens høyde over havet.
$H_b$ Barometerets høyde over havet (overkant av kvikksølvkoppen).
$h_t$ Høyden over marka av termometerkula.
$h_a$ Høyden over marka av vindhastighetsmåleren.
$h_d$ Høyden over marka av vindretningsmåleren (vindfløy, vaker).
$h_r$ Høyden over marka av nedbørmålerens overkant.
$\Phi$ Geopotensial.
m som nedre indeks angir midlet av elementet.
— over betegnelsen (Max, Min) blir benyttet for å angi at det er en middelverdi.
$\Delta$ Avvikelse.
$\Sigma$ Sum.
n Antall observasjoner.
An Årsverdi.
M Månedsverdi.
Dat Datum.
Dies Døgnmiddel.

# SYMBOLS

## Symbols occurring in the columns «Skydekke og vær» and «Værforløp» of the Ekstensotabell.

- ∞ Haze.
- ≡ Mist.
- ≡ Fog.
- • Drizzle.
- • Rain.
- * Snow.
- Sleet.
- Granular snow.
- Grains of ice.
- Ice needles.
- Shower of rain.
- Shower of snow.
- Shower of rain and snow (sleet).
- Soft hail.
- △ Small hail.
- ▲ Hail.
- Distant lightning.
- Thunderstorm.
- Drifting snow.
- Dew.
- Hoarfrost.
- Glazed frost.
- V Soft rime.
- Gale ($F_x \geqq 9$).
- ⊙ Sunshine.
- Solar halo.
- Solar corona.
- ◠ Rainbow.
- Aurora Borealis.
- n in the night.
- a in the forenoon.
- p in the afternoon.
- na after midnight.
- np before midnight.
- i intermittent.
- ( ) brackets are used to indicate weather phenomena occurring in the neighbourhood of the station, but not at the station itself.

0 and 2 appearing as superscript indicate the intensity of the weather phenomena, such that 0 = slight or weak, and 2 = heavy or thick.

## Further symbols.

- P Atmospheric pressure.
- T Air temperature.
- $T^1$ Sea surface temperature.
- U Relative humidity.
- D Wind direction.
- v Wind speed.
- F Wind force.
- C Calm.
- V Visibility.
- R Amount of precipitation.
- N Amount of cloud cover.
- w Weather.
- W Sequence of weather.
- $\varphi$ Latitude.
- $\lambda$ Longitude.
- g Acceleration of gravity.
- $\Delta$ G Difference between the time used and Greenwich time.
- $H_s$ Height of station above mean sea level.
- $H_b$ Height of the barometer cistern above mean sea level.
- $h_t$ Height above the ground of the thermometer bulb.
- $h_a$ Height above the ground of the anemometer.
- $h_d$ Height above the ground of the wind vane.
- $h_r$ Height above the ground of the collecting surface of the precipitation gauge.
- $\Phi$ Geopotential.
- m as subscript, indicate the mean value of an element.
- — (e.g. $\overline{\text{Max}}$, $\overline{\text{Min}}$) indicates a mean value.
- $\Delta$ Departures.
- $\Sigma$ Sum.
- n Number of observations.
- An Annual value.
- M Monthly value.
- Dat Date.
- Dies 24-hour means.
