## MONTHLY MEANS OF UPPER WINDS

During the month, observations of velocity and direction of upper winds were made at 55 stations in India. ut of these, at 40 stations all the observations were taken by means of pilot balloons and at 14 stations some bservations were made by means of pilot balloons while the other observations by the radiowind method. In the ase of Bangalore, the observations were taken by following radiosonde balloon by means of an optical theodolite. 'articulars of these stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the table overleaf. All radiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data upto 9.0 Km. above mean sea level are given under Table IV and data above 9.0 Km. above mean sea level under Table V.

In Tables IV and V :-

N = represents the number of observations;

S = represents the mean wind speed in metres per second irrespective of direction;

V = represents the resultant mean velocity in metres per second;

D = represents the direction of the resultant mean wind in degrees East of North.

Means and resultant winds are given in this publication for the following heights :-

Surface, 0.15 Km. a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0, and 36.0 Km. above mean sea level. Of these the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0 and 30 Km. above mean sea level are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150, 100, 70, 50, 30, 20 and 10 Mb. respectively.

# INDIA WEATHER REVIEW, 1966

## Monthly Weather Report

## JUNE

Published by authority of the Government of India

Chief features :

(i) Advance of the southwest monsoon to cover the entire country outside West Rajasthan and the western parts of the Punjab by the end of the third week;

(ii) Good rainfall activity over the Peninsula during the first fortnight followed by feeble activity later;

(iii) Generally good rainfall over north and central India during the second fortnight with heavy rains leading to floods in the Punjab during the third week;

(iv) Pronounced monsoon activity in Assam causing serious floods;

(v) Formation and movement of three Bay depressions; and

(vi) Moderate to severe heat wave over large areas of north India mostly during the second week.

A well marked low pressure area which had developed at the end of last month moved westwards and concentrated into a depression by the evening of 2nd with centre near Lat. 15.0° N and long. 88.0°E. Moving rapidly in a northwesterly direction it crossed coast near Kalingapatam by the next evening and weakened into a trough of low pressure over Andhra Pradesh. The trough moved very slowly westwards across the north Peninsula to east central Arabian Sea off the Mysore coast where it persisted on 6th and 7th. Thereafter, it shifted slowly northwestwards and became unimportant over the northeast Arabian Sea by 13th. Under its influence the southwest monsoon set in over south Kerala on 1st which is about the normal date. The monsoon advanced steadily northwards to cover the entire Peninsula by the middle of the month. Some of the noteworthy amounts of rainfall recorded were : Alleppey and Punalur 11 cm. each on 2nd, Fort Cochin and Alleppey 10cm. each and Madurai 8 cm. on 3rd, Minicoy 7 cm. on 4th, Mangalore 8 cm. on 6th, Amini 10 cm. on 10th and Cuddapah 8 cm. on 11th.

The Bay branch of the monsoon also extended into Assam by 6th and into the remaining parts of northeast India by the middle of the month. Some of the noteworthy rainfalls recorded were : Dhubri 18 cm. on 2nd, Pasighat 23 cm. on 3rd, 13 cm. on 4th, 11 cm. on 5th, 19cm. on 6th, 19 cm. on 7th and 16 cm. on 9th, North Lakhimpur 13 cm. on 9th, Silchar 12 cm. and Haflong 10 cm. on 10th, Kailashahar 12 cm. on 11th, Tezpur 11 cm. on 12th and Imphal 11 cm. on 14th. The prolonged spell of heavy rains in Assam led to serious floods there during the second week. According to press reports, communication with Assam was completely cut off due to breaches and flooding caused by the continued heavy rains and standing crops were damaged. About seven lakh people were reported to have been affected by the floods in Cachar district alone. 12 persons were reported to have lost their lives. The flood situation, however, began to improve from 15th in North Assam.

A well marked low pressure area developed over the north Bay of Bengal on 15th. It intensified into a deep depression by the next morning with centre about 300 kms. southeast of Calcutta. Moving northnorthwestwards, it crossed the Sunderbans coast during the night of 16th-17th and began to recurve northeastwards. It weakened into a depression by the morning of 18th, centred about a hundred kms. east of Agartala. Weakening further it moved away eastwards. Another low pressure area formed over East Pakistan and neighbourhood on 20th. It shifted slightly westwards and persisted over Gangetic West Bengal and adjoining Bihar Plateau and Orissa till 26th. Later, it shifted southeastwards to the head Bay of Bengal and concentrated into a depression by the morning

of 28th with centre about 150 kms. south of Calcutta. The depression moved northwards and crossed coast the same day. On 29th morning it was centred near Berhampore. Later it weakened, moved northwestwards and was lying as a low pressure area over Bihar Plains on 30th. Under the influence of these two systems, the monsoon was fairly active over most parts of northeast India. Some of the heavy rainfalls recorded were : Sandheads and Chandbali 9 cm. each on 16th, Agartala 13 cm. and Kailashahar 9 cm. on 18th, Haflong 24 cm., Silchar 17 cm., Kohima 10 cm. and Gorakhpur 9 cm. on 19th, Gauhati 9 cm. on 23rd, Pasighat 15 cm. and Chaibasa 12 cm. on 24th, Sambalpur 13 cm. and Jamshedpur 9 cm. on 25th, Jharsuguda 9 cm. on 26th, Balasore 9 cm. on 28th and Krishnanagar 9 cm. on 30th. According to press reports, the flood situation in Cachar district, Manipur and Tripura worsened during the third week due to the continuous heavy rains. Half of Imphal town was under water and the town was cut off from air and land routes. Standing paddy crop in Tripura State was damaged and nearly 8 lakh people were affected by the floods.

The advance of the monsoon into Gujarat State and the central parts of the country was delayed by about a week as compared with the normal dates. The seasonal low over West Pakistan and Rajasthan became active at the beginning of the third week and the monsoon made a rapid advance over north India and covered the entire country except West Rajasthan and the western parts of the Punjab by the end of the week. Consequently,there was excess rainfall over northwest India, Uttar Pradesh and the central parts of the country. Rewa recorded 9 cm. of rain on 18th, Abu 18 cm. on 19th and Dehra Dun 12 cm. and Idar 9 cm. on 20th. According to press reports, the Pathankot-Jullunder railway lines were breached at several points due to heavy rains and traffic on this sector had to be suspended. An upper air cyclonic circulation developed over Gujarat State and adjoining Rajasthan on 23rd and persisted there till 25th, causing good rainfall there. Veraval recorded 16 cm. of rain on 23rd. The monsoon was also active in Uttar Pradesh and adjoining areas during the last week. Some of the heavy rainfalls recorded were Dehra Dun 13 cm. on 24th, 15 cm. on 25th, 9 cm. on 26th, 16 cm. on 27th and 13 cm. on 28th, Askote 17 cm. on 24th, Bareilly 21 cm. on 26th and Hardoi 10 cm. on 28th. According to press reports, the torrential rains caused widespread damage in Dehra Dun and road traffic was blocked by streams of rain water in the western Doon Valley.

The monsoon remained generally feeble over the Peninsula during the second fortnight.However, moderate rain with a few heavy falls occurred along the west coast on a few days. Ratnagiri and Honavar recorded 9 cm. of rain each on 15th, Calicut 9 cm. on 16th, Alleppey 9 cm. on 20th, Honavar 12 cm. on 21st and Calicut and Mangalore 10 cm. each and Fort Cochin 9 cm. on 30th.

The fairly active western disturbance which was lying over the Punjab and Jammu and Kashmir at the end of last month moved away eastwards by 2nd without causing any appreciable precipitation. Another feeble western disturbance moved eastwards across the north of the country during the period 11th-12th and under its influence there was incursion of moist southwesterlies into northwest India leading to dust or thunderstorms at a number of places.

Day temperatures were above normal over practically the entire north and central India from the beginning of the month. With further rise in the day temperatures, a moderate to severe heat wave affected Uttar Pradesh, western parts of Bihar State and North Madhya Pradesh on 6th. It extended eastwards upto West Bengal by the next day. From 9th to 12th the heat wave was confined to east Uttar Pradesh, Bihar State and adjoining areas of east Madhya Pradesh, Gangetic West Bengal and adjoining parts of Orissa. The highest maximum temperature of 49°C was recorded at Orai and Banda in Uttar Pradesh on 8th, the highest departure from normal of maximum temperature of +12°C was reported from Berhampore in Gangetic West Bengal on 9th. The heat wave abated after 12th. Day temperatures remained generally below normal over northwest India and Uttar Pradesh during the second fortnight, being markedly so over northwest India during the third week and also over Uttar Pradesh during the last week. They were also below normal on most of the days over Assam. Over the Peninsula day temperatures were above normal during the second and fourth weeks.

The rainfall for the month was in large excess in Bihar Plateau, Uttar Pradesh, Punjab, Himachal Pradesh, East Rajasthan, East Madhya Pradesh and Rayalaseema; in moderate excess in Jammu and Kashmir, Assam, Orissa and Madras; in slight excess in Western Rajasthan, Gujarat and Saurashtra and Kutch and normal in Gangetic West Bengal and Arabian Sea Islands. It was in slight defect in West Madhya Pradesh, Coastal Mysore and Kerala; in moderate defect in Sub-Himalayan West Bengal, Bihar Plains, Konkan, Madhya Maharashtra, Marathwada, Coastal Andhra Pradesh and North Interior Mysore, and in large defect in the Bay Islands, Vidarbha, Telangana and South Interior Mysore.

The mean maximum temperature was above normal in Bihar Plains, Marathwada and Interior Mysore and below normal in Assam, Punjab and East Rajasthan. It was normal over the rest of the country.

The mean minimum temperature was above normal in Himachal Pradesh and below normal in West Uttar Pradesh and Rajasthan. It was normal over the rest of the country.

The mean relative humidity in the morning was above normal in West Uttar Pradesh, Punjab, Himachal Pradesh, and East Madhya Pradesh and below normal in Marathwada. It was normal over the rest of the country.

The mean relative humidity in the evening was above normal in West Uttar Pradesh, Punjab, Himachal Pradesh, Jammu and Kashmir and East Madhya Pradesh and below normal in Bihar Plains, Marathwada, Vidarbha and Interior Mysore. It was normal over the rest of the country.

The mean cloud amount in the morning was above normal in West Uttar Pradesh, Punjab, Himachal, Pradesh, and Rajasthan. It was normal over the rest of the country.

The mean cloud amount in the evening was above normal in West Uttar Pradesh, Punjab and West Rajasthan and below normal in Bihar Plains. It was normal over the rest of the country.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 32 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. I.S.T. of the date noted in the succeeding column; similarly the heaviest rainfall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hrs. I.S.T. of the date given in the succeeding column.

# MONTHLY MEANS OF UPPER WINDS.

During the month, observations of velocity and direction of upper winds were made at 55 stations ı India. Out of these, at 40 stations all the observations were taken by means of pilot balloons and at ı stations some observations were made by means of pilot balloons while the other observations by the adiowind method. In the case of Bangalore, the observations were taken by following radiosonde balloon by eans of an optical theodolite. Particulars of these stations, their co-ordinates and the approximate times f the regular pilot balloon and rawin ascents at each station are given in the table overleaf. All adiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled imes of regular observations have been used for averaging.

Data upto 9.0 km. a.m.s.l. are given under Table IV and data above 9.0 km. a.m.s.l. under Table V.

In Tables IV and V :-

N = represents the number of observations;

S = represents the mean wind speed in metres per second irrespective of direction;

V = represents the resultant mean velocity in metres per second;

D = represents the direction of the resultant mean wind in degrees East of North.

Means and resultant winds are given in this publication for the following heights :-

Surface, 0.15 km. a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 4.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0, and 36.0 km. a.m.s.l. Of these the levels 1.5, 3.0, .4, 7.2, 9.0, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0 and 30 km. a.m.s.l. are considered as the best pproximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150, 100, 70, 50, 30, 20, nd 10 mb. respectively.

## Monthly Weather Report

## JULY

Published by authority of the Government of India

Chief features :-

(i) Further advance of the monsoon to cover the entire country by 6th;

(ii) Continuation of weak monsoon conditions till the middle of second week leading to serious water shortage in Mysore, Maharashtra and Gujarat States;

(iii) General revival and maintenance of the monsoon activity thereafter till the end of the month; and

(iv) Formation and movement of two Bay depressions.

A low pressure area which formed over east Uttar Pradesh on the last day of June moved eastnortheastwards to Sub-Himalayan West Bengal on 2nd July. Later it became less marked. Under its influence, the monsoon was fairly active over northeast India, East Uttar Pradesh and East Madhya Pradesh on the first three days of the month. Later, the axis of the monsoon trough shifted northwards to the foot of the Himalayas and the rainfall activity continued over Assam and Sub-Himalayan West Bengal but was less intense. Some of the noteworthy amounts of rainfall recorded were : Baghdogra 25 cm., Kanpur and Lucknow (Amausi) 12 cm. each, Kalimpong and Lucknow City 11 cm. each and Jalpaiguri and Darjeeling 10 cm. each on 1st, Pasighat 11 cm. on 2nd and Silchar 10 cm. on 3rd. According to press reports, the entire plains of Assam were in the grip of a second wave of floods with breaches of bunds of the Brahmaputra.

An active western disturbance moved eastwards across northwest India during the period 3rd to 7th causing good rainfall there. The monsoon also advanced further to cover the entire country by 6th.

The monsoon continued to be weak over the Peninsula and also over the central parts of the country during the first week. However, Coastal Mysore and Kerala received moderate to heavy rainfall on a few days. Amini in the Arabian Sea Islands recorded 16 cm. of rain on 4th.

Although thunderstorms occurred during the second week over many parts of the Peninsula where the showers gave welcome relief from a prolonged dry spell, a very serious situation developed in regard to the supply of water in Bombay City and suburbs due to the absence of rains in the catchment areas of the lakes in the weatern ghats.

A revival of the monsoon activity began to take place by about the middle of the second week and the activity was evenly maintained for the rest of the month. A low pressure area developed over the south Peninsula on 8th. Moving slowly in a northwesterly direction, it lay as a trough of low pressure over the east central Arabian Sea off Mysore and south Maharashtra coasts on 11th. Thereafter, it moved northnorthwestwards and merged into the seasonal trough by 17th. Under its influence, the monsoon activity began to revive over Kerala on 10th and the activity extended northwards later. Amini recorded 12 cm. of rain on 10th, Honavar 18 cm. on 13th, and Panjim (Goa) 15 cm. on 14th.

Another low pressure area from the east moved into the north Bay of Bengal on 15th. It intensified into a depression by the morning of 17th, with centre about 250 kms. east of Puri. Moving westwards it crossed the Orissa coast near Paradeep the next morning. Thereafter, it moved westnorthwestwards and weakening into a low pressure area by 19th, moved across the central parts

of the country and Gujarat State. It finally merged into the seasonal low by 21st. This was followed by a low pressure area which formed over the northwest and adjoining west central Bay of Bengal on 21st. Moving inland on 23rd it weakened over west Orissa and adjoining Madhya Pradesh and merged into the seasonal trough by 24th. Another low pressure area which also developed over the northwest and adjoining west central Bay of Bengal on 25th moved inland next day and weakened over Bihar Plateau and adjoining areas by 27th. The last system of the month appeared as a low pressure area over the northwest angle of the Bay of Bengal on 27th. It intensified into a depression by the morning of 28th with centre about 200 kms. south of Calcutta. Moving westnorthwestwards, it crossed coast between Contai and Balasore the next morning and lay centred about 100 kms. north of Jabalpore on the morning of 31st. Under the influence of the above four systems, the monsoon activity was evenly maintained over the country during the second fortnight with spells of heavy rains over the central parts of the country and adjoining areas. Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 32 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. I.S.T. of the date noted in the succeeding columns; similarly the heaviest rainfall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hrs. I.S.T. of the date given in the succeeding column.

## MONTHLY MEANS OF UPPER WINDS

During the month, observations of velocity and direction of upper winds were made at 5 stations in India. Out of these, at 40 stations all the observations were taken by means of ilot balloons and at 15 stations some observations were made by means of pilot balloons while he other observations by the radiowind method. In the case of Bangalore, the observations were aken by following radiosonde balloon by means of an optical theodolite. Particulars of these tations, their co-ordinates and the approximate times of the regular pilot balloon and rawin scents at each station are given in the table overleaf. All radiowind ascents have been indicated y means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the ıcheduled times of regular observations have been used for averaging.

Data upto 9.0 km. above mean sea level are given under Table IV and data above 9.0 km. ıbove mean sea level under Table V.

In Tables IV and V :

N = represents the number of observations;

S = represents the mean wind speed in metres per second irrespective of direction;

V = represents the resultant mean velocity in metres per second;

D = represents the direction of the resultant mean wind in degrees East of North.

Means and resultant winds are given in this publication for the following heights:-

Surface, 0.15 km. a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5,4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0, and 36.0 km. above mean sea level. Of these the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0 and 30 km. above mean sea level are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150, 100, 70, 50, 30, 20 and 10 mb. respectively.

## Monthly Weather Report

## AUGUST

Published by authority of the Government of India

Chief features :-

(i) Monsoon activity confined to north India and central parts of the country;

(ii) Heavy rains leading to floods in northern parts of Assam, West Bengal and Bihar State during the last week; and

(iii) Feeble monsoon activity over the Peninsula but with spells of good rainfall over the southeastern parts.

The depression which was lying over north Madhya Pradesh on 31st July weakened into a low pressure area by 1st August. Later,it shifted northwards and merged into the seasonal trough by 2nd. Under its influence, good rainfall activity continued over north and central India. The monsoon was also active over West Madhya Pradesh and West Uttar Pradesh. Some of the heavy rainfalls recorded during this sepll were : Pachmarhi and Kalimpong 10 cm. each on 1st, Gwalior 14 cm. and Aligarh and Tonk 10 cm. each on 2nd and Delhi (Palam) 12 cm. and Jharsuguda 10 cm. on 3rd.

A low pressure area formed over Gangetic West Bengal and neighbourhood on 6th. Moving westnorthwestwards, it lay over southwest Uttar Pradesh and neighbourhood on 9th. Later it moved to northwest Uttar Pradesh and the Punjab where it lay as an upper air trough on 11th. It finally moved away eastwards across the hills of west Uttar Pradesh and of the Punjab by the next day. In association with it the monsoon was active in the central parts of the country, Uttar Pradesh and northwest India. The noteworthy amounts of rainfall recorded were : Mussoorie 14 cm., Dharmsala 12 cm., Dharchula 12 cm. and Dehra Dun and Najibabad 11 cm. each on 6th and Dehra Dun 15 cm. and Jamshedpur 13 cm. on 7th.

Another feeble low pressure area formed over Bihar Plateau and adjoining Gangetic West Bengal on 12th. It persisted with no appreciable movement till 14th. Later, it shifted slightly westwards and persisted as an upper air cyclonic circulation over northeast Madhya Pradesh and neighbourhood till 20th. Thereafter it moved northwestwards to northeast Rajasthan and finally moved northeastwards, across the Western Himalayas by 22nd. This system also helped to maintain the monsoon activity over north and central India. Najibabad recorded 18 cm. of rain on 14th, Hyderabad 15 cm. and Champa 13 cm. on 15th, Hissar 14 cm. on 16th, Malda 15 cm. on 18th and Mussoorie 19 cm. on 19th. According to press reports, the rivers in the Punjab rose in spate during the third week causing breaches of bunds and flooding of a few low lying villages in the Punjab and Rajasthan.

The axis of the monsoon trough shifted northwards and lay close to the foot of the Himalayas during the last week. Consequently the rainfall over the central parts of the country decreased considerably and there was heavy rainfall over the Himalayas and adjoining plains. The rainfall , however, decreased towards the end of the month. Some of the noteworthy amounts of rainfall recorded were : Jalpaiguri 18 cm. and Pasighat 17 cm. on 21st, Pasighat 14 cm. on 22nd, Motihari 12 cm. on 23rd, Baghdogra 22 cm. and Cooch Behar 21 cm. on 24th, Jalpaiguri 23 cm. on 25th and Nainital 18 cm. on 27th. According to press reports, the heavy rains led to serious floods in the northern parts of Assam, West Bengal and Bihar State causing damage to standing crops and disrupting surface communications. Nearly one and a half lakh people were reported to have been affected by the floods in Assam and 3.6 lakh people in north Bihar. Crops worth about Rs.25 crores over an area of 15.5 lakh acres were also reported to have been destroyed in north Bihar.

Feeble monsoon conditions prevailed generally over the Peninsula during the month. However, there were spells of good rainfall in the southeastern parts. An upper air cyclonic circulation developed over the east central and adjoining northeast Bay of Bengal on 28th. It shifted slowly westwards and lay as an extended trough over the north Peninsula and adjoining Bay on 31st. At the same time,a trough of low pressure also developed over the east central Arabian Sea off the Mysore coast and persisted there during the period 28th-31st. Under the influence of these two systems, there was well distributed rainfall over the Peninsula towards the end of the month.

The total rainfall in the month was in large excess in Sub-Himalayan West Bengal and Madras State, in moderate excess in West Uttar Pradesh, Punjab and Rayalaseema, and in slight excess in Assam and West Rajasthan. It was normal in the Bay Islands, Bihar Plateau, Jammu and Kashmir and Coastal Andhra Pradesh. It was in slight defect in Gangetic West Bengal, Bihar Plains, East Uttar Pradesh, Himachal Pradesh, West Madhya Pradesh, Telangana, North Interior Mysore and Arabian Sea Islands, in moderate defect in Orissa, East Rajasthan, East Madhya Pradesh and Vidarbha and in large defect in Gujarat, Saurashtra, Konkan, Madhya Maharashtra, Marathwada, Coastal Mysore, South Interior Mysore and Kerala.

The mean maximum temperature was above normal in Himachal Pradesh, Gujarat, Saurashtra, Madhya Maharashtra, Marathwada, Vidarbha, Coastal Andhra Pradesh, Telangana, North and South Interior Mysore and was normal over the rest of the country.

The mean minimum temperature was normal over the country.

The mean relative humidity in the morning was normal over the country.

The mean relative humidity in the evening was below normal in West Rajasthan, Gujarat, Saurashtra, Madhya Maharashtra, Coastal Mysore and South Interior Mysore. It was normal over the rest of the country.

The mean cloud amount in the morning was normal all over the country.

The mean cloud amount in the evening was below normal in West Rajasthan and Saurashtra and it was normal over the rest of the country.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 32 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. I.S.T. of the date noted in the succeeding column; similarly the heaviest rainfall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hrs. I.S.T. of the date given in the succeeding column.

## MONTHLY MEANS OF UPPER WINDS

During the month, observations of velocity and direction of upper winds were made at 55 stations in India. Out of these, at 40 stations all the observations were taken by means of pilot balloons and at 15 stations some observations were made by means of pilot balloons while the other observations by the radiowind method. In the case of Bangalore, the observations were taken by following radiosonde balloon by means of an optical theodolite. Particulars of these stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the table overleaf. All radiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data upto 9.0 km. above mean sea level are given under Table IV and data above 9.0 km. above mean sea level under Table V.

In Tables IV and V :

N = represents the number of observations.

S = represents the mean wind speed in metres per second irrespective of direction.

V = represents the resultant mean velocity in metres per second;

D = represents the direction of the resultant mean wind in degrees East of North.

Means and resultant winds are given in this publication for the following heights :-

Surface, 0.15 km. a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5,4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0, and 36.0 km. above mean sea level. Of these the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0 and 30 km. above mean sea level are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150, 100, 70, 50, 30, 20 and 10 mb. respectively.

# INDIA WEATHER REVIEW, 1966

## Monthly Weather Report

## SEPTEMBER

Published by authority of the Government of India

Chief features:-

(i) A general revival and maintenance of the monsoon activity during the first ten days.

(ii) Heavy rains over northwest India causing serious floods in Srinagar valley during the second week.

(iii) Formation and movement of a depression and a severe cyclonic storm in the Bay of Bengal and the development of a depression in the Arabian Sea; and

(iv) Withdrawal of the monsoon from northwest India, Gujarat State, West Madhya Pradesh and Uttar Pradesh during the second fortnight.

The trough of low pressure lying over east central Arabian Sea off Mysore coast at the end of August shifted northwards and became unimportant by 2nd. The upper air trough which was lying over the north Peninsula and adjoining Bay of Bengal on 31st August moved slightly northwards and a low pressure area formed over the north Bay of Bengal on the morning of 2nd September. It intensified into a depression by the same evening with centre about 200 kms. east of Puri. Moving in a westerly direction, it crossed the Orissa coast near Puri in the afternoon of 3rd. It continued to move westwards till 5th. Later, it took a northwesterly direction till 7th evening when it was centred near Jodhpur. Thereafter, it recurved northnortheastwards and broke up over the Western Himalayas by 9th. Under its influence, there was a general revival of the monsoon activity over the country at the beginning of the month and it was maintained till 10th. The monsoon was quite active over the north Peninsula, central parts of the country and northwest India. Some of the noteworthy amounts of rainfall recorded were : Tezpur 15 cm. on 1st, Goa 13 cm. and Devgarh 11 cm. on 3rd, Ratnagiri 13 cm., Jagdalpur 12 cm. and Bhira 11 cm. on 4th, Harnai 17 cm., Nizamabad 13 cm. and Ramagundam 12 cm. on 5th, Vallabh Vidyanagar 19 cm. on 7th, Abu 24 cm., Deesa 21 cm. and Ahmadabad and Dalhousie 14 cm. each on 8th, Dharmsala and Dras 18 cm. each, Jammu and Quazigund 17 cm. each and Najibabad 12 cm. on 9th. According to press reports, the flood waters of the Jhelum caused breaches of its embankment and inundated 50 villages in Srinagar valley. The air service between Srinagar and Delhi remained suspended for three days due to bad weather; the Srinagar - Jammu road was also closed for traffic for about a week due to breaches.

After the depression had moved off, the monsoon weakened generally over the country. However, rainfall continued to occur over northwest India and the Peninsula.

A low pressure area moved from the east into the north Bay of Bengal on 9th and persisted there till 14th. Thereafter, it moved slowly northeastwards to south Assam where it became unimportant by 14th. Under its influence there was good rainfall over northeast India with heavy rains in Assam. Krishnanagar recorded 11 cm. of rain and Agartala 10 cm. on 17th. An upper air trough developed over the central parts of the Peninsula on the 15th and persisted there with no appreciable movement till 22nd. Later it weakened and became unimportant by 24th. In association with it, a spell of good rainfall occurred over the Peninsula during the third week. Bellary recorded 11 cm. of rain on 18th and Hassan 9 cm. on 21st.

An upper air trough developed over the Punjab and adjoining Rajasthan on 14th. It persisted there till 18th and shifted later slightly southeastwards to West Madhya Pradesh and West Uttar Pradesh where it became unimportant. In association with it, moderate rainfall occurred over the Western Himalayas in the early parts of the third week. A few light showers also occurred over Gujarat State, Rajasthan and west Madhya Pradesh later. Another upper air trough moving eastwards across the Western Himalayas during the period 22nd - 24th caused isolated showers over northwest India.

The monsoon began to withdraw from northwest India from 20th and by the end of the month, it had withdrawn from Gujarat State, West Madhya Pradesh and Uttar Pradesh.

A low pressure area from the east moved into the southeast Bay of Bengal on 25th and concentrated into a depression by the morning of 27th with centre near Lat. 9.5°N and Long. 90.0°E. Moving in a northerly direction, it intensified into a deep depression by the next morning with centre near Lat. 12.5°N and Long. 89.5°E. Later, it took a northwesterly course and further intensified into a cyclonic storm by the morning of 29th, with centre near Lat. 15.0°N and Long. 85.5°E. Thereafter, it recurved northeastwards and, intensifying further into a severe cyclonic storm, lay centred near Lat. 20.5°N and Long. 88.5°E on the evening of 30th. An upper air low moved westwards across the south Peninsula on 26th and a well marked low pressure area formed over the east central Arabian Sea off the north Kerala and Mysore coasts the next day. It intensified into a depression by the morning of 29th with centre near Lat. 12.5°N and Long. 72.5°E and was persisting there on 30th. Under the influence of these two systems, there was a spell of good rains over the Peninsula. Trivandrum and Alleppey recorded 11 cm. of rain each on 26th, Fort Cochin 9 cm. on 27th and Calicut 10 cm. and Trivandrum 9 cm. on 30th.

Rainfall was in large excess in Jammu and Kashmir, Madras, South Interior Mysore and Kerala, in moderate excess in North Interior Mysore, in slight excess in Telangana and Arabian Sea Islands, in slight defect in Assam, Sub-Himalayan West Bengal, Punjab, Himachal Pradesh, Madhya Maharashtra, Coastal Andhra Pradesh and Coastal Mysore and in moderate defect in Gangetic West Bengal, Orissa, West Uttar Pradesh, East Rajasthan, West Madhya Pradesh and Saurashtra. It was in large defect in Bihar, East Uttar Pradesh, East Madhya Pradesh and Marathwada and normal over the rest of the country.

The mean maximum temperature was above normal in Orissa, Bihar, East Uttar Pradesh, Madhya Pradesh, Gujarat, Saurashtra & Kutch and Vidarbha. It was normal over the rest of the country except Jammu and Kashmir where it was below normal.

The mean minimum temperature was below normal in Sub-Himalayan West Bengal, Uttar Pradesh, Punjab, Himachal Pradesh, Jammu and Kashmir, Rajasthan and West Madhya Pradesh. It was normal over the rest of the country.

The Relative Humidity in the morning was above normal in Rayalaseema and below normal in Bihar, Uttar Pradesh, Rajasthan and Madhya Pradesh. It was normal over the remaining parts of the country.

The Relative Humidity in the evening was above normal in Jammu and Kashmir and Rayalaseema and below normal in Bihar, Uttar Pradesh, Himachal Pradesh, Rajasthan, Madhya Pradesh, Gujarat, Saurashtra & Kutch, Marathwada, Vidarbha and the Arabian Sea Islands. It was normal over the rest of the country.

The mean cloud amount in the morning was below normal in Gangetic West Bengal, Orissa, Bihar, Uttar Pradesh, Himachal Pradesh, Rajasthan, Madhya Pradesh, Gujarat and Saurashtra & Kutch and was above normal in Jammu and Kashmir. It was normal over the rest of the country.

The mean cloud amount in the evening was below normal in Sub-Himalayan West Bengal, Bihar, Uttar Pradesh, East Rajasthan, Madhya Pradesh, Gujarat and Saurashtra & Kutch and was above normal in Jammu & Kashmir. It was normal over the rest of the country.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 32 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. I.S.T. of the date noted in the succeeding column; similarly the heaviest rainfall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hours I.S.T. of the date given in the succeeding column.

## MONTHLY MEANS OF UPPER WINDS

During the month, observations of velocity and direction of upper winds were made at 55 stations in India. Out of these, at 40 stations all the observations were taken by means of pilot balloons and at 15 stations some observations were made by means of pilot balloons while the other observations by the radiowind method. In the case of Bangalore, the observations were taken by following radiosonde balloon by means of an optical theodolite. Particulars of these stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the table overleaf. All radiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data upto 9.0 km. above mean sea level are given under Table IV and data above 9.0 km. above mean sea level under Table V.

In Tables IV and V :

N = represents the number of observations;

S = represents the mean wind speed in metres per second irrespective of direction;

V = represents the resultant mean velocity in metres per second;

D = represents the direction of the resultant mean wind in degrees East of North.

Meansand resultant winds are given in this publication for the following heights :-

Surface, 0.15 km. a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0, and 36.0 km. above mean sea level. Of these the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0 and 30 km. above mean sea level are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150, 100, 70, 50, 30, 20 and 10 mb. respectively.

## Monthly Weather Report

# OCTOBER

Published by authority of the Government of India

**Chief features :-**

i) Further withdrawal of the monsoon from the country outside the south Peninsula by 9th.

ii) Spells of heavy rains in the south Peninsula.

iii) Intensification into a cyclonic storm of the last month's depression in the Arabian Sea, and formation and movement of two other depressions.

iv) Movement of five western disturbances across northwest India causing excess precipitation over Jammu and Kashmir.

The severe cyclonic storm which was lying over the northwest Bay of Bengal on 30th September moved northeastwards and crossed the East Pakistan coast near Long. 90°E by the morning of 1st October. Weakening rapidly, it broke up against the Assam hills by the next day. Under its influence, there was well distributed rainfall over northeast India with a few heavy falls in Assam. Sagar Island recorded 11 cm. of rain on 1st, Shillong 13 cm., Kohima 12 cm., Silchar 11 cm. and Pasighat 10 cm. on 2nd and Tura 11 cm. on 3rd. According to press reports, the coastal districts of East Pakistan and the off shore islands suffered severe damage to property and loss of life due to the cyclone and the associated tidal waves. Unofficial reports put the cyclone death roll at more than one thousand.

The depression in the Arabian Sea lying off the Mysore and north Kerala coasts on 30th September intensified into a cyclonic storm by the morning of 1st October with centre about 200 kms. west of Mangalore. Moving in a northerly direction it weakened into a depression by 3rd morning when it was centred about 100 kms. west of Honavar. Thereafter,it moved northwestwards and weakened further into a low pressure area over the east central Arabian Sea by 5th. It finally moved away westnorthwestwards. Under its influence, there was good rainfall over the southwestern parts of the Peninsula during the first five days of the month. Alleppey recorded 8 cm of rain on 3rd.

The monsoon withdrew in stages from the remaining parts of north and central India and from the north Peninsula by 9th and was later confined to the south Peninsula.

The rainfall activity over the south Peninsula continued to be good for the rest of the month when a series of low pressure systems moved westwards across the area. An upper air cyclonic circulation developed over the Madras State and adjoining Bay of Bengal on 6th. It moved away slowly westwards across the Laccadive area by 10th. Some of the heavy rainfalls recorded during this spell were: Madras 11 cm. and Punalur 8 cm. on 6th, Vedaranniyam 9 cm., Fort Cochin and Alleppey 8 cm. each and Amini and Atirampattinam 7 cm. each on 7th, Tondi 7 cm. on 8th and Pamban 7 cm. on 9th.

A low pressure area moving from the east became well marked on 9th over the southeast Bay of Bengal and adjoining central Bay. Moving slightly westwards,it concentrated into a depression by the morning of 11th with centre near Lat. 12.0°N and Long. 86.0°E. Taking a northwesterly course, it lay centred about 250 kms. southeast of Kakinada on the evening of 12th. Later, it weakened into a low pressure area. The system persisted as an extended upper air trough over Andhra Pradesh and neighbourhood on 13th and 14th. The southern end of the trough got accentuated and an upper air cyclonic circulation developed over the south Peninsula on 15th. It moved away westwards across the Laccadive area by 18th. In association with these developments, there was good rainfall over the south Peninsula. The rainfall belt also extended to the northeastern parts of the Peninsula and northeast India on a few days. Some of the heavy rainfalls recorded were Trivandrum 16 cm. on 12th, Kalingapatam 10 cm. on 13th and Salem 14 cm. and Hassan 13 cm. on 15th.

Another low pressure area moving from the east became well marked over the southwest Bay

of Bengal on 18th. It moved across the extreme south Peninsula the next day and emerged into the Arabian Sea by 20th. Later it moved slowly northwestwards and intensified into a depression by the morning of 22nd with centre near Lat. 12°N and Long. 70°E. Thereafter, it took a westerly course and weakened over the extreme west Arabian Sea by 25th. In association with it there was heavy rainfall over the south Peninsula. Some of the noteworthy amounts of rainfall recorded were : Atirampattinam and Tondi 12 cm. each on 18th, Tiruchchirappalli 16 cm., Cuddalore 11 cm. and Nagapattinam 10 cm. on 19th and Cuddalore 13 cm. and Minicoy 9 cm. on 20th.

Two spells of rainfall occurred in the south Peninsula during the last week. The first spell occurred when an upper air low moved westwards across the extreme south Peninsula during the period 24th - 25th. Calicut recorded 10 cm. of rain and Punalur 8 cm. on 24th. The second spell occurred in association with a low pressure wave which was over the south Andaman Sea on 26th and moved westwards across the Comorin area and adjoining south Peninsula on the last day of the month. Nancowry recorded 17 cm. of rain on 26th and Punalur 5 cm. on 30th.

Although five western disturbances affected NW India, the precipitation over northwest India during the month was in defect except over Jammu and Kashmir where it was in excess. The first western disturbance moved eastwards from the Punjab across the Western Himalayas during the period 5th - 6th causing isolated showers over northwest India. The next disturbance moved into the Punjab on 11th, persisted there the next day and moved away eastwards across the Western Himalayas by 13th. Under its influence, there was good precipitation over the Western Himalayas. Srinagar recorded 7 cm. of rain on 11th. The third western disturbance affected many parts of north India during the third week. It appeared over the northern divisions of West Pakistan on 19th. Moving eastwards across the Punjab and Uttar Pradesh, it weakened over Bihar State by 23rd. In association with it, there was good rainfall over the Western Himalayas. Scattered or isolated light rain also occurred over many parts of north India as the disturbance moved eastwards. The fourth western disturbance lying over Afghanistan on 25th moved eastwards across the northern divisions of West Pakistan on 26th and passed across the Western Himalayas by the next day. The last western disturbance of the month also moved from Afghanistan across the extreme north of the country during the period 28th - 30th. In association with them, isolated precipitation occurred over Jammu and Kashmir.

Night temperatures were below normal over northeast India during the first eleven days of the month and again during the last week. They were also below normal over northwest India on a few days during the first fortnight and over the south Peninsula during the last week. They remained above normal over northwest India during the second half of the month. They were also above normal over Gujarat State and central parts of the country from 6th to 9th and again during the period 20th to 24th.

Day temperatures remained above normal almost throughout the month over the country outside the extreme northwestern and northeastern parts of the country and the south Peninsula, being appreciably to markedly so over the central parts of the country on a number of days. Even over northwest India, day temperatures were above normal during the first and third weeks and over northeast India during the last week. They became below normal over the south Peninsula from 4th to 15th and again from 18th to 24th.

The total rainfall for the month was in large excess in Jammu and Kashmir, Madras and the Arabian Sea Islands and in slight excess in South Assam, Coastal Mysore and Kerala. It was in slight defect in South Interior Mysore, in moderate defect in Bay Islands, North Assam, Gangetic West Bengal, Orissa, Bihar Plateau, Telangana, Rayalaseema and North Interior Mysore and was in large defect over the rest of the country. There was no rain in Gujarat region.

The mean maximum temperature was above normal in Orissa, Bihar Plateau, Uttar Pradesh, Rajasthan, Madhya Pradesh, Gujarat, Saurashtra & Kutch, Konkan, Madhya Maharashtra, Marathwada, Vidarbha, Telangana and Interior North Mysore. It was below normal in South Assam, Jammu and Kashmir and Madras and normal over rest of the country.

The mean minimum temperature was below normal in Assam, Sub-Himalayan West Bengal, Gangetic West Bengal, Orissa, Bihar, Uttar Pradesh, Himachal Pradesh and Rayalaseema. It was normal over the rest of the country.

The Relative Humidity in the morning was below normal in Bihar Plateau, Uttar Pradesh, East Rajasthan, Madhya Pradesh, Gujarat, Madhya Maharashtra, Marathwada and Vidarbha. It was normal over the remaining parts of the country.

The Relative Humidity in the evening was below normal in Orissa, Bihar, East Uttar Pradesh, Himachal Pradesh, East Rajasthan, Madhya Pradesh, Gujarat, Madhya Maharashtra, Marathwada, Vidarbha, Telangana and North Interior Mysore. It was normal over the remaining parts of the country, except in Jammu and Kashmir, where it was above normal.

The mean cloud amount in the morning was above normal in Punjab and Jammu and Kashmir, and normal in the Bay Islands, South Assam, Konkan, Rayalaseema, Madras State, Coastal Mysore, Interior Mysore, Kerala and the Arabian Sea Islands. It was below normal over the rest of the country.

The mean cloud amount in the evening was above normal in Punjab and Jammu and Kashmir and normal in the Bay Islands, West Uttar Pradesh, Konkan, Madhya Maharashtra, Marathwada, Rayalaseema, Madras, Mysore, Kerala and the Arabian Sea Islands. It was below normal over the rest of the country.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 32 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. I.S.T. of the date noted in the succeeding column; similarly the heaviest rainfall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hrs. I.S.T. of the date given in the succeeding column.

## MONTHLY MEANS OF UPPER WINDS

During the month, observations of velocity and direction of upper winds were made at 55 stations in India. Out of these, at 40 stations all the observations were taken by means of pilot balloons and at 15 stations some observations were made by means of pilot balloons while the other observations by the radiowind method. In the case of Bangalore, the observations were taken by following radiosonde balloon by means of an optical theodolite. Particulars of these stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the table overleaf. All radiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data upto 9.0 km. above mean sea level are given under Table IV and data above 9.0 km. above mean sea level under Table V.

In Tables IV and V :

N = represents the number of observations;

S = represents the mean wind speed in metres per second irrespective of direction;

V = represents the resultant mean velocity in metres per second;

D = represents the direction of the resultant mean wind in degrees East of North.

Means and resultant winds are given in this publication for the following heights :-

Surface, 0.15 km. a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0, and 36.0 km.above mean sea level. Of these the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, and 30 km.above mean sea level are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150, 100, 70, 50, 30, 20 and 10 mb. respectively.

Chief features :-

i) Abnormal activity of cyclonic storms with a record number of four severe cyclonic storms developing in the Bay of Bengal;

ii) Sustained rainfall activity in the south Peninsula throughout the month;

iii) Two spells of rains in northeast India, Uttar Pradesh and the central parts of the country; and

iv) Feeble activity of western disturbances.

A low pressure area which had moved into the south Andman Sea on 31st October intensified into a depression by the morning of 1st November with centre near Lat. 9.0°N and Long. 94.5°E. Moving westwards,it further intensified into a cyclonic storm by the next morning centred near Lat. 9.5°N and Long. 88.0°E. Later, it moved rapidly in a northwesterly direction and, intensifying into a severe cyclonic storm with a core of hurricane winds by the 3rd morning, crossed the north Madras coast between Cuddalore and Madras the same afternoon. It soon weakened into a depression and took a westsouthwesterly course. Emerging into the Arabian Sea near Calicut by the morning of 5th, it moved westwards somewhat slowly and again intensified into a cyclonic storm by the morning of 7th with centre near Lat. 11°N and Long. 68°E. Thereafter it took a northwesterly course and further intensified into a severe cyclonic storm with a core of hurricane winds by 10th morning centred near Lat. 15.5°N and Long. 61.0°E. On approaching the Arabian Coast on 12th, the storm appears to have weakened off rapidly. Under its influence, heavy to very heavy rains occurred over the Bay Islands and the south Peninsula. Some of the noteworthy rainfalls recorded were: Nellore 22 cm., Cuddalore 15 cm., Madras 11 cm. and Vellore 10 cm. on 4th. Strong gales also lashed the north Madras coast on 3rd. According to press reports, the storm caused serious havoc in Madras city and in Chingleput and south Arcot districts. The Madras harbour suffered heavy loss. Three ships were grounded, one of them, S.S. Progress, splitting into two. In addition to the 26 members of the crew of the above ship, a few others on the mainland also lost their lives. Due to the heavy rains, low lying areas were inundated and communications were seriously interrupted.

Another low pressure area formed over the southeast Bay of Bengal on 7th. Moving westnorthwestwards, it intensified into a depression by the next morning with centre near Lat. 8°N and Long. 84°E. It further intensified into a cyclonic storm by 9th morning with centre near Lat. 8.5°N and Long. 82.0°E. Moving across extreme north Ceylon and the Palk Strait, it crossed the south Madras coast near Tondi during the night of 9th-10th and weakened into a depression. It emerged into the Arabian Sea near Mangalore and taking a northnorthwesterly course it again intensified into a severe cyclonic storm by the morning of 12th centred near Lat. 14.0°N and Long. 73.5°E. Thereafter,it moved northwards and crossed coast near Ratnagiri by the evening of 13th. Weakening into a depression, it moved later northeastwards and further weakened into a low pressure area by 15th. Maintaining the northeastward movement, it became unimportant over Bihar Plateau and neighbourhood by 18th. Under its influence, the rainfall increased over the south Peninsula with widespread heavy rains during the second week. The rainfall belt extended progressively to the north bringing good rainfall over central India and many parts of north India. Some of the noteworthy amounts of rainfall recorded were: Cuddalore 9 cm. on 9th, Alleppey 18 cm., Tuticorin and Vellore 16 cm. each, Madras 13 cm., Kodaikanal and Cuddalore 12 cm. each and Fort Cochin 10 cm. on 10th, Coonoor 20 cm. and Fort Cochin 15 cm. on

11th, Goa 12 cm. and Karwar and Panjim (Goa) 10 cm. each on 13th and Devgarh 23 cm., Kolhapur and Ratnagiri 20 cm. each, Jeur 12 cm. and Baramati and Coonoor 11 cm. each on 14th. According to press reports, the heavy rains in the Madras State caused breaches of tanks and flooding of low lying areas and seriously affected standing crops and harvesting operations. The cyclone also affected seriously north Kerala, Mysore and south Maharashtra coasts involving coastal shipping and a number of fishing crafts. Ratnagiri district suffered extensive damage due to falling trees and telegraph and telephone poles and destruction of plantations. Ratnagiri town was completely cut off following the cyclone havoc. The rainfall over the draught hit areas of north and central India were reported to be beneficial to the standing crops and eased the water scarcity considerably.

A fresh low pressure area moved from the east into the south Andaman sea on the 16th. It concentrated into a depression by the morning of 18th with centre near Lat. 9.5°N and Long. 87.0°E. Moving northwestwards it intensified into a cyclonic storm by 19th morning centred near Lat. 13°N and Long. 85°E. Later it moved northwards and further intensified into a severe cyclonic storm by the morning of 20th centred near Lat. 14.5°N and Long. 85.0°E. The storm took a northwesterly course from the evening of 21st and crossed coast near Calingapatam the same night. It rapidly weakened into a low pressure area by the evening of 22nd and persisted over southwest Orissa and adjoining Madhya Pradesh and Andhra Pradesh till 24th. Thereafter, it became unimportant. Under its influence, heavy rains occurred over coastal Andhra Pradesh and coastal Orissa. Vishakhapatnam recorded 21 cm. of rain, Balasore and Gopalpur 13 cm. each, Kalingapatam 10 cm. and Chandbali 9 cm. on 22nd. Fairly well distributed rainfall also occurred over the remaining parts of northeast India, while isolated showers occurred over east Madhya Pradesh and the remaining parts of the Peninsula.

The last cyclonic storm of the month originated as a low pressure area which moved from the east into the south Andaman Sea on 23rd. The low pressure area concentrated into a depression by the morning of 25th with centre near Lat. 10°N and Long. 95°E. Moving in a west to westnorthwesterly direction, it intensified into a cyclonic storm by 27th morning with centre near Lat. 11.5°N and Long. 85.5°E. Intensifying further into a severe cyclonic storm during the night of 27th-28th, it crossed coast near Madras on 28th morning. Later it weakened rapidly into a depression and moving across the Peninsula emerged into the Arabian Sea near Karwar on 30th morning. Under its influence, there was heavy rainfall in the Bay Islands and the Peninsula. Some of the noteworthy amounts of rainfall recorded were : Car Nicobar 31 cm. and Nancowry 22 cm. on 25th, Madras 11 cm. on 28th, Bangalore 9 cm. on 29th and Honavar 33 cm. and Karwar 14 cm. on 30th. According to press reports, two adults and a child were killed, one of the adults being blown off from the terrace of a building when the cyclonic storm hit Madras. Air and rail traffics were also affected.

While the activity of cyclonic storms in the south was abnormally high there was only feeble activity of western disturbances over northwest India leading to deficit precipitation there. An upper air cyclonic circulation developed over the Punjab and neighbourhood on 11th and persisted there till 4th. It caused light to moderate precipitation over the Western Himalayas. Another upper air cyclonic circulation persisted over northwest India during the period 17th to 20th. Simultaneously the Gujarat State was also affected by a fresh upper air cyclonic circulation. In association with these developments, isolated precipitation occurred over northwest India and adjoining areas.

Night temperatures remained above normal over the central parts of the country and most parts of the Peninsula, being appreciably to markedly so from 11th onwards. They were also above normal over Gujarat State from 6th to 27th and over Uttar Pradesh and northeast India during the second fortnight, being markedly so over northeast India during the last week. Night temperatures were below normal over northeast India from 4th to 11th and over northwest India during the last week.

The total rainfall for the month was in moderate excess in the Bay Islands, Gangetic West Bengal and Kerala, in slight excess in South Assam and Madras State, normal in Sub-Himalayan West Bengal, Bihar Plateau, East Rajasthan and the Arabian Sea Islands. It was in slight defect in Himachal Pradesh, in moderate defect in Telangana and in large defect in Punjab and West Rajasthan. There was large excess of rainfall in North Assam, Orissa, Bihar Plains, Uttar Pradesh, Madhya Pra-

desh, Konkan, Madhya Maharashtra, Vidarbha, Coastal Andhra Pradesh, Rayalaseema and Mysore. There was no rain in Jammu and Kashmir,Gujarat and Saurashtra and Kutch.

The mean maximum temperature was above normal in Gangetic West Bengal, Orissa, Bihar Plateau, Madhya Pradesh, Gujarat and Vidarbha. It was normal over the rest of the country except in coastal Mysore, where it was below normal.

The mean minimum temperature was above normal in Assam, Orissa, Bihar, East Uttar Pradesh, East Rajasthan, Madhya Pradesh, Gujarat Region, Konkan, Madhya Maharashtra, Marathwada, Vidarbha, Coastal Andhra Pradesh, Telangana, Rayalaseema and Interior Mysore. It was normal over the rest of the country.

The Relative Humidity in the morning was above normal in Jammu and Kashmir, Madhya Maharashtra, Marathwada, Rayalaseema and Mysore, below normal in Saurashtra & Kutch and was normal over the remaining parts of the country.

The Relative Humidity in the evening was above normal in Orissa, West Madhya Pradesh, Madhya Maharashtra, Coastal Andhra Pradesh, Telangana, Rayalaseema and Mysore and below normal in the Arabian Sea Islands. It was normal in the remaining parts of the country.

The mean cloud amount in the morning was below normal in Punjab, Himachal Pradesh and Jammu and Kashmir. It was normal in the Bay Islands, West Rajasthan, Gujarat, Saurashtra & Kutch,Madras, Coastal Mysore, South Interior Mysore, Kerala and the Arabian Sea Islands and was above normal over the rest of the country.

The mean cloud amount in the evening was below normal in Punjab, Himachal Pradesh and Jammu and Kashmir. It was normal in the Bay Islands, West Rajasthan, Gujarat, Saurashtra and Kutch, Madras, South Interior Mysore, Kerala and the Arabian Sea Islands and was above normal over the rest of the country.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 32 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. I.S.T. of the date noted in the succeeding column; similarly the heaviest rainfall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hrs. I.S.T. of the date given in the succeeding column.

## MONTHLY MEANS OF UPPER WINDS

During the month, observations of velocity and direction of upper winds were made at 5 stations in India. Out of these, at 40 stations all the observations were taken by means of ilot balloons and at 15 stations some observations were made by means of pilot balloons while he other observations by the radiowind method. In the case of Bangalore, the observations were aken by following radiosonde balloon by means of an optical theodolite. Particulars of these tations, their co-ordinates and the approximate times of the regular pilot balloon and rawin scents at each station are given in the table overleaf. All radiowind ascents have been indicated y means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the cheduled times of regular observations have been used for averaging.

Data upto 9.0 km. above mean sea level are given under Table IV and data above 9.0 km. bove mean sea level under Table V.

In Tables IV and V :

N = represents the number of observations;

S = represents the mean wind speed in metres per second irrespective of direction;

V = represents the resultant mean velocity in metres per second;

D = represents the direction of the resultant mean wind in degrees East of North.

Means and resultant winds are given in this publication for the following heights :-

Surface, 0.15 km. a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 2.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0, and 36.0 km. above mean sea level. Of these he levels 1.5, 3.0, 5.4,7.2, 9.0, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0 and 30 km. above ean sea level are considered as the best approximations to the standard pressure levels 850, 00, 500, 400, 3001 200, 150, 100, 70, 50, 30, 20 and 10 mb. respectively.
