WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

JANUARY, 1966

Summary

Significant features were the scattered, thundery rain showers which occurred with hail in certain localized southern regions. Hail was reported from the following localities: Arcadia, Norbrook, Jacks Hill and Barbican in St. Andrew, Mandeville in Manchester and Treasure Beach in St. Elizabeth. Apart from local causes showers were associated with a quasi-stationary front lying across Jamaica between the 12th and 13th of the month.

Temperatures

Temperatures fell about 2 degrees Fahrenheit below normal in eastern districts generally, but were either normal or 1 to 2 degrees Fahrenheit above in more western ones.

Rainfall

Mean island rainfall was 153% of the normal for the month. The parishes of Kingston and St. Andrew, St. Catherine and Clarendon showed below-normal rainfall. All other parishes showed above-normal values. Millbank in Portland reported 5.82 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

FEBRUARY, 1966

Summary

Apart from a few local scattered showers the weather was generally fair. This was occasioned by the extension of high pressure systems into the Caribbean area. A number of weak modified cold fronts, however, crossed the island but were mainly dry.

Temperatures

Temperatures fell slightly below normal in some localities, especially at night during the passage of the cold fronts. In Southern coastal areas, however, temperatures were 1 to 2 degrees Fahrenheit above normal.

Rainfall

Mean island rainfall was 50% of the normal for the month. It was deficient in all parishes. Richmond Prison Farm in St. Mary reported 10.00 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

MARCH, 1966

Summary:

Two cold fronts moved across the island bringing showers and thunderstorms. Apart from scattered local showers the weather was fair and at times windy under the influence of the Atlantic high pressure system.

Temperatures:

Temperatures were about normal except in the extreme west of the island where they rose between 1 and 2 degrees Fahrenheit above normal.

Rainfall

Mean island rainfall was 166% of the normal for the month. The parishes of Trelawny, St. Catherine, Clarendon and Westmoreland experienced below normal rainfall. All other parishes showed excess values. Millbank in Portland reported 6.40 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

APRIL, 1966

Summary

Cloudy conditions with showers and thunderstorms occurred in various localities. These conditions were partly associated with an area of low pressure which moved southwards near to Jamaica.

Temperatures

Cool weather was experienced on a number of days. However, temperatures rose 1 to 2 degrees Fahrenheit above normal, especially in coastal districts.

Rainfall

Mean island rainfall was about normal. The parishes of St. Ann, St. Mary, Portland and St. Thomas received excess rainfall. All other parishes had less than normal values. Millbank in Portland reported 9.15 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

MAY, 1966

Summary

Main features of the weather were the cloudy periods with numerous showers and thunderstorms which occurred in various parts of the island throughout the month. Apart from isolated, scattered showers the intervening days were mainly fair. In addition to local causes, the weather was associated with a low pressure area in the Gulf of Mexico, an upper level trough lying North to South off the east coast of Jamaica and a cold front which gave rain showers over most of the Caribbean.

Temperatures

Temperatures fell about 1 degree Fahrenheit below normal especially in the Southern and Southeastern districts. However, in the extreme west of the island temperature conditions were about normal.

Rainfall

Mean island rainfall was 112% of the normal for the month. Excesses were shown in the western, north-western and northeastern districts. Deficient rainfall occurred in the parishes of St. Mary and St. Catherine. Conditions were about normal in the parishes of St. Ann, Kingston and St. Andrew, Manchester and St. Elizabeth. Smallwoods in St. Catherine reported 11.10 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

JUNE, 1966

Summary

Frequent rain showers which at times were thundery and widespread occurred throughout the month in association with low pressure systems located mainly to the west and south of the island. Squally conditions were occasioned by the formation of tropical storm, Alma, which later developed into a hurricane. Extension of the Atlantic high pressure system into the Caribbean produced strong winds and fair weather on a number of days.

Temperatures

Temperatures were about normal throughout the month.

Rainfall

Mean island rainfall was 177% of the normal for the month. It was well distributed throughout the island, being normal in the parishes of Hanover and St. Thomas and well above normal in all others. Excess rainfall was particularly marked in the parishes of Manchester, Clarendon, St. Elizabeth and St. Catherine, in that order. Linstead in St. Catherine reported 14.53 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

JULY, 1966

Summary

The persistence of troughs of low pressure in the Western Caribbean was mainly responsible for cloudy periods and showery activity which spread towards Jamaica. Two Easterly waves also crossed the island and both produced showers. Otherwise, conditions were mainly fair with occasionally moderate to strong winds associated with the Atlantic high pressure system.

Three hurricanes, Becky, Celia and Dorothy and one tropical storm Ella developed during the month but none constituted a threat to Jamaica.

Temperature

Temperatures rose about 1 degree Fahrenheit above normal mainly in extreme western coastal areas. Otherwise, normal temperatures prevailed.

Rainfall

Mean island rainfall was 108% of the normal for the month. It was about normal in the parishes of St. Mary and St. Catherine, slightly deficient in St. James, St. Ann, St. Catherine and St. Elizabeth and somewhat above normal in all others. Millbank in Portland reported 9.75 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

AUGUST, 1966

Summary

Unstable weather conditions and convergence effects, were mainly responsible for showers, squally at times, and thunderstorms which occurred. The main features included the troughs of low pressure located to the west of Jamaica and two Easterly waves which crossed the island. The weather was otherwise mainly fair.

Hurricane Faith which formed during the month was associated with a trough of low pressure which extended into the western Caribbean.

Temperatures

Temperatures were just over 1 degree Fahrenheit above normal in western coastal districts and only slightly above generally elsewhere.

Rainfall

Mean island rainfall was 59% of the normal for the month. It was deficient in all parishes except Portland where an excess was shown. Ecclesdown in Portland reported 4.25 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

SEPTEMBER, 1966

Summary

Fair periods dominated the weather during the month due to the influence of the Atlantic high pressure system. However, showers and thunderstorms which occurred between the 7th and 14th were mainly associated with upper level troughs of low pressure in conjunction with Easterly wave features in the vicinity of Jamaica.

Three tropical storms Greta, Hallie, and Judith and one hurricane, Inez developed during the month. Inez came within 125 miles of the Northeast coast of Jamaica. Hurricane Faith which formed during September continued its path across the Atlantic.

Temperatures

The August pattern of temperatures prevailed throughout the month. Temperatures were just over 1 degree Fahrenheit above normal in western coastal districts and only slightly above generally elsewhere.

Rainfall

Mean island rainfall was 68% of the normal for the month. It was only slightly above normal in the parish of St. Mary but deficient in all others. Robins Bay in St. Mary reported 7.35 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

OCTOBER, 1966

Summary

Rain showers during the first week of the month were mainly associated with an active trough, in conjunction with Hurricane Inez and an easterly wave over Jamaica. Trough-like features which persisted in the Western Caribbean between the 16th and 20th accounted for widespread, moderate to heavy showers during this period. A low pressure area between Jamaica and Panama coupled with moist unstable conditions over the central Caribbean brought cloudy conditions over the island. Otherwise, the weather was mainly fair.

No hurricane formed during the month but Inez continued its path to the Bahamas, the Gulf of Mexico and across to the Mexican mainland where it dissipated.

Temperatures

Temperatures were generally normal.

Rainfall

Mean island rainfall was 78% of the normal for the month. It was normal in the parish of Trelawny but deficient in all others. Ginger Ridge in St. Catherine reported 8.17 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

NOVEMBER, 1966

Summary

"Norther" conditions affected the island during the first, third and fourth weeks of the month with resultant strong winds and out breaks of rain showers. Periods of cool weather were also experienced.

Hurricane Lois formed far out into the Atlantic and was no threat to Jamaica.

Temperatures

Temperatures fell 1°F to just over 2°F below the normal for the month.

Rainfall

Mean island rainfall was 139% of the normal for the month. Deficient rainfall was experienced in the more western parishes of St. Elizabeth, Westmoreland and Hanover. In all other parishes it was above normal. Up Park Camp in Kingston (and St. Andrew) reported 20.35 inches in one day.

WEST INDIES METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

DECEMBER, 1966

Summary

Showers were associated with the passage of two quasistationary fronts across the island during the first and third weeks of the month. Otherwise, the Atlantic high pressure system extended to within the Caribbean to give fair weather generally throughout the period.

Temperatures

Temperatures were normal along low coastal regions, but fell as much as 2° F below normal in some hilly regions.

Rainfall

Mean island rainfall was 89% of the normal for the month. The parishes of St. Ann, Portland and St. Elizabeth showed above normal values. In all other parishes it was below normal. Comfort Castle in Portland reported 8.40 inches in one day.
