die druk styg effens langs die Suidkus maar daar is geen aanduiding vanwe die ooswaartse beweging van 'n oorsiendelike hoogdrukstelsel nie die sterkwind bly suidoostelik oor Transvaal en suidwes afrika en die vogtige lug in die noorde sal ons nie suidwaarts beweeg nie donderweer sal ontwikkel oor transvaal, natal en noord-vrystaat maar verder na die suide sal dit slegs effens bewolk wees.

pressure is rising slightly along the south coast but there is no indication of the eastward movement of an anticyclone the upper wind remains southeasterly over transvaal and Rhodesia? africa and consequently the humid air to the north will not move southwards. Thunder conditions will occur over transvaal natal and northern free state. but it will be fair further to the south.

INFERENCE — DATE 14 – 1 – 1953 DATUM — AFLEIDING

the rhodesian cyclone is moving gradually eastwards. and is diminishing its influence over the air circulation over the northern half of the union. a fresh anticyclone is building up in the west. and is expected to effect the union in the following three days.

die rodesiese sikloon beweeg geleidelik na die ooste en verminder sy invloed op die lugsirkulasie van die noordelike dele van die unie. 'n nuwe hoogdruk sel is besig om in die weste op te bou en sal die unie binne die eerskomende drie dae affekteer.

a colder airmass has invaded the southern and southwestern shores of the union and has penetrated some distance inland. at the same time the indian anticyclone is strengthening and moving westward thereby supplying moist air to the transvaal, natal and the free-State thunderstorm development can be expected from tomorrow onwards.

'n kouer lugmassa het die suidwestelike en suidelike kusstreke binnegedring. ter selfder tyd het die indiese oseaan hoogdruk stelsel versterk & beweeg weswaarts met die resultaat dat vogtige lug weer oor transvaal, natal en vrystaat instroom. donderstorm ontwikkeling kan weer vanaf môre verwag word.

Dry air is advancing eastwards over the Cape Province and this air should spread over Northern Cape and Orange Free State tomorrow. Scattered showers are expected over Transvaal and Natal in the retreating moist air.

Droë lug beweeg ooswaarts oor die Kaapprovinsie en hierdie lug sal môre die vogtige lug oor die Vrystaat en Noord-Kaapland verdring. Verspreide buie kan egter nog oor Transvaal en Natal verwag word.

SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART

INFERENCE

Pressure is rising slightly along the South Coast and falling slightly over the western interior areas. This will favour the southward movement of the moist air over northern Transvaal and the northern parts of Bechuanaland and S.W.A and thunder conditions will spread southward over Transvaal.

DATE 28/2/1963. DATUM

AFLEIDING

Die druk styg ietwat langs die Suidkus en daal effens oor die westelikste binneland. Gevolglik sal die kuslug gunstiger word vir die suidwaartse terugkeer van die vogtige lug oor die noordelike dele van Transvaal, Betsjoeanaland en S.W.A. Donderweerstoestande sal suidwaarts uitbrei oor Transvaal.

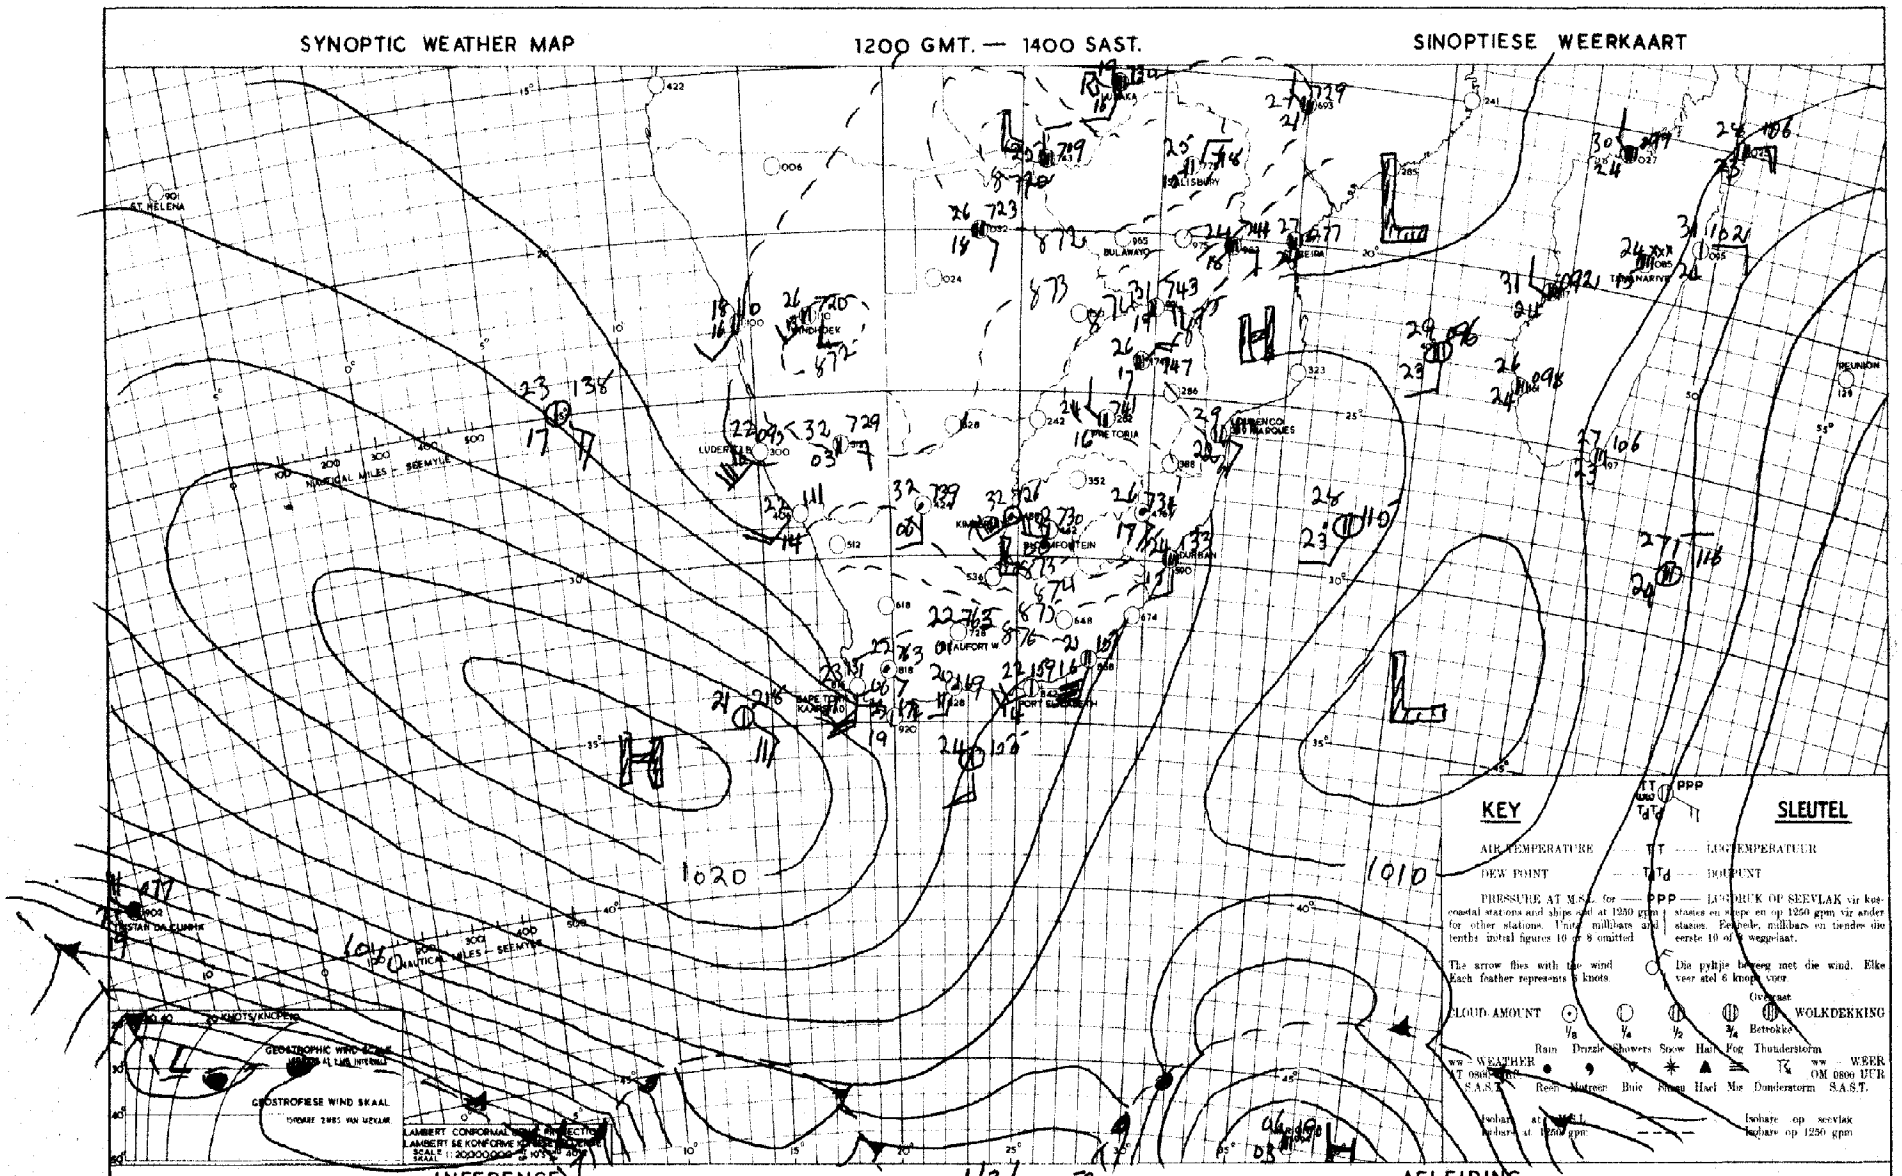
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

As expected the humid air and associated thunder conditions have spread Southwards over the Transvaal and the Northern parts of the Freestate and the N. Cape. It is unlikely to penetrate much further Southwards because a fairly strong W'ly circulation is being maintained in the upper air over the Southern Union.

DATE 1/3/1953 DATUM

AFLEIDING

Soos verwag het die vogtige lug en meegaande donderweerstoestande noord-Suidwaarts uitgebrei tot oor Transvaal en die Noordelike dele van die Vrystaat- en van Noord Kaapland. Dit is onwaarskynlik dat dit veel verder sal indring omrede 'n taamlike sterk W'like sirkulasie in die bolug oor die Suidelike Unie in stand gehou word.

Pressure is rising over most parts of the Union and over Southern Rhodesia but is expected to fall again tomorrow over the Cape Province, while a deep depression is moving eastwards southeast of Tristan. The upper anticyclone over Northern Cape will persist and partly cloudy weather with isolated thunderstorms will occur over Natal and Transvaal.

Die druk styg in die algemeen oor die Unie, asook oor Suid Rhodesië, maar sal môre weer oor die Kaapprovinsie begin daal aangesien 'n diep laagdrukstelsel ooswaarts beweeg ten suidooste van Tristan. Die antisiklone in die bolug oor Noord-Kaapland sal voortbestaan en gedeeltelik bewolkte toestande met los donderstorms sal voorkom oor Natal en Transvaal.

INFERENCE

DATE 13-3 19 53 DATUM

The anticyclone west of the Cape is intensifying and moving eastwards and consequently pressure will rise over the Cape Province and Natal tomorrow. Pressure is, however, not rising over Southwest Africa and hence the situation will change rapidly to one with easterly wind over the Union.

AFLEIDING

Die antisiklone wes van die Kaap intensifiseer en beweeg oostwaarts en gevolglik sal die druk môre ook Kaapland en Natal heelwat hoër wees. Die druk styg egter nie oor S.W.A. nie en gevolglik sal drukverspreiding vinnig verander en die wind sal oostelik oor die Unie begin waai.

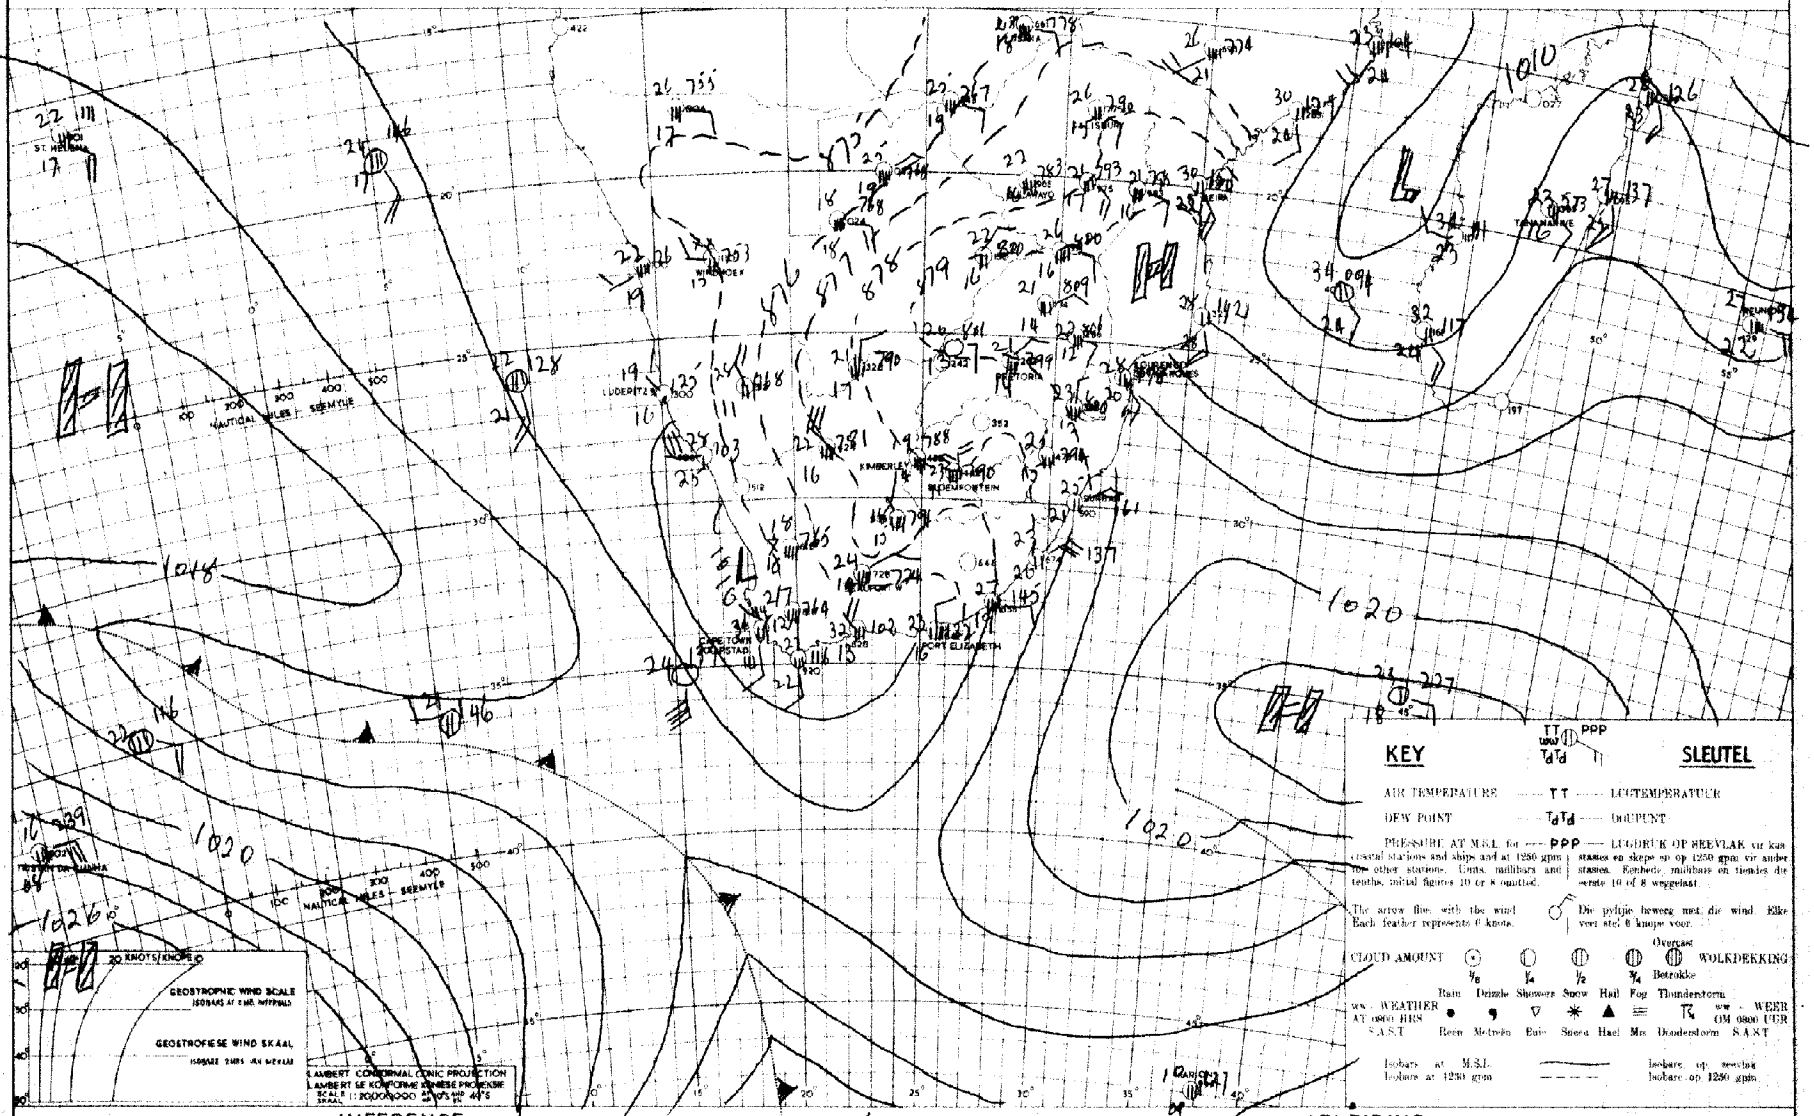
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 16-3-1953 DATUM — AFLEIDING

Pressure is still falling over the Union, probably due to wave development to the NE of Tristan where cold air is slowly advancing to the NE. The upper air indicates a slight trough over southwestern Cape and fairly general rain is likely to NE of the trough as it advances inland.

Die druk daal nog verder oor die Unie, heelwaarskynlik as gevolg vanne ontwikkeling van 'n golf NO. van Tristan waar koue lug stadig NWwaarts beweeg. 'n Swak trog word in die bolug aangedui oor SW'ke Kaapprovinsie en waarskynlik algemene reën sal aan die NOtlike kant van die trog vaal soos dit verder oor die binneland beweeg.

Drier air advancing from the West and South in the upper air has caused a clearance over the Cape, Freestate and over most of Natal. Over the Transvaal however conditions remain rather unsettled and with the advance of the high around the coast further showers will be likely.

DATE 18/3 19 73

Droër lug uit die weste en die Suide het nou in die bolug oor Kaapland die Vrystaat en 'n groot deel van Natal ingevloei en die weer het gevolglik opgeklrek. Oor Transvaal egter bly toestande taamlik ongestadig en met die hoogdruk wat oor die kus staan sal verder buie waarskynlik voorkom.

SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART

INFERENCE

The low which has developed over the Western and N. Cape shows signs of moving off Eastwards, which should cause upper winds to back to W or SW'ly, thus bringing drier air over the country. It is therefore expected that the unsettled conditions over the Eastern half of the Union will clear.

DATE 24/5/1953 DATUM

AFLEIDING

Die laagdrukgebied wat oor die Weste en Noord Kaapland ontwikkel het, toon tekens dat dit nou O'waarts sal beweeg en dit sal meebring dat die bowinde W. of SW sal swaai en dat droër lug die land sal oorstroom. Dit word gevolglik verwag dat die ongesteldheid oor die Oostelike helfte van die Unie sal opklaar.

SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART

INFERENCE

The low on the Southwest coast shows signs of a gradual filling and of a movement towards the South coast. There is no indication of a rapid rise of pressure to follow so that unsettled weather with the passage of a trough Eastwards across the Union is not expected. Scattered thundershowers will however occur.

DATE 6/11/53-19 DATUM

AFLEIDING

Daar is aanduidings dat die laag oor die Suidwes kus nou stadig verswak en suidooswaarts skuif. Daar is geen teken van 'n volgende skerp styging in druk nie en dus word dit nie verwag dat ongestadige weer, met die Ooswaartse beweging van 'n trog oor die land sal plaasvind nie. Verspreide donderbuie sal egter voorkom.

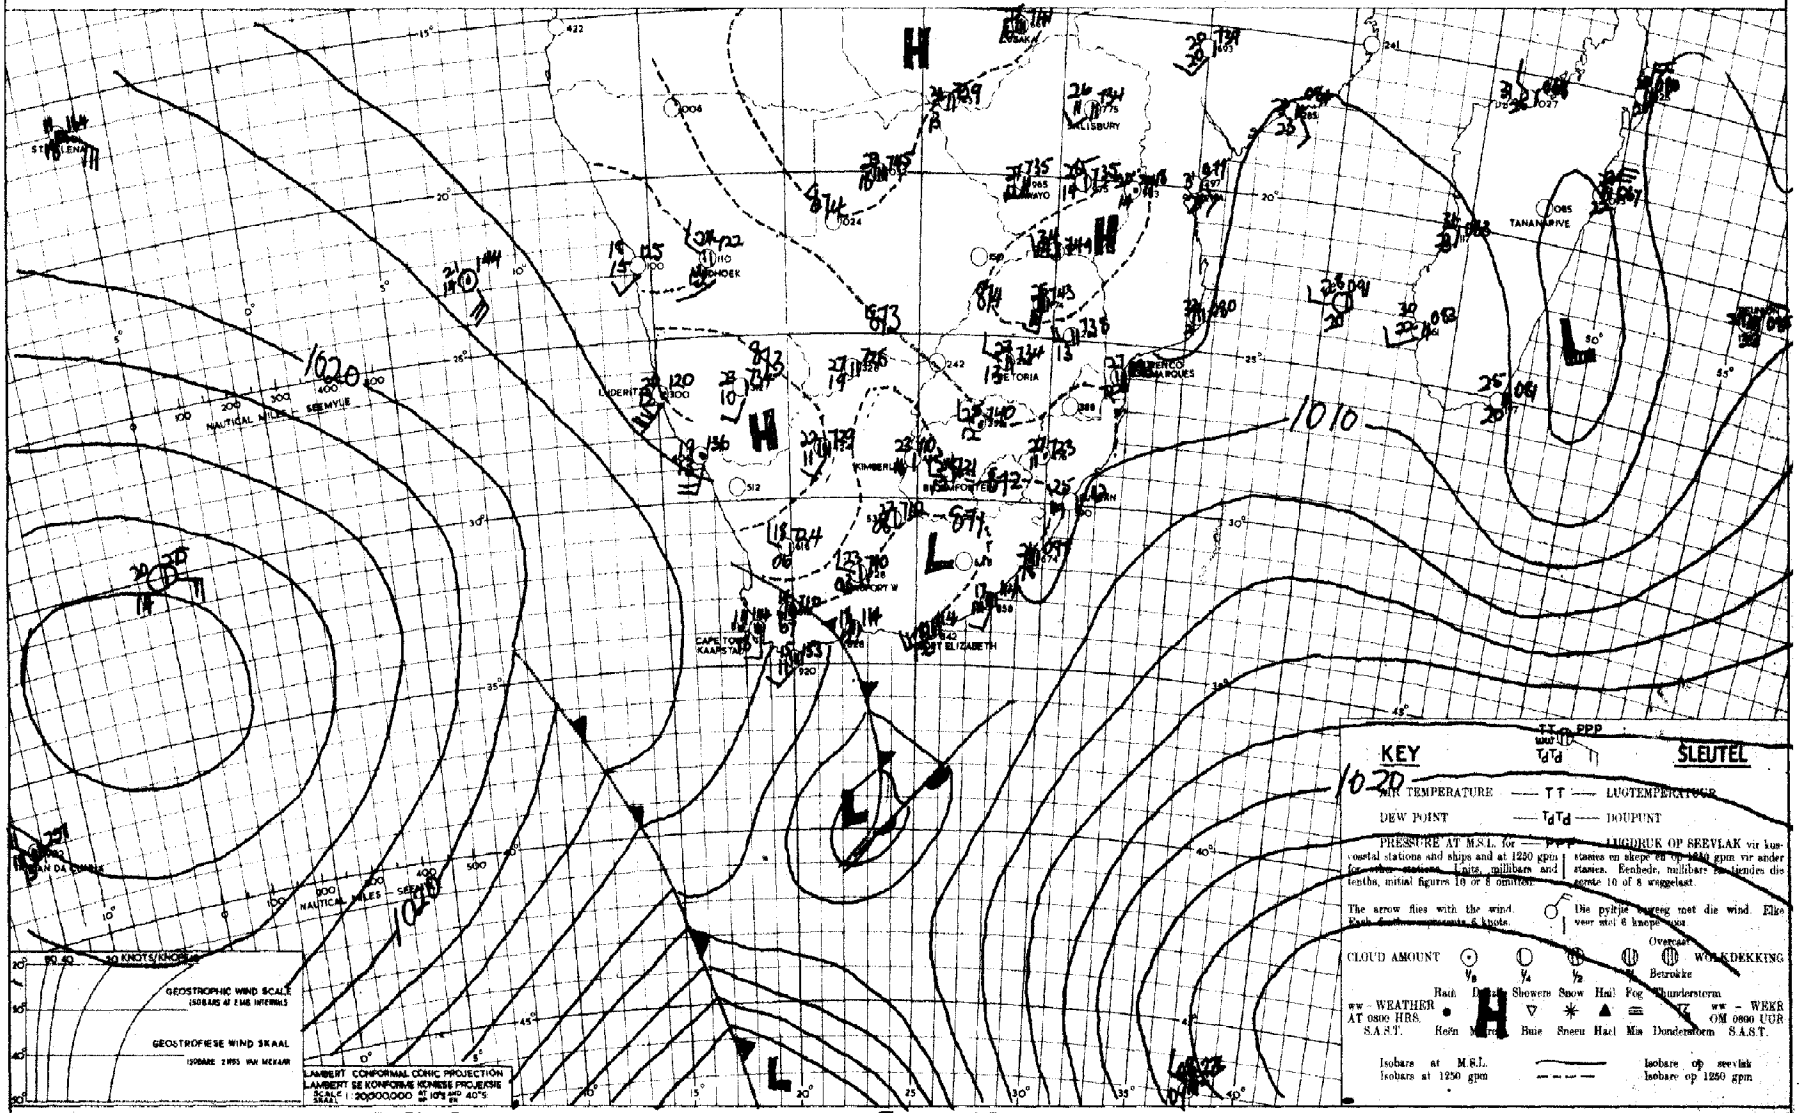
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

The trough of low pressure is very slowly moving eastwards across the country, and the weather over the Eastern parts will be unsettled with rain at first. Cool air is spreading across the western Cape in the rear of the trough and a further surge of cold air is likely at least over the southern parts of the Union, as the second cold front moves Eastwards. With the passage of the fronts the coastal weather will be showery.

DATE 84 1963 DATUM

AFLEIDING

Die trog van lae druk beweeg stadig oostwaarts oor die land en oor die Oostelike dele sal dit aanvanklik onbestendig weer wees met reën. Koel lug begin dan oor die Kaapland en verdere koue lug sal moontlik inbreuk, terminate oor die suidelikke dele van die Unie, soos die tweede koue-front Ooswaarts beweeg. Met die beweging van die front sal buie oor die kuslyke voorkom.

A deep cold low has developed S of the Cape and is still intensifying. Its E-ward passage is retarded by an anticyclone NE of Marion. Cold air is moving N-wards over the Union, causing clearance which should extend to Southern Transvaal tomorrow. A low is developing over SWA and warm moist air will be moving S-wards over SWA tomorrow.

AFLEIDING

'n Diep koue laagdrukstelsel het S. van die Kaap ontwikkel en intensifeer nog steeds, terwyl die O-waartse beweging daarvan vertraag word deur 'n hoogdrukstelsel NO. van Marion. Koue lug beweeg N-waarts oor die Unie en veroorsaak opklaring wat môre tot oor S. Transvaal sal strek. 'n Laagdrukstelsel is egter besig om oor SWA. te ontwikkel en warm vogtige lug sal mooi weer S-waarts beweeg oor SWA.

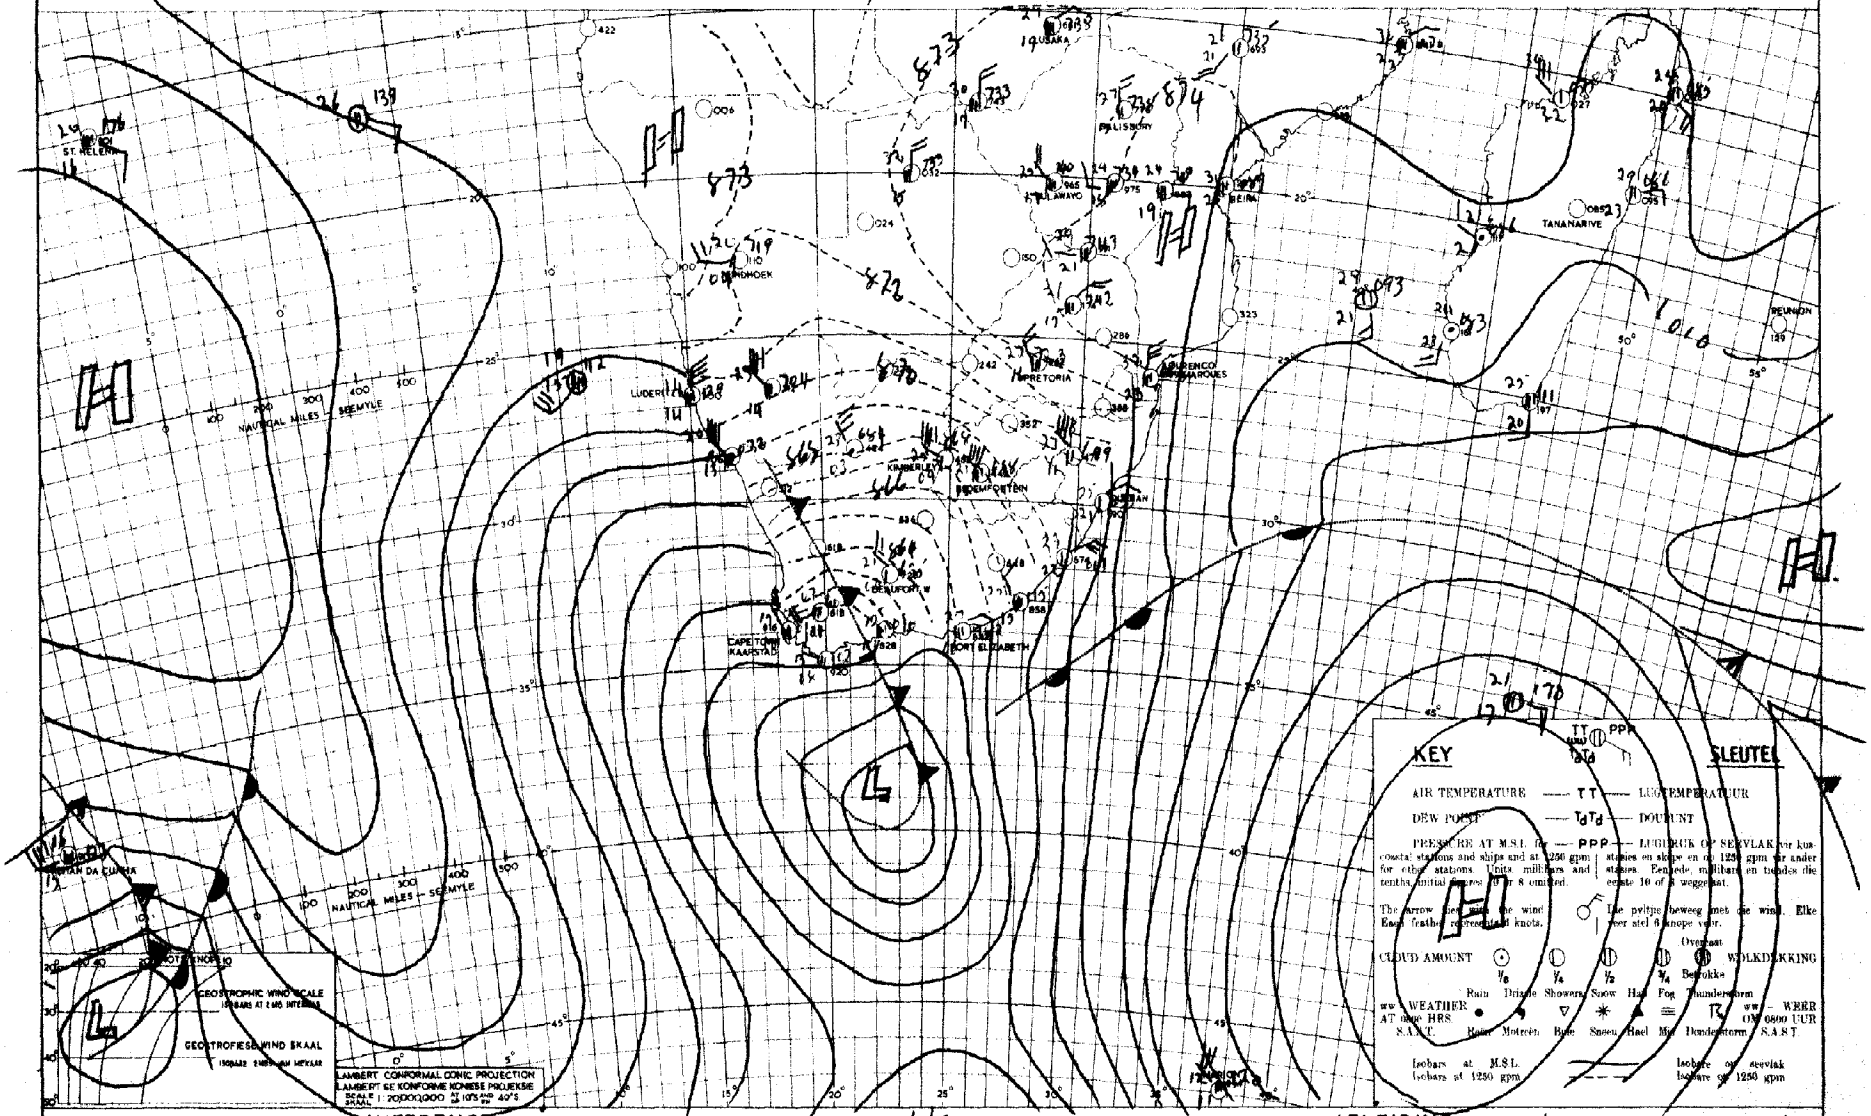
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

The deep low South of the Cape is showing signs of a movement Eastwards which will cause cool Westerly to Southwesterly winds to invade the Union in the rear of the cold front, after which the weather will clear.

DATE 12/9/53. 19

AFLEIDING

DATUM

Die diep laag Suid van die Kaap toon tekens dat dit ooswaarts sal beweeg en dit sal veroorsaak dat koel westelik tot Suidwestelike wind die land agter die koue front sal oorstroom, waarna die weer sal opklaar.

Except for the Northern parts of the Transvaal the weather over the interior remains dry and clear weather with chilly weather will prevail. With the approach of the low pressure system now East of Tristan the weather over the Southwest Cape will become cloudy and unsettled.

UITSONDERING Met uitsondering van die Noordelike dele van Transvaal bly die weer oor die binneland droog en mooiweer met koue nagte sal heers. Met die nadering van die laagdrukstelsel wat nou Oos van Tristan geleë is, sal ongestadigde en bewolkte toestande oor Suidwes Kaapland ontstaan.

INFERENCE

Pressure is falling rapidly over the Southern Union and a low is developing east of Port Elizabeth. Another surge of cold air is likely to move over the Southern Union behind the low. The airmass over the remainder of Southern Africa is dry.

AFLEIDING

Lugdrukke daal vinnig oor die Suidelike Unie en 'n Laag ontwikkel net ods van Port Elizabeth. Daar is 'n moontlikheid dat koue lug agter die Laag oor die Suidelike Unie sal beweeg. Die lug-massa oor die res van Suidelike Afrika is droog.

DATE 29-6-1953 DATUM -2

AFLEIDING

An almost stationary cyclone has developed in the neighbourhood of Marion, while the anticyclone at Tristan is also remaining stationary - There is evidence of another trough advancing in the southwesterly air stream to the southwest of the Cape. There will remain partly cloudy along the west coast and final elsewhere with moderate to fresh W to SW wind

'n Tipa stasionere laagdrukstelsel het naby Marion tot stand gekom terwyl die antisiklone by Tristan ook stasionêr bly. Daar is aanduiding dat 'n volgende trog die Kaap nader in die suidwesterlike windstroom suidwes van die Kaap. Dit sal aldus verwag bewolk bly langs die weskus, maar mooiweer elders, terwyl die wind matig tot sterk wes tot suidwes sal wees
