NOTE.—The above observations, taken at 7 a. m., Washington time, were received too late for publication in the DAILY BULLETIN, and are given here in full from the opening to close of station. For explanation, see page 20.

REVIEW.

INTERNATIONAL METEOROLOGY.

[*Pressure expressed in inches and millimetres; temperature in degrees, Fahrenheit and Centigrade; wind-force by scale of* 0–10.]

The following description refers to chart ii. for the month of May, 1883, issued with this SUMMARY. This chart continues the series of international charts begun in January, 1877, and exhibits the mean pressure, mean temperature, and prevailing wind-direction over the northern hemisphere, as determined from one observation taken simultaneously each day at 7 a. m., Washington, or 0 h. 8 m. p. m., Greenwich mean time.

In May, 1883, the area of absolute barometric minima was indicated by the isobar for 29.6 (751.8), and occupied that part of British India lying between N. 20° and 35° and E. 70° and 90°; in this region the mean atmospheric pressure ranged from 29.5 (749.3) to 29.59 (751.6). In southern India the mean pressure ranged from 29.61 (752.1) to 29.74 (755.4). Two areas of low mean pressure, each indicated by the isobar for 29.8 (756.9), are shown on the chart. The first of these extends from the Norwegian coast north of N. 65°, southwestward to the Färöe and Shetland islands, the lowest mean reported being 29.78 (756.4); the second area occupies the region north of the Black sea, and comprises the Crimea and the provinces of South and Little Russia. Over the British Isles, the southern peninsulas, and central and western Europe, the mean atmospheric pressure ranges from 29.9 (759.4) to 30.0 (762.0); in Scandinavia, Austria and Russia, it varies from 29.8 (756.9) to 29.88 (758.9). In the North American continent the mean pressure is least over the country lying between W. 97° and 115°, from Dakota and Montana southwestward to the Gulf of California; within this region the means range from 29.8 (756.9) to 29.9 (759.4). In Mississippi, Alabama and Tennessee, and in the states bordering on the Atlantic south of the fortieth parallel, the mean pressure varied from 30.0 (762.0) to 30.05 (763.3). In the Canadian maritime provinces the mean pressure was not below 30.0 (762.0), and in the north Pacific coast region, it was from 30.0 (762.0) to 30.05 (763.2). In all other parts of the United States and Canada the mean pressure was below 30.0 (762.0). In Greenland and Iceland the mean pressure averaged 29.89 (759.2). In Japan and on the eastern coast of China, it ranged from 29.85 (758.2) to 29.90 (759.4).

The only area of barometric maxima shown on the chart is that of the north Atlantic ocean; this area is very extensive and occupies the Atlantic ocean south of N. 50°, and from W. 15° westward to the American coasts. The centre of this area, where the mean pressure is 30.3 (769.6), is situated between N. 30° and 35°, and W. 40° and 45°. From this region the mean pressure gradually decreases, but nowhere over the Atlantic ocean south of N. 50°, or west of W. 15°, does it fall below 30.0 (762.0).

Compared with the chart for the preceding month (April, 1883,), there has been a slight increase of pressure in the north Pacific coast region and in the extreme northwestern part of the United States, also in Florida and the Gulf States; in other parts of the United States there has been a slight decrease of pressure. In the maritime provinces there has been an increase of pressure, but in other parts of Canada the mean pressure is below that of the preceding month. Over the north Atlantic ocean there has been a general increase of pressure. In Europe there has been a slight increase in the southern peninsulas, but in other districts the mean pressure was less than that for April, the decrease being most marked in Denmark, Scandinavia, and Russia, where it averaged .2 inch. In Hindostan there has been a decrease of about .1 inch. In Siberia, eastern China, and Japan the pressure has decreased.

Compared with the corresponding month of previous years the mean atmospheric pressure in May, 1883, was slightly below the normal in the United States, east of the Mississippi river, except in Florida; it was also below the normal in the north Pacific coast region, Colorado, Kansas, and northern Texas. In other districts of the United States the pressure was in general slightly above the normal. In Canada it was generally below the normal, except in the maritime provinces where there was a slight excess. In Europe the mean atmospheric pressure was normal or slightly below.

The following table gives the mean pressure and mean temperature, with corresponding departures for May, 1883, in the several countries of the eastern hemisphere, compared with the means as determined from observations taken during the last six years:

Countries.	Mean pressure.			Mean temperature.		
	May mean of 6 (1877–'82) years.	May, 1883.	Departure.	May mean of 6 (1877–'82) years.	May, 1883.	Departure.

* Means for five years only.

In the United States the mean temperature of the air was below the normal in all districts, the departures being greatest in the lake region and in the northwestern sections of the country. In Canada the temperature was below the normal, except in the maritime provinces where it was about normal. In Europe the mean temperature of the air was below the normal in the Iberian peninsula; in the other districts it was normal or slightly above. In British India the highest mean temperature reported was 105°.4 Fahr. (40°.8 Cent.), at Nagpur, and the lowest was 79°.3 Fahr. (26°.3 Cent.), at Sibsagar.

The following are some of the extreme mean temperatures reported at isolated stations:

Highest.	Fahr.	Cent.	Lowest.	Fahr.	Cent.
	°	°		°	°
Petro-Alexandrovsk, Turkestan, Asia	86.0	30.0	York Factory, B. A	31.5	— 0.5
Cairo, Egypt	85.3	29.6	Jacobshavn, Greenland	32.9	0.5
Freetown, Africa	83.6	28.7	Godthaab, Greenland	33.4	0.8
Bridgetown, Barbadoes	83.2	28.4	Behring's Island (N. 55° 10′, E. 166° 30′)	33.7	0.9
Manila, Philippine Islands	82.4	28.0	Stykkisholm, Iceland	36.7	2.6

In the United States the winds were mostly from south through west to northwest; in Canada they were generally from southwest to northwest. Over the Atlantic ocean the winds were southerly and southeasterly, from the coasts of America eastward to about W. 45°; from that meridian eastward to the European coasts they were mostly northeasterly. In Europe the winds were mostly westerly, northwesterly and northerly; in the northern peninsulas they were southwesterly.

The rainfall during the month of May, 1883, was below the average in Florida, the Gulf states, the middle Atlantic states and in the extreme northwest, but in other districts it greatly exceeded the average, the excess being greatest in the lake region, California, and the Missouri valley; in these districts nearly double the average amount of rain fell during May, 1883. In Canada the rainfall was in excess of the average. In Europe it was normal or slightly below the normal.

With this REVIEW is issued international chart iii. for the month of December, 1881. This chart continues the series of international charts begun in November, 1877, and exhibits the paths of the principal atmospheric depressions that have appeared in the northern hemisphere. The data are charted for each day of the month on the maps accompanying each issue of the "International Bulletin," and from these charts and additional miscellaneous data are traced the movements of the centres of barometric minima.

The paths of thirty depressions have been traced for the month of December, 1881. The following concerns the general distribution of these disturbances: Ten are traced over the North American continent, of this number, five appear to have originated in the northwestern part of the continent, and have moved southeastward over the British Possessions to about the Lake Superior region, passing thence eastward over the northern part of the United States and Canada. One depression is traced from the north Pacific coast region eastward to the lake region and then northeastward to the mouth of the Saint Lawrence river; two depressions are shown in the lake region, one being a continuation of low area xv. of the November chart. Two depressions developed in the Gulf of Mexico and moved northeastward over the United States to the Atlantic. Twelve depressions are charted in the north Atlantic ocean, of this number, four are continuations of storms which passed over the United States and Canada; five developed in the region north of the sixtieth parallel; two appeared near N. 50°, and between the thirty-fifth and fortieth meridians, and one, number xxii., was first observed near N. 30°, W. 75°. Four depressions are shown in southern Europe; one is a continuation of number xxii., above referred to, and the others are traced over the Mediterranean and near the coast of Algeria. Three depressions appeared in the British Isles; one of them moved southeastward from Greenland and passed over northern Scotland; one, number xxiii., passed over England, the North Sea, northern Germany, and the Baltic, and disappeared in central Russia; and one developed in the neighborhood of the English channel and dissipated in the same region. One disturbance, number xii., is shown in the Ural region, and is a continuation of the depression charted as number xxvii. on the chart for last month. Two depressions appeared in northeastern Asia. A special feature of the month was the prevalence of barometric maxima over Europe, especially in the central and eastern parts of the continent.

The following descriptions refer to the depressions traced in North America:

I.—This was a continuation of low area xv., of the chart for November, 1881. At the close of that month the area of disturbance extended from Texas to the lake region; on December 1st it occupied the lower lake region, New England, and the provinces of Ontario and Quebec, the centre being near Rockliffe, Ontario, where the barometer read 29.61 (752.1), calm, heavy rain. During the day the disturbance moved towards the Gulf of Saint Lawrence, attended by rainy weather in the lower lake region and the Saint Lawrence valley, and by the 2d it had reached the Gulf, where it displayed increased energy, and was attended by moderate to strong gales, and stormy weather in the maritime provinces. It passed over Newfoundland into the Atlantic, and is hereafter described as low area xiii.

II.—This disturbance appeared on the northwestern boundary of the United States on the 5th; it moved eastward, and on the 6th the centre was over Lake Superior. The course then changed to the southeastward and the disturbance moved into Ontario, the pressure of the centre having now fallen below 29.4 (746.7); during the 7th and 8th it moved eastward over northern New England and the maritime provinces, its passage being marked by moderate to strong gales, accompanied by rain or snow. During the 8th the disturbance moved rapidly northeastward over Newfoundland and entered the Atlantic. This depression is hereafter referred to as low area xvi.

III.—This was a slight depression which approached the United States from the northwest territories and was shown in the upper lake region on the 8th; on the 9th it was in northern Ontario, whence it passed eastward over the Gulf of Saint Lawrence to Newfoundland, where it was apparently central on the 10th. This disturbance is hereafter described as low area xx.

IV.—This depression appeared in the north Pacific coast region on the 10th, on which date the barometer at Olympia, Washington Territory, read 29.55 (750.6), being a fall of .64 inch, or 16.2 mm. since the simultaneous observation of the 9th; light snows occurred in Washington Territory and Oregon, and light rains in California. By the 11th the disturbance had extended eastward to Dakota, but the pressure was still least in Washington Territory; by the 12th the region of least pressure occupied Minnesota and Manitoba, where the barometer ranged from 29.47 (748.5) to 29.57 (751.1). During the day the low area moved southward from Minnesota over Iowa and then eastward to Lake Michigan, where it was central on the 13th. The disturbance then moved northeastward over Ontario and Quebec, and on the 14th it was central near the mouth of the Saint Lawrence river, and by the 15th it had apparently filled up. This depression, during its progress over the lakes, was attended by very heavy rains and high winds in the region east of the ninetieth meridian and north of the thirty-fifth parallel.

V.—This disturbance apparently originated in Alaska. On the 13th the barometer at Sitka read 29.32 (744.7), being a fall of .45 inch, or 11.4 mm. during the preceding twenty-four hours. The low area retained its position until the 14th, when it apparently began to move southeastward, and by the 15th it had reached the northern boundary of the United States; it then passed eastward, with its centre to the north of the lake region, and apparently filled up in northern Quebec on the 18th; it displayed no storm energy during its transit.

VI.—This depression, like the preceding, developed in Alaska prior to the 18th; it remained in that region until the 20th, the barometer ranging from 28.93 (734.8) to 29.38 (746.2). On the 20th the disturbance disappeared beyond the limits of observation.

VII—Decreasing pressure and the circulation of the winds indicated the development of a depression near the Texas coast on the 19th, and by the 20th a disturbance, attended by heavy rain, had moved into Arkansas. It moved slowly northeastward, and on the 21st it was shown in Missouri, the pressure near the centre being about 29.95 (760.7), while heavy rains

occurred in all districts east of the Mississippi river. On the 22d the storm-centre was in Indiana, where the pressure had now fallen below 29.8 (756.9), and moderately high winds and rainy weather prevailed in the southern and eastern districts. Moving east-northeastward, with gradually decreasing pressure during the day, the disturbance reached the Atlantic coast on the 23d, on which date the centre was in Connecticut, where the pressure was 29.44 (747.8). As the storm-centre neared the coast line, vessels to the northward of Cape Hatteras and west of the sixty-fifth meridian, encountered heavy sw. gales, shifting to nne. This disturbance moved over the Atlantic in a northeasterly course, and is hereafter described as low area xxvii.

VIII.—By the morning of the 22d the barometer at Sitka, Alaska, had fallen to 28.93 (734.8); during the day it began to rise and on the following day it read 29.2 (741.7). The disturbance appears to have been rapidly transferred southeastward, and by the morning of the 24th the pressure, although increased to 29.65 (753.1), was least in Manitoba; on the 25th, the position of the centre of depression remained unchanged, but by the following day it had passed northeastward beyond the range of observations.

IX.—This disturbance developed in the Gulf of Mexico on the 25th; on that date, the schooner "Gersh Banker," reporting a hurricane in about N. 28°, W. 87°, in which she lost spars and sails. By the morning of the 26th the disturbance had reached Alabama, the pressure near the centre being about 29.85 (758.3); it moved northeastward accompanied by heavy rains and moderate gales along the coast, and on the 27th it was shown in West Virginia; during the day it passed into the Atlantic, causing strong sw. gales at sea. This depression is hereafter described as low area xxviii.

X.—This depression appeared in Alaska on the 25th, and remained in that region until the 27th, when it began to move southeastward, and by the 28th it had reached Manitoba, the pressure at the centre of disturbance falling below 29.4 (746.7) It moved southeastward to the lower lake region and thence along the Saint Lawrence valley, and at the close of the month it was central near Father Point, Quebec, where the barometer read 29.2 (741.7). This area, during its passage, caused rainy weather and high winds to moderate gales in the lake region, New England, and the Maritime Provinces.

The following descriptions refer to the depressions traced over the Atlantic, and in Europe:

XI.—From the 1st to the 6th, the atmospheric pressure over the region north of the sixtieth parallel and between W. 10° and 50°, ranged from 28.95 (735.3), to 29.4 (746.7), and caused during that period, a continuation of southwesterly to southerly winds and rainy weather over the British Isles and Scandinavian peninsula. By the 7th the disturbance had moved east-southeastward and was central near the Färöe Islands, the barometer at Thorshaven reading 28.67 (728.2), wind w. 18 miles an hour. As the barometric gradient became steeper over the British Isles, the winds increased in force, and moderate to strong sw. to w. gales and rainy weather prevailed over the northern and western portions of the United Kingdom, with moderate southerly gales in Denmark and Scandinavia. The disturbance passed northeastward, after being joined by a depression which had moved up from the Atlantic, and during the 8th and 9th it existed off the Norwegian coast as an extensive depression with no well-defined centre, but with several subsidiary disturbances within its area. By the 10th, it had passed northeastward and disappeared in the Arctic regions.

XII.—This depression appeared in the Ural region on the 1st, and was probably a continuation of low area xxvii. of the November chart. It moved southeastward during the 2d and 3d, and filled up in Central Asia on the last-mentioned date.

XIII.—This is a continuation of low area i. above described. After passing over Newfoundland the disturbance moved rapidly eastward and on the 3d was central near N. 51,° W. 37°; on reaching the ocean the disturbance appears to have increased in energy, causing some disasters to shipping. On the 2d, the schooner "Water Lily" encountered the gale when sixty-three miles from Saint Pierre, Newfoundland, and was abandoned, after losing rudder, spars, &c. The s. s. "Bath City," which had suffered greatly during the November gales, was also abandoned, in N. 46° 20′, W. 45° 00′, on the 3d. On the 3d, the s. s. "Gellert,' W. Kuhlewein, commanding, reported, in N. 50° 18′, W. 33° 53′, barometer 29.3 (744.2), wind w. by s., force 9–10; the s. s. "Amsterdam," T. M. Lucas, commanding, in N. 49° 08′, W. 28° 21′, had barometer 29.51 (749.5), wind shifting from n. to s., squally weather, with hail and rain. Captain Beynon, commanding the s. s. "Vaderland," reported as follows: "2d, in N. 46° 24′, W. 42° 17′, at 3.15 a. m., Greenwich time, wind northerly, light, weather cloudy, very long swell from n. by e.; 2.36 p. m., hazy weather, with drizzling rain, strong breeze with hard squalls, 6.30 p. m., same weather, wind blowing a gale from ssw., confused sea. On the 3d, in N. 48° 15′, 35° 33′, strong wsw. gale, heavy hail squalls, very high sea; 2.8 p. m. (N. 48° 42′, W. 32° 12′), gale at its height, frequent hail squalls; 8 p. m., weather moderating." Vessels to the eastward of W. 35°, encountered strong sw. gales, with furious seas, and those to the westward of that meridian had equally strong nw. gales. On the 4th, the disturbance moved northeastward without any diminution of energy, and during the day it probably united with a large and deep depression (number xi.) which occupied the ocean north of 55°.

XIV.—This was a slight disturbance which formed over the western part of the Mediterranean and southern Spain on the 4th, moved eastward over Algeria during the 5th, and on the 6th was central off the eastern coast of Tunis. H. M. S. "Beacon," in N. 35° 19′, E. 12° 53′, reported barometer 30.06 (763.5), wind e., force 4, and the bark "Peppina," in N. 36° 19′, E. 14° 19′, barometer 30.11 (764.8), wind se., force 4. By the 7th the pressure had decreased to 29.7 (754.4), and the disturbance was central near Malta; on board the above-mentioned vessels the barometer read 29.72 (754.9) and 29.79 (756.7), respectively, with ene. wind of force 6 at the former, and se. wind of force 7 at the latter, with heavy rain; at Malta the barometer read 29.73 (755.1), wind s., force 3. During the 7th, 8th, and 9th, the disturbance moved slowly eastward, causing stormy, unsettled weather over the eastern part of the Mediterranean, and finally disappeared on the last-mentioned date.

XV.—This disturbance appeared immediately after the passage of low area xiii., and was probably a secondary development of that depression. On the 5th the s. s. "Switzerland," in N. 48° 48′, W. 31° 04′, reported, 4 p. m., barometer 28.79 (731.3), vessel struck by a hurricane from e. to se., sw. and n., with rain and blinding spray; this lasted two hours and then settled into a heavy nw., gale; in N. 47° 17′, W. 32° 52′, the s. s. "Canada," had a heavy sw. gale; Captain Bonjer, commanding the s. s. "Maas," reported as follows: "5th, 4 p. m., barometer 29.4 (746.7), wind shifting from sw. to s., e. and n.; barometer falling rapidly to 28.37 (720.6); at 7.50 p. m. a dead calm set in which lasted about ten minutes, when suddenly the wind came out from nnw. with hurricane force, causing a very high sea; at 10 p. m. the wind began to decrease, but it continued to blow a heavy gale until 7 a. m. of the 6th. The ship's position during the gale was N. 50° 28′, W. 29° 20′." The disturbance moved northeastward, and on the 6th it was central off the western coast of Ireland, causing moderate s. gales and rainy weather over that country. During the day the depression probably moved north-northeastward and merged in low area xi., then central near the Färöe islands.

XVI.—This is a continuation of low area ii. of this chart. As the disturbance moved over Newfoundland during the 8th it was attended by moderate to strong gales on the coasts of New England and the maritime provinces. At Saint Johns, Newfoundland, several vessels dragged anchor and sustained damage. On the 9th the disturbance was central near N. 53°, W. 37°; moderate southerly gales were reported to the eastward of W. 35°, while strong w. and nw. gales prevailed to

the south and westward; on the 10th the disturbance moved slowly eastward, and by the 11th it was shown off the southwestern coast of Ireland, the pressure near the centre of disturbance being about 29.75 (755.6). During the day this disturbance probably became merged in a large area of relatively low pressures which extended from England southeastward over central Europe to the Mediterranean, and which contained several distinct storm-centres.

XVII.—This was a secondary disturbance which appeared in southern England on the 9th; during the 10th, 11th and 12th it occupied the English channel and the North Sea, the pressure in its central region ranging from 29.5 (749.3) to 29.7 (754.4). It caused unsettled, rainy weather over the British Isles during its passage, and finally filled up on the 12th.

XVIII.—This disturbance occupied the southern part of the Iberian peninsula on the 9th, and had probably moved in from the ocean. Referring to the unsettled weather which prevailed near the western coasts of Spain and Portugal, Captain Fry, commanding the bark "Pawashick," near N. 41° 37′, W. 11° 27′ on the 9th, reports as follows: "9th, 10 p. m., very sudden and violent storm lasting four hours, wind sse. to se. by e. force 8–9 for two hours, with much rain, barometer 29.51 (749.5). The barometer had fallen one tenth of an inch per hour for five hours and had been very unsteady for three days, oscillating .3 to .4 inch per day." During the 9th the disturbance moved over southern Spain and entered the Mediterranean, and on the 10th it was central near the Balearic Isles, its central region being inclosed by the isobar for 29.7 (754.4). By the 11th it had moved northeastward to Sardinia, its passage being marked by moderate gales and stormy weather in Algeria and over the Mediterranean. On the 12th the disturbance was central in Italy where it apparently dissipated during the day.

XIX.—From the 10th to 13th, the atmospheric pressure over southern Greenland ranged from 28.93 (734.8), to 29.19 (741.4). By the 14th the region of least pressure was shown over Iceland where the barometer read 28.91 (734.3), wind sw. force 6. snowing. During the 13th an area of high pressure occupied the British Isles and the greater part of Europe, its centre being over the Gulfs of Bothnia and Finland; as the depression moved southeastward, the barometric gradient became steeper and high winds to moderate gales prevailed in Scandinavia and in Scotland. During the 15th and 16th the disturbance moved slowly southeastward, causing a general decrease of of pressure, with rainy, unsettled weather in the regions to the eastward and southeastward. During the 16th a great decrease of pressure occurred and by the morning of the 17th, the isobar for 28.8 (731.5) included Scotland and stretched northwestward to Iceland; at the centre of disturbance, which was near the Hebrides, the barometer read 28.58 (725.9). Strong westerly breezes to moderate gales prevailed over Ireland, the Channel and the bay of Biscay, while southerly winds were reported at stations on the shores of the North Sea. On the 18th the disturbance moved northeastward to the western coast of Norway, the pressure at the centre having fallen to 28.4 (721.3). Exceedingly steep gradients now existed over the British Isles, northern and central Europe, so that the winds increased to the force of a strong gale in nearly all districts north of the fiftieth parallel and west of 20° east longitude. The depression passed northeastward with slight change in pressure and on the 19th it was central off the Norwegian coast, north of N. 65°. The winds retained their force over the Baltic and the northern part of the North Sea, but moderated somewhat in the other districts, while the rainy weather continued over northwestern Europe. On the 20th this disturbance passed northeastward and disappeared in the Arctic regions.

XX.—This is a continuation of the disturbance traced as low area iii. on the chart. After passing over Newfoundland on the 10th, it was probably joined by a disturbance which had moved over the Atlantic from the vicinity of Bermuda. During the passage of this last, strong ne. gales prevailed off the coast of the United States. Captain G. D. Spicer, commanding the ship "E. J. Spicer," reported on the 10th, near N. 39° 40′, W. 58° 40′, as follows: "7.30 p. m., a very heavy gale from s. veering to ssw., sw., w., and nw., in eight hours time; part of this time the wind blew with hurricane force, attended by heavy rain, lightning, and very high sea." Low area xx., after uniting with the disturbance just referred to, became central on the 11th, near N. 50°, W. 42°, and during the day it apparently moved northeastward and merged in low area xix., which then occupied the region north of the sixtieth parallel.

XXI.—This disturbance developed in Algeria on the 13th; it moved eastward and by the 14th the region of low barometer occupied Tunis; the storm-centre then moved northeastward with decreasing pressure, and passed over Sicily and the southern part of the Italian peninsula on the 15th and 16th, disappearing over the Adriatic on the latter date.

XXII.—The data relating to the development and earlier movement of this disturbance are very meagre; the reports, however, are sufficient to indicate the presence of an atmospheric disturbance over the region as charted. On the 15th the pressure over the eastern part of the United States varied from 30.2 (767.1) to 30.5 (774.7), except on the south Atlantic coast and in Florida, where it was below 30.1 (764.5). The area of high barometer extended east-southeastward from the Virginia coast to Bermuda, where the barometer read 30.2 (767.1), but from Hatteras southward the pressure was about 30.05 (763.3), with high winds and rainy weather; it also decreased to the southeastward of the Bermudas. No barometrical observations have been received by which the disturbance can be definitely located; the following reports, however, from the logs of vessels serve to indicate its presence on the 15th: The s. s. "New York," off Cape Carnaveral, had a violent nne. gale lasting thirty-six hours; brig "Scotia," in N. 32°, W. 73°, heavy n. by e. gale, which lasted forty-eight hours; the s. s. "Edith Godden," about one hundred and forty miles southeast of Hatteras, had a severe n. by e. gale, with blinding snow storm; in N. 36° 00′, W. 74° 30′, the brig "O. B. Stillman" had a heavy ene. gale lasting forty-eight hours; split sails and started water tanks; off Hatteras the brig "Thetis," reported a heavy ne. gale, in which she had sails split; the brig "Tula," fifty miles north of Hatteras had a hurricane from ene., lasting eighteen hours; vessel lost deckload and several sails; off Cape Lookout the s. s. "Delaware," encountered a heavy nne. gale increasing to hurricane, during which the ship was hove to for fifteen hours; the ship "David Crockett," fifty miles sse. of Cape Hatteras, had a violent ssw. gale shifting suddenly to nne. By the morning of the 16th the pressure at Bermuda had decreased from 30.20 (767.1) to 29.87 (758.7); over the United States and eastward to the sixty-eighth meridian the pressure was above 30.20 (767.1), and from the Azores westward to the fiftieth meridian it was also above 30.20 (767.1), while a trough of low pressures existed over the ocean between those limits. Strong n. and nne. gales occurred along the coast of the United States, and moderate to strong s. winds prevailed near W. 50°.

On the 17th the isobar for 30.0 (762.0) enclosed an extensive region between N. 25° and 35° and W. 65° and 48°; within this region the lowest reported pressure was 29.78 (756.4); at Bermuda the barometer had risen to 29.97 (761.2), wind nnw.; near N. 30°, W. 55°, it was easterly, and on the twenty-fifth parallel it was westerly. During the 18th and 19th, the disturbance appears to have moved slowly northeastward, the high area which existed to the eastward being gradually forced southeastward; on the 20th the depression was well defined by the reports as central near N. 45°, W. 45°, where the pressure was 29.8 (756.9); a moderately steep gradient existed west of the fiftieth meridian, so that moderate to strong n. and nw. gales prevailed over that region; north of the storm-centre moderate e. gales were reported, and to the eastward between W. 35° and 25°, moderate s. winds were reported; east of W. 25°, however, moderate to strong w. and nw. gales prevailed, that region being under the influence of low area xxiii. On the 21st the disturbance was probably near N. 50° and between W. 20° and 25°, but its position was not well-defined; on the

22d the storm-centre, having moved slightly south of east, reached Brittany where the pressure was 29.55 (750.6). By the 23d a great change had taken place in the distribution of pressure; over the British Isles, western Europe, and the Bay of Biscay, it had increased to 30.4 (772.1), and the area of low barometer was forced to the southeastward and passed rapidly over France to the Mediterranean, its centre on the 23d being near the western coast of Italy. During the 24th and 25th the disturbance lingered over southern Italy and Greece, and finally disappeared on the last-mentioned date. On that date the pressure at the centre of the high area above referred to, increased to 30.7 (779.8), and the region of high pressures included the whole of Europe, except Scandinavia and northwestern Russia.

XXIII.—After the passage of low area xix., on the 17th and 18th, the pressure over the British Isles increased to 29.5 (749.3), but a sudden decrease occurred and by the 20th a deep depression, indicated by the isobar for 28.8 (731.5) occupied the British Isles. Furious westerly gales prevailed over the Atlantic from W. 20° eastward to the English Channel; in the southern parts of England the winds were sw. and nw., and blew with the force of a strong gale; at stations on the French coast the westerly and southwesterly winds attained the force of a strong gale. Much damage was done to shipping near the coasts and to property on shore, the gale being especially severe in the Channel islands. The centre of disturbance moved rapidly eastward, and by the 21st it was shown in northern Germany, the pressure at the centre having increased to 29.1 (739.1); the winds to the westward of the centre decreased somewhat in force, but in many places they continued to blow with the force of a moderate gale; moderate winds prevailed to the northward of the storm-centre, where the gradient was slight. The depression continued its easterly movement and passed into Russia, and on the 22d it occupied the government of Moscow, the pressure having increased to 29.55 (750.6). On the 23d the disturbance moved northeastward and filled up during the day; this depression was attended by heavy rains during its passage over western Europe, and by snow in Russia.

XXIV.—This depression appeared to the northward of Scotland on the 21st, the lowest reported pressure being 29.19 (741.4), wind nw., at Thorshavn, Färöe islands. On the 22d it moved northeastward along the Norwegian coast, attended by generally higher temperature and light snow, and on the 23d it disappeared to the northward of Scandinavia, causing moderate w. gales at the northern stations.

XXV.—The pressure over southern Greenland decreased about .5 inch from the 20th to 21st; the barometer on the latter date, reading about 29.08 (738.6) The disturbance appears to have moved south-southeastward, the region of least pressure being shown near N. 53°, W. 38° on the 23d; moderate to strong northwesterly gales prevailed over the region between N. 40° and 50° and west of W. 40°, while moderate to strong southerly and southwesterly gales were reported from N. 45° to 55°, and between W. 35° and 25°. As the depression moved eastward the barometric gradient in its front became much steeper, and the southerly winds attained the force of a whole gale; the s. s. "Prussian," J. G. Stevens commanding, reported in N. 54° 50′, W. 16° 45′, barometer 29.64 (751.8), wind s., force 9, raining; at Monach lighthouse, Hebrides, the barometer read 30.18 (766.6), wind ssw., force 7. To the westward the winds were w. and nw., ranging from force 4 to 7. The eastward movement of the depression was barred by the area of barometric maxima which existed over Europe, and this depression probably moved northward and united with low area xxvi.

XXVI.—This disturbance appeared in southern Greenland on the 23d, on which date the barometer at Godthaab read 28.71 (729.2); on the 24th the centre was near Iceland, the barometer at Stykkisholm having fallen to 28.29 (718.6), wind s., force 8, raining. The disturbance passed east-northeastward over Iceland during the 25th, and on the 26th it was central off the extreme northwestern coast of Norway; on the 27th the centre was near Finmark, barometer at Gjæsvaer 28.47 (723.1), wind w., force 4. By the 28th the storm-centre had passed to the northeastward of Archangel, Russia, and during the 29th and 30th it moved into northern Siberia, the pressure having increased to 29.5 (749.3).

XXVI.—This is a continuation of the disturbance described as low area vii. The depression passed off the New England coast as a somewhat severe storm on the 23d, and by the 24th the centre was in N. 45°, W. 55°, with the pressure below 29.2 (741.7), while strong gales prevailed in all quadrants of the depression. The s. s. "Rhodora," in N. 43° 10′, W. 57° 6′, reported a strong sw. gale after which the wind came from nne. with great violence, causing a very high cross sea in which the ship rolled heavily and shifted cargo; the s. s. "City of Paris," in N. 43° 40′, W. 57° 4′, had strong gales from sw. to wsw. and ne. with very heavy rain and snow. The bark "New York," in N. 38° 7′, W. 65° 55′, had barometer 29.5 (749.3), wind nw. force 10°. The disturbance moved northeastward and on the 25th it was central near N. 49°, W. 42°, the lowest reported pressure being 29.44 (746.8); fierce southwesterly gales continued over the region from W. 40° to 30°, and n. and nw. winds of moderate force were reported from the region west of W. 45°. During the 26th, 27th, and 28th, the disturbance moved slowly northeastward and on the 29th it was central south of Iceland, the pressure at Stykkisholm being 28.93 (738.8), wind e. force 8, snowing. During the 30th and 31st, it moved slowly northeastward to the Norwegian coast, causing cloudy, rainy weather, and sw. winds at the northern stations in the British Isles.

XXVIII.—This is a continuation of low area ix. described above. After passing into the Atlantic it moved northeastward, and on the 28th, was central south of Nova Scotia. It continued its northeasterly movement over the Atlantic during the 29th and 30th, but does not appear to have exhibited much storm-energy, as the barometric gradient had become greatly reduced after the 29th. On the 31st this disturbance was off the southwest coast of the British Isles.

The following refers to the two depressions traced in eastern Asia:

XXIX.—This disturbance appeared over the sea of Okhotsk on the 4th. At Nikolaevsk on the Amoor the pressure ranged from 29.73 (755.1) to 29.30 (744.2), the wind remaining westerly and moderate in force. By the 8th the disturbance had passed beyond the limit of observation.

XXX.—This appeared in the same region as the preceding depression, and remained from the 26th to the 29th, during which time the barometer at Nikolaevsk ranged from 29.3 (744.2), to 29.79 (756.7). At the close of the month the disturbance had disappeared from the chart.

The following information respecting the twentieth and last typhoon of the season of 1881, is taken from "The typhoons of the China seas," published by the Rev. Marc Dechevrens, S. J., director of the Observatory at Zi-Ka-Wei, China.

The details of this typhoon are too indefinite to admit of a tracing of its path, it however passed over the Philippine Archipelago in a course very nearly the same as that pursued by the "Elgin" typhoon, the first of the season. On the morning of December 10th, the weather at Albay, a harbor of southeastern Luzon, (N. 13° 13′, E. 123° 40′), became threatening, wind nnw. and nw. with rain, barometer falling to 29.8 (756.9). This continued during the night of 10–11th, and at 8 a. m. the wind was blowing violently from wnw. barometer 29.82 (757.4), 10 a. m., violent w. wind, heavy rain, barometer 29.69 (754.1); noon, hard squalls from w. and sw. barometer 29.61 (752.1), rain continuing. No change occurred until 2. p. m., when the wind shifted to s, without abating, barometer 29.53 (750.0); 5 p. m. barometer at its minimum reading, 29.45 (748.0); 6 p. m., rising again; 7 p. m., wind and rain abating rapidly; 9 p. m., fresh s. wind, sky clearing, barometer rising. 12th, at daybreak fine weather; 10 a. m., barometer 29.92 (760.0). During the storm the s. s. "Francisco" dragged her anchors and drove ashore but did not sustain serious

damage; at Marinac a ship was reported wrecked; at Sorgoson two lorchas engaged in unloading the steamer "Gravina," foundered with part of the cargo valued at $10,000. The centre of the typhoon appears to have passed from se. to nw., skirting the eastern coast of the Archipelago between N. 10° and 14°; at Albay the winds were strongly convergent (nnw., nw.), whilst the centre was approaching. On the 11th the centre lay to the eastward of Albay; at noon the violence of the w. and sw. winds, accompanied by heavy rains, showed that the centre had turned to the left and was about to cross the island, as several of the preceding typhoons had done, but more to the southward near Albay. There are no observations to indicate the course of this typhoon over the China sea.

GENERAL REMARKS.

All data which appear in the DAILY BULLETIN OF SIMULTANEOUS METEOROLOGICAL OBSERVATIONS are copied from the regular exchanges of this office. The barometer readings for land stations, in the first and second columns, are reduced to freezing and their respective standards; those in the third and fourth columns to sea-level. When necessary, corrections for instrumental error, temperature, and reduction to sea-level are always applied, while those for instrumental error, only when such corrections can be ascertained with close approximation, as by comparison when vessels are at or near land stations. Relative humidity generally requires computation from the hygrometrical observations. When rain has fallen, but neither the amount nor duration is recorded, the word "blank" is published in the rainfall column. The weather is generally published as given. The following symbols and abbreviations are common to all series, viz: †, aneroid; *, instrumental error not known; c, cirrus; k, cumulus; s, stratus; n, nimbus; d, scud; f, fracto; p, pallio; hz, haze; fg, fog; sk, smoke; inap, inappreciable; d. clouds, detached clouds. The movement of the air is published as given on the originals, when indicated by velocity in miles per hour, in meters per second, or by force, all variations of the latter being reduced to the common scale of 0 to 10. Those stations reporting the movement in pounds pressure per square foot are reduced to force on the common scale, and those in kilometers per hour, to meters per second and miles per hour. The distinction between upper and lower clouds is carefully made in the United States and a portion of the Canadian series, and the various formations are indicated by the letters above given and their combinations. In the MONTHLY SUMMARY OF INTERNATIONAL SIMULTANEOUS METEOROLOGICAL OBSERVATIONS the position of stations (latitude and longitude) are obtained from Keith Johnson's "Index Geographicus," except where more exact information is furnished. The elevation of stations is obtained either from the annual, semi-annual, and monthly publications of the various meteorological bureaus here represented, or from the original forms upon which are entered the daily observations. In the United States series the elevations are computed from the latest surveys, and are carefully revised each month, in order to note any change in the elevation of the barometer-cistern at any station. It is believed for the most part that, throughout the European and other series, the elevations as given represent the height of the barometer-cistern above sea-level; at least, this should be the case. The local time, where omitted or not given correctly in the original, is carefully computed at this office. A letter placed opposite the name of a station or some portion of the data credited thereto, indicates that a certain number of observations are missing, corresponding to the relative position in the alphabet of the letter so used.

On February 1, 1883, the following change was made in publishing marine data in the "Daily International Bulletin":

All marine reports are classified as to districts, which are designated as follows: District No. 1, North Atlantic; District No. 2, South Atlantic, &c. under which headings the respective reports are printed.

BOUNDARIES OF DISTRICTS.

District No. 1 comprises the Atlantic ocean, its arms and tributaries, from the equator northward to the pole, and in the arctic from 100° E., westward to 100° W., of Greenwich.

District No. 2 comprises the Atlantic ocean, its arms and tributaries, from the equator southward to the pole, and in the antarctic from 20° E., westward to 70° W., of Greenwich.

District No. 3 comprises the Pacific ocean, its arms and tributaries, from the equator northward to the pole, and in the arctic from 100° W., westward to 100° E., of Greenwich.

District No. 4 comprises the Pacific ocean, its arms and tributaries, from the equator southward to the pole, and in the antarctic from 70° W., westward to 145° E., of Greenwich.

District No. 5 comprises the Indian ocean, its arms and tributaries, from the Asiatic continent southward to the pole, and in the antarctic from 20° E., eastward to 145° E., of Greenwich.

INTERNATIONAL CHARTS ACCOMPANYING DAILY BULLETIN AND MONTHLY SUMMARY

International chart i. shows isobars and isotherms charted from data as appearing in the INTERNATIONAL BULLETIN of same date, as reported by the several observers. Isobars, in continuous lines, exhibit atmospheric pressure at sea-level in English inches; isotherms, in dotted lines, exhibit temperature of the air in degrees, Fahrenheit, similarly charted.

International chart ii. (monthly mean chart), showing mean pressure at sea-level in English inches, mean temperature in degrees, Fahrenheit, mean force and prevailing direction of wind at 7 a. m., Washington mean time.

International chart iii. shows tracks of centres of low barometer. The Arabic numerals show location of the centres of low barometer at 7 a. m., Washington mean time, of that date.

In the above charts, broken lines indicate that the lines so drawn are doubtful.

Arrows show direction of, and fly with, the wind. Force is shown as follows:

SYMBOLS.	FORCE.	VELOCITY.	
		MILES PER HOUR.	METRES PER SECOND.
○	0	0	0
→	1, 2	0 to 9	0 to 4
→	3, 4	9.1 to 22.5	4.1 to 10.1
→	5, 6	22.6 to 40.5	10.1 to 18.1
→	7, 8	40.6 to 67.5	18.1 to 30.2
→	9, 10	67.6 up.	30.2 and over.

The following remarks relate to the individual peculiarities in the *methods* of recording, and the *times* of taking, the international simultaneous meteorological observations, under the auspices of the various meteorological bureaus:

ALGERIAN SERIES (furnished by co-operation of General Maritz, Commandant Supérieur du Génie in Algeria).—The originals give the barometer in millimetres reduced to sea-level; temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The rainfall is measured at 7 a. m., local time, and the amount indicated in millimetres.

AUSTRALIAN SERIES (furnished by co-operation of R. L. J. Ellery, Director of the Observatory at Melbourne, N. S. W.).—At Melbourne the conversions are published as given in the originals. The movement of the air is indicated by velocity in miles per hour. Adelaide, furnished by co-operation of Charles Todd, C. M. G., F. R. A. S. The observations are taken at 9 p. m., local time.

AUSTRO-HUNGARIAN SERIES (furnished by co-operation of Prof. Dr. Julius Hann, Director of the Imperial and Royal Central Meteorological Institute at Vienna).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. At the following stations rainfall is measured at local time: Lemberg, 7 p. m.; Vienna, 2 p. m.; Trieste, 7 a. m. The weather is given by the Vienna symbols or in general terms.

BRITISH SERIES (furnished by co-operation of the Meteorological Council, London, Robert H. Scott, Esq., F. R. S., Secretary, and respective observers).—In general the originals do not give rainfall or distinction between upper and lower clouds. Relative humidity, except for Bradford and Silloth Rectory, is not given on the originals, but is computed from hygrometrical observations. At Cardington, Oxford, and Sandwick Manse the barometers are given as read off. At Greenwich the movement of the air is indicated by pounds pressure per square foot. At the following stations rainfall is measured at local time: Bradford, 9 a. m., and Aberdeen, 10 a. m. The wind-direction is given to 32 points and weather by the Beaufort notation. At Bradford, no observations are taken on Sunday, except the rainfall, and in the monthly summary the letter designating a certain number of days missing applies to all the data except rainfall.

CANADIAN SERIES (furnished by co-operation of Charles Carpmael, A. M., F. R. A. S., Director of the Magnetic Observatory at Toronto and Superintendent of the Meteorological Office of the Dominion of Canada, and respective observers).—The originals give the barometer reduced to sea-level in English inches and the temperature in Fahrenheit. Meteorological reports from stations marked with a * are telegraphed daily to the office of the Chief Signal Officer of the Army.

CAPE COLONY SERIES (furnished by co-operation of the Meteorological Commission of Cape Colony, Cape Town, and respective observers).—At Cape Saint Francis Lighthouse, the original gives barometer reduced to freezing, but not to sea-level. The kind of clouds is given, but no distinction is made between upper and lower. Weather in general terms.

CHINESE SERIES (furnished by co-operation of Marc Dechevrens, S. J., Director of the Meteorological Observatory at Zi-Ka-Wei).—At Zi-Ka-Wei the originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is given in metres per second and the direction to 16 points. The kind of clouds is occasionally given, and the degree of cloudiness on the scale of 0 to 10; distinction between upper and lower clouds is sometimes made. The weather is given in general (French) terms. The rainfall is given in millimetres and measured at the moment of simultaneous observation. At Tchang-Kia-Tchouang the original gives barometer in millimetres reduced to sea-level, temperature in Centigrade, velocity in kilometres for past 3 hours 53 minutes, clouds on scale of 0–10, no distinction between upper and lower.

DANISH SERIES (furnished by co-operation of Captain N. Hoffmeyer, Director of the Royal Danish Meteorological Institute at Copenhagen).—The

originals give the barometer in millimeters reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6. The weather is occasionally given by the Vienna symbols, but it is not certain that they always refer to the moment of simultaneous observations, except at Copenhagen. No distinction is made between upper and lower clouds, and the direction of movement, together with the rainfall, is entirely omitted. At Jacobshavn the observations are taken at 8 a. m. instead of 8.44.

EGYPTIAN SERIES (Furnished by the co-operation of Albert Ismalun, Director of the Laboratoire Khédivial du Caire).—Original gives barometer reduced to zero, but not to sea-level, temperature in Centigrade. The velocity is the mean for past 24 hours. Rainfall in millimetres.

FRENCH SERIES (furnished by co-operation of the Central Meteorological Office of France, Professor E. Mascart, Director, and respective observers).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in metres per second for Mont Louis and Perpignan. In general the rainfall is measured at 9 a. m., local time. The direction of upper and lower clouds is given, but no distinction is made as to kind. The degree of cloudiness is given on a scale of 0 to 4 at Clermont-Ferrand and Puy de Dome, while at other stations the scale of 0 to 10 is employed, or general weather terms, from which the amount of cloudiness is inferred. The weather is given in general terms, except occasionally by the Vienna symbols at Mont Louis and Perpignan.

GERMAN SERIES (furnished by co-operation of Prof. Dr. G. Neumeyer, Director of the German Marine Observatory at Hamburg).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The kind of clouds is occasionally given, but no distinction is made between upper and lower; the amount is given on a scale of 0 to 10, but the kind is rarely given. The weather is given in Vienna symbols or in general terms. The elevation of barometer cistern at Friedrichshafen, changes from 413 to 408 metres.

GREEK SERIES (furnished by co-operation of Prof. Dr. J. F. Julius Schmidt, Director of the Royal Observatory at Athens).—The originals give the barometer corrected for temperature only, and the thermometer in Centigrade. Hygrometrical observations are not given. The kind of clouds is occasionally given, and the amount is inferred from the general weather terms. The movement of the air is indicated by force on a scale of 0 to 10.

INDIAN SERIES (furnished by co-operation of H. F. Blanford, Meteorological Reporter to the Government of India at Calcutta).—The barometric observations refer to the Calcutta standard, which requires a correction of —0.011 inch, or 0.28 mm., as compared with the Kew standard. The wind-velocity given is the average rate of wind since the observation of the preceding day. All conversions are published as given in the originals, where the data are recorded to an additional decimal. The weather is given by the Beaufort notation, Vienna symbols, or special symbols.

ITALIAN SERIES (by authority of the Minister of Agriculture, Industry, and Commerce—furnished by co-operation of Professor P. Tacchini, Director of the Central Meteorological Office at Rome, and respective observers).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometres per hour, or by force on a scale of 0 to 4, as at Mondovi, Florence, and Cagliari. No distinction is made between upper and lower clouds, and the amount is given on a scale of 0 to 10. When snow has fallen at Stelvio and Valdobbia, it is not certain whether the amount given refers to melted or unmelted.

JAPANESE SERIES (furnished by co-operation of I. Arai, Director of the Imperial Meteorological Observatory at Tokei).—The rainfall is measured at 9.30 a. m., local time, and the conversions are all published as given in the originals. Distinction is generally made between upper and lower clouds, and the amount is given on a scale of 0 to 10. The weather is given in general terms.

MAURITIUS SERIES (furnished by co-operation of C. Meldrum, Secretary of the Meteorological Society of Mauritius).—All conversions are published as given in the originals. The direction of the wind is given to 64 points, and the rainfall is measured at 9.30 a. m., local time.

MEXICAN SERIES (by authority of the Secretary of Public Works—furnished by co-operation of Señor Mariano Barcena, Director of the Central Meteorological Observatory in the City of Mexico, and respective observers).—All conversions are published as given in the originals, but when an evident mistake has been made the data is queried at this office. The kind of clouds is given, and also the direction and amount of both upper and lower. The degree of cloudiness is indicated on a scale of 0 to 10. Rainfall is generally measured at 6 a. m., local time.

NETHERLANDS SERIES (furnished by co-operation of Professor Buys-Ballot, Director of the Royal Meteorological Institute of the Netherlands at Utrecht).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by pressure in kilograms per square metre, except at Hellevoetsluis, which gives force on a scale of 0 to 12. The humidity is not given on the originals, but for two stations it is computed from the hygrometrical observations. The weather is only given for Utrecht, from which the amount of cloudiness at that station is inferred.

NORWEGIAN SERIES (furnished by co-operation of Professor H. Mohn, Director of the Royal Norwegian Meteorological Institute at Christiania).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade The movement of the air is indicated by velocity in metres per second or by force on a scale of 0 to 6. The weather is occasionally given by Vienna symbols. At Bergen observations upon the weather and degree of cloudiness are made at 2 p. m., local time. At Brono the observations are taken at 2 p. m., instead of 12.57 p. m.

PORTUGUESE SERIES (furnished by co-operation of J. C. de Brito Capello, Director of the Meteorological Observatory of the Infante Dom Luiz at Lisbon).—In the originals the barometer is given in millimetres and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometres per hour. The weather is occasionally given by the Vienna symbols. The rainfall is measured at noon each day. On May 1st, elevation of barometer cistern at Lisbon changes from 102 to 95 metres.

RUSSIAN SERIES (furnished by co-operation of Professor H. Wild, Director of the Imperial Central Physical Observatory of Russia at St. Petersburg).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by velocity in meters per second. No distinction is made between upper and lower clouds; the amount is given on a scale of 0 to 10, and the kind occasionally. The weather is occasionally given by the Vienna symbols. At Astrakhan, Ashurada and Baku, the barometer-cistern is below sea-level. At Kasalinsk, the barometer appears to have a large error.

SCOTTISH SERIES (furnished by co-operation of Alexander Buchan, M. A., F. R. S. E., Secretary of the Scottish Meteorological Society at Edinburg, and respective observers).—The originals give the barometer as read off and the movement of the air is indicated by force on a scale of 0 to 6. Distinction is made between upper and lower clouds as to degree, and the amount of cloudiness is given on a scale of 0 to 10. The direction of upper clouds is given separately. The rainfall, temperature, and humidity are not given at North Unst. The wind-direction is given to 32 points.

SPANISH SERIES (furnished by co-operation of the Royal Observatory at Madrid, and respective observers).—The movement of the air, except for sub-series, is given in kilometres per hour. The kind of clouds is occasionally given, and the degree of cloudiness on a scale of 0 to 10. The rainfall at San Juan is measured at 4 p. m., local time, and at San Fernando at midnight. The weather is given in general (Spanish) terms.

SWEDISH SERIES (furnished by co-operation of Professor R. Rubenson, Director of the Royal Swedish Meteorological Institute, and of Professor H. H. Hildebrandsson, Director of the Meteorological Observatory of the Upsala University).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in metres per second for Upsala. The kind of clouds is not given, but the degree of cloudiness is indicated on a scale of 0 to 10. The rainfall is measured at 8 a. m., local time, and the weather is occasionally given by the Vienna symbols.

SWISS SERIES (furnished by co-operation of Professor E. Plantamour, Director of the Observatory at Geneva).—The originals give the barometer in millimetres, corrected for temperature only, and the thermometer in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10.

TURKISH SERIES (furnished by co-operation of A. Coumbary, Effendi, Director of the Central Observatory at Constantinople, and of F. Nimr, B. A., Director of the Lee Observatory at Beirut).—The originals give the barometer in millimetres reduced to sea-level. The temperature is given in Centigrade. The movement of the air is indicated by force on a scale of 0 to 7 for Valona, and on a scale of 0 to 12 for Beirut. At Constantinople the velocity is given in meters per second. The kind of clouds is not given, but the amount is indicated on a scale of 0 to 10, except at Valona, at which station it is inferred from the general weather terms. At Samakov, the barometer is reduced to freezing, but not to sea-level; temperature in Fahrenheit. The kind of clouds is given, also the distinction between upper and lower.

UNITED STATES SERIES (by authority of the Secretary of War—furnished by co-operation of W. B. Hazen, Brigadier and Brevet Major General, Chief Signal Officer, U. S. Army).

UNITED STATES SUB-SERIES (furnished by co-operation of the respective observers).—The originals generally give the barometer reduced to sea-level and the temperature in Fahrenheit. At Bogota the barometer is corrected for temperature only; at Puerto Berrio, is given as read off, and at Rivas is omitted. The movement of the air is generally indicated by velocity in miles per hour, except on a scale of 0 to 10 for Bogota, Paramaribo, and Rivas, and 0 to 12 for Puerto Berrio. The wind-direction is generally given to 16 points, except 8 points for Bogota and 32 points for Rivas. At Rivas the humidity is obtained by readings from Saussure's hygrometer.

BRITISH NAVAL SERIES (furnished by co-operation of the Meteorological Council, London, Robert H. Scott, Esq., F. R. S., Secretary).—The originals give the barometer as read off. The wind-direction is given to 32 points. The movement of the air is indicated by force on a scale of 0 to 12. The distinction between upper and lower clouds is made as to direction, but not as to amount. The height of the sea-disturbance is given on a scale of 0 to 9, and the weather by the Beaufort notation. The direction of movement of wind, clouds, and sea is compass direction, corrected only for deviation caused by the iron in the ship, while the correction for magnetic variation is applied at this office. The humidity is not given, but is computed from the hygrometrical observations.

PORTUGUESE NAVAL SERIES (furnished by co-operation of J. C. de Brito

Capello, Director of the Meteorological Observatory of the Infante Dom Luiz at Lisbon).—*The originals give the barometer in millimetres, corrected* for temperature only, and the thermometer in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The humidity is not given, but is computed from the hygrometrical observations. The kind of clouds is not given, but the amount is indicated on a scale of 0 to 10; the direction of movement is given without distinction between the upper and lower. The height of sea disturbance is given on a scale of 0 to 9 and the weather by the Beaufort notation. The rainfall is not measured, but the duration is generally given in hours and minutes.

SWEDISH NAVAL SERIES (furnished by co-operation of E. Malmberg, Director of the Nautical Meteorological Bureau at Stockholm).—The originals give the barometer as read off. The movement of the air is indicated by force on a scale of 0 to 12, and the direction is corrected for magnetic variation at this office. The humidity is not given, but is computed from the hygrometrical observations. The rainfall is omitted. The height of the sea-swell is given on a scale of 0 to 9 and the weather by the Beaufort notation.

UNITED STATES NAVAL SERIES (*by authority of the Secretary of the Navy*—furnished by co-operation of the Navy Department, through Commodore John G. Walker, U. S. N., Chief of Bureau of Navigation).—The originals give the barometer as read off. The humidity is not given, but is computed from the hygrometrical observations. The sea-swell and weather are given in general terms. The direction of the wind is compass direction, corrected for variation.

MERCHANT-MARINE SERIES (furnished by co-operation of the owners, agents, &c., of the respective lines and vessels).—Same as U. S. Naval.

OCEAN SQUARES.—The table of ocean square data shows (1) the location of the centres of squares whose sides extend 5° each in latitude and longitude, (2) the monthly mean pressure and temperature of the air, and the mean force and total frequency of the wind at 7 a. m., Washington time, computed for the centre of each square from daily readings as obtained by interpolation between the isobars and isotherms of the daily international simultaneous weather maps.

NOTES (FORT RAE, B. A.).

Furnished by the co-operation of Captain H. P. Dawson, R. A., chief of the British expedition on behalf of the International Polar Commission.

All barometric observations have been corrected for temperature and instrumental error, but have not been reduced to sea-level as the elevation is uncertain.

The spirit thermometer has a correction at 32° Fah., of —0°.3, and at —38° of —3°.9. The mercurial thermometer at 52°, Fah., has a correction of —0°.9. These corrections have not been applied, as it is not stated whether they apply to the dry or wet-bulb thermometer.

The following remarks apply to the corresponding numbers in the weather column of tabulated data:

1, 3 a. m., faint aurora, ese., wnw.; 2, 2.45 a. m., faint patch of auroral light in e.; 3, 3.9 a. m., auroral band, w. to e.; 4, 2.10 a. m., faint patch aurora in zenith, nw., se.; 5, 3 a. m., faint patch of aurora, se.; 6, patch of aurora, w., e.; 7, 3 a. m., auroral arch from e. to nw.; December, 1882, spirit thermometers used on 14th, 15th, and 16th; 8, spirit thermometers used from 2d to 24th, inclusive; 9, terrestrial radiation, 3 a. m., —45°.2, 5 a. m., —40°.0; 10, terrestrial radiation, —40°.0; 11, spirit thermometers used from 1st to 4th, inclusive. During the month of February, 1883, the terrestrial radiation was as follows:

On 1st, —46°.8 Fah.; 12th, —29°7; 13th, —50°.1; 14th, —46.5; 15th, —52°.5; 16th, —47°.0; 19th, —21°.0; 20th, —2°.4 (at 3 a. m.); 21st, —11°.0; 22d, —18°,0; 24th, —44°.5.

ERRATA.

MONTHLY SUMMARY, April, 1883, page 7, United States Sub., Santiago de Cuba, in place of latitude, longitude, and elevation as given, read N. 19° 55′, W. 75° 50′, 7.04 a. m., 21 feet, 6 metres.

DAILY BULLETIN, May 3, 1883, page 4, United States, Block Island, R. I., reduced barometer 30.66 inches, should read 30.16; page 6, U. S. Navy yard, Pensacola, Fla., velocity 2 miles, .9 metres, should read 21 miles, 9.4 metres.

4th, Page 1, Austro-Hungarian, Trieste, temperature, 17°.5 Cent., should read 17°2; Canadian, Quebec, actual barometer 729.2 mm., should read 759.2.

7th, Page 2, Danish, Godthaab, actual barometer 761.8 mm., should read 771.8.

11th, Page 1, Canadian, Granton, reduced barometer, 29.12 inches, 739.6 mm., should read 30.12, 765.0.

18th, Page 5, United States, Thomas Camp, Arizona, actual barometer 17.18 inches, should read 27.18.

21st, Page 5, United States, Kitty Hawk, N. C., reduced barometer, 751.5 mm., should read 751.1.

23d, Page 4, United States, Huron, Dakota, reduced barometer 28.76 inches, should read 29.76.

30th, Page 8, District No. 3, H. M. S. "Flying Fish," latitude N. 37° 00′, should read N. 37° 09′.

NOTE.—The above observations, taken at 7 a. m., Washington time, were received too late for publication in the DAILY BULLETIN, and are given here in full.

REVIEW.

INTERNATIONAL METEOROLOGY.

[*Pressure expressed in inches and millimetres; temperature in degrees, Fahrenheit and Centigrade; wind-force by scale of* 0-10.]

The following description refers to chart ii. for the month of June, 1883, issued with this SUMMARY. This chart continues the series of international charts begun in January, 1877, and exhibits the mean pressure, mean temperature, and prevailing wind-direction over the northern hemisphere, as determined from one observation taken simultaneously each day at 7 a. m., Washington, or 0 h. 8 m. p. m., Greenwich, mean time.

For the month of June, 1883, the area of least pressure is indicated by the isobar for 29.4 (746.7), which occupies the Punjab, in British India; the lowest barometric mean reported was 29.35 (745.5), at Lahore. Over that part of Hindostan lying between N. 22° and 30° the mean atmospheric pressure ranged from 29.4 (746.7) to 29.5 (749.3); in southern India it varied from 29.52 (749.8) to 29.7 (754.4). Over the rest of Asia the mean pressure ranged from 29.7 (754.4) to 29.85 (758.2). In the North American continent the mean pressure was least in the southwestern part of the United States, where it ranged from 29.75 (755.6) to 29.8 (756.9). From the Rocky mountain regions northeastward to the mouth of the Saint Lawrence river the mean atmospheric pressure ranged from 29.85 (758.2) to 29.9 (759.4); from western Texas northeastward to the province of Quebec, Canada, it varied from 29.9 (759.4) to 30.0 (762.0), and from eastern Texas northeastward along the Atlantic coast to the New England states and Nova Scotia it was above 30.0 (762.0). In Europe the mean pressure was greatest in western France and the Iberian peninsula, where it exceeded 30.0 (762.0); in northern and central Europe it ranged from 29.95 (660.7) to 30.0 (762.0), and in Russia it was below 29.9 (759.4).

The areas of barometric maxima are indicated by the isobaric lines for 30.2 (767.1) and 30.1 (764.5), respectively. The first of these occupies that part of the Atlantic ocean between N. 20° and 35° and W. 35° and 60°; at the centre of this area the pressure is about 30.25 (768.3). South of latitude 40° North, and from the West Indies eastward to W. 10°, the pressure is above 30.1 (764.5). The second area of high pressure, above referred to, is shown over Oregon, Washington Territory, and the southern part of Vancouver Island, the means in those districts being above 30.1 (764.5).

Compared with the chart for the preceding month (May) there has been a slight increase of pressure on the north Pacific coast and on the Atlantic coast, while a very slight decrease has occurred in other parts of the United States. In Canada the changes have been slight and unimportant. Over the north Atlantic ocean the following changes have occurred: between N. 40° and 20° and from W. 30° westward to W. 55° there has a slight decrease, while an increase is shown over the regions east of the thirtieth and west of the fifty-fifth meridians. Between N. 40° and 50° the pressure has decreased; north of the last-mentioned parallel it has increased slightly. In Europe there has been a slight increase of pressure, the changes being most marked in the Scandinavian peninsula, where it amounted to about .1 inch. Throughout Asia there has been a general decrease of pressure.

Compared with the corresponding month in previous years the mean atmospheric pressure in the United States was slightly below the normal in the lake region. On the Atlantic coast and in the western part of the country it was slightly above normal, and in other districts it was about normal. In northern Europe the mean pressure was above the normal, while in the southern and central districts it was normal or slightly below. In British India it was .02 inch less than the six years' mean.

The following table gives the mean pressure and mean temperature, with corresponding departures for June, 1883, in the several countries of the eastern hemisphere, compared with the means as determined from observations taken during the last six years:

Countries.	Mean pressure.			Mean temperature.		
	June mean of 6 (1877-'82) years.	June, 1883.	Departure.	June mean of 6 (1877-'82) years.	June, 1883.	Departure.

* Means for five years only.

In the United States the mean temperature of the air was above the normal in the Atlantic coast districts and in the region west of the Rocky mountains; elsewhere it was below the normal. The departures were slight in all districts. In Europe the mean temperature was below the normal in the southern peninsulas, and was somewhat above the normal in the northern districts. In Hindostan the highest mean, 105°.5 Fahr. (40°.8 Cent.), was reported from Lahore, and the lowest, 72°.2 Fahr. (22°.3 Cent.), from Belgaum.

The following are some of the extreme mean temperatures reported from isolated stations:

Highest.	Fahr.	Cent.	Lowest.	Fahr.	Cent.
	°	°		°	°
Cairo, Egypt	92.1	33.4	*Ooglaamie, Alaska*	29.2	− 1.6
Petro-Alexandrovsk, Turkestan, Asia	91.4	33.0	Upernavik, Greenland	36.9	2.7
Tashkend, Turkestan, Asia	89.8	32.1	Godthaab, Greenland	37.9	3.3
Sarmarkand, Turkestan, Asia	85.6	29.8	Behring's Island (N. 55° 10′, E. 166° 30′)	39.4	4.1
Nassau, West Indies	84.4	29.1	Jacobshavn, Greenland	40.8	4.9

In the United States east of the hundredth meridian the

winds were southerly, southwesterly, and westerly; west of the above-mentioned meridian they were westerly and northwesterly. Over the north Atlantic ocean between N. 20° and 40° and west of 50° west longitude the winds were southerly and southeasterly; east of W. 50° they were mostly northeasterly. North of the fortieth parallel the winds were southwesterly, southerly, and southeasterly, except near the European coast, where they were northerly. In Europe the winds were northerly and northeasterly in the northern districts, and westerly and southwesterly in the southern portions.

The rainfall during June, 1883, was below the average in the western part of the United States and in New England, Florida, and Tennessee. In all other districts of the United States it was above the average, the excess being greatest in Missouri and Nebraska. In northwestern Europe the rainfall was less than the average, but in the southern and eastern districts it exceeded the average; heavy floods occurred in the provinces of Silesia, Bohemia, and Moravia.

GENERAL REMARKS.

All data which appear in the DAILY BULLETIN OF SIMULTANEOUS METEOROLOGICAL OBSERVATIONS are copied from the regular exchanges of this office. The barometer readings for land stations, in the first and second columns, are reduced to freezing and their respective standards; those in the third and fourth columns to sea-level. When necessary, corrections for instrumental error, temperature, and reduction to sea-level are always applied, while those for instrumental error, only when such corrections can be ascertained with close approximation, as by comparison when vessels are at or near land stations. Relative humidity generally requires computation from the hygrometrical observations. When rain has fallen, but neither the amount nor duration is recorded, the word "blank" is published in the rainfall column. The weather is generally published as given. The following symbols and abbreviations are common to all series, viz: †, aneroid; *, instrumental error not known; c, cirrus; k, cumulus; s, stratus; n, nimbus; d, scud; f, fracto; p, pallio; hz, haze; fg, fog; sk, smoke; inap, inappreciable; d. clouds, detached clouds. The movement of the air is published as given on the originals, when indicated by velocity in miles per hour, in meters per second, or by force, all variations of the latter being reduced to the common scale of 0 to 10. Those stations reporting the movement in pounds pressure per square foot are reduced to force on the common scale, and those in kilometers per hour, to meters per second and miles per hour. The distinction between upper and lower clouds is carefully made in the United States and a portion of the Canadian series, and the various formations are indicated by the letters above given and their combinations. In the MONTHLY SUMMARY OF INTERNATIONAL SIMULTANEOUS METEOROLOGICAL OBSERVATIONS the position of stations (latitude and longitude) are obtained from Keith Johnson's "Index Geographicus," except where more exact information is furnished. The elevation of stations is obtained either from the annual, semi-annual, and monthly publications of the various meteorological bureaus here represented, or from the original forms upon which are entered the daily observations. In the United States series the elevations are computed from the latest surveys, and are carefully revised each month, in order to note any change in the elevation of the barometer-cistern at any station. It is believed for the most part that, throughout the European and other series, the elevations as given represent the height of the barometer-cistern above sea-level; at least, this should be the case. The local time, where omitted or not given correctly in the original, is carefully computed at this office. A letter placed opposite the name of a station or some portion of the data credited thereto, indicates that a certain number of observations are missing, corresponding to the relative position in the alphabet of the letter so used.

On February 1, 1883, the following change was made in publishing marine data in the "Daily International Bulletin":

All marine reports are classified as to districts, which are designated as follows: District No. 1, North Atlantic; District No. 2, South Atlantic, &c. under which headings the respective reports are printed.

BOUNDARIES OF DISTRICTS.

District No. 1 comprises the Atlantic ocean, its arms and tributaries, from the equator northward to the pole, and in the arctic from 100° E., westward to 100° W., of Greenwich.

District No. 2 comprises the Atlantic ocean, its arms and tributaries, from the equator southward to the pole, and in the antarctic from 20° E., westward to 70° W., of Greenwich.

District No. 3 comprises the Pacific ocean, its arms and tributaries, from the equator northward to the pole, and in the arctic from 100° W., westward to 100° E., of Greenwich.

District No. 4 comprises the Pacific ocean, its arms and tributaries, from the equator southward to the pole, and in the antarctic from 70° W., westward to 145° E., of Greenwich.

District No. 5 comprises the Indian ocean, its arms and tributaries, from the Asiatic continent southward to the pole, and in the antarctic from 20° E., eastward to 145° E., of Greenwich.

INTERNATIONAL CHARTS ACCOMPANYING DAILY BULLETIN AND MONTHLY SUMMARY

International chart i. shows isobars and isotherms charted from data as appearing in the INTERNATIONAL BULLETIN of same date, as reported by the several observers. Isobars, in continuous lines, exhibit atmospheric pressure at sea-level in English inches; isotherms, in dotted lines, exhibit temperature of the air in degrees, Fahrenheit, similarly charted.

International chart ii. (monthly mean chart), showing mean pressure at sea-level in English inches, mean temperature in degrees, Fahrenheit, mean force and prevailing direction of wind at 7 a. m., Washington mean time.

International chart iii. shows tracks of centres of low barometer. The Arabic numerals show location of the centres of low barometer at 7 a. m., Washington mean time, of that date.

In the above charts, broken lines indicate that the lines so drawn are doubtful.

Arrows show direction of, and fly with, the wind. Force is shown as follows:

SYMBOLS.	FORCE.	VELOCITY.	
		MILES PER HOUR.	METRES PER SECOND.
○	0	0	0
→	1, 2	0 to 9	0 to 4
→	3, 4	9.1 to 22.5	4.1 to 10.1
→	5, 6	22.6 to 40.5	10.1 to 18.1
→	7, 8	40.6 to 67.5	18.1 to 30.2
→	9, 10	67.6 up.	30.2 and over.

The following remarks relate to the individual peculiarities in the *methods* of recording, and the *times* of taking, the international simultaneous meteorological observations, under the auspices of the various meteorological bureaus:

ALGERIAN SERIES (furnished by co-operation of General Maritz, Commandant Supérieur du Génie in Algeria).—The originals give the barometer in millimetres reduced to sea-level; temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The rainfall is measured at 7 a. m., local time, and the amount indicated in millimetres.

AUSTRALIAN SERIES (furnished by co-operation of R. L. J. Ellery, Director of the Observatory at Melbourne, N. S. W.).—At Melbourne the conversions are published as given in the originals. The movement of the air is indicated by velocity in miles per hour. Adelaide, furnished by co-operation of Charles Todd, C. M. G., F. R. A. S. The observations are taken at 9 p. m., local time.

AUSTRO-HUNGARIAN SERIES (furnished by co-operation of Prof. Dr. Julius Hann, Director of the Imperial and Royal Central Meteorological Institute at Vienna).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. At the following stations rainfall is measured at local time: Lemberg, 7 p. m.; Vienna, 2 p. m.; Trieste, 7 a. m. The weather is given by the Vienna symbols or in general terms.

BRITISH SERIES (furnished by co-operation of the Meteorological Council, London, Robert H. Scott, Esq., F. R. S., Secretary, and respective observers).—In general the originals do not give rainfall or distinction between upper and lower clouds. Relative humidity, except for Bradford and Silloth Rectory, is not given on the originals, but is computed from hygrometrical observations. At Cardington, Oxford, and Sandwick Manse the barometers are given as read off. At Greenwich the movement of the air is indicated by pounds pressure per square foot. At the following stations rainfall is measured at local time: Bradford, 9 a. m., and Aberdeen, 10 a. m. The wind-direction is given to 32 points and weather by the Beaufort notation. At Bradford, no observations are taken on Sunday, except the rainfall, and in the monthly summary the letter designating a certain number of days missing applies to all the data except rainfall.

CANADIAN SERIES (furnished by co-operation of Charles Carpmael, A. M., F. R. A. S., Director of the Magnetic Observatory at Toronto and Superintendent of the Meteorological Office of the Dominion of Canada, and respective observers).—The originals give the barometer reduced to sea-level in English inches and the temperature in Fahrenheit. Meteorological reports from stations marked with a * are telegraphed daily to the office of the Chief Signal Officer of the Army. At St. John's, N. F., the barometer appears read about .10 inch too high.

CAPE COLONY SERIES (furnished by co-operation of the Meteorological Commission of Cape Colony, Cape Town, and respective observers).—At Cape Saint Francis Lighthouse, the original gives barometer reduced to freezing, but not to sea-level. The kind of clouds is given, but no distinction is made between upper and lower. Weather in general terms.

CHINESE SERIES (furnished by co-operation of Marc Dechevrens, S. J., Director of the Meteorological Observatory at Zi-Ka-Wei).—At Zi-Ka-Wei the originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is given in metres per second and the direction to 16 points. The kind of clouds is occasionally given, and the degree of cloudiness on the scale of 0 to 10; distinction between upper and lower clouds is sometimes made. The weather is given in general (French) terms. The rainfall is given in millimetres and meas-

ured at the moment of simultaneous observation. At Tchang-Kia-Tchouang the original gives barometer in millimetres reduced to sea-level, temperature in Centigrade, clouds on scale of 0–10, no distinction between upper and lower.

DANISH SERIES (furnished by co-operation of Captain N. Hoffmeyer, Director of the Royal Danish Meteorological Institute at Copenhagen).—The originals give the barometer in millimeters reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6. The weather is occasionally given by the Vienna symbols, but it is not certain that they always refer to the moment of simultaneous observations, except at Copenhagen. No distinction is made between upper and lower clouds, and the direction of movement, together with the rainfall, is entirely omitted. At Jacobshavn and Upernavik the observations are taken at 8 a. m. instead of 8.44.

EGYPTIAN SERIES (Furnished by the co-operation of Albert Ismalun, Director of the Laboratoire Khédivial du Caire).—Original gives barometer reduced to zero, but not to sea-level, temperature in Centigrade. The velocity is the mean for past 24 hours. Rainfall in millimetres.

FRENCH SERIES (furnished by co-operation of the Central Meteorological Office of France, Professor E. Mascart, Director, and respective observers).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in metres per second for Mont Louis and Perpignan. In general the rainfall is measured at 9 a. m., local time. The direction of upper and lower clouds is given, but no distinction is made as to kind. The degree of cloudiness is given on a scale of 0 to 4 at Clermont-Ferrand and Puy de Dome, while at other stations the scale of 0 to 10 is employed, or general weather terms, from which the amount of cloudiness is inferred. The weather is given in general terms, except occasionally by the Vienna symbols at Mont Louis and Perpignan. At Besançon the elevation of barometer cistern changes to 843 feet 257 metres.

GERMAN SERIES (furnished by co-operation of Prof. Dr. G. Neumeyer, Director of the German Marine Observatory at Hamburg).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The kind of clouds is occasionally given, but no distinction is made between upper and lower; the amount is given on a scale of 0 to 10, but the kind is rarely given. The weather is given in Vienna symbols or in general terms.

GREEK SERIES (furnished by co-operation of Prof. Dr. J. F. Julius Schmidt, Director of the Royal Observatory at Athens).—The originals give the barometer corrected for temperature only, and the thermometer in Centigrade. Hygrometrical observations are not given. The kind of clouds is occasionally given, and the amount is inferred from the general weather terms. The movement of the air is indicated by force on a scale of 0 to 10.

INDIAN SERIES (furnished by co-operation of H. F. Blanford, Meteorological Reporter to the Government of India at Calcutta).—The barometric observations refer to the Calcutta standard, which requires a correction of —0.011 inch, or 0.28 mm., as compared with the Kew standard. The wind-velocity given is the average rate of wind since the observation of the preceding day. All conversions are published as given in the originals, where the data are recorded to an additional decimal. The weather is given by the Beaufort notation, Vienna symbols, or special symbols.

ITALIAN SERIES (by authority of the Minister of Agriculture, Industry, and Commerce—furnished by co-operation of Professor P. Tacchini, Director of the Central Meteorological Office at Rome, and respective observers).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometres per hour, or by force on a scale of 0 to 4, as at Mondovi, Florence, and Cagliari. No distinction is made between upper and lower clouds, and the amount is given on a scale of 0 to 10. When snow has fallen at Stelvio and Valdobbia, it is not certain whether the amount given refers to melted or unmelted.

JAPANESE SERIES (furnished by co-operation of I. Arai, Director of the Imperial Meteorological Observatory at Tokei).—The rainfall is measured at 9.30 a. m., local time, and the conversions are all published as given in the originals. Distinction is generally made between upper and lower clouds, and the amount is given on a scale of 0 to 10. The weather is given in general terms.

MAURITIUS SERIES (furnished by co-operation of C. Meldrum, Secretary of the Meteorological Society of Mauritius).—All conversions are published as given in the originals. The direction of the wind is given to 64 points, and the rainfall is measured at 9.30 a. m., local time.

MEXICAN SERIES (by authority of the Secretary of Public Works—furnished by co-operation of Señor Mariano Barcena, Director of the Central Meteorological Observatory in the City of Mexico, and respective observers).—All conversions are published as given in the originals, but when an evident mistake has been made the data is queried at this office. The kind of clouds is given, and also the direction and amount of both upper and lower. The degree of cloudiness is indicated on a scale of 0 to 10. Rainfall is generally measured at 6 a. m., local time.

NETHERLANDS SERIES (furnished by co-operation of Professor Buys-Ballot, Director of the Royal Meteorological Institute of the Netherlands at Utrecht).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by pressure in kilograms per square metre, except at Hellevoetsluis, which gives force on a scale of 0 to 12. The humidity is not given on the originals, but for two stations it is computed from the hygrometrical observations. The weather is only given for Utrecht, from which the amount of cloudiness at that station is inferred.

NORWEGIAN SERIES (furnished by co-operation of Professor H. Mohn, Director of the Royal Norwegian Meteorological Institute at Christiania).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade The movement of the air is indicated by velocity in metres per second or by force on a scale of 0 to 6. The weather is occasionally given by Vienna symbols. At Bergen observations upon the weather and degree of cloudiness are made at 2 p. m., local time. At Brono the observations are taken at 2 p. m., instead of 12.57 p. m.

PORTUGUESE SERIES (furnished by co-operation of J. C. de Brito Capello, Director of the Meteorological Observatory of the Infante Dom Luiz at Lisbon).—In the originals the barometer is given in millimetres and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometres per hour. The weather is occasionally given by the Vienna symbols. The rainfall is measured at noon each day.

RUSSIAN SERIES (furnished by co-operation of Professor H. Wild, Director of the Imperial Central Physical Observatory of Russia at St. Petersburg).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by velocity in meters per second. No distinction is made between upper and lower clouds; the amount is given on a scale of 0 to 10, and the kind occasionally. The weather is occasionally given by the Vienna symbols. At Astrakhan, Ashurada and Baku, the barometer-cistern is below sea-level. At Kasalinsk, the barometer appears to have a large error.

SCOTTISH SERIES (furnished by co-operation of Alexander Buchan, M. A., F. R. S. E., Secretary of the Scottish Meteorological Society at Edinburg, and respective observers).—The originals give the barometer as read off and the movement of the air is indicated by force on a scale of 0 to 6. Distinction is made between upper and lower clouds as to degree, and the amount of cloudiness is given on a scale of 0 to 10. The direction of upper clouds is given separately. The rainfall, temperature, and humidity are not given at North Unst. The wind-direction is given to 32 points.

SPANISH SERIES (furnished by co-operation of the Royal Observatory at Madrid, and respective observers).—The movement of the air, except for sub-series, is given in kilometres per hour. The kind of clouds is occasionally given, and the degree of cloudiness on a scale of 0 to 10. The rainfall at San Juan is measured at 4 p. m., local time, and at San Fernando at midnight. The weather is given in general (Spanish) terms.

SWEDISH SERIES (furnished by co-operation of Professor R. Rubenson, Director of the Royal Swedish Meteorological Institute, and of Professor H. H. Hildebrandsson, Director of the Meteorological Observatory of the Upsala University).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in metres per second for Upsala. The kind of clouds is not given, but the degree of cloudiness is indicated on a scale of 0 to 10. The rainfall is measured at 8 a. m., local time, and the weather is occasionally given by the Vienna symbols.

SWISS SERIES (furnished by co-operation of Professor E. Plantamour, Director of the Observatory at Geneva).—The originals give the barometer in millimetres, corrected for temperature only, and the thermometer in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10.

TURKISH SERIES (furnished by co-operation of A. Coumbary, Effendi, Director of the Central Observatory at Constantinople, and of F. Nimr, B. A., Director of the Lee Observatory at Beirut).—The originals give the barometer in millimetres reduced to sea-level. The temperature is given in Centigrade. The movement of the air is indicated by force on a scale of 0 to 7 for Valona, and on a scale of 0 to 12 for Beirut. At Constantinople the velocity is given in meters per second. The kind of clouds is not given, but the amount is indicated on a scale of 0 to 10, except at Valona, at which station it is inferred from the general weather terms. At Samakov, the barometer is reduced to freezing, but not to sea-level; temperature in Fahrenheit. The kind of clouds is given, also the distinction between upper and lower.

UNITED STATES SERIES (by authority of the Secretary of War—furnished by co-operation of W. B. Hazen, Brigadier and Brevet Major General, Chief Signal Officer, U. S. Army).

UNITED STATES SUB-SERIES (furnished by co-operation of the respective observers).—The originals generally give the barometer reduced to sea-level and the temperature in Fahrenheit. At Bogota the barometer is corrected for temperature only; at Puerto Berrio, is given as read off, and at Rivas is omitted. The movement of the air is generally indicated by velocity in miles per hour, except on a scale of 0 to 10 for Bogota, Paramaribo, and Rivas, and 0 to 12 for Puerto Berrio. The wind-direction is generally given to 16 points, except 8 points for Bogota and 32 points for Rivas. At Rivas the humidity is obtained by readings from Saussure's hygrometer.

BRITISH NAVAL SERIES (furnished by co-operation of the Meteorological Council, London, Robert H. Scott, Esq., F. R. S., Secretary).—The originals give the barometer as read off. The wind-direction is given to 32 points. The movement of the air is indicated by force on a scale of 0 to 12. The distinction between upper and lower clouds is made as to direction, but not as to amount. The height of the sea-disturbance is given on a scale of 0 to 9, and the weather by the Beaufort notation. The direction of movement

of wind, clouds, and sea is compass direction, corrected only for deviation caused by the iron in the ship, while the correction for magnetic variation is applied at this office. The humidity is not given, but is computed from the hygrometrical observations.

PORTUGUESE NAVAL SERIES (furnished by co-operation of J. C. de Brito Capello, Director of the Meteorological Observatory of the Infante Dom Luiz at Lisbon).—The originals give the barometer in millimetres, corrected for temperature only, and the thermometer in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The humidity is not given, but is computed from the hygrometrical observations. The kind of clouds is not given, but the amount is indicated on a scale of 0 to 10; the direction of movement is given without distinction between the upper and lower. The height of sea disturbance is given on a scale of 0 to 9 and the weather by the Beaufort notation. The rainfall is not measured, but the duration is generally given in hours and minutes.

SWEDISH NAVAL SERIES (furnished by co-operation of E. Malmberg, Director of the Nautical Meteorological Bureau at Stockholm).—The originals give the barometer as read off. The movement of the air is indicated by force on a scale of 0 to 12, and the direction is corrected for magnetic variation at this office. The humidity is not given, but is computed from the hygrometrical observations. The rainfall is omitted. The height of the sea-swell is given on a scale of 0 to 9 and the weather by the Beaufort notation.

UNITED STATES NAVAL SERIES (by authority of the Secretary of the Navy—furnished by co-operation of the Navy Department, through Commodore John G. Walker, U. S. N., Chief of Bureau of Navigation).—The originals give the barometer as read off. The humidity is not given, but is computed from the hygrometrical observations. The sea-swell and weather are given in general terms. The direction of the wind is compass direction, corrected for variation.

MERCHANT-MARINE SERIES (furnished by co-operation of the owners, agents, &c., of the respective lines and vessels).—Same as U. S. Naval.

OCEAN SQUARES.—The table of ocean square data shows (1) the location of the centres of squares whose sides extend 5° each in latitude and longitude, (2) the monthly mean pressure and temperature of the air, and the mean force and total frequency of the wind at 7 a. m., Washington time, computed for the centre of each square from daily readings as obtained by interpolation between the isobars and isotherms of the daily international simultaneous weather maps.

ERRATA.

MONTHLY SUMMARY, April and May, 1883, page 7, Unalaska, in place of latitude, longitude and elevation as given, read N. 53° 53′, W. 166° 32′, 1.02 a. m., 13 feet 4 metres.

DAILY BULLETIN, June 11th, 1883, page 8, District No. 3, s. s. "Zealandia," latitude N. 37° 48′, should read N. 36° 48′.

15th, page 5, Palestine, Texas, reduced barometer 760.0 mm., should read 763.0.

17th, page 8, District No. 3, s. s. "Granada," latitude N. 34° 35′, should read N. 24° 35′.

18th, page 6, District No. 1, the barometric readings of the following vessels on this date are evidently wrong, and should be omitted, s. s. "Lord Clive," "British Princess,', "Bohemia," "Mentmore," "Belgenland," "Naderland," "State of Nevada" and "Oregon."

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.
