METEOROLOGICAL OBSERVATIONS.

JAMAICA 1921

The hours of observation are 7 and 3: the "mean" refers to the day of 24 hrs. as deduced from these hours.

Meridian of longitude adopted for calculation of time adopted as standard in the Colony .. .. .. 75° W.

Hours slow (or fast) of Greenwich mean time .. 5 hrs. slow.

METEOROLOGICAL—JAMAICA.

Climatic Conditions, Year 1921.

Precipitation.

January.—The rainfall was exceptionally heavy, being more than twice the average. Most of the rain fell between the 15th and 21st; though there were heavy rains in the West-Central Division on the 31st. Severe "Northers" were experienced on the northside, doing some damage to cultivation and causing some small craft to drift from their moorings. The rivers, particularly those on the northside, were in heavy flood. The heaviest fall for the month was 61.27 inches at Mt. Holstein in Portland.

February.—The rainfall was again more than twice the average, and is the highest on record for February, as was also the January rainfall, since 1870, when the records begin. Very little rain was recorded up to the 13th, the rains falling in the latter half of the month.

March.—The rainfall was 84 per cent. above the average, and the rains were distributed through the whole month.

The heaviest fall 21.09 inches, was recorded at Fellowship in Portland.

April.—The rainfall was again above the average, but except at the West end of the Island where 20 and 21 inches fell, the rains were not excessive. Most of the rain was recorded early in the month

May.—The rainfall was above the average throughout the whole Island. The heaviest falls occurred on the 28th and 29th and between 2 and 9 inches were recorded on those dates.

The heaviest fall for the month was 23 inches at Bluefields in Westmoreland, but several Stations had falls of 20 inches or more.

June.—The rainfall was below the average this month; the West end again had good rains but all along the northern and southern shores and over the rest of the Island too, though not to the same extent, the rainfall was deficient.

July.—The rainfall was again below the average but, though light, well distributed. The Northern Division had the least rain;; the recorded falls rising to the average at the west end of the Island. The heaviest fall for the 24 hours was 9.30 inches at Bluefields where the guage overflowed; 16.34 inches fell at Burnt Ground in Hanover, the heaviest for the month.

August.—The rainfall was the average for this month and well distributed through the Island and the month. The West end again had heavy rains bringing the Southern and West-Central Divisions up to their averages, though the remaining parts of these divisions did not have average rains. The heaviest fall , 23 inches, was recorded at Zion Hill in St. Catherine.

September.—The rainfall was just about the average, the Northern and West-Central Divisions being a little below their averages, while the North-eastern and Southern had good rains. The heaviest rains fell in the early and later parts of the month. The heaviest fall for the month, 22.98 inches, occurred at Moore Town in Portland.

October.—The rainfall was one-third below the average, the Southern Division having the lowest amount in proportion to the averages. The greatest fall 29.32 inches fell at Zion Hill, an excessive amount compared with the rest of the Island.

November.—The rainfall was just over half the average for the month. The North-eastern and southern Divisions were very deficient, while the Northern and West-Central Divisions had a little above their average rains. The greatest fall for the month 21.74 inches fell at Greenvale in Portland.

December.—The rainfall was one inch below the average and while the North-eastern Division had average rains, they got lighter all across the Island, the West-Central and Southern Divisions having about half their averages.

There was a phenomenal fall of 44.12 inches at Mt. Holstein; 8 inches falling on the 22nd.

The Year.—The total rainfall was 83.74 inches; 6.28 inches above the average. As shewn above most of the rain fell in the earlier months; at the end of October the rainfall was 12 inches above the average.

Kingston.

Rainfall.—The rainfall for the year was 26.91 inches, and below the 50 year-average of 33.59 ins. The rains in May and September were above the average and in some of the earlier months of the year; but from September very little rain fell.

Temperatures.—The Mean temperatures was 78.5 , and slightly below the average, 78.8.

Humidity.—The mean humidity was also a little below the average.

Weather Disturbances.—There was evidence of a small depression off the west end of the Island on the 31st May, moving on a north-easterly track towards Cuba. A circular warning was issued on June 1st. On Sept. 8th a disturbance developed to the east of Trinidad and moved W.N.W. till the 11th, when it turned north over Haiti, being by then a fully developed hurricane. The lowest barometer reading was 29.75 ins. at Kingston and Morant Point Lighthouse. Circulars warnings were issued.

Northers.—Northers were experienced on the northern and eastern coasts in January and December; see above.

Hail.—There were falls of hail at Santa Cruz on Sept. 5th and 26th at 2.40 and 3.30 p.m. lasting 10 and 15 mins. respectively. The latter fall was accompanied by high winds.

Solar Haloes.—There was a fine and complete Solar Halo visible in Kingston on May 14th from 10.30 a.m. to 3 p.m. Prismatic colours appeared round the ring most of the time it was visible. From angular measurements taken, the radius to the red band was 22 degrees 6 mins. Haloes were also seen June 30th and July 17th.

Earthquakes.—There was only one earthquake on Nov. 25th at 1.17 p.m., of sufficient intensity to cause alarm. It lasted a few seconds and was felt throughout the Island. The Kingston Seismometer showed horizontal movement of 0.100 in.

Aurora Borealis.—Fine displays were seen throughout Jamaica on the nights of 14th and 15th May. On the night of the 14th the Lights extended to an altitude of 50 degrees.

J. F. Brennan,
Govt. Meteorolgist.

1921.

METEOROLOGICAL REPORT.

KINGSTON.

The rainfall for the year was only about three-quarters of the average. The May, September, and October seasons more heavier than in 1920.

Northers were experienced in January and February.

Distant lightning and thunderstorms were noted during each month.

There was a Solar Halo on the 14th May, the 30th June and the 17th July.

The maximum daily range of temperature was 23.2 degs. on 29th March and the minimum 5.0 degs. on 30th May.

On the 7th September an extreme Max. of 92.8 degs. was recorded and the extreme Min. 65.5 degs. occurred on 17th March.

A weather disturbance was apparently West of Jamaica on 31st May, moving towards the Island of Cuba.

On the 8th September a Tropical disturbance developed to the East of Trinidad and moved on a W. N. W. track in the Caribbean, until it curved north over Haiti on the 11th, causing some damage to the other Islands.

NEGRIL POINT LIGHT HOUSE.

The rainfall for the year was a little above the average and good rains fell in May as well as in October.

Northers were experienced in January, February, and December.

There were thunderstorms noted almost every month.

Brisk South-east winds in May.

The extreme Max. temperature, 91.9 degs. occurred on the 9th November, and the extreme Min. 64.5 on the 26th January.

MORANT POINT LIGHT HOUSE.

The rainfall for the year was a little below the average but good rains fell in the month of May.

Northers were felt in January, February, March, and December, with frequent rain squalls in March.

Thunderstorms were noted in January, and from May to the end of the year.

An easterly gale blew in July.

Extreme Max. temp. 90 degs. on 12th September, and Extreme Min. 65 degs. on 25th February and on 30th April.

J. F. BRENNAN,
Government Meteorologist.
