AVVERTENZE

Come nel precedente bollettino, così anche in questo, sono stati riassunti i dati esposti per ogni singola stazione in *climagrammi* che hanno per iscopo di dare un'idea delle particolarità e dell'insieme dei fattori principali del clima, nel periodo considerato

Vicende avverse, non hanno consentito ancora di poter mettere a confronto col climagramma annuale quello che, dedotto da tutto il complesso degli elementi disponibili, per ciascuna stazione, verrebbe ad assumere il carattere di valore *normale* e consentirebbe quindi di valutare ogni anno, lo scostamento d'ogni singolo fattore.

La raccolta del materiale a ciò necessario, è apparsa più lunga e, specialmente per quanto concerne l'Eritrea e la Somalia, più difficoltosa di quanto si era in un primo tempo ritenuto; è d'uopo perciò rimandare ai prossimi numeri del Bollettino, la pubblicazione di questi elementi di confronto, che verranno a dare ai climagrammi annuali un significato più completo e più esteso.

Come nel precente bollettino, i membri d'ogni climagramma sono in numero di cinque:

1° gruppo: Media pressione annua
» » del mese di gennaio
» » » » » luglio
Massima » annua (assoluta)
Minima » » »

2° gruppo: Media temperatura annua
» » massima del mese di gennaio
» » minima » » » »
» » massima » » » luglio
» » minima » » » »
Massima » annua (assoluta)
Minima » » »

3° gruppo: Media annua umidità relativa
» umidità relativa del mese di gennaio
» » » » » » luglio
Massima umidità relativa annua (assoluta)
Minima » » » »

4° gruppo: Media nebulosità annua
» » mese di gennaio
» » » » luglio
Totale annuo di ore di sole verificatosi nella stazione
» » » » » » (teorico)

5° gruppo: Totale annuo della pioggia
» giorni piovosi
» del mese più piovoso
» » » meno piovoso

I climagrammi sono quindi ordinati, a seconda delle varie zone climatiche in cui è stata ripartita ciascuna colonia.

N. B. - I valori racchiusi fra parentesi sono dedotti da elementi incompleti.

N. B. - Nel mese di aprile la media della tensione del vapore, dell'umidità e della nebulosità è stata dedotta da una osserv. al giorno, per gli altri mesi 3 osserv. al giorno.
