WYDAWNICTWA KOMUNIKACYJNE – WARSZAWA 1959

Wydanie pierwsze	Oddano do składania 13.I.59
Nakład 500+45 egz.	Podpisano do druku 24.IX.59
Ark. wyd. 121,2; druk 50,5	Druk ukończono w październiku 1959
Papier druk. sat. III 80 70×100/6	Papier z remanentu
Zamówienie TT/1149 K 2938	W-83

Zakłady Graficzne „Tamka", Warszawa, ul. Tamka 3 Nr zam. 103/59.

PRZEDMOWA

Po pięcioletniej przerwie spowodowanej trudnościami technicznymi Państwowy Instytut Hydrologiczno-Meteorologiczny wznawia wydawanie roczników meteorologicznych z lat między- i powojennych, jak i bieżących.

Układ niniejszego rocznika — za 1954 rok — nie różni się zasadniczo od układu ostatniego z opublikowanych roczników (1949). W porównaniu z nim wprowadzono do niniejszego rocznika małe, ale dla niektórych zagadnień istotne uzupełnienia przez podanie wysokości umieszczenia wiatromierzy nad powierzchnią gruntu, średnich prędkości wiatru według kierunków oraz skrajnych dat wystąpienia temperatur minimalnych niższych od 0°C.

Rocznik został opracowany w Dziale Sieci Stacji Meteorologicznych przez zespół: mgr *Janiszewski* Feliks (kierownictwo i redakcja), *Węglewski* Wacław, *Gawałko* Wanda, *Kowalczyk* Elżbieta, *Plak* Wanda oraz *Leszczyńska* Halina.

Prof. dr *W. OKOŁOWICZ*
Dyrektor
Państwowego Instytutu
Hydrologiczno-Meteorologicznego

PRÉFACE

Après l'interruption de cinq ans causée par les difficultés d'ordre technique l'Institut Hydrologique et Météorologique d'État vient de reprendre la publication des annuaires météorologiques courants ainsi que des annuaires d'avant et d'après la dernière guerre.

La disposition des tableaux numériques ne diffère pas en principe du dernier annuaire 1949 déja publié. Nous avons jugé opportun d'insérer dans le présent annuaire les compléments nécessaires qui nous ont paru importants pour certains problèmes, savoir: les hauteurs d'anémomètre au-dessus du sol, les valeurs moyennes de la vitesse du vent pour les directions respectives, ainsi que les dates limites des minima de la température au-dessous de 0°C.

Le présent annuaire a été préparé dans la Section des stations météorologiques par mgr *Janiszewski* Feliks (rédaction), *Węglewski* Wacław, *Gawałko* Wanda, *Kowalczyk* Elżbieta, *Plak* Wanda et *Leszczyńska* Halina.

Prof. dr *W. OKOŁOWICZ*
Directeur
de l'Institut Hydrologique
et Météorologique d'État

OBJAŚNIENIA

Użyte w niniejszym roczniku symbole mają następujące znaczenia:

φ — szerokość geograficzna.

λ — długość geograficzna.

H_s — wysokość terenu ogródka meteorologicznego nad średnim poziomem morza.

H_b — wysokość barometru nad średnim poziomem morza.

Dla stacji posiadających barometry H_s i H_b zostały wyznaczone za pomocą niwelacji, dla pozostałych stacji H_s wyznaczono z mapy topograficznej.

h_w — wysokość wiatromierza nad powierzchnią gruntu.

m — w połączeniu z literowym symbolem elementu oznacza wartość średnią miesięczną (np. U_m oznacza średnią miesięczną wilgotność względną).

P — ciśnienie atmosferyczne w milibarach, zredukowane do 0° i do ciężkości normalnej.

$P_{0,m}$ — wartość średnia miesięczna ciśnienia atmosferycznego sprowadzona do średniego poziomu morza.

T — temperatura w °C.

Temperaturę wyznaczano za pomocą termometrów umieszczonych w klatce meteorologicznej typu angielskiego na wysokości 2 m nad powierzchnią gruntu. Skrajne dobowe wartości temperatur odnoszą się do okresu od III obserwacji dnia poprzedniego do III obserwacji danego dnia. Do wartości temperatury minimalnej zastosowano dodatkowo poprawki obliczone z porównania wskazań słupka toluolu w termometrze minimalnym ze wskazaniami termometru rtęciowego („suchego").

$\overline{Max}$ — średnia miesięczna z wartości temperatur maksymalnych dobowych.

$\overline{Min}$ — średnia miesięczna z wartości temperatur minimalnych dobowych.

U — wilgotność względna w procentach.

Δ — niedosyt wilgotności w milibarach.

N — zachmurzenie w skali 11-stopniowej (przy tym 0 oznacza niebo bezchmurne, a 10 — niebo całkowicie pokryte chmurami).

W tablicy I rocznika obok wartości zachmurzenia podane są za pomocą symboli również dane o zjawiskach zaobserwowanych podczas obserwacji terminowych.

D — kierunek wiatru.

v — prędkość wiatru w m/sek.

n_D — częstotliwość występowania poszczególnych kierunków wiatru.

v_{mD} — średnia prędkość wiatru wg kierunków.

Obserwacje nad wiatrem były dokonywane (z nielicznymi wyjątkami) przy użyciu wiatromierzy Wilda.

R — wysokość opadu w mm.

Wysokość opadu odnosi się do okresu czasu od I (porannej) obserwacji jednego dnia do I obserwacji dnia następnego i jest podawana pod datą dnia poprzedniego. Obserwacje te były dokonywane przy użyciu deszczomierzy Hellmanna o powierzchni otworu 200 cm², umieszczonych na wysokości 1 m nad powierzchnią gruntu, z wyjątkiem części stacji górskich, położonych powyżej 500 m nad poziomem morza, gdzie używa się deszczomierzy typu górskiego, posiadających powierzchnię otworu 500 cm² i umieszczonych na wysokości 1,5 m nad powierzchnią gruntu.

V — widzialność z II terminu obserwacji wyrażona w następującej skali międzynarodowej:

0 — przedmioty są niewidoczne już z odległości mniejszej od 50 m;

1 — przedmioty są widoczne z odległości 50 m, lecz niewidoczne z odległości 200 m;

2 — przedmioty są widoczne z odległości 200 m, lecz niewidoczne z odległości 500 m;

3 — przedmioty są widoczne z odległości 500 m, lecz niewidoczne z odległości 1 km;

4 — przedmioty są widoczne z odległości 1 km, lecz niewidoczne z odległości 2 km;

5 — przedmioty są widoczne z odległości 2 km, lecz niewidoczne z odległości 4 km;

6 — przedmioty są widoczne z odległości 4 km, lecz niewidoczne z odległości 10 km;

7 — przedmioty są widoczne z odległości 10 km, lecz niewidoczne z odległości 20 km;

8 — przedmioty są widoczne z odległości 20 km, lecz niewidoczne z odległości 50 km;

9 — przedmioty są widoczne z odległości 50 km i więcej.

h — grubość pokrywy śnieżnej w centymetrach wg obserwacji dokonywanych w I terminie.

pł. — śnieg w płatach.

Usłonecznienie — w godzinach. Obserwacji dokonywano za pomocą heliografów Campbell-Stokes'a.

n — liczba dni z poszczególnymi zjawiskami.

Za dzień z mgłą przyjęto w niniejszym roczniku dzień, w którym to zjawisko powodowało zmniejszenie się widzialności poniżej 1 km.

Za dni pogodne uważa się takie, w których średnia wartość zachmurzenia, wyznaczona z trzech terminów, jest mniejsza od 2.0, a za dni pochmurne — w których wartość ta jest większa od 8.0.

I, II, III — terminy obserwacji (7^h, 13^h, i 21^h średniego miejscowego czasu słonecznego).

Dies — średnia dobowa, obliczona dla temperatury wg wzoru

$$śr. = 1/4\ (I+II+2\times III),$$ a dla pozostałych elementów

$$śr. = 1/3\ (I+II+III).$$

Natężenie zjawisk oznaczono za pomocą małych cyferek: ^{0}, ^{1}, albo ^{2} umieszczonych z prawej strony u góry odpowiedniego symbolu („^{0}" oznacza zjawisko o natężeniu słabym, „^{1}" o natężeniu umiarkowanym, a „^{2}" o natężeniu silnym; w przypadku mgły cyferki te oznaczają odpowiednio: mgłę umiarkowaną, mgłę gęstą i mgłę bardzo gęstą).

Do oznaczania czasu, obok godzin i minut, użyto następujących symboli:

n — czas od III obserwacji dnia poprzedniego do I obserwacji dnia danego,

na — czas od północy do I obserwacji dnia danego,

a — czas między I a II terminem obserwacji,

p — czas pomiędzy II a III terminem obserwacji,

np — czas od III obserwacji do północy.

Przerwy w czasie trwania zjawiska oznaczono wielokropkiem (...) lub skrótem „z prz.".

Kropka (.), postawiona na miejscu wartości liczbowej, oznacza brak zjawiska, kreska (—) zaś brak danych, wartości wątpliwe podano ze znakiem zapytania (?), a wartości oszacowane podano w nawiasach.

EXPLICATIONS

Les symboles employés dans le présent annuaire sont les suivants:

φ — latitude géographique.

λ — longitude géographique.

H_s — hauteur du terrain du jardin météorologique au-dessus du niveau moyen de mer.

H_b — hauteur du baromètre au-dessus du niveau moyen de la mer.

Pour les stations munies d'un baromètre H_s et H_b ces données ont été déterminées à l'aide de nivellement, pour les autres stations H_s d'après la carte topographique.

h_w — hauteur d'une girouette au-dessus du sol.

m — auprès une lettre symbolique signifie une valeur mensuelle moyenne (p. ex. Um — valeur moyenne mensuelle de l'humidité relative).

P — pression atmosphérique en millibars réduite à 0° et à la gravité normale.

$P_{o,m}$ — valeur mensuelle moyenne de la pression atmosphérique réduite au niveau moyen de la mer.

T — température en C°.

La température a été mesurée à l'aide des thermomètres installés dans les abris météorologiques du type anglais à la hauteur de 2 mètres au-dessus du sol. Les température extrêmes diurnes se rapportent à une période de la III observation du jour précedent jusqu'à la III observation du jour donné. Les valeurs de la température à minima ont été corrigées par la comparaison des indications de la colonne à toluol dans les thermomètres minimum avec les indications du thermomètre à mercure („sec").

$\overline{\text{Max}}$ — valeur moyenne mensuelle calculée des maximas de température diurne.

$\overline{\text{Min}}$ — valeur moyenne mensuelle calculée des valeurs minima de la température diurne.

U — humidité relative en %.

Δ — déficit de l'humidité en millibars.

N — nébulosité en échelle 11° (O signifie ciel serein, 10 — ciel entièrement couvert par des nuages). Dans la table I de l'annuaire à coté des valeurs de la nébulosité figurent aussi les symboles des phénomènes observés aux heures des observations normales.

D — direction du vent.

v — vitesse du vent en m/sec.

n_D — fréquence d'apparition des directions du vent.

v_{mD} — vitesse moyenne du vent ont été faite (avec des peu nombreuses exceptions) à l'aide de girouette système Wild.

R — hauteur de précipitation en mm. L'hauteur de la précipitation se rapporte au laps de temps à partir de la I (matinale) observation d'un jour jusqu'à la I observation du jour suivant et inscrite sous la date du jour précédent. Ces observations ont été faites à l'aide des pluviomètres système Hellmann dont la superficie de l'ouverture est égale à 200 cm², placés à 1 m au-dessus du sol. L'excepiton est, toutefois, faite à certaines stations de montagnes, situées à une hauteur dépassant 500 m au-dessus du niveau de la mer, ou on emploie des pluviomètres du type montagnard à l'orifice de 500 cm² et placés à une hauteur de 1,5 m au-dessus du sol.

V — visibilité à l'heure de la II observation, d'après l'échelle internationale:

0 — les objets ne sont pas visibles à 50 m;

1 — les objets sont visibles à 50 m, mais pas à 200 m;

2 — les objets sont visibles à 200 m, mais pas à 500 m;

3 — les objets sont visibles à 500 m, mais pas à 1000 m;

4 — les objets sont visibles à 1 km, mais pas à 2 km;

5 — les objets sont visibles à 2 km, mais pas à 4 km;

6 — les objets sont visibles à 4 km; mais pas à 10 km;

7 — les objets sont visibles à 10 km, mais pas à 20 km;

8 — les objets sont visibles à 20 km, mais pas à 50 km;

9 — les objets sont visibles à 50 km et davantage.

h — l'épaisseur de la couche de neige en centimètres à l'heure de la I observation.

pł. — neige éparse.

Insolation — en heures. Les observations effectuées d'après les indications des heliographes Campbell-Stoke.

n — nombre des jours avec phénomènes particuliers.

Comme jour avec brouillard est considéré dans le présent annuaire un jour où ce phénomène provoquait une dimunution de la visiblité au-dessous d'un km.

Comme jours sereins sont considérés dans le présent annuaire les journées dont la moyenne valeur de nebulosité, indiquée de trois termes est inférieure à 2.0 et comme jours couverts — ou cette valeur est supérieure à 8.0.

I, II, III — les heures d'observations (7^h, 13^h et 21^h du temps moyen solaire local).

Dies — moyenne diurne, calculée pour la température selon la formule:

$m = 1/4\ (I + II + 2 \times III)$, et pour les autres éléments $m = 1/3\ (I + II + III)$.

L'intensité de phénomènes est indiquée à l'aide des petits chiffres: ^{0}, ^{1} ou ^{2} placés du coté droit en haut du symbole respectif („^{0}" indique le phénomène d'une faible intensité, „^{1}" intensité moderée et „^{2}" intensité forte; en cas de brouillard ces chiffres indiquent respectivement: brouillard moderée, brouillard épais et brouillard très épais).

Pour indiquer le temps à part les heures et les minutes on a employé les symboles suivantes:

n — laps de temps depuis la III observation du jour précédent jusqu'à la I observation,

na — laps de temps depuis minuit jusqu'à la I observation du jour donné.

a — laps de temps entre les I et II observations,

p — laps de temps entre les II et III observations,

np — laps de temps de la III observation jusqu à minuit.

Les interruptions servenues dans la marche d'un phénomène sont indiquées par des points suspensifs (. . .) ou par l'abréviation „z prz."

La manque d'un phénomène est marqué par un point (.), inséré en place de la qualité numérique, les lacunes dans les observations par un trait (—), les valeurs évaluées entre parenthèses et les valeurs douteuses — par un signe d'interrogation (?).

Wykaz użytych w roczniku symboli meteorologicznych

Les symboles météorologiques employés dans l'annuaire

●	deszcz	— pluie
●	mżawka	— bruine
*	śnieg	— neige
⁂	deszcz ze śniegiem	— pluie et neige
⌂	śnieg ziarnisty	— neige en grains
⌂	krupy miękkie	— neige roulée
△	krupy twarde	— grésil
△	deszcz lodowy	— grains de glace
▲	grad	— grêle
↔	igły lodowe	— aiguilles de glace
▽	(pod symbolem opadu) opad przelotny	— (sous symbole de précipitation) averses
⌓	rosa	— rosée
⌴	szron	— gelée blanche
V	szadź miękka	— givre mou
▼	szadź twarda	— givre dur
∿	gołoledź	— verglas
≡	mgła	— brouillard
■	mgła przyziemna	— brouillard épais au sol
=	zamglenie	— brume
≡	mgła (niebo widoczne)	— brouillard (ciel visible)
≡	mgła z kryształków lodu	— brouillard glacé
≫	wiatr 10–15 m/sek	— vent 10 - 15 m/sec
⚑	wiatr > 15 m/sek	— vent > 15 m/sec
⚡	burza	— orage
(⚡)	burza odległa	— orage lointain
⚡	błyskawica	— éclair
⌓	zorza polarna	— aurore boréale
⌒	tęcza	— arc-en-ciel
⊕	halo naokoło słońca	— halo solaire
⊕	halo naokoło księżyca	— halo lunaire
⦶	wieniec naokoło słońca	— couronne autour du soleil
⦶	wieniec naokoło księżyca	— couronne autour de la lune
⊹	zamieć niska	— chasse neige au sol
⊹	zamieć wysoka	— chasse neige élevée
⁂	zawieja	— tempête de neige
⊠	pokrywa śnieżna	— couche de neige
∞	zmętnienie	— brume sèche
⊙	słońce w czasie obserwacji	— insolation
⊙	gloria	— glorie
⊘	iryzacja	— irisation
⚡	ognie św Elma	— feux de St. Elme
≡	mgła w ławicach	— brouillard en bancs
▥	morze mgieł	— mer de brouillard
( )	przejrzyste powietrze	— air pur
◔	dni pogodne	— jours sereins
◕	dni pochmurne	— jours couverts
