This is part II of the volume "The Daily Rainfall of India" which is a compilation of (a) The Daily Rainfall Tables and (b) The Monthly Rainfall Tables for the different States in India for the calendar year 1955. The volume is issued in five parts, each part containing the data of a Zone as detailed below :-

Part	I	Jammu & Kashmir. Punjab. Patiala and East Punjab States Union. Rajasthan. Himachal Pradesh.
Part	II	Bihar. West Bengal. Assam. Orissa. Kosi Catchment.
Part	III	Bombay. Kutch. Mysore.
Part	IV	Madras. Hyderabad. Andhra Pradesh.
Part	V	Uttar Pradesh. Madhya Pradesh. Madhya Bharat, Bhopal and Vindhya Pradesh.

For each State, the set of 12 Daily Rainfall Tables is followed by the Monthly and Annual Rainfall Table. The Monthly and Annual Rainfall Tables alone will also be found in the volume entitled "The Monthly Rainfall of India", which contains this data for all the States of India.

The Daily Rainfall Tables of Orissa for all the months and of Patiala and East Punjab States Union for the month of May and the Monthly and Annual Rainfall Tables of Orissa, Bihar, West Bengal, Andhra Pradesh and Madhya Pradesh are not included in the respective parts and will be issued separately when available.

Contd.....2

Since the inception of the system of rainfall registration in India till 31st December, 1949, the hour of rainfall measurement at the State Raingauge stations was 8 a.m. local mean time. From 1st January, 1950, this has been changed to 8.30 a.m. I.S.T. (0300 hours G.M.T.). The amount indicated against any date in the tables denotes the total rainfall which occurred during the 24 hour period ending at 8.30 a.m. of that date and measured at that time. If this rainfall is a tenth of an inch or more, then, by convention, the particular date is counted as a rainy day.

In most of the cases, the (actual) district average
(normal)
is the unweighted arithmetic mean of the (actual) values
(normal)
for those stations in the district which possess normals and for which the actual values are recorded.

The normals used in this volume are based on the rainfall records available upto December 1940. These normals are contained in the 'Memoirs of the India Meteorological Department' Vol. XXVII Part - V.

* Rainfall return not received.

†This sign is shown in the columns for normal number of rainy days; normal rainfall against those stations for which normals have not been established; in the columns from 1st to 31st January 1955, it means that owing to the records being incomplete, the totals are not known.

SUMMARY OF RAINFALL OBSERVATIONS TAKEN IN BIHAR DURING THE MONTH OF JANUARY, 1955.

During the month under report rain fell in all the districts of the State except Saharsa where there was no rain. The fall was above the normal everywhere except Saran, Champaran, Muzaffarpur, Darbhanga, Purnea, Manbhum and Singhbhum where it was below the normal.

On an average Bihar received 0.74 inch of rain and Chotanagpur 1.88 inches.

The departure from the normal was +0.23 inch in Bihar and +1.08 inches in Chotanagpur.
