## INTRODUCTION.

### § 1. *Buildings and Instruments.*

A detailed description of the Observatory and Instruments is contained in the Introduction for 1913 and 1914.

### § 2. *Reduction of the Observations.*

The continuous records of the temperature of the air and of evaporation, and direction of the wind are measured at each hour of the day, from 1ʰ to 24ʰ of Hongkong standard time. Those of wind velocity and amount of rainfall are measured at 30 minutes before the above hours, so as to obtain the value of these elements at the hour. The records of the duration of sunshine are measured so as to include the amount of sunshine recorded from 30 minutes before to 30 minutes after each hour of local apparent time.

The hourly values of the principal meteorological elements are given in Tables I to VII. Three-hourly observations of the character and direction of motion of the clouds are given in Table VIII and a list of phenomena observed during the month at the foot of Table X. The daily values of the meteorological elements are collected in Table IX and the mean hourly values for the month in Table X. The normals given in Tables IX refer to the periods 1884–1923.

The values given in Table I, barometric pressure, are derived from the hourly readings of the Kew pattern Station barometer No. 1323. The results are corrected for index error and reduced to the temperature 32° F. They are ***not*** reduced to sea level, nor to the gravity at latitude 45°. The height of the barometer cistern above mean sea level is 109 feet.

The temperature of the air and of evaporation (Tables II and III) are derived from the hourly measures of the Richard dry and wet-bulb thermograph. The highest and lowest temperatures given in Tables IX are the highest and lowest points on the thermograms. The records are obtained on plain paper, on which a base-line for each day's register is laid down from the eye observations of rotating thermometers. The registers are time-scaled electrically ; an electro-magnet operated by the hourly time signal lifts the pens from the paper, and clock work apparatus, adapted by Mr. Evans in January, 1923, locks them until the

3rd minute when they are released and fall back on to the paper. The thermometers are aspirated from the 55th to the 60th minute of each hour by an electric fan, operated by a contact on one of the electric dials, air being drawn into the shelter through a 14-inch zinc pipe. A buzzer, operated each minute, was fitted to the thermometer frames on April 2nd, 1924, to overcome inertia and friction.

The index corrections of all thermometers in use are determined near mid-summer and mid-winter, by comparison in water with a standard thermometer (Kew No. 647) constructed at the Kew Observatory. Comparisons with a Griffin standard thermometer, purchased in the year 1914, indicate that Kew No. 647 reads 0°·10 F. too high. No correction has been applied on this account, however.

The vapour tension and relative humidity given in Tables IX and X have been derived from the Hygrometric Tables in use in the India Meteorological Department.

In Table VIII the cloud classification adopted by the London Meteorological Office is used. Where the names of upper and lower clouds are given, but only one direction, the latter refers to the lower clouds.

The amount of sunshine given in Table V is derived from the hourly measures of the Campbell-Stokes Universal Sunshine Recorder, Lecky No. c51. The percentage of possible sunshine given in Tables IX and X is obtained by dividing the observed amount by the number of hours the Sun's centre is above the horizon, using 34′ as the mean refraction on the horizon.

The shadow of the wireless mast, erected in the summer of 1917, falls on the sunshine recorder for a few minutes in the afternoon from January 16 to March 29 and September 16 to November 28. The mast has a skeleton frame the ribs of which partially eclipse the Sun and occasionally cause a slight loss of register. A more serious loss occurs when the sun passes behind the joints of the mast (which are steel plates 3 feet square) or when the Sun sets behind the mast. A list of corrections to the sunshine values in Tables V and IX of the Monthly Meteorological Bulletin for the years 1917–19, on account of this interruption, is given in the Bulletin for December, 1919. The correction is never large enough to affect the values given in Table X.

A second recorder, similar to the Lecky instrument, was obtained from Messrs. J. Hicks and set up on the south-west corner of the Main Building on January 6, 1921. The records of this instrument furnish the necessary corrections to those of the old Lecky instrument, as the interruption by the mast occurs at a different time.

The amount of rainfall given in Table VI is derived from the hourly measures of the Nakamura pluviograph, corrected when necessary by observation of the standard rain-gauge. In order to contrast the dry and wet hours the former are indicated by three dots, thus,...and the same symbol has been used to indicate clear sky (Tables IV and VIII), no sunshine (Tables V and IX), and calms (Table VII). In Table VI the letter *d* indicates that drizzle occurred but that the amount was too small to be recorded on the pluviogram. As regards the duration of rain given in Tables IX–X, it should be mentioned that frequently in the winter months very fine drizzle occurs at intervals during the day, but the amount collected in the gauge is less than 0·005 inch.

The direction and velocity of the wind (Table VII) are derived from the hourly measures of the Beckley anemograms. These measures are resolved into north and east components by the aid of a table giving the components for every point of direction and every mile of velocity, the values in the table being increased by 100 to avoid minus signs. The mean daily direction and velocity,

and the mean hourly values in each month, given in Tables IX—X, are derived from the north and east components by the aid of Table III (B) in Chapter VI of the International Meteorological Tables. For the sake of continuity Dr. Robinson's factor (3) has been retained for converting the velocity of the cups into wind velocity, in the above Tables.

Beginning with the Year 1927, only monthly values of the Meteorological elements in C.G.S. units have been published. They will be found under Table IX. Phenomena and Time Ball errors have been placed under Table X.

Rain fell on 3 days. The mean hourly intensity was 0·015*in*, and the maximum fall in one hour was 0·040*in* at 24*h* on the 18th and 1*h* and 3*h* on the 19th.

The maximum squall velocity, as recorded by the Dines-Baxendell anemograph, was at the rate of 39 miles per hour at 1*h* 19*m* on the 24th.

Clouds with base less than 2,000 feet high were observed on 5 days.
Clouds with base less than 1,000 feet high were observed on 1 day.

*0°=N., 90°=E., &c. † Maximum velocity in one hour.

January 19*d.* 11*h.* 23*m.*—Pressure has decreased considerably at Nemuro. It has increased considerably from S. Manchuria to S.W. Japan, moderately over the Loochoos and slightly from Formosa to Hong Kong.

The Japanese depression has deepened considerably. It is now passing into the Pacific.

The anticyclone over China and S.E. Mongolia appears to be unchanged.

Fresh monsoon may be expected along the S.E. coast of China and over the northern portion of the N. China Sea.

Hong Kong rainfall for the 24 hours ending at 10 a.m. to-day, 0·26 inch. Total since January 1st, 0·31 inches, against an average of 0·58 inches.

### FORECAST FOR THE 24 HOURS ENDING AT NOON ON THE 20TH.

| District. | Forecast. |
|---|---|
| 1.—Formosa Channel, | N.E. winds, fresh; overcast at first, finer later. |
| 2.—South coast of China between Hong Kong and Lamocks, | |
| 3.—Hong Kong to Gap Rock, | |
| 4.—South coast of China between Hong Kong and Hainan, | |

Rain fell on 11 days. The mean hourly intensity was 0·053*in*, and the maximum fall in one hour was 0·560*in* at 24*h* on the 16th.

The maximum squall velocity, as recorded by the Dines-Baxendell anemograph, was at the rate of 53 miles per hour at 4*h* 18*m* on the 17th.

Clouds with base less than 2,000 feet high were observed on 9 days.
Clouds with base less than 1,000 feet high were observed on 6 days.

*0°=N., 90°=E., &c.

† Maximum velocity in one hour.

February 16*d.* 11*h.* 15*m.*—Pressure has increased moderately over N.E. China and S. Manchuria, and slightly over the Yangtze Valley and at Yap. It has decreased moderately over the Bonins and slightly over the Loochoos. Elsewhere it is nearly stationary.

The typhoon is now about 300 miles North of Yap travelling northward.

A depression is shown to the N.E. of Tokio and an anticyclone has formed over N.E. China.

The monsoon will set in again along the coast of China and over the China Sea.

Hong Kong rainfall for the 24 hours ending at 10 a.m. to-day, 0·45 inch. Total since January 1st, 0·82 inches, against an average of 2·35 inches.

### FORECAST FOR THE 24 HOURS ENDING AT NOON ON THE 17TH.

| District. | Forecast. |
|---|---|
| 1.—Formosa Channel,<br>2.—South coast of China between Hong Kong and Lamocks,<br>3.—Hong Kong to Gap Rock,<br>4.—South coast of China between Hong Kong and Hainan, | Light N.E. winds, freshening; overcast, some drizzle or mist, cooler. |

February 28*d.* 11*h.* 58*m.*—Pressure has decreased moderately over N.E. China and slightly over S.E. China and Formosa. It has increased considerably over central Japan and slightly over S.W. Japan. It is nearly stationary in southern districts.

The anticyclone has weakened and is now central over the Eastern Sea.

Moderate monsoon may be expected along the S.E. coast of China and over the N. China Sea.

Hong Kong rainfall for the 24 hours ending at 10 a.m. to-day, 0·02 inch. Total since January 1st, 4·62 inches, against an average of 3·11 inches.

### FORECAST FOR THE 24 HOURS ENDING AT NOON ON THE 1st.

| District. | Forecast. |
|---|---|
| 1.—Formosa Channel, | N.E. winds, fresh. |
| 2.—South coast of China between Hong Kong and Lamocks, 3.—Hong Kong to Gap Rock, 4.—South coast of China between Hong Kong and Hainan, | N.E. winds, moderate; overcast, some drizzle or mist. |

**Rain** fell on 13 days. The mean hourly intensity was 0·049*in*, and the maximum fall in one hour was 0·450*in* at 13*h* on the 25th.

The maximum squall velocity, as recorded by the Dines-Baxendell anemograph, was at the rate of 53 miles per hour at 9*h* 30*m* on the 21st.

Clouds with base less than 2,000 feet high were observed on 11 days.
Clouds with base less than 1,000 feet high were observed on 6 days.

*0°=N., 90°=E., &c.

† Maximum velocity in one hour.

March 18*d.* 11*h.* 40*m.*—Pressure has decreased considerably over central Japan and slightly from S.W. Japan to Formosa and the Philippines, and over Indo-China.

The anticyclone has passed into the Pacific, leaving an area of high pressure from S.W. Japan to N.E. China.

A depression is shown to the east of Mindanao.

Fresh to moderate monsoon may be expected along the S.E. coast of China and over the N. China Sea.

Hong Kong rainfall for the 24 hours ending at 10 a.m. to-day, 0·09 inch. Total since January 1st, 5·87 inches, against an average of 4·58 inches.

### FORECAST FOR THE 24 HOURS ENDING AT NOON ON THE 19th.

| District. | Forecast. |
|---|---|
| 1.—Formosa Channel, | N.E. winds, moderate; overcast. |
| 2.—South coast of China between Hong Kong and Lamocks, | |
| 3.—Hong Kong to Gap Rock, | |
| 4.—South coast of China between Hong Kong and Hainan, | |

March 23*d*. 10*h*. 40*m*.—Pressure has increased considerably from Chefoo to Wladivostock. It has decreased slightly at the majority of other reporting stations.

A fresh anticyclone has formed over N.E. China and Manchuria.

Moderate to fresh monsoon may be expected along the S.E. coast of China and over the northern portion of the N. China Sea.

Hong Kong rainfall for the 24 hours ending at 10 a.m. to-day, 0·00 inch. Total since January 1st, 6·14 inches, against an average of 5·18 inches.

### FORECAST FOR THE 24 HOURS ENDING AT NOON ON THE 24TH.

| District. | Forecast. |
|---|---|
| 1.—Formosa Channel, | N.E. winds, moderate to fresh. |
| 2.—South coast of China between Hong Kong and Lamocks,<br>3.—Hong Kong to Gap Rock,<br>4.—South coast of China between Hong Kong and Hainan, | E. to N.E. winds, moderate to fresh; generally overcast, probably rain later. |

B. D. EVANS,—*First Assistant.*

Rain fell on 16 days. The mean hourly intensity was 0·069*in*, and the maximum fall in one hour was 1·610*in* at 22*h* on the 20th.

The maximum squall velocity, as recorded by the Dines-Baxendell anemograph, was at the rate of 47 miles per hour at 7*h* 23*m* on the 3rd.

Clouds with base less than 2,000 feet high were observed on 13 days.
Clouds with base less than 1,000 feet high were observed on 3 days.

*0°=N., 90°=E., &c.

† Maximum velocity in one hour.

April 2*d*. 11*h*. 32*m*.—Pressure has increased moderately at Nemuro and Chefoo, and slightly over S. China. It has decreased slightly from S.W. Japan to the Loochoos and is nearly stationary elsewhere.

The anticyclone is passing into the Pacific.

A depression is still shown to the S.W. of Haiphong.

Pressure gradients appear to be shallow over the China Sea.

Hong Kong rainfall for the 24 hours ending at 10 a.m. to-day, 0·03 inch. Total since January 1st, 9·22 inches, against an average of 6·36 inches.

### FORECAST FOR THE 24 HOURS ENDING AT NOON ON THE 3RD.

Rain fell on 19 days. The mean hourly intensity was 0·221*in*, and the maximum fall in one hour was 2·100*in* at 13*h* on the 1st.

The maximum squall velocity, as recorded by the Dines-Baxendell anemograph, was at the rate of 56 miles per hour at 13*h* 40*m* on the 17th.

Clouds with base less than 2,000 feet high were observed on 11 days.
Clouds with base less than 1,000 feet high were observed on 7 days.

*0°=N., 90°=E., &c. † Maximum velocity in one hour.

May 26*d*. 16*h*. 38*m*.—Warning to Hong Kong, Coast Ports, &c.:—Typhoon of unknown intensity within 60 miles of Lat. 18° N. Long. 120° E., moving N.W.

May 27*d*. 10*h*. 07*m*.—Warning to Hong Kong, Coast Ports, &c.:—Typhoon of unknown intensity within 60 miles of Lat. 19° N. Long. 119° E, moving N.W.

May 27*d*. 5*h*. 50*m*.—Local signal No. 1 hoisted.

May 27*d*. 10*h*. 57*m*.—Pressure has increased moderately at Chefoo and slightly at Wladivostock and Legaspi. It has decreased slightly from Pratas to the Loochoos and is nearly stationary elsewhere.

A feeble anticyclone is central near Wladivostock.

At 6 a.m. the typhoon was 300 to 350 miles S.E. of Hong Kong moving N.W. or N.N.W. at about 10 miles an hour. There is now a possibility that it may curve into the Formosa Channel.

Shanghai warning 26*d*. 21*h*. 50*m*.:—Typhoon of unknown intensity within 120 miles of Lat. 19° N. Long. 119° E., moving N.W. Recd. 26*d*. 22*h*. 53*m*.

Manila warning. 26*d*. 11*h*. 50*m*.:—Typhoon in Lat. 18° N. Long. 120° E., moving W.N.W. Recd 26*d*. 12*h*. 45*m*.

Hong Kong rainfall for the 24 hours ending at 10 a.m. to-day, 0·00 inch. Total since January 1st. 41·70 inches, against an average of 21·38 inches.

### FORECAST FOR THE 24 HOURS ENDING AT NOON ON THE 28TH.

| District. | Forecast. |
|---|---|
| 1.—Formosa Channel, ..... | N.E. winds, fresh; possibly increasing to a gale, fine at first, overcast with rain later. |
| 2.—South coast of China between Hong Kong and Lamocks, | |
| 3.—Hong Kong to Gap Rock, ..... | |
| 4.—South coast of China between Hong Kong and Hainan, | |

Rain fell on 20 days. The mean hourly intensity was 0·093*in*, and the maximum fall in one hour was 1·400*in* at 23*h* on the 30th.

The maximum squall velocity, as recorded by the Dines-Baxendell anemograph, was at the rate of 47 miles per hour at 16*h* 30*m* on the 30th.

Clouds with base less than 2,000 feet high were observed on 8 days.
Clouds with base less than 1,000 feet high were observed on 4 days.

*0°=N., 90°=E., &c.

† Maximum velocity in one hour.

Rain fell on 24 days. The mean hourly intensity was 0·172*in*, and the maximum fall in one hour was 1·290*in* at 19*h* on the 17th.

The maximum squall velocity, as recorded by the Dines-Baxendell anemograph, was at the rate of 72 miles per hour at 3*h* 20*m* on the 25th.

Clouds with base less than 2,000 feet high were observed on 5 days.
Clouds with base less than 1,000 feet high were observed on 1 day.

*0°=N., 90°=E., &c.

† Maximum velocity in one hour.

July 12*d.* 17*h.* 22*m.*—**Warning to Hong Kong, Coast Ports, &c.:—Typhoon of unknown intensity within 120 miles of Lat. 17° N. Long. 128° E., moving W.N.W.**

July 13*d.* 10*h.* 25*m.*—Warning to Hong Kong, Coast Ports, &c.:—Typhoon in Lat. 17° N. Long. 127° E., direction unknown, position uncertain.

July 13*d.* 10*h.* 30*m.*—Pressure changes are small since yesterday.

A feeble anticyclone is central to the east of Japan and a depression is central over N.E. China.

The estimated position of the typhoon is 800 miles E.S.E. of Hong Kong, but this is uncertain. The direction of motion is also uncertain.

**Hong Kong rainfall for the 24 hours ending at 10 a.m. to-day, 0·00 inch. Total since January 1st, 59·75 inches, against an average of 43·75 inches.**

## FORECAST FOR THE 24 HOURS ENDING AT NOON ON THE 14TH.

| District. | Forecast. |
|---|---|
| 1.—Formosa Channel, ..... | S.W. or variable winds, Light; fair. |
| 2.—South coast of China between Hong Kong and Lamocks, | |
| 3.—Hong Kong to Gap Rock, ..... | |
| 4.—South coast of China between Hong Kong and Hainan, | |

July 21*d.* 17*h.* 21*m.*—Warning to Hong Kong, Coast Ports, &c.:—Typhoon of unknown intensity within 120 miles of Lat. 17° N. Long. 127° E. moving W.N.W.

July 22*d.* 11*h.* 35*m.*—Warning to Hong Kong, Coast Ports, &c.:—Typhoon of unknown intensity within 60 miles of Lat. 17° N. Long. 123° E., moving W.

July 22*d.* 11*h.* 45*m.*—Pressure has increased considerably at Chefoo and slightly to moderately at other coast stations from Haiphong to Wladivostock; it has decreased considerably over N. Japan, and slightly elsewhere.

The depression remains over Tongking and a secondary appears to be developing in the neighbourhood of the Paracels.

The northern depression has moved into the Sea of Japan; the typhoon is situated about 200 miles N.E. of Manila, moving W.

Shanghai warning 21*d.* 21*h.* 25*m.*:—Typhoon of unknown intensity within 120 miles of Lat. 17° N. Long. 12[illegible] E. moving W.N.W. Recd. 21*d.* 22*h.* 52*m.*

Hong Kong rainfall for the 24 hours ending at 10 a.m. to-day, 0·38 inch. Total since January 1st 72·45 inches, against an average of 47·50 inches.

### FORECAST FOR THE 24 HOURS ENDING AT NOON ON THE 23RD

| District. | Forecast |
|---|---|
| 1.—Formosa Channel, | N.E. winds, moderate to fresh. |
| 2.—South coast of China between Hong Kong and Lamocks, | E. winds, fresh; cloudy, squally, rain. |
| 3.—Hong Kong to Gap Rock, | |
| 4.—South coast of China between Hong Kong and Hainan, | |

T. F. CLAXTON, *Director.*

Rain fell on 19 days. The mean hourly intensity was 0·282*in*, and the maximum fall in one hour was 1·620*in* at 2*h* on the 30th.

The maximum squall velocity, as recorded by the Dines-Baxendell anemograph, was at the rate of 116 miles per hour at 15*h* 23*m* on the 20th.

Clouds with base less than 2,000 feet high were observed on 1 day.
Clouds with base less than 1,000 feet high were observed on 0 day.

*0°=N., 90°=E., &c.

† *Maximum velocity in one hour.*

Phenomena :—

Solar halo:—on the 29th.
Lunar halo :—on the 15th.
Lunar corona :—on the 12th and 17th.
Fog :—on the 28th.
Unusual visibility :—on the 26th.
Dew :—on the 4th, 5th, 7th, 15th, 18th, 19th and 24th.
Rainbow :—on the 10th, 14th and 29th.
Lightning :—on the 1st, 2nd, 3rd, 5th, 7th, 8th, 9th, 11th, 16th, 19th, 20th, 24th, 26th, 27th, 28th, 29th, and 30th.
Thunder :—on the 1st, 16th, 19th, and 29th.

Thunderstorms :—

1*d.* 11*h.* 03*m.* to 11*h.* 50*m.* in W.S.W.; distant.

August 17*d.* 11*h.* 00*m.*—Pressure is highest to the east of Japan. The typhoon is now shown as a depression over Tongking.

A depression has developed over N.E. China.

The position of the Guam typhoon is uncertain. Observations from the Visayas indicate that it is moving westward, however.

Hong Kong rainfall for the 24 hours ending at 10 a.m. to-day, 1·33 inch. Total since January 1st, 80·04 inches, against an average of 60·19 inches.

## FORECAST FOR THE 24 HOURS ENDING AT NOON ON THE 18TH.

| District. | Forecast. |
|---|---|
| 1.—Formosa Channel. | S. or variable winds, moderate to light; fair. |
| 2.—South coast of China between Hong Kong and Lamocks. | |
| 3.—Hong Kong to Gap Rock. | |
| 4.—South coast of China between Hong Kong and Hainan. | |

**Rain fell on 17 days. The mean hourly intensity was 0·123*in*, and the maximum fall in one hour was 1·080*in* at 11*h* on the 5th.**

**The maximum squall velocity, as recorded by the Dines-Baxendell anemograph, was at the rate of 56 miles per hour at 17*h* 16*m* on the 19th.**

**Clouds with base less than 2,000 feet high were observed on 0 day.**
**Clouds with base less than 1,000 feet high were observed on 0 day.**

*0°=N., 90°=E., &c.

† Maximum velocity in one hour.

# ROYAL OBSERVATORY, HONG KONG.

Latitude.....22° 18′ 13·2″ North.
Longitude ... 7h 36m 41·25s East.

# MONTHLY SEISMOLOGICAL BULLETIN

## OCTOBER,
## 1927.

PREPARED UNDER THE DIRECTION OF

T. F. CLAXTON, F. R. A. S.

DIRECTOR.

### NOTATION.

$P$ = Time of arrival of longitudinal waves.
$P_r$ = ,, ,, ,, ,, once reflected.
$S$ = ,, ,, of transverse ,,
$S_r$ = ,, ,, ,, ,, ,, ,,
$L$ = ,, ,, of long, or surface ,,
$M$ = ,, ,, of maximum of long waves.
$F$ = ,, of end of record.
$A_N$ = Amplitude (half range) of N.-S. movement.
$A_E$ = ,, ,, ,, E.-W. ,,
$T$ = Period of undamped pendulum (complete swing).

Rain fell on 7 days. The mean hourly intensity was 0·123*in*, and the maximum fall in one hour was 0·550*in* at 7*h* on the 12th.

The maximum squall velocity, as recorded by the Dines-Baxendell anemograph, was at the rate of 60 miles per hour at 5*h* 25*m* on the 7th.

Clouds with base less than 2,000 feet high were observed on 4 days.
Clouds with base less than 1,000 feet high were observed on 1 day.

*0°=N., 90°=E., &c.

† Maximum velocity in one hour.

Rain fell on 6 days. The mean hourly intensity was 0·096*in*, and the maximum fall in one hour was 0·665*in* at 9*h* on the 20th.

The maximum squall velocity, as recorded by the Dines-Baxendell anemograph, was at the rate of 74 miles per hour at 12*h* 27*m* on the 20th.

Clouds with base less than 2,000 feet high were observed on 0 day.
Clouds with base less than 1,000 feet high were observed on 0 day.

*0°=N., 90°=E., &c.

† Maximum velocity in one hour

# MONTHLY METEOROLOGICAL BULLETIN.

*DECEMBER, 1927.*

## INTRODUCTION.

In this Bulletin an annual summary of the Hong Kong Observations for the year 1927 is given in Tables XI to XVIII, following the usual monthly Tables. They contain mean and extreme values of the principal Meteorological Elements, in British and C.G.S. Units, and of the prevalence of different phenomena for each month, and for the year, together with the normal values (for the period 1884-1927 unless otherwise stated). Also five-day means of the principal meteorological elements for the year 1927 and the period 1884-1923.

The readings of the barometer in British Units are *not* reduced to sea-level, or to the gravity at latitude 45°.

In the column headed "Days of rain" only those days have been counted on which the fall amounted to or exceeded 0·01 inch.

The remaining columns in the Tables require no special remark, the necessary explanations having been given in the Introduction to the Bulletin for the month of January.

The tracks of the typhoons and principal depressions which occurred in the Far East during the year 1927 are shown on two plates following the five-day means.

The results of Magnetic Observations made in the year 1927 are given at the end of the Bulletin.

T. F. CLAXTON.

Rain fell on 3 days. The mean hourly intensity was 0·042*in*, and the maximum fall in one hour was 0·305*in* at 13*h* on the 7th.

The maximum squall velocity, as recorded by the Dines-Baxendell anemograph, was at the rate of 38 miles per hour at 9*h* 35*m* on the 13th.

Clouds with base less than 2,000 feet high were observed on 3 days.
Clouds with base less than 1,000 feet high were observed on 1 day.

*0°=N., 90°=E., &c.

† Maximum velocity in one hour.

| 10 | + 0·3 | 20 | + 0·3 | 30 | − 0·1 |
| | | | | 31 | + 0·1 |

+ = Late ; − = Early.

The above may also be regarded as the errors of the time signals by radiotelegraphy and by signal lights.

The probable error for the month was ± 0s·13

* Error at 16h only. At 10h the Timeball was 1s·1 late owing to over correction of the clock.

* 0° = N. 90° = E., &c.
