*The first two figures in each column give the wind direction "dd" in tens of degree counting from North through East. The next two figures give the wind speed "ff" in knots. If wind speed "ff" exceeds 99 knots, 50 is added to "dd" and the hundred figures for wind speed "ff" is omitted.

dd—Hundreds and tens of degree of wind direction rounded off to the nearest 5°

ff—Wind speed in knots.

Cloud observation Data (Hiii Cdd V. V. etc.)

PPP—Pressure in hundreds tens and units of millibars.

DD—Dew point depression.

hhh—(heights)—Tens of geopotential metres.

TT—Dry Bulb temperatures in °C

T$_0$—Approximate each value in (0 °C) even values indicate positive and odd values indicate negative temperatures.

† The actual time of observations may vary within half an hour of the specified time.

* The first two figures in each column give the wind direction "dd" in tens of degree counting from North through East. The next two figures give the wind speed "ff" in knots. If wind speed "ff" exceeds 99 knots, 50 is added to "dd" and the hundred figures for wind speed "F" omitted.

The accuracy of individual entries in this report cannot be guaranteed. Corrections obtained, if necessary on application to the Meteorologist. Weather Centre Air Port, KARACHI—11
