Inhalt.

Vorwort.

I. Meteorologische Beobachtungen an zwölf Stationen in Norwegen 1878.

II. Monats- und Jahres-Resumé für das Jahr 1878.

III. Geschenke an das meteorologische Institut. Juni bis November 1879.

Vorwort.

Das Jahrbuch für 1878 enthält die vollständigen Beobachtungen an denselben 12 Stationen, wie die früheren Jahrgänge, und die Uebersichtstabellen für 40 Stationen. Unter diesen befindet sich eine neue, nämlich Tönset. Die Stationen Frederikstad, Fruholmen und Røst sind aufgehoben, letztere wegen des Todes des Beobachters.

Bezüglich der Instrumente und der Lage u. s. f. der älteren Stationen ist auf das Vorwort der Jahrbücher für 1875, 1876 und 1877 zu verweisen. Ueber die neue Station und die bei den älteren inzwischen eingetretenen Veränderungen sind folgende Bemerkungen zu machen.

Aalesund. Die Station wurde am 31 August 1878 um 2 Uhr p. m. in ein neues Local verlegt. In den Uebersichtstabellen sind die Barometerhöhen für das ganze Jahr auf die ältere Seehöhe zurückgeführt.

Alten. Die Station wurde am 21 Juni 1878 von mir inspicirt. Die Correction des Barometers wurde = —0.^{mm}33 gefunden, übereinstimmend mit der früher gefundenen (—0.^{mm}31).

Christiania. Von Juli 18, 2 Uhr p. m. bis Juli 23, 8 Uhr a. m. stimmen die Psychrometerbeobachtungen schlecht mit dem Haarhygrometer. Es scheint das feuchte Thermometer nicht hinlänglich nass gewesen zu sein. Nach dem corrigirten Haarhygrometer haben wir:

1878.	Absolute Feuchtigkeit.			Relative Feuchtigkeit.		
Juli.	8	2	8	8	2	8
18		9.5	8.0		39	42
19	8.4	7.8	6.9	50	36	42
20	8.1	10.0	9.3	62	50	49
21	8.0	9.2	10.0	49	40	58
22	8.1	8.5	4.7	49	42	28
23	4.6			34		
Corr. Monatsmittel	8.5	8.9	8.9	59	46	60

Also werden

die corrigirten Mittel in der zweiten Abtheilung (Seite 76):

1878.	Absolute Feuchtigkeit.				Relative Feuchtigkeit.			
	1	2	3	Mittel	1	2	3	Mittel
Juli	8.5	8.9	8.9	8.7	59	46	60	59
Jahr	5.7	5.9	6.0	5.8	76	63	75	76

Eidsvold. Bei der Inspection im September 1879 wurde die Seehöhe = 187.6 Meter gefunden. Die früher angenommene, weniger genaue Seehöhe von 180.^{m}4 ist in den Uebersichtstabellen stehen geblieben; während in der unten stehenden Tabelle die neue aufgenommen worden ist.

Florö. Die Station wurde am 8 April 1878 um 2 Uhr p. m. in ein neues Local verlegt. Die ältere Seehöhe, 6.^{m}6, gilt für die in extenso abgedruckten Barometerhöhen der 3 ersten Monate, die jetzige, 8.^{m}8, für die übrigen Monate vom 1 April ab. In den Uebersichtstabellen sind sämtliche Barometerhöhen auf die neue Seehöhe zurückgeführt.

Gjesvär. Die Station wurde im Sommer 1878 inspicirt.

Sandösund. Die Station wurde am 16 October 1878 nach der Morgenbeobachtung in ein neues Local verlegt, wo die Seehöhe des Barometers 8.^{m}1 ist, statt der früheren 12.^{m}6. Die in extenso gedruckten Barometerhöhen haben keine Correction wegen der Aenderung der Seehöhe erhalten, weil die ersten, vom Beobachter selbst mit dem Aneroid angestellten, Nivellements keinen merklichen Unterschied zwischen der älteren und neueren Seehöhe des Barometers zeigte. Durch die Inspection am 5 September 1879 wurde die neue Seehöhe vom Herrn *Steen* durch Nivellement bestimmt und ausserdem die frühere constante Correction des Barometers wiedergefunden. In den Uebersichtstabellen sind sämtliche Barometerhöhen auf die ältere Seehöhe von 12.^{m}6 zurückgeführt.

Skudesnes. Die Station wurde am 9 October in ein neues Local verlegt, wo die Seehöhe des Barometers 4.^{m}2 ist. Bis zum 1 October gilt die ältere Seehöhe, 11.^{m}4, für die in extenso gedruckten Beobachtungen, vom 1sten October ab aber die neue Seehöhe. In den Uebersichtstabellen sind alle Barometerhöhen auf die Seehöhe von 11.^{m}4 zurückgeführt.

Tromsö. Vom 24 Juli 1878 ab beobachtet Hr. Seminar-Director *Christophersen*. Die Station wurde am 28 August 1878 von mir inspicirt.

Tönset. Die Seehöhe der Station, welche nahe bei der Eisenbahnstation Tönset liegt, ist durch Nivellement bestimmt worden. Die Station wurde am 19 September 1879 inspicirt. Das Barometer, Adie 1475, Kew-Modelle, war früher auf der Station Rena benutzt worden. Am meteorologischen Institut wurde die constante Correction im Mai 1875 = + 0.^{mm}14 gefunden, und dieselbe Correction wurde bei der Inspection auf Rena im September 1875 wiedergefunden. Bei der letzten Inspection in Tönset fand Hrr. *Steen* die Correction = + 0.^{mm}41. In diesem Jahrbuche für 1878 ist die ältere Correction + 0.^{mm}14 benutzt worden.

Das nach innen offene Thermometer-Häuschen steht ausserhalb eines Fensters gegen N. z. E., nnd war im Hochsommer bei der Abendbeobachtung nicht ganz vor der Sonne beschützt. Die nöthigen Schirme sind später angebracht worden. Der Windmesser (Wilds Platte) steht frei auf einem Dache. Der Regenmesser steht frei, etwa 10^{m} von der nächsten Wand entfernt; er hat eine quadratische Oeffnung von 0.^{mm}15 Seite, welche sich 0.^{m}9 über dem Boden befindet.

In den Uebersichtstabellen ist die Seehöhe unrichtig zu 494^{m} angegeben. Dies ist die Höhe der Eisenbahnstation. Die Seehöhe des Stationsbarometers ist 485.^{m}3, wie dieselbe in der unten stehenden Tabelle aufgeführt ist.

Vardö. Die Station wurde am 26 Juni 1878 von mir inspicirt. Die Correction des Barometers wurde = —0.^{mm}49 gefunden. Da diese Correction nur um 0.^{mm}05 von der früheren, am meteorologischen Institute bestimmten, —0.^{mm}44 abweicht, ist die letztere behalten worden.

Die folgende Tabelle giebt eine Uebersicht über die Lage der Stationen, die Höhe der Instrumente, die constante Correction der Barometer, die Beobachtungszeiten uud die verschiedenen Beobachter. An den Telegraphenstationen ist ein bestimmter Beamter für die Beobachtungen verantwortlich. Auf den Leuchtthürmen werden die Beobachtungen vom betreffenden Leuchtfeuerverwalter ausgeführt.

Wegen der Controlle der Barometer- und Thermometerbeobachtungen siehe Jahrbuch für 1877, Vorwort Seite V.

Die Tabellen der ersten Abtheilung enthalten:

Die Barometerhöhe in Millimetern, auf 0° reducirt und mit der constanten Correction des Instrumentes corrigirt[1]). Die beobachteten Maxima und Minima des Monats sind mit fetten Typen gedruckt.

Die Lufttemperatur nach Celsius. Die Ablesungen des Index des Minimumthermometers sind durch tägliche Vergleichung desselben mit dem trocknen Thermometer corrigirt worden. Wo die Lufttemperatur in der Nacht, zwischen 8 Uhr Abends und 8 Uhr Morgens kein Minimum nachweist, ist die Temperatur für 2 Uhr Morgens interpolirt und mit Cursiv gedruckt worden. Dies ist geschehen, damit das Mittel aus den 4 täglichen Beobachtungen, inclusive der interpolirten Nachttemperatur, möglichst genau die wahre 24 stündige Mitteltemperatur des Tages ergeben kann.

Die beobachteten Maxima und Minima sind mit fetten Typen gedruckt.

Der Dunstdruck in Millimetern aus den Psychrometerbeobachtungen nach Jelineks Tabellen berechnet. Die beobachteten Maxima und Minima sind mit fetten Typen gedruckt.

Die relative Feuchtigkeit auf dieselbe Weise berechnet. 00 = 100%.

Die Windrichtung rechtweisend nach 16 Strich, in den englischen Bezeichnungen ausgedrückt.

Die Windstärke nach Schätzung, Scala 0 = Still bis 6 = Orkan[2]).

Die Bewölkung nach der Scala 0 = Heiter bis 10 = Ueberzogen.

Die Höhe des Niederschlags in Millimetern, angeführt für den Tag, an welchem er gefallen ist. Der am Morgen gemessene Niederschlag ist also für den vorhergehenden Tag angeführt worden, ausgenommen in solchen Fällen, wo man mit Bestimmtheit weiss, dass er nach Mitternacht gefallen ist.

Bemerkungen über Niederschlag und andere Phänomene mit zugehöriger Tageszeit.

Die Bezeichnungen sind:

● Regen.	^{n} Nacht	Als Exponent
✱ Schnee.	^{a} Vormittag	
△ Graupeln.	^{p} Nachmittag	
≡ Nebel.	^{o} Schwach	
⌴ Reif.	^{s} Stark	
∞ Höhenrauch.	^{1} Erste Beobachtungsstunde.	
⁄ Starker Wind.	^{2} Zweite —	
⊼ Gewitter.	^{3} Dritte —	
< Blitz ohne Donner.		
Nordlicht.		
⊕ Sonnenring.		
⦶ Sonnenhof.		
Mondring.		
Mondhof.		

Interpolirte Werthe sind mit Cursiv gedruckt.

In den Uebersichtstabellen der zweiten Abtheilung sind die Luftdrucksmittel direct aus den Monatsmitteln der drei Beobachtungsstunden berechnet. Alle sind auf 0° und absoluten Stand, aber nicht auf die Meeresfläche reducirt.

[1]) Wegen des Normal-Barometers siehe Jahrbuch für 1874.

[2]) Eine Vergleichung der geschätzten Windstärken mit gemessenen Windgeschwindigkeiten findet sich im Jahrbuche für 1874. Siehe auch Jahrbuch für 1875. Vorwort, Seite II.

Die Monatsmittel der Lufttemperatur (Celsius) sind als Mittel der drei täglichen festen Beobachtungen und der Minimum-Temperatur bestimmt.

Für Christiania sind die mittelst Maximumthermometer beobachteten absolut höchsten Temperaturen in jedem Monat mit zugehörigen Datum aufgeführt. Sonst sind es die auf die Beobachtungsstunden fallenden Maxima, und die mittelst Minimumthermometer gefundenen Minimumtemperaturen, welche aufgeführt wurden.

Die Monatsmittel der absoluten und relativen Feuchtigkeit sind als Mittel aus den Morgen- und Abendbeobachtungen, ohne Correction berechnet. Für Dovre und Röros ist eine Correction wegen des Luftdrucks an den Mitteln angebracht worden.

Die Monatsmittel der Bewölkung sind die Mittel aus den drei täglichen Beobachtungen.

Der Niederschlag ist die Monatssumme.

Die Zahl der Tage mit Niederschlag u. s. w. Tage, wo Schnee und Regen gemischt waren, sind als Schneetage gerechnet. Heitere Tage sind solche, wo die Summe der Bewölkung für alle drei Beobachtungsstunden weniger als 6 beträgt. Trübe Tage sind solche, an denen die Summe grösser ist als 24. Sturmtage sind solche, an welchen die an Wilds Windstärkeplatte beobachtete Geschwindigkeit des Windes 15 Meter überstieg, oder an den Stationen, die keine Windmesser haben, die Windstärke über 4 notirt ist.

Die Windvertheilung ist direct aus den notirten Beobachtungen abgeleitet.

Das Monatsmittel der Windstärke ist das Mittel aus den drei täglichen Beobachtungen.

Bei den Leuchtthurmstationen ist die Meerestemperatur das Monatsmittel für die Beobachtungsstunde 8 Uhr Morgens.

Die Berechnungen für das Jahrbuch haben die Herren Assistenten *A. Steen*, *K. Hesselberg*, *N. Oftedal* und *H. Chr. Löcken* ausgeführt. Die drei erstgenannten Herren sind mit der Correctur beschäftigt gewesen.

Christiania, December 1879.

H. Mohn.
