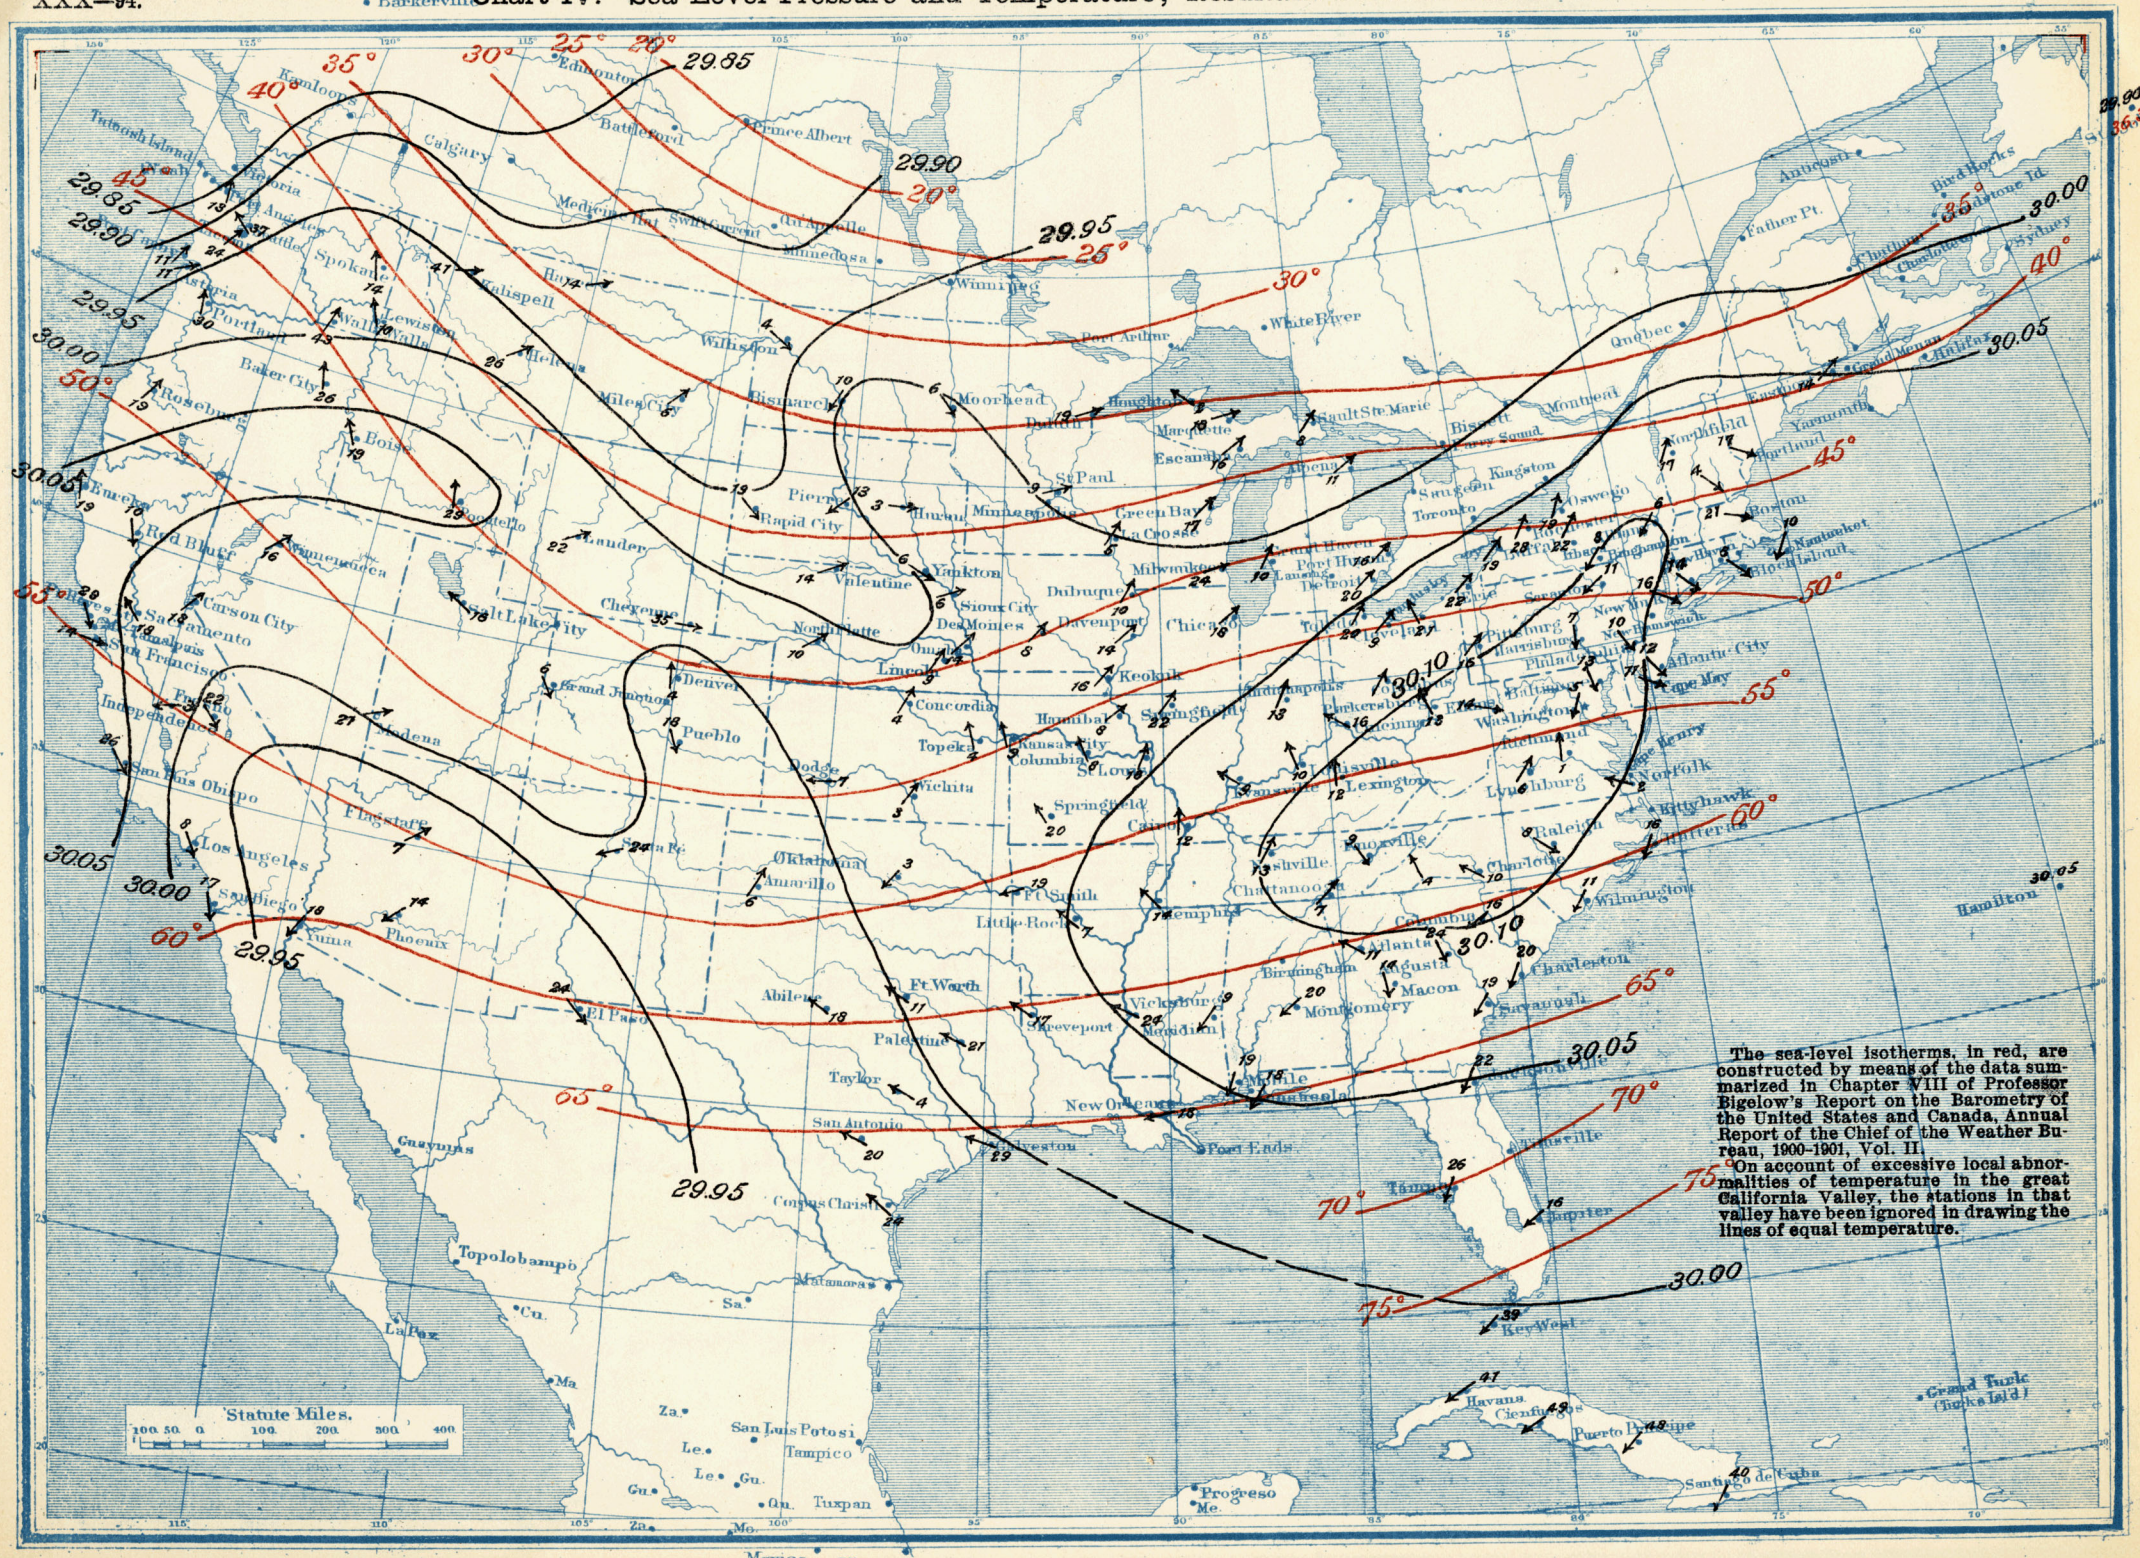
Chart IV. Sea-Level Pressure and Temperature; Resultant Surface Winds. November, 1902.



The sea-level isotherms, in red, are constructed by means of the data summarized in Chapter VIII of Professor Bigelow's Report on the Barometry of the United States and Canada, Annual Report of the Chief of the Weather Bureau, 1900-1901, Vol. II.

On account of excessive local abnormalities of temperature in the great California Valley, the stations in that valley have been ignored in drawing the lines of equal temperature.
