INFERENCE

DATE 31 – 12 – 1953 DATUM

AFLEIDING

With pressures showing a marked rise along the Cape coasts cool air will flow across Natal into the Transvaal giving cloudy skies and setting off scattered thundershowers. Over the remainder of the interior it will remain fine and hot.

Met vinnig stygende drukke aan die Kaapse kus sal koel lug oor Natal na Transvaal ingevoer word. Daarmee sal bewolkte weer en verspreide buie voorkom. Oor die res van die binneland sal dit mooiweer en baie warm bly.

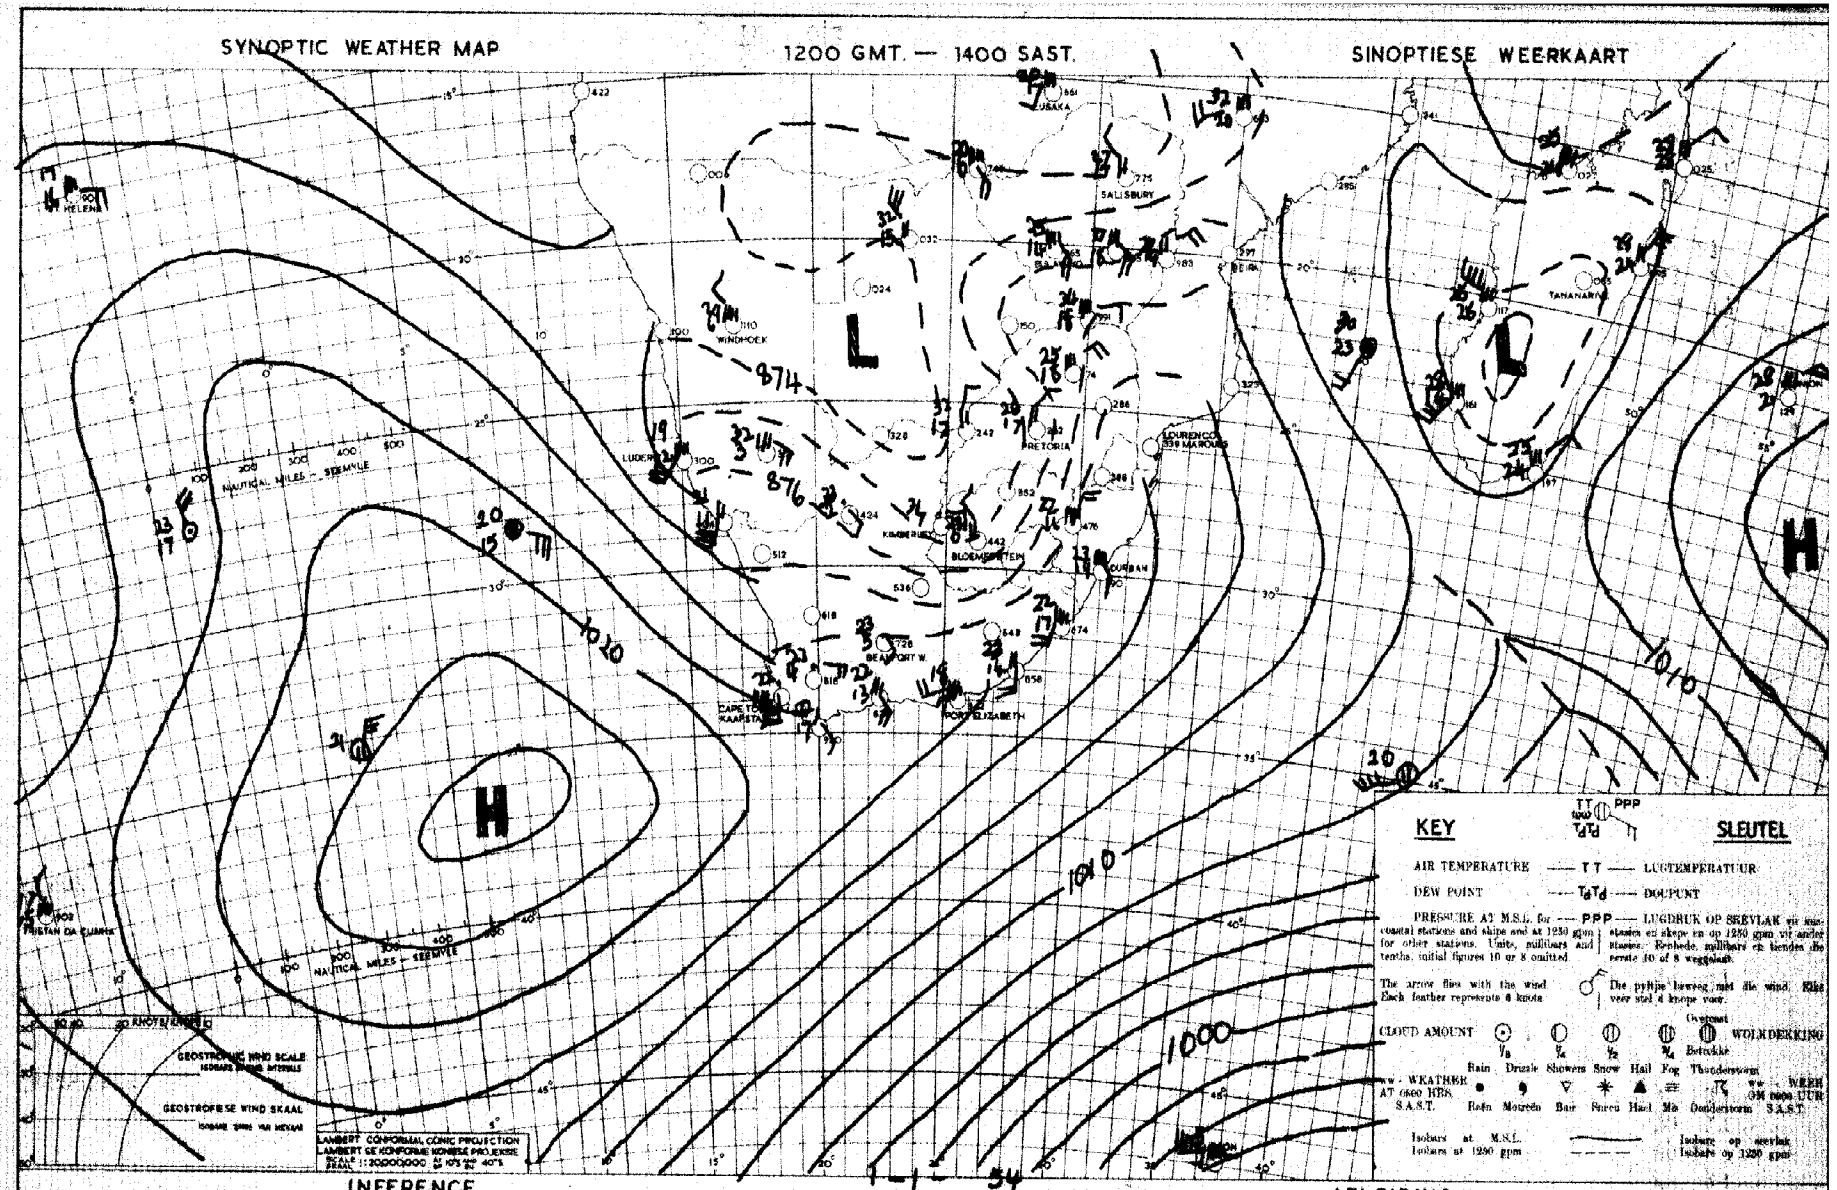
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

The High west of the Cape willremain stationary and a separate cell will form over the south east coast. The air will remain humid over Natal, Transvaal and the Free State and isolated showers will occour. The tropical cyclone over Madagascar is moving southwards.

DATE 19

DATUM

AFLEIDING

Die Hoog wes van die Kaap sal stasionêr bly maar 'n afsonderlike Hoog dal oor die suidooskus vorm. Die lugmassa oor Natal, Transvaal en die Vrystaat sal vogtig bly en los buie sal uitsak. Die tropiese siklone oor Madagaskar sal suidwaarts beweeg.

INFERENCE

DATE 2 JAN. 1954 DATUM

AFLEIDING

A trough of low pressure has developed over the interior and is moving eastwards. In advance of the trough good rains are likely, but drier westerly winds in its rear will bring a rapid clearance.

'n Trog van lae druk het oor die binneland ontwikkel en beweeg ooswaarts. Voor dié trog sal goeie reëns waarskynlik voorkom, maar droë westewinde aan die agterkant daarvan sal veroorsaak dat dit vinnig ooptrek.

The dry westerly winds in the upper levels will spread over most of the Union, but the surface synoptic situation will change but little. Apart from scattered clouds over Natal and the eastern Transvaal, it will be hot and fair.

Die droë westewinde in die bolug sal na bykans die hele Unie uitbrei, maar die sinoptiese toestand naby die oppervlakte sal nie baie verander nie. Afgesien van verspreide wolke oor Natal en oos-Transvaal sal dit hoofsaaklik mooiweer en baie warm word.

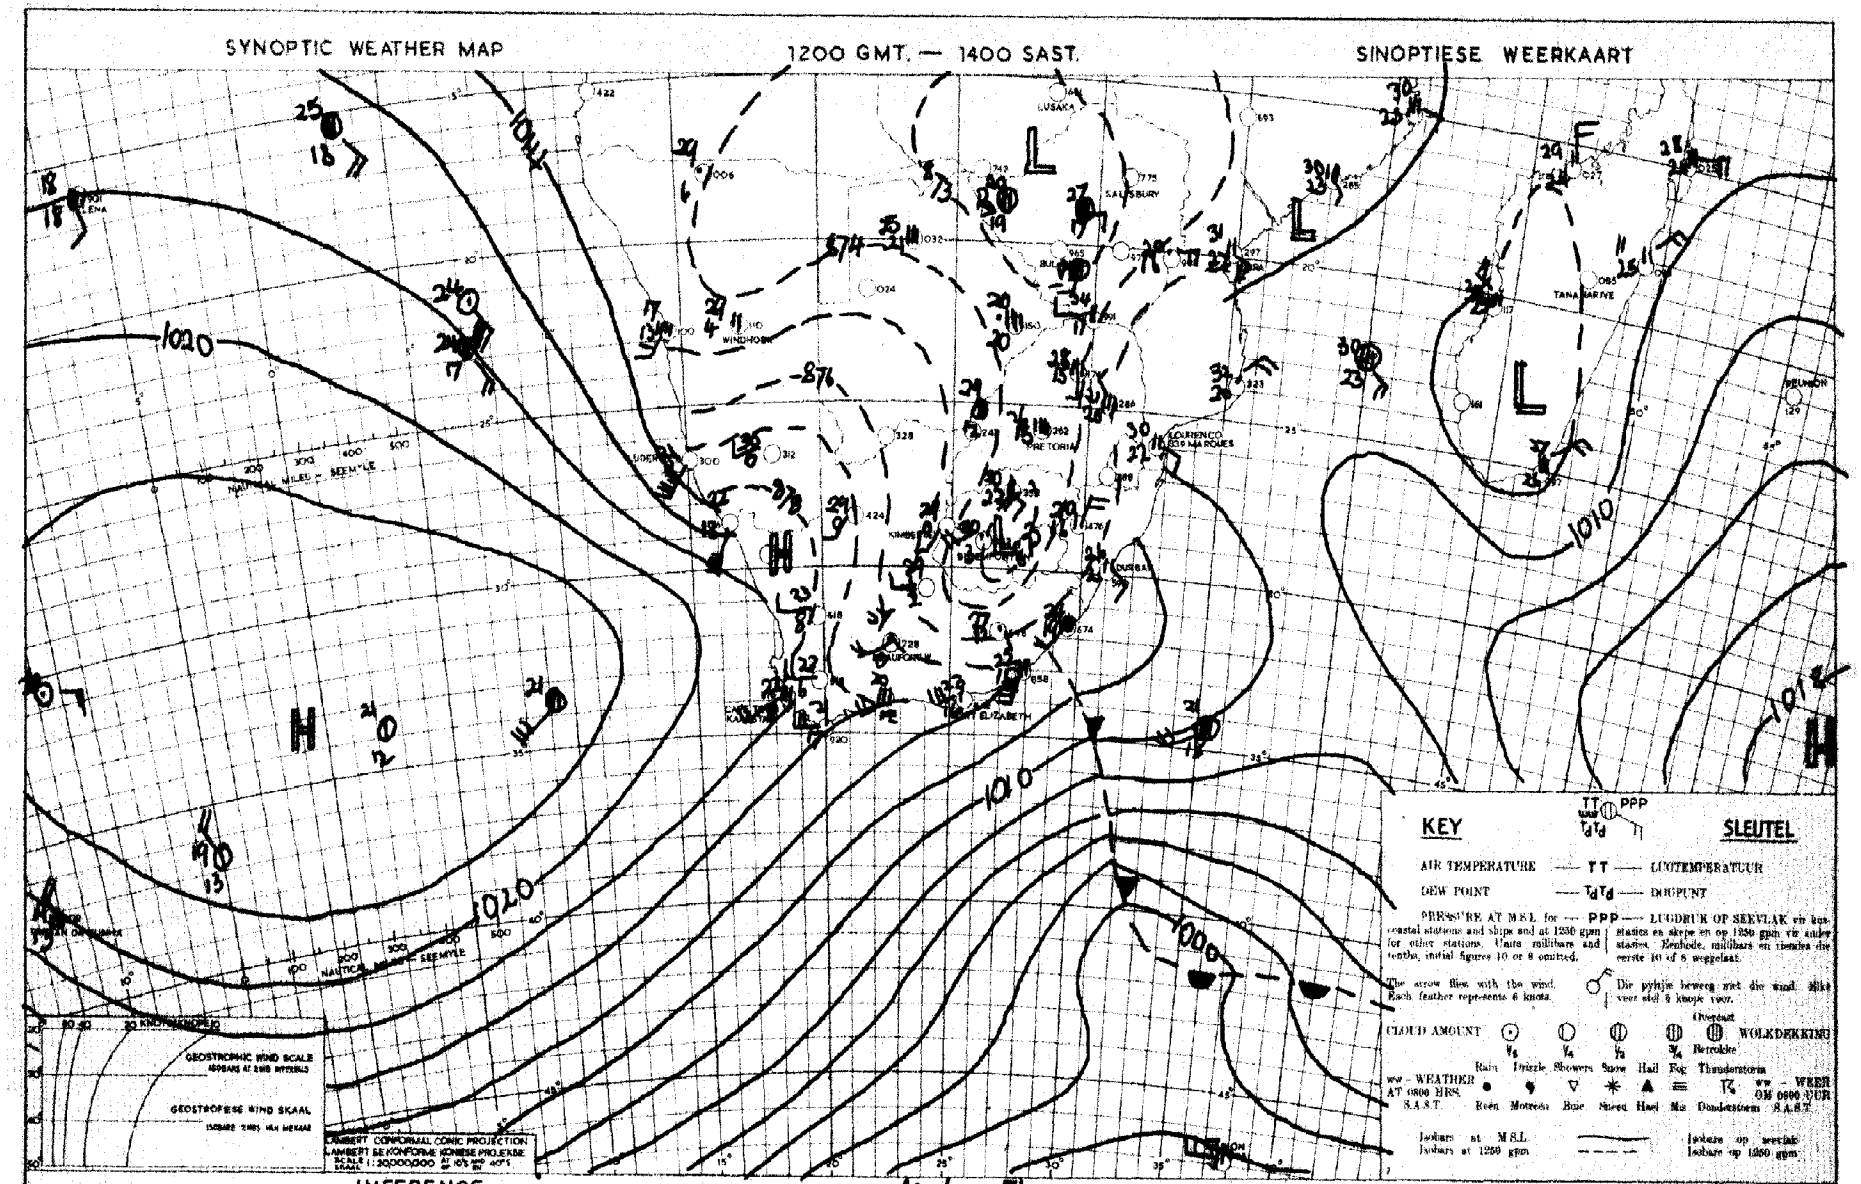
Stegi			



The Atlantic anticyclone is slow moving and although pressure is rising slightly along the south and east coasts no major influx of moist air from the east is likely. The situation will remain more or less unchanged, with scattered clouds and isolated showers over Transvaal, Natal and northeastern Free State. It will remain fine elsewhere.

Die Atlantiese antisikloon beweeg langsaam en alhoewel die druk effens styg langs die Suid- en ooskus word geen aansienlike instroming van vogtige lug uit die ooste verwag nie. Die toestand sal min-of-meer onveranderd bly met verspreide wolke en los donderbuie oor Transvaal, Natal en Noordoos-Vrystaat. Elders sal mooi-weer voortduur.

INFERENCE

DATE 5-/- 1954 DATUM

AFLEIDING

Pressures are rising over the Southeast coasts and a separate High will form over those areas. There will however be little change in the Atlantic High and in the synoptic situation over Southern Africa. Isolated thundershowers will developed in the humid air over Transvaal, northeast O.F.S.and over Natal.

Lugdrukke styg oor die suidoostelike kusstreke en 'n Hoog sal daar vorm. Daar sal maar min verandering wees in die Atlantiese Hoog en in die sinoptiese toestande oor suidelike Afrika. Los donderbuie sal ontwikkel in die vogtige lug oor Transvaal noordoos O.V.S. en oor Natal.

very strong zonal westerly circulation persists to the south of the nion and any important change in weather over the Union is unlikely ithin the next few days.

hSterk sonale westelike sirkulasie duur voort suid van die Unie, waar enigebelangrike weersverandering dus onwaarskynlik is binne die volgende paaf dae.

INFERENCE

DATE 7-1-1954 DATUM

AFLEIDING

Humid air is slowly moving southwards over the Free State and northern Cape and cloudy weather with thunder showers will occur over Transvaal, Natal, Free State, Northern and Eastern Cape tomorrow. Otherwise the zonal circulation remains strong south of the Union and westerly winds will prevent the moist air from penetrating to Southern Cape Province.

Vogtige lug beweeg langsamerhand suidwaarts oor die Vrystaat en Noord-Kaapland en bewolkte weer met donderbuie sal môre voorkom oor Transvaal, Vrystaat, Natal, Noord - en Oos-Kaapland. Ten suide van die Unie bly die westelike stroming sterk en westewind sal verhoed dat die vogtige lug suidelike Kaapland sal binnedring.

The Low west of the Cape is moving southwastwards and the cold front will move over the southwestern Cape causing showers. The humid northerly airstream over the eastern half of the Union will continue and showers will occur. Drier air will later move over S.W.A. and the western Cape.

Die Laag wes van die Kaap sal suidooswaarts beweeg en die kouefront sal oor suidwes Kaapland beweeg en buie veroorsaak. Die vogtige lugstroom uit die noorde sal voortduur oor die oostelike helfte van die Unie en buie sal uitsak. Later sal droër lug oor S.W.A. en wes Kaapland beweeg.

With pressure rising rapidly along the south coast the anti-cyclone west of the Union will extend to the south coast and cool air from southwest and south will spread over the Cape Province and Free State. Cloudy, unsettled weather will continue in the humid air over Transvaal and Natal, but it will clear over the Free State.

Met die vinnig stygende druk langs die Suidkus sal die antisiklone wes van die Kaap na die Suidkus beweeg en koel lug sal Kaapland en die Vrystaat vanuit die suide en suidweste oorstroom. Bewolkte, ongestadige weer sal voortduur in die vogtige lug oor Transvaal, en Natal, maar oor die Vrystaat sal dit optrek.

Cool air, following the fronts extending southeastwards off the east coast, will cross Natal and flow across the Transvaal and the northeastern Free State giving cool cloudy weather and rain or drizzle will occur along the mountains of the escarpment.

Koel lug, wat volg op die fronte wat van die ooskus suidooswaarts strek, sal Natal oorstroom en ook oor Transvaal en noordoos Vrystaat indring. Dit sal koel bewolkte weer veroorsaak en reën of motreën sal oor die bergreekse van die platorand uitsak.

INFERENCE

DATE 11-1-1954 DATUM

AFLEIDING

The pressure distribution over the Union and neighbouring oceans will change little and the airmass over the eastern Union will remain humid and the dry air will remain over the western half of the country.

Die lugdruk distribusie oor die Unie en aangrensende oseane sal nie baie verander nie en die lugmassa oor die oostelike dele van die land sal betreklik vogtig bly terwyl die lug droog sal wees oor die westelike dele.

Cool air will invade the southwestern and southern Cape in the rear of the cold front now approaching the Cape. Cloudy conditions will spread eastwards along the Cape coasts. Elsewhere there will be little change.

Koel lug sal suidwestelike en suidelike Kaapland oorstroom nadat die kouefront, wat tans die Kaap nader, verby geskuif het. Bewolkte toestande sal ooswaarts oor die Kaapse kusstreke uitbrei. Origens sal daar min verandering wees.

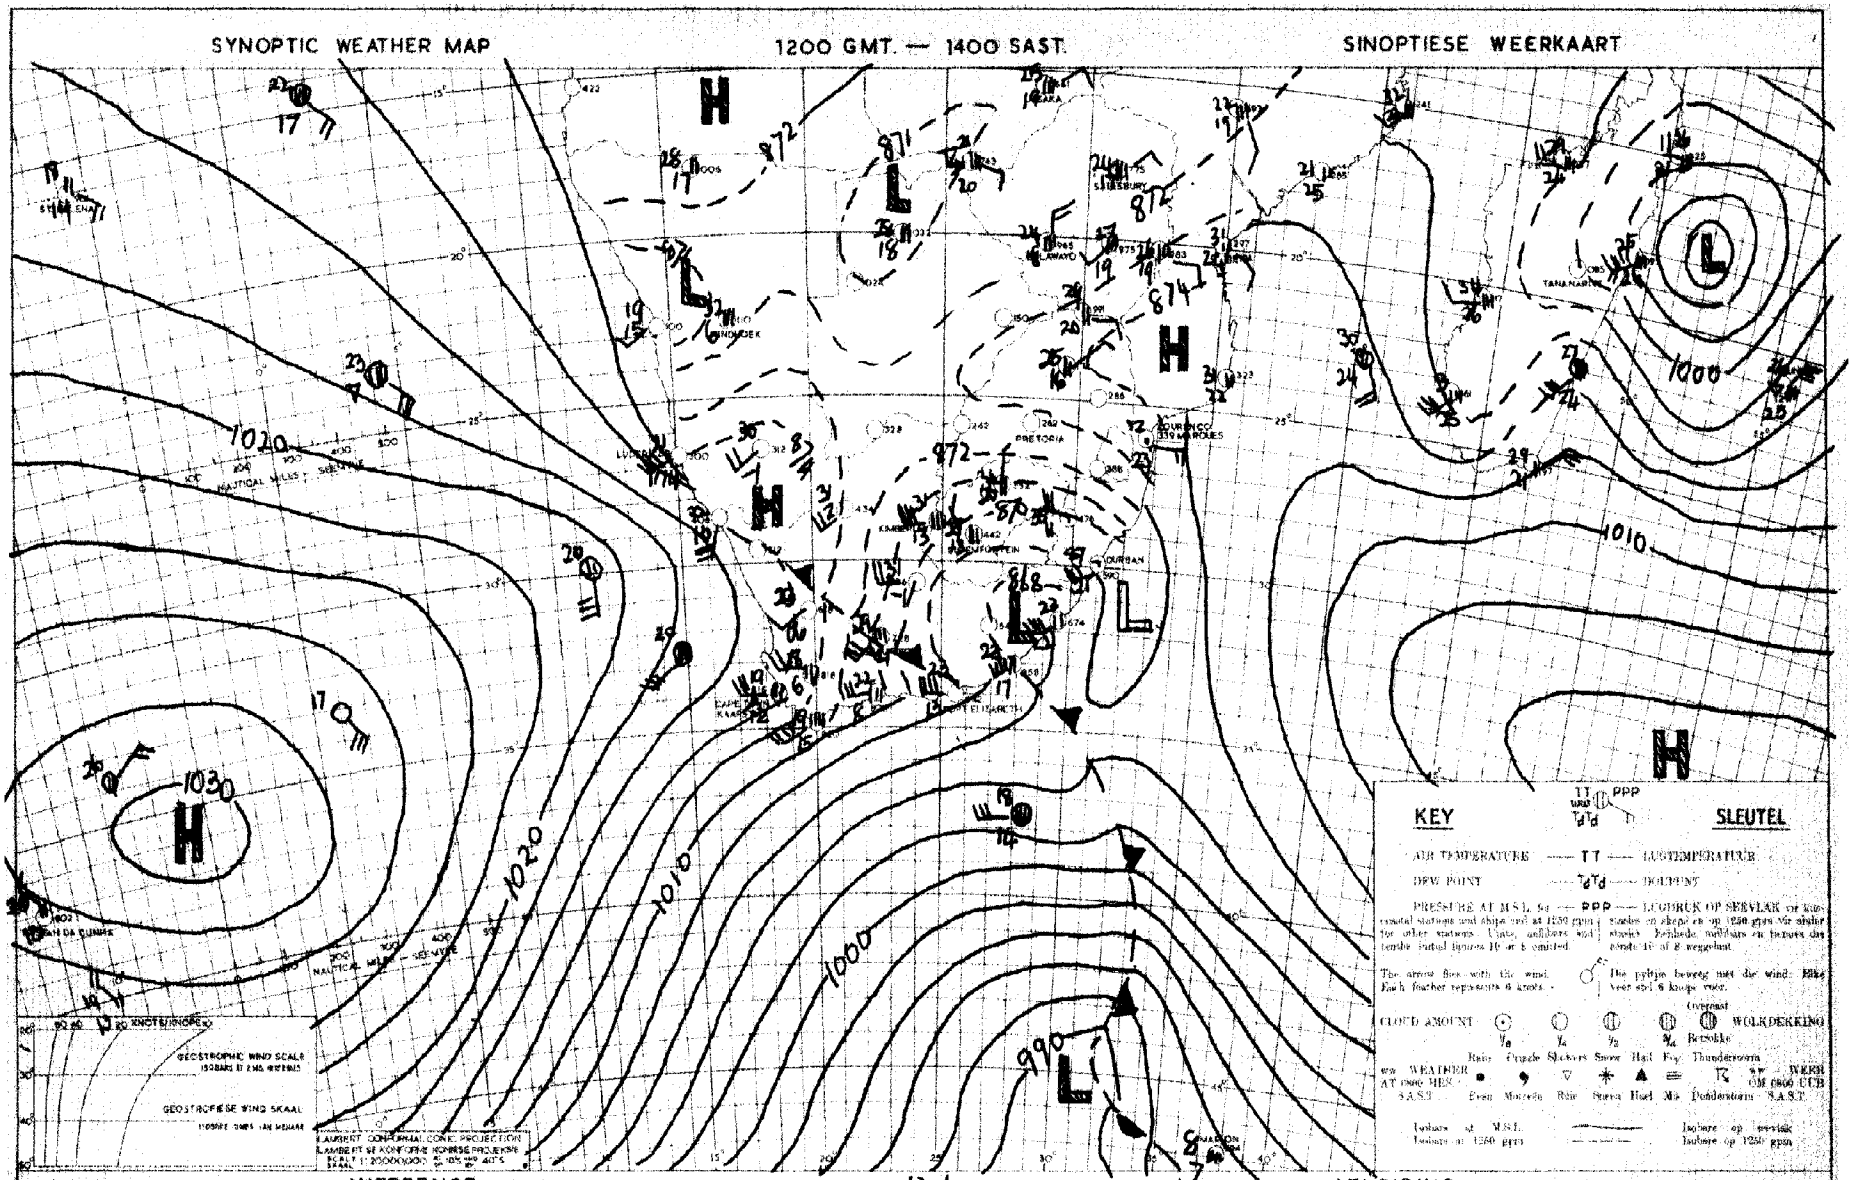
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

DATE 13-1-1954 DATUM

Cool air from the southwest has extended over southwestern Cape while the air is warm and moist over Transvaal, Natal and northern Free State. Dry, warm air is present over the intervening areas. With pressure rising along the south coast the cool air will advance to eastern Cape and Natal, causing cloudy weather with light rain. Thunder conditions will continue over Transvaal and northern Free State.

AFLEIDING

Koel lug vanaf die suidweste het oor Suidwes-Kaapland beweeg, terwyl warm, vogtige lug aanwesig is oor Transvaal, Natal en Noord-Vrystaat. Droë lug strek oor die tussengeleë gebiede.

Met stygende druk langs die suidkus sal die koel lug uitbrei na Oos-Kaapland en Natal en ligte reën sal uitsak. Donderweerstoestande sal voortduur oor Transvaal en noordelike Vrystaat.

INFERENCE

DATE 14-1 19 54 DATUM

AFLEIDING

A separate High will form over the SE coast and the colder air will slowly extend northwards. With the warmer northwesterlies over the northern Union skies will become overcast over Transvaal and north Free State and rain will fall.

'n Afsonderlike Hoog sal oor die suidoos kus vorm en die kouer lug sal geleidelik noordwaarts uitbrei. Met die warmer, noordweste winde oor die noordelike Unie sal die weer oor Transvaal en Noord Vrystaat betrokke word en reën sal uitsak.

INFERENCE

Cool air and cloudy unsettled weather has developed over the eastern Union. With the development of a trough of low pressure over Bechuanaland and the northern Cape it is expected that rainy weather will develop over the northern Cape, the Free State and the Central Cape, while cool cloudy conditions should persist for a day or two over Transvaal and Natal, with rain unlikely.

DATE 15/1 — 1954 DATUM

AFLEIDING

Koel lug en bewolkte ongestadigde weerstoestande het oor die oostelike Unie ontwikkel. Met die ontwikkeling van 'n trog van lae druk oor Betsjoeanaland en Noord Kaapland word dit verwag dat reëntoestande oor Noord en Middel Kaapland en die Vrystaat sal ontwikkel. Koel bewolkte weer sal vir 'n dag of twee oor Transvaal en Natal voortduur met enige verdere reën onwaarskynlik.

INFERENCE

DATE 16-1-1954 DATUM

AFLEIDING

As pressure is rising over the South and southeast coasts in advance of the Atlantic High, a separate High will form over those Areas. The cooler easterly upper winds will spread over most of Transvaal and skies will gradually clear over the eastern half of the Union.

Lugdrukke styg oor die suidelike en suidoostelike kusstreke voor die Atlantiese Hoog en 'n afsonderlike Hoog sal vorm. Die koeler, oostelike bowinde sal oor die hele Transvaal uitbrei en die weer oor die oostelike helfte van die Unie sal begin opklaar.

INFERENCE

DATE 17 - 1 1954 DATUM

AFLEIDING

The combined effect of the tropical cyclone in the Mocambique channel, the low over Rhodesia and the cell of high pressure off the southeast coast, is to cause fresh, cool easterly wind over Natal and Tfansvaal. This air stream is fairly humid but stable. Thundery showers are, however, likely in the warmer air over the Free State, Northern Cape and Karo.

Die gesamentlike invloed van die tropiese siklone in die Mosambiekkanaal, die laagdrukstelsels oor Rhodesië en die sel van hoë druk langs die suidooskus, is om taamlike sterk en koel suidoostewind te veroorsaak oor Natal en Transvaal. Hierdie lugstroom is vogtig maar stabiel. Donderstorms is egter moontlik in die warmer lug oor die Vrystaat, Noord-Kaapland en die Karo.

Confluent airflow and the supply of fairly moist air from the north-east is causing cloudy weather and local showers over most of the Cape interior and over the Southern Free State. With the tropical cyclone still centred in the Mocambique Channel dry SE'ly winds are causing fair weather over Natal and Transvaal.

Samevloeiing en die toevoer van vogtige lug uit die noordooste veroorsaak bewolkte weer en buie oor 'n groot deel van die Kaapse binneland en oor suid Vrystaat. Met die tropiese siklone nog oor die Mosambiek Kanaal het droë suidoostewinde oor Natal en Transvaal redelike mooiweer tot gevolg.

INFERENCE

DATE 19 - 1 - 1954 DATUM

AFLEIDING

The tropical cyclone in the Mocambique Channel remains stationary and will affect South Africa only in the extreme northeast where upper southeasterly wind will transport dry, stable air over northern and eastern Transvaal. The air over the Free State and interior Cape is moderately moist and thunder conditions, with isolated afternoon showers, will develop over these Provinces.

Die tropiese werwelstorm in the Mosambiekkanaal bly onveranderd van posisie en intensiteit en sal droë, stabiele lug uit die suidooste invoer oor Noord - en Oos-Transvaal, Die lug oor die Vrystaat en Kaapland is redelik vogtig en donderweerstoestande met plaaslike buie, sal oor hierdie provinsies ontwikkel in die namiddag.

The High to the southeast of the Union is moving away and the Tropical cyclone in the Mocambique channel is now almost stationary. The synoptic situation over the Union will change but little and thunderconditions will again develop over the interior.

Die Hoog ma die suidooste van die Unie, beweeg weg en die Tropiese siklone in the Mosambiek Kanaal toon geen beweging nie. Die sinoptiese toestand oor die Unie sal ook min verander en donderweerstoestande sal oor die binneland ontwikkel.

INFERENCE

DATE 21/1/1954 DATUM

AFLEIDING

Rising pressures over the southwestern Cape indicate an eastward surge of the Atlantic High and cool cloudy conditions will extend eastwards over the southern and southeast eastern Cape. Elsewhere over the Union there will be little change.

Stygende durkke aan die Kaapse Suidweskus dui daarop dat die "Atlantiese Hoog" ooswaarts uitbrei en daarmee sal koel bewolkte weerstoestande ooswaarts oor suidelike en suidoostelike Kaapland beweeg. Origemsword daar min verandering oor die Unie verwag.

DATE 22-1-19S4 DATUM

AFLEIDING

Rising pressure along the east coast and falling pressure along the west coast indicates that the anticyclone southwest of the Union will divide into a cell off the southeast coast and another midway between the Union and Tristan. Cool, humid air will invade the Union from the east, causing cloudy weather over the three northern provinces and Transkei, with local rain and showers.

Die stygende druk langs die ooskus en dalende druk langs die weskus dui aan dat die antisiklone suidwes van die Unie in twee sal verdeel, met 'n oostelike sel môre tem suidooste van die Unie en 'n westelike sel halpad tussen die Kaap en Tristan. Koel, vogtige lug sal weswaarts oor die drie noordelike Provinsies van die Unie instroom en bewolkte weer veroorsaak, met plaaslike

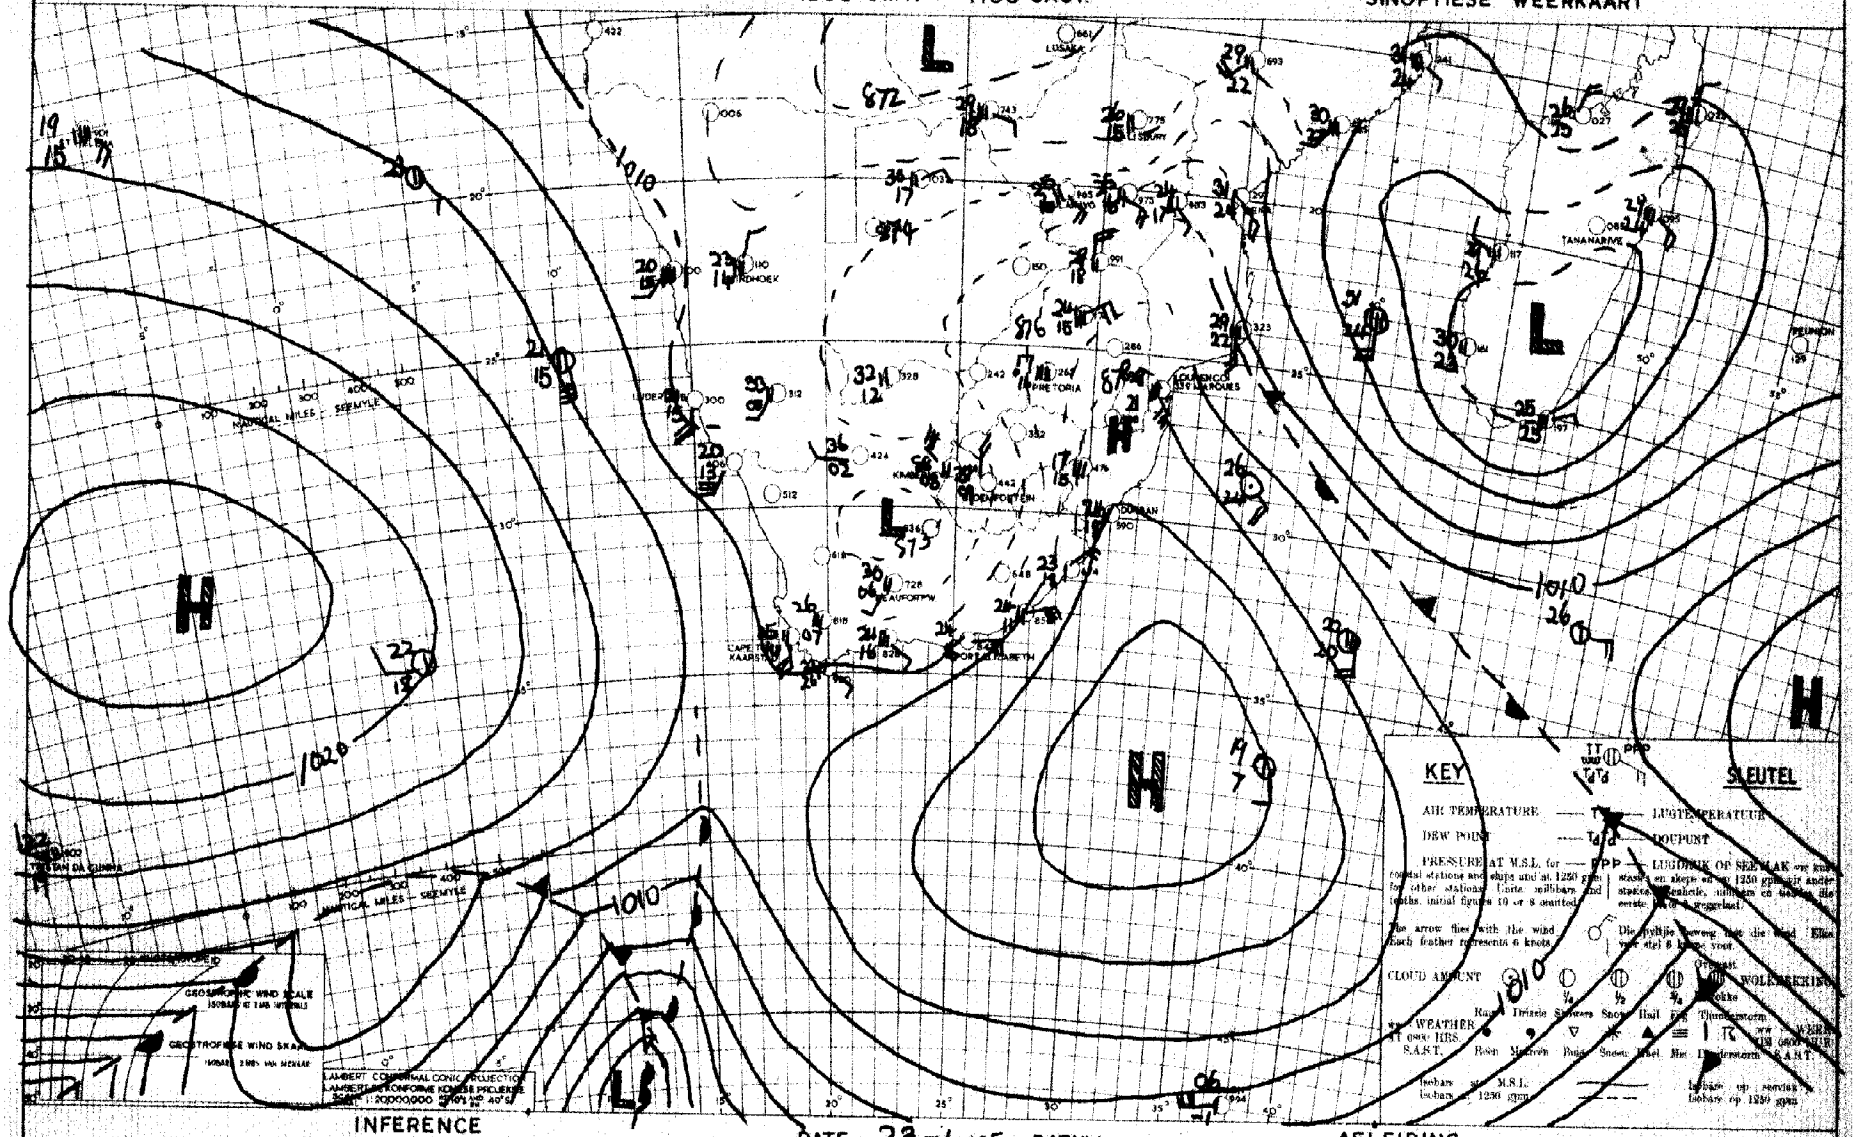
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

Falling pressures indicate that the "high" off the east coast is receding, which should establish a fairly deep northerly airstream of moist air over the eastern and Central Union. Thundershowers are however only expected over the Free State and the northern and eastern Cape tomorrow, while overcast and rainy weather over the Transvaal and Natal, associated with the advance ofthe high, will clear.

DATE 23-1-1954 DATUM

AFLEIDING

Dalende drukke dui daarop dat die "hoog" aan die Oostus wegtrek en daardeur sal 'n taamlike diep vogtige noordelike lugstroom oor die oostelike en middel Unie ontstaan. Donderbuie word môre egter slegs oor die Vrystaat en noord en oos Kapland verwag, terwyl betrokke weer met reën oor Transvaal en Natal, wat ontstaan het met die instoot van die hoog, sal opklaar.

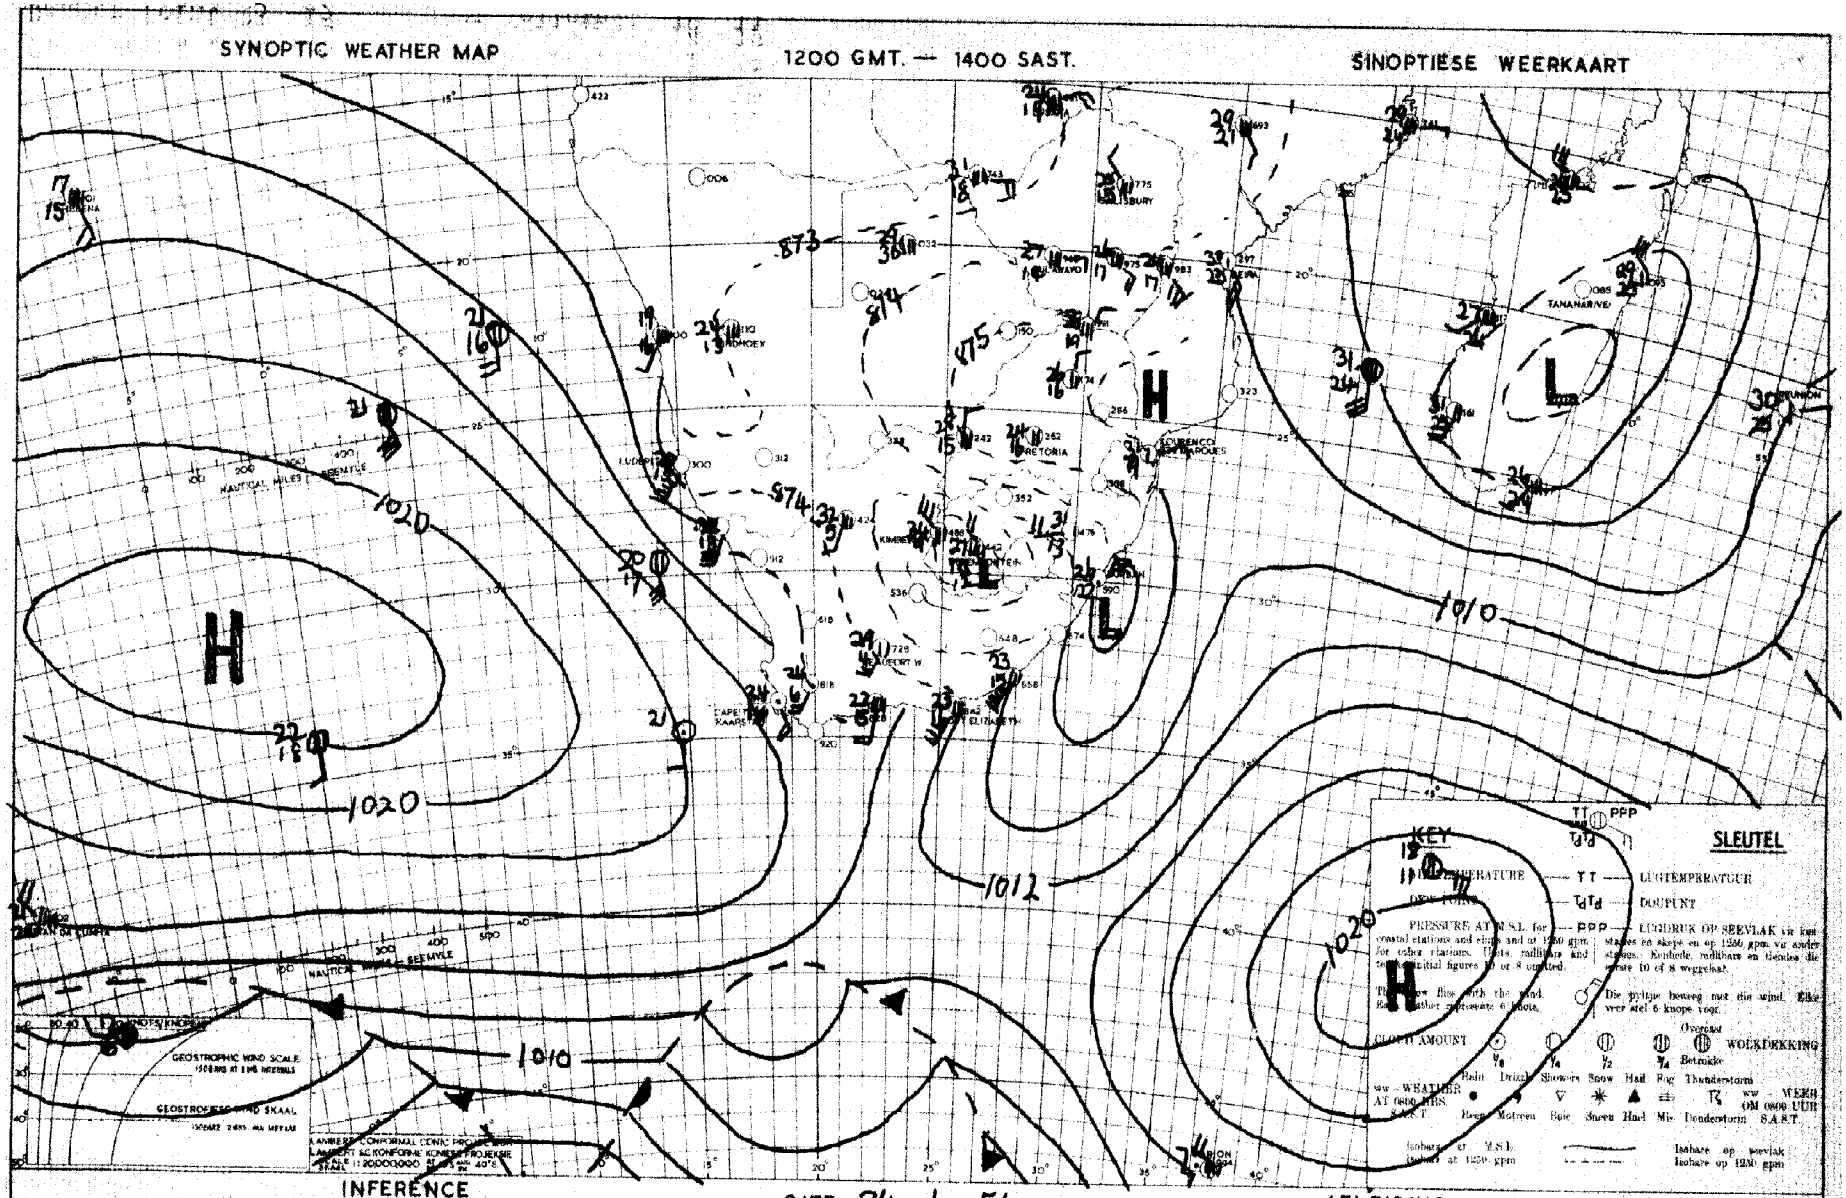
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



DATE 24-1-1954 DATUM

INFERENCE

The coastal low will move rapidly eastwards and a ridge of high pressure will form over the southern and southeastern Union. Humid northeasterly surface winds will continue over Transvaal and Free State giving rise to thunderconditions.

AFLEIDING

Die kus laag sal vinnig ooswaarts uitwyk en 'n rug van hoë lugdruk sal oor die suidelike en suidoostelike Unie vorm. Vogtig noordooste winde aan die oppervlakte sal voortduur oor Transvaal en Vrystaat en aanleiding gee tot donderweerstoestande.

Pressure is rising slightly along the south coast but falling along the west coast. Consequently the gradient will favour northerly winds in the lower layers over the Union tomorrow, but southwesterly upper wind is likely to persist. Thunder conditions will recur over Transvaal and northern Free State, but it will be fair to fine over the Cape.

Met 'n geringe styging in die druk langs die suid- en ooskus en 'n gelyktydige daling langs die weskus, sal die druk gradiënt môre noordewind in die onderste lae oor die Unie veroorsaak, maar suidwestewind sal voortduur in die bolug. Donderweerstoestande sal weer ontwikkel oor Transvaal en noordelike Vrystaat, maar oor Kaapland sal dit mooiweer wees.

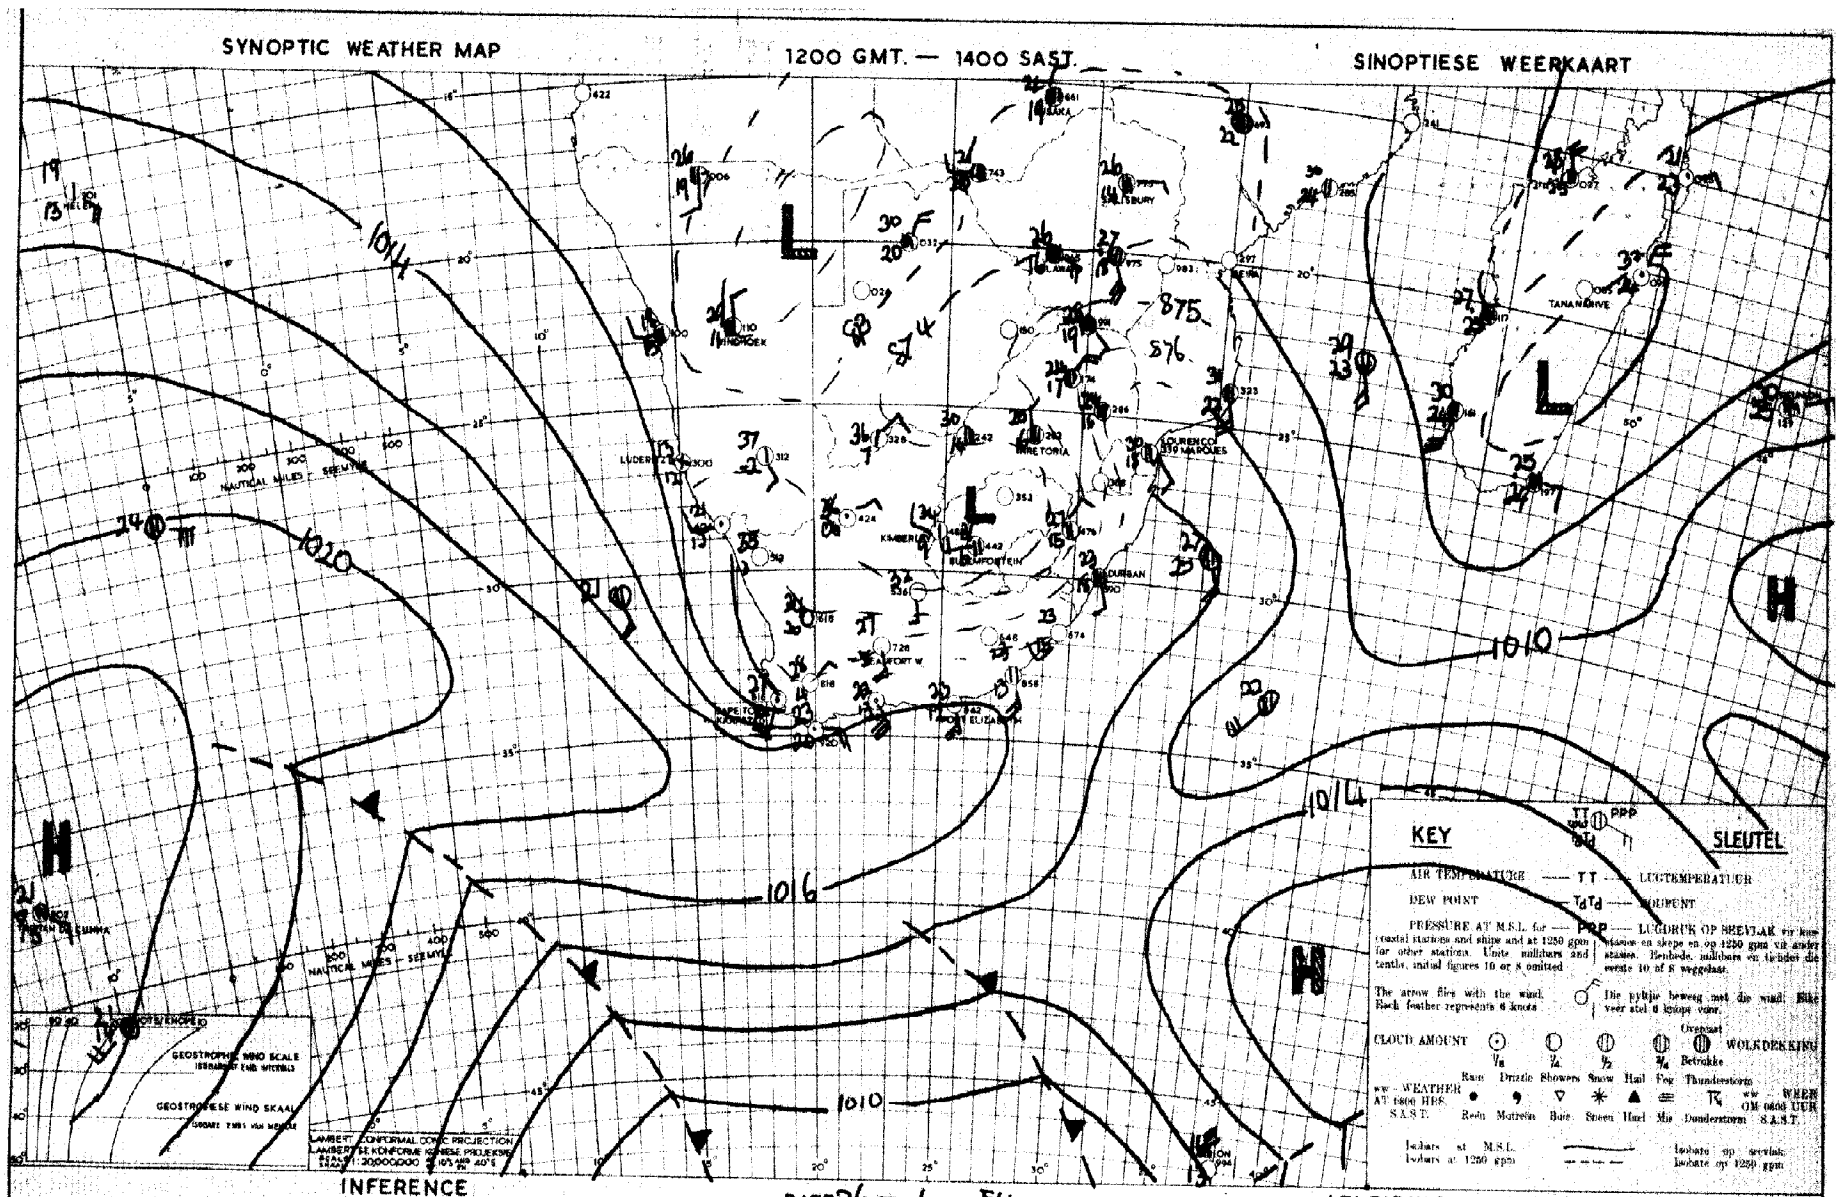
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 26 — 1 — 1954 DATUM AFLEIDING

As a result of the Low over the western Cape, a shallow layer of relative humid air is moving southwestwards over the Union, otherwise however there will be little change in the synoptic situation. Thunderconditions will again develop over the eastern Union.

As gevolg van die Laag oor wes Kaapland, vloei daar 'n vlak lagie vogtige lug suidweswaarts oor die Unie. Origens egter sal daar nie baie verandering in die sinoptiese toestand wees nie. Donderweerstoestande sal weer oor die oostelike Unie ontwikkel.

INFERENCE

Cool air, in the rear of the cold front now approaching the Cape, is expected to reach the southwest and south Cape coastal regions tomorrow causing temporary cloudy conditions. Elsewhere little change is likely and afternoon thundershowers will be confined to the Transvaal, Natal, and northern Cape area, and the northern Free State.

DATE 27 — 1 — 19 54

AFLEIDING

DATUM

Koel lug, wat volg op die koue front wat tans die Kaap nader, sal môre die Kaapse Suidwes en suidkusstreke bereik en tydelike bewolkte weer veroorsaak. Origens sal daar min verandering wees en namiddag donderbuie sal tot Transvaal, Natal, Noord Vrystaat en Noord Kaapland beperk wees.

Moist air is advancing southwards over the Cape Province and should extend over all parts of the Cape tomorrow, giving partly cloudy weather with thunderstorms. Pressure will fall along the south coast and low cloud will drift in behind the coastal minimum. Scattered clouds with isolated thunderstorms are likely over Transvaal, Natal and northern Free State.

Vogtige lug beweeg suidwaarts oor die Kaapprovinsie en behoort môre oor alle dele van die Provinsie aanwesig te wees, waar dit gedeeltelik bewolkte weer met donderbuie sal veroorsaak. Die druk sal langs die suidkus daal en 'n kuslaag vorms, aan die westekant waarvan koel seelug en miswolke sal instroom langs die kus. Verspreide wolke sal ook oor Transvaal, Natal en Noord-Vrystaat ontwikkel en los buie sal uitval.

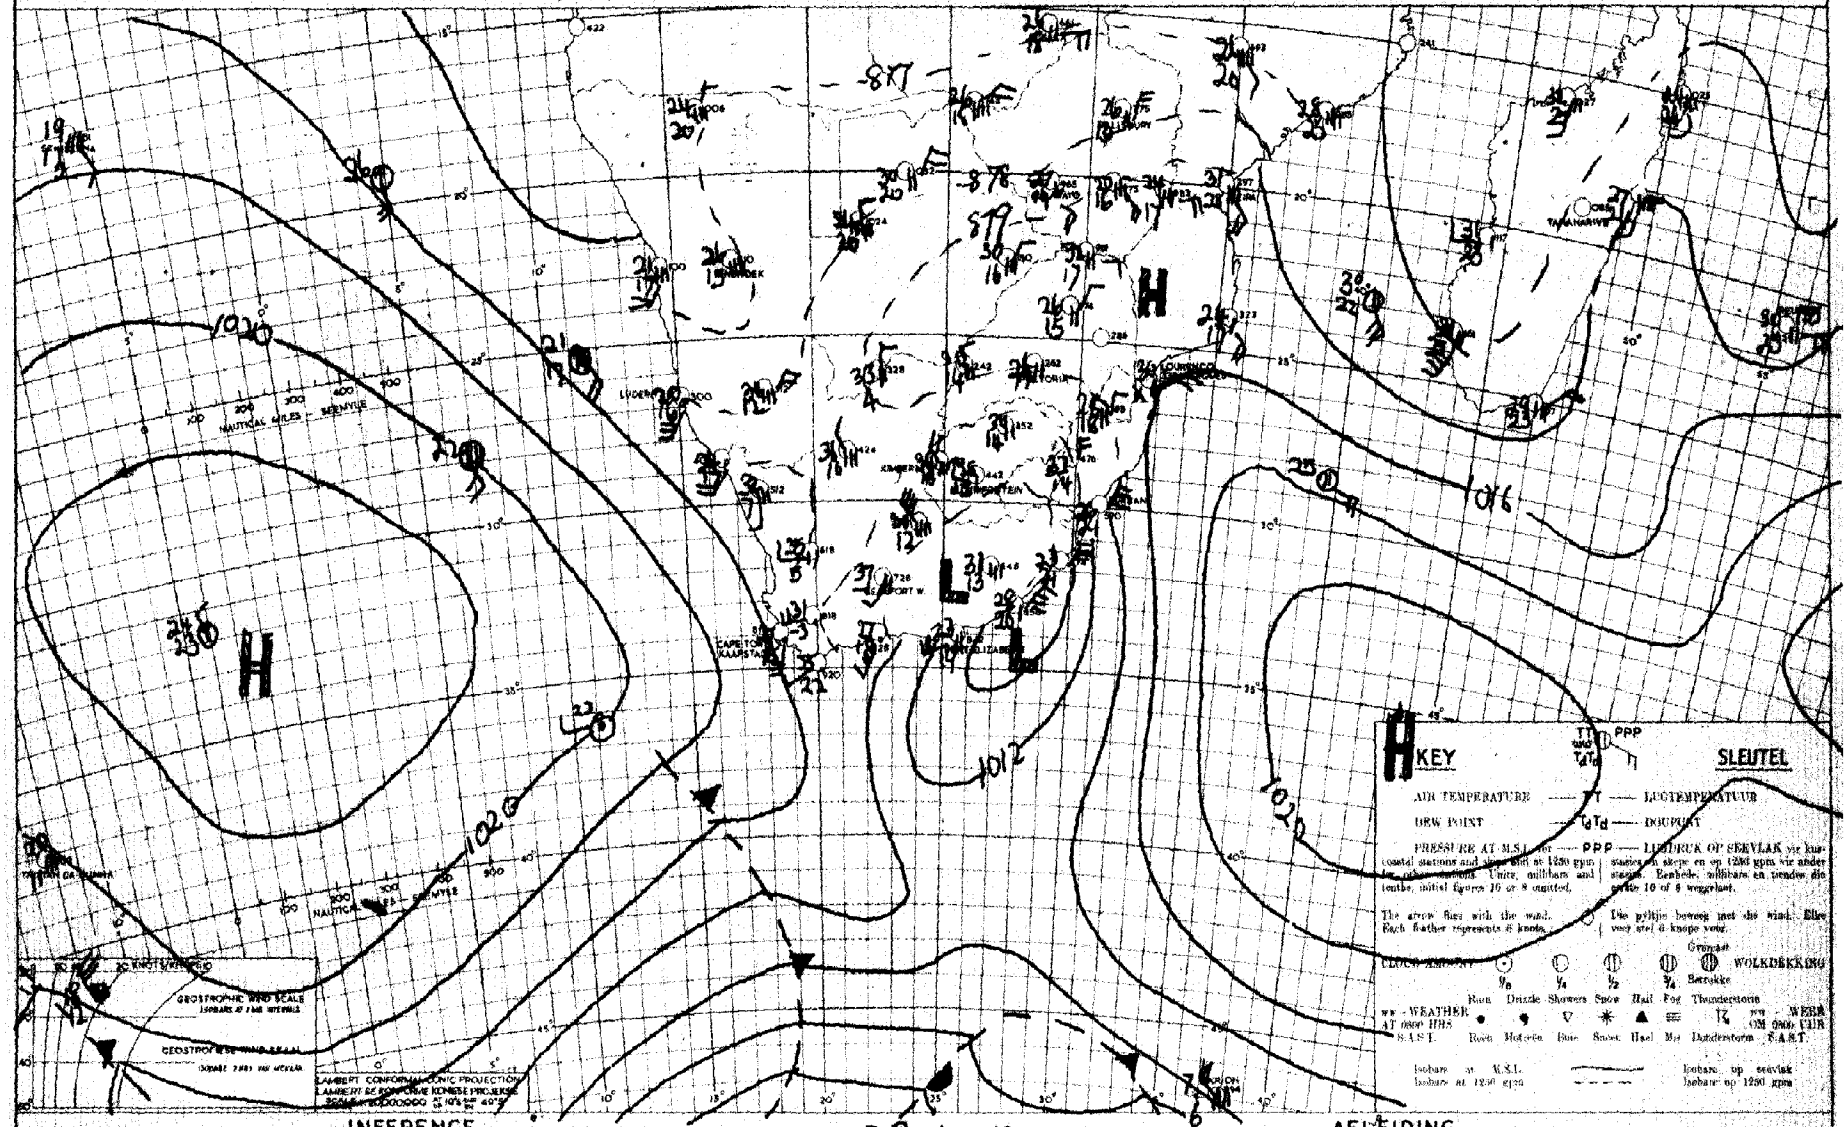
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 29-1-19 54 DATUM AFLEIDING

The eastern part of the Atlantic High will move over the South-western and southern Cape Province and drier air will move over the Cape interior. The humid air over the remainder of the Union will persist causing isolated thundershowers.

Die oostelike deel van die Atlantiese Hoog sal oor suidwes en suid Kaapland beweeg en droër lug sal oor die Kaapse binneland invloei. Die vogtige lug oor die res van die Unie sal onveranderd bly en los donderstorms sal ontwikkel.

INFERENCE

DATE 30-1-1954 DATUM

AFLEIDING

No change is expected in the general situation. Moist air will remain in circulation over Natal and all areas north of the Orange River and thunder conditions with isolated showers will occur in the afternoon.

Daar is nie aanduiding van enige aansienlike verandering in die algemene toestand nie. Vogtige lug sal oor Natal en alle gebiede noord van die Oranje Rivier aanwesig wees en donderweerstoestande met plaaslike buie sal voorkom.

Over Natal, the Northeastern Cape and the Transkei and in general over all areas of the Union north of the Orange River conditions willremain favourable for thunderstorms and showers. Cool cloudy weather is also likely to continue along the Cape south and south-east coasts under the influence of onshore winds.

Oor Natal, noordoos Kaapland, die Transkei en in die algemeen oo alle dele van die land noord van die Oranje Rivier sal toestande gunstig bly vir donderstorms en buie. Koel bewokte weer sal ook voortduur aan die Kaapse suid- en suidooskusstreke waar wind land waarts sal waai.

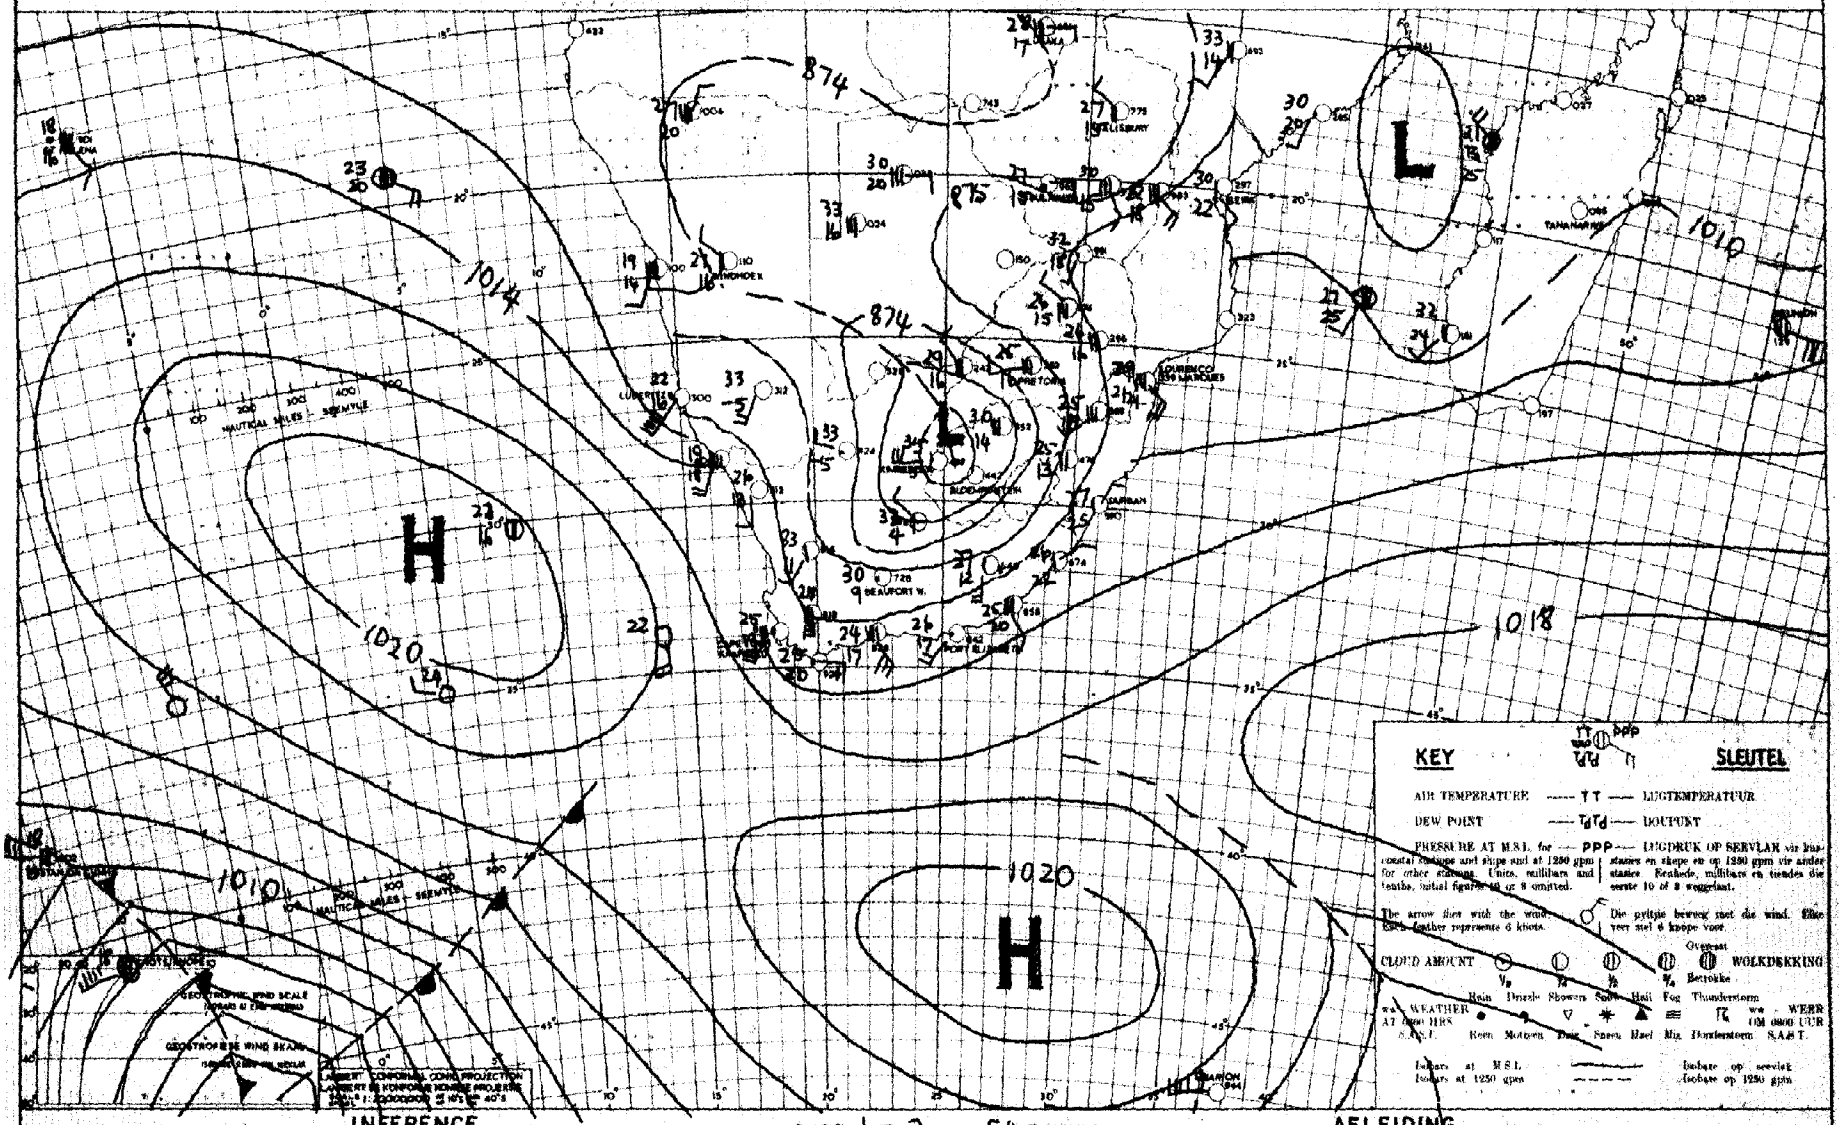
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE

DATE 1 - 2 - 1954 DATUM

AFLEIDING

The low over the central Union is very shallow and the drier westerly to southwesterly upper winds will spread to most of the Union. Only isolated thunder conditions will develop over the eastern Union.

Die Laag oor die middel Unie is baie vlak en die droër westelike tot suidwestelike bowinde sal oor bykans die hele land uitbrei. Los donderweerstoestande sal oor die oostelike dele ontwikkel.

Although the upper air circulation has become mainly S'ly the lower Northerly winds over the Transvaal, Natal, the Free State and the northern and Northeastern Cape remains moist and further thundershowers are likely over these areas in the afternoons.

Alhoewel die bolugsirkulasie nou meesal suidelike geword het bly die noordelike winde indie onderste lae oor Transvaal, Natal, die Vrystaat en oor noord en noordoos Kaapland vogtig en verdere donderbuie word oor hierdie dele in die namiddae verwag.

INFERENCE

DATE 3 - 2 - 19 54 DATUM

AFLEIDING

Pressure is falling rapidly along the South coast and the West coast troughwill be displaced to the Southeast coast tomorrow, extending Northwards over Central Cape and Bechuanaland . Coastal low cluod will develop along the Southwest and South coasts and scattered clouds will occur over the interior areas East of the trough.

Die druk daal vinnig langs die Suidkus en die trog langs die Weskus sal dus môre na die Suidooskus verskuif, vanwaar dit Noordwaarts oor Sentrale Kaapland na Betsjoeanaland sal trek. Mis en lae wolke sal langs die Kaapse Wes- en Suidkus ontwikkel en verspreide wolke sal voorkom oor die binnelandse gebiede Oos van die trog.

INFERENCE

DATE 4-2-19 54 DATUM

The Atlantic High between Tristan and the Cape is moving eastwards and the cooler air will flow over the Cape Province and Natal. Orographic showers will occur over the south and southeast coasts. Thundershowers will develop over Transvaal and Northern Free State.

AFLEIDING

Die Atlantiese Hoog tussen Tristan da Cunha en die Kaap beweeg oostwaarts en koeler lug sal oor Kaapland en oor Natal beweeg. Buie sal oor die suidelike en suidoostelike kuststreke uitsak. Donderbuie sal voorkom oor Transvaal en Noord Vrystaat.

Isobars at M.S.L. / Isobare op seevlak

Isobars at 1250 gpm / Isobare op 1250 gpm

INFERENCE

The High will move eastwards to the south east coast creating a pressure gradient from east to west. The colder air will therefore move over Natal and the Transvaal and the Free State.

Cloudy weather will persist over the eastern Union.

DATE 5 - 2 - 1954 DATUM

AFLEIDING

Die Hoog sal ooswaarts beweeg na die suidooskus en drukgradiënte sal van oos na wes wees. Koeler lug sal dus oor Natal, Transvaal en Vrystaat stroom. Die weer oor die oostelike Unie sal bewolk bly.

DATE 6 - 2 - 1954 DATUM

AFLEIDING

Pressure is falling over the central Union and a trough will develop. Consequently isolated thunderconditions will begin to develop over the O.F.S. and northern Cape. Otherwise there will be little change in the weather over the Union.

Lugdrukke daal oor die Middel Unie en 'n trog sal ontwikkel. Gevolglik sal los donderstorms begin ontwikkel oor die Vrystaat en noord Kaapland. Origens sal daar min verbandering in die weer oor die Unie wees.

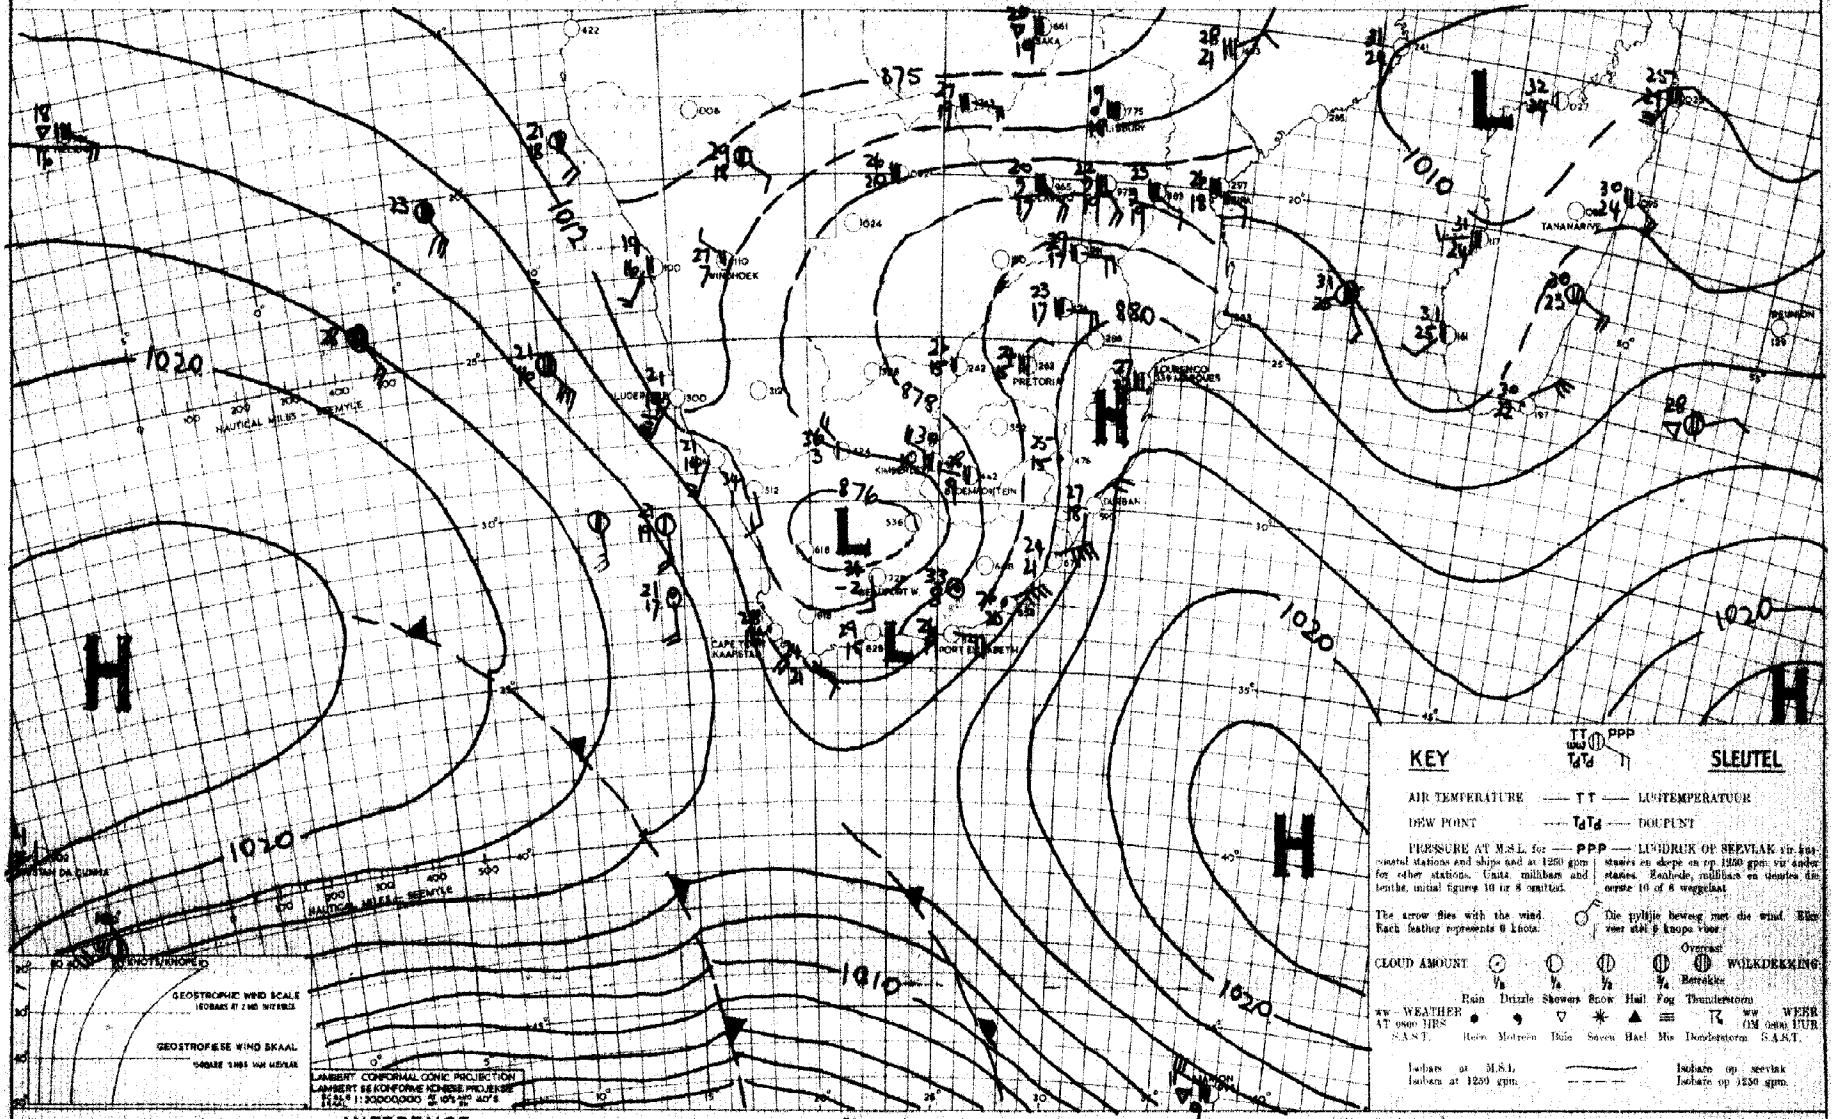
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 7 - 2 - 1954 DATUM — AFLEIDING

With pressure falling along the east coast, the coastal low at George will be displaced to the Natal coast and some low cloud will temporarily appear along the southwest and south coast. Moist air will move southwards over the Free state and Northern Cape towards Eastern Cape and partly cloudy weather with local thunder will occur over the eastern half of South Africa.

Aangesien die druk langs die oostkus daal, sal die kuslaag by George môre na die Natalse kus verskuif en misvolke sal tydelik langs die suidwes en suidkus voorkom. Vogtige lug beweeg suidwaarts oor die Vrystaat en Noord-Kaapland na die oostelike Provinsie en gedeeltelike bewolkte weer met plaaslike donderweer, salmôre oor die oostelike helfte van Suid-Afrika voorkom.

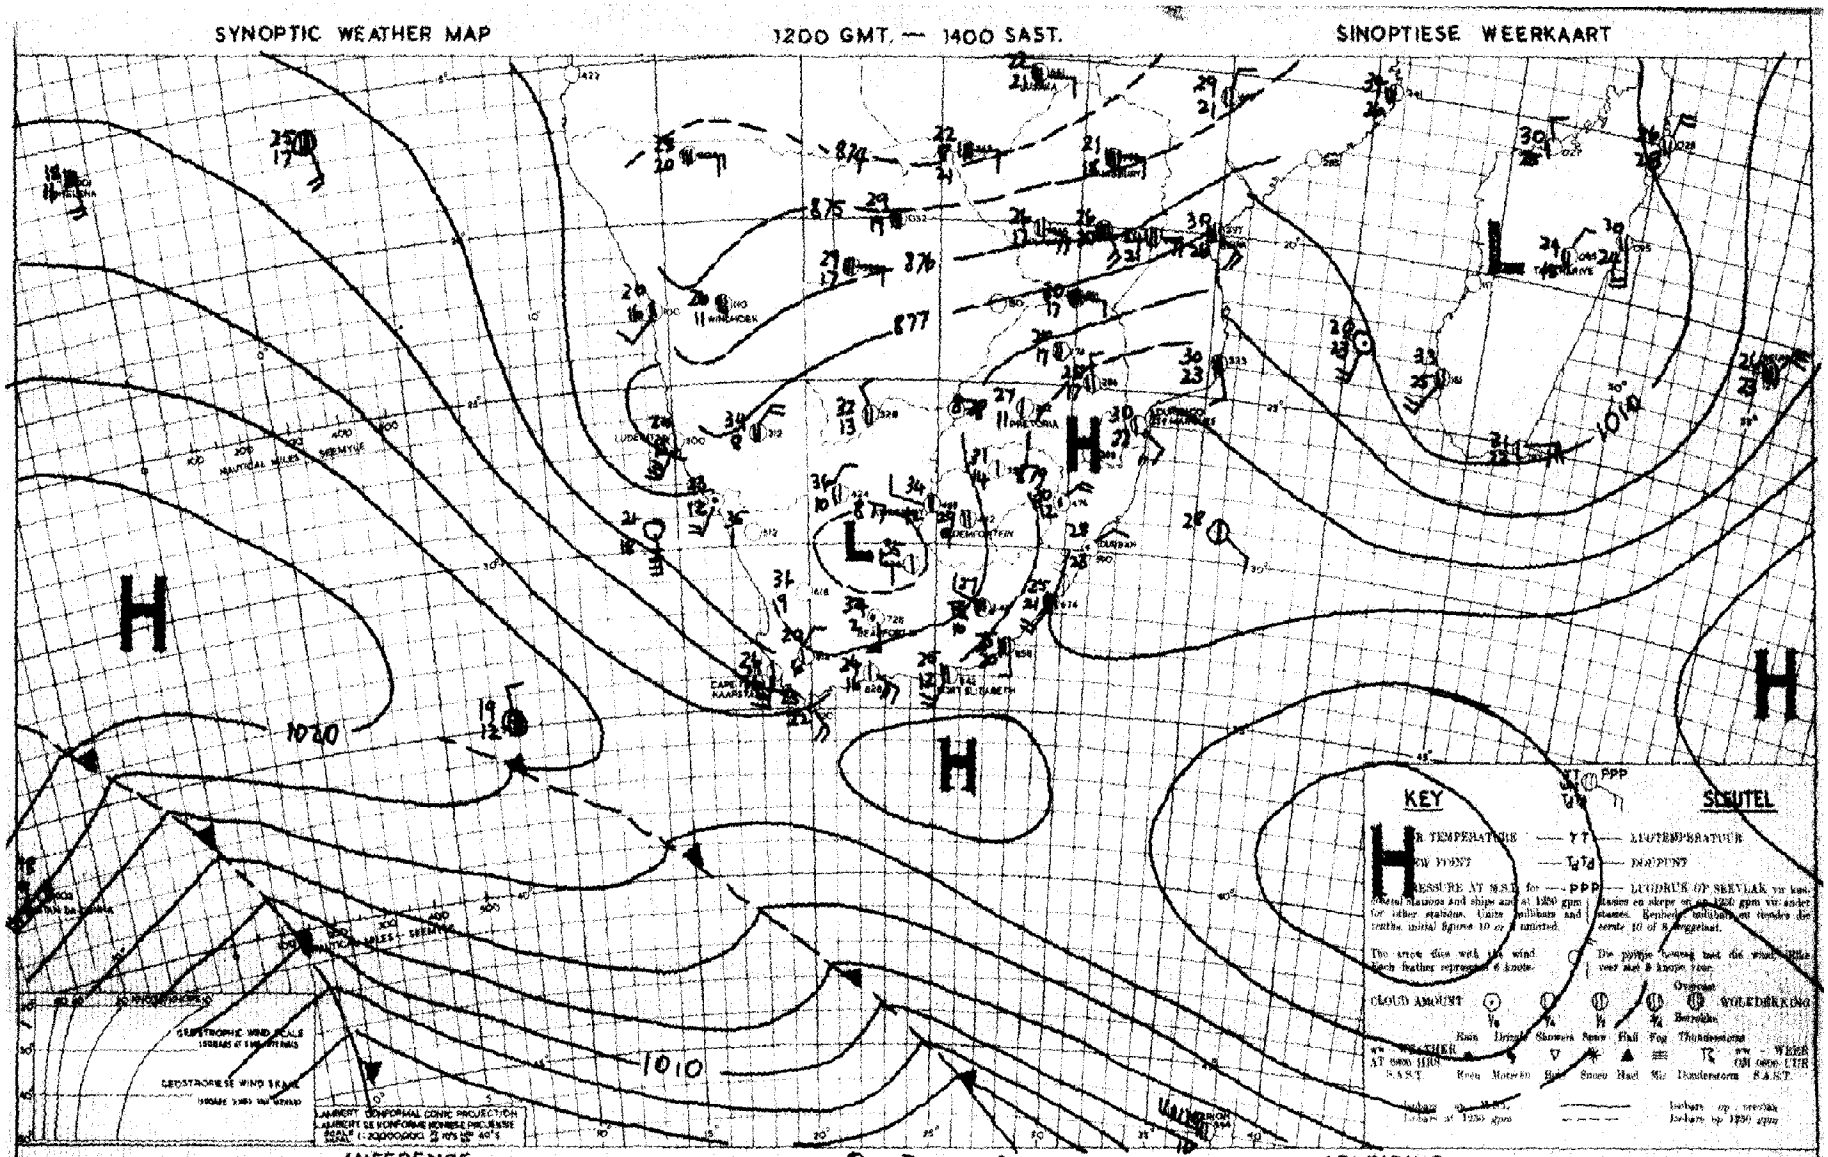
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 8-2-1954 DATUM AFLEIDING

Anticyclonic circulation and stable conditions exist over the Transvaal, northern Free State and most of Natal. Fairly moist air is however flowing southwards across the southern Free State and the Cape interior and should result in local afternoon thundershowers.

Antisiklonies sirkulasie en stabiele toestande bestaan oor Transvaal, noord Vrystaat en 'n groot gedeelte van Natal. Taamlike vogtige lug beweeg egter suidwaarts oor suidelike Vrystaat en die Kaapse binneland en sal plaaslike namiddag donderbuie veroorsaak.

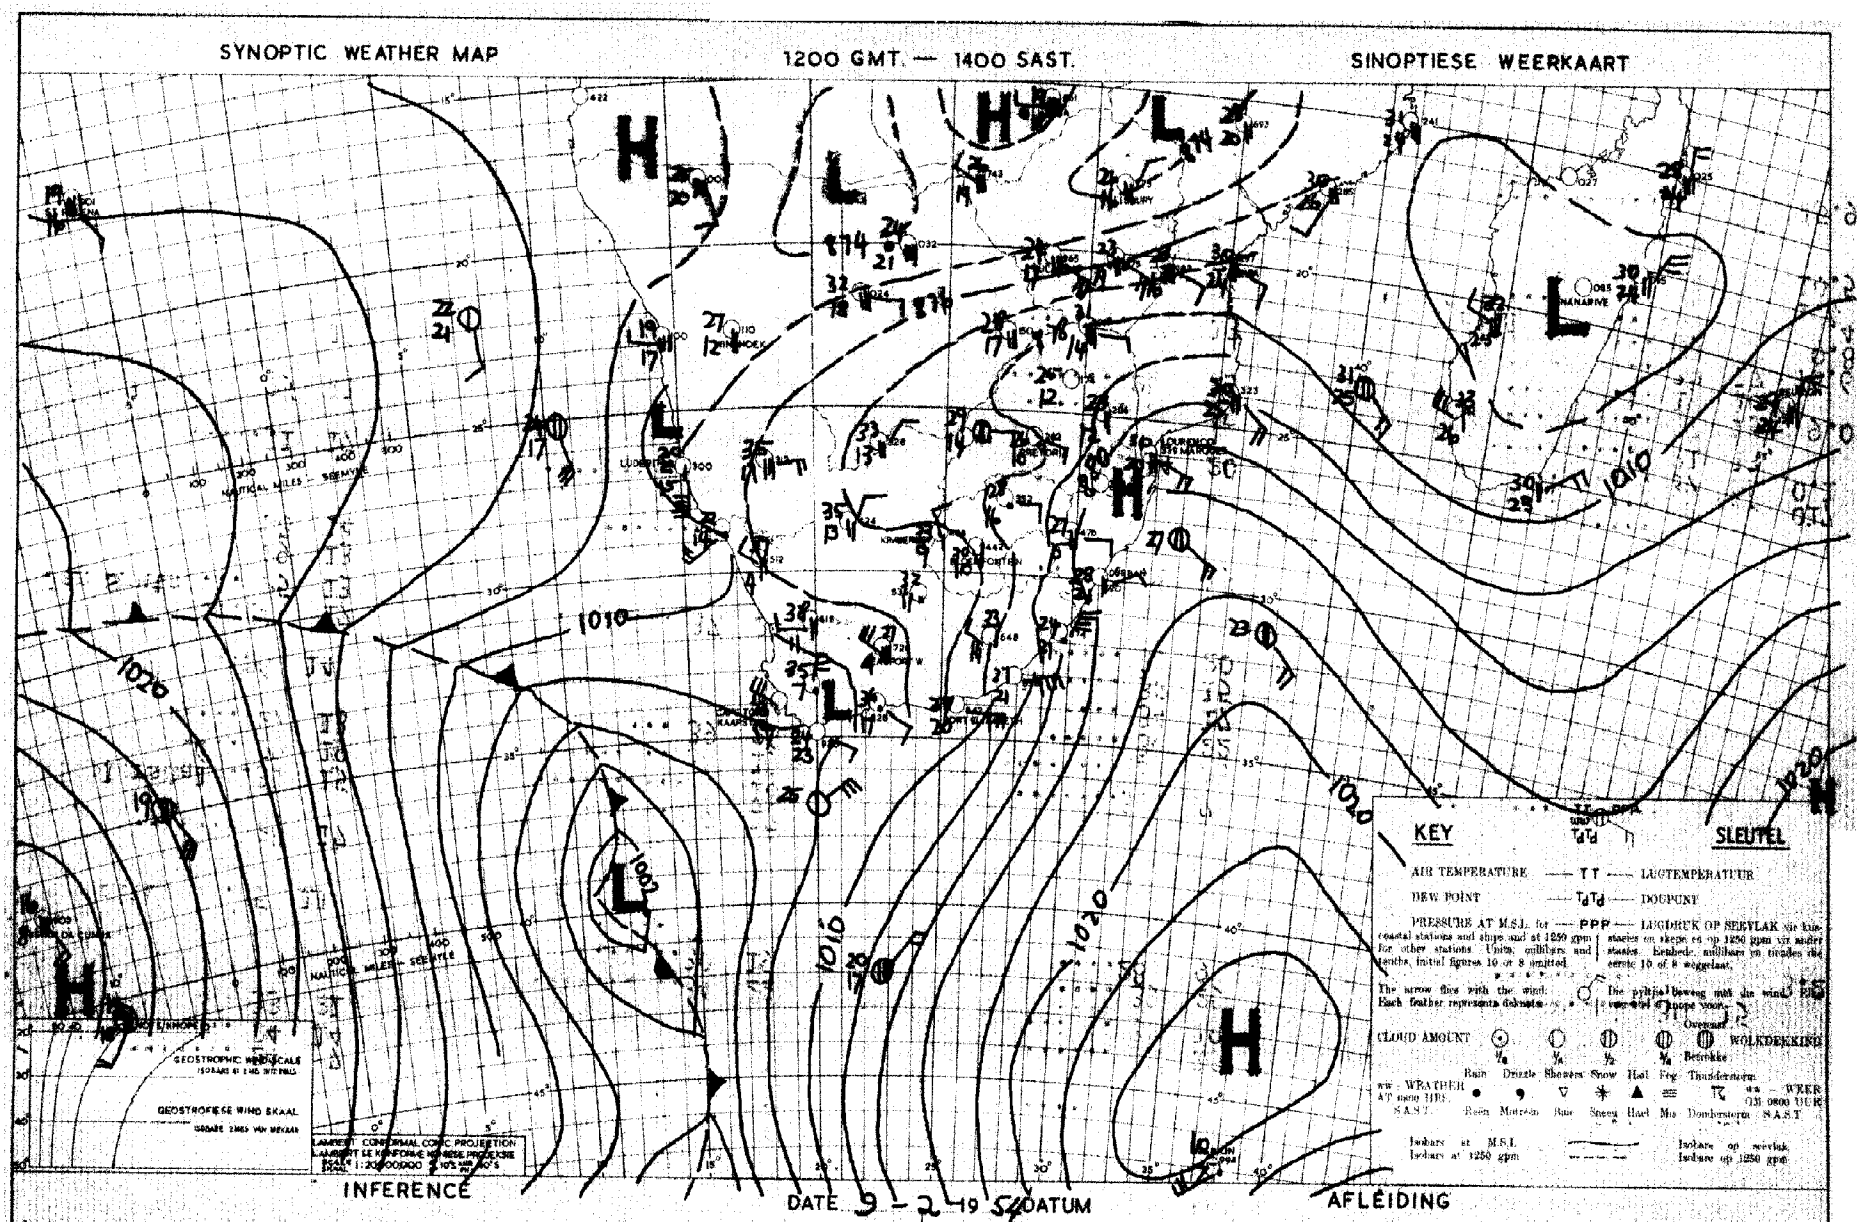
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 9 — 2 — 19 57 DATUM AFLEIDING

A trough is approaching the Union from the southwest and northerly to northwesterly upper winds are transporting moist air from S.W. Africa over the western half of the Cape. An upper anticyclone over the Free State and eastern Cape will, however, maintain an influx of dry air over Natal, Transvaal and northern Free State, so that thunder conditions will be limited mainly to the western, central and southern Cape.

'n Trog nader die Unie uit die suidweste en noordelike tot noordwestelike wind verveer vogtige lug vanaf Suidwes-Afrika oor die westelike helfte van die Kaap. 'n Antisiklone in die bolug oor die Vrystaat en Oos-Kaapland sal egter steeds droë lug laat sirkuleer oor Transvaal, Natal en noordelike Vrystaat, sodat donderweerstoestande meestal beperk sal wees tot noordelike, middel- en suidel[illegible]

INFERENCE

A wave developed just south of the Union on the cold front and the eastward movement of the colder air over the Union will be retarded. The air over Transvaal will remain dry.

DATE 10 - 2 - 54 19 DATUM

AFLEIDING

'n Golf het net suid van die Unie op die koufront ontwikkel en as gevolg hiervan sal die ooswaartse beweging van die koeler lug vertraag word. Die lugmassa oor Transvaal sal droog bly.

INFERENCE

DATE 11-2-1954 DATUM

AFLEIDING

Cool air has invaded the Cape Province, and is also likely to spread to Natal, where clouds conditions will result. The indications are, however, that the winds over the Transvaal, Free State and Northern Cape will tend NE'ly or N'ly thus causing moister air to return to these provinces where afternoon thunder showers will become likely.

Koel lug het Kaapland oorstroom en sal waarskynlik ook na Natal uitbrei en bewolkte weerstoestande veroorsaak. Die aanduidings is dat die winde oor Transvaal, Vrystaat en Noord Kaapland Noordoos of Noord sal draai en daardeur sal vogtige lug na hierdie provinsies terugkeer en namiddag donderbuie sal weer begin ontwikkel.

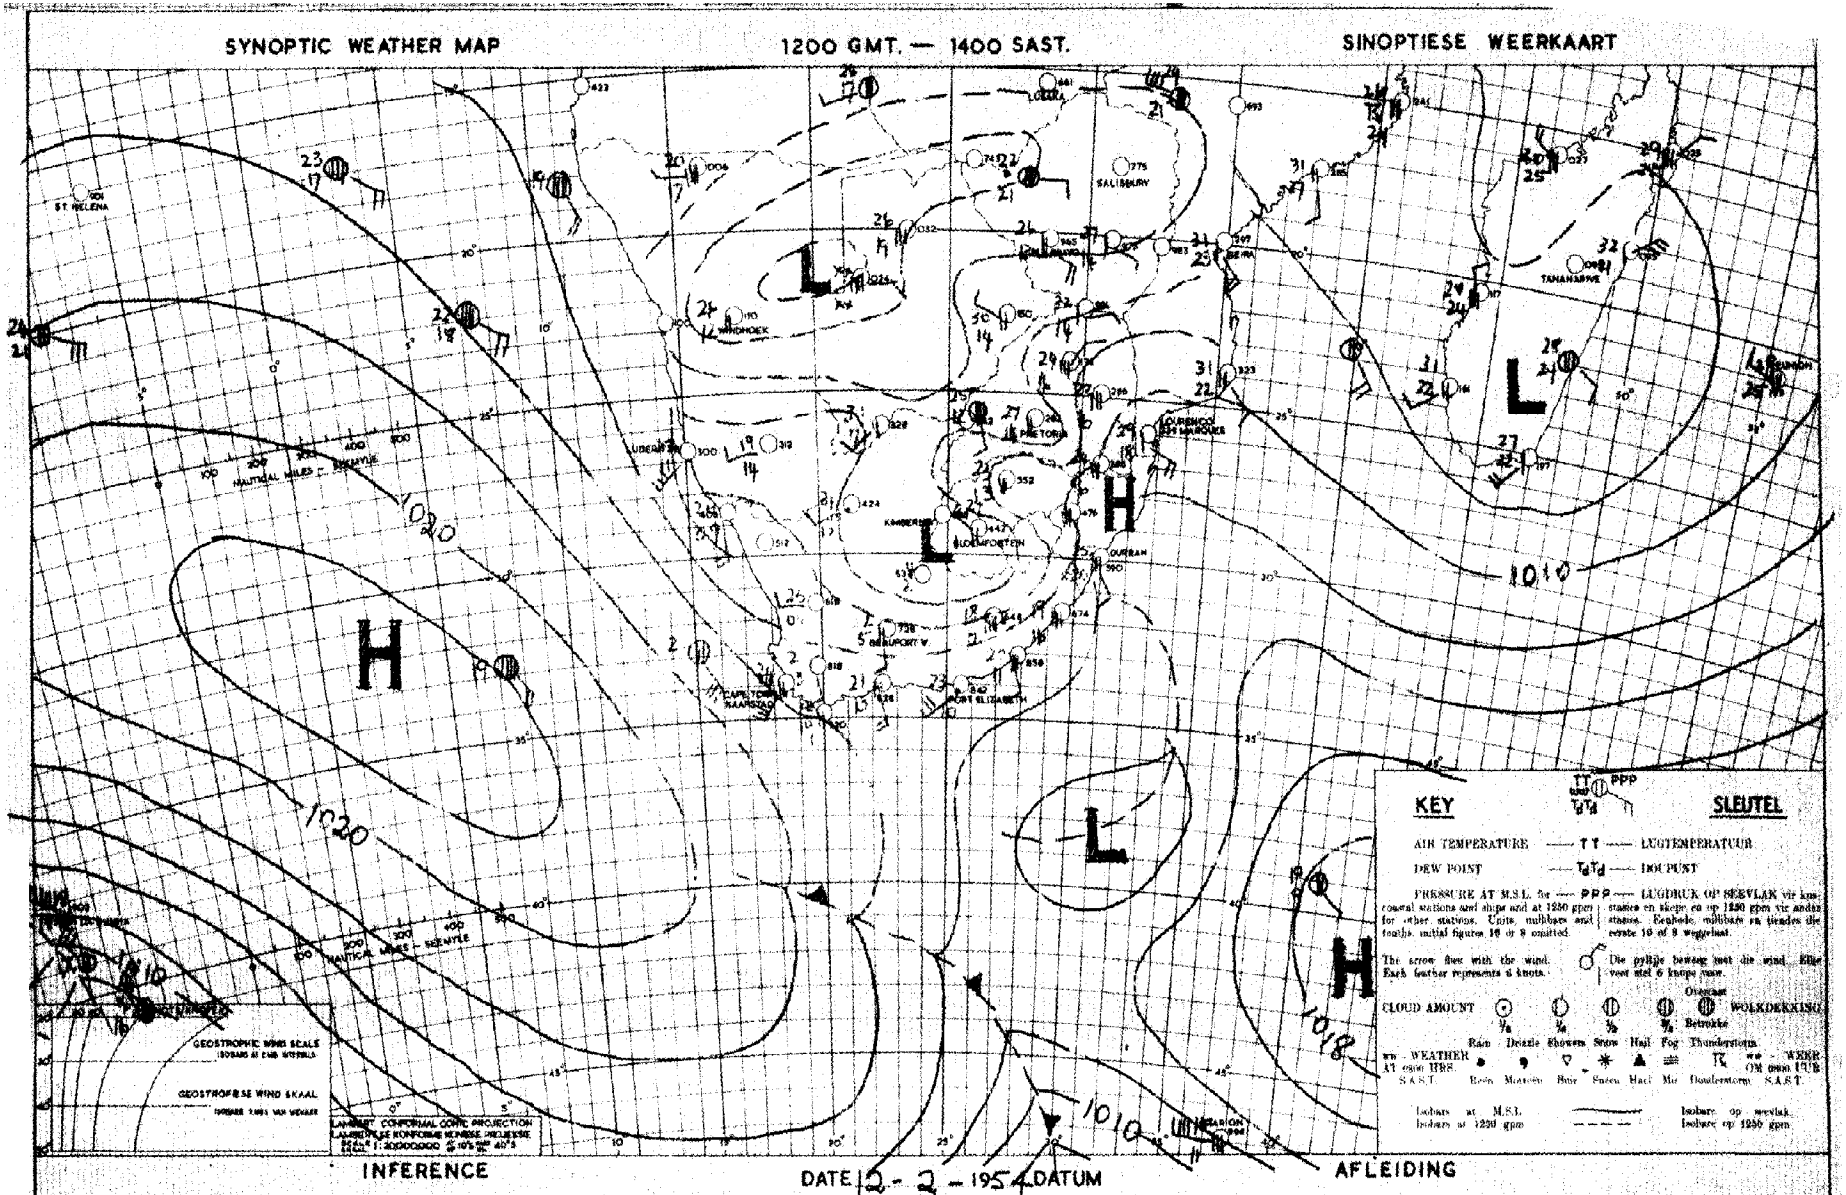
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 12 - 2 - 1954 DATUM — AFLEIDING

According to the falling tendency of pressure over all parts of the Union, the ridge extending southwards to the southwest of the Union will pass eastwards along the latitude of Marion and the situation over the Union will remain unchanged. Moist air will cause cloudy weather and showers over Natal, Transvaal, Orange State and Northern Cape, but elsewhere it will remain

Dalende drukneigings oor die Unie dui daarop dat die rug van hoë druk ten suidweste van die Unie ooswaarts sal beweeg langs die breedtegraad van Marion en die toestand oor die Unie sal wenig verander. Vogtige lug oor Natal, Transvaal, die Vrystaat en Noord-Kaapland sal bewolkte weer handhaaf en verspreide donderbuie sal uitsak. Elders sal dit mooiweer wees.

A trough of low pressure has developed along a line from Upington to Port St. Johns and all areas north of this line will experience cloudy skies, but rain and showers will occur mainly over Griqualand West, the Southern half of the Free State, the northeast Cape and the Transkei.

'n Trog van lae druk het ontwikkel langs 'n lyn vanaf Upington na Port St. Johns en oor alle dele noord van hierdie lyn sal dit bewolk wees, maar reën en buie sal hoofsaaklik tot Griekwaland Wes, die suidelike helfte van die Vrystaat, noordoos Kaap en die Transkei beperk wees.

The intensifying anticyclone west of Marion is receding eastwards. and pressure will continue falling along the south coast. The southward drift of humid air over the eastern areas of the Union will therefore be maintained and cloudy conditions with scattered rain and showers will occur over Transvaal, Natal, Orange Free State, northern and eastern Cape and over the eastern Karroo.

Die intensifiserende antisikloon wes van Marion sal na die ooste uitwyk en die druk sal verder daal langs die suidkus. Gevolglik sal die suidwaartse stroming van vogtige lug oor die oostelike dele van die Unie voortduur en bewolkte weer met verspreide reën en buie sal voorkom oor Transvaal, Natal, die Vrystaat, noordelike en oostelike Kaapland en

The Atlantic High will move slightly eastwards and drier air will move over the Western Union. There will, however, be little change in the humid air over the eastern Union.

Die Atlantiese Hoog sal effens ooswaarts beweeg en droër lug sal oor die westelike Unie vloei. Daar sal egter min verandering wees in die vogtige lug oor die oostelike Unie.

Drier air is slowly advancing across the Union from the west, but it is not expected to displace the moist northerly airstream over the Transvaal, Natal and the northern Free State.

Droër lug uit die weste beweeg langsamerhand oor die Unie, maar dit word nie verwag dat dit die vogtige noordelike lugstroo oor Transvaal, Natal en Noord Vrystaat sal verplaas nie.

INFERENCE

DATE 18-2-1954 DATUM

AFLEIDING

Falling pressures at Marion and Cape Town and fresh upper northwesterlies over Cape Province indicate the intensification of low pressuresystems to the southwest and south of the Union. Consequently cloudy weather with light rain is likely over the southwestern and southern coastal belts. Thunder conditions with isolated showers will recur over the three northern [illegible].

Die dalende drukneigings by Marion en Kaapstad dui op intensiferende laagdrukstelsels suidwes en suid van die Unie en gevolglik sal bewolkte weer met ligte reën langs die suidwes- en suidkus ontwikkel. Donderweerstoestande met los buie sal weer oor die drie noordelike Provinsies voorkom

INFERENCE

DATE 19-2-5 19 54 DATUM

AFLEIDING

Pressure tendencies indicate that there will be little eastward movementiin the Atlantic High. Upper winds over the Union are becoming more northerly and the humid air over the Transvaal will slowly spread over the Free State and northern Cape.

Lugdrukneigings toon aan dat daar min ooswaartse beweging van die Atlantiese Hoog sal wees. Bowinde oor die Unie word ook meer noord en die vogtige lug oor Transvaal sal geleidelik oor die Vrystaat en noord-Kaapland beweeg.

INFERENCE

DATE 20 – 2 – 1954 DATUM

AFLEIDING

Pressure is rising along the south and east coast and a separate anticyclone will develop southeast of the Union tomorrow, causing moist air to flow westwards over Transvaal. The warm slightly humid air over Bechuanaland and S.W. Africa will flow southwards. Thunder conditions will develop north of the Orange River.

Die druk styg langs die suid- en ooskus en 'n aparte antisikloon sal môre suidoos van die Unie gelee wees. Gevolglik sal die ietwat vogtige lug oor S.W.-Afrika en Betsjoeanaland môre suidwaarts beweeg en vogtige lug sal weswaarts oor Transvaal instroom. Donderweerstoestande sal oor die gebiede noord van die Oranjerivier ontwikkel.

Moist air is present over all areas north of the Orange River and with pressures once again rising along the southwest Cape coast, conditions are favourable for local afternoon thundershowers over Transvaal, Free State, Natal and the northern and north-eastern Cape.

Die lug oor alle dele van die Unie noord van die Oranjerivier is vogtig, en met stygende drukke aan die Kaapse Suidweskus, is toestande gunstig vir plaaslike namiddag donderbuie oor Transvaal, Vrystaat, Natal, en oor Noord en Noordoos Kaapland.

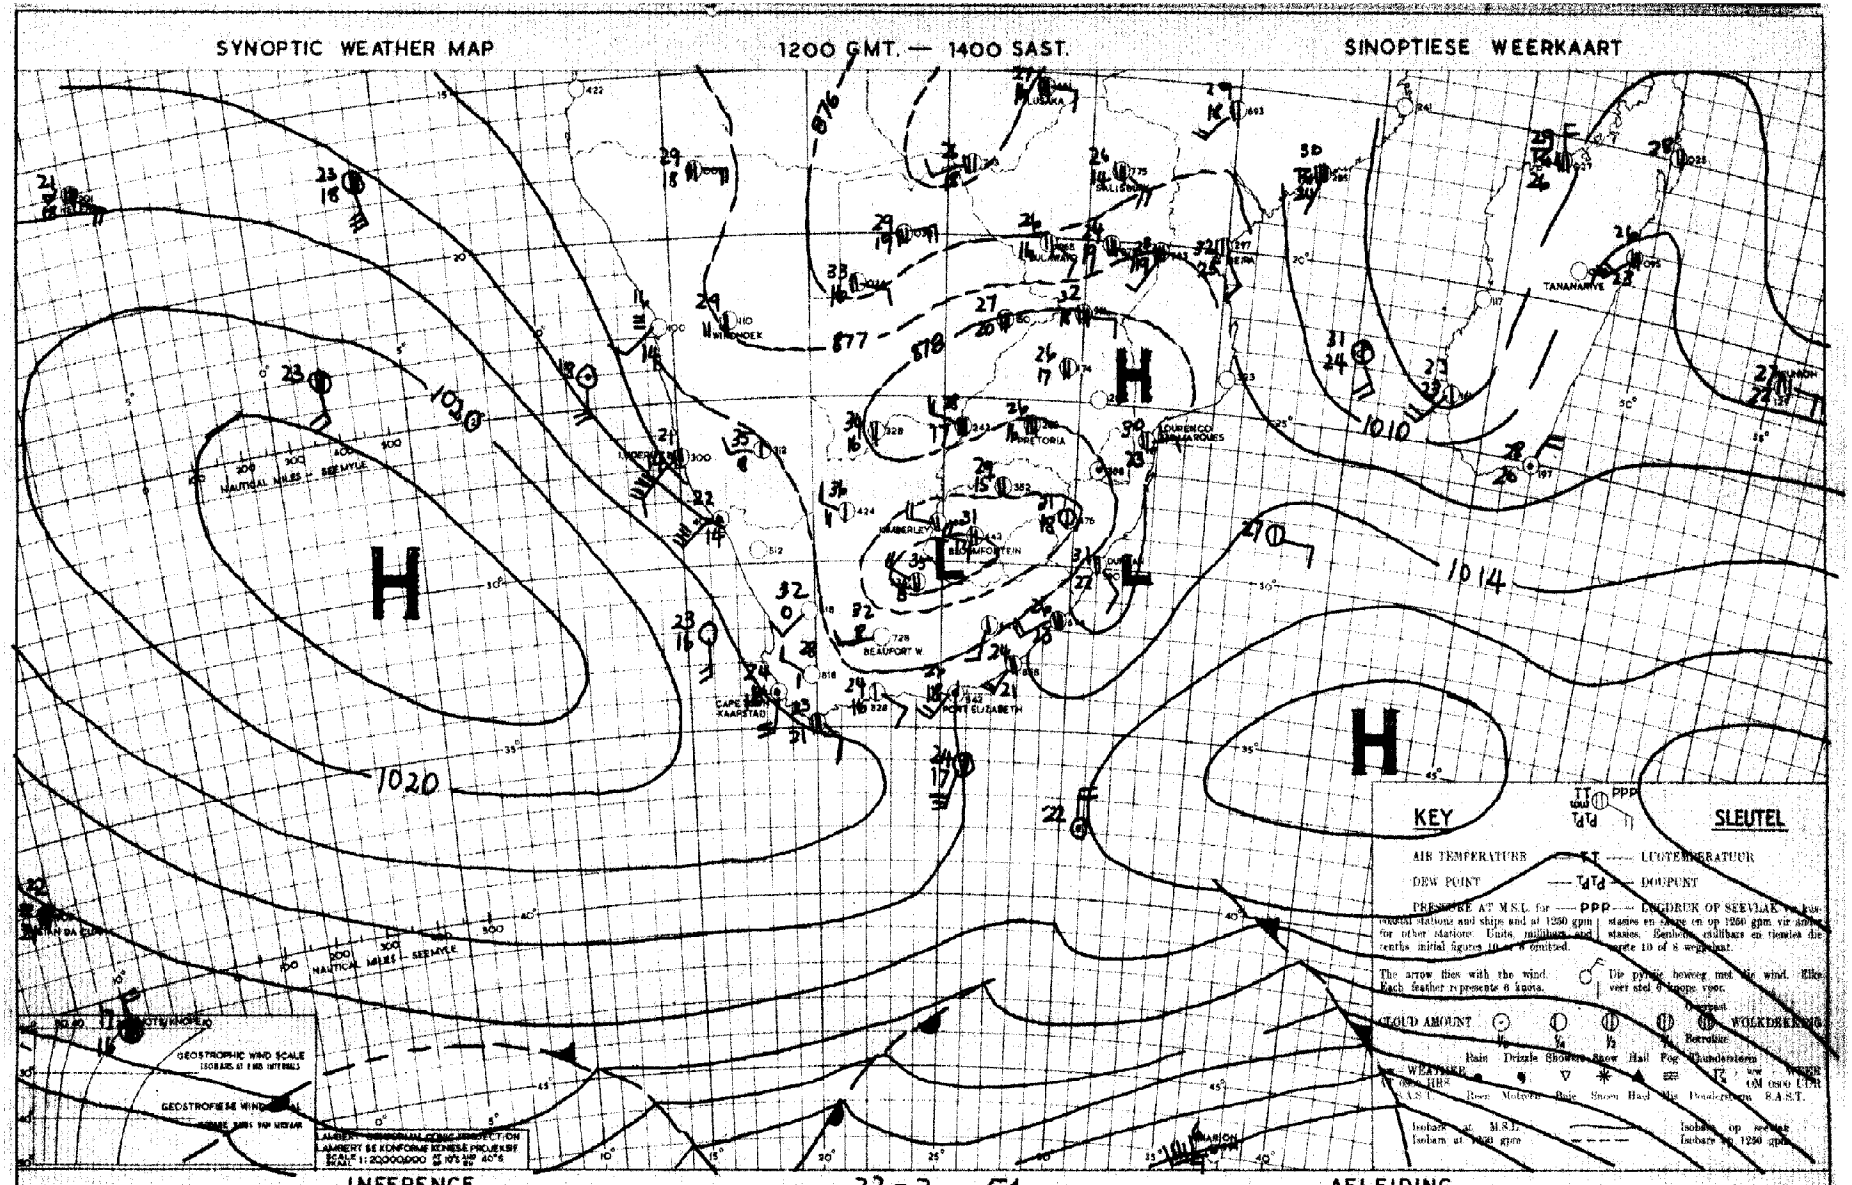
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 22 - 2 - 1954 DATUM AFLEIDING

There will be little change in the synoptic situation. The relatively humid air will remain over the eastern Union and there will be dry air over the western half of the country.

Daar sal min verandering in die sinoptiese toestand wees. Die betreklike vogtige lug sal oor die oostelike Unie bly maar droër lug sal aanwesig wees oor die westelike helfte van die land.

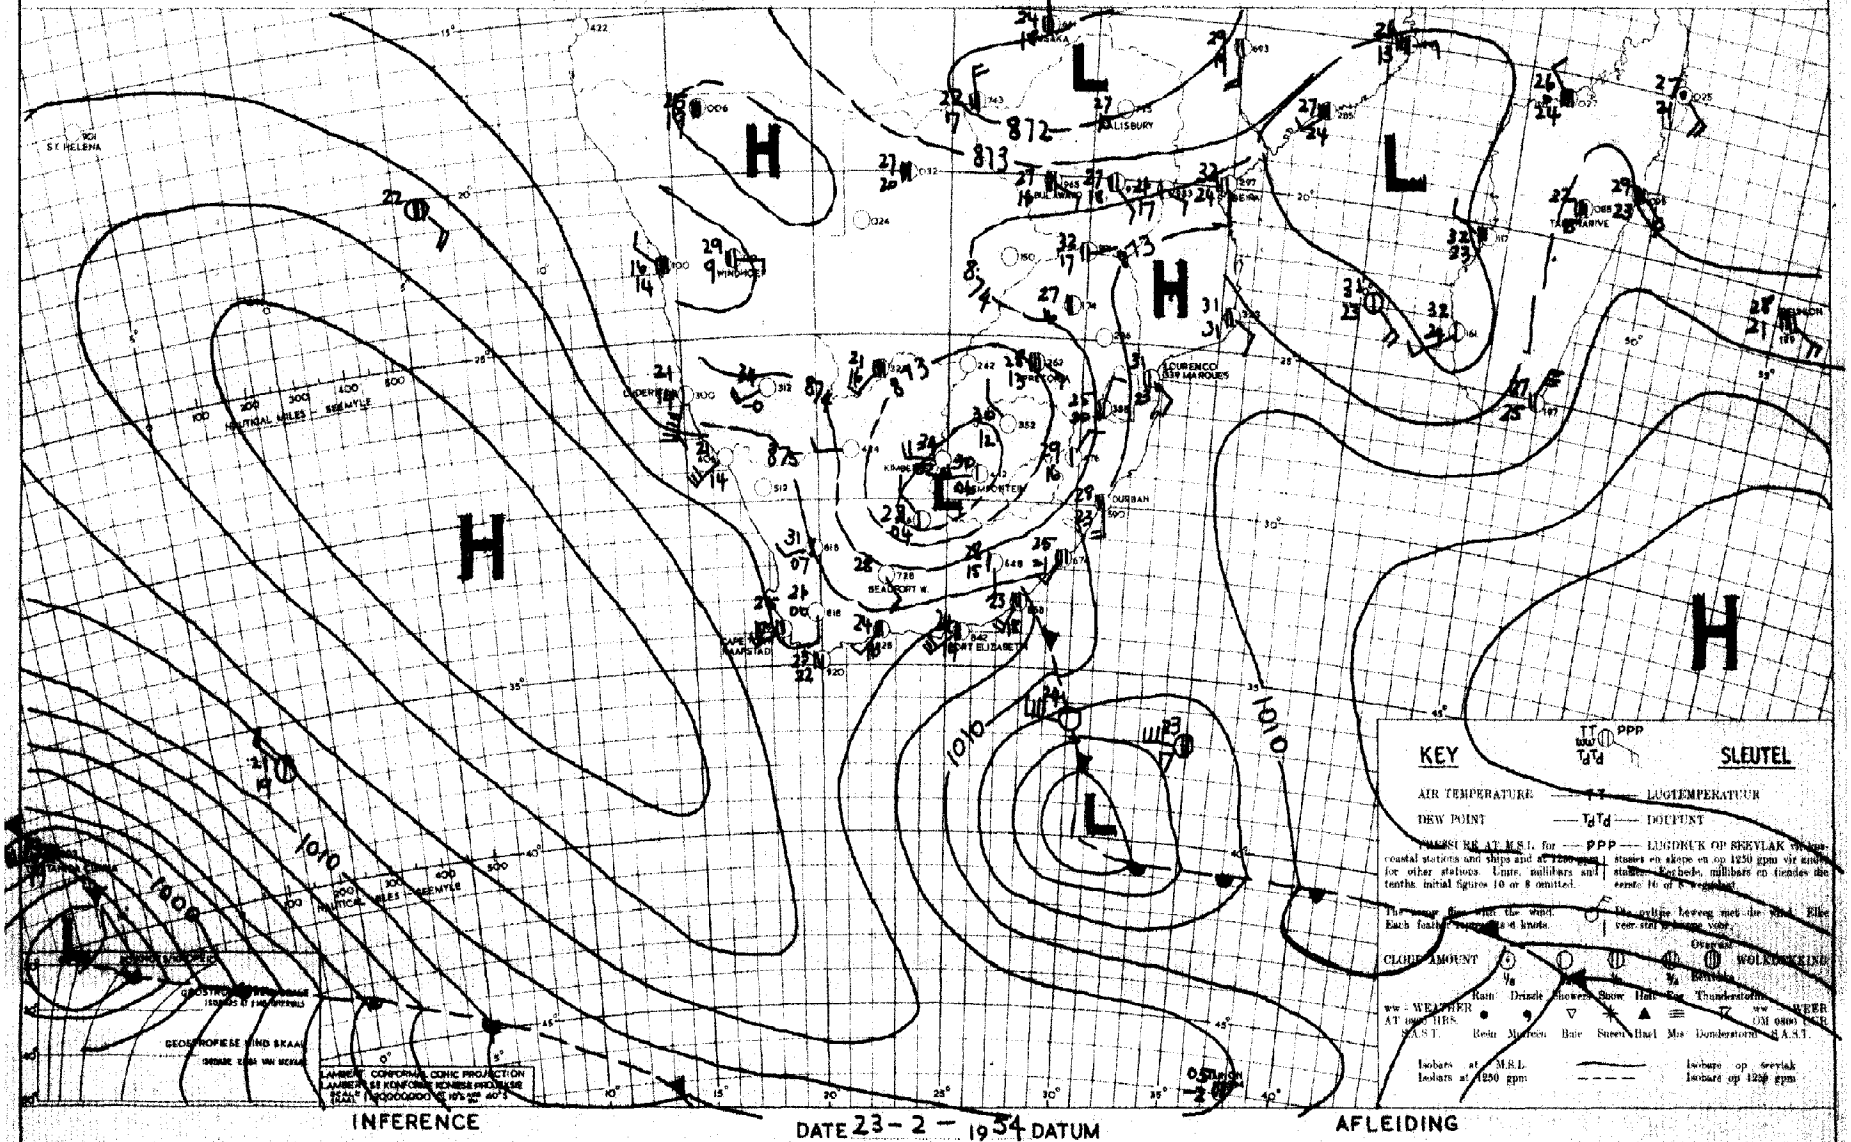
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 23 - 2 - 1954 DATUM AFLEIDING

A wedge of high pressure is extending along the Cape south coast to Natal and cloudy weather is expected to develop along the South Cape coast and over the Eastern Cape. Little change is likely over the interior where isolated thundershowers may be expected over the Transvaal, the Free State, and Natal.

'n Wig van hoë druk brei langs die suidkus na Natal uit en dit word verwag dat bewolkte weer aan die Kaapse suidkus en oor oos Kaapland sal ontwikkel. Min verandering sal oor die binneland en voorkom en los donderbuie sal oor Transvaal, Vrystaat en Natal voorkom.

The anticyclone South of the Union will slowly recede Eastwards while the cold air spreading from the West should influence the weather along the Southwest coast tomorrow night. The combined effect of rising pressure along the South coast will be to cause a Southward drift of warm, moist air with thunder conditions into the Karroo tomorrow.

Die antisiklone Suid van die Unie sal na die Ooste uitwyk terwyl die koue lug Wes van die Unie die weer teen môreaand langs die Suidweskus sal beïnvloed, Die gesamentlike invloed van stygende druk langs die Ooskus en dalende druk langs die Suidkus sal veroorsaak dat warm, vogtige lug na die Suide te laat vloei en donderweersomstandighede sal uitbrei na die Karo.

The intense High centred at Marion caused cooler, drier air to move over the Eastern parts of the Union. A trough has however developed over the Central Union and warm humid air will move Southwards to those parts of the country.

Die uitgebreide Hoog met sy sentrum oor Marion was oorsaak dat koeler, droër lug oor die Oostelike Unie beweeg het. 'n Treg het egter oor die Middel Unie gevorm en warm, vogtiger lug sal Suidwaarts daarheen beweeg.

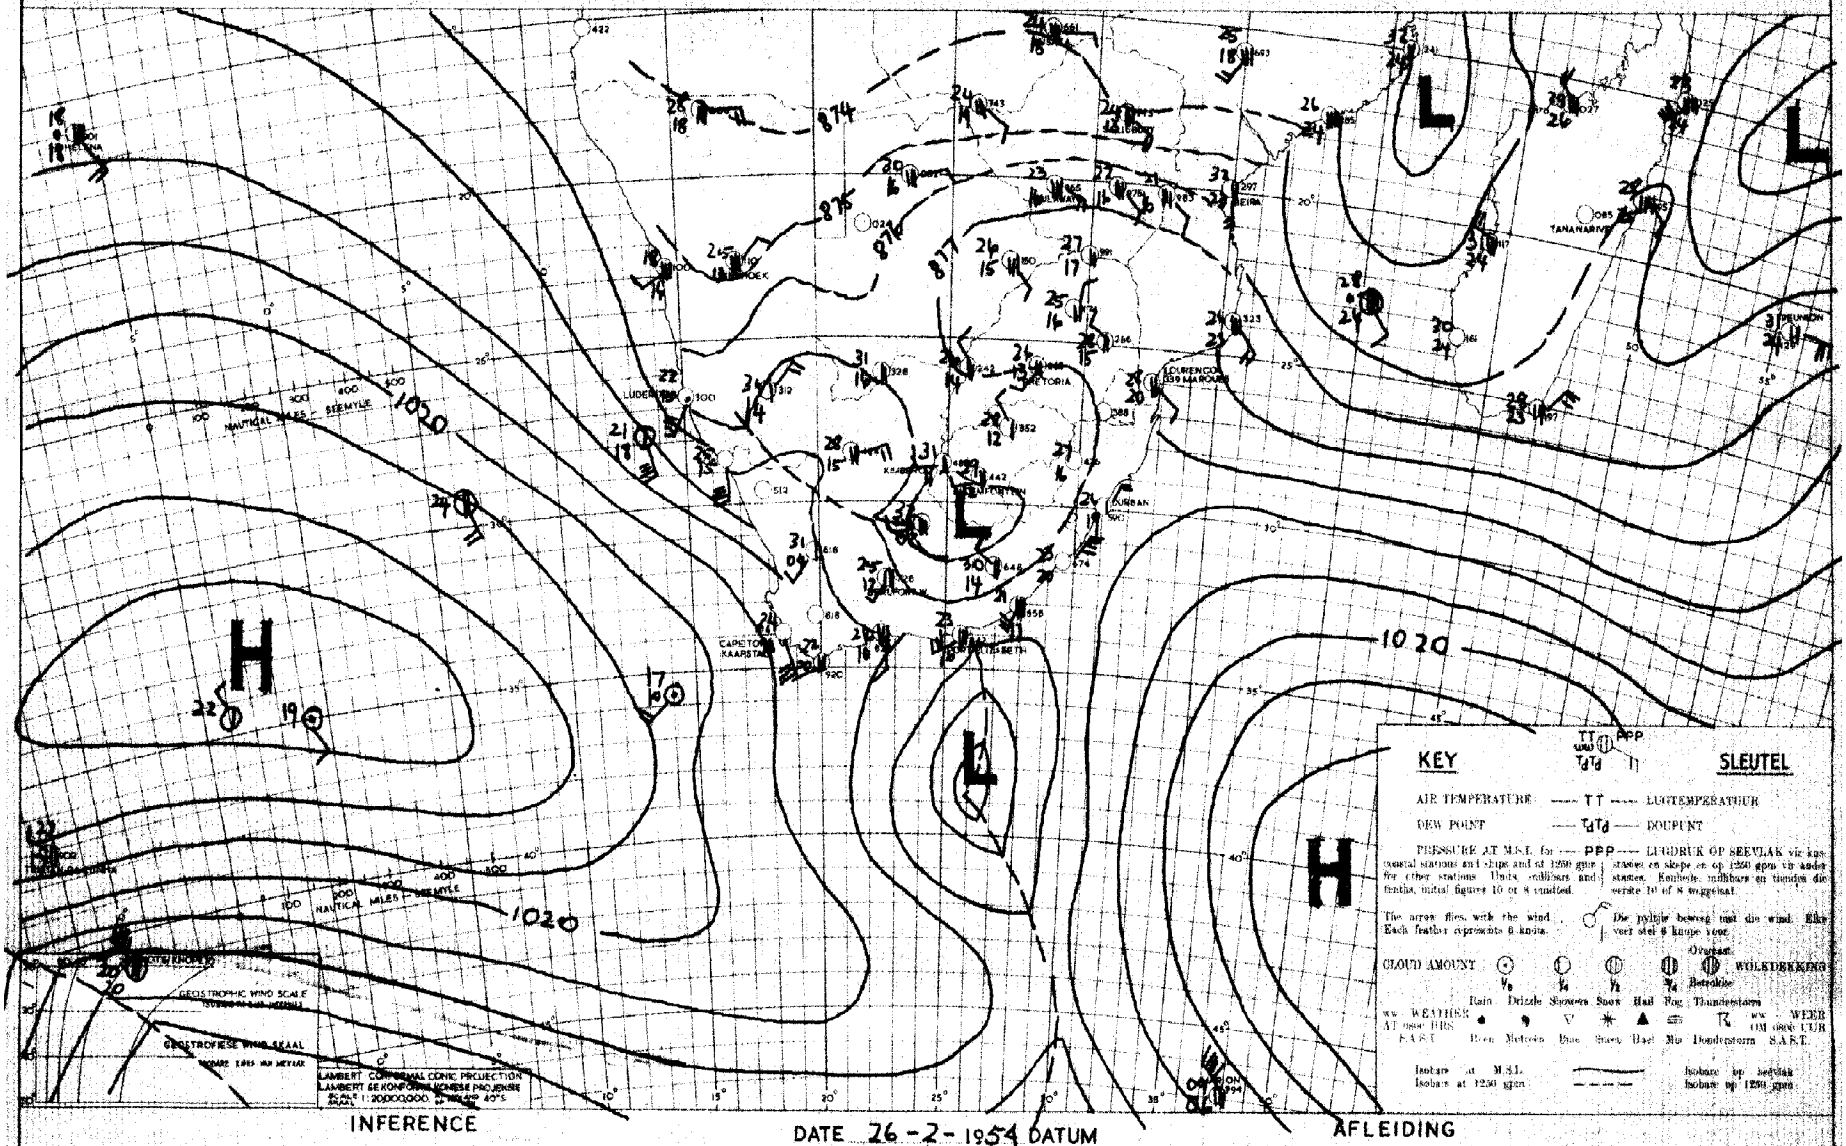
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 26-2-1954 DATUM AFLEIDING

The Atlantic High will remain stationary. Humid air will continue to move over South West Africa and over the Northwestern Cape. The drier Southeasterly upper winds under the influence of the intense High just East of Marion will continue to blow over the Eastern Union.

Die Atlantiese Hoog sal nie veel beweeg nie. Vogtige lug sal voortduur oor Suidwes-Afrika en oor die Noord Westelike Kaapprovinsie. Die droër Suidoostelike bowinde onder die invloed van die groot Hoog Oos van Marion sal aanhou waai oor die Oostelike Unie.

In reasonably moist air over the Transvaal, Free State and Natal there will be isolated showers and thunderstorms, but there will be little change otherwise.

In taamlike vogtige lug oor Transvaal, Vrystaat en Natal sal daar los buie en donderstorms wees, maar origens sal daar min verandering wees.

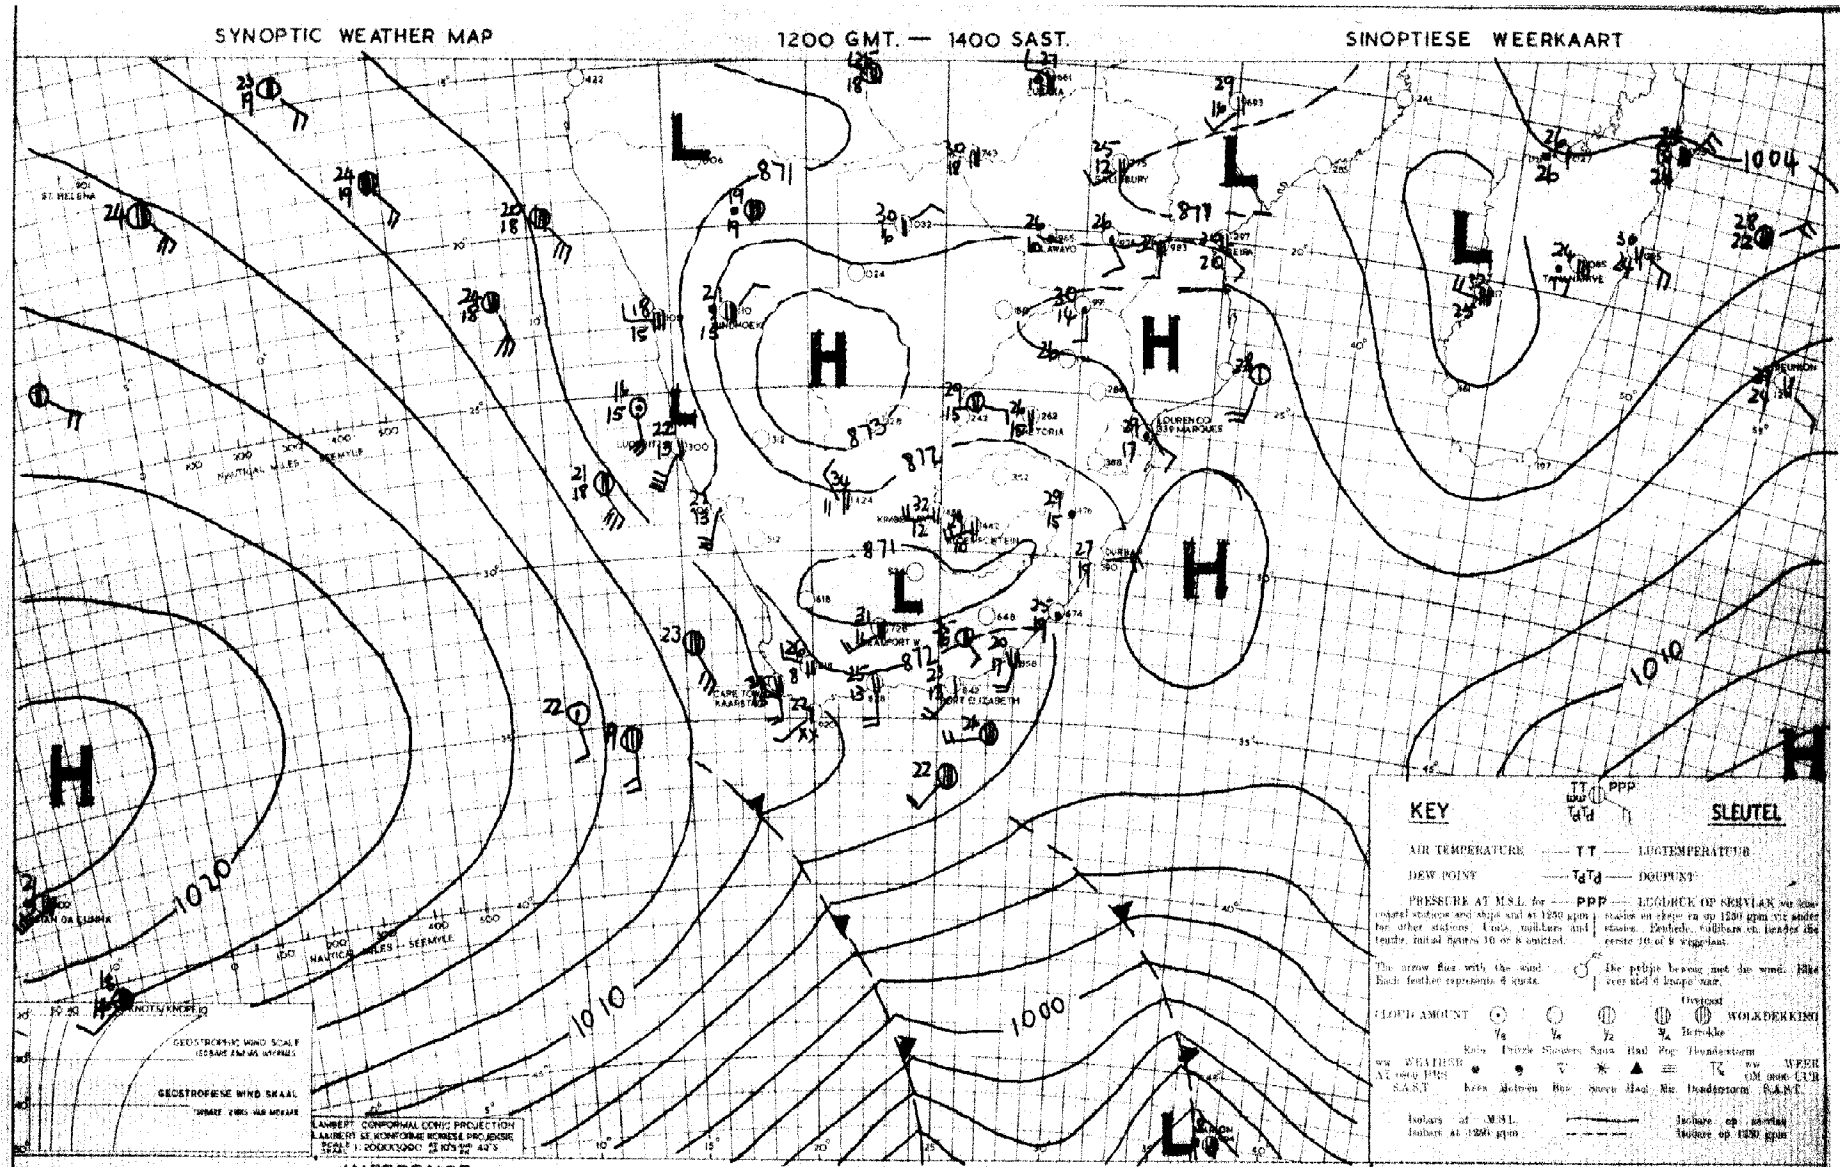
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



DATE 28-2-1954 DATUM

INFERENCE

An upper anticyclone is situated centrally over South Africa and with humid air over Southwest Africa, this circulation maintains moderately moist air over the northern Provinces and Northern districts of the Cape, and scattered clouds will recur over these regions tomorrow.

AFLEIDING

'n Antisiklone is sentraal oor Suid-Afrika in die bolug gelee en aangesien vogtige lug oor Suidwes-Afrika aanwesig is, sal die antisikloniese stroming taamlik vogtige lug in beweging hou oor die drie noordelike Provinsies en en noordelike Kaapse binneland en verspreide wolke sal oor hierdie gebiede ontwikkel.

INFERENCE

Cool air in the rear of the cold front now approaching the Cape is expected to bring cloudy weather and showers to the Southwestern en Southern Cape coasts. Drier westerly winds are spreading over the interior and will cause fine settled conditions except over the Transvaal and Natal where surface layers will remain moist enough to give isolated afternoon thundershowers.

DATE 1 - 3 - 1954 DATUM

AFLEIDING

Kouer lug agter die kouefront, wat tans die Kaap nader, sal na verwagting bewolkte weer en buie na die Suidwestelike en Suidelike Kaapse kusstreke bring. Droër Westewind dring die binneland binne en sal gestadigde mooiweerstoestande veroorsaak uitgesonderd oor Transvaal en Natal waar die lug in die onderste lae vogtig genoeg sal bly om los namiddag donderbuie te gee.

INFERENCE

DATE 2 - 3 - 1954 DATUM

AFLEIDING

Pressure is rising rapidly along the Southeast and East coasts of the Union and a separate anticyclone will be situated off the South-east coast tomorrow. Cool, moist air flowing in from South and East over Natal and Transvaal will undercut the warm continental air, causing cloudy to overcast weather with rain and drizzle. Fair weather will continue over Western Cape and Southwestern Free State.

Die druk styg vinnig langs Suidoos- en Ooskus van die Unie en 'n aparte hoogdrukstelsel sal môre Suidoos van die Unie gelê wees Koel vogtige lug vanuit die Suidooste sal die warmer kontinentale lug oor Natal en Transvaal verdring en algemene bewolkte weer met reën en motreën sal ontwikkel. Mooiweer sal egter voortduur oor Westelike Kaapland en Suidwestelike Vrystaat.

DATE 3 – 3 – 1954 DATUM

INFERENCE

The Atlantic high will slowly move Eastwards over the Southern Cape. Warmer, humid air from the Northwest will flow over the central Union as the Indian high moves Eastwards and scattered showers will occur.

AFLEIDING

Die Atlantiese Hoog beweeg stadig Ooswaarts oor Suid Kaapland. Warmer, vogtige lug uit die Noordweste sal oor die Middel Unie vloei na mate die Indiese Hoog Ooswaarts uitwyk en verspreide buie sal uitsak.

Moist air is spreading Southwards over the Union and there are indications of a trough of low pressure developing in the West and conditions are likely to become favourable for showers and thundery weather over most of the interior during the next day of two.

Vogtige lug beweeg Suidwaarts oor die Unie en daar is aanduidings dat 'n trog van lae druk in die Weste ontwikkel en toestande sal dus waarskynlik gedurende die volgende dag of twee gunstig word vir buie en donderweer oor die binneland.

Isobars at 1250 gpm — Isobare op 1250 gpm

INFERENCE

DATE 5-3-1954 DATUM

AFLEIDING

With a cold front approaching the Southwest coast pressure is unlikely to rise over Southwest and South coasts until late tomorrow and the Northerly stream of moist air should persist over the interior, except over Western Cape interior where it is likely to clear from the West. Rain and showers are expected over O.F.S. and Eastern half of Cape Province.

Aangesien die koue front Wes van die Unie eers later môre die Suidweskus sal bereik is dit onwaarskynlik dat die druk langs die Suidwes- en Suidkus sal styg en die Noordelike stroom van vogtige lug sal voortduur oor die binneland behalwe oor Wes Kaapland waar dit sal ooptrek vanuit die Weste. Reën en buie word verwag oor die Vrystaat en Oostelike helfte van Kaapland.

INFERENCE

DATE 6-3-1954 DATUM

AFLEIDING

Cooler dry air will flow across the Union behind the cold front which has just reached the Cape. Cloudy showery weather will prevail along the coasts at first and it will be unsettled with rain over Transvaal and Natal tomorrow, but thereafter it will become mainly fine.

Koeler droë lug agter die koufront, wat so pas die Kaap bereik het, sal die land oorstroom. Aanvanklik sal dit bewolk wees met buie oor die kuststreke en oor Natal en Transvaal sal ongestadige weer met reën voorkom. Daarna sal dit egter oor die Unie meestal mooiweer wees.

INFERENCE

DATE 8-3-19 54

Pressure is commencing to fall along the west coast and with the anticyclone off the east coast moderate to fresh northerly wind will transport moist air southwards to northern Cape and Southern Free State where thunder conditions will develop. The influx of cool air over Natal and Transvaal will cause cloudy but stable conditions over these provinces.

AFLEIDING

DATUM

Die druk daal reeds langs die weskus en met die hoogdruk stelsel langs die Ooskus sal matige tot taamlike sterk Noordewind môre oor die binneland waai en vogtige lug na Noord Kaapland en Suid-Vrystaat vervoer, waar donderweerstoestande sal ontwikkel. Die instroming van koel lug oor Natal en Transvaal sal bewolkte maar stabiele weer oor hierdie Provinsies skep.

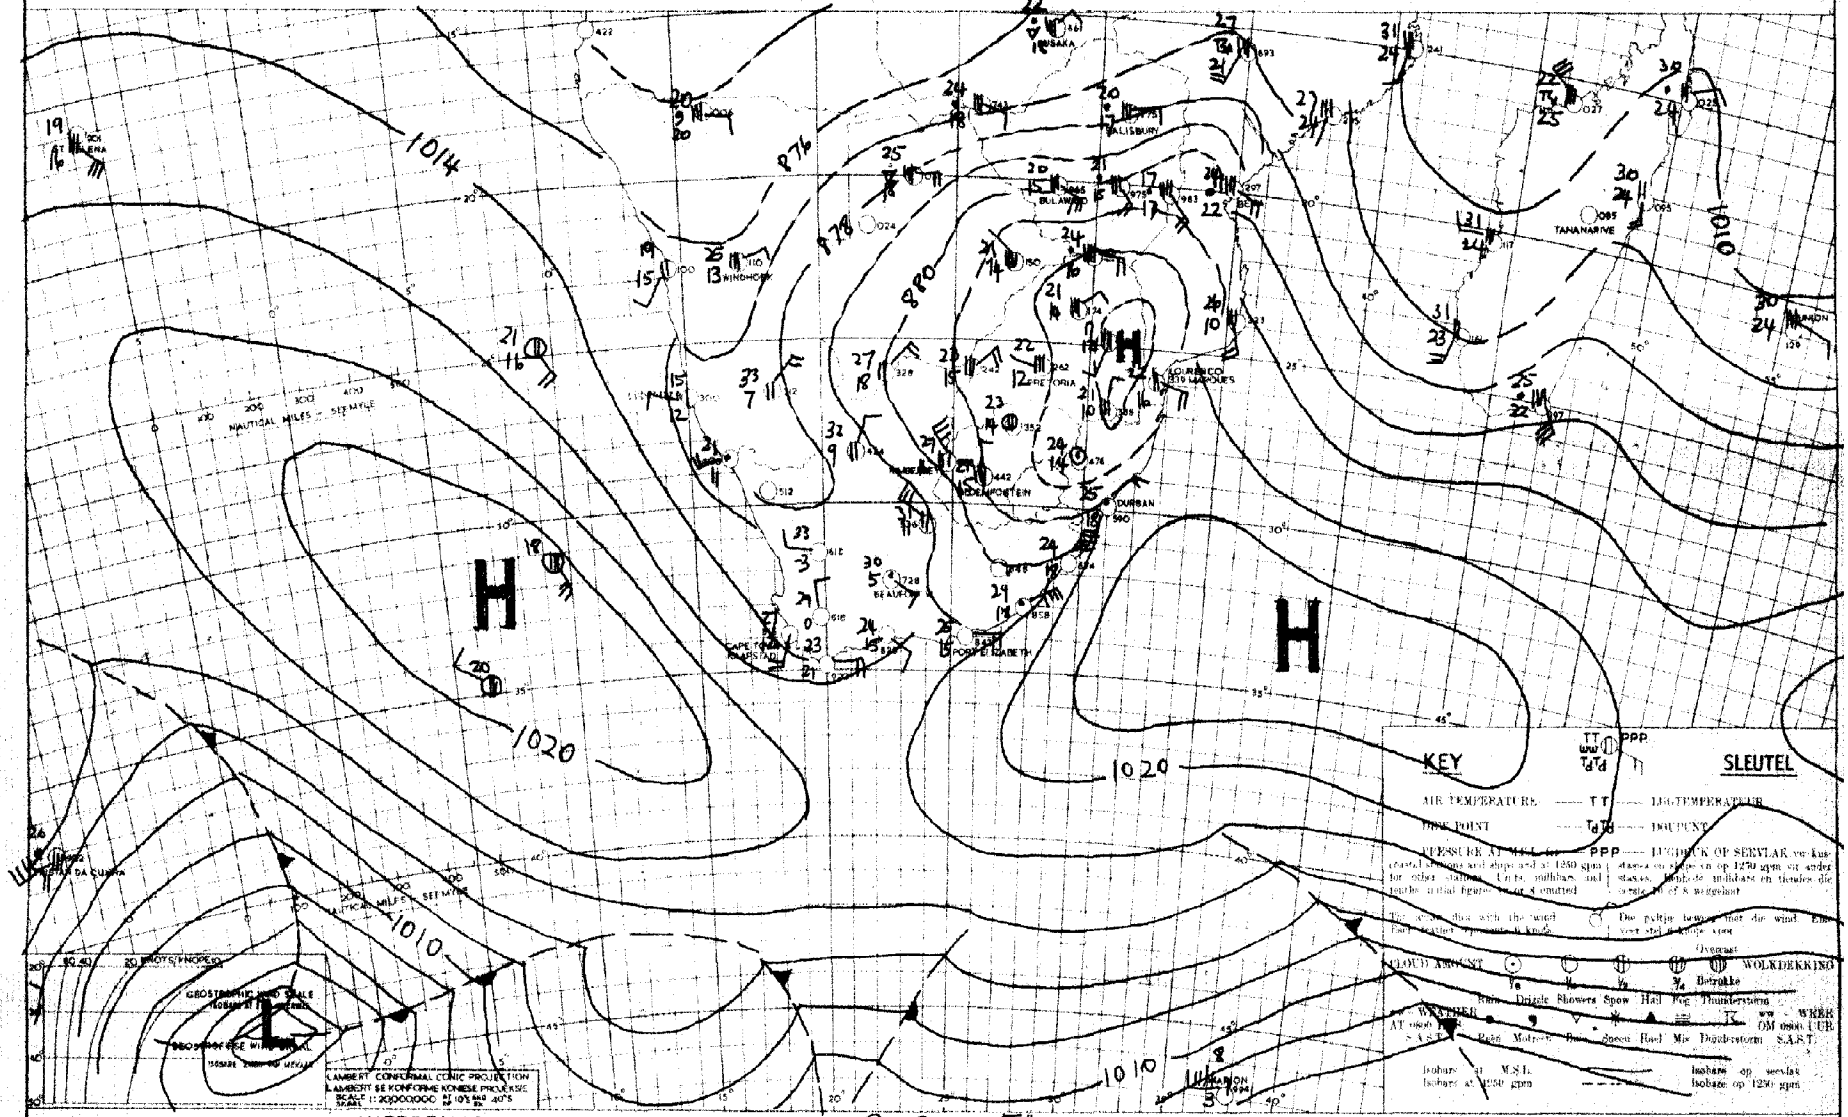
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 9 - 3 - 1954 DATUM AFLEIDING

The cooler, dry air in the upper levels of the High East of Durban will move over Natal, Transvaal and Northern Free State and skies will clear. In the humid warm air over the central Union isolated thundershowers will develop.

Die koeler, droë lug in die bolug oor die hoog net Oos van Durban sal oor Natal, Transvaal en oor die Noordelike Vrystaat beweeg en dit sal mooiweer word. In die vogtiger lug oor die middel Unie sal los donderbuie ontwikkel.

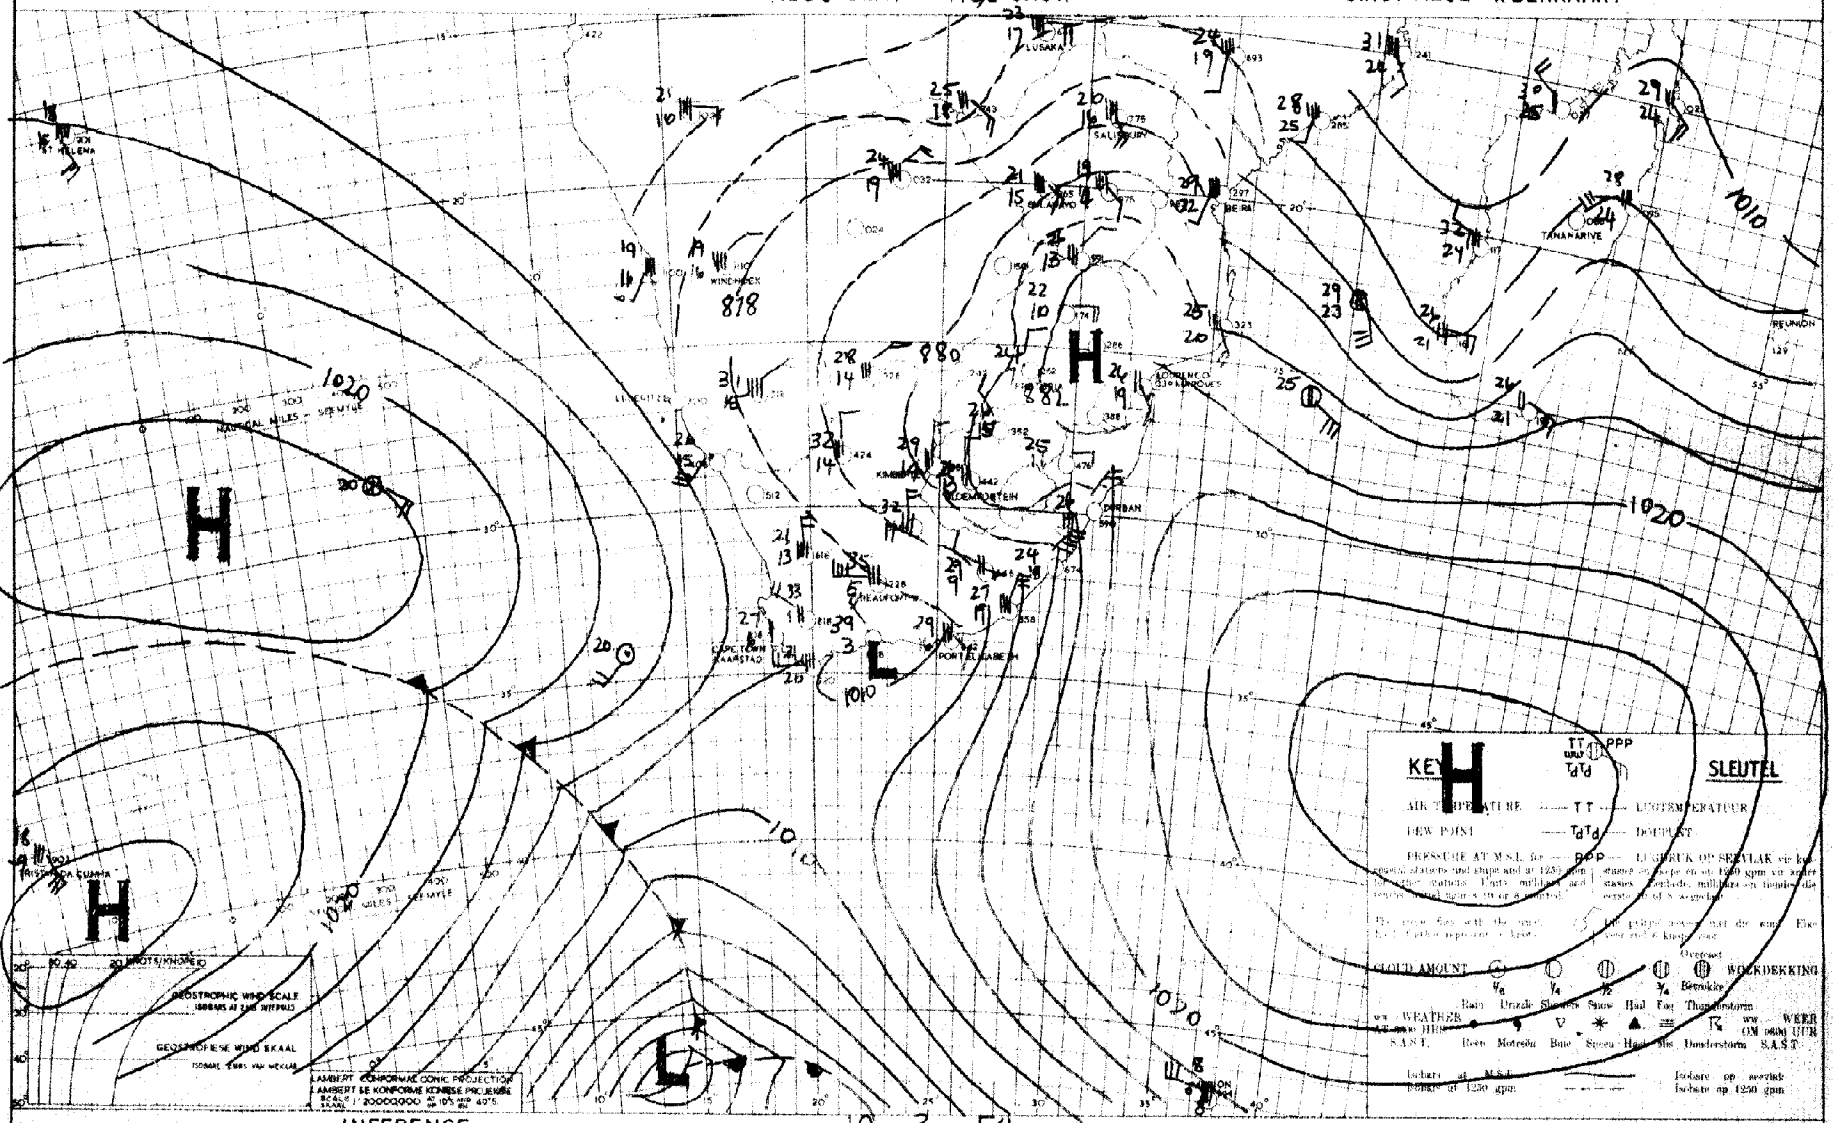
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 10 - 3 - 1954 DATUM AFLEIDING

Under the influence of the Anticyclonic upper air circulation it will be fine over Transvaal, Natal and the Northern Free State. Over the Southern Free State and the Cape interior the NW'ly airstream is moist and cloudy showery weather is likely, particularly as there are indications of a troughline developing over the Western Cape.

Onder die invloed van antisikloniese bolugsirkulasie sal dit oor Transvaal, Natal en Noord Vrystaat mooiweer wees. Oor Suid Vrystaat en die Kaapse binneland is die Noordwestelike lugstroom vogtig en sal dit bewolk wees met buie, veral ook omdat daar tekens is dat 'n troglyn oor Wes Kaapland ontwikkel.

With pressure rising along the South coast and falling along the west coast it is evident that the high Southwest of the Union will follow a course South of the Union and pressure will be [illegible] Southeast coast tomorrow. The wind will mainly [illegible] cloudy weather with scattered rain [illegible] Southern Free State.

Aangesien die druk langs die Suidkus styg maar daal langs die weskus sal die antisiklone suidwes van die Unie 'n baan beskryf suid van die Unie volg en die druk sal môre taamlik hoog wees langs die Suidoskus. Die wind sal hoofsaaklik noord wees oor die Unie en bewolkte weer met verspreide reën sal voortduur oor Kaapland en die Suidelike Vrystaat.

INFERENCE

DATE 13 - 3 - 19 54 DATUM

AFLEIDING

High pressure is advancing eastward from the Atlantic Ocean and with the expected rise of pressure over Southern Cape tomorrow and the undercutting of the warm, moist air moving Southwards over the Union, fairly widespread rain is likely over the Cape and Southern half of the Free State, while it will remain cloudy and warm over Transvaal and Natal.

'n Gebied van stygende druk beweeg ooswaarts oor die Atlantiese Oseaan na die Unie en met die verwagte drukstyging oor Suidelike Kaapland en die opheffing van die suidwaarts bewegende warm, vogtig lug dor die Unie kan uitgebreide reën oor Kaapprovinsie en die Suidelike helfte van die Vrystaat verwag word, terwyl gedeeltelike warm weer oor Transvaal en Natal sal voortduur.

The intensification of the low pressure area over S.W.A. and the high pressures South of the Union will result in general rains over the Cape Province and the Free State, but as the low gradually shifts to the Southeast it will gradually clear from the West with rainy conditions extending to Southern Transvaal and Natal.

Die verdieping van die laagdruksisteem oor S.W.A. en hoë drukke Suid van die Unie dui daarop dat algemene reëns oor Kaapland en die Vrystaat sal uitsak, maar namate die lang Suidooswaarts skuif sal dit geleidelik uit die Wewte ooptrek terwyl reëntoestande na Suid Transvaal en Natal sal uitbrei.

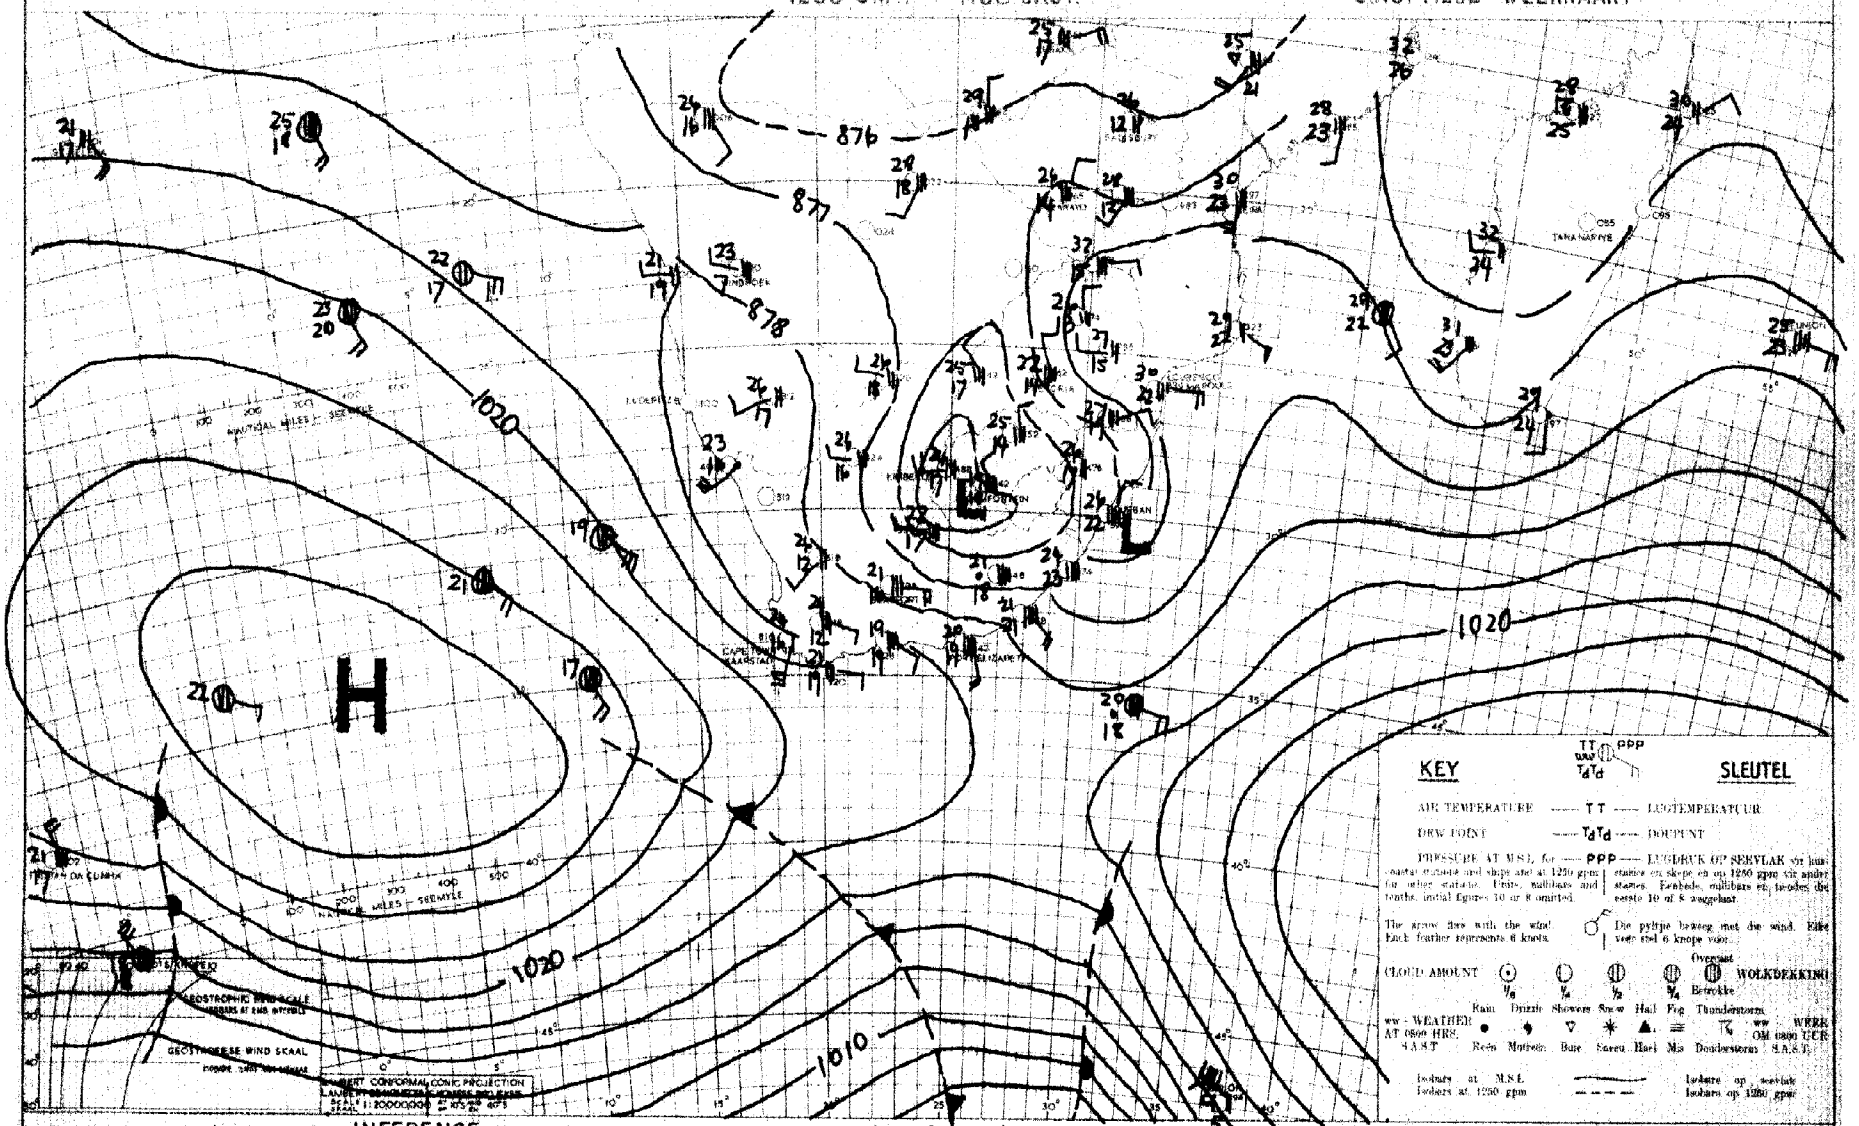
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 15-3-1954 DATUM — AFLEIDING

The Atlantic High is moving eastwards over the Southern Cape and the low over the southern Free State is slowly filling up. The weather will clear partially over most of the interior.

Die Atlantiese Hoog beweeg ooswaarts oor suidelike Kaapland en die laag oor die suid Vrystaat sal stadig aan verdwyn. Die weer oor bykans die hele binneland sal stadig begin ooptrek.

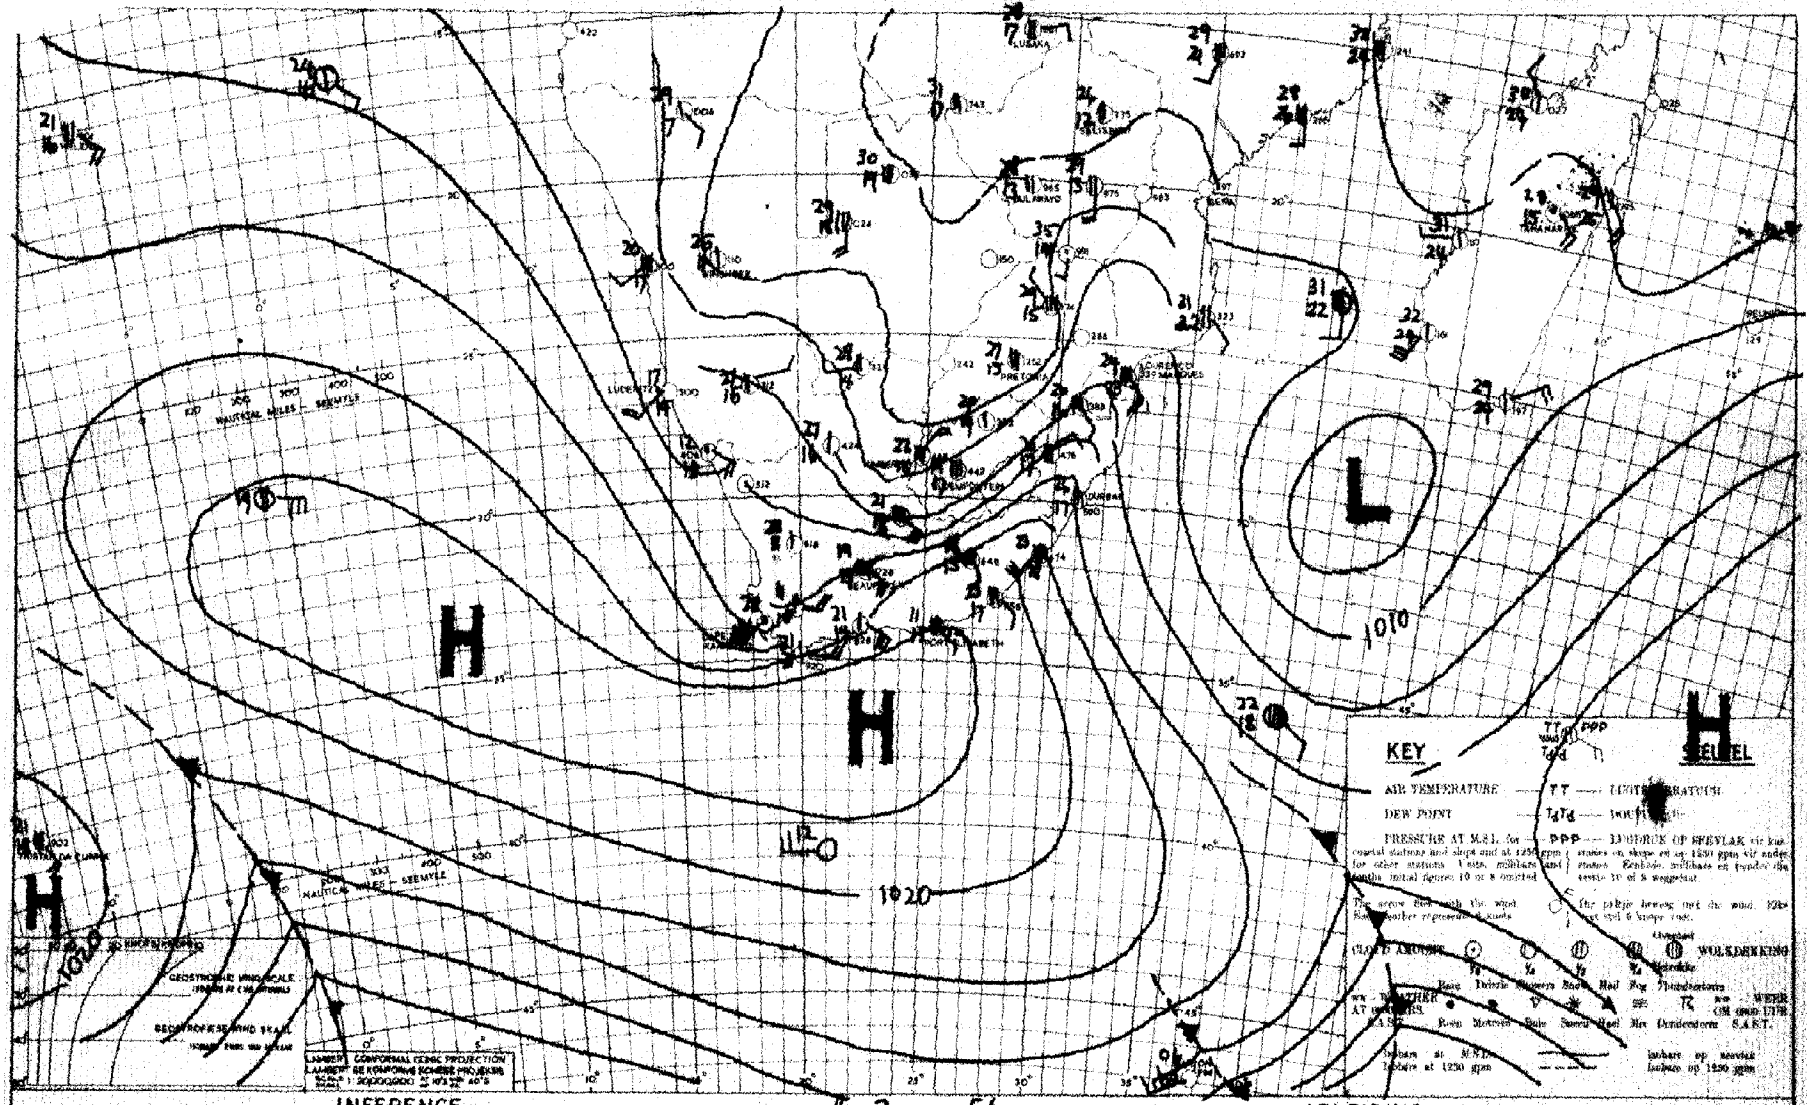
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 16-3-1954 DATUM — AFLEIDING

Cool moist air will flow into the Transvaal from the east and with pressures falling over the Southwestern Cape NE'ly gradients will be established over the interior and this will transport moist air over the whole of the interior, where scattered clouds will consequently develop. Thunder conditions will gradually develop over the Free State and Northern Cape.

Koel vogtige lug sal uit die Ooste oor Transvaal invloei, en - dalende drukke oor Suidwes Kaapland sal 'n noordoostelik- oor die binneland geskep word en daardeur sal ve... hele binneland beweeg en verspreide wo... weerstoestande sal weer geleidelik... ontwikkel.

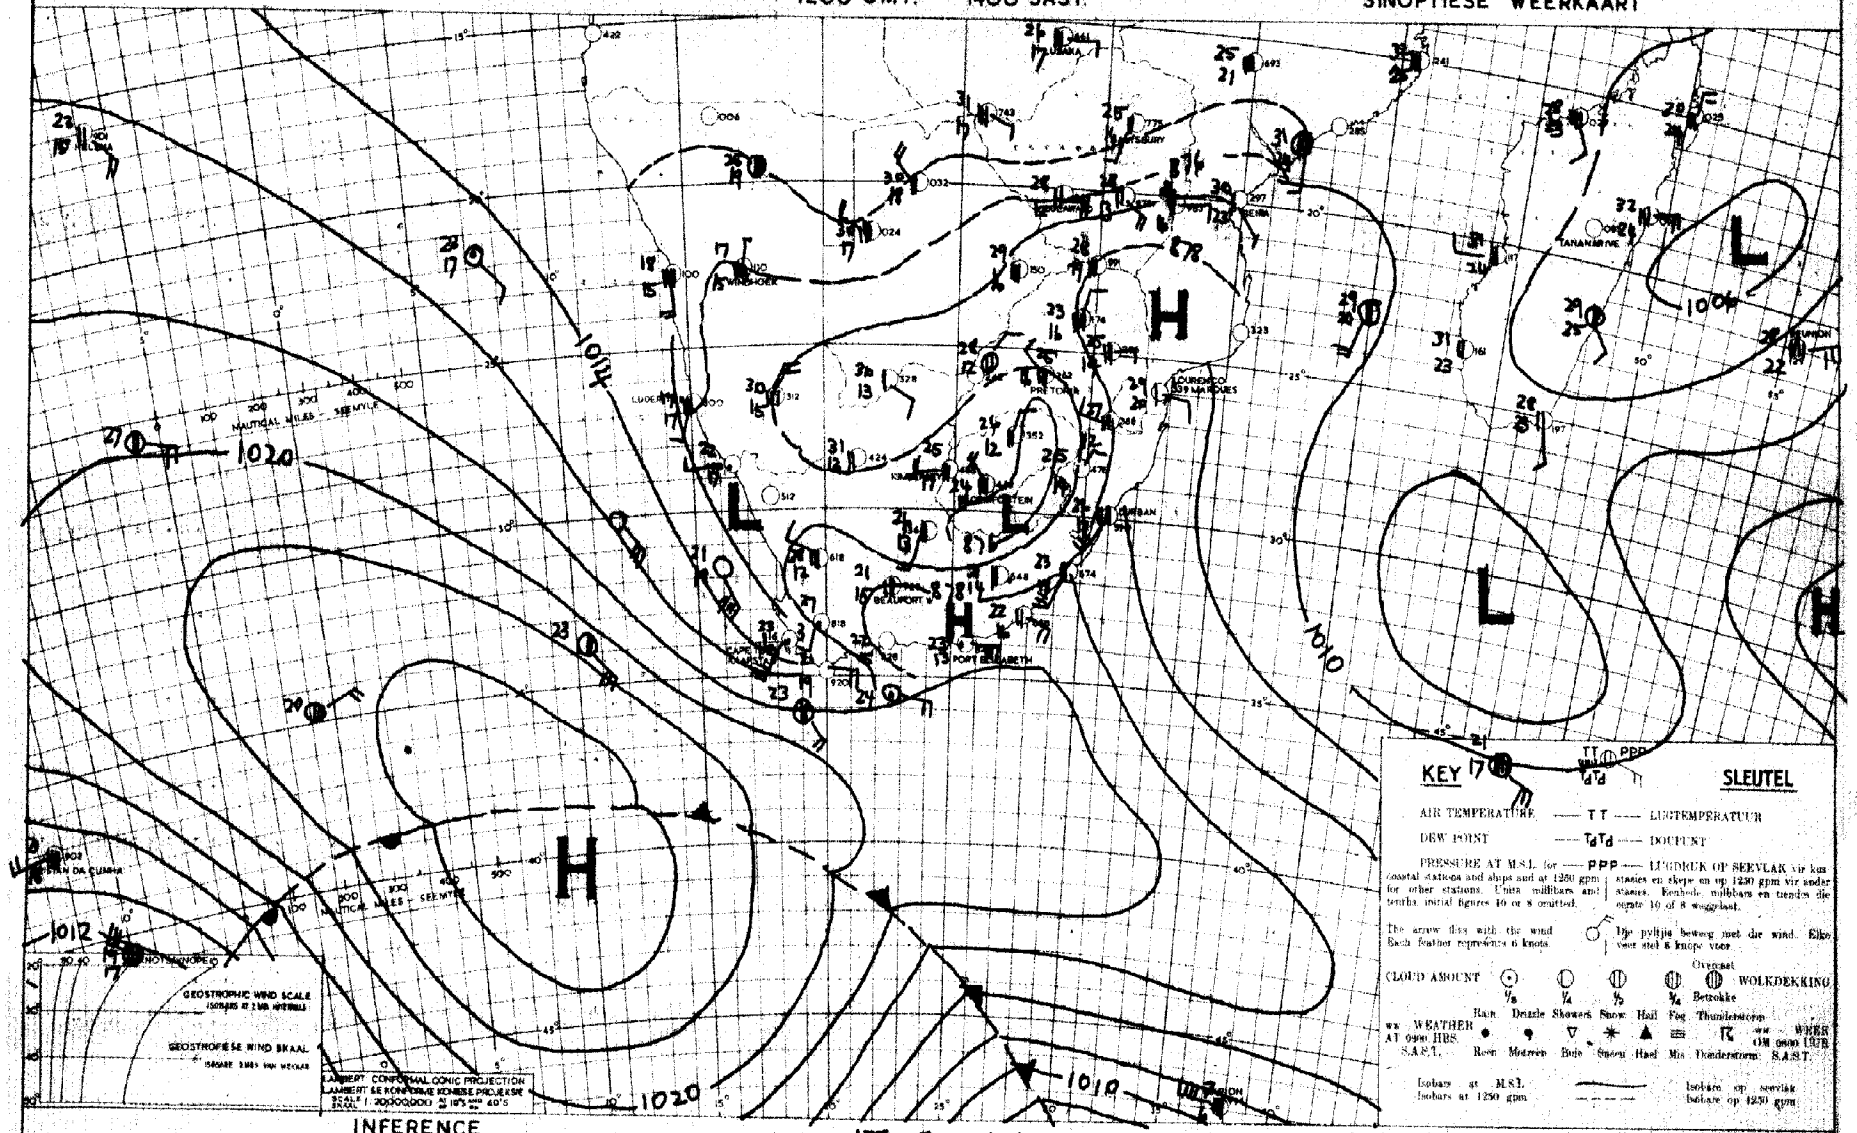
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 17-3-1954 DATUM — AFLEIDING

The anticyclone southwest of the Union will follow a track rather far south of the Union, but southeasterly onshore winds should cause cloudy weather along the south and southeast coasts. The air over the interior is sufficiently moist to cause cloud development over all areas, but thunder showers are likely mainly over Transvaal and the Free State.

Die antisiklone suidwes van die Unie sal taamlik ver suid van die Unie verby beweeg, maar dit sal nogtans tog landwaartse suid-oostewind langs die suid- en suidooskus veroorsaak met gevolglike bewolkte weer. Die lug oor die land is vogtig genoeg om wolke te laat ontwikkel oor alle dele, maar donderbuie sal hoofsaaklik tot Transvaal en die Vrystaat beperk wees.

As the High south of the Union moves eastwards, the cooler air will move over Natal, Transvaal, the Free State and over the eastern Cape. Showers will occur over the east coast. Wind will freshen generally.

Na mate die Hoog suid van die Unie ooswaarts beweeg, sal koele lug oor Natal, Transvaal, die Vrystaat en oor Oos Kaapland beweeg. Buie sal oor die Ooskus uitsak.

With the anticyclone off the southeast coast cool moist air is flowing southwards from the Transvaal into the Free State. Humid air is also approaching the Northern Cape from the direction of S.W.A. Showers will be likely over the northern Cape and over western and southwestern Free State with cool overcast conditions in the morning over the Transvaal.

Met die antisiklone aan die Suidooskus vloei koel vogtige lug suidweswaarts van die Transvaal na die Vrystaat. Vogtige lug nader ook noord Kaapland uit die rigting van S.W.A. Buie word verwag oor noord Kaapland en oor wes en suidwes Vrystaat met koel betrokke weer in die oggend oor Transvaal.

INFERENCE

DATE 20-3-54 DATUM

AFLEIDING

The airmass over the western half of the Union is humid and showers will develop. Pressures will continue to fall over the south and southeast coasts, in advance of the trough east of Tristan. No large scale convergence is therefore possible over the Union.

Die lugmassa oor die westelike helfte van die Unie is vogtig en buie sal uitsak. Lugdrukke sal aanhou daal oor suid en suidoos kusstreke, as gevolg van die naderende trog oos van Tristan. Geen groot skaalse konvergensie sal dus oor die Unie plaasvind nie.

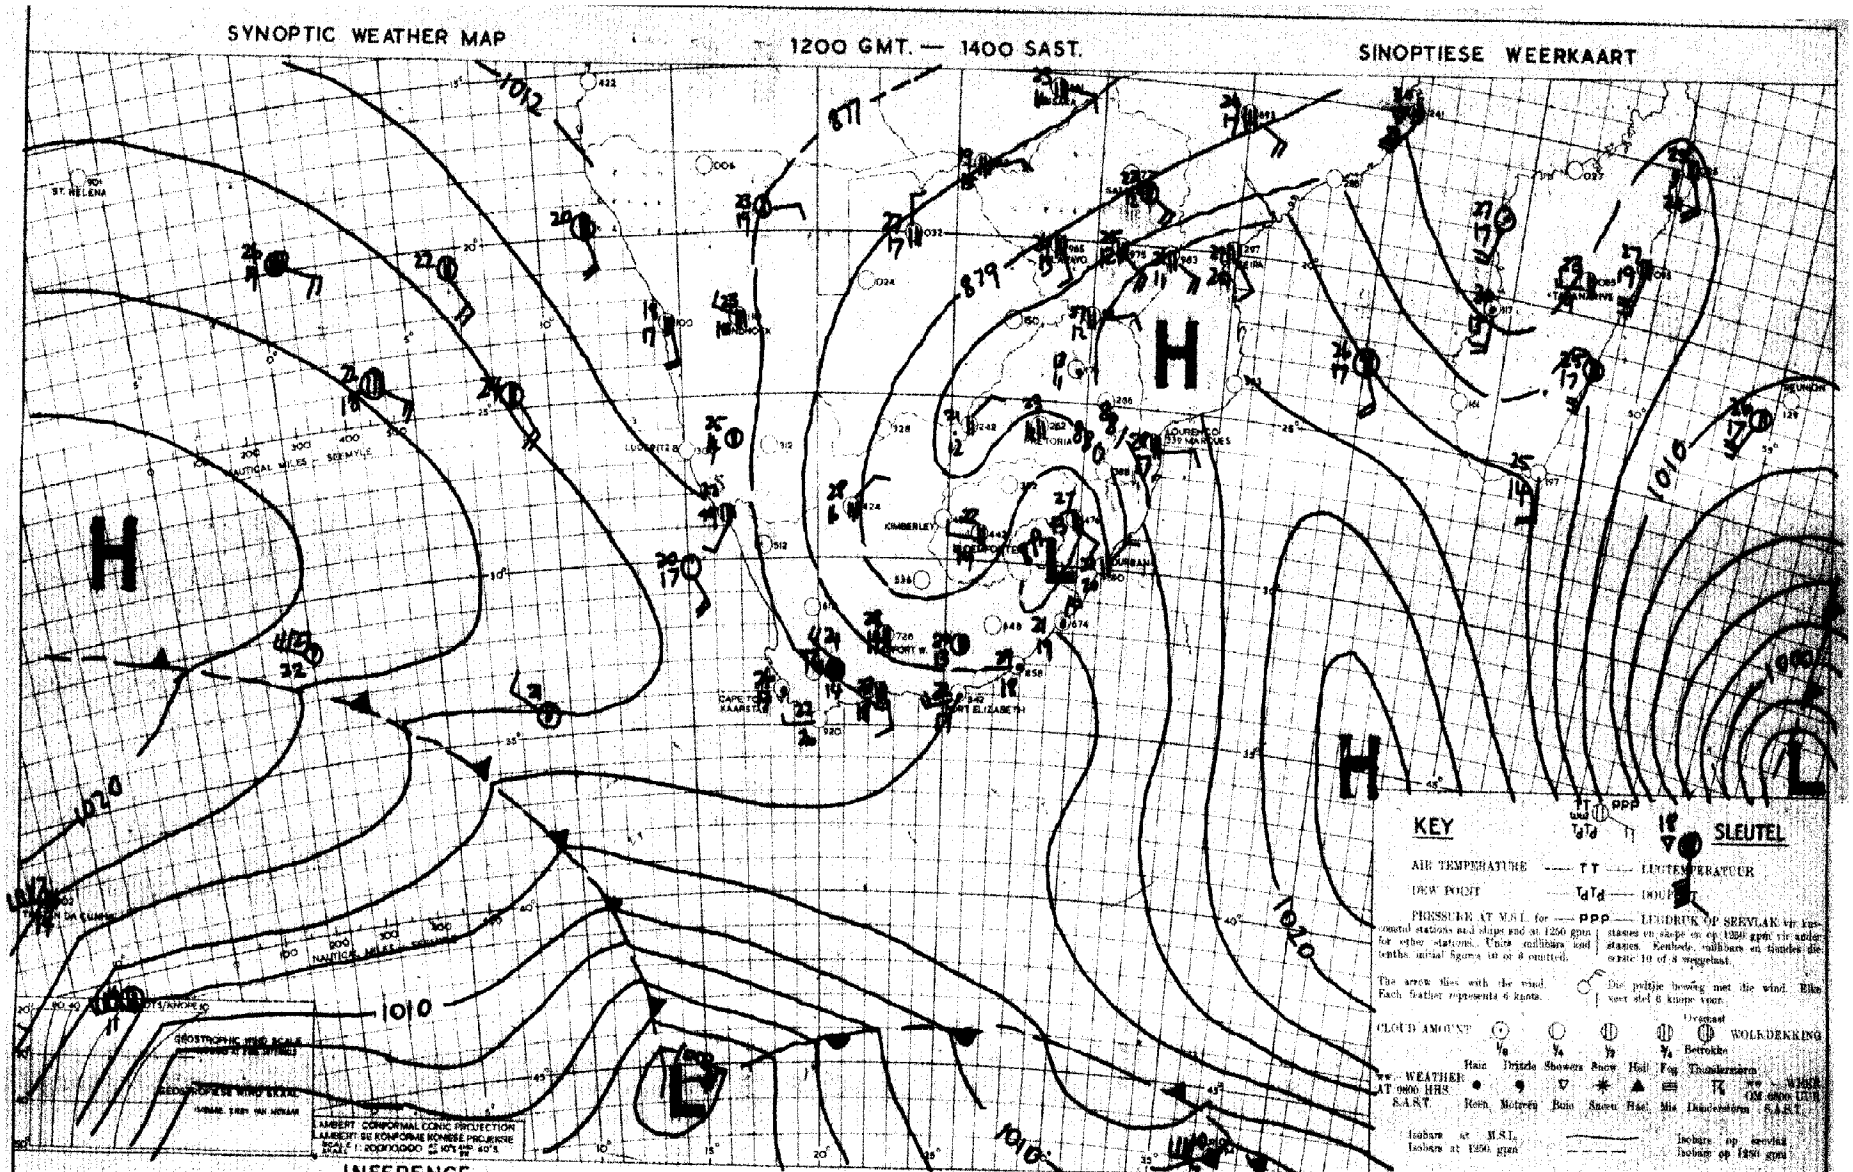
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 21-3-1954 DATUM — AFLEIDING

The antioyclone and intense low east of South Africa will not affect the weather over the Union and the cold front midway between the Cape and Tristan is weak. Consequently little change is expected and scattered clouds will recur in the moist air over the interior, with thunderstorms confined to interior Cape and Southern Free State.

Die antisiklone en intensiewe laagdrukstelsel oos van Suid-Afrika sal nie die weer oor die Unie beïnvloed nie en die koue front halfpad tussen Tristan en die Kaap is swak. Gevolglik word min verandering verwag en verspreide wolke sal weer ontwikkel in die vogtige lug oor die binneland, maar donderstorms sal moontlik tot Kaapland en Suid-Vrystaat beperk wees.

The humid airstream which is moving across the Cape Province from the direction of S.W.A. and Bechuanaland will cause cloudy rainy weather over the Cape interior. Only a few isolated afternoon thundershowers are likely over the three northern provinces.

Die vogtige lugstroom wat uit die rigting van S.W.A. en Betsjoeanaland oor Kaapland beweeg sal bewolkte toestande en reën oor die Kaapse binneland veroorsaak. Slegs enkele namiddag donderbuie is waarskynlik oor die drie noordelike provinsies.

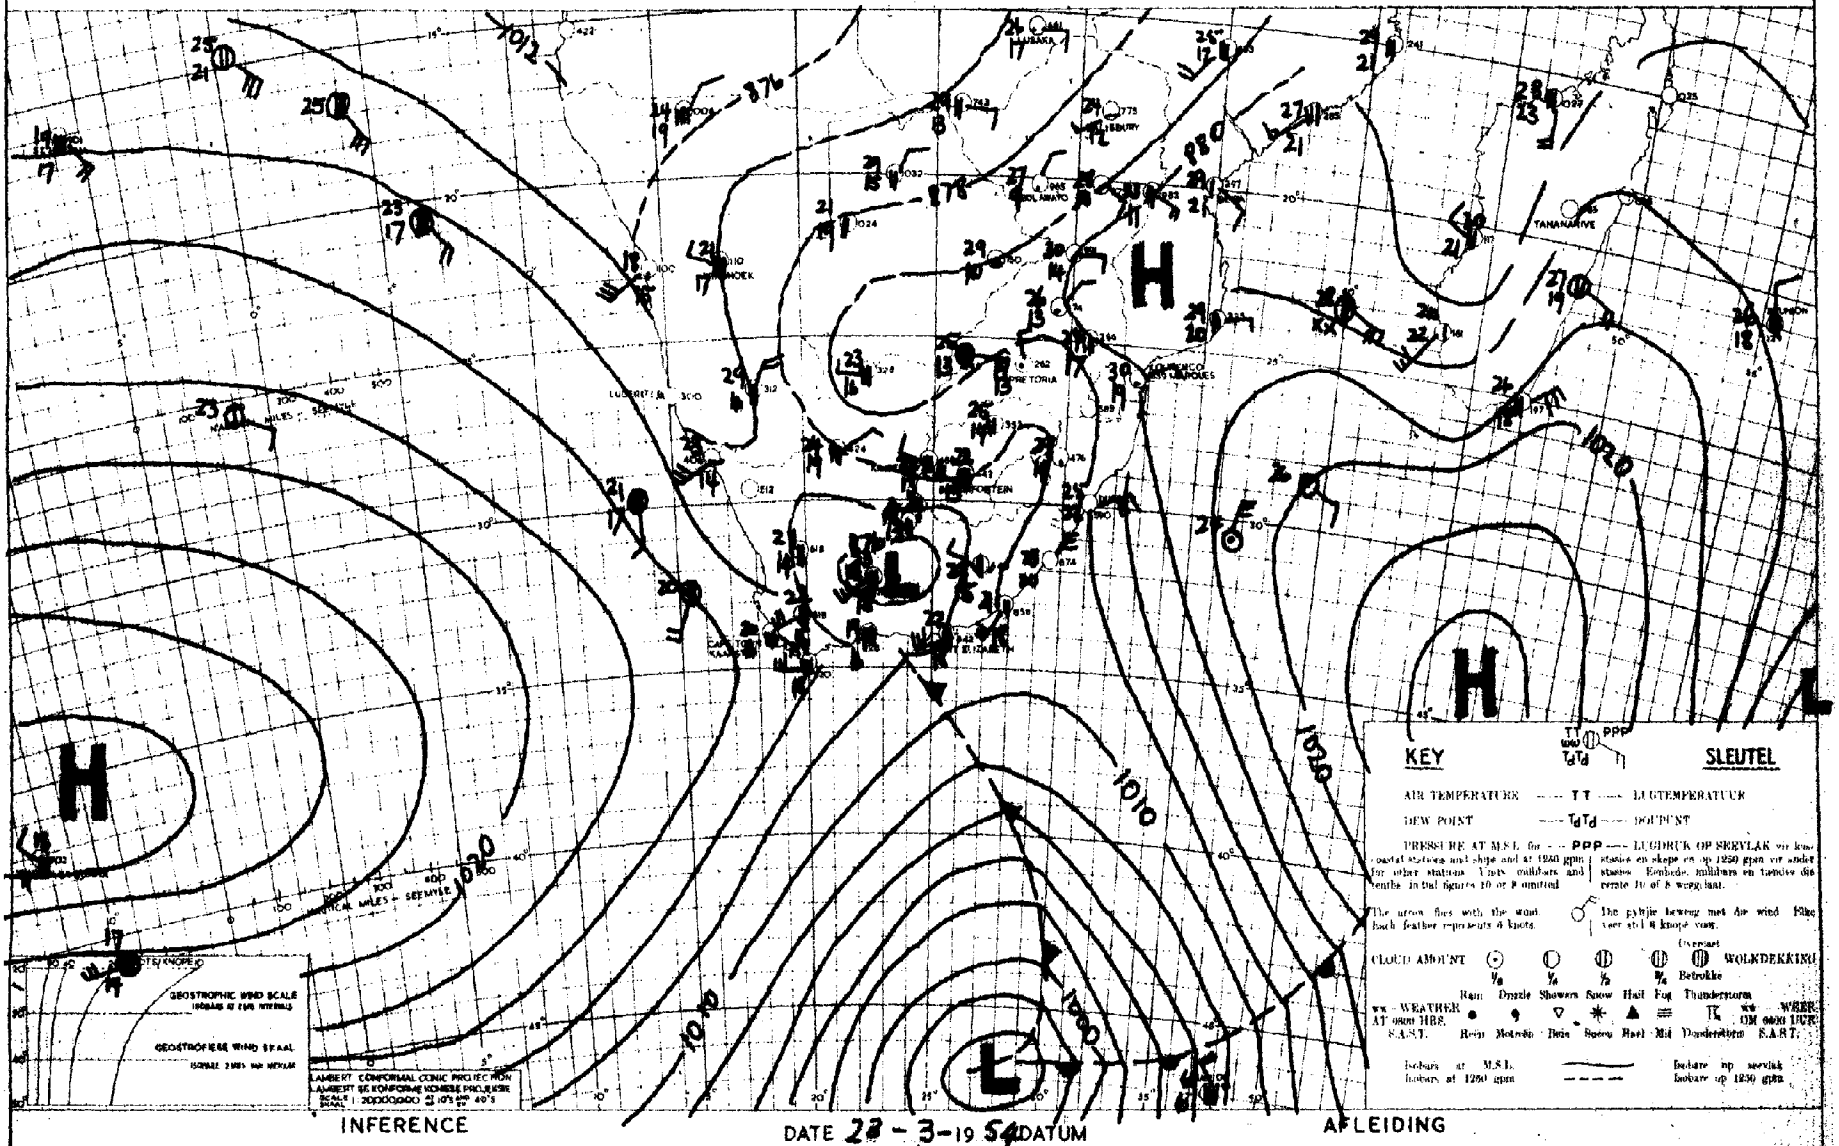
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 28 - 3 - 19 54 DATUM — AFLEIDING

Cool air has reached Southwestern Cape and is wedging in beneath the warmer, moist continental air. Pressure is rising along the south coast and consequently a wedge of high pressure will extend eastwards along the south and southeast coast tomorrow. The situation is favourable for widespread rain over interior Cape and southern Free State.

Koel lug het nou suidwestelike Kaapland bereik en dring wigvorming in onder die warmer, vogtige, kontinentale lug. Die druk styg langs die suidkus en gevolglik sal 'n rug van hoë druk more langs die suid en suidooskus gelee wees. Die toestand is gunstig vir reën oor 'n wye gebied van die Kaapse binneland en Suid-Vrystaat.

INFERENCE

DATE 24-3-1954 DATUM

AFLEIDING

Pressure is falling over the western Cape, indicating that a separate high will form over the southeast coast. Cooler air will thus move over Natal, and the eastern Transvaal. The humid, warm air will continue to move southwards over the western Union and S.W.A.

Lugdrukke daal oor wes Kaapland en dit dui aan dat 'n afsonderlike hoog oor die suidoos kusstreke sal vorm. Koel lug sal dus oor Natal en die oostelike Transvaal beweeg. Die suidwaartse beweging van vogtige, warm lug sal voortduur oor die Westelike Unie en oor S.W.A.

The high over the eastern parts of the Union will recede eastwards and it will clear and become warmer over Natal and the Transvaal. With moist air still flowing from S.W.A. across the Cape interior and Southern Free State further scattered rain and showers are likely over these regions.

Die hoogdruksisteem in die Ooste sal ooswaarts wegskuif en dit sal oor Transvaal en Natal gedeeltelik ooptrek en warmer word. Vogtige lug vloei nog vanaf S.W.A. oor die Kaapse binneland en suidelike Vrystaat en verdere verspreide reëns en buie sal oor hierdie dele uitsak.

INFERENCE

A trough is situated over Western Cape, giving unsettled weather in the warm, moist air over the Cape and Southwestern Free State. Cooler, drier air will follow in the wake of this eastward moving trough, causing clearance over western Cape, but a cold front should reach southwestern Cape later tomorrow, giving cold, cloudy weather to S.W. and S. Cape.

DATE 26-3-1954 DATUM

AFLEIDING

'n Trog is gelê oor die Kaapse weskus en dit veroorsaak ongestadige weer in die warm, vogtige lug oor Kaapland en Suidwes-Vrystaat. Koeler, droër lug sal agter die trog oor Wes-Kaapland instroom en opklaring veroorsaak, maar 'n koue front sal later môre die suidweskus bereik en dan sal dit bewolk en koud word langs die suidwes- en suidkus.

Cold and drier air will invade the Union in the rear of the cold front which is now approaching the Cape. Associated with the advance of the cold air showers will occur, but afterwards it will become fair to fine generally.

Koue en droër lug sal die Unie agter die koufront, wat tans die Kaap nader, oorstroom. Gepaard met die beweging van die koue lug sal buie uitsak, maar daarna sal dit oor die algemeen mooiweer word.

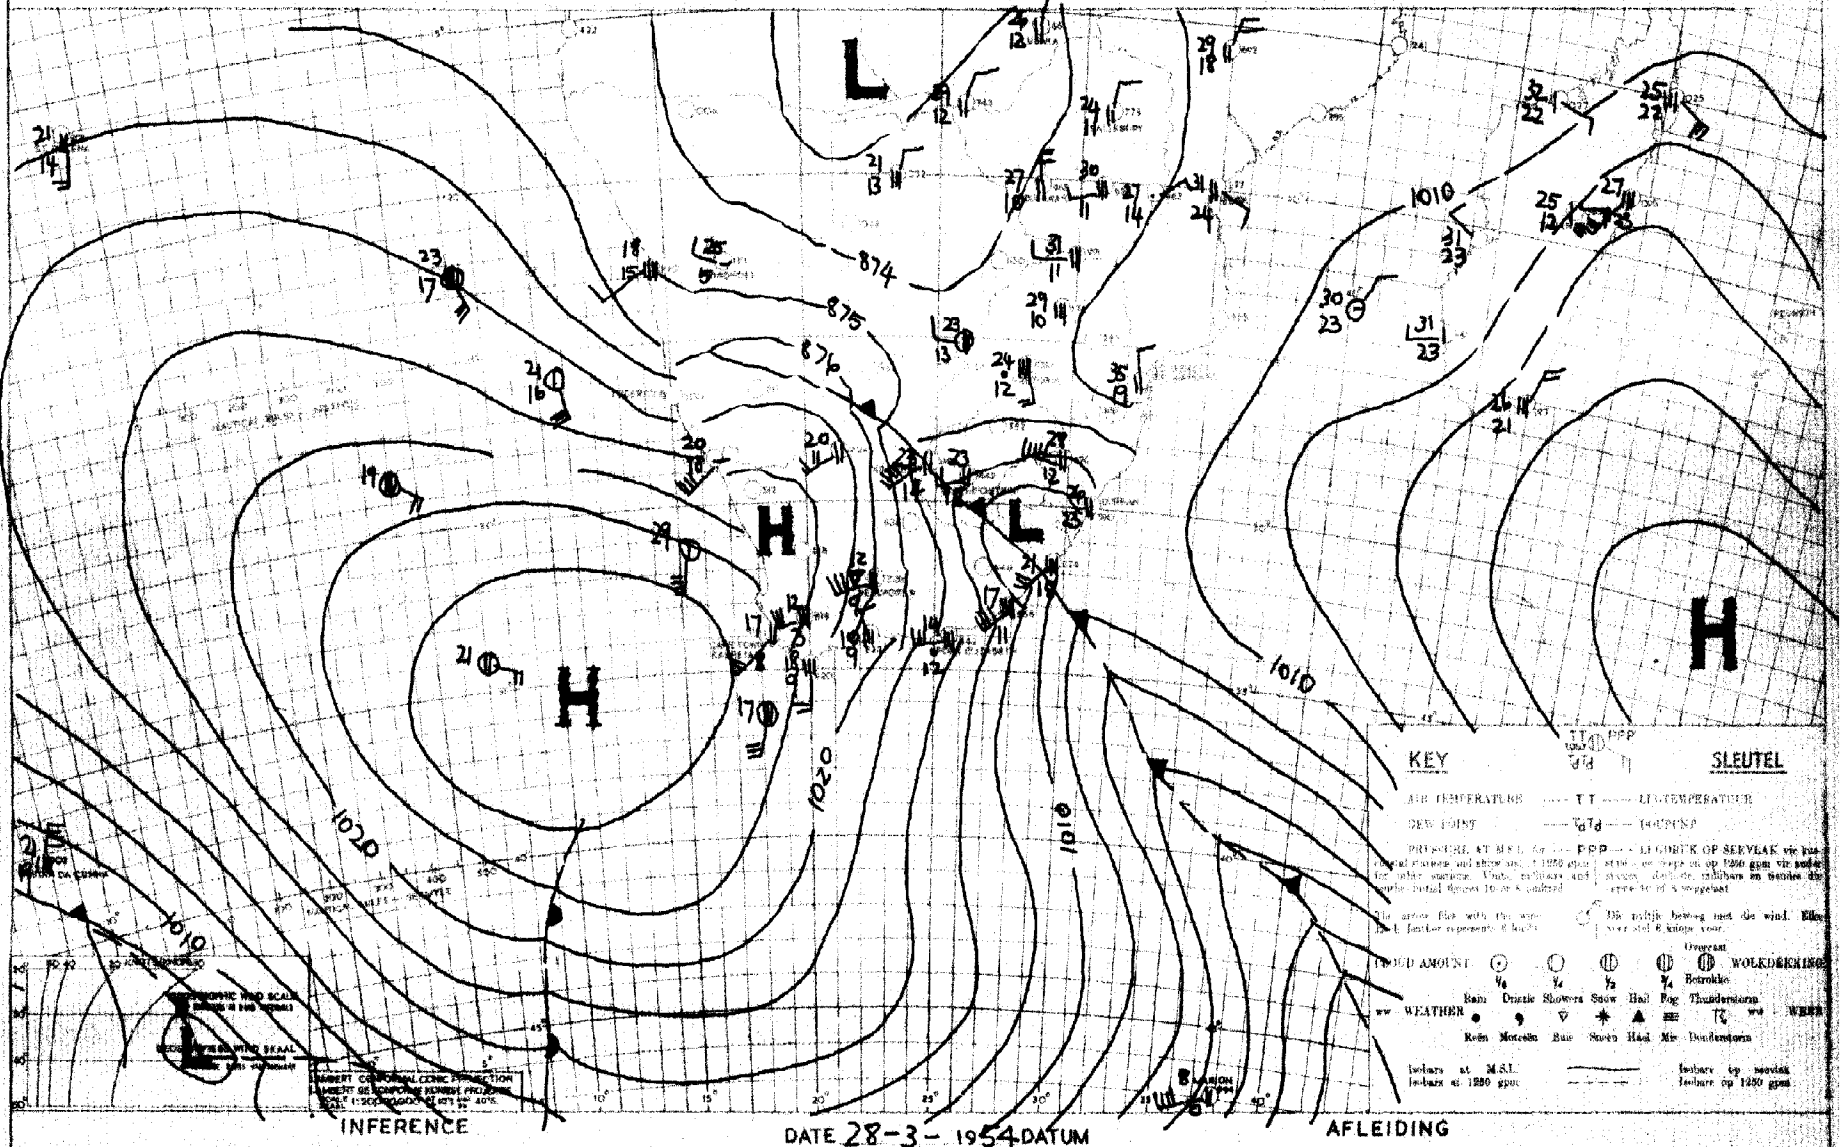
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST SINOPTIESE WEERKAART



INFERENCE DATE 28-3-1954 DATUM AFLEIDING

Pressure is rising very rapidly over the Southwestern and Southern Union and the Atlantic High with its colder, dry air will spread over the whole Union giving orographic cloud over the east escarpment but clear weather elsewhere.

Lugdrukke styg vinnig oor die suidwestelike en suidelike dele van die Unie en die Atlantiese Hoog met sy kouer, droë lug sal oor die hele land beweeg. Orografiese lae wolke sal oor die oostelike platorand voorkom maar elders sal dit mooiweer wees.

Cold air has now invaded all parts of the Union except northern and western Transvaal. The cold air advancing westwards over Natal and eastern Transvaal will spread to the remainder of Transvaal, northern Free State and eastern Bechuanaland tomorrow, while the cool air now over the Free State and the Cape will retreat southwards again.

Koue lug het nou alle dele van die Unie binnegedring uitgesonderd Noord- en Wes Transvaal, maar oostewinde sal die koue vannag en môre ook na Wes-Transvaal, Noord-Vrystaat en oostelike Betsjoeanaland vervoer. Die koue lug wat nou oor die Vrystaat en Kaapland aanwesig is sal vinnig uitwyk na die suide.

INFERENCE

DATE 30 - 3 - 1954 DATUM

AFLEIDING

Dry, subsiding air over the Union will cause fair weather to continue. An intense low developed just west of Tristan and the Atlantic High to its east will move but little and the Union will not be effected.

Droë, dalende lug oor die Unie sal as gevolg hê dat mooiweers toestande sal voortduur. 'n Intensiewe laag het wes van Tristan ontwikkel en die Atlantiese Hoog na die ooste sal maar min beweeg en sal min invloed op die weer van die Unie hê.

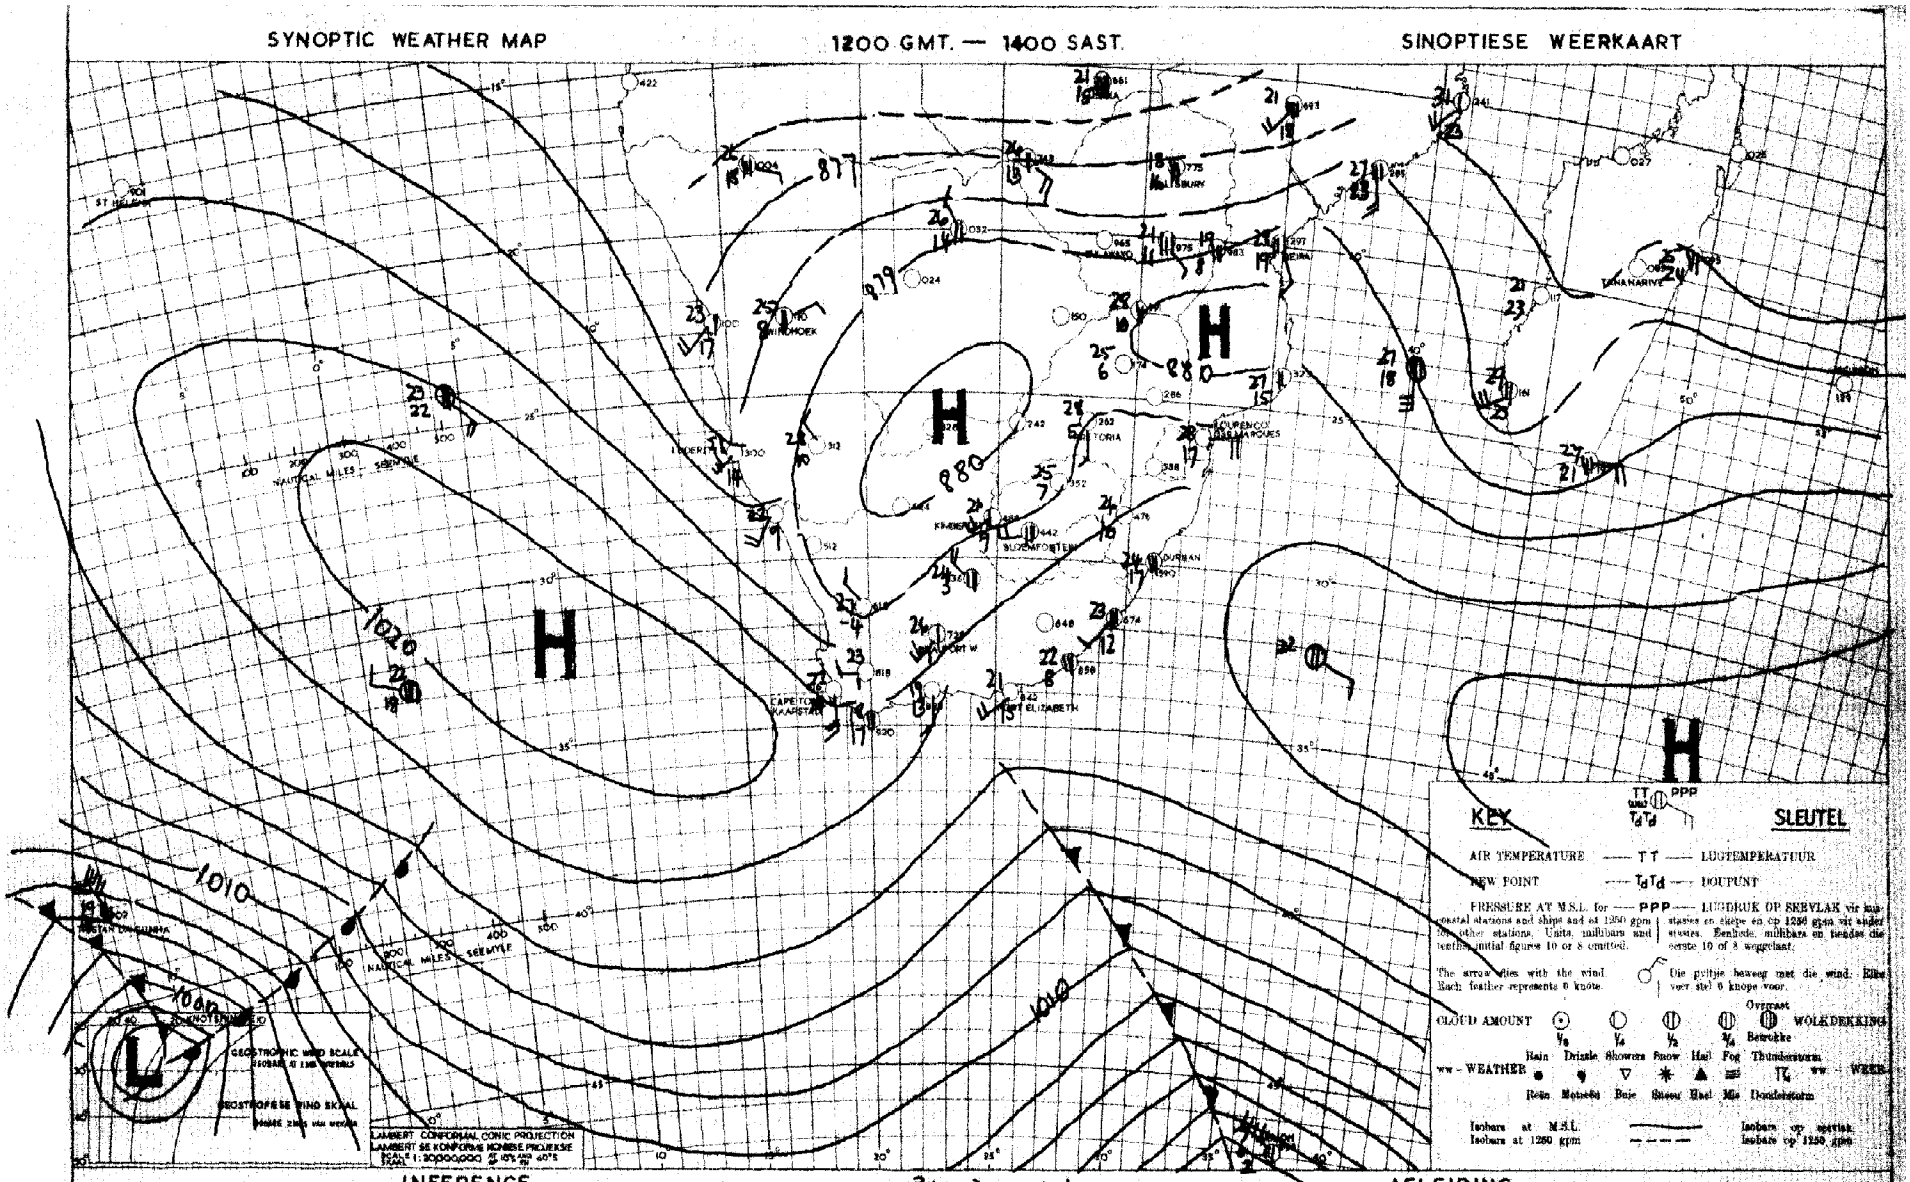
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 31 - 3 - 1954 DATUM AFLEIDING

With a cell of high pressure advancing eastwards along the South coast some cloud will develop temporarily along the coastal regions of the eastern Cape. Elsewhere over the Union it will remain fine or slightly cloudy.

Met stygende drukke, aan die Kaapse suidkus as gevolg van die oswaartse beweging van die hoogdrukgebied sal wolke tydelik oor die kusstreke van Kaapland voorkom. Oor die res van die Unie sal dit mooiweer of effens bewolk bly.

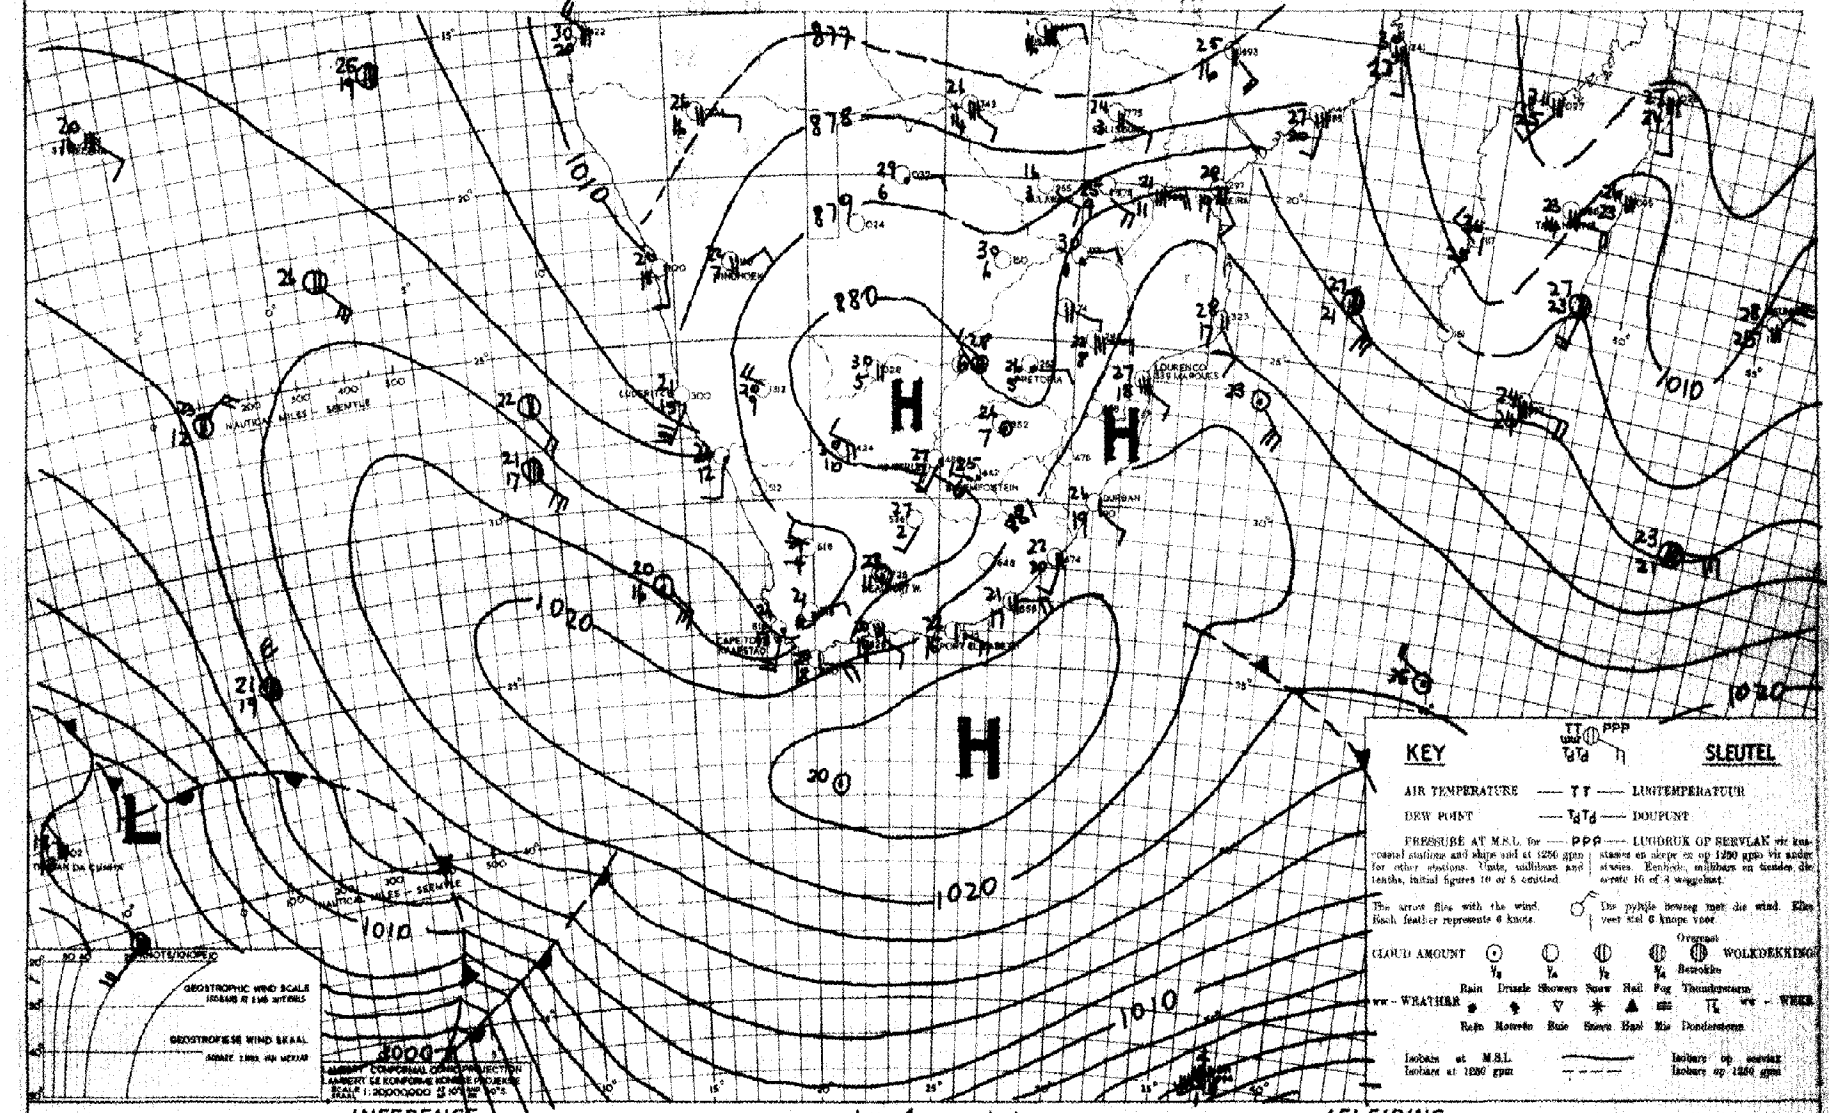
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 1 - 4 - 1954 DATUM — AFLEIDING

The high south of the Union will have little effect on the land since pressure is high over central South Africa. The upper circulation is anticyclonic and dew points are dropping generally over the interior. Consequently only fair weather clouds will occur and it will be warm inland.

Die antisiklone suid van die Unie sal geen noemenswaardige invloed op die weer hê nie aangesien die druk ook op land besonder hoog is. Die bolug-sirkulasie is anitisiklonies en doupunte toon 'n dalende neiging oor die binneland. Gevolglik sal slegs mooiweer-wolkies ontwikkel en dit sal warm wees oor die binneland.

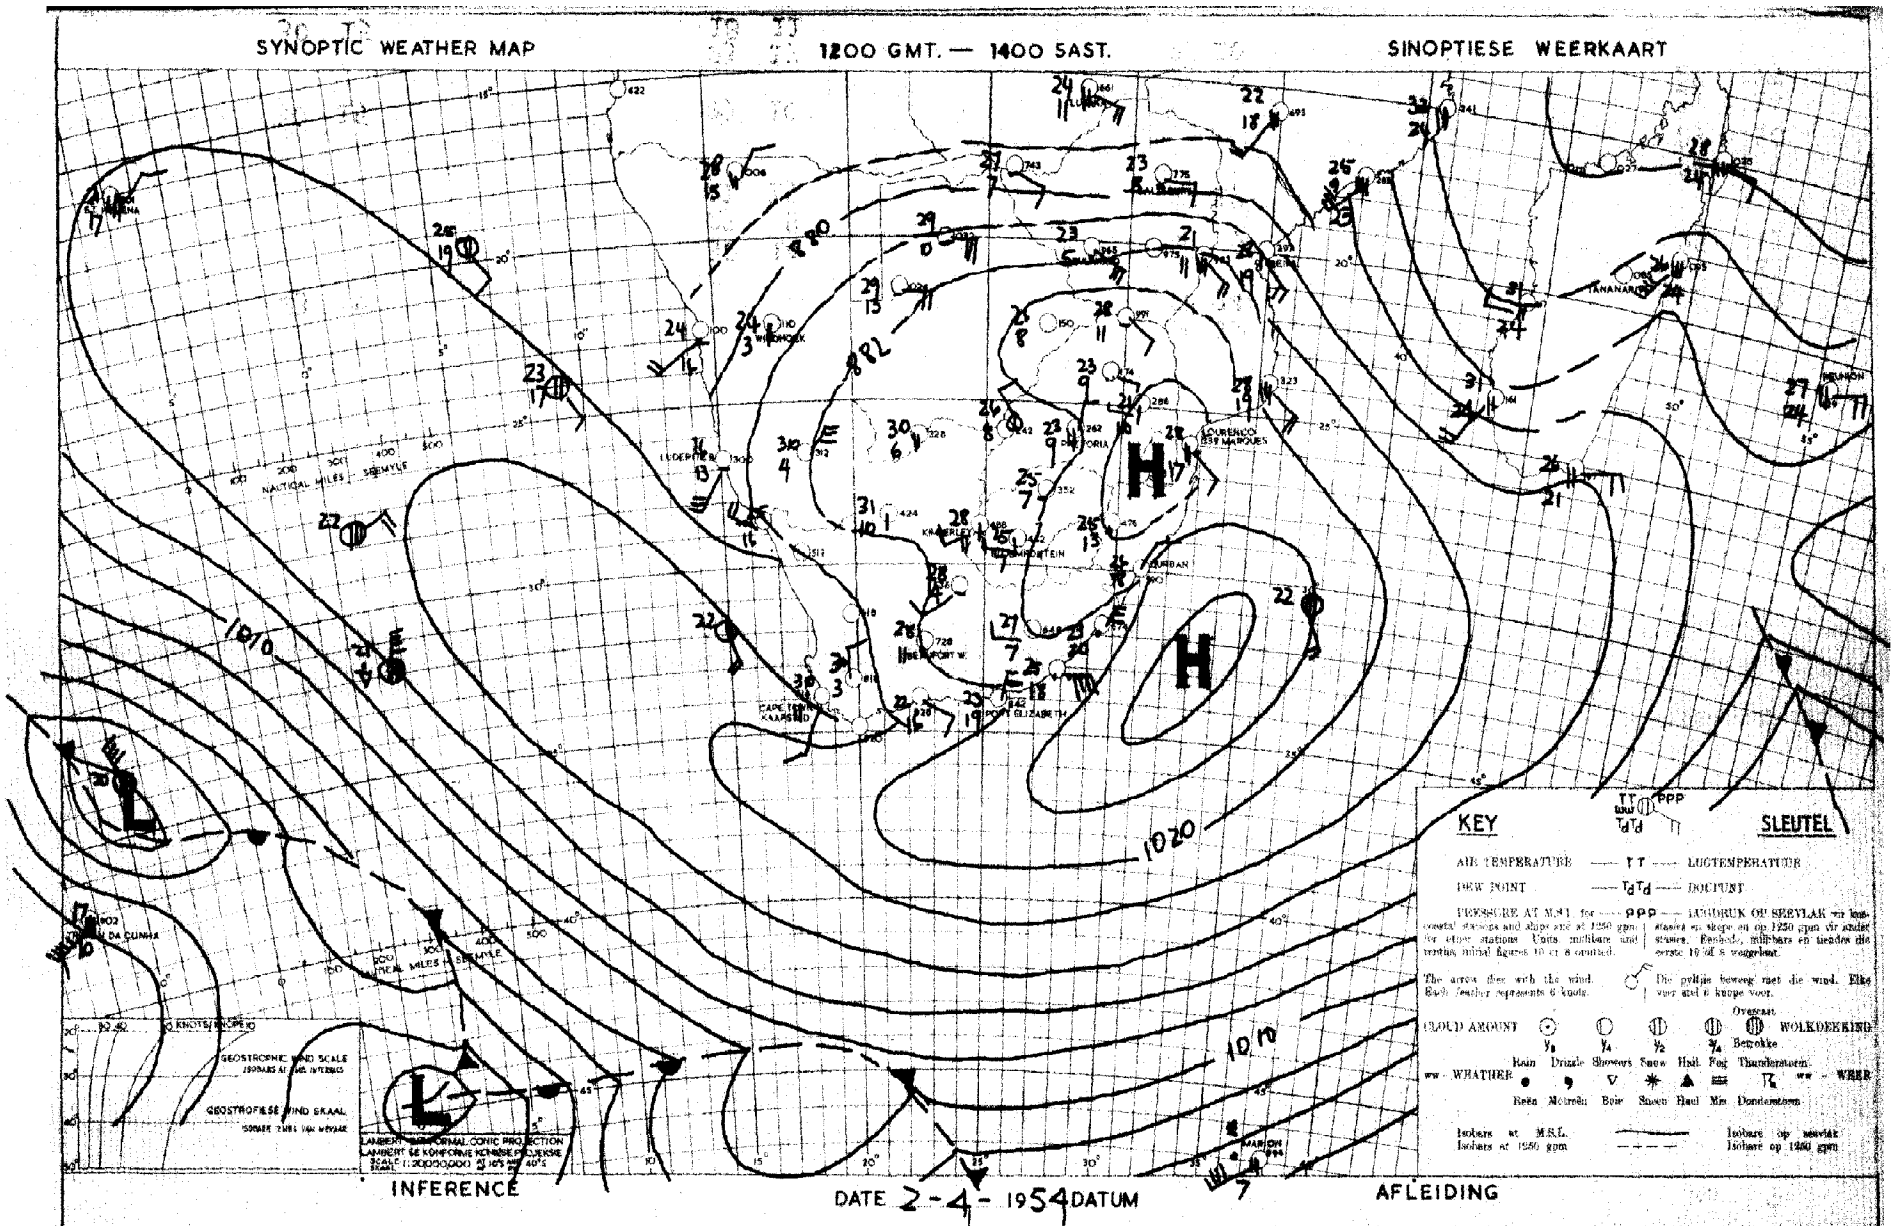
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 2-4-1954 DATUM — AFLEIDING

The High over the Southeast coast is moving out over the Indian Ocean. The Airmass over the whole Southern Africa is dry and the weather will be fair. Pressure is already falling over the western Cape in advance of the Low northeast of Tristan.

Die Hoog oor die Suidoos kus beweeg uit oor die Indiese Oseaan Die lugmassa oor suidelike Afrika is egter droog en dit sal mooi-weer bly. Lugdrukke begin reeds daal oor wes Kaapland voor die Laag noordoos van Tristan.

The circulation remains anticyclonic over the Union and the cool air behind the cold front midway between Tristan and the Cape should reach the southwest coats only tomorrow night. Therefore it will remain fair to fine and warm over all parts of the Union.

Die sirkulasie bly steeds antisiklonies oor die Unie en die koel lug agter die koue front halfpad tussen Tristan en die Kaap sal die suidweskus eers mōrenag bereik, sodat dit mooiweer of slegs effens bewolk en warm sal bly oor alle dele van die Unie.

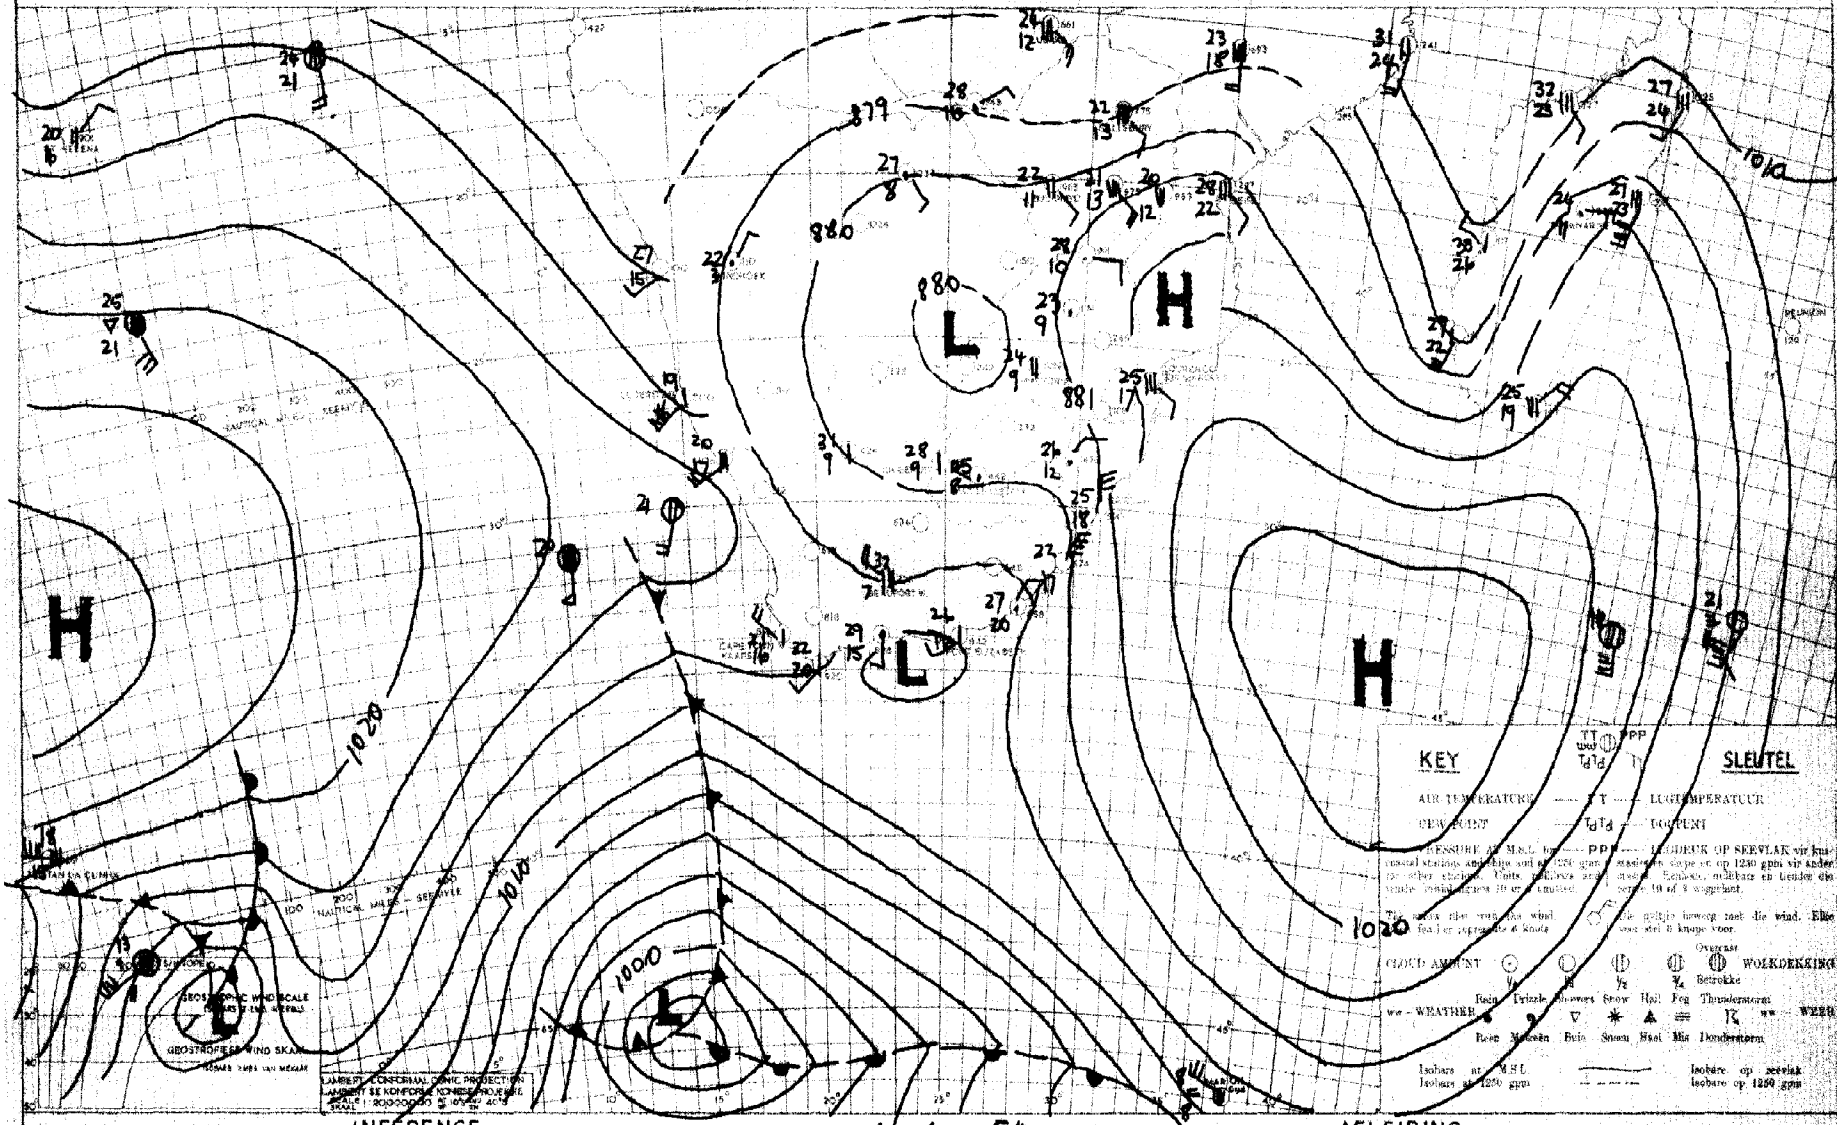
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE

Cool air in the rear of the cold front will affect the Southern and eastern Cape where light showers will be likely. Elsewhere over the Union there will be little change.

DATE 4-4-1954 DATUM

AFLEIDING

Koel lug agter die kouefront sal suid- en oos Kaapland beïnvloed en ligte buie sal waarskynlik voorkom. Elders oor die Unie sal daar min verandering wees.

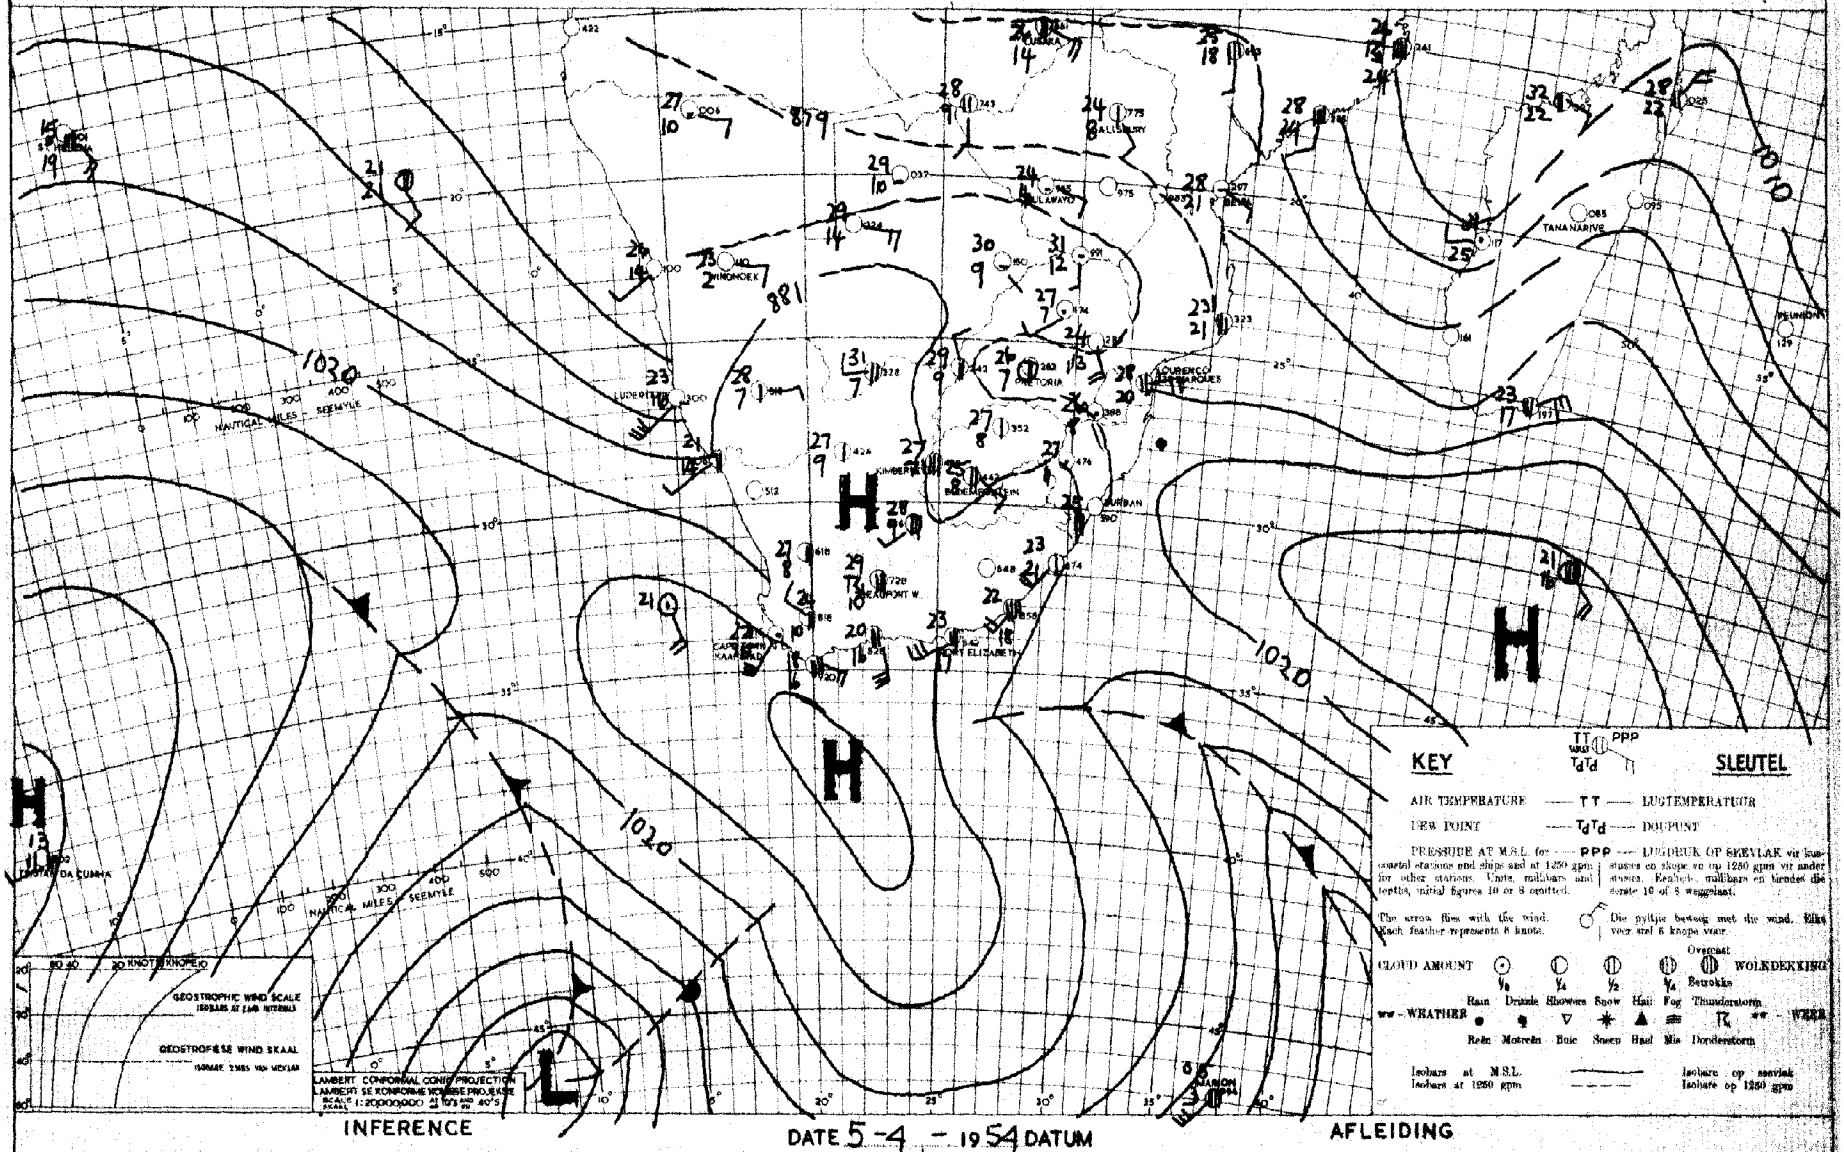
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 5-4-1954 DATUM — AFLEIDING

A shallow high is centred just south of Cape Agulhas. Slightly humid air from the north is moving over the Karroo and eastern Cape and over the southern Free State causing cloudy skies. These conditions will change but little.

'n Vlak Hoog lê met sy sentrum net suid van Kaap Agulhas. Vogtiger lug uit die noorde beweeg oor die Karo, oor oos Kaapland en oor die suidelike Vrystaat en veroorsaak bewolkte weer. Daar sal min verandering in hierdie toestand wees.

SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART

INFERENCE — DATE 7-4-1954 DATUM — AFLEIDING

Pressure is falling generally over the Union and the pressure will be lowest along the southeast coast tomorrow, so that the wind will be westerly generally tomorrow. The air over the plateau is warm and slightly moist so that scattered clouds will develop and light showers are possible over the eastern interior areas.

Die druk daal algemeen oor die Unie, maar dit sal mõre laagste wees langs die suidooskus, sodat westewind oor alle gebiede sal voorkom. Die lug oor die binneland is warm en effens vogtig en verspreide wolke sal ontwikkel, terwyl ligte buie moontlik is oor die oostelike gebiede.

INFERENCE

Colder air in the rear of the cold front now affecting the Cape Peninsula is expected to flow northwards over the Cape Province, the southern Free State and should reach Natal and possibly southern Transvaal later. The coastal weather will be showery and some cloud will persist over the interior at first.

DATE 8 — 4 — 54

AFLEIDING

Koeler lug agter die koufront, wat tans die Kaapse Skiereiland bereik het, sal volgens verwagting die Kaapprovinsie uit die suide oorstroom asook die Vrystaat en die lug behoort Natal en moontlik Suid Transvaal later te beinvloed. Aan die kus sal buie uitsak en aanvanklik sal daar wolkies oor die binneland wees.

INFERENCE

Unexpected wave development southwest of the Cape retarded the eastward and northward advance of the cold air and it remained cloudy over most areas while light rain set in over the Free State from middle cloud. Pressure is rising again over southwestern Cape and the cold air should now advance to Natal and Southwestern half of Transvaal.

DATE 9 - 4 - 1954 DATUM

AFLEIDING

Onverwagte siklogenese suidwes van die Kaap het die noord-oostwaartse beweging van koue lug oor die Unie vertraag en dit het bewolk gebly oor meeste dele, terwyl ligte reën oor die Vrystaat uitgesak het uit middelwolke. Die druk begin nou weer styg oor suidwestelike Kaap en die koue lug behoort môre oor Natal en suidwestelike Transvaal te stroom.

The Atlantic High will move to the south coast and the cold air will flow over Natal, the east Transvaal and also remain over the Cape and O.F.S. Warm north-westerly upper winds are however freshening over Transvaal and northern Free State and showers will occur.

Die Atlantiese Hoog sal na die suidkus beweeg en die koue lug sal oor Natal en oos Transvaal beweeg en sal ook voortduur oor Kaapland en die Vrystaat. Warm noordweste bowinde word egter sterker oor Transvaal en oor die noordelike Vrystaat en buie sal uitsak.

Maksimum en Minimum Temperatuur (°C) en Reënval (mm.) vir die Tydperk wat om 0800 (SAST) eindig op 12 – 4 – 25.4

Maximum and Minimum Temperatures (°C) and Rainfall (mms.) 24 hours ending at 0800 (SAST) on

DATE 11-4-54 DATUM

AFLEIDING

Pressure is falling very slowly along the southcoast and with cool, moist air flowing westwards and southwards over Transvaal and the Free State and fresh northwesterly upper winds it will remain cloudy over Transvaal and Natal and cloud will extend across the Free State and N.Cape to Eastern Cape. Showers are likely over Southern Transvaal, the Free State and Northern Cape.

Aangesien die druk slegs stadig daal langs die suidkus, sal die stroom van koel, vogtige lug wat weswaarts en suidwaarts oor Transvaal en die Vrystaat beweeg, gepaard met taamlike sterk noordwestelike bowind, bewolkte weer na die Vrystaat, Nood- en Oos-Kaapland laat uitbrei. Buie is moontlik oor Suid-Transvaal, die Vrystaat en Noord-Kaapland.

Drier Westerly upper winds were present this afternoon over the western and Central Union and as this air advances eastwards the unsettled rainy weather over the Free State, Transvaal and Natal will gradually clear.

Droër Westelike tot suidwestelike bowinde was vanmiddag oor die westelike en middel Unie aanwesig en namate hierdie lug ooswaarts beweeg sal die ongestadigde reënweer oor Vrystaat, Transvaal en Natal geleidelik ooptrek.

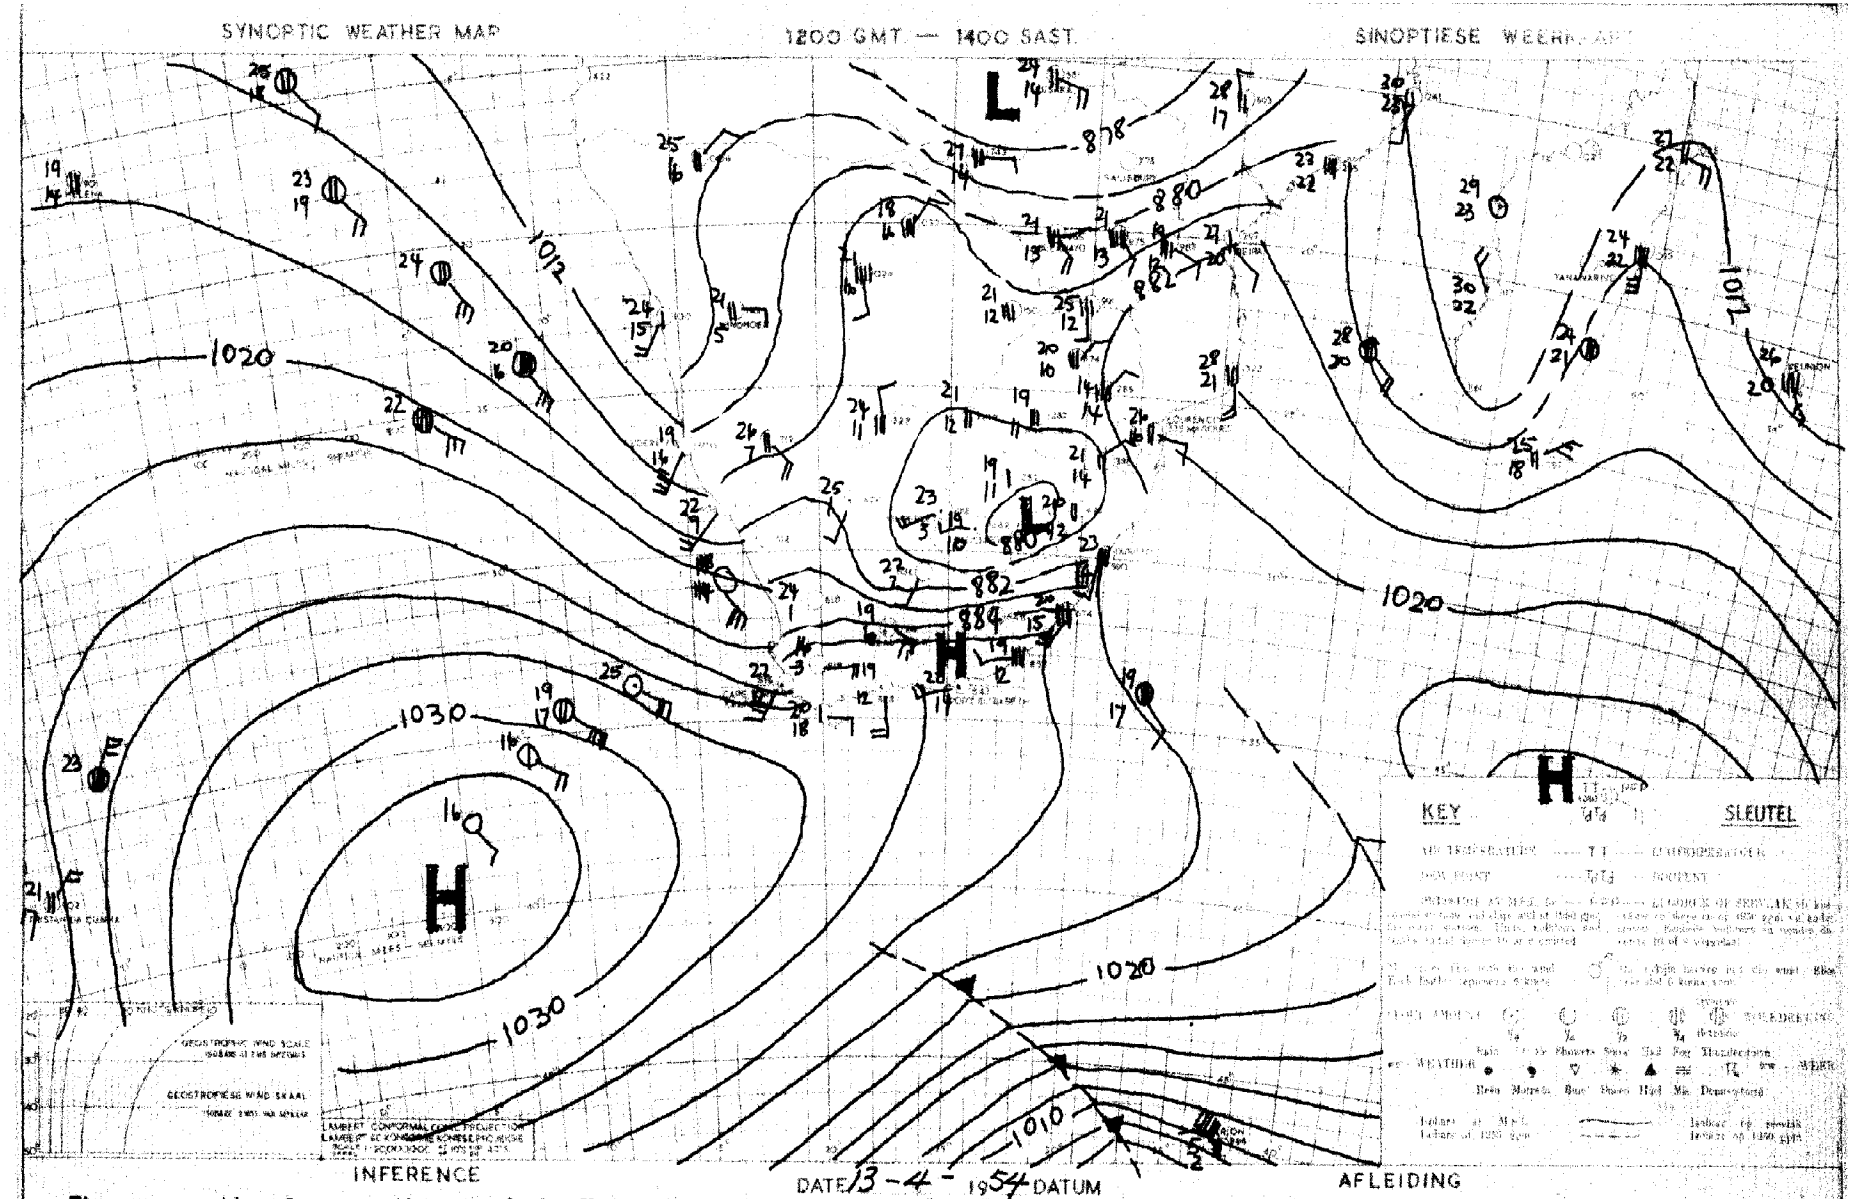
SYNOPTIC WEATHER MAP 1200 GMT — 1400 SAST SINOPTIESE WEERKAART



DATE 13-4-1954 DATUM

INFERENCE

The warm anticyclone southwest of the Union is weakening and pressure over the Cape do not show a rising tendency. Therefore bad weather over the south and east coastal belts is unlikely to develop. An upper trough is situated over the interior Cape with dry southerly winds in its rear. This will maintain cloudy weather over Transvaal, Natal and northern Free State, but elsewhere it will fair to fine.

AFLEIDING

Die warm hoogdrukstelsel suidwes van die Unie verswak en die druk oor die Kaap toon geen stygende neiging nie. Gevolglik is slegte weer onwaarskynlik langs die suid en ooskus. 'n Trog is in die bolug gelee oor die Kaap en droë suidewind waai ten weste daarvan. Dit sal bewolkte weer oor Transvaal, Natal en Noord-Vrystaat handhaaf maar elders sal dit mooiweer wees.

Pressure is falling over the western Union and the trough over Transvaal will show little tendency to move eastwards. Cloudy skies will therefore recur over the eastern half of Transvaal. It will however be fair over the remainder of the Union.

Lugdrukke daal oor die westelike Unie en die trog oor Transvaal sal nie baie verder ooswaarts beweeg nie. Bewolkte weer sal dus voorkom oor die oostelike helfte van Transvaal. Oor die res van die Unie sal dit egter mooiweer wees.

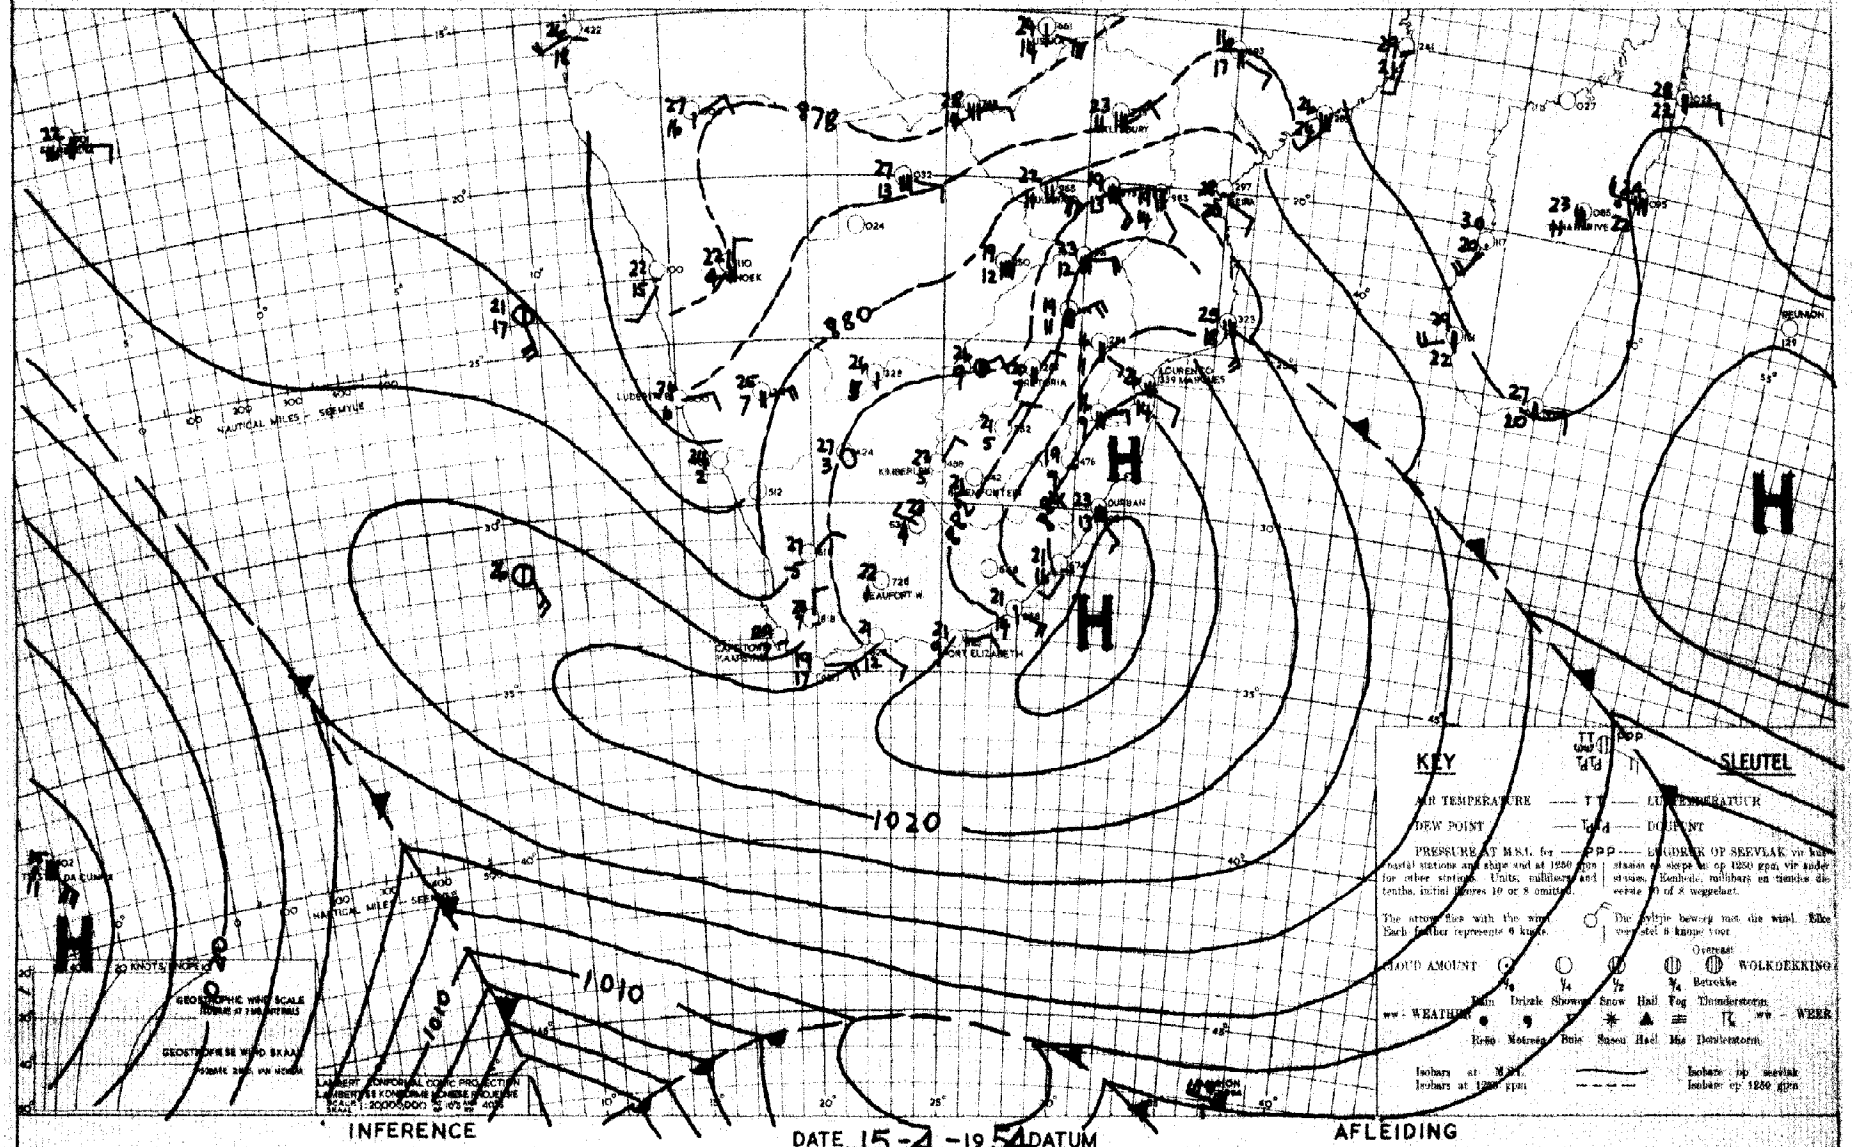
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 15-2-1954 DATUM AFLEIDING

With pressure falling sharply over the western Cape the upper winds are expected to back to N'ly or NW'ly and this will allow moister air to reach the Northern and Western Cape, where scattered clouds are therefore likely to appear. Elsewhere it will be fair with rising temperatures.

Aangesien die drukke oor Wes Kaapland skerp daal word verwag dat die bowinde noord of noordwes sal draai en daarmee sal vogtiger lug noordelike en westelike Kaapland bereik en verspreide wolke sal waarskynlik ontwikkel. Oor die res van die Unie sal redelike mooiweer wees met stygende temperatuur.

DATE 16-4-1954 DATUM

AFLEIDING

It is now expected that the moist air reaching the northern and northwestern Cape from the north will result in light thunder conditions and possibly a few slight showers. Elsewhere it will be fair and temperatures will rise generally.

Dit word nou verwag dat daar in die vogtige lug, wat noord en noordwes Kaapland uit die noorde bereik, donderweerstoestande en moontlik enkele ligte buie sal voorkom. Elders oor die land sal dit egter redelik mooiweer wees en temperatuur sal oor die algemeen styg.

INFERENCE

DATE 17-4-1954 DATUM

AFLEIDING

The moist NW'ly airstream over the Cape interior and the Southern Free State is expected to result in scattered showers. A trough of low pressure is expected to extend across the Union from the West and cloudiness and shower conditions may extend eastwards later.

Die vogtige noordwestelike lugstroom oor die Kaapse binneland en die suidelike Vrystaat sal volgens verwagting verspreide buie veroorsaak. 'n Trog van lae druk sal waarskynlik uit die Weste oor die Unie instoot en daarmee sal bewolkte weer en buie na die Ooste uitbrei.

INFERENCE

DATE 18 - 4 - 1954 DATUM

AFLEIDING

The High east of Natal is moving out over the Indian Ocean and pressures are falling over the Union. Humid air from the northwest will be transported over the Free State, Northern Cape, Transvaal and Natal and cloudiness will increase generally.

Die Hoog oos van Natal beweeg uit oor die Indiese Oseaan en lugdrukke daal oor die Unie. Vogtige lug uit die noordweste sal oor die Vrystaat noord Kaapland, oor Transvaal en oor Natal beweeg en bewolktheid sal algemeen toeneem.

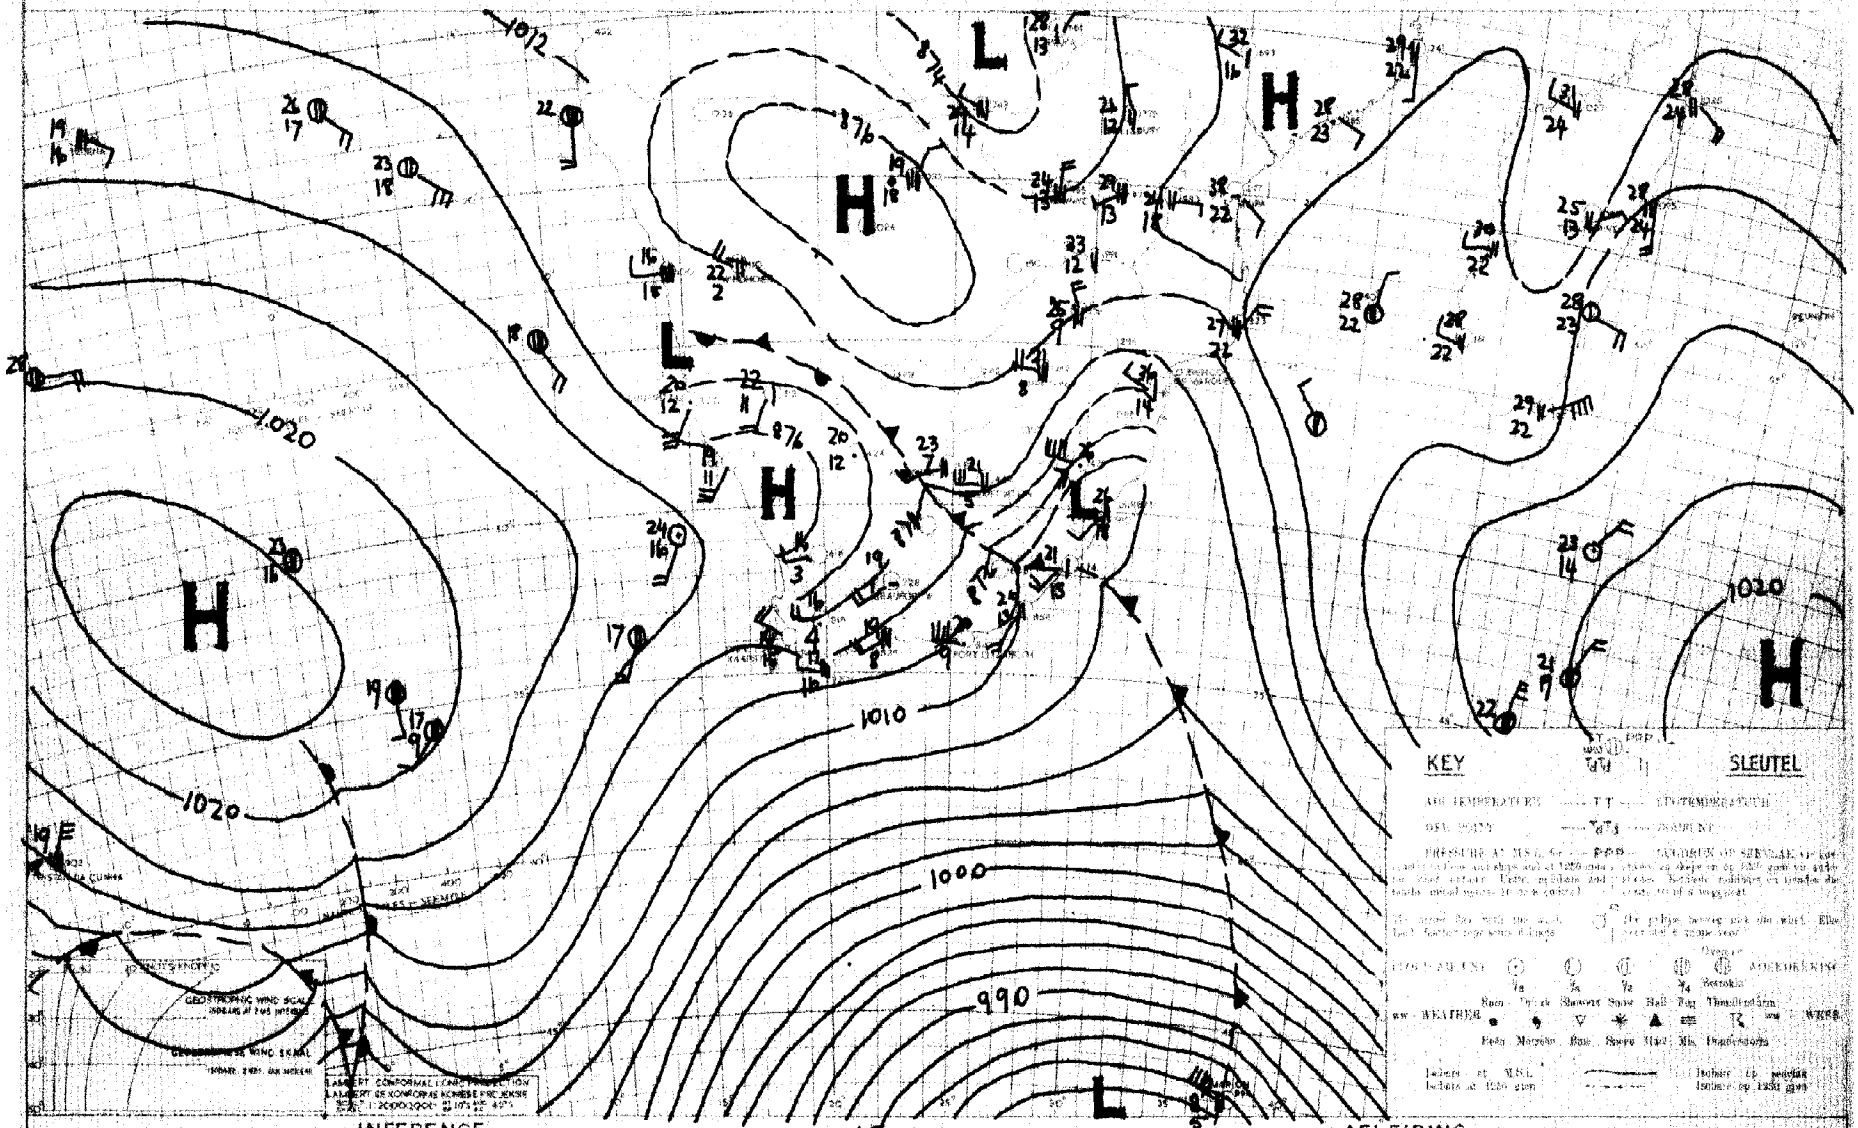
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

Pressure is rising along the south and east coasts and with upper W.N.W. wind the moist air over Transvaal will not be replaced by the cooler, drier air from the southwest. Rain is expected over Transvaal and it will be cloudy and cooler over Natal, but it will be fair over the Cape and Orange Free State.

DATE 19-4-1954 DATUM

AFLEIDING

Die druk styg lange die suid- en ooskus en met die bowind vanaf W.N.W. sal die vogtige lug oor Transvaal nie verdring word deur die koeler, droeër lug uit die suidweste nie. Reën sal oor Transvaal uitsak en dit sal ook bewolk en koeler word oor Natal, maar oor Kaapland en die Vrystaat sal dit redelike mooiweer wees.

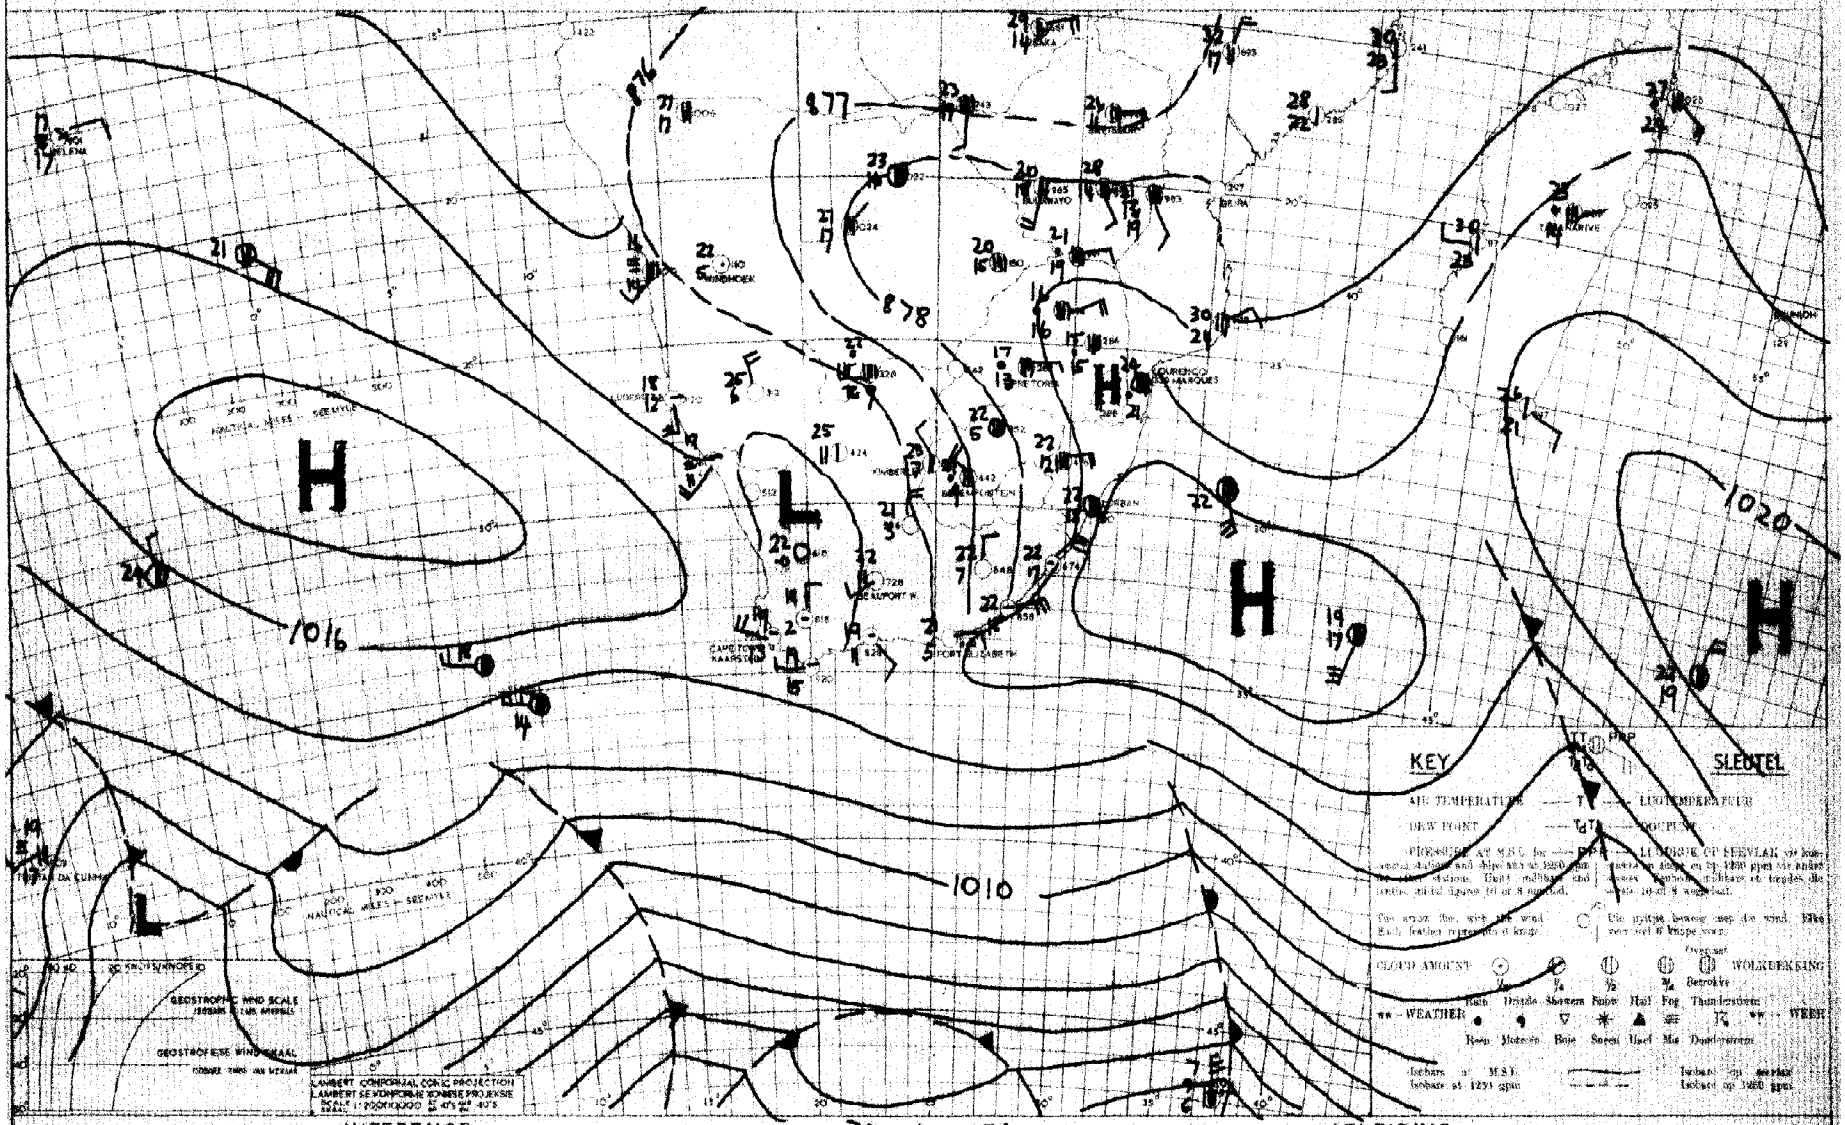
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 20 - 4 - 1954 DATUM AFLEIDING

Pressure is falling rapidly over the Union and the upper westerlies to north westerlies are freshening over Southern Africa. Skies will clear partially over the Transvaal and Free State, but cloudy cooler weather will move over the southwestern Cape.

Lugdrukke daal vinnig oor die Unie en westelike tot noordwestelike bowinde oor Suidelike Afrika word ook sterker. Die weer sal gedeeltelik ooptrek oor Transvaal en die Vrystaat, maar koeler, bewolkte weer sal oor die Kaapse skiereiland beweeg.

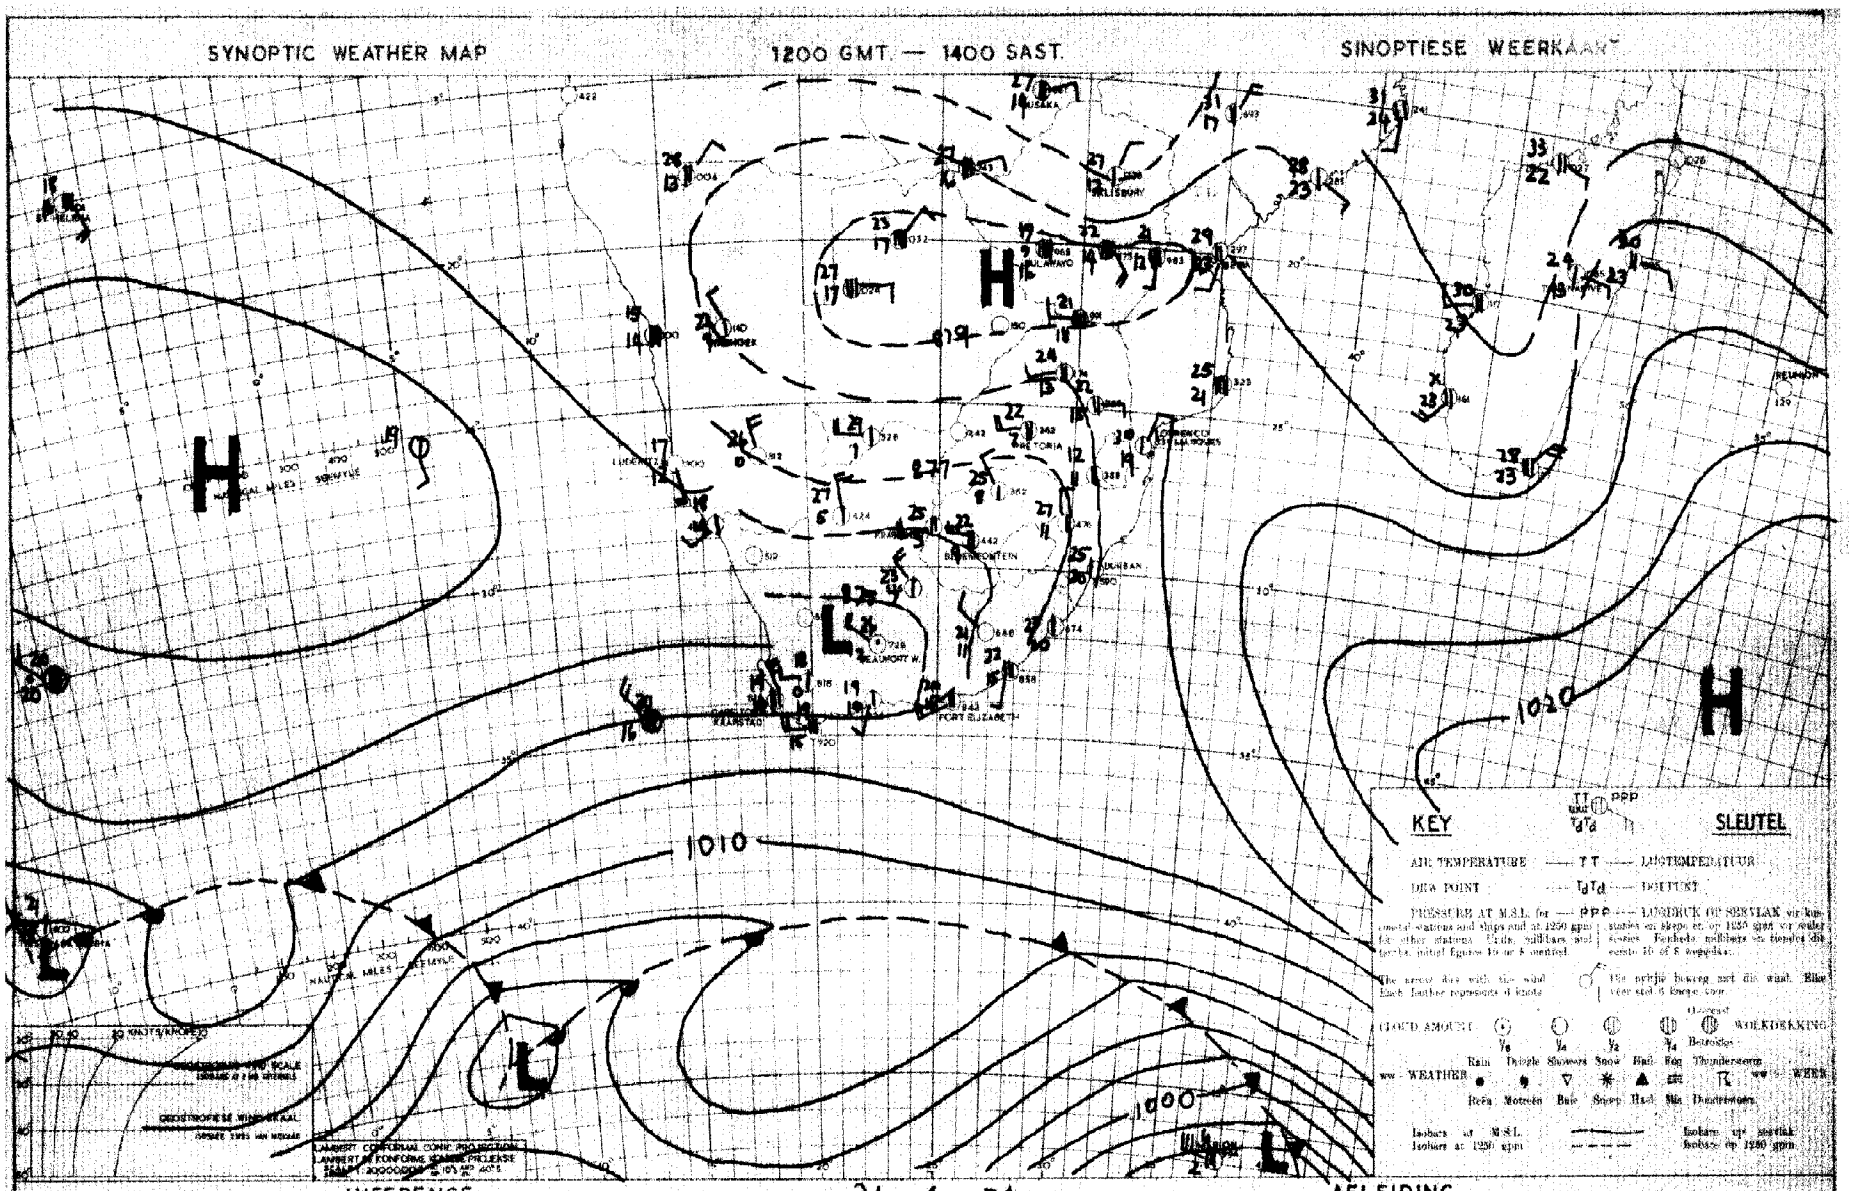
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 21-4-1954 DATUM AFLEIDING

The winds are westerly over the south Atlantic to the west of Cape Town and, as these moist winds strike the southwestern Cape, clouds and possibly local light rain will result. Over the remainder of the Union there will be little change and only isolated slight showers are likely over the Transvaal in the afternoon.

Die windstroom wes van die Kaap is meesal westelik oor die Suid Atlantiese Oseaan en hierdie lugstroom sal gevolglik vogtig genoeg wees om wolke en moontlik plaaslike ligte reën oor suidwes Kaapland te veroorsaak. Oor die res van die land sal daar min verandering wees en slegs enkele ligte buie is moontlik oor Transvaal in die namiddag.

INFERENCE

DATE 22-4-1954 DATUM

AFLEIDING

A cold front, indicated southwest of the Cape, but a new wave has developed northeast of Tristan and consequently cold air will not penetrate deep into the Union and will be limited to the Cape Province. Mild weather with isolated clouds will continue over Transvaal and Natal and it will be cool, cloudy and showery over southwestern Cape.

'n Koue front word aangedui suidwes van die Kaap maar as gevolg van die ontwikkeling van 'n nuwe golf noordoos van Tristan sal koue lug nie ver oor die Unie beweeg nie en sal beperk bly tot die Kaapprovinsie. Matige weer met los wolke in die lug sal voortduur oor Transvaal en Natal en oor suidwestelike Kaapland sal koel, bewolkte weer met buie voorkom.

AFLEIDING

Colder air behind a cold front is moving towards the western Union and in advance of it cloudy, showery weather will occur over the western and southwestern Cape. There will be little change in the weather over the rest of the country.

Kouer lug, agter 'n kouefront beweeg na die westelike Unie en sal vooraf gegaan word deur bewolkte weer met buie oor wes en suidwes Kaapland. Daar sal egter min verandering wees in die weer oor die res van die Unie.

INFERENCE

DATE 24-4-1954 DATUM

AFLEIDING

Cold air from the southwest will invade the Cape Province tonight and tomorrow and with a fair amount of moisture over interior Cape, as indicated by dewpoints and middle cloud, light rain should fall over interior Cape as well as over the Cape coastal areas. The cool air will invade O.F.S. tomorrow night and will also intend to Natal.

Koue lug vanaf die suidweste sal vannag en môre oor Kaapland stroom en aangesien daar heelwat vog aanwesig is, soos aangedui deur doupunte en middelwolke, sal ligte reën oor die Kaapse binneland sowel as oor die kusstreke uitsak. Die koel lug sal moreaan ook oor die Vrystaat en Natal beweeg.

Cool air, which has already invaded the Cape Province and Southern Free State will spread northwards over the remainder of the Free State and across Natal and will later flow across the Transvaal from the southeast. It will bring cloudy weather to Natal and the eastern Transvaal, but it will become fine generally over the remainder of the Union.

Koel lug, wat reeds Kaapland en Suidelike Vrystaat oorstroom het, sal verder noordwaarts oor die res van die Vrystaat en oor Natal uitbrei en sal later uit die suidooste oor Transvaal instroom. Dit sal bewolkte weer oor Natal en oos Transvaal veroorsaak maar oor die res van die Unie sal dit algemeen mooiweer word.

INFERENCE

DATE 26-4-1954 DATUM

AFLEIDING

Pressure is rising over the eastern Union and cool, humid air associated with cloudy weather will move over Natal, north Free State and the Transvaal and isolated showers will occur. In the upper air northwesterlies will continue.

Lugdrukke styg oor die oostelike Unie en koel, vogtige lug gepaard met bewolkte toestand sal oor Natal, noord Vrystaat en oor Transvaal beweeg. Los buie sal uitsak. In die bolug sal noordweste winde voortduur.

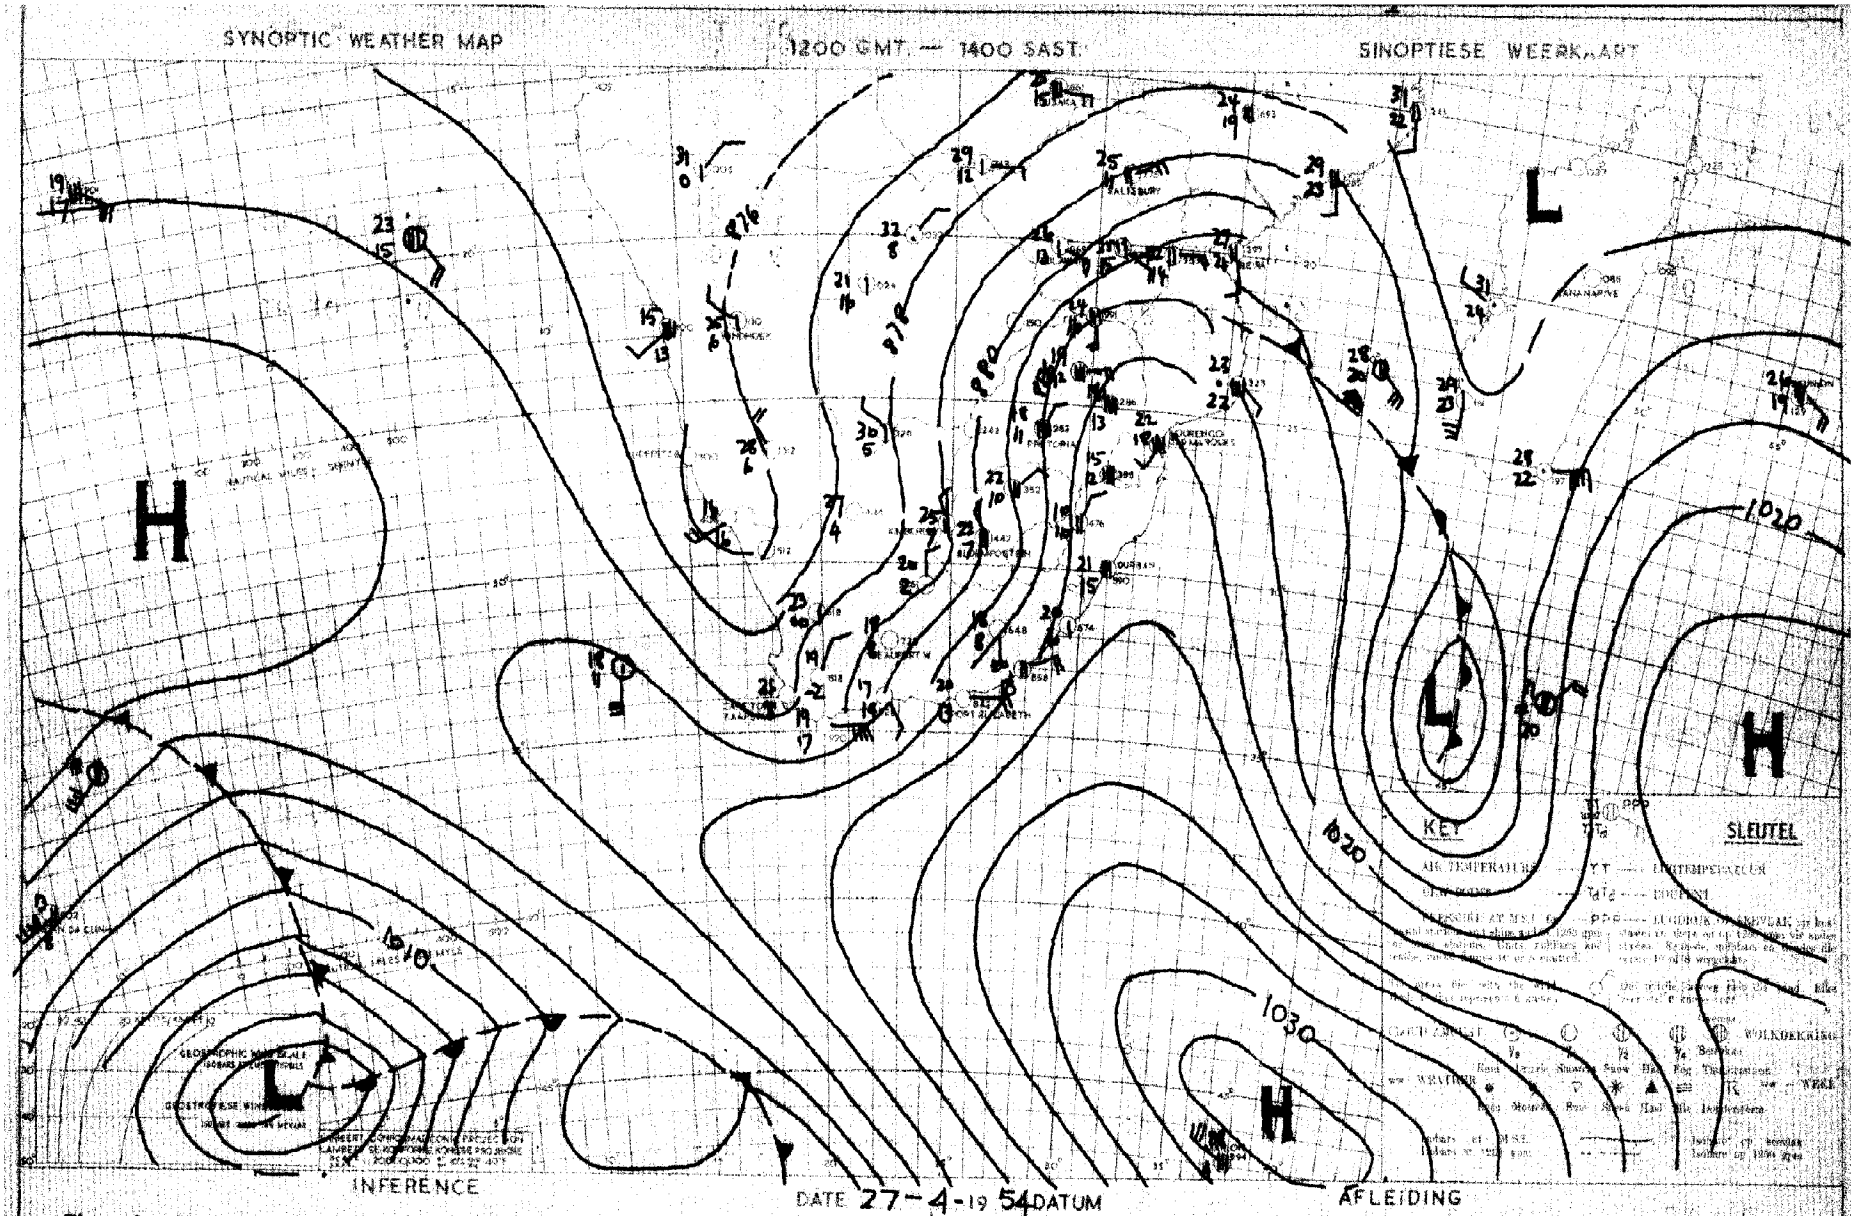
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 27-4-1954 DATUM AFLEIDING

The air flowing over the Transvaal, the northern Free State and Natal from the North is moist and cloudy rainy conditions will persist over these areas at first. Elsewhere over the Union it will however be mainly fine.

Die lug wat uit die noorde oor Transvaal, Noord Vrystaat en Natal beweeg is vogtig en bewolkte weer met reën sal aanvanklik oor hierdie dele voortduur. Elders oor die Unie sal dit egter meestal mooiweer wees.

INFERENCE

DATE 28 - 4 - 1954 DATUM

AFLEIDING

Air containing a moderate amount of moisture is flowing southwards over S.W. Africa and Bechuanaland, while cold air is approaching the Union behind a trough southwest of the Cape. The trough should reach the west coast tomorrow and convergence in the continental air will cause cloud development and thunder conditions over interior Cape and S.W. Free State.

Lug bevattende 'n matige hoeveelheid vog beweeg suidwaarts oor S.W.-Afrika en Betsjoeanaland, terwyl koue lug die Unie uit die suidweste nader agter 'n trog wat suidwes van die Kaap gelee is. Die trog sal môre die weskus bereik en Konvergensie in die Kontinentale lug sal wolke en donderweerstoestande skep oor die Kaapse binneland en S.W. Vrystaat.

The cold front will move over the southwest Cape and showers will occur. In the warmer air to the east of the front thundershowers will develop over the eastern half of the Cape and over Southern Freestate.

Die kouefront sal oor Suidwes Kaapland beweeg en buie sal voorkom. In die warmer lug na die ooste sal donderbuie ontwikkel oor die Oostelike helfte van die Kaapprovinsie en oor Suidelike Vrystaat.

INFERENCE

DATE 1-5-1954 DATUM

Cool dry air is spreading over the Union behind a cold front and the unsettled rainy weather is expected to clear, but with the passage of a series of waves to the South of the Union cloudy and unsettled weather is likely to recur over the South-western Cape.

AFLEIDING

Koel droëlug beweeg oor die Unie agter 'n kouefront en dit word verwag dat ongestadige reënweer daarmee sal ooptrek. Aangesien 'n reeks golwe egter suid van die Unie sal verby beweeg sal bewolkte ongestadigde toestande weer oor Suidwes Kaapland ontwikkel.

INFERENCE

DATE 2-5-1954 DATUM

The moist air and cloud of the previous day was displaced over all provinces by dry, cool air from the Southwest. Upper winds are fresh Southwesterly and the dry air will penetrate the Rhodesias. Warmer moister air has, however, extended to Southwestern Cape and with fresh zonal circulation it should remain cloudy over Southwestern Cape and fine over the remainder of the Union.

AFLEIDING

Die vogtige lug en wolke van die vorige dag is verdring deur droë, koel lug uit die Suidweste oor al vier provinsies. Die bowinde is sterk Suidwestelik en die droë lug behoort ook oor Rhodesië te stroom. Vogtiger, warmer lug het egter die Kaapse suidweskus bereik en met 'n sonale sirkulasie sal dit bewolk bly langs die suidweskus en mooiweer oor die res van die Unie.

INFERENCE

DATE 3 - 5 - 1954 DATUM

AFLEIDING

With the anticyclone dominating the circulation it will be mainly fine over the Union except over the Southwest Cape coast where it will be cloudy at times. The nights will be cold over the interior, but day temperatures will recover rapidly.

Met die antisikloniese sirkulasie sal dit oor die Unie meestal mooiweer wees uitgesonderd die Suidwes Kaapse kusstreke waar dit by tye bewolk sal wees. Die nagte oor die binneland sal koud wees maar dagtemperature sal vinnig herstel.

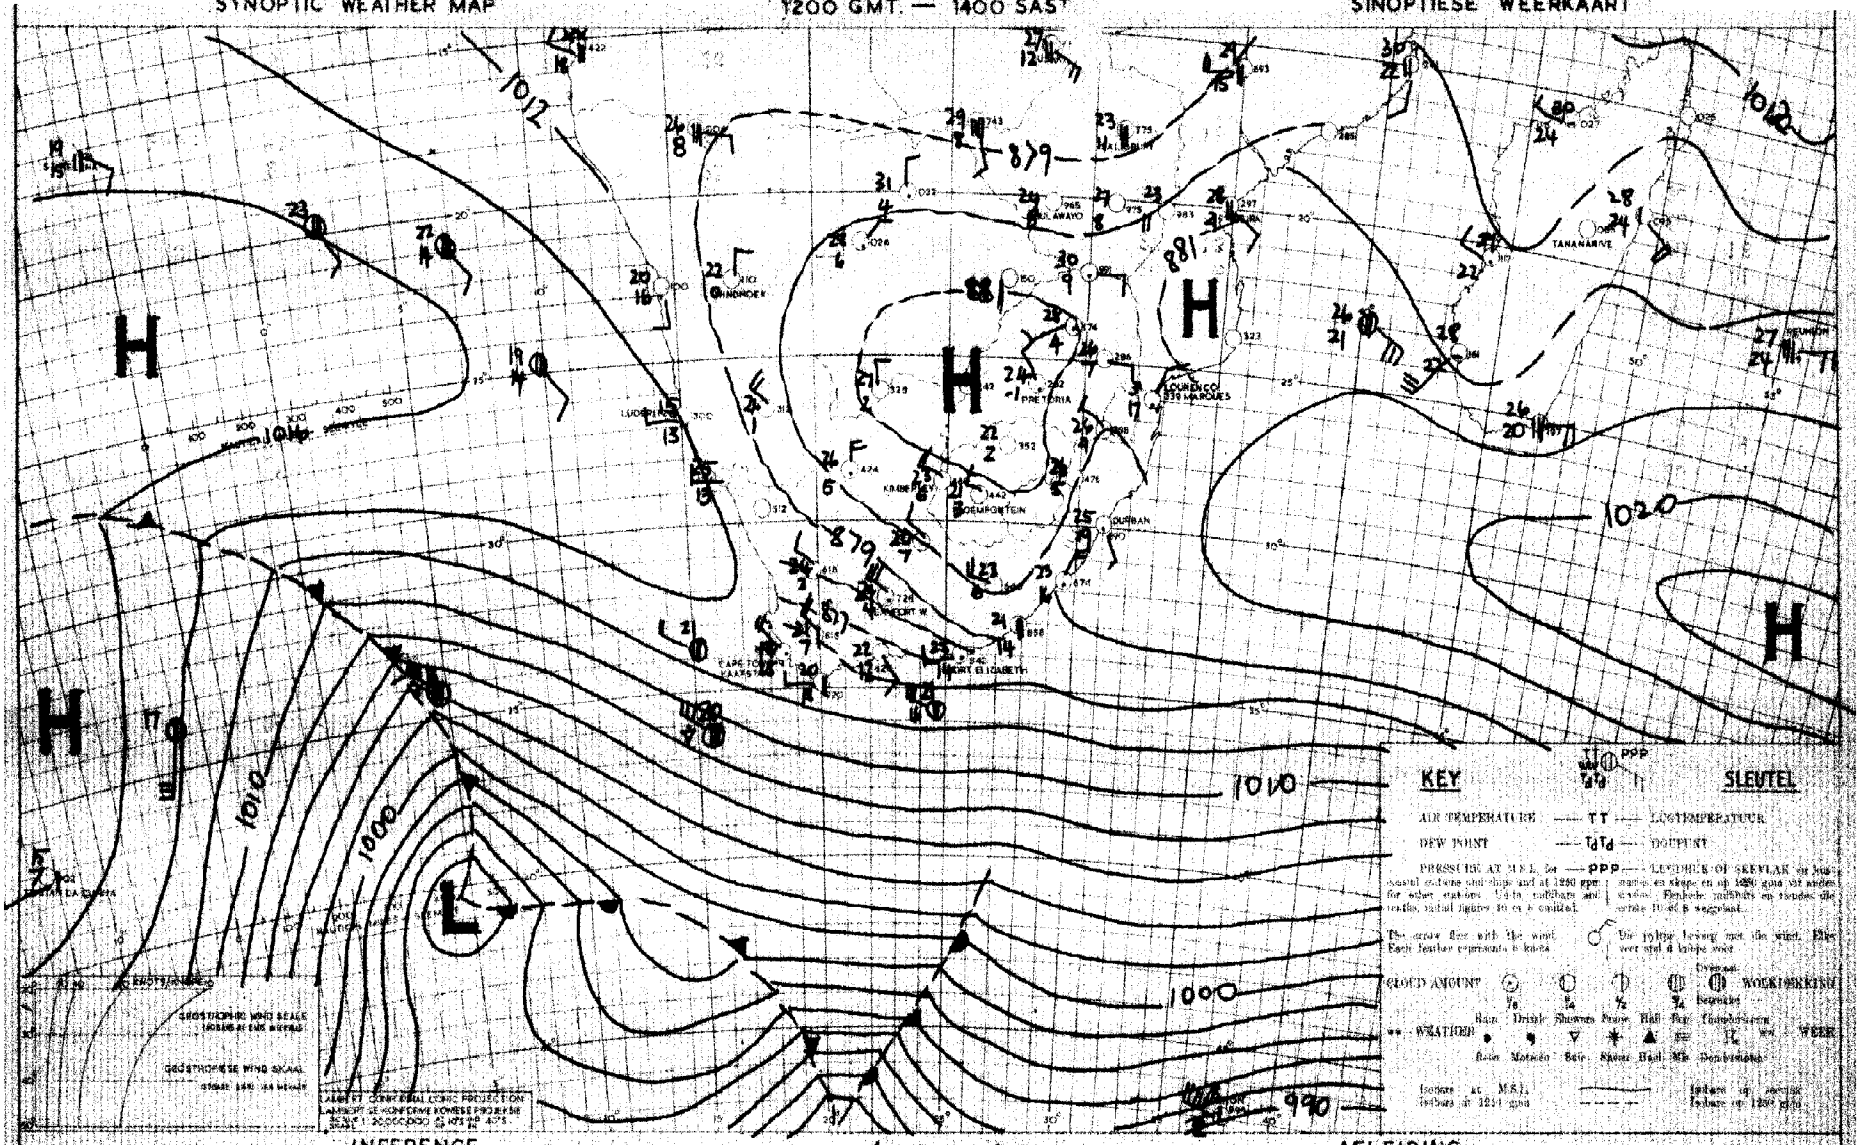
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST — SINOPTIESE WEERKAART



INFERENCE — DATE 4-5-1954 DATUM — AFLEIDING

The circulation is anticyclonic at all levels over the Union. A trough with an associated cold front is approaching midway between the Cape and Tristan and cloudy conditions will develop along the southwest coast but otherwise no change is likely.

Die sirkulasie is antisiklonies op alle hoogtes oor die Unie. 'n Trog vergesel van 'n Koue front nader halfpad tussen Tristan en die Kaap, maar afgesien van bewolkte weer langs die suidwestkus is geen verandering te verwagte oor die Unie nie.

INFERENCE

Cooler air is approaching the Southwestern Cape coastal districts from the west and temporary rainy weather will occur over these areas tomorrow. Over the remainder of the Union the dry anti-cyclonic air circulation will continue resulting in further fine weather conditions.

AFLEIDING

Koeler lug nader die Suidwestelike kusdistrikte van Kaapland en reënagtige weer van tydelike aard sal môre oor hierdie streke voorkom. Oor die res van die Unie sal droë anti-sikloniese lugstromings voortduur met die gevolg dat die mooiweerstoestande sal aanhou.

DATE 6 - 5 - 1954 DATUM

AFLEIDING

The "Atlantic" anticyclone is extending Eastwards along the Cape south and east coasts and the resultant onshore circulation will bring cooler cloudy weather to Natal and the eastern Transvaal and it will remain cloudy at first with drizzle along the eastern Cape coasts.

Die "Atlantiese" antisikloon brei ooswaarts langs die Kaapse suid- en ooskusstreke uit en die landwaartse sirkulasie wat daarop volg sal koeler bewolkte toestande na Natal en Oos Transvaal invoer. Dit sal ook aanvanklik oor die Oos Kaapse kusstreke bewolk bly met motreën.

INFERENCE

DATE 7 – 5 – 1954 DATUM

AFLEIDING

Cooler air is travelling coastwise towards the Transvaal where cloudy to overcast conditions will develop in the morning. Pressures are falling rapidly in the rear of the high and the weather will clear over the Eastern Cape Province and Natal. Elsewhere it will remain fair to fine.

Koeler lug wat kusgewyse langs die oostelike lunie beweeg nader die Transvaal en betrokke tot bewolkte toestande sal in die oggend oor hierdie Provinsie ontwikkel. Die lugdruk agter die hoog toon sterk dalende neigings en die weer oor Oos-Kaapland en Natal sal spoedig opklaar. Elders sal dit hoofsaaklik mooiweer bly.

Rapidly falling pressures over the Western Cape have caused Northly to Northwesterly winds to freshen. Moister air will thus be carried across the Cape interior and Southern Free State, where showers will be likely later. The cold front approaching from the West will bring cloudy and showery weather to the south eastern and Southern Cape coasts.

Vinnig dalende drukke oor Wes Kaapland het die Noordelike tot noordwestelike wind sterker laat waai. Vogtiger lug sal dus oor die Kaapse binneland en suidelike Vry Staat stroom en buie sal later oor hierdie dele uitsak. Die kouefront, wat die Unie uit die weste nader sal bewolkte weer met buie na die Kaapse suidwestelike en suidelike kusstreke bring.

The cooler air behind the cold front will move over the south-western and southern Cape. Light showers will occur. Isolated showers will also develop over the eastern half of the Cape Province and over the southern Free State in the warmer, humid air.

Die koeler lug agter die koue front, sal oor suidwes en suid Kaapland beweeg en ligte reën sal uitsak. Los buie sal ook voorkom oor die oostelike helfte van die Kaapprovinsie en oor die suid Vrystaat in die warmer vogtige lug.

INFERENCE

DATE 10-5-1954 DATUM

AFLEIDING

The anticyclone west of the Cape is weakening and will have little effect on the weather. Dry westerly upper winds over the Cape will maintain fine weather over western Cape, but elsewhere there will still be sufficient moisture left to cause cloud development in the afternoon.

Die antisiklone wes van die Kaap verswak geleidelik en sal min invloed op die weer uitoefen. Droë westelike bowinde oor die Kaap sal mooiweer laat voortduur oor westelike Kaapprovinsie, maar elders oor die Unie is die lug vogtig genoeg om aanleiding tot wolkontwikkeling in die namiddag te gee.

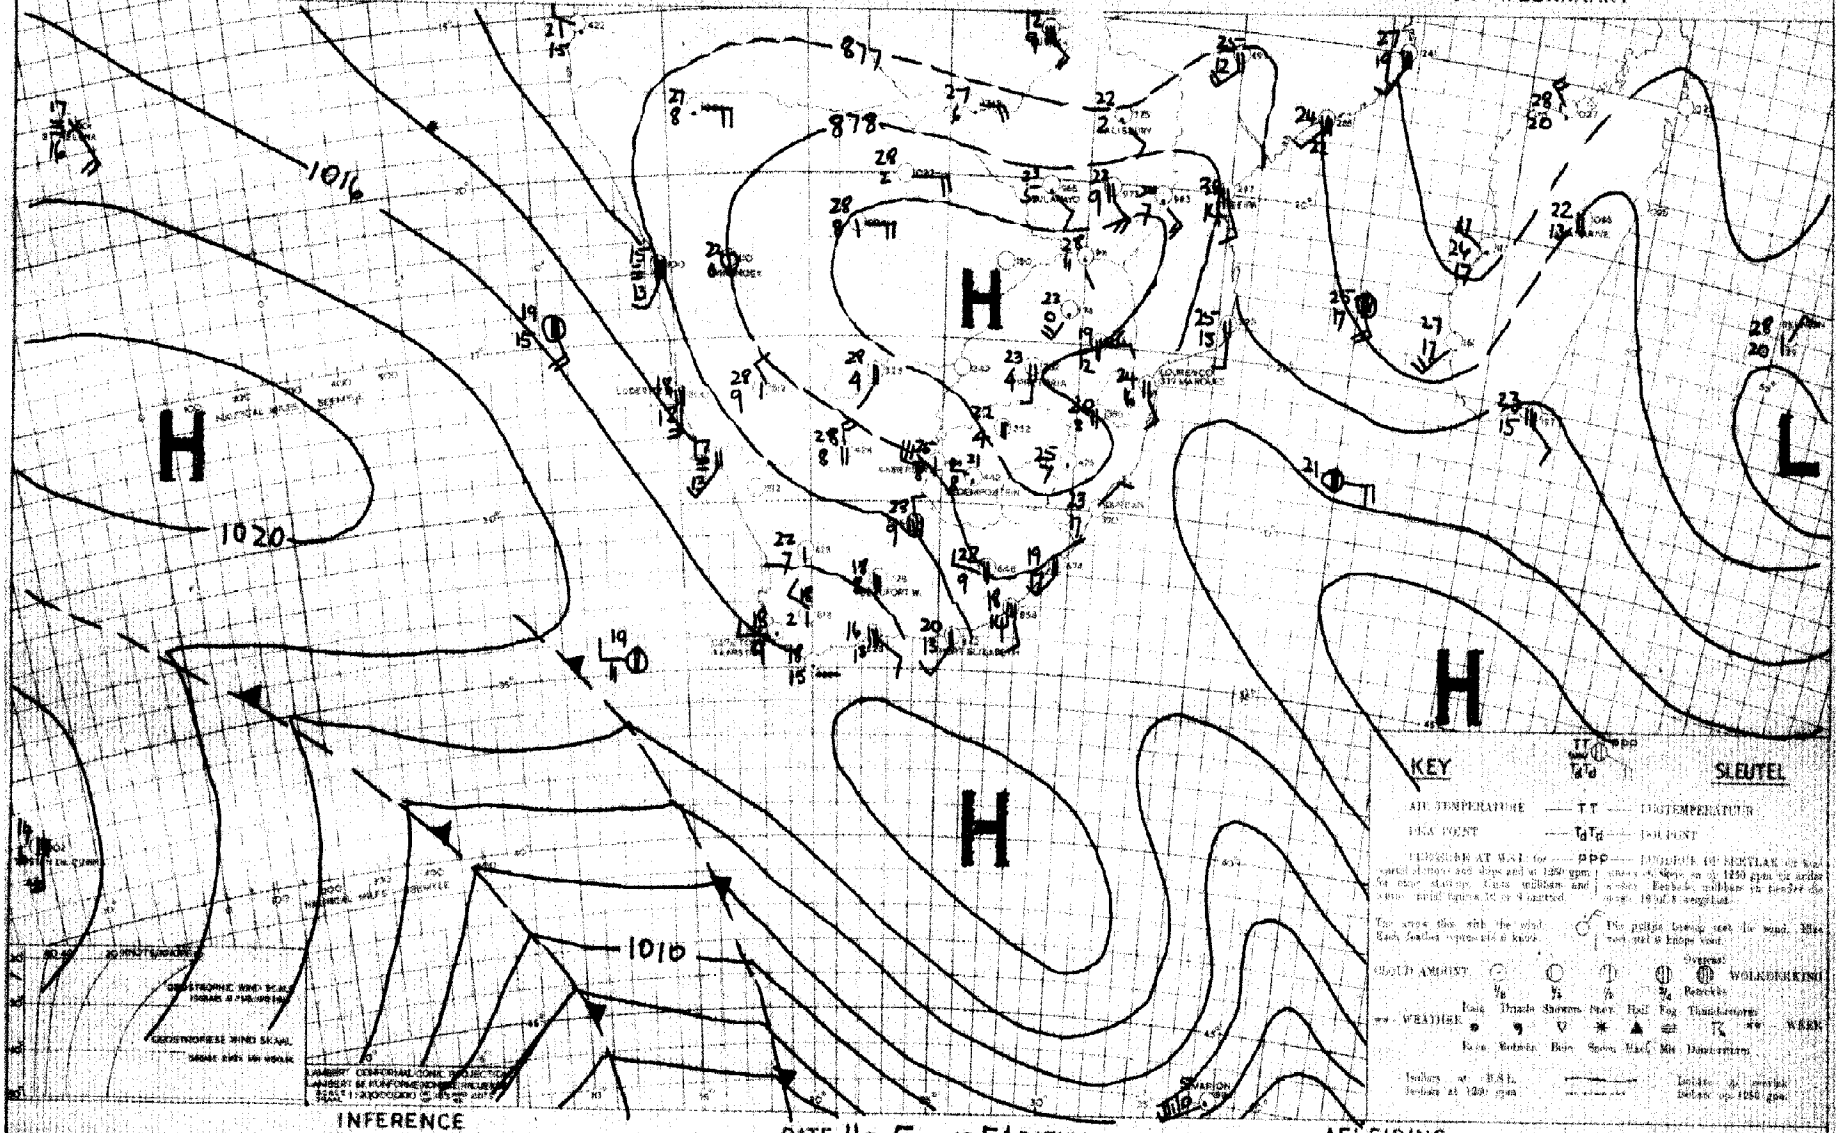
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAS SINOPTIESE WEERKAART



DATE 11 - 5 - 1954 DATUM

Pressure gradients will become stronger over the the western Union and winds will freshen. The cold fronts over the Atlantic are weak and will have liftle effect on the weather of the Union.

Lugdruk-gradiënte sal sterker word oor die weste like Unie en gevolglik sterker winde begin waai. Die koue-fronte oor die Atlantiese Oseaan is swak en sal min uitwerking op die weer van die Unie hê.

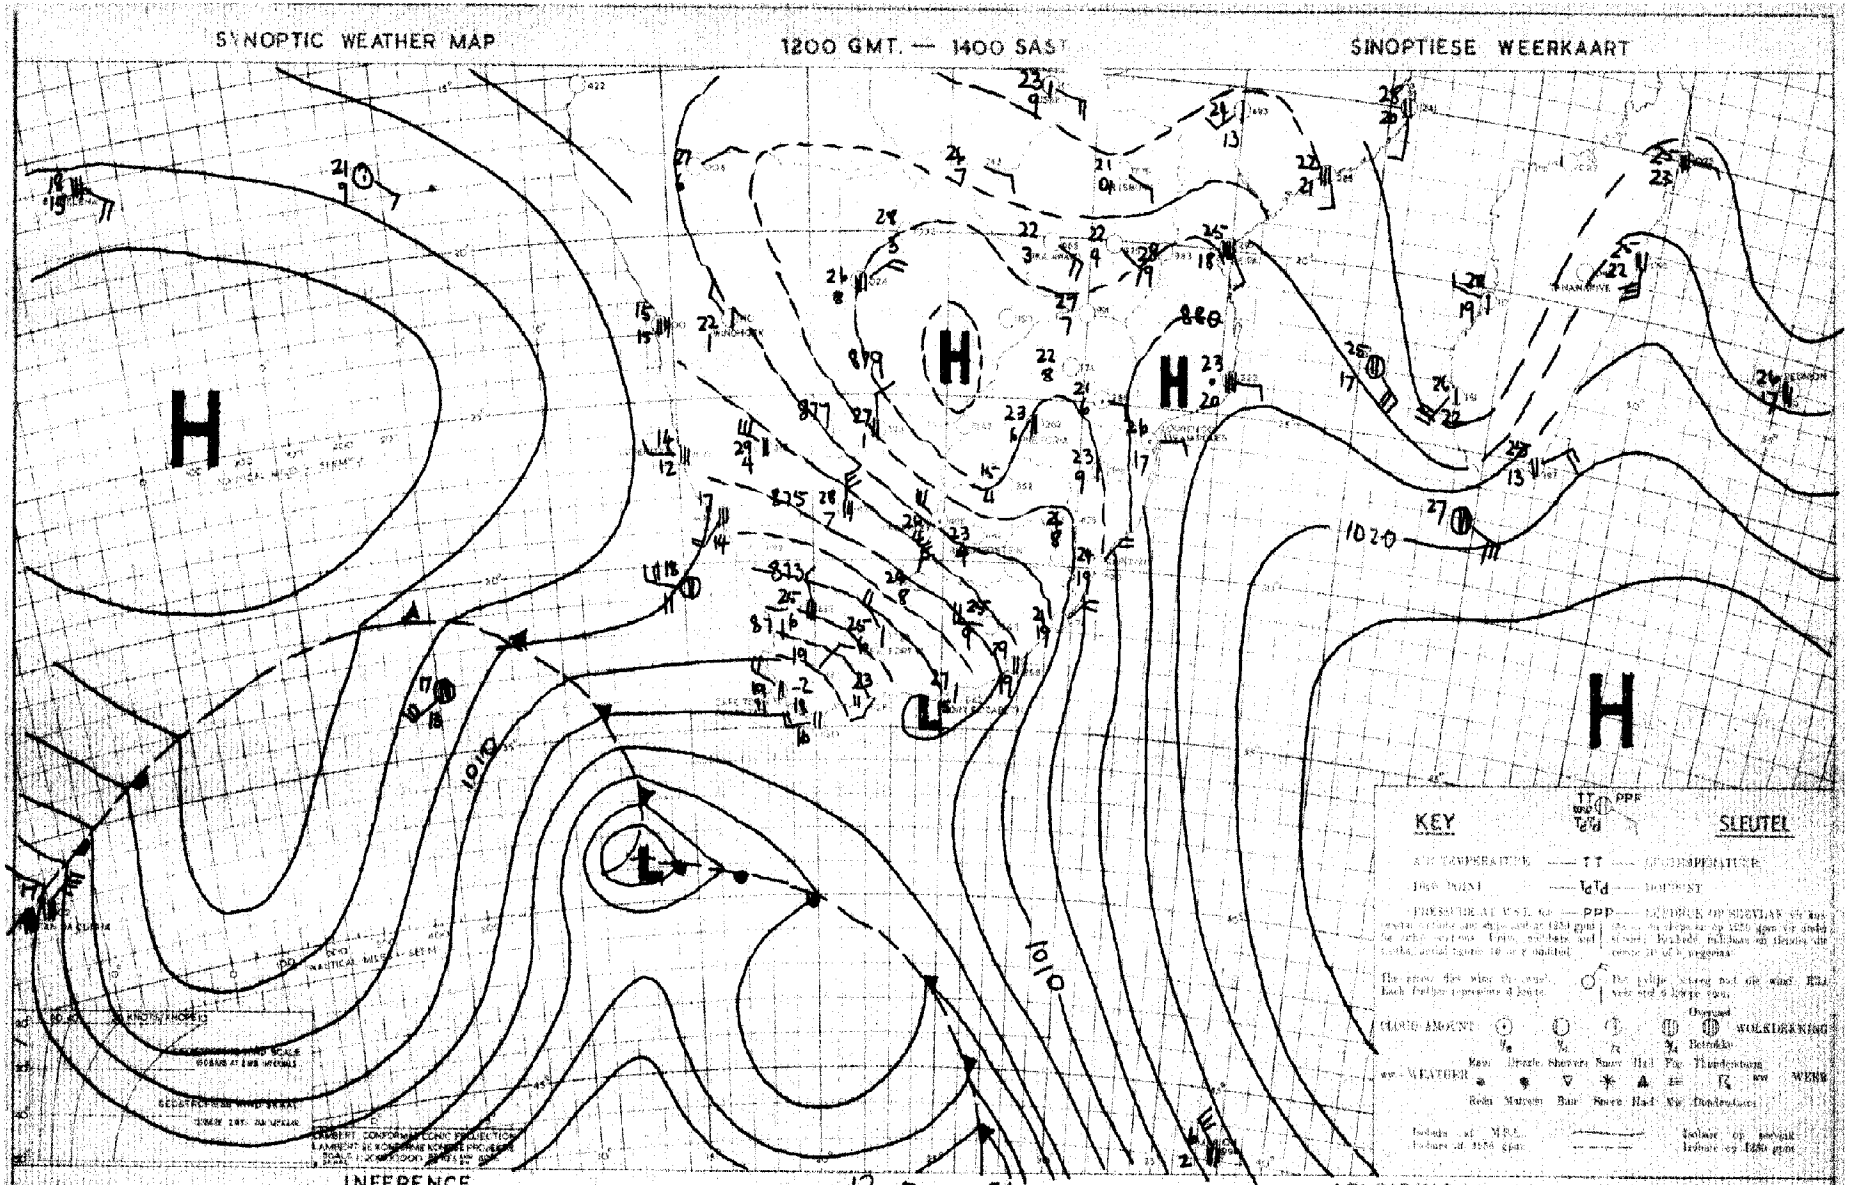
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST SINOPTIESE WEERKAART



DATE 12-5-1954 DATUM

INFERENCE

Pressures over the Western Cape are falling shaply as the cold front approaches and it is expected that cool unsettled weather with rain and showers will reach the southwestern and Western Cape, tonight, spreading afterwards over most of the remainder of the province. Over the northern provinces there will be little change.

AFLEIDING

Met die nadering van die kouefront daal die drukke oor Wes Kaapland vinnig en dit word verwag dat koel ongestadigde weerstoestande, met reën en buie, vannag Wes Kaapland sal bereik en later sal hierdie toestande oor bykans die hele provinsie uitbreid. Oor die noordelike provinsies sal daar min verandering wees.

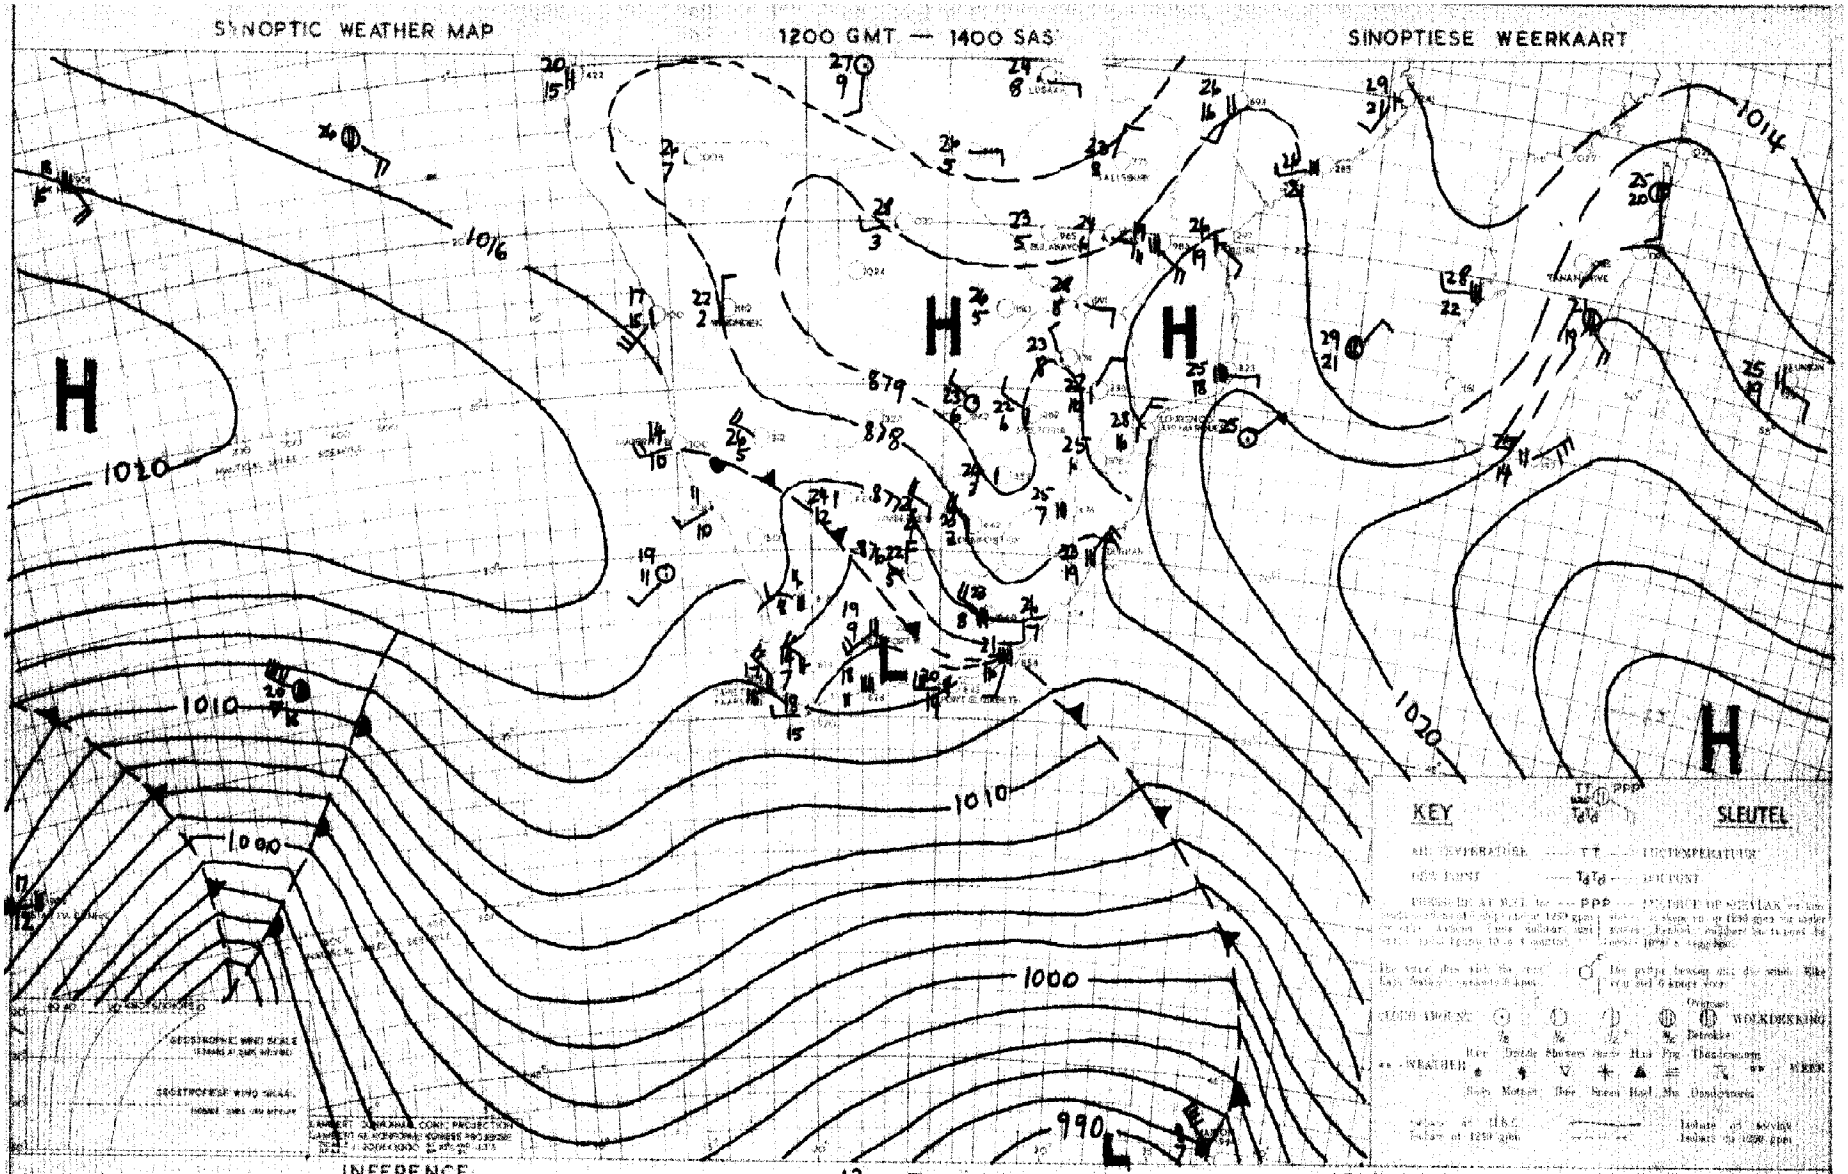
SYNOPTIC WEATHER MAP 1200 GMT — 1400 SAS SINOPTIESE WEERKAART



INFERENCE DATE 13 - 5 - 1954 DATUM AFLEIDING

With pressure falling in advance of the trough east of Tristan, the circulation will become mainly northwesterly over the Union and the cool air over western Cape will be displaced southwards. Slight amounts of middle cloud will develop inland and fog and low clouds will occur along the west coast.

Met dalende druk aan die oostekant van die trog Oos van Tristan sal die wind mêrá meesal noordwestelik wees oor die Unie en die koel lug oor Wes-Kaapland sal suidwaarts verdring word. Geringe hoeveelhede middelwolke sal oor die binneland voorkom en mis en lae wolke sal langs die weskus aanwesig wees.

The weather will become unsettled over the southwestern Cape in advance of the cold front. The warmer continental air will however remain unchanged over the rest of the Union and the wea- will be fair.

Ongestadigde weer sal voorkom oor Suidwes Kaapland voor die koufront. Die warmer kontinentale lug oor die res van die Unie sal onveranderd bly en mooiweerstoestande sal voortduur.

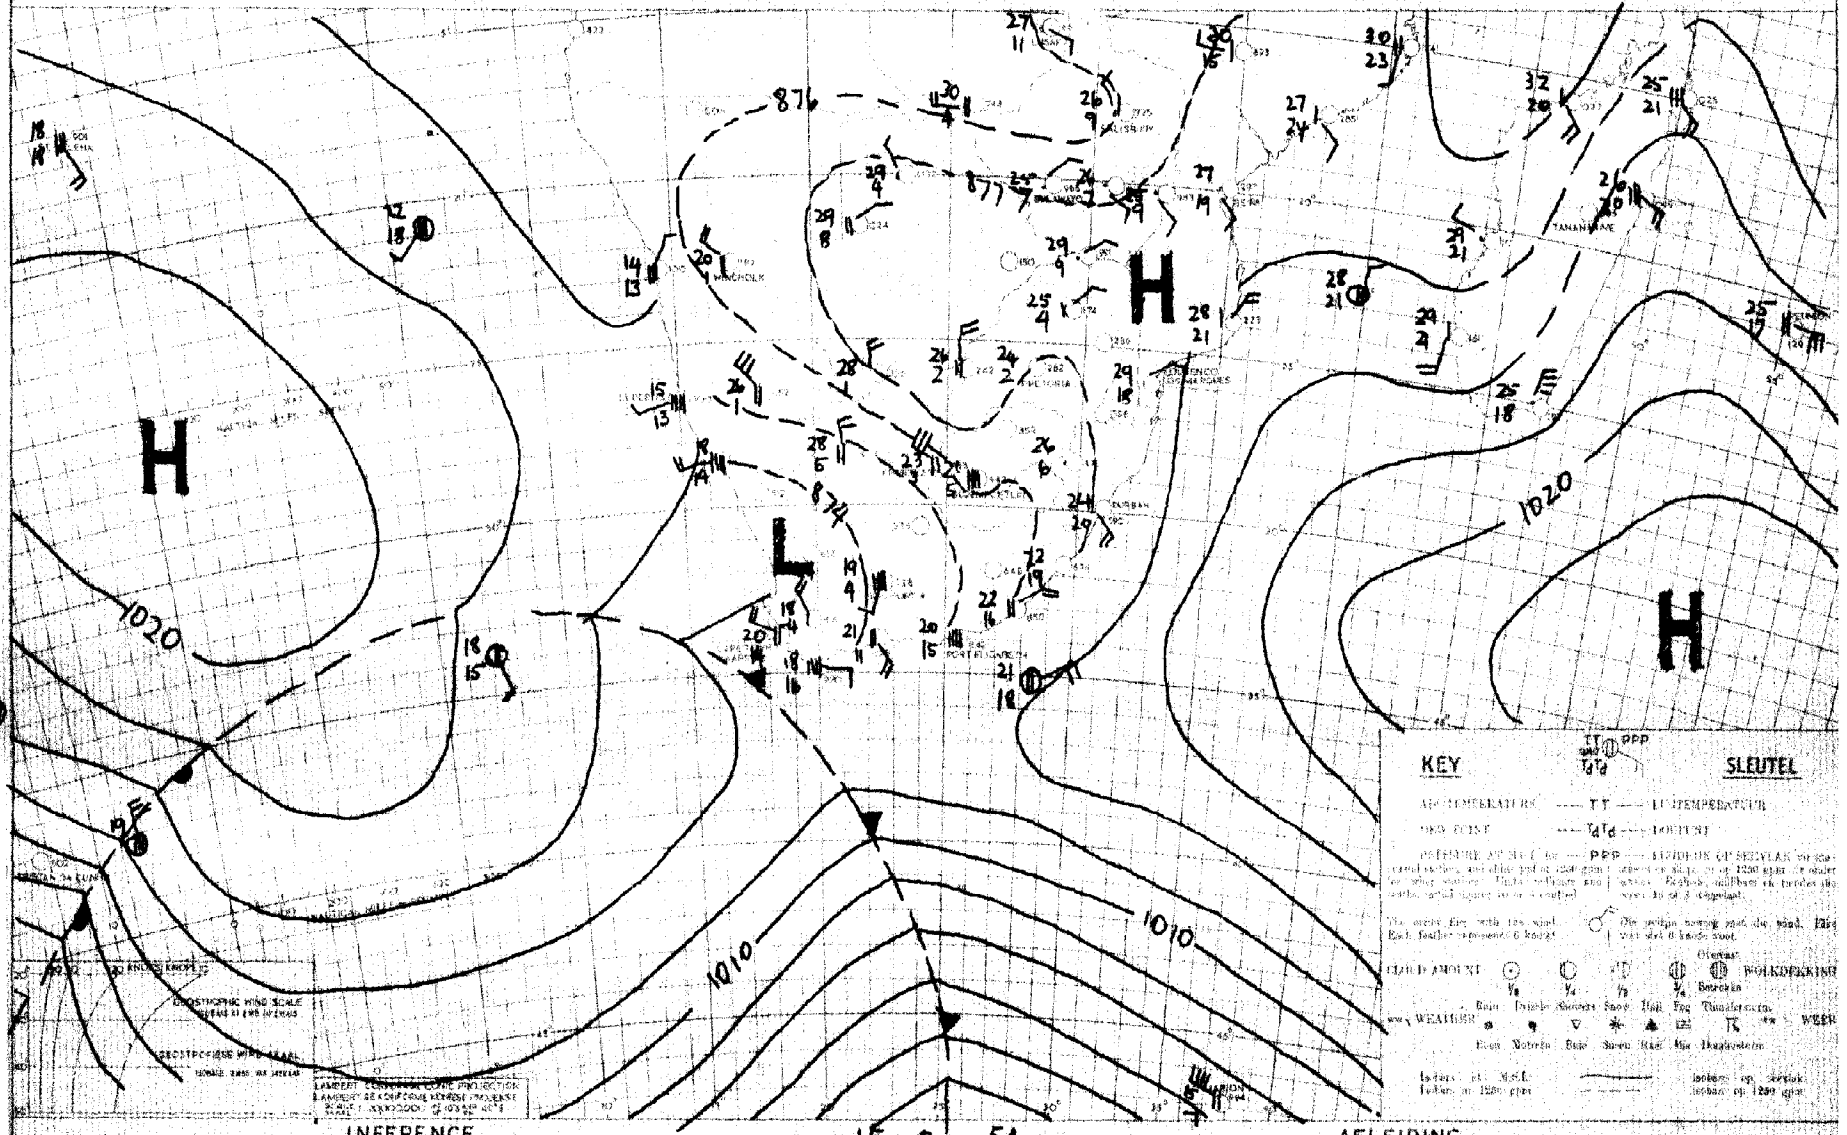
SYNOPTIC WEATHER MAP — 1200 GMT — 1400 SAST — SINOPTIESE WEERKAART



INFERENCE

DATE 15 - 5 - 1954 DATUM

AFLEIDING

A weak ridge is developing along the south coast and it will probably develop into a separate shallow high along the southeast coast tomorrow. Warm continental air is continually circulating over the interior and with the slight blocking action of the expected southeast coast high appreciable amounts of high cloud will develop inland.

'n Swak rug het langs die suidkus verskyn en sal môre waarskynlik 'n afsonderlike vlak hoogdrukstelsel langs die suidooskus vorm. Warm kontinentale lug sirkuleer nog steeds oor die binneland en met die blokkerende invloed van die verwagte hoër druk langs die suidooskus, sal heelwat hoë wolke oor die binneland ontwikkel.

Dit word verwag dat die swak hoogdruksisteem Suid van die Unie vinnig ooswaarts sal verdwyn en dat die drukke in die Weste weer sal daal met die nadering van die laagdrukstelsel uit die weste. Die wind sal daarmee oor die hele Unie noordwes draai en gedeeltelik bewolkte toestande sal oor die binneland heers. Ligte los buie sal moontlik oor Kaapland, Vrystaat, Suidwes Transvaal en later Natal voorkom.

It is expected that the weak Cell of high pressure south of the Union will recede rapidly eastwards and that pressures in the west will fall once again with the approach of a low pressure system from the west. The winds will consequently become NW'ly over the whole of the Union and partly cloudy conditions will prevail over the interior. Light local showers may occur over the Cape Province, the Free State, the Southwestern

INFERENCE

The eastward moving low South of the Cape will increase pressure gradients over the Union and north westerly winds will freshen over the Cape and Free State. Weather will also become unsettled over the Southwest Cape. It will become cooler over the western Union.

DATE 17-5-1954 DATUM

AFLEIDING

As gevolg van die laag Suid van Kaap en wat Ooswaarts beweeg sal lugdruk gradiënte oor die Unie sterker word en taamlike sterk Noordweste winde sal oor Kaapland en die Vrystaat waai. Ongestadigde weer sal ontwikkel oor Suidwes Kaapland. Dit sal koeler word oor die westelike Unie.

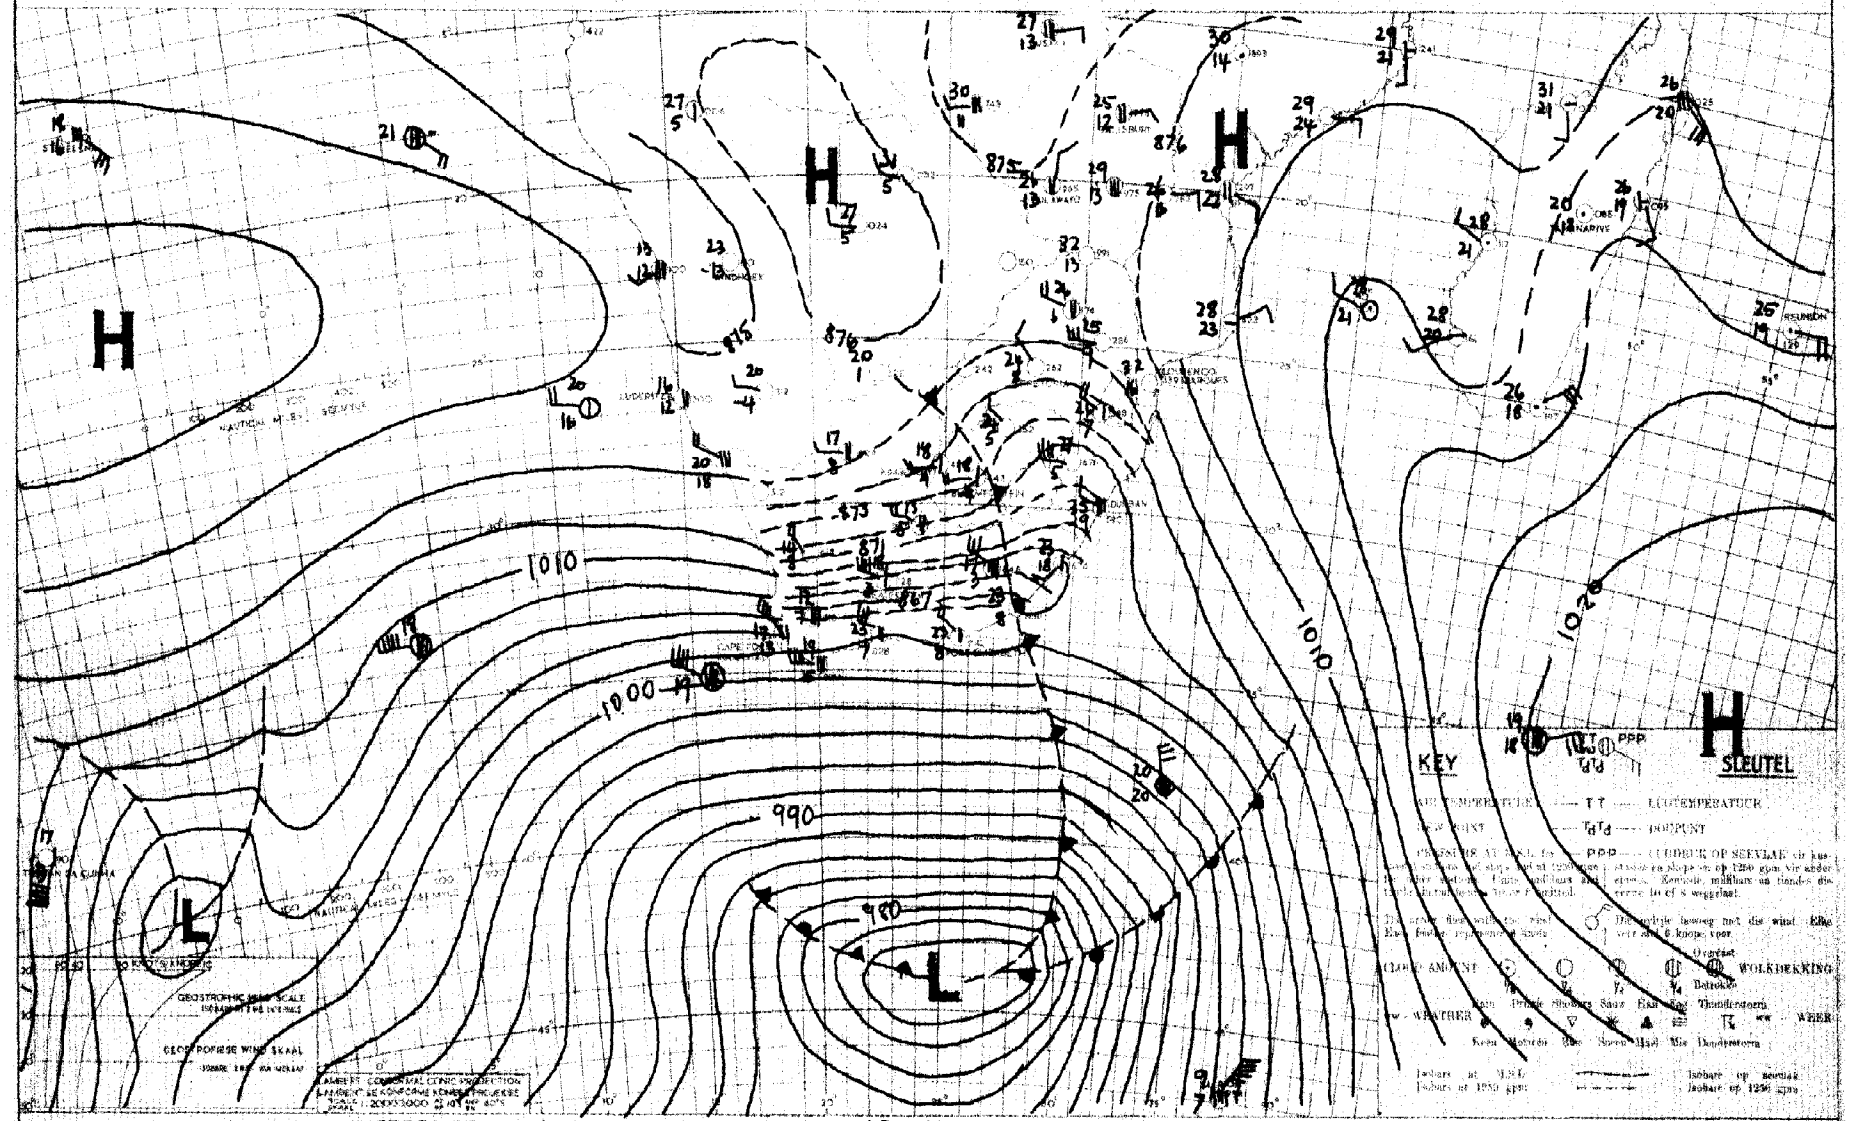
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST SINOPTIESE WEERKAART



DATE 18-5-1954 DATUM

INFERENCE

Although cool air in the rear of the cold front has invaded the Cape Province pressures are not rising over the Western Cape where strong N.W.'ly winds are continuing. It appears therefore that another deep trough of low pressure is developing west of the Cape. Further stormy and unsettled weather with heavy rain is therefore likely over the Southwest Cape with little change at first elsewhere over the Union

AFLEIDING

Alhoewel koel lug agter die kouefront reeds Kaapland oorstroom het styg die drukke nog nie oor Wes Kaapland nie en die wind bly sterk N.W.'lik. Dit wil dus voorkom dat 'n diep trog van lae druk Wes van die Kaap ontwikkel. Voortdurende stormagtige en ongestadigde toestande met swaar reën is dus waarskynlik oor Wes Kaapland en daar sal vireers min verandering elders oor die Unie wees

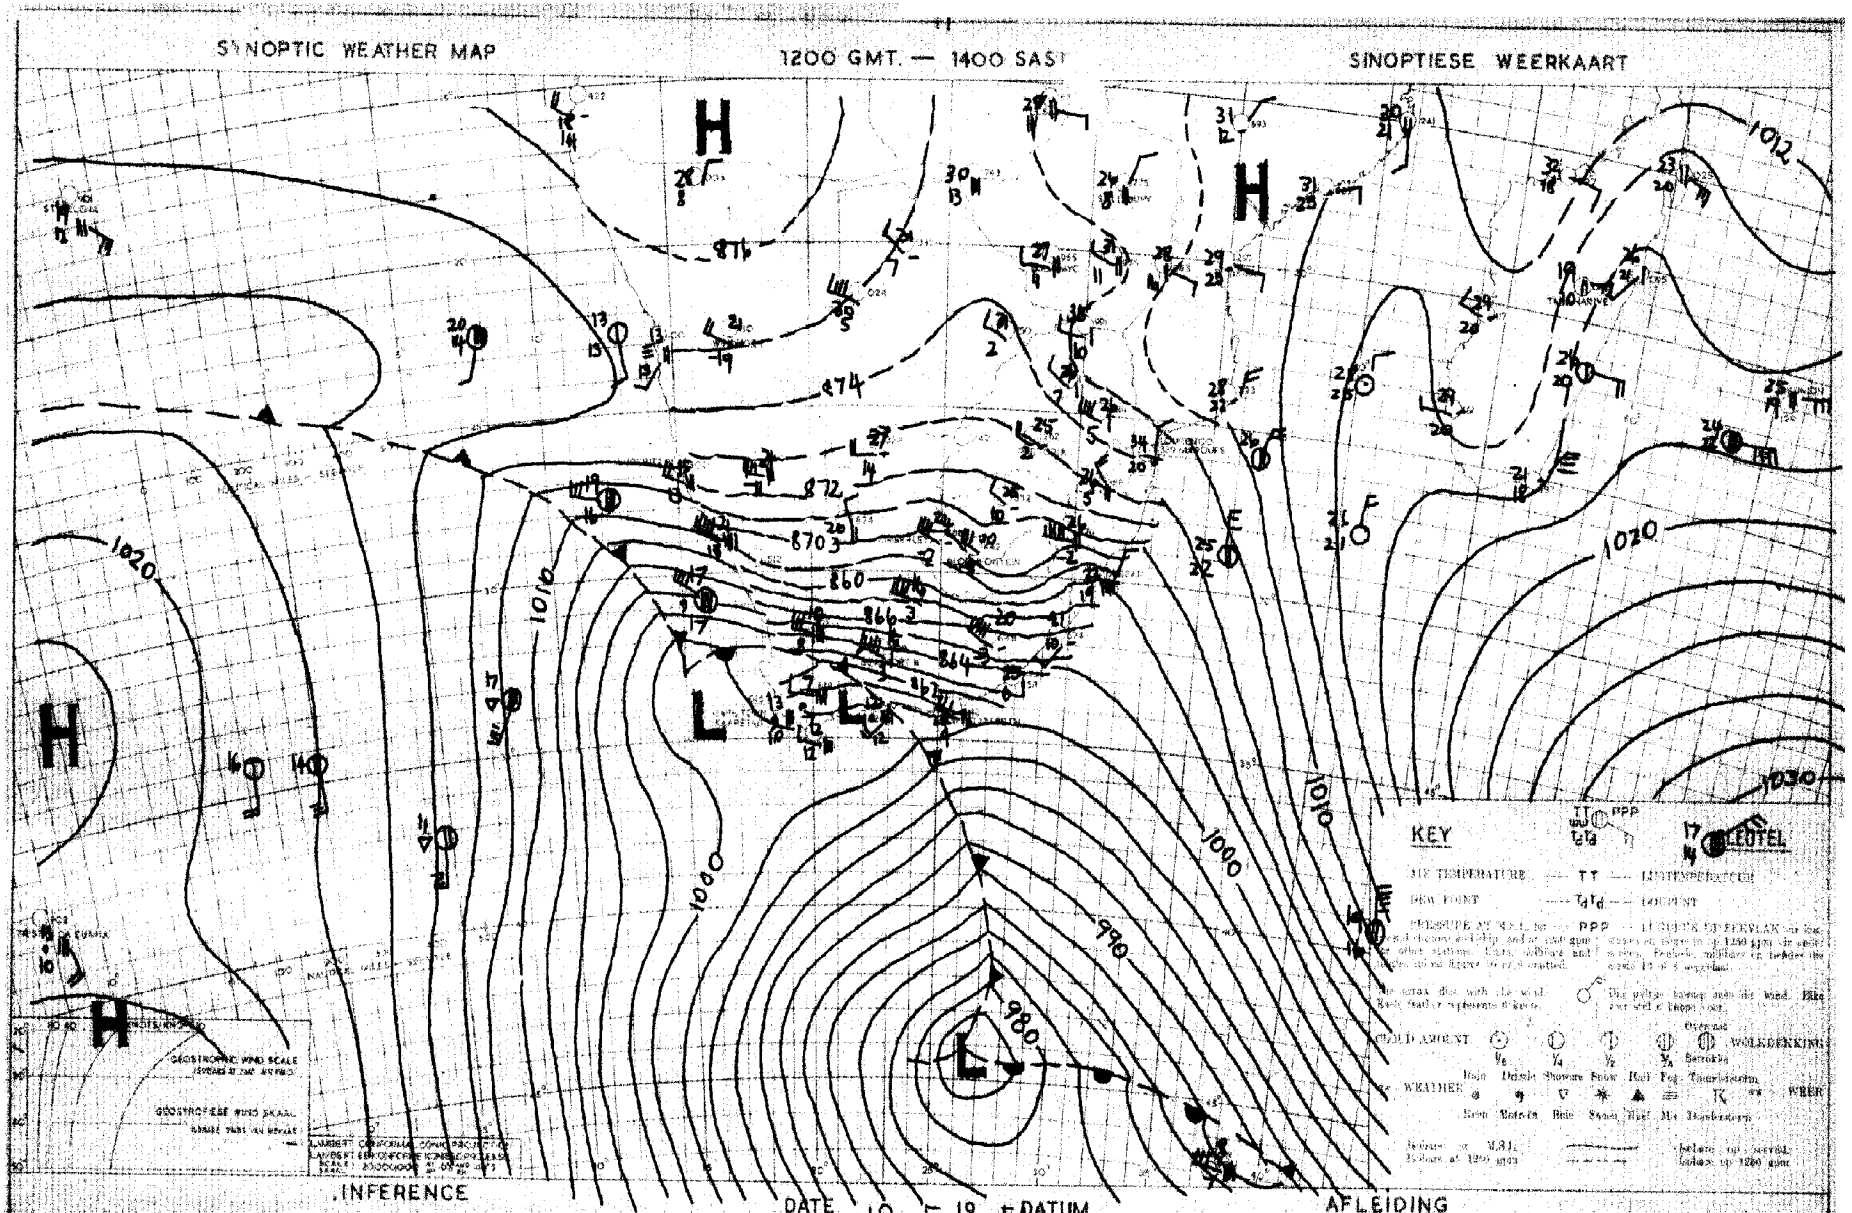
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST — SINOPTIESE WEERKAART



INFERENCE

With high pressure at Tristan and an extensive Southerly current between Tristan and the Union, cold air will now finally invade the Union and the long spell of Westerly wind will be terminated. A wave just off the west coast will penetrate the Cape Province and temporary unsettled weather will continue over Western and Southern Cape, but it will be fine and warm over Natal, Transvaal and the Free State.

DATE 19-5-19 DATUM

AFLEIDING

Met die hoë druk by Tristan en 'n uitgestrekte suidelike lugstroom tussen Tristan en die Kaap sal die lang tydperk van Westewind nou beëindig word en koue lug sal nou finaal die Unie uit die Suide oorstroom. 'n Golf net Wes van die Kaap sal Ooswaarts beweeg en tydelike ongestadige weer oor Wes- en Suid-Kaapland veroorsaak. Dit sal môre egter nog mooiweer en warm wees oor Transvaal, Natal en die Vrystaat.

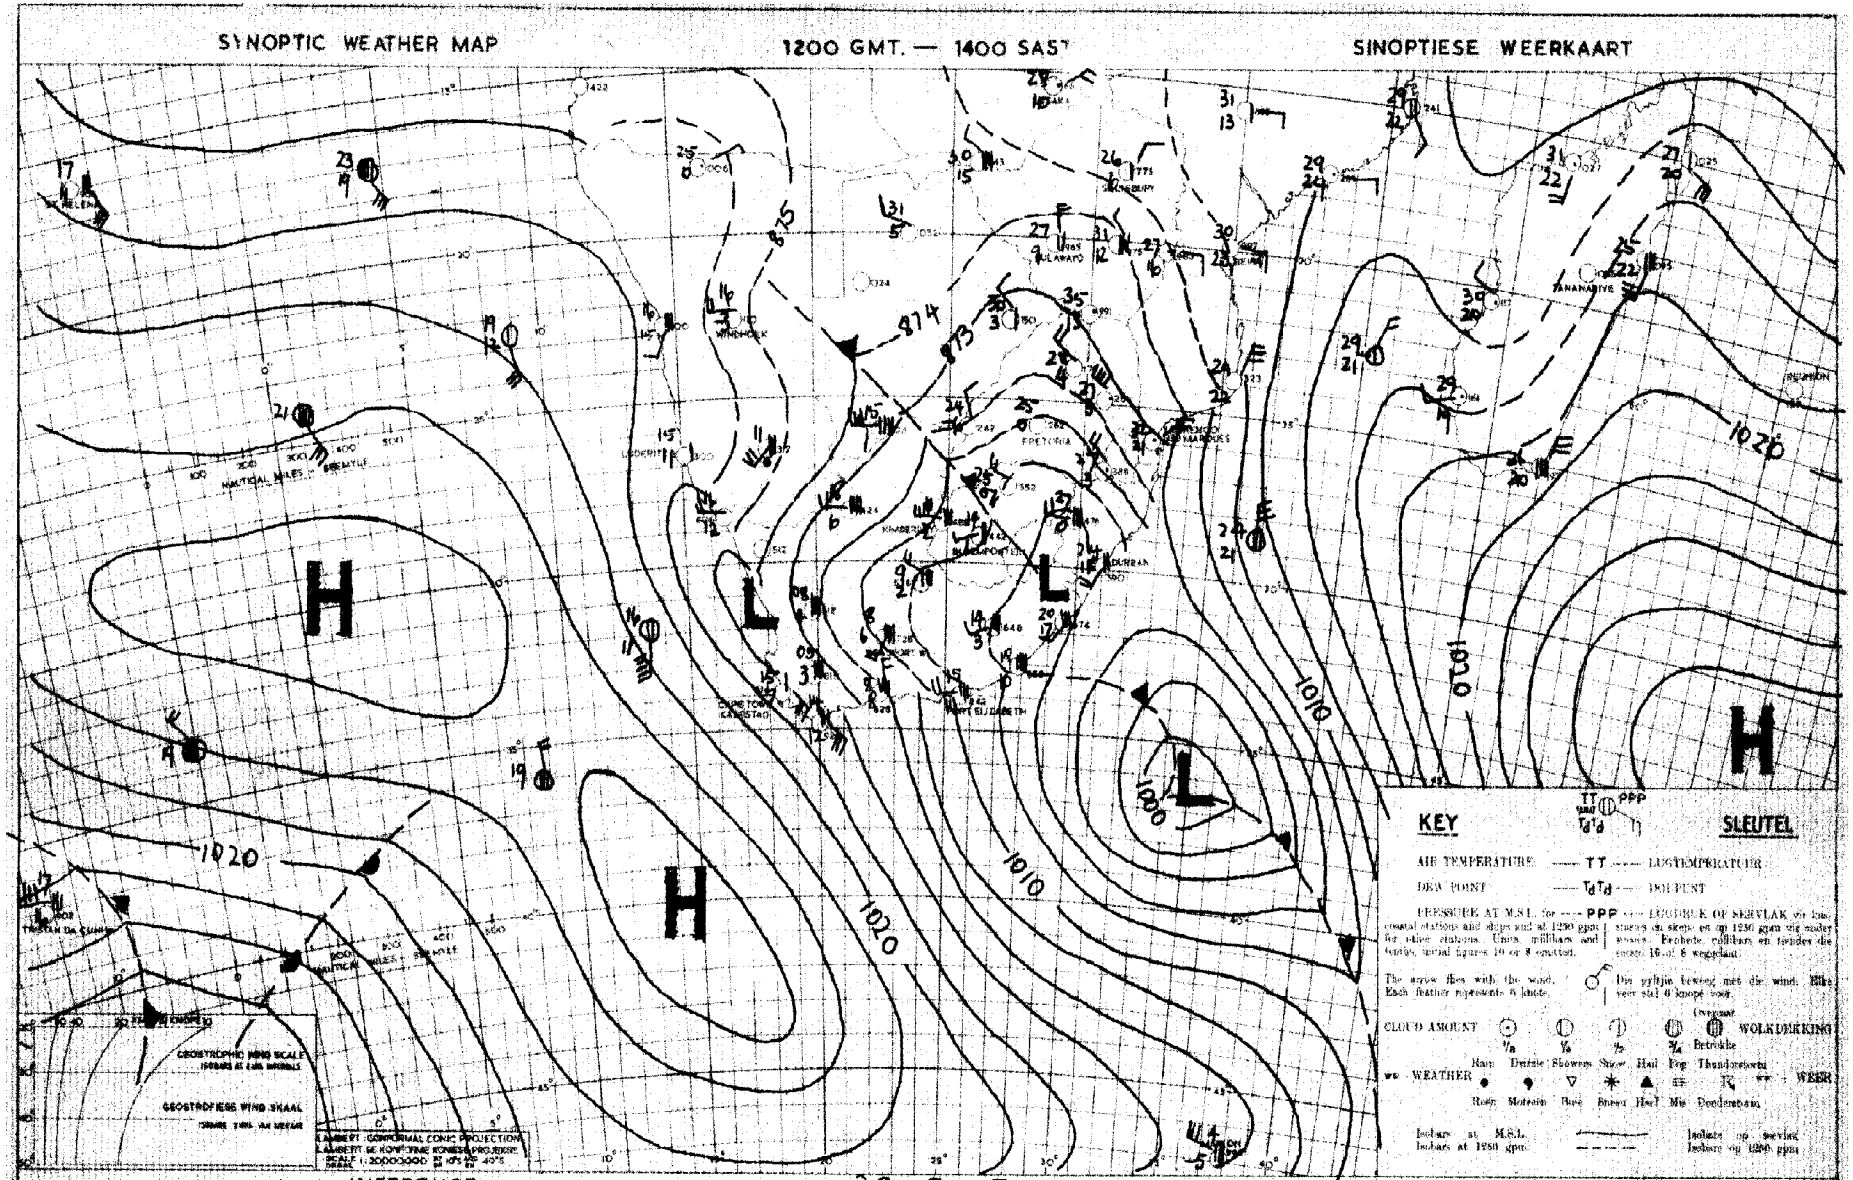
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST SINOPTIESE WEERKAART



INFERENCE

DATE 20-5-1954 DATUM

AFLEIDING

The ridge of High pressure which extends from Marion northwestwards will move eastwards increasing pressure over the south coast. The colder air over the Cape Province will move further northeastwards over the Free State and southern Transvaal and cloudy weather with local showers will develop in advance.

Die rig van hoë lugdruk wat van Marion noordweswaarts strek, sal ooswaarts beweeg en drukke sal styg oor die suidelike kuslyn. Die kouer lug oor Kaapland sal verder noordooswaarts oor die Vrystaat en suid Transvaal beweeg en dit sal voorafgegaan word deur bewolkte weer en plaaslike buie.

It is expected that the low pressure systems over the eastern Union and off the East coast will disappear eastwards which will allow cold air from the Southwest and South to overrun the whole Union. It will remain cloudy and unsettled at first over Natal, the Transkei and the eastern Transvaal but otherwise it will be fine and cold.

Dit word verwag dat die laagdruksisteme oor die oostelike Unie en aan die Ooskus ooswaarts sal verdwyn en dit sal toelaat dat die hele Unie deur koue lug uit die Suidweste en Suide oorstroom word. Aanvanklik sal dit oor Natal, die Transkei en Oos Transvaal bewolk en ongestadig bly, maar origens sal dit mooiweer en koud wees.

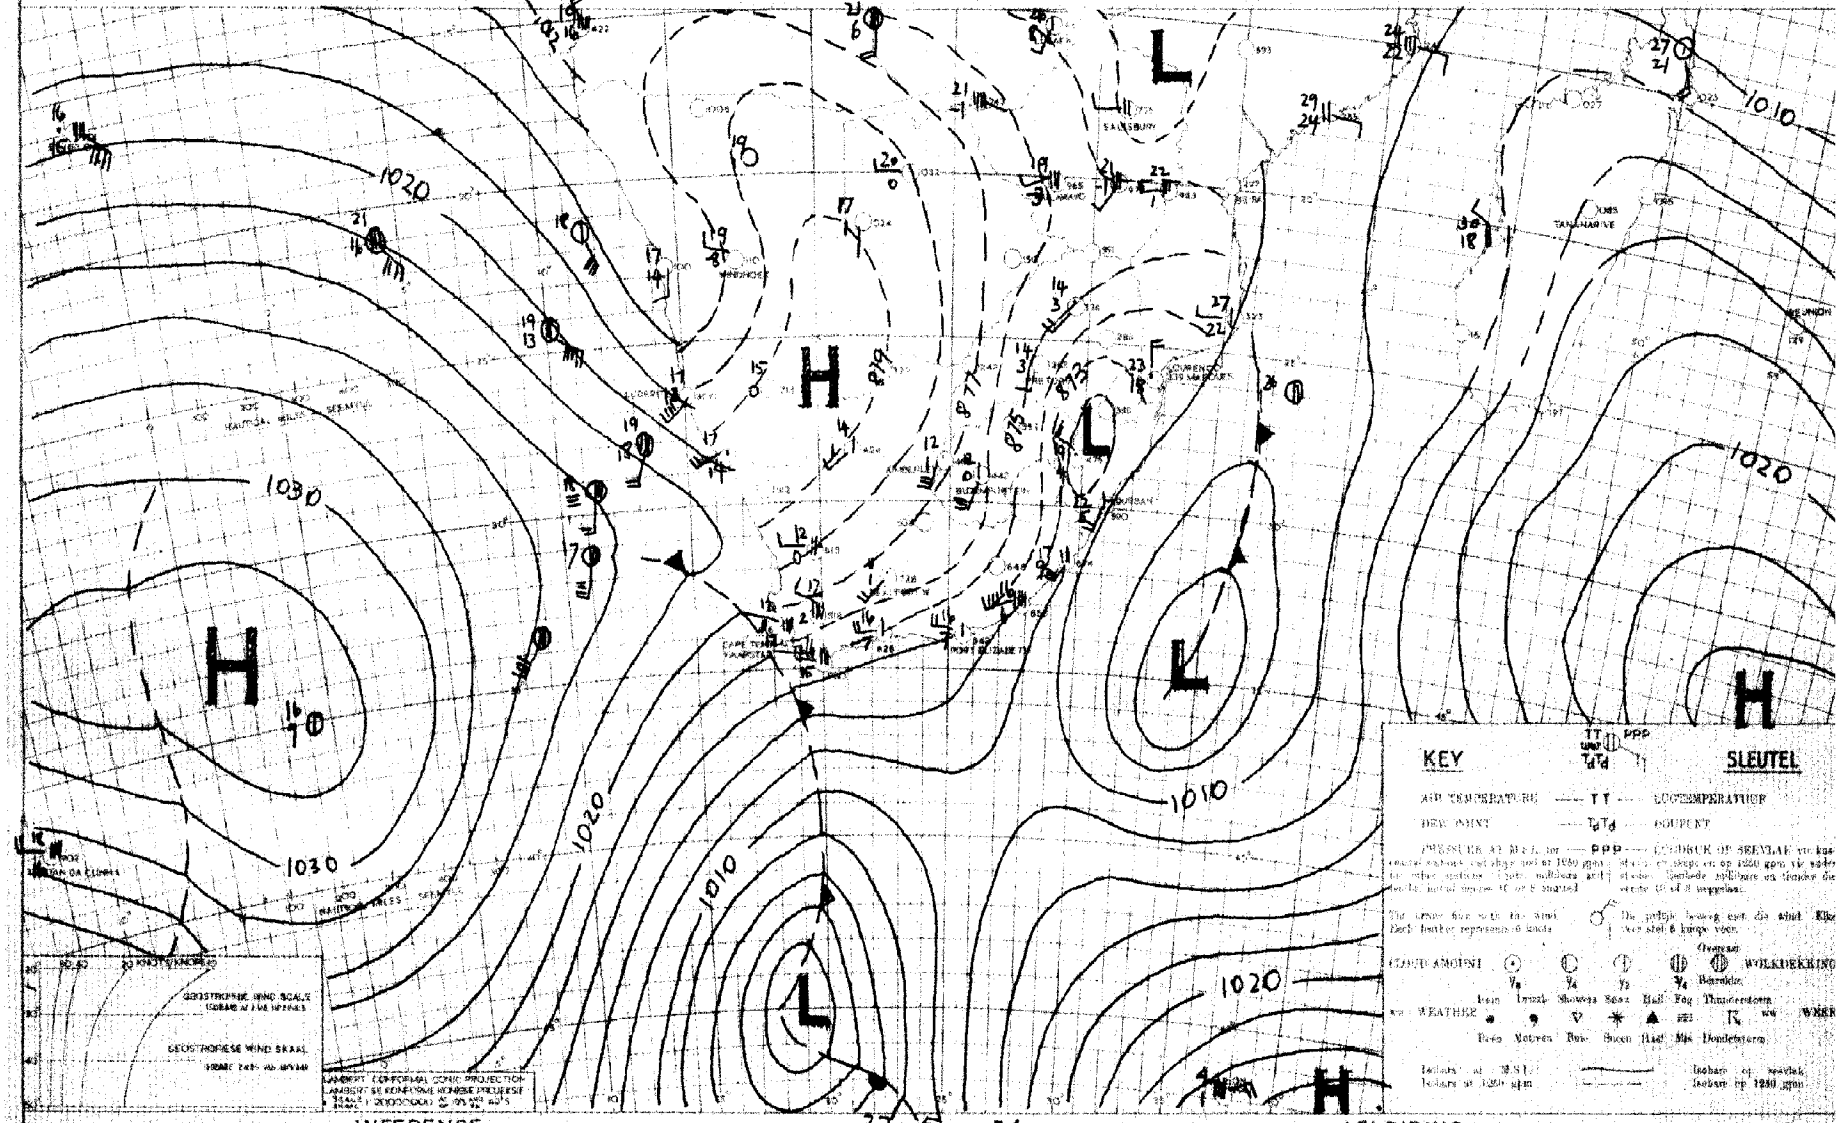
SYNOPTIC WEATHER MAP 1200 GMT — 1400 SAST SINOPTIESE WEERKAART



INFERENCE

The anticyclone northeast of Tristan is intensifying, but trough or wave development is indicated near the southwest coast and unsettled showery weather will develop over southwestern Cape. Elsewhere over the Union it will remain fine with moderating southwesterly wind and temperature remaining below normal

DATE 22-5-1954 DATUM

AFLEIDING

Die antisiklone noordoos van Tristan word versterk, maar golf- of trog ontwikkeling word aangedui Suidwes van die Kaap en ongestadige weer met buie sal langs die Suidweskus ontwikkel. Oor die res van die Unie sal dit mooiweer wees, met bedarende suidwestwind en onder normale temperatuur.

AFLEIDING

With the passage of a fresh system of depressions and fronts to the south the weather along the Southwest Cape coastal belt will become cloudy and somewhat unsettled. Over the remainder of the Union there will be little change in the prevailing fine weather. The nights will be cold over the interior.

Met die verbytrek van 'n nuwe stelsel depressies en fronte Suid van die Unie sal dit oor die Suidwestelike Kaapse kuststreke bewolk en ietwat ongestadig word. Oor die res van die Unie sal daar min verandering in die heersende mooiweerstoestande wees. Die nagte sal oor die binneland koud wees.

INFERENCE

DATE 25-5-1954 DATUM

AFLEIDING

Cool air is approaching southwestern Cape and it should be cloudy along the South coast tomorrow but pressure is falling at Tristan with a southwesterly wind, hence pressure is unlikely to rise much behind the indicated cold fronts. Moist air over Rhodesia will slowly spread westward and southward, giving some cloud over northern Transvaal.

Koel lug nader Suidwes-Kaapland en dit behoort môre bewolk te wees langs die Suidkus, maar aangesien die druk by Tristan daal met suidwestewind, is dit onwaarskynlik dat die druk veel sal styg agter die aangeduide koue fronte. Vogtige lug oor Rhodesië beweeg stadig Wes- en Suidwaarts en dit sal wolke teweegbring oor Noord-Transvaal.

A trough of Low pressure is developing West of the Cape and winds over the western Union will remain N.W. Cloudy weather will continue over the Southwestern Cape, but little change is expected in the dry air over the remainder of the Union.

'n Trog van lae lugdruk ontwikkel wes van die Kaap en Noord-west winde sal dus voortduur oor die Westelike Unie. Bewolkte weer sal voorkom oor Suidwes Kaap maar daar word min verandering verwag in die droë lug oor die res van die Unie.

DATE 27-5-1954 DATUM

AFLEIDING

In advance of the low unsettled weather will develop over the Southwestern Cape. Humidity is also increasing slightly over the Central Union and highlevel clouds will begin to form.

Voor die Laag sal ongestadige weer oor Suidwes Kaapland voorkom. Die lug word ook effens vogtiger oof die Middel Unie en hoë wolke sal begin vorm.

INFERENCE

DATE 28-5- 1954 DATUM

AFLEIDING

The trough West of the Cape is slow moving, but unsettled weather should reach the west coast tonight and extend to the south-western districts and south coast tomorrow. Middle clouds will develop in the northwesterly current preceding the disturbance over interior Cape and southwestern Free State. Temperature will drop appreciably over Western Cape.

Die trog wes van die Kaap beweeg stadig, maar ongestadige weer sal vannag die weskus bereik en môre na die Suidwestelike binneland en Suidkus uitbrei. Middelwolke sal in die Noordwestelike lugstroom ontwikkel oor die Kaapse binneland en suidwestelike Vrystaat. Die temperatuur sal aansienlik daal oor Wes-Kaapland.

INFERENCE

Koel suidwestewind agter die koufront wat tans baie naby die Kaap is sal oor Kaapland en 'n deel van die Vrystaat beweeg. Ongestadigde toestande oor Suidwes Kaapland sal tydelik verbeter, maar met die nadering van nog 'n frontale trog sal dit later weer bewolk word met buie.

DATE 29/5/1954 DATUM

AFLEIDING

Cool southwesterly winds in the rear of the cold front now almost at the Cape will spread across the Cape Province and a portion of the Free State. Unsettled conditions over the Southwestern Cape will improve temporarily but with the approach of another frontal trough it will again become cloudy with showers.

The cold air west of the Union will move over the Southwestern and Western Cape Provinces, where cloudy weather and showers will occur. The cooler air over the Cape and Free State will not move much farther northwards.

Die koue lug wes van die Unie sal oor Wes en Suidwes Kaapland beweeg; bewolkte weer en buie sal voorkom. Die koeler lug oor die Kaapprovinsie en oor die Vrystaat sal nie baie verder noordwaarts beweeg nie.

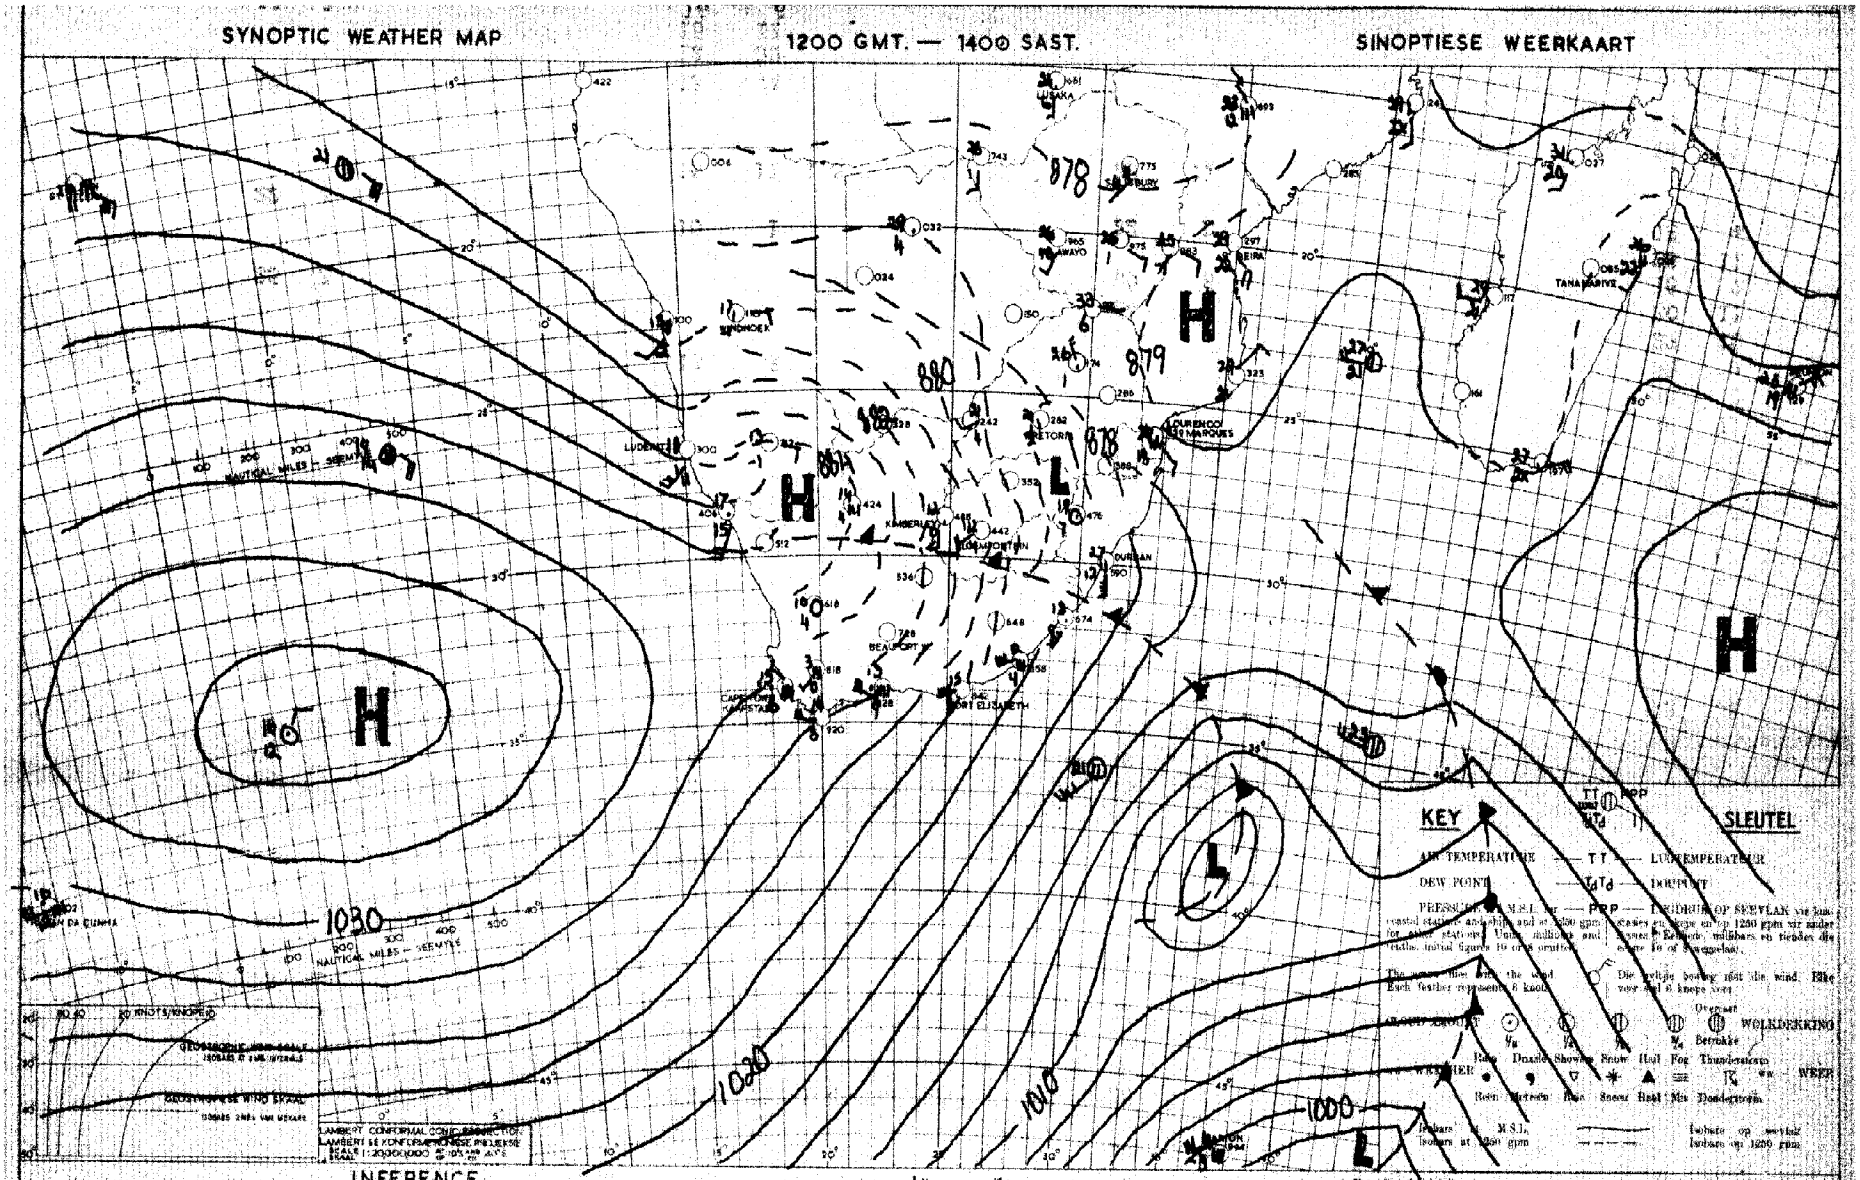
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 31/5 1954. DATUM — AFLEIDING

A second surge of cold air is spreading northwards over the Union and it is expected that temperatures will fall to below normal over the Whole Union. It will become mainly fine and cold frosty nights will be experienced over the interior.

'n Tweede stoot van koue lug brei noordwaarts oor die Unie uit en dit word verwag dat temperatuur oor die hele Unie tot onder normaal sal daal. Dit sal meesal mooiweer word en oor die binneland sal koue nagte met ryp ondervind word.

INFERENCE

Cloudy weather will occur in the humid air over Northeastern Transvaal. The airmass over the remainder of the Union is very dry and indications are that there will be little change.

DATE 1-6-1954 DATUM

AFLEIDING

As gevolg van vogtige lug oor Noordoos Transvaal sal verspreide wolke daar voorkom. Die lug is egter baie droog oor die res van die Unie en die aanduidings is dat daar nie baie verandering sal wees nie.

INFERENCE

A wedge of high pressure is extending along the Cape South coast and with the developement of a trough southwards along the West coast it is likely that a separate cell of high pressure will be established off the East coast tomorrow. This will encourage the influx of a shallow layer of moist air into the Transvaal where scattered clouds will be likely. Elsewhere it will be mainly fine.

DATE 8 JUNIE 1949 DATUM

AFLEIDING

'n Wig van hoë druk brei Ooswaarts aan die Suidkus uit en met die ontwikkeling van 'n trog van lae druk Suidwaarts langs die Weskus is dit waarskynlik dat 'n aparte sel van hoogdruk môre aan die Ooskus sal ontstaan. Daardeur sal die invloei van 'n vlak laag vogtige lug oor Transvaal vergemaklik word en oor Transvaal word verspreide wolkies dus verwag, maar origens sal dit meestal mooi weer bly.

INFERENCE

The High west of the Cape will extend eastward over the Cape and South coast, but is unlikely to give much cloud along the coast. Middle cloud over S.W. Africa and Northern Cape should persist in the upper N.W. current but the cloud over Transvaal will decrease with upper southwesterly wind at shallow levels.

AFLEIDING

Die hoogdrukstelsel wes van die Kaap sal Ooswaarts oor Kaapland en die Suidkus uitbrei, maar sal nie veel wolke lange die Suidkus veroorsaak nie. Middelwolke sal voortduur in die noordwestelike bowind oor S.W.-Afrika en Noord-Kaapland, maar die wolke oor Transvaal sal verminder aangesien Suidwestewind op vlak hoogtes waai.

INFERENCE

DATE 5/6/19 J4

The circulation is mainly anticyclonic at surface and upper levels and with the air dry it will be fine over all areas, except over eastern and northern Transvaal where some fair weather cloud may develop.

DATUM

AFLEIDING

Die sirkulasie is meesal antisiklonies aan die oppervlakte sowel as in die bolug en aangesien die lug droog is sal dit mooiweer wees oor alle gebiede uitgesonderd Noord- en Oos-Transvaal waar enkele mooiweerswolkies sal verskyn.

INFERENCE

The system of depressions passing to the south are not affecting the weather over the Union, which is controlled by an anticyclonic circulation resulting in fine settled conditions.

DATE 19 54 DATUM

AFLEIDING

Die stelsel depressies wat Suid van die Unie verby beweeg beinvloed nie die weerstoestande oor die Unie nie. Antisiklonieses sirkulasie oor die Unie het mooiweer en gestadigde toestande tot gevolg.

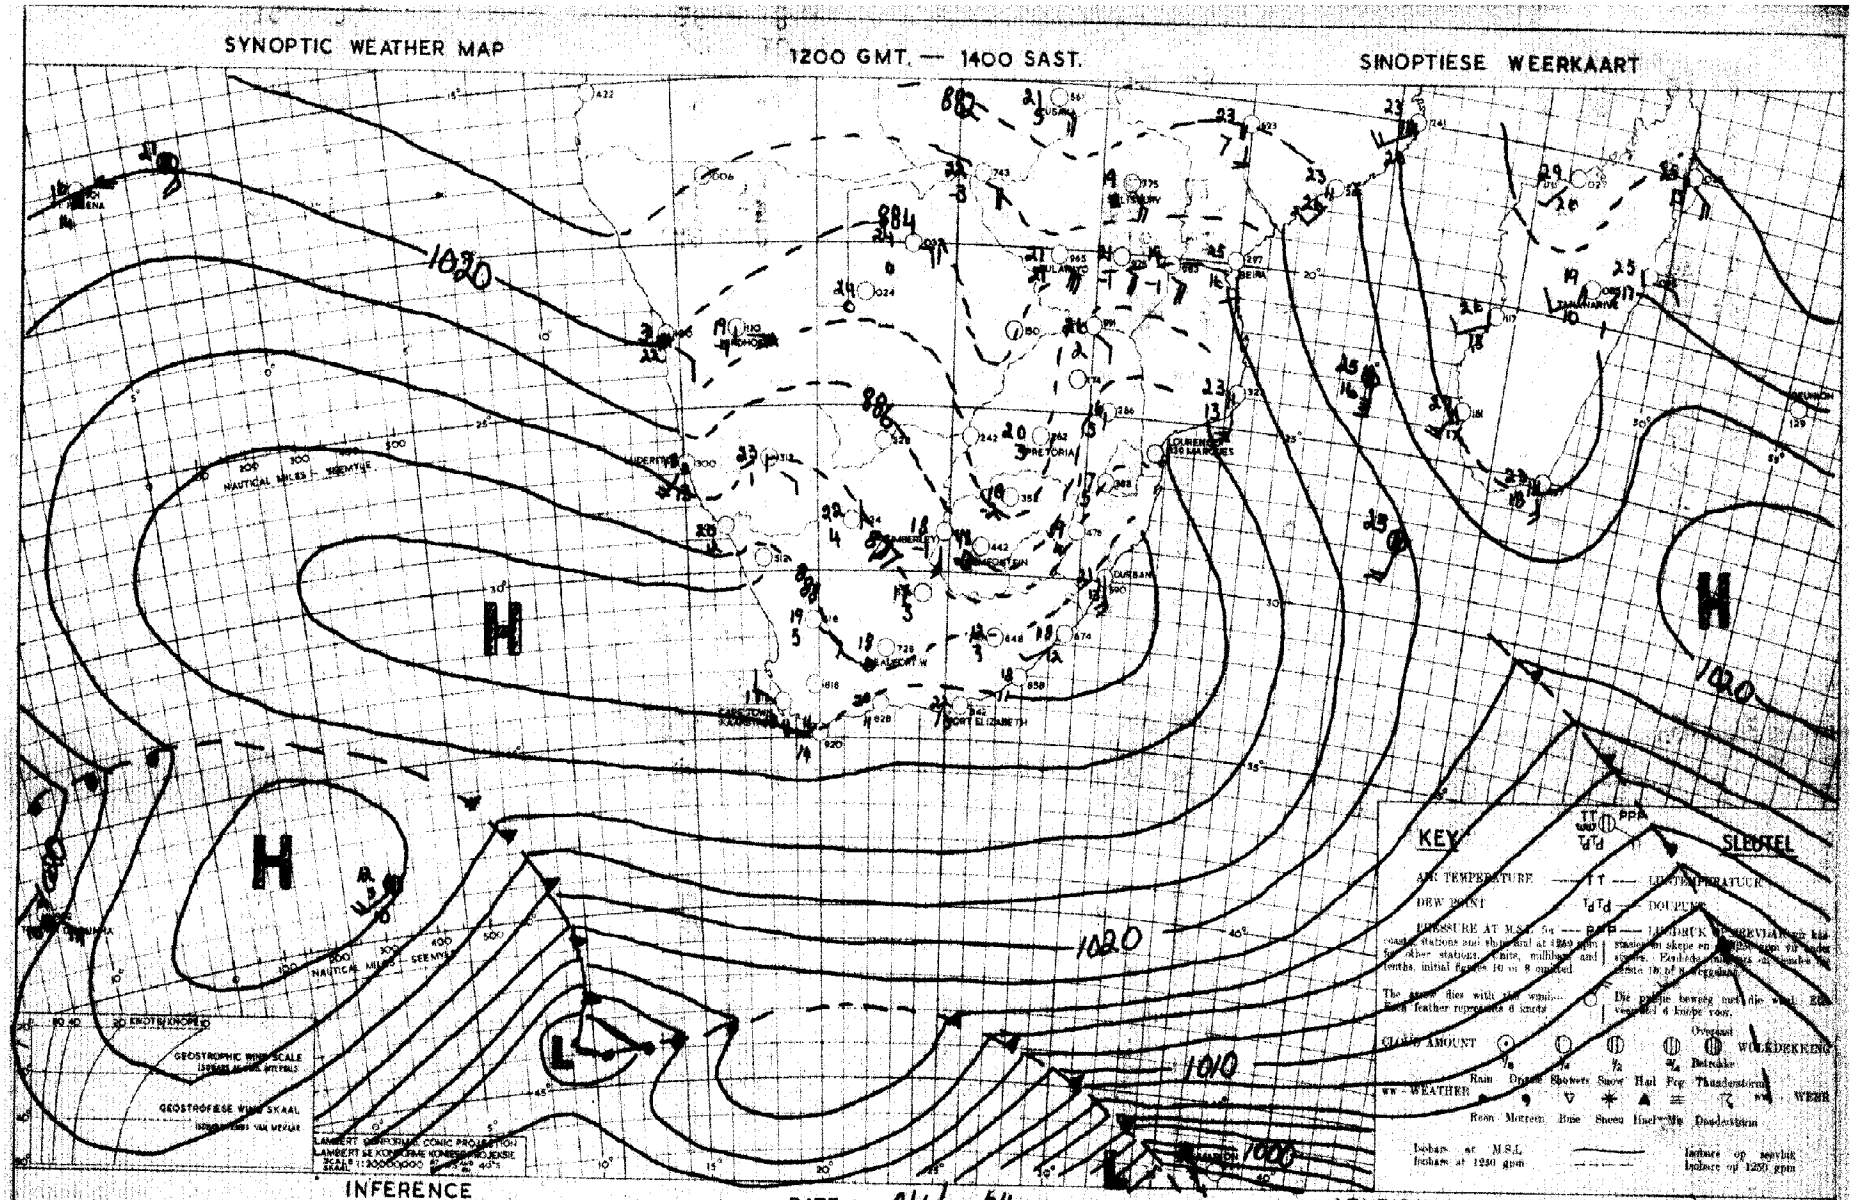
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

With rising pressures along the East coast of the Union indicating the eastward extension of the high, a shallow layer of cool moist air is expected to flow across the Transvaal Lowveld and the northern Transvaal resulting in low clouds over most of of those areas. Elsewhere over the Union it will remain fine.

DATE 8/6/1954. DATUM

AFLEIDING

Stygende drukke aan die Ooskus van die Unie dui daarop dat die hoogdruksisteem ooswaarts uitbrei en dit word verwag dat 'n vlak laag koel vogtige lug oor noordTransvaal en die Transvaalse Laeveld sal instroom en miswolke sal veroorsaak. Oor die res van die Unie sal dit mooiweer bly.

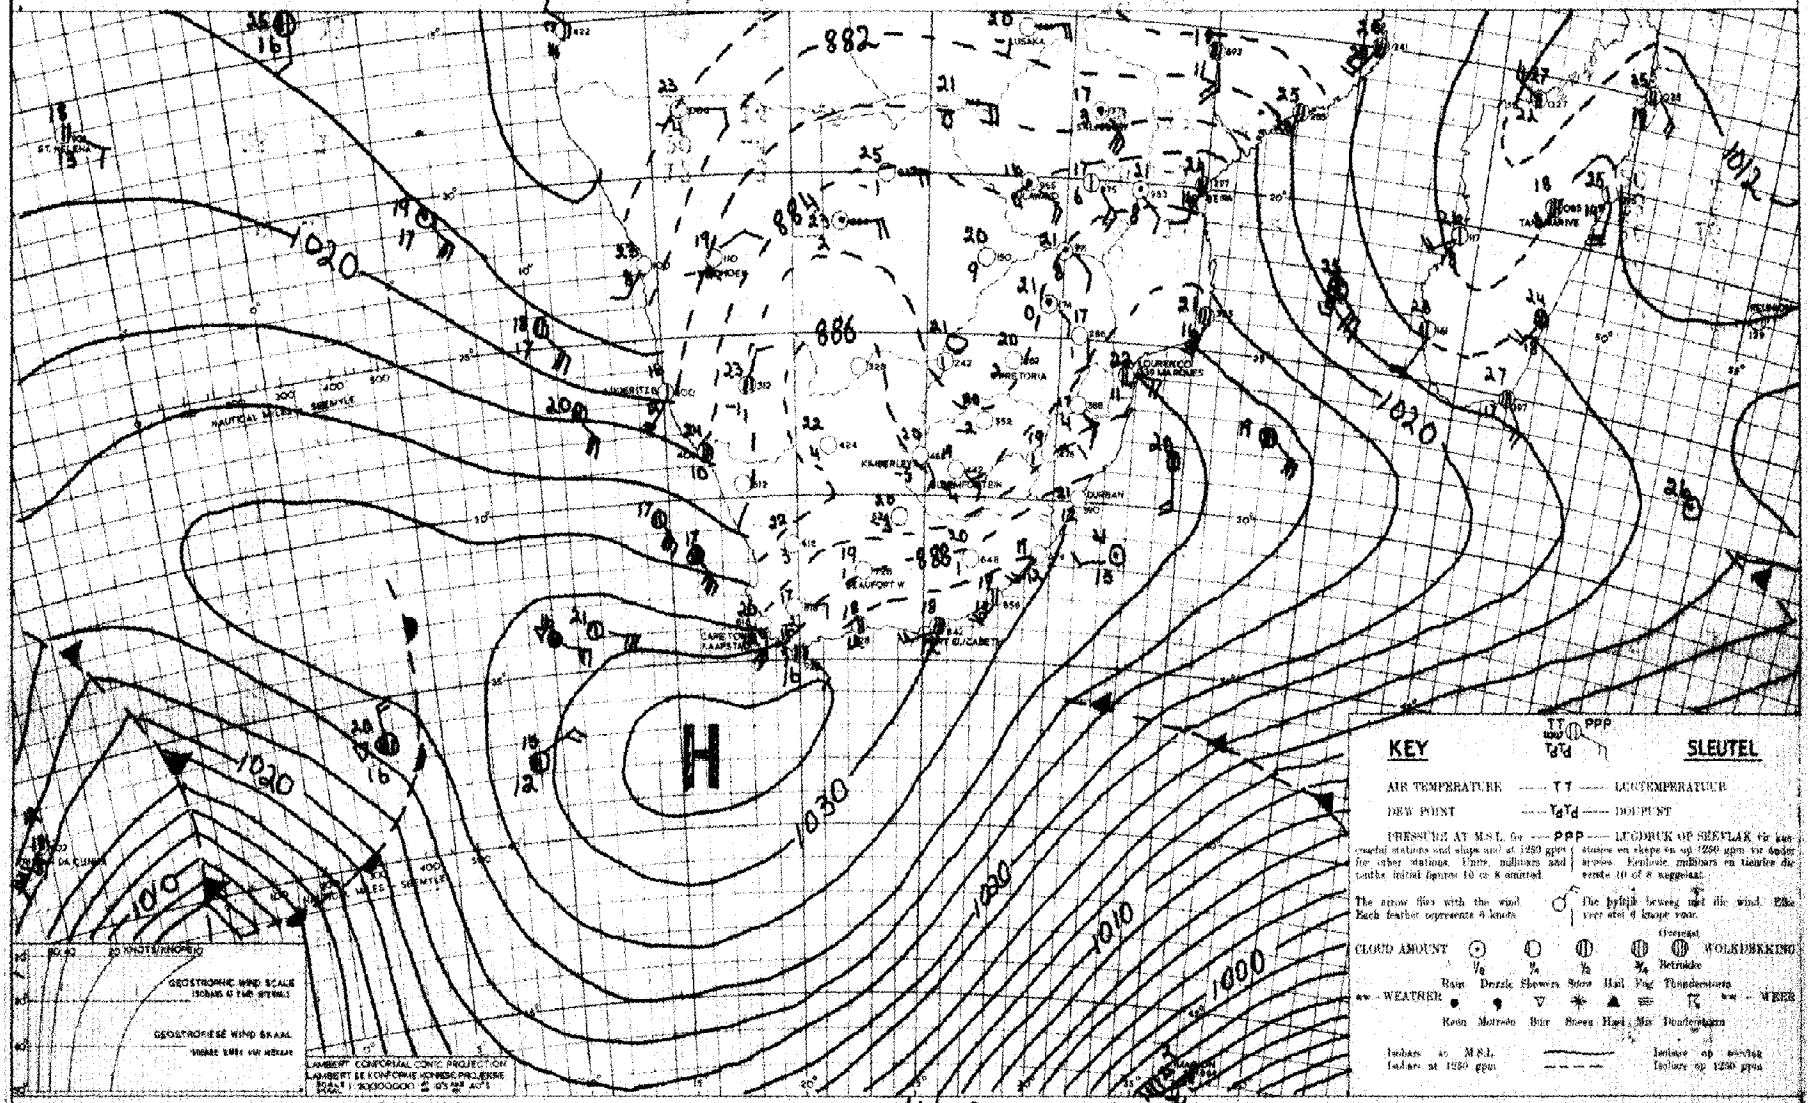
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 9/6/1954 DATUM — AFLEIDING

The High off the southwest coast will move to the southeast coast tomorrow causing cloudy weather over Natal, and the south-east coast. With the moisture confined to a shallow layer east of the Escarpment it will remain fine with normal temperature and easterly wind over the remaining areas.

Die hoogdrukstelsel langs die Suidweskus sal môre langs die suidooskus gelee wees en dit sal bewolkte weer oor Natal en die suidooskus veroorsaak, maar aangesien die vogtige lug slegs in 'n dun laag beperk sal wees, sal dit mooiweer bly oor die res van die Unie, waar temperatuur normaal sal wees en wind matig oostelik.

The rapidly falling pressures over the Union show that the High just east of Durban is moving out over the Indian Ocean. Northerly winds will continue over the Union. The cold front over the Atlantic has weakened and will have little effect on the weather.

Die vinnig dalende lugdrukke oor die Unie dui aan dat die Hoog met sy sentrum net oos van Durban ooswaarts oor die Indiese Oseaan beweeg. Noorde winde sal dus voortduur oor die Unie. Die koue-front oor die Atlantiese Oseaan sal die weer maar weinig beïnvloed.

Pressures are rising and cool cloudy weather is expected to spread temporarily to the Cape South Coast in the rear of an ill-defined cold front . Elsewhere over the Union it will however remain fine with mild days and cold nights.

Drukke styg en koel bewolkte toestande sal tydelik aan die Kaapse Suidkus agter 'n swak koue-front ontwikkel. Elders oor die Unie sal dit egter mooiweer bly met matige dae en koue nagte.

INFERENCE

DATE 12/6/1954 DATUM

AFLEIDING

A belt of high pressure extends over the southern and eastern parts of the Union and the circulation at upper levels is anticyclonic. The air is dry and consequently it will remain fine over all areas.

Met 'n gordel van hoë druk oor die suidelike en oostelike dele van die Unie en antisiklonisse stroming in die bolug, gepaard met droë lug, sal dit mooiweer bly oor alle gebiede.

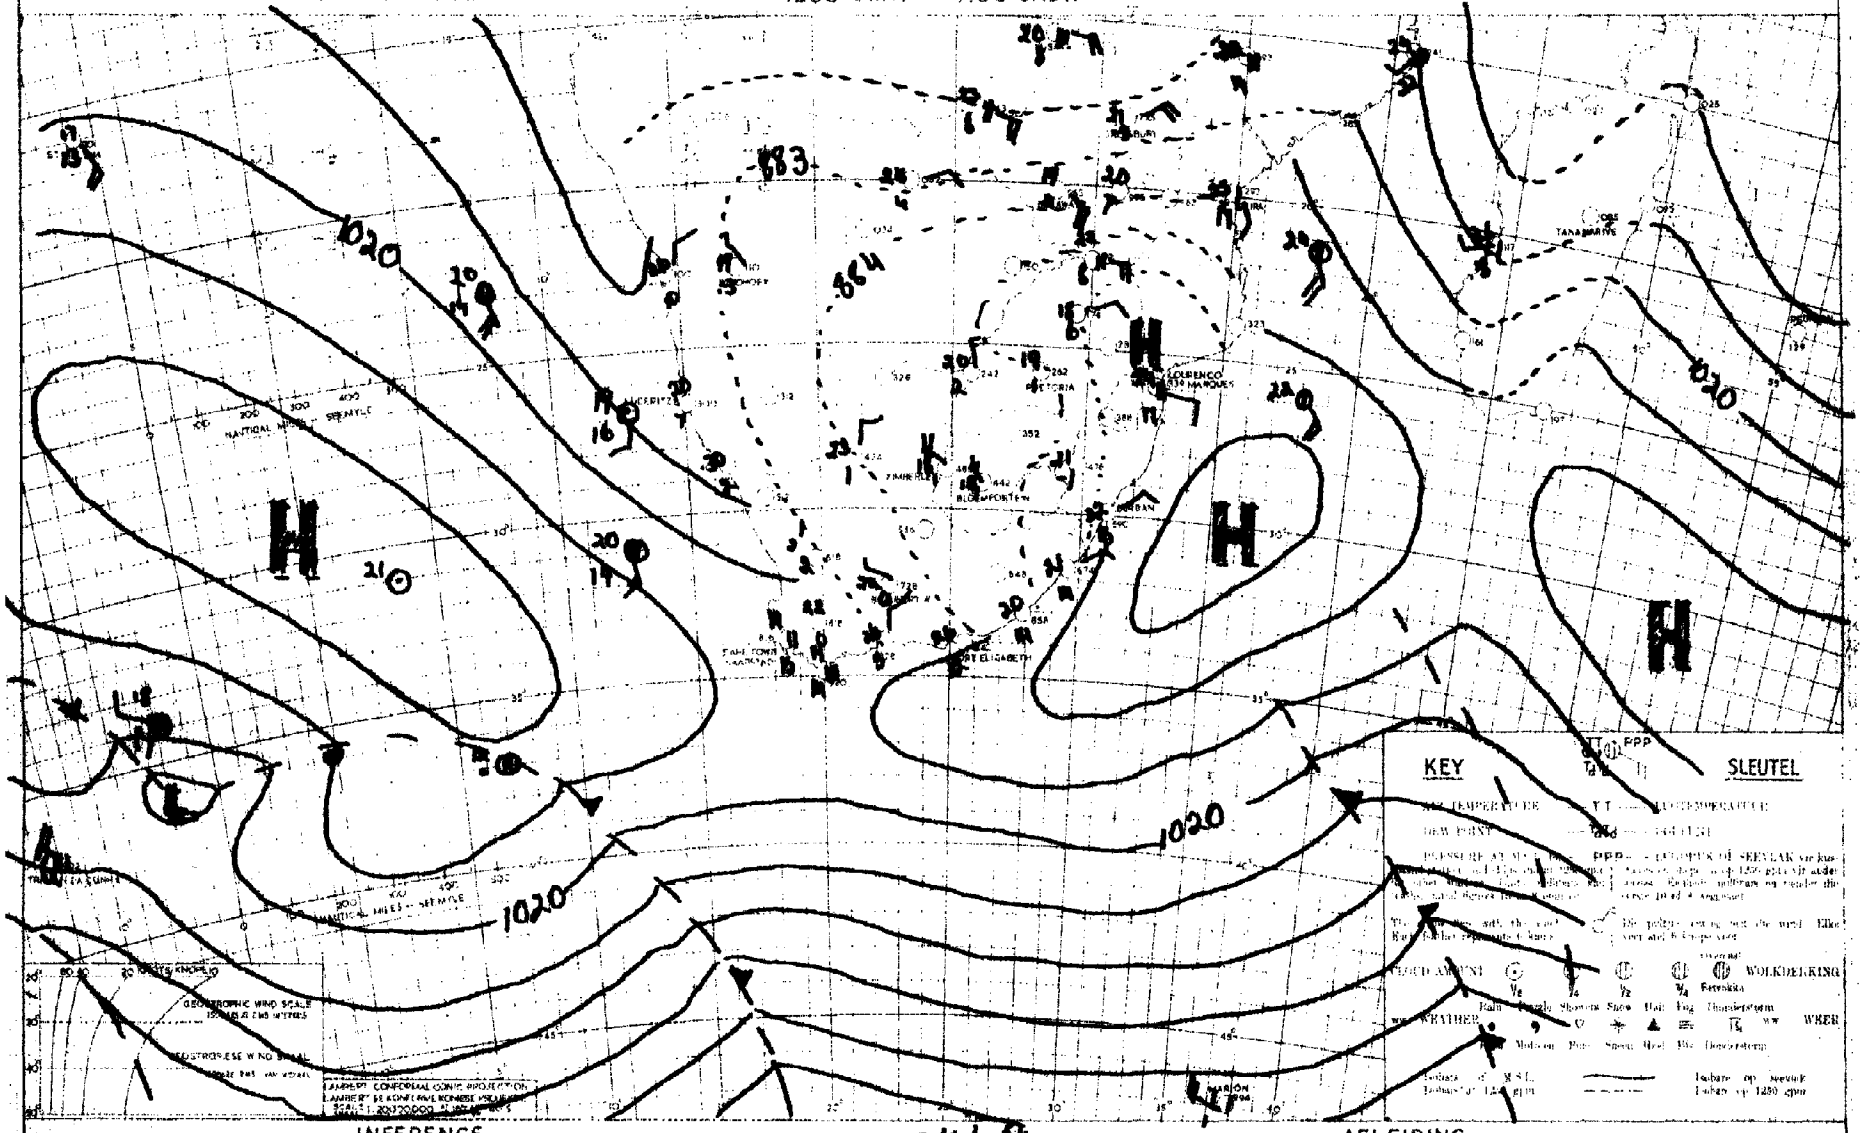
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 13/6/19 54 DATUM AFLEIDING

The belt of high pressure is almost continuous from the Atlantic to the Indian Ocean. There will be little change in the fair weather conditions over the Union.

Die gordel van hoë lugdruk is bykans aaneenlopend van die Atlantiese tot die Indiese Oseaan. Daar sal min verandering in mooiweerstoestande oor die Unie wees.

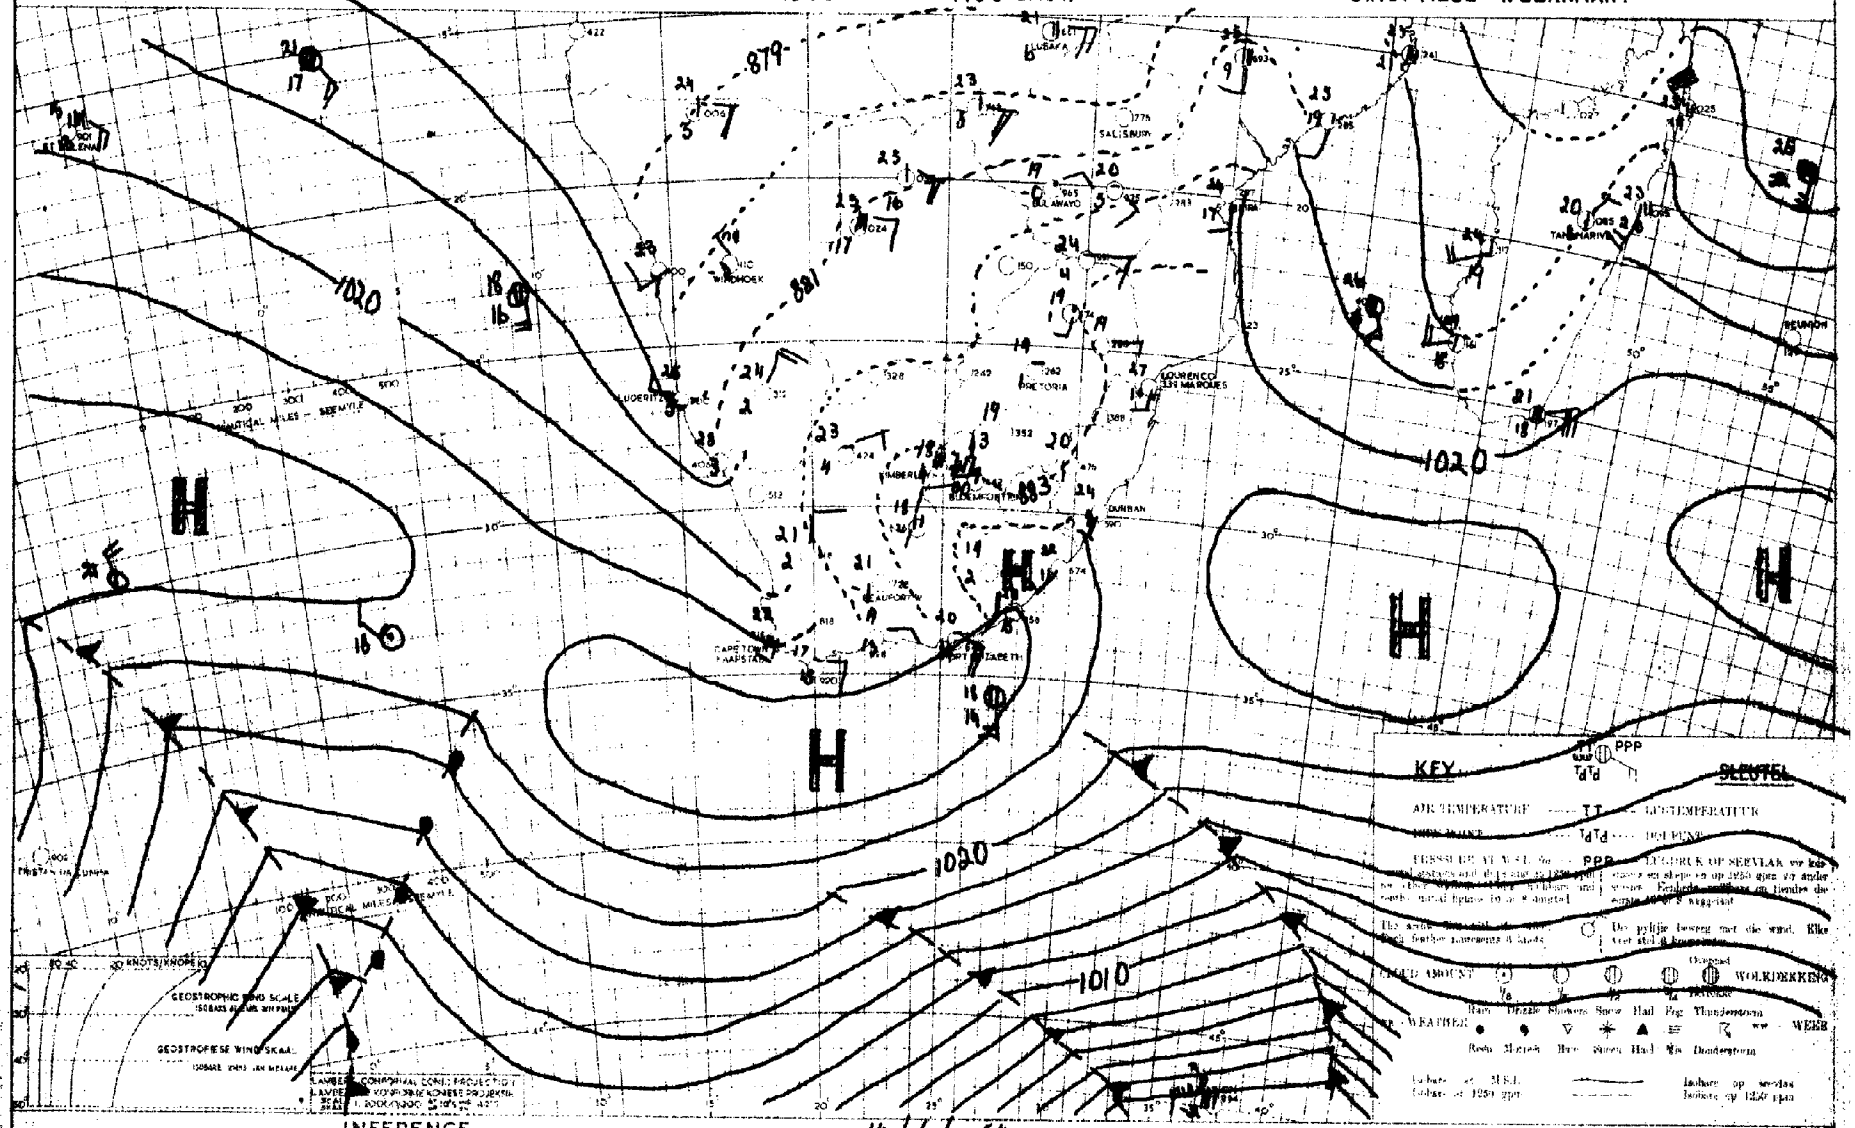
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 14/6/1954. DATUM AFLEIDING

There will be little change except over the western and South-western Cape where the approach of the depression in the South Atlantic will cause falling pressures and a gradual freshening of Northwesterly winds.

Daar sal min verandering wees behalwe oor Wes- en Suidwes Kaapland waar die naderende depressie in die Suid Atlantiese Oseaan drukke sal laat daal en later ook sal veroorsaak dat noordwestewind fris sal word.

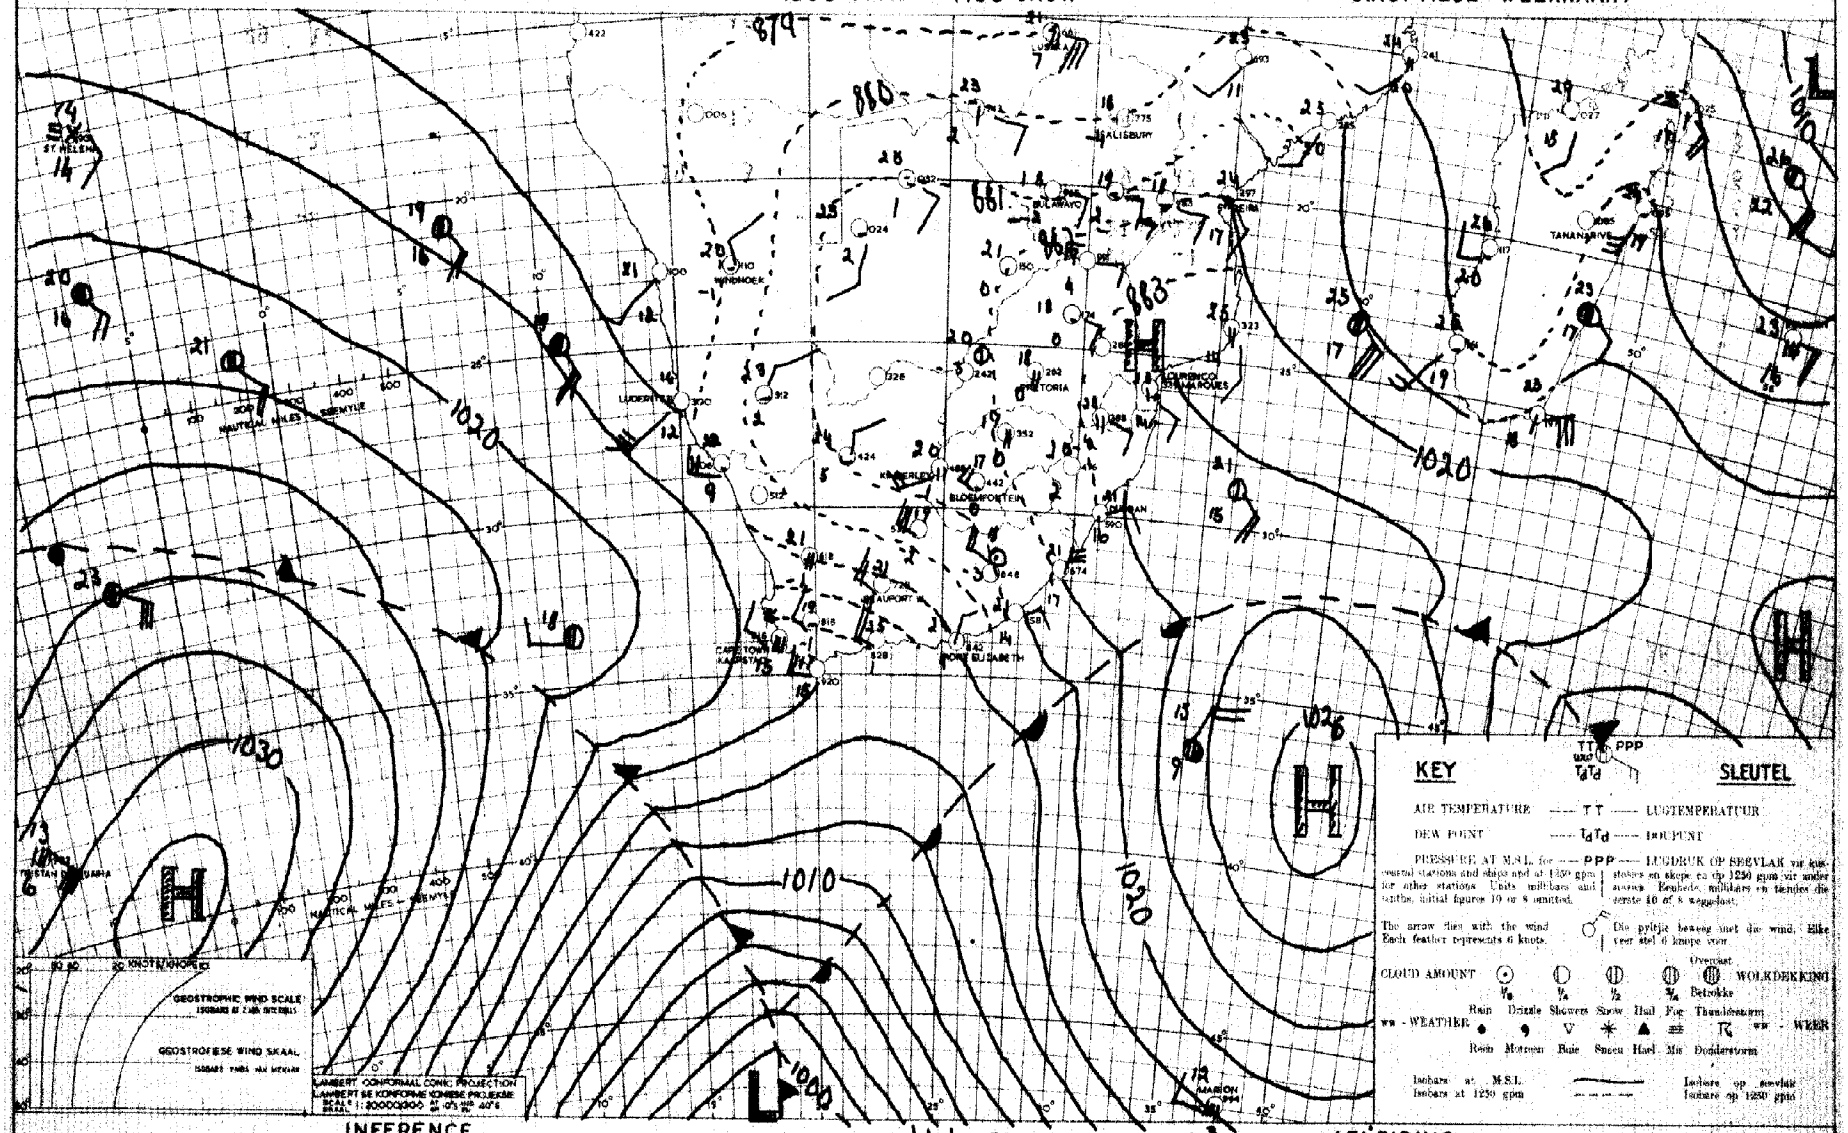
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 15 6 1954 DATUM AFLEIDING

Koeler lug nader die Kaap uit die weste en dit sal môre bewolk word langs die Suidwes- en Suidkus. Verspreide middelwolke sal in die noordwestelike lugstroom oor die binneland ontwikkel.

Cooler air is approaching the Cape from the Southwest and cloudy weather will develop along the Southwest and South coasts tomorrow. Scattered middle cloud will develop in the northwesterly airstream over the interior.

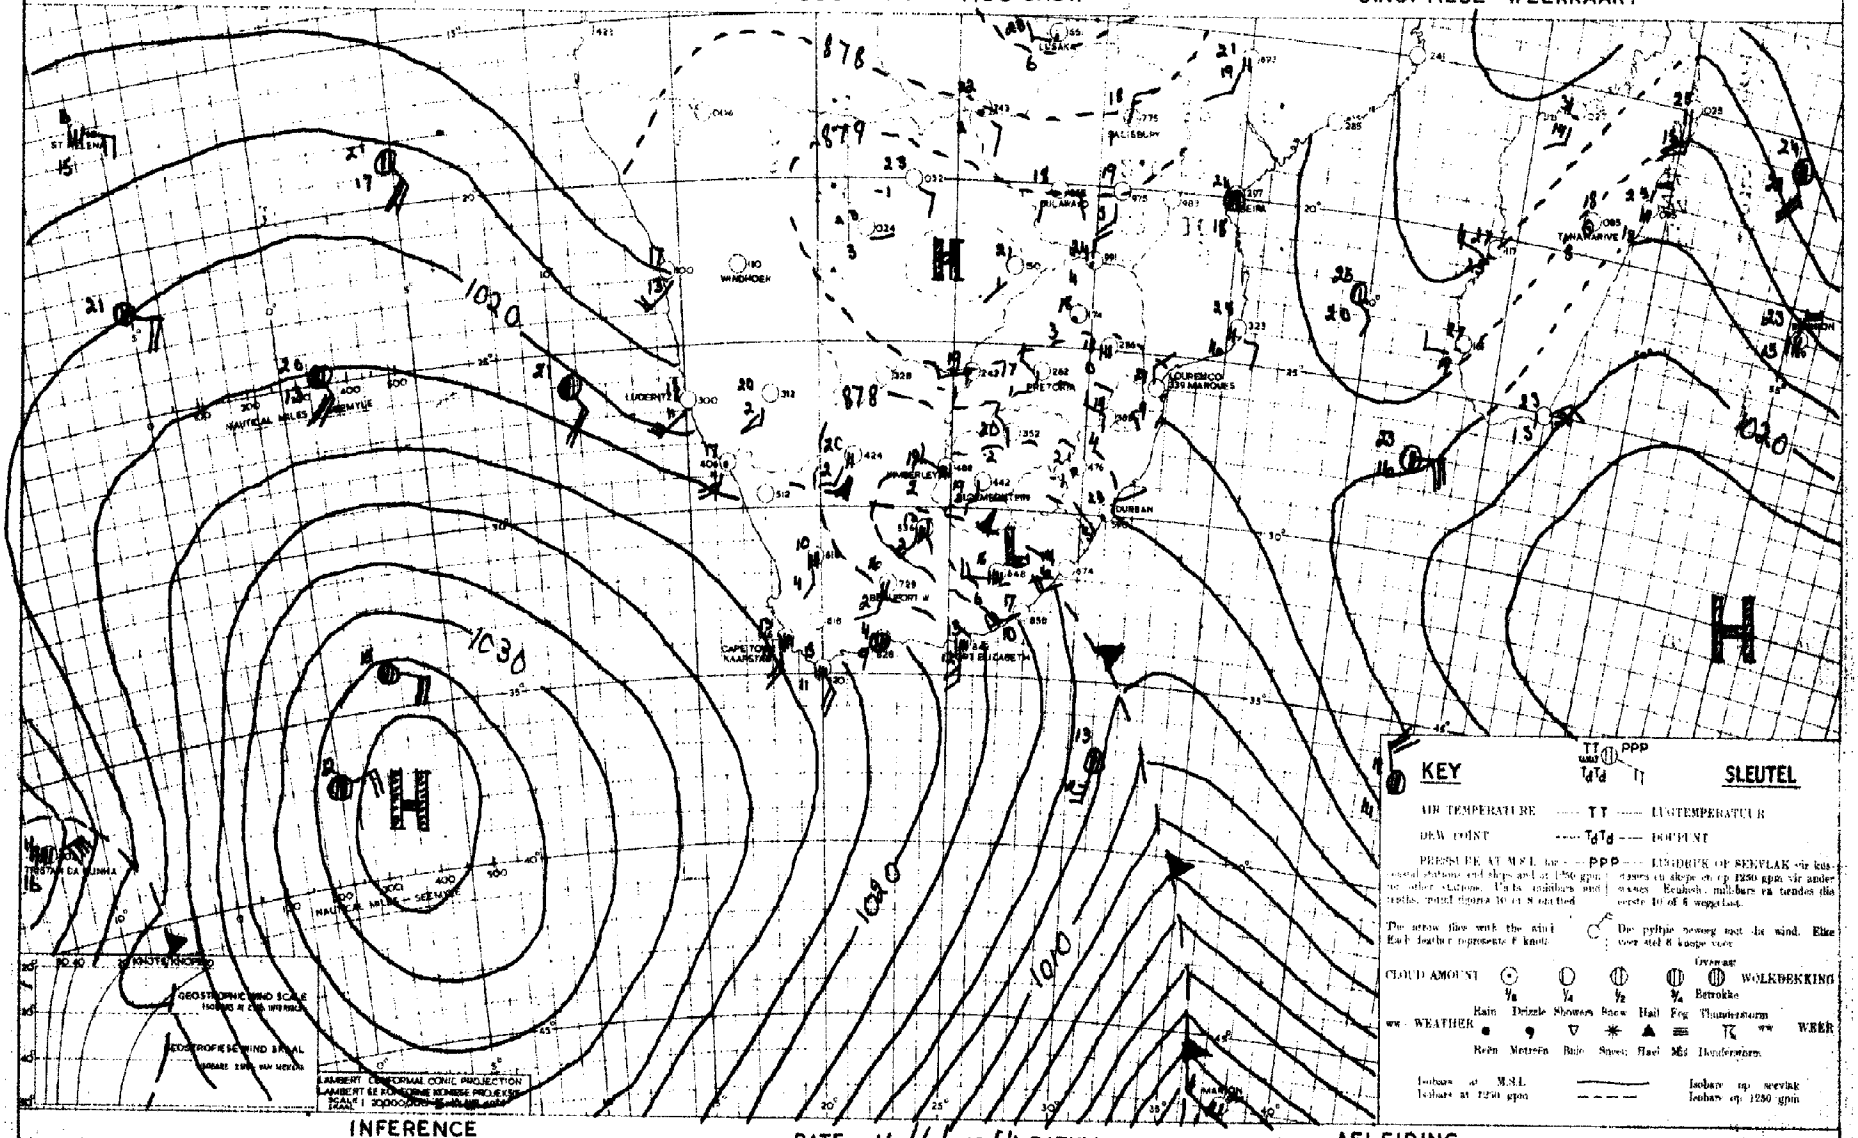
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 16/6/1954 — DATUM — AFLEIDING

Pressure is rising rapidly over the South Cape coasts indicating that the Atlantic high will move eastwards and pressure gradients be increased from South to North. Moist air will therefore move over the Cape, South Free State and over Natal and isolated showers will occur over the Eastern Cape and Natal.

Lugdrukke styg vinnig oor die Suidelike kusstreke en dit dui aan dat die Atlantiese Hoog ooswaarts beweeg. Druk gradiënte sal sterker word van Suid na Noord en vogtiger lug sal oor Kaapland Suid Vrystaat en Natal beweeg. Los buie is moontlik oor Oos Kaapland en oor Natal.

Very cold air in the rear of the cold front will complete its invasion of the Union by also flowing across the Transvaal with strong Southeasterly winds. The weather will remain unsettled at first over the Eastern parts of the Union with rain and with snow along high ground.

Deur ook Transvaal met sterk Suidoostewind te oorstroom sal die inval van die Unie deur baie koue lug, agter die koue front, voltooi wees. Daar sal oor die Oostelike dele van die Unie aanvanklik ongestadigde weer heers en reën sal voorkom. Sneeu sal oor die hoogliggende dele voorkom.

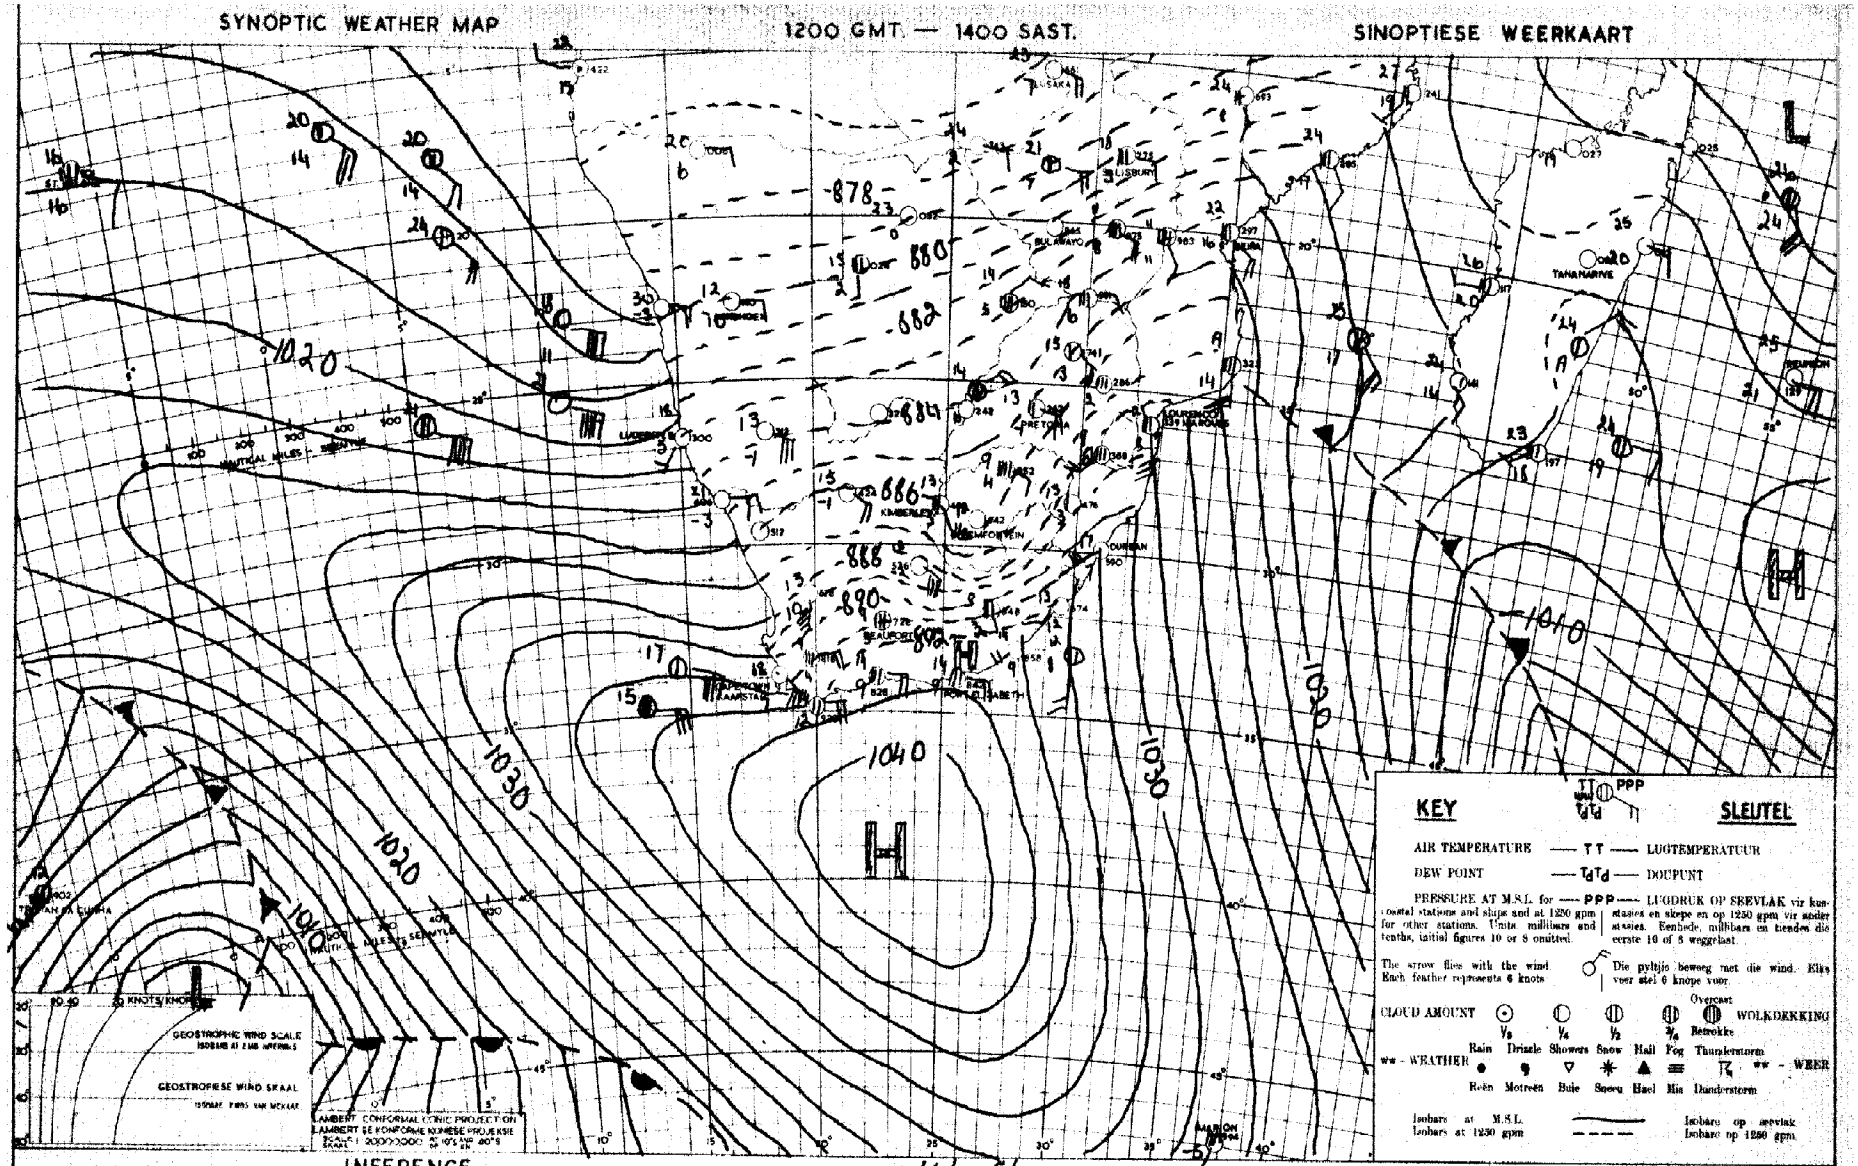
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



DATE 18/6/1954 DATUM

INFERENCE

The anticyclone south of the Union will recede further eastwards tomorrow while pressure will fall along the west and south coasts, but rise along the east coast. This will cause fresh easterly to northeasterly wind over the Union and it should clear over all areas west of the Drakensberg escarpment. Temperatures will remain well below normal.

AFLEIDING

Die antisikloon suid van die Unie sal verder ooswaarts uitwyk terwyl die druk langs die Ooskus sal styg maar sal daal langs die wes en suidkus. Dit sal sterk oostelike tot noordoostelike wind oor die Unie veroorsaak en dit sal ook ooptrek oor alle gebiede wes van die Drakensberg. Die temperatuur sal aansienlik onder normaal bly.

INFERENCE

DATE 19/6/1954. DATUM

AFLEIDING

The high is gradually receding eastwards and it is expected that fine weather will prevail generally except over Natal and the Eastern Transvaal where scattered low clouds will recur tomorrow morning. Day temperatures will be slightly higher generally.

Die Hoogdruksisteem beweeg geleidelik ooswaarts en dit word verwag dat mooiweerstoestande sal heers behalwe oor Natal en Oos Transvaal, waar daar môreoggend heelwat lae wolke sal wees. Dagtemperatuur sal effens hoër wees.

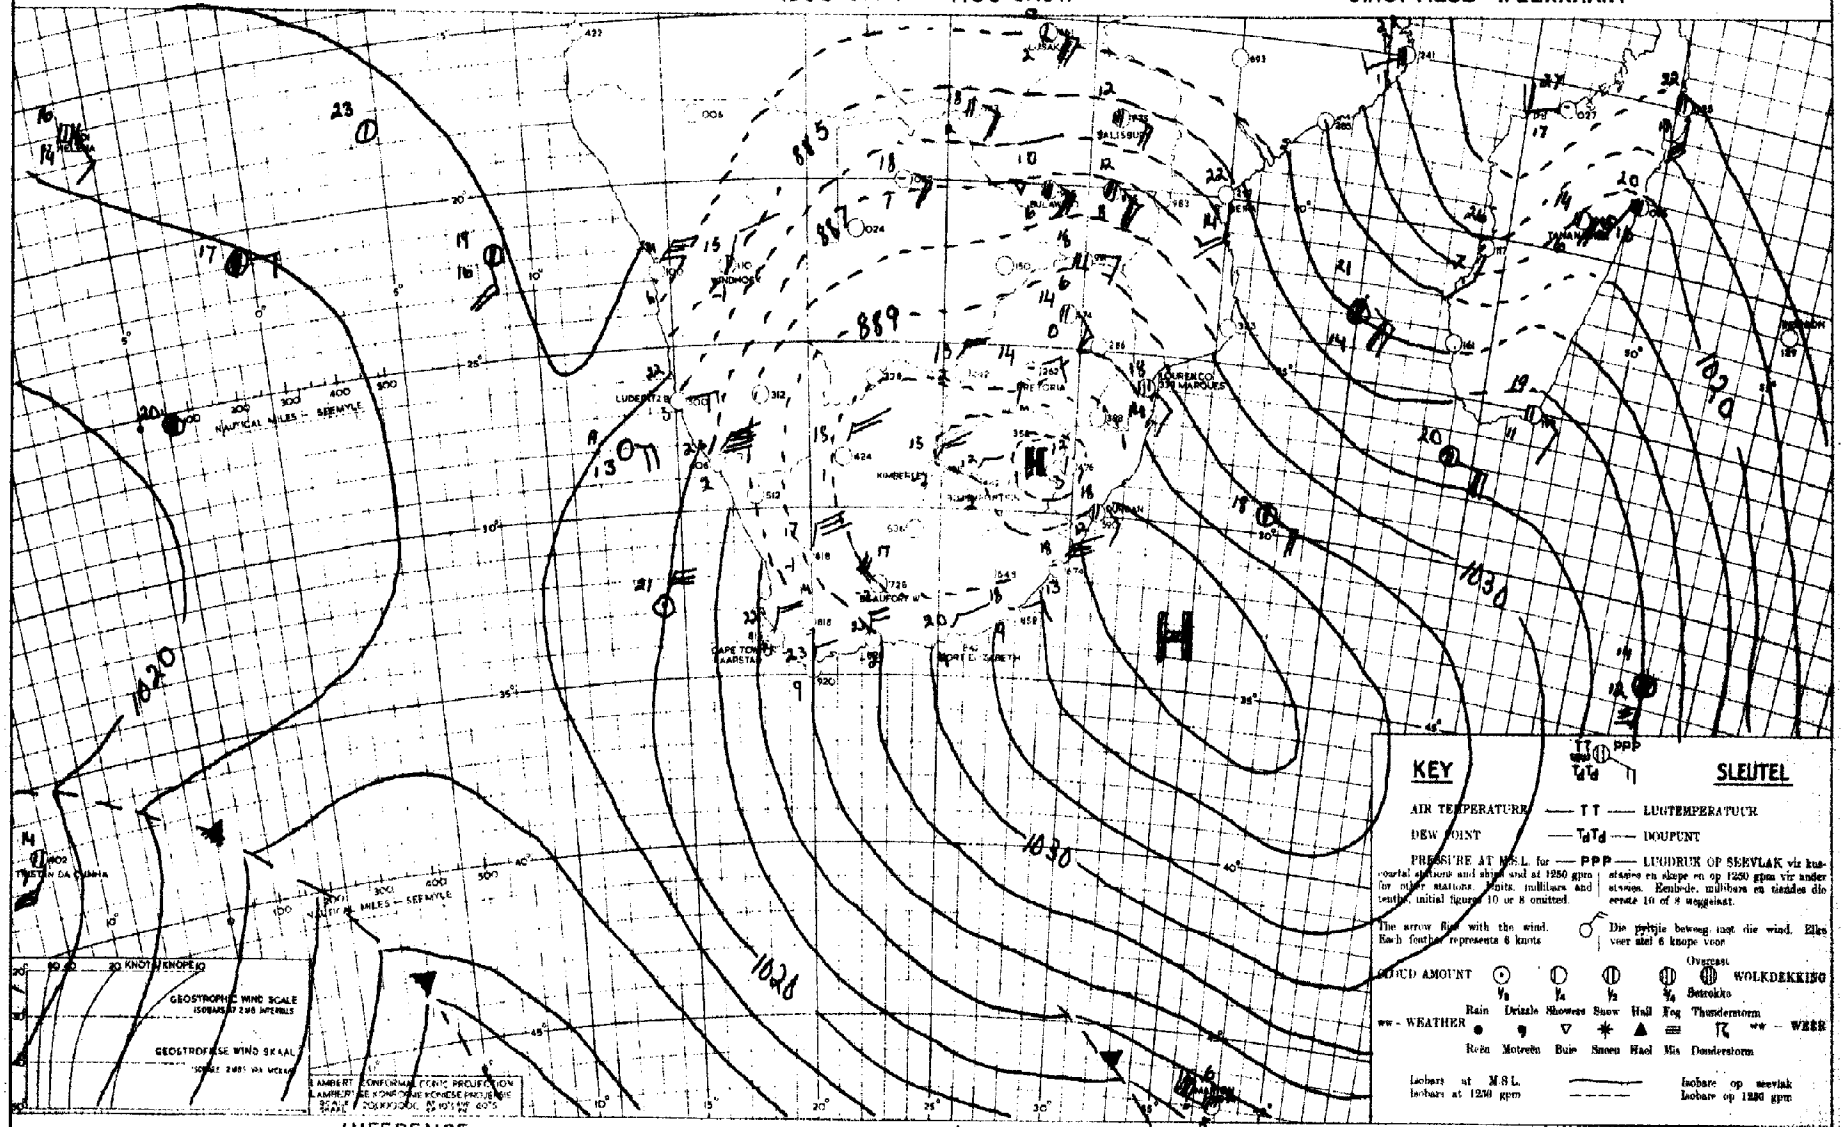
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE

The extensive dynamic high centred southeast of Durban is almost stationary and will control the upper air circulation to great heights over the whole of Southern Africa. The air is dry and skies will remain clear generally.

DATE 20/6/1954 DATUM

AFLEIDING

Die uitgebreide dinamiese hoog met sy middelpunt suidoos van Durban sal die sirkulasie oor die hele suidelike Afrika kontroleer tot op hoë hoogtes. Die lug is droog en dit sal algemeen mooi-weer bly.

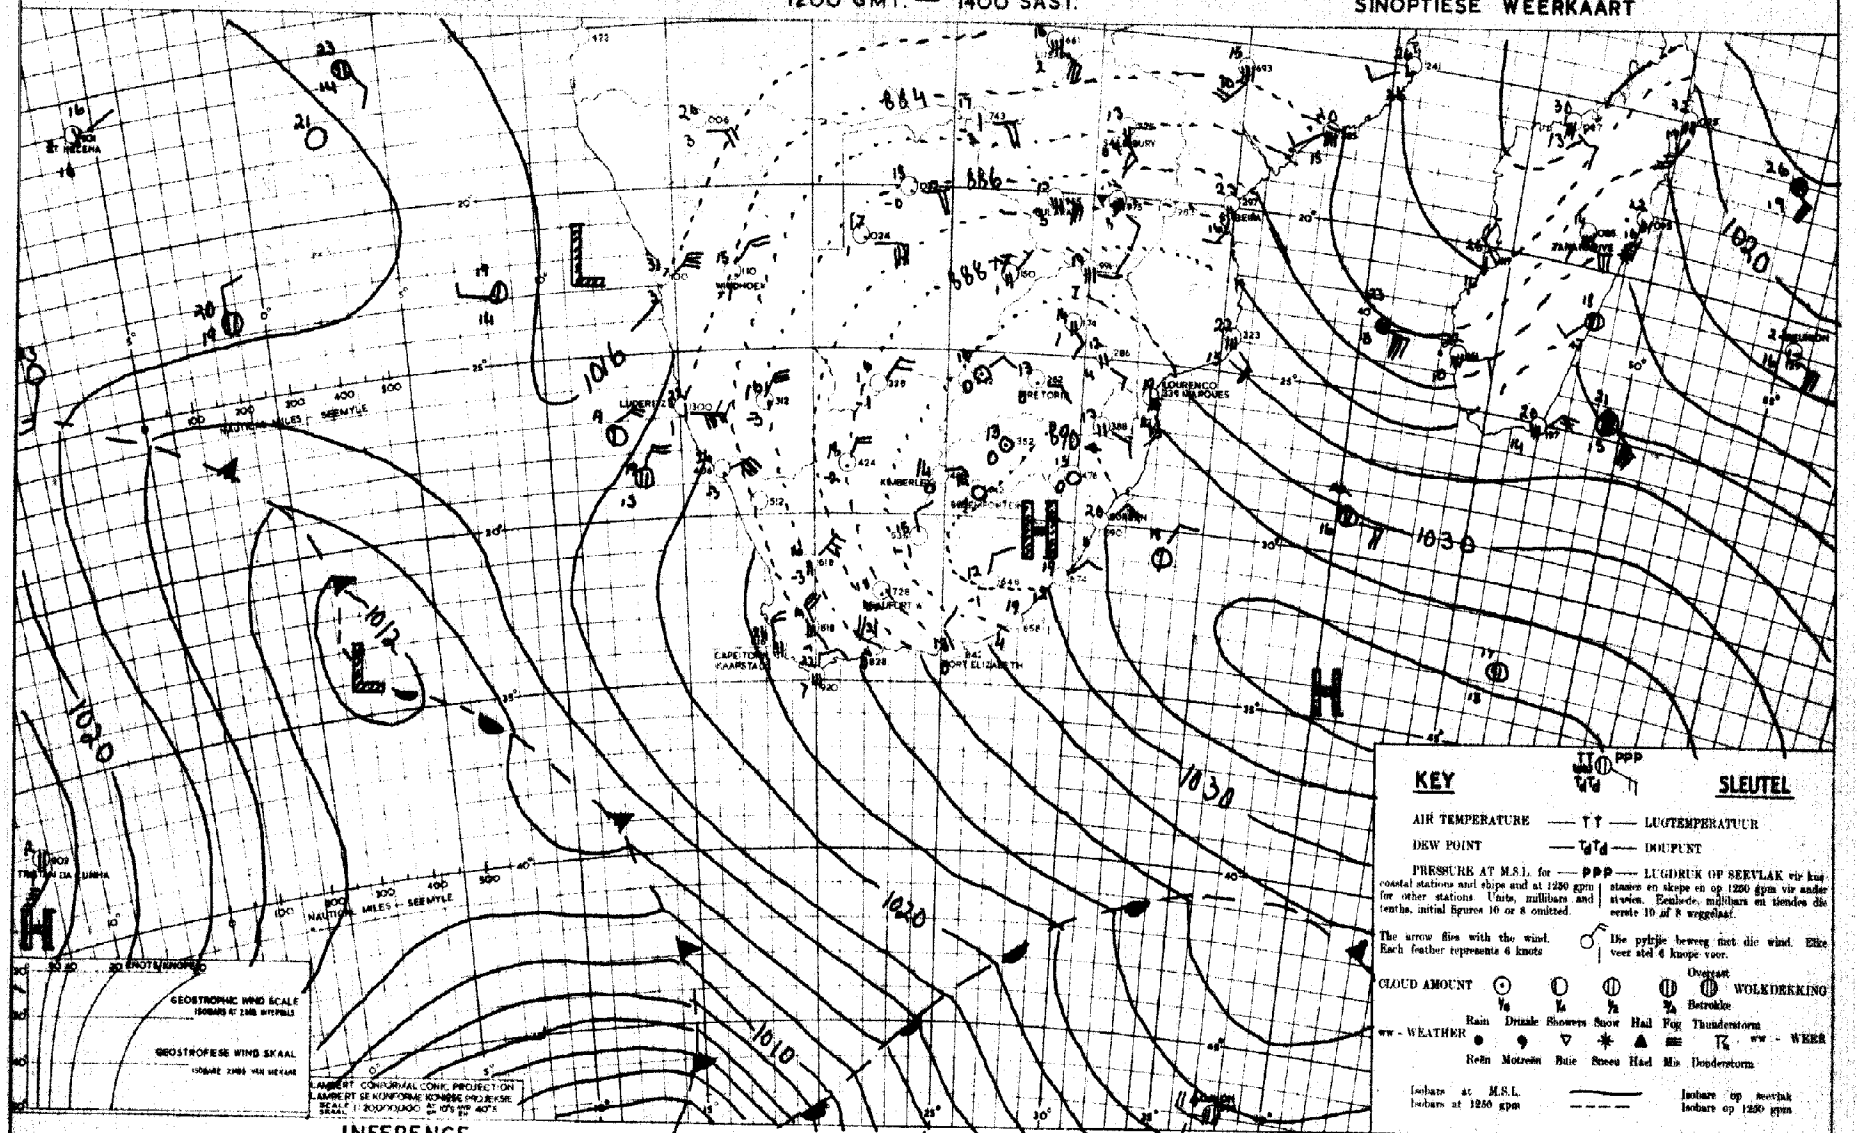
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 21/6/1954 DATUM AFLEIDING

The anticyclone east of the Union is now weakening and receding and pressures are falling generally over the Union. Wave development is indicated halfway between Tristan and the Cape and this will induce fresh easterly to northerly bergwinds along the Cape coasts. Elsewhere over the Union it will be fine except for some low cloud over northeastern Transvaal.

Die antisikloon oos van die Unie verswak nou en wyk uit na die ooste en die druk daal algemeen oor die Unie. Golfontwikkeling word aangedui halfpad tussen Tristan en die Kaap en dit sal aanleiding gee tot verdere fris bergwinde langs die Kaapse kusstreke Elsesien van miswolke oor Noordoos-Transvaal sal dit mooiweer wees oor die res van die Unie.

DATE 22/6/1954 DATUM

AFLEIDING

An extensive high is building up near Tristan da Cunha and cold air is moving northwards between the island and the Cape. The low just southwest of the Union will move southeastwards giving fresh winds and cloudy skies over the southwestern Cape Province.

'n Uitgebreide hoog vorm in die omgewing van Tristan da Cunha en koue lug beweeg noordwaarts tussen die eiland en die Kaap. Die Laag net suidwes van die Unie beweeg suidooswaarts en sal taamlike sterk winde en bewolkte weer oor die Suidwestelike Kaapprovinsie veroorsaak.

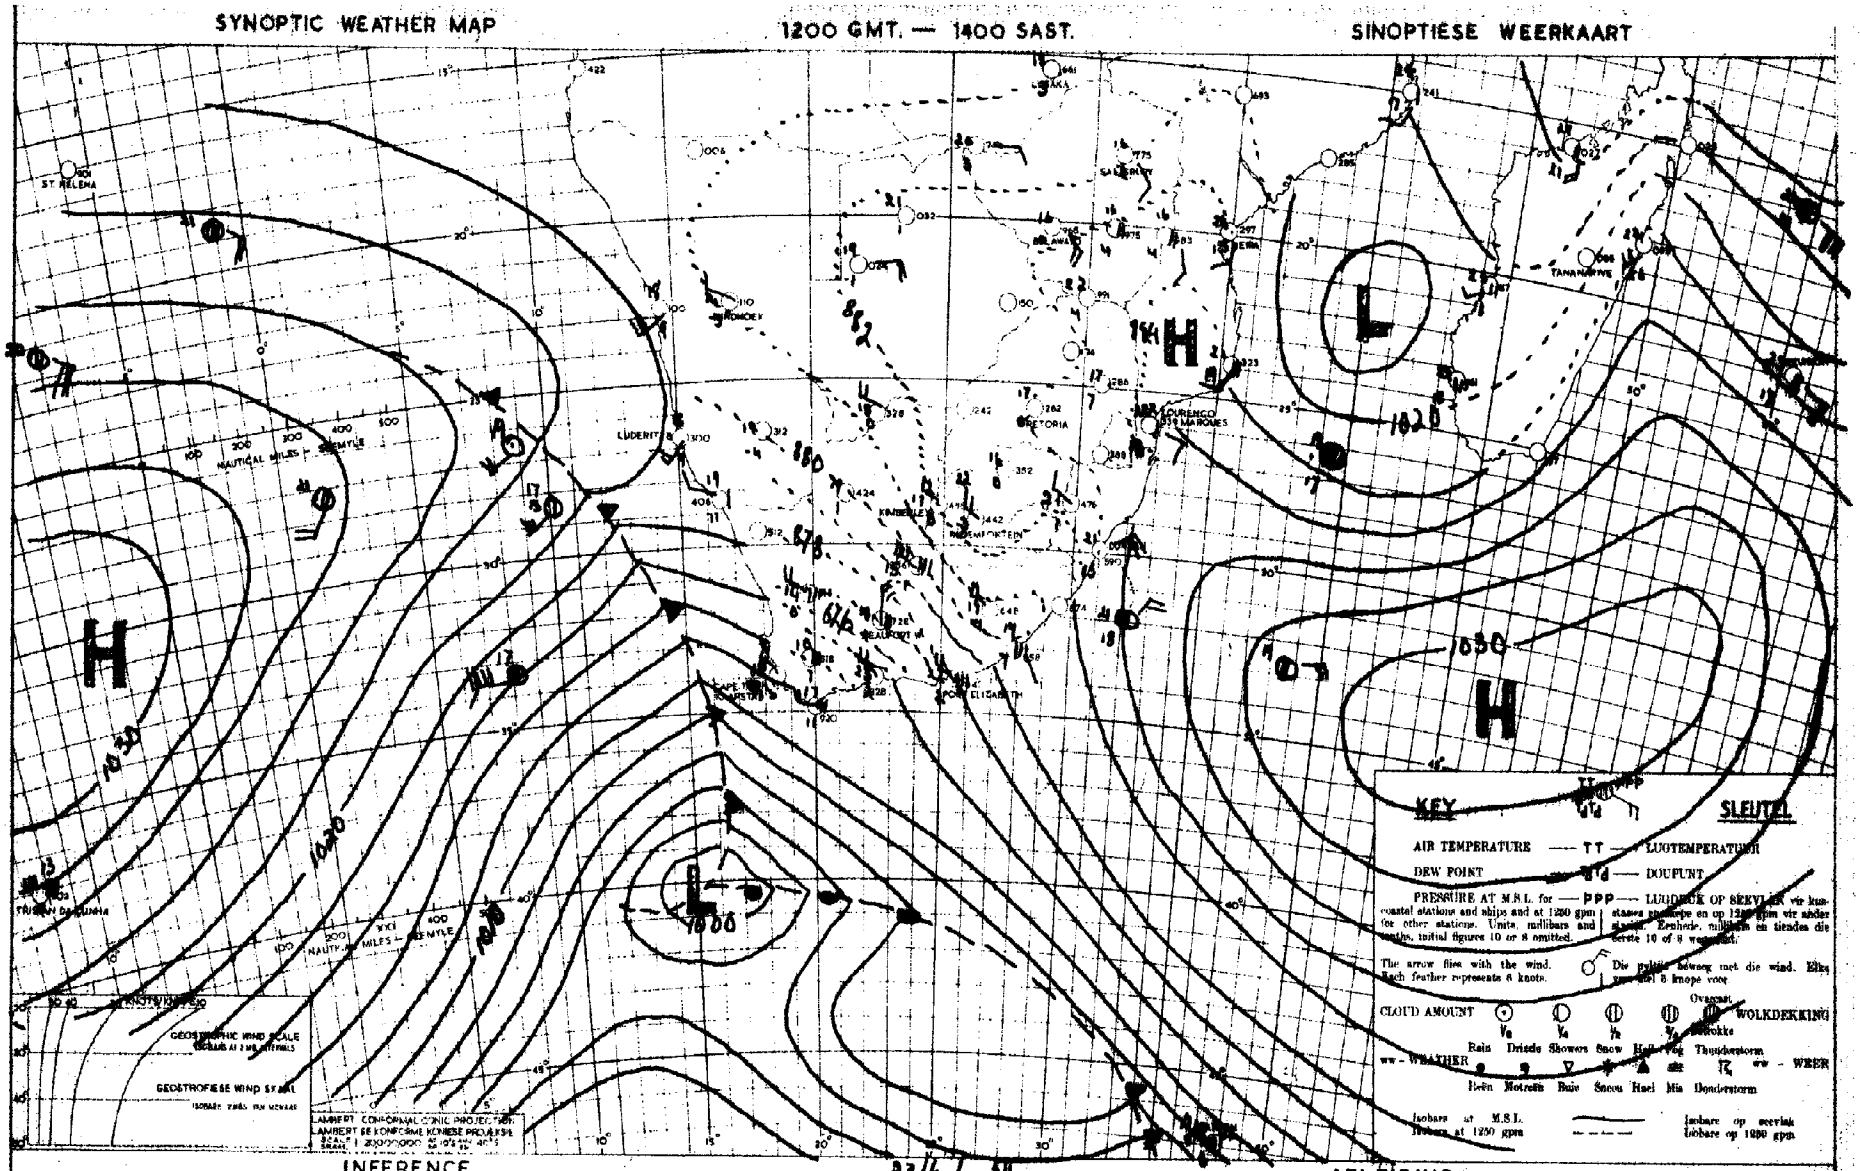
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 23/6/19 54 DATUM — AFLEIDING

Cool moist air flowing with the northwesterly airstream in advance of the cold front approaching the Cape will cause cloudy rainy weather to persist over the Southwestern Cape, but these conditions are not likely to extend eastwards until the day after tomorrow.

Koel vogtige lug wat met die noordwestelike lugstroom voor die koufront ingevoer word sal bewolkte weer en reën oor Suidwes Kaapland laat voortduur. Hierdie toestande sal egter nie voor oormôre ooswaarts beweeg nie.

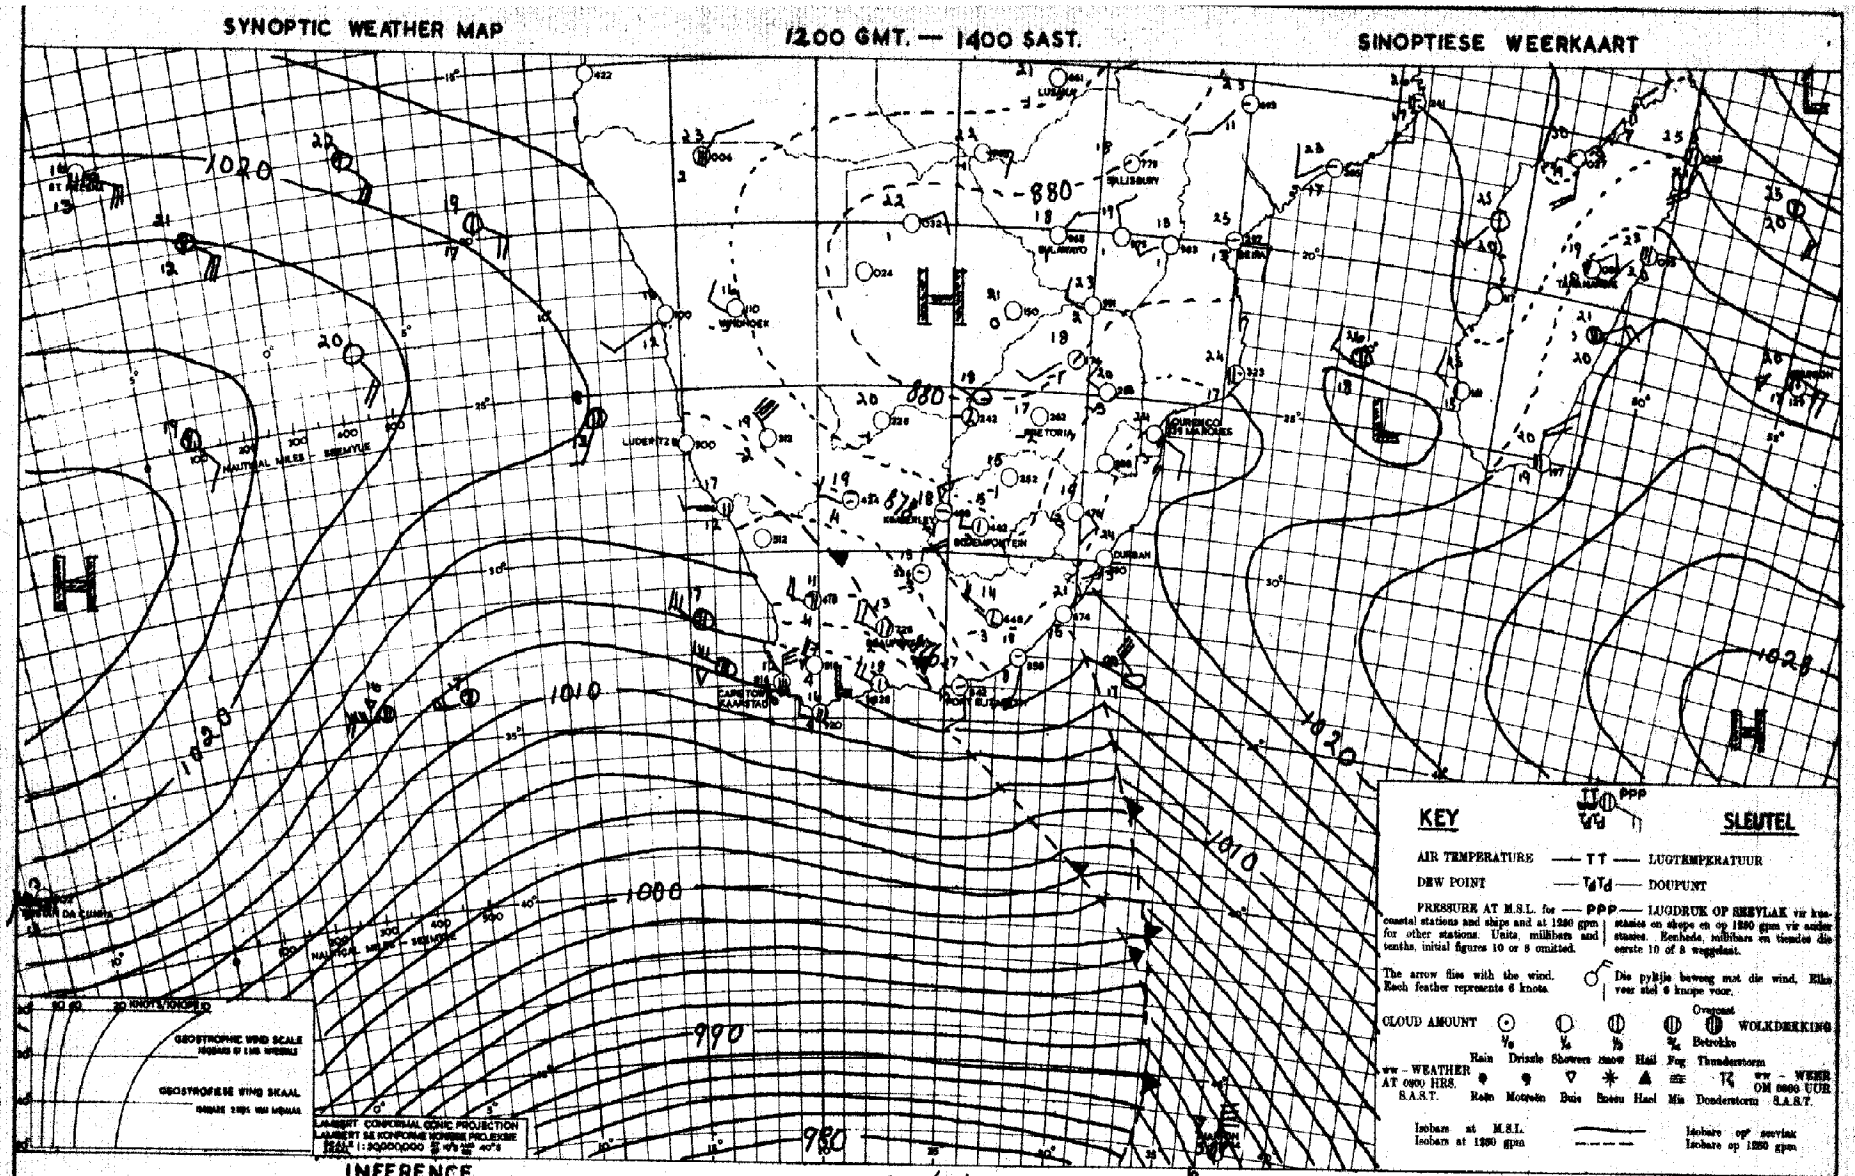
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 24/6/54 DATUM AFLEIDING

The reports from Tristan and ships west of the Cape indicate that the Atlantic high is situated far to the north and westerly to northwesterly wind will continue over the Union, resulting in cloudy weather over southwestern Cape and fine, mild weather over the remainder of the Union.

Die berigte vanaf Tristan en skepe wes van die Kaap dui aan dat die Atlantiese hoogdrukgordel ver na die noorde gelee is en dat weste- tot noordwestewind sal voortduur oor die Unie. Gevolglik sal dit bewolk bly oor Suidwestelike Kaap, maar oriens sal dit mooiweer en matig wees oor die Unie.

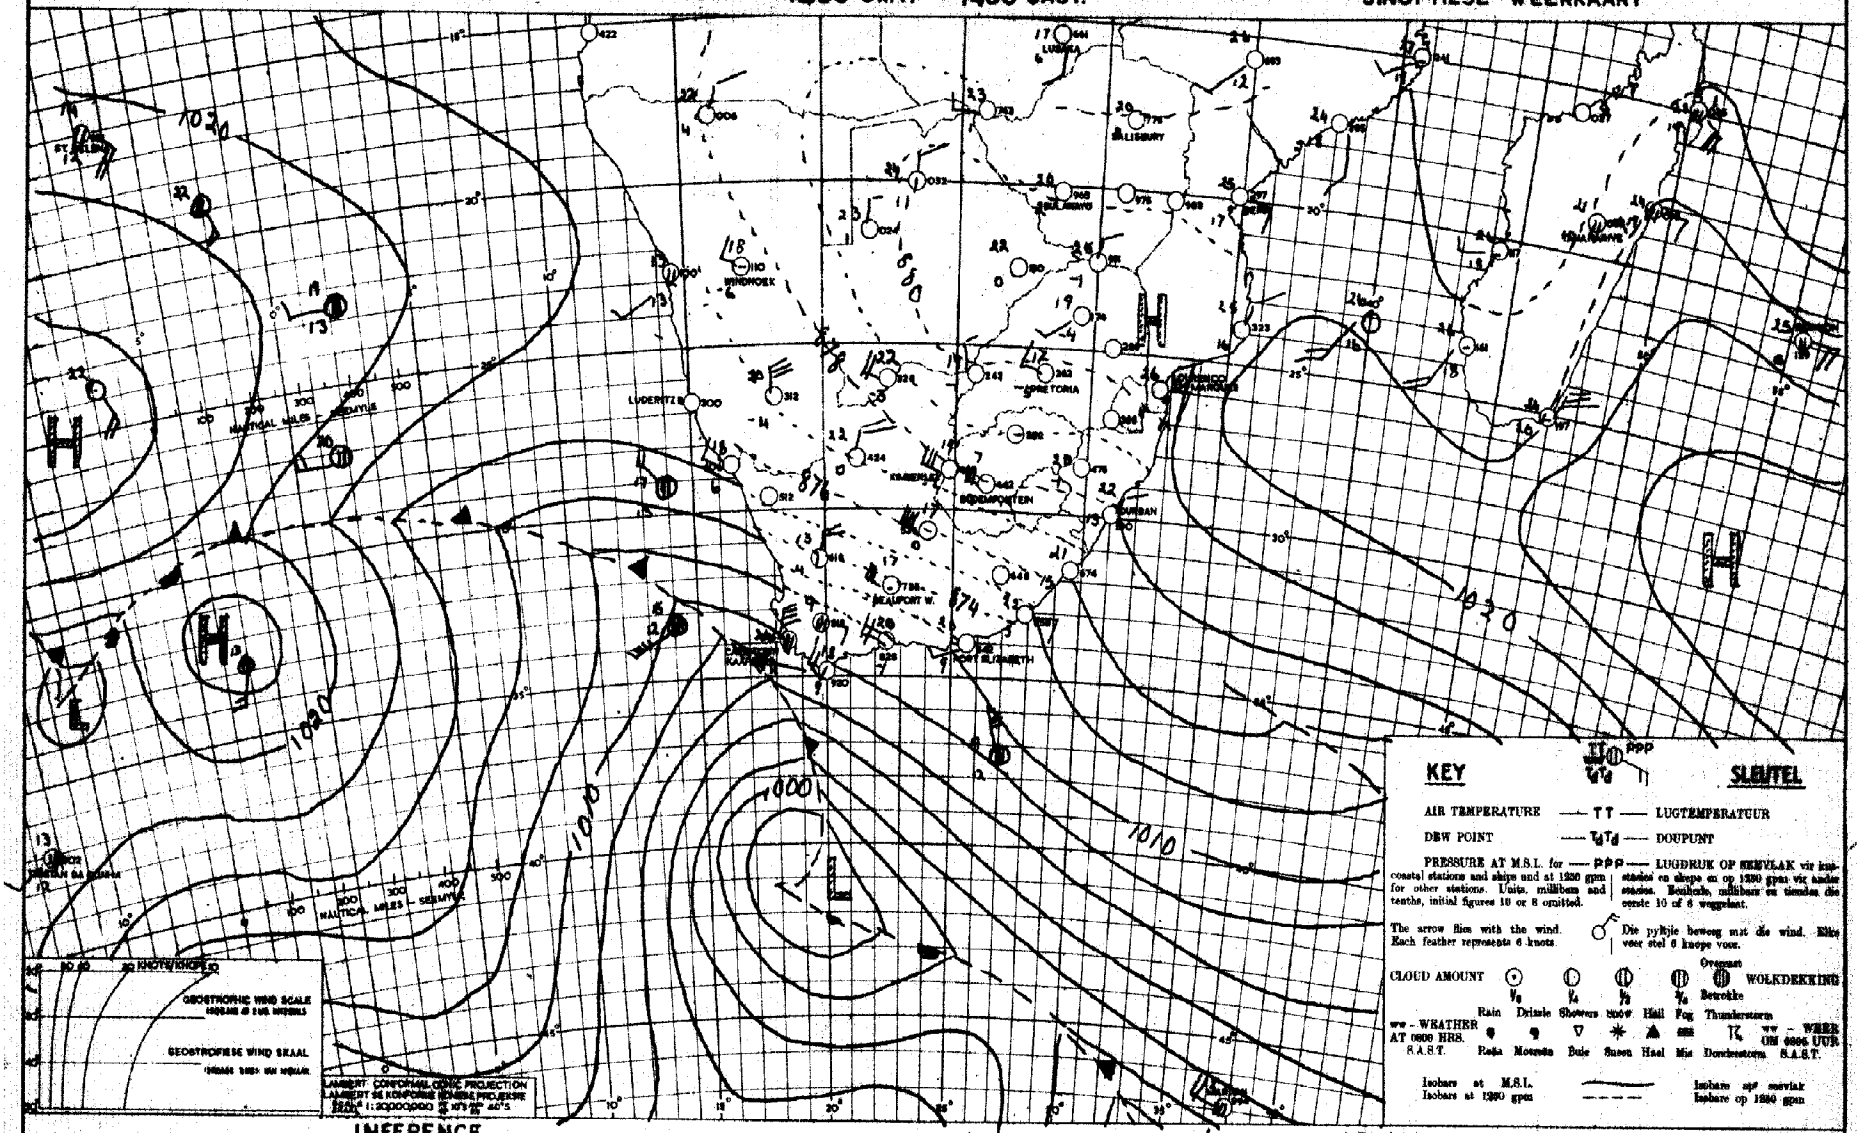
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 25/6/1954 DATUM — AFLEIDING

A trough is indicated within a short distance west of the Cape, but pressure is stagnant at Tristan and therefore a strong invasion of cold air from Southwest over the Union is unlikely. Unsettled weather should persist over southwestern Cape and cool air will penetrate to all parts of the Cape Province.

'n Trog word aangedui op geringe afstand wes van die Kaap, maar die druk bly betreklik laag by Tristan en gevolglik kan geen grootskaalse indringing van koue lug uit die suidweste verwag word nie. Ongestadige weer sal voortduur oor Suidwes Kaapland en koel lug sal ook na alle dele van die Kaapprovinsie versprei.

DATE 26/6/1954 DATUM

AFLEIDING

The depression south of the Cape will slowly move eastwards and cold air in its rear will penetrate all parts of the Cape and southern Free State. Cloudy conditions with light rain will develop over southern Cape and the southeast coast. The eastward movement of the depression northeast of Tristan will, however, intiate clearance and falling pressures on the west coast.

Die laagdrukstelsel suid van die Kaap sal stadig ooswaarts uitwyk en die koue lug wes daarvan sal dwarsoor Kaapland tot in Suid-Vrystaat beweeg. Bewolkte weer met ligte reën sal oor Suid-Kaapland en langs die suidooskus ontwikkel. Die laagdrukstelsel noordoos van Tristan sal egter dalende druk en opklaring aan die weskus veroorsaak.

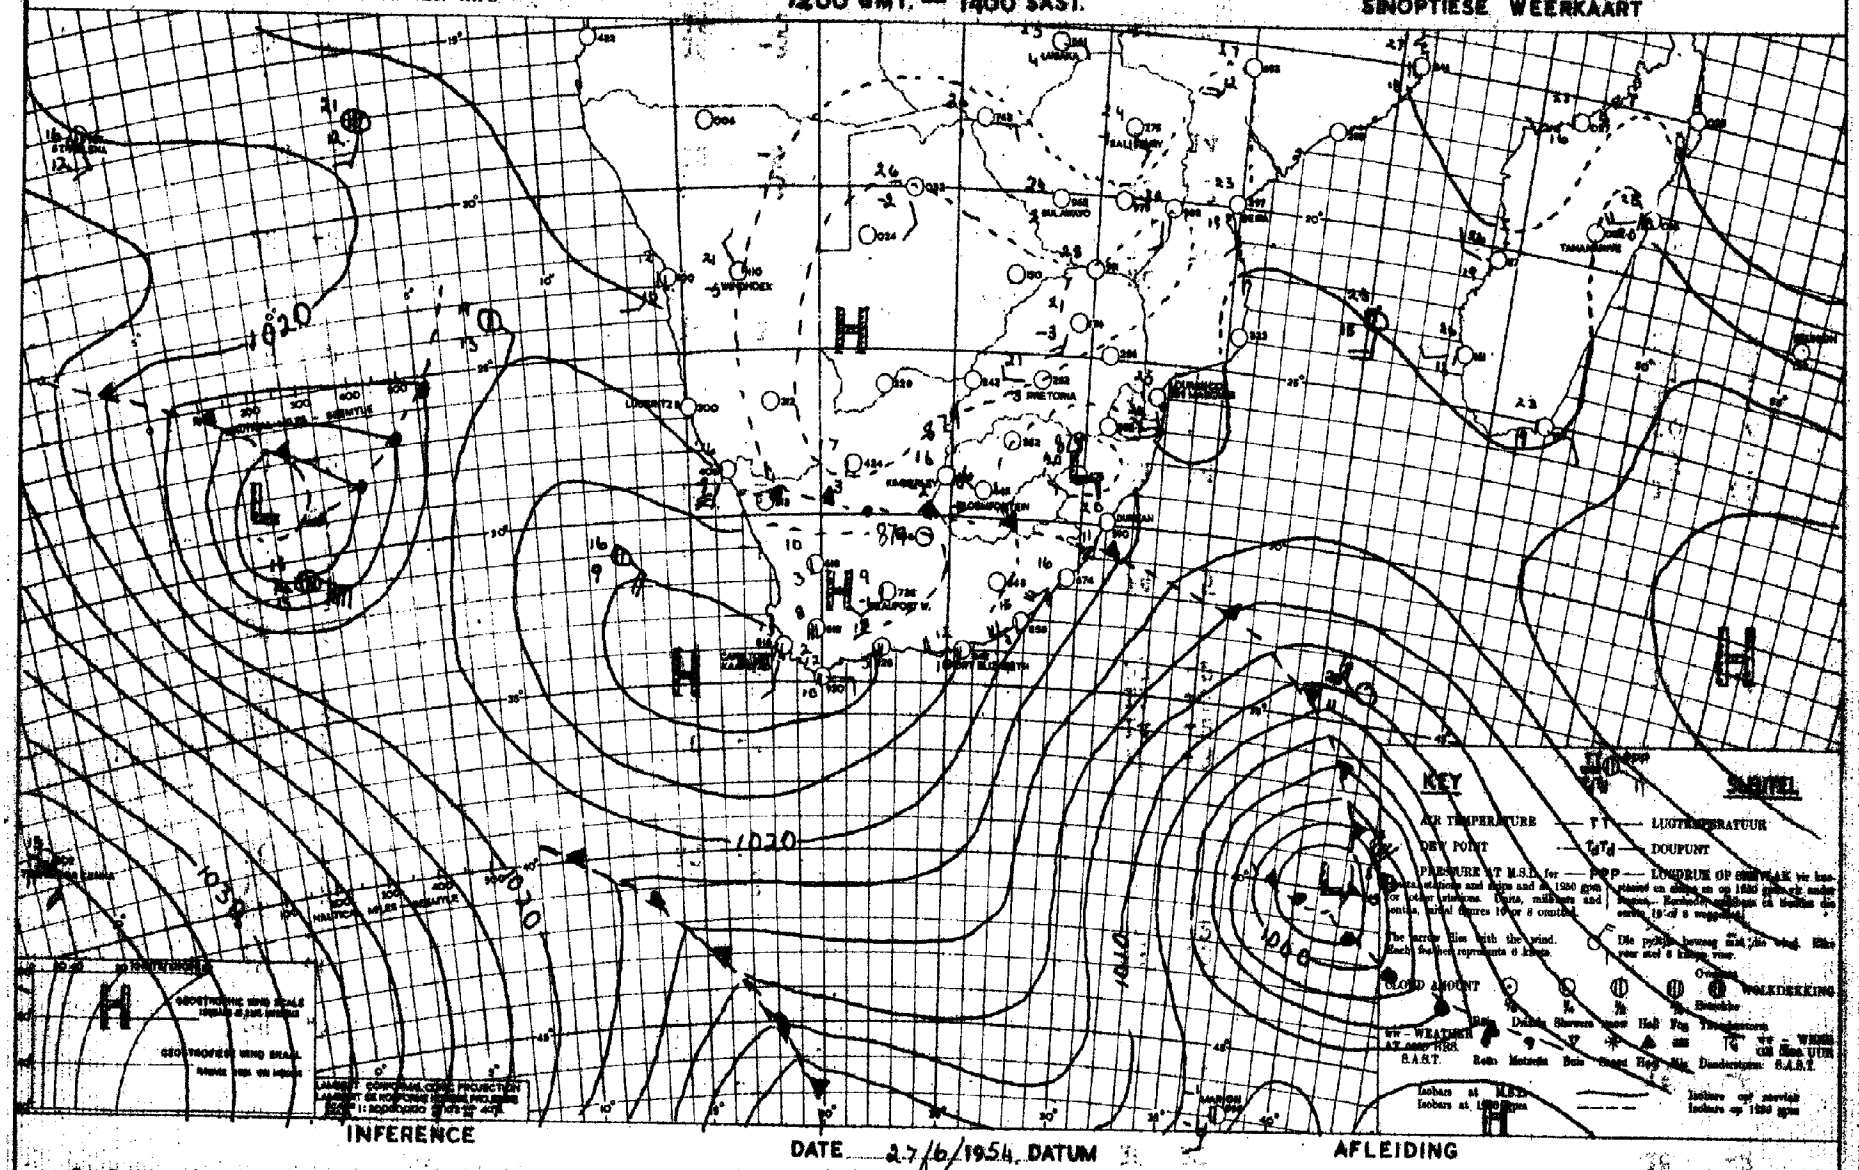
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



DATE 27/6/1954 DATUM

Cooler moister air will spread northwards across Natal and the eastern Transvaal Lowveld giving cloudy conditions temporarily in the morning, but elsewhere over the Union it will be mainly fine. The approach of the depression in the Atlantic will cause a fall of pressure over the western Cape, where winds will become Northly.

Koeler vogtiger lug sal noordwaarts oor Natal en die Oos Transvaalse Laeveld uitbrei en sal in die oggend tydelik bewolkte weer veroorsaak, maar origens sal dit oor die Unie meesal mooiweer wees. Die naderende depressie in die Atlantiese Oseaan sal drukke laat daal oor Wes Kaapland en winde sal noordelik draai.

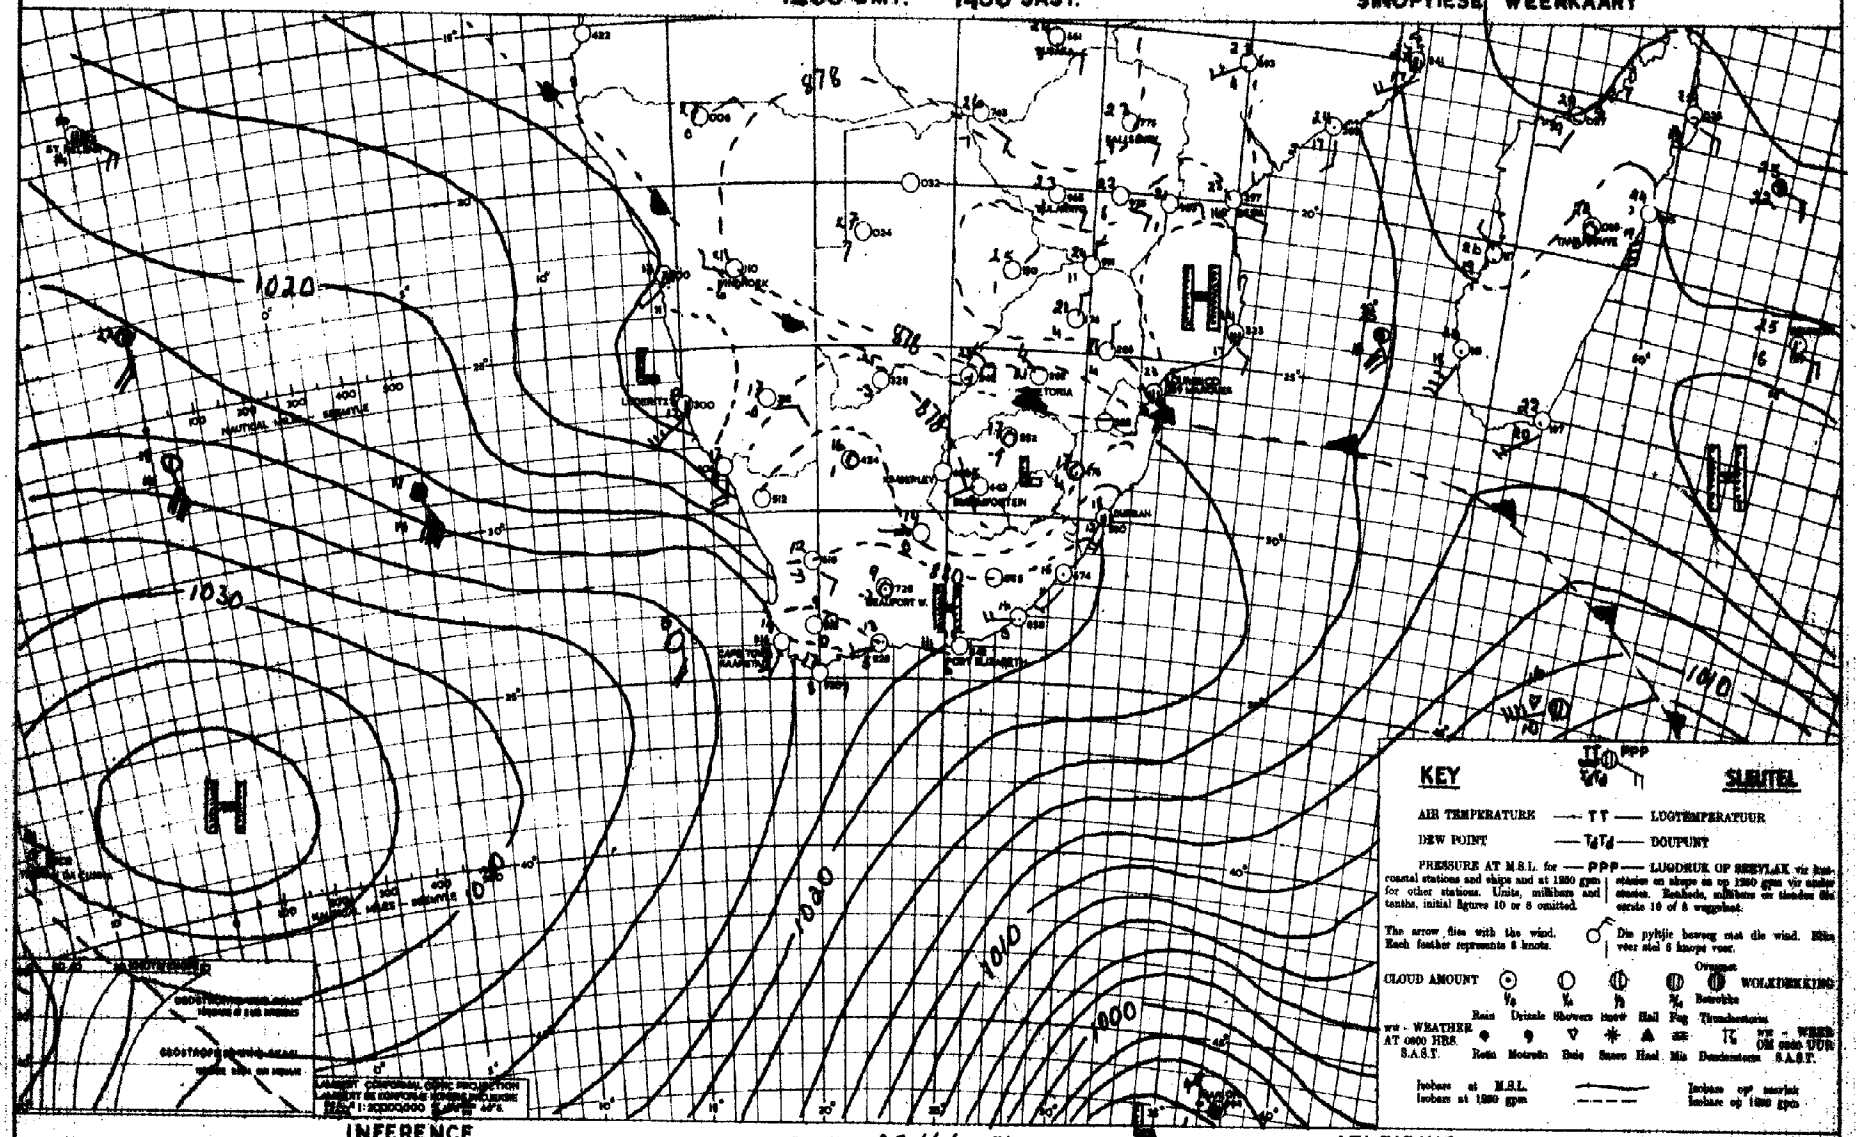
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE

Stable weather conditions existed throughout the Union and as little or no pressure development is expected, the weather will continue to remain fine.

DATE 28/6/1954 DATUM

AFLEIDING

Mooiweerstoestande het deurgaans oor die hele Unie geheers. Aangesien min verandering in die drukpatroon verwag word, sal die bestendige weerstoestande voort duur.

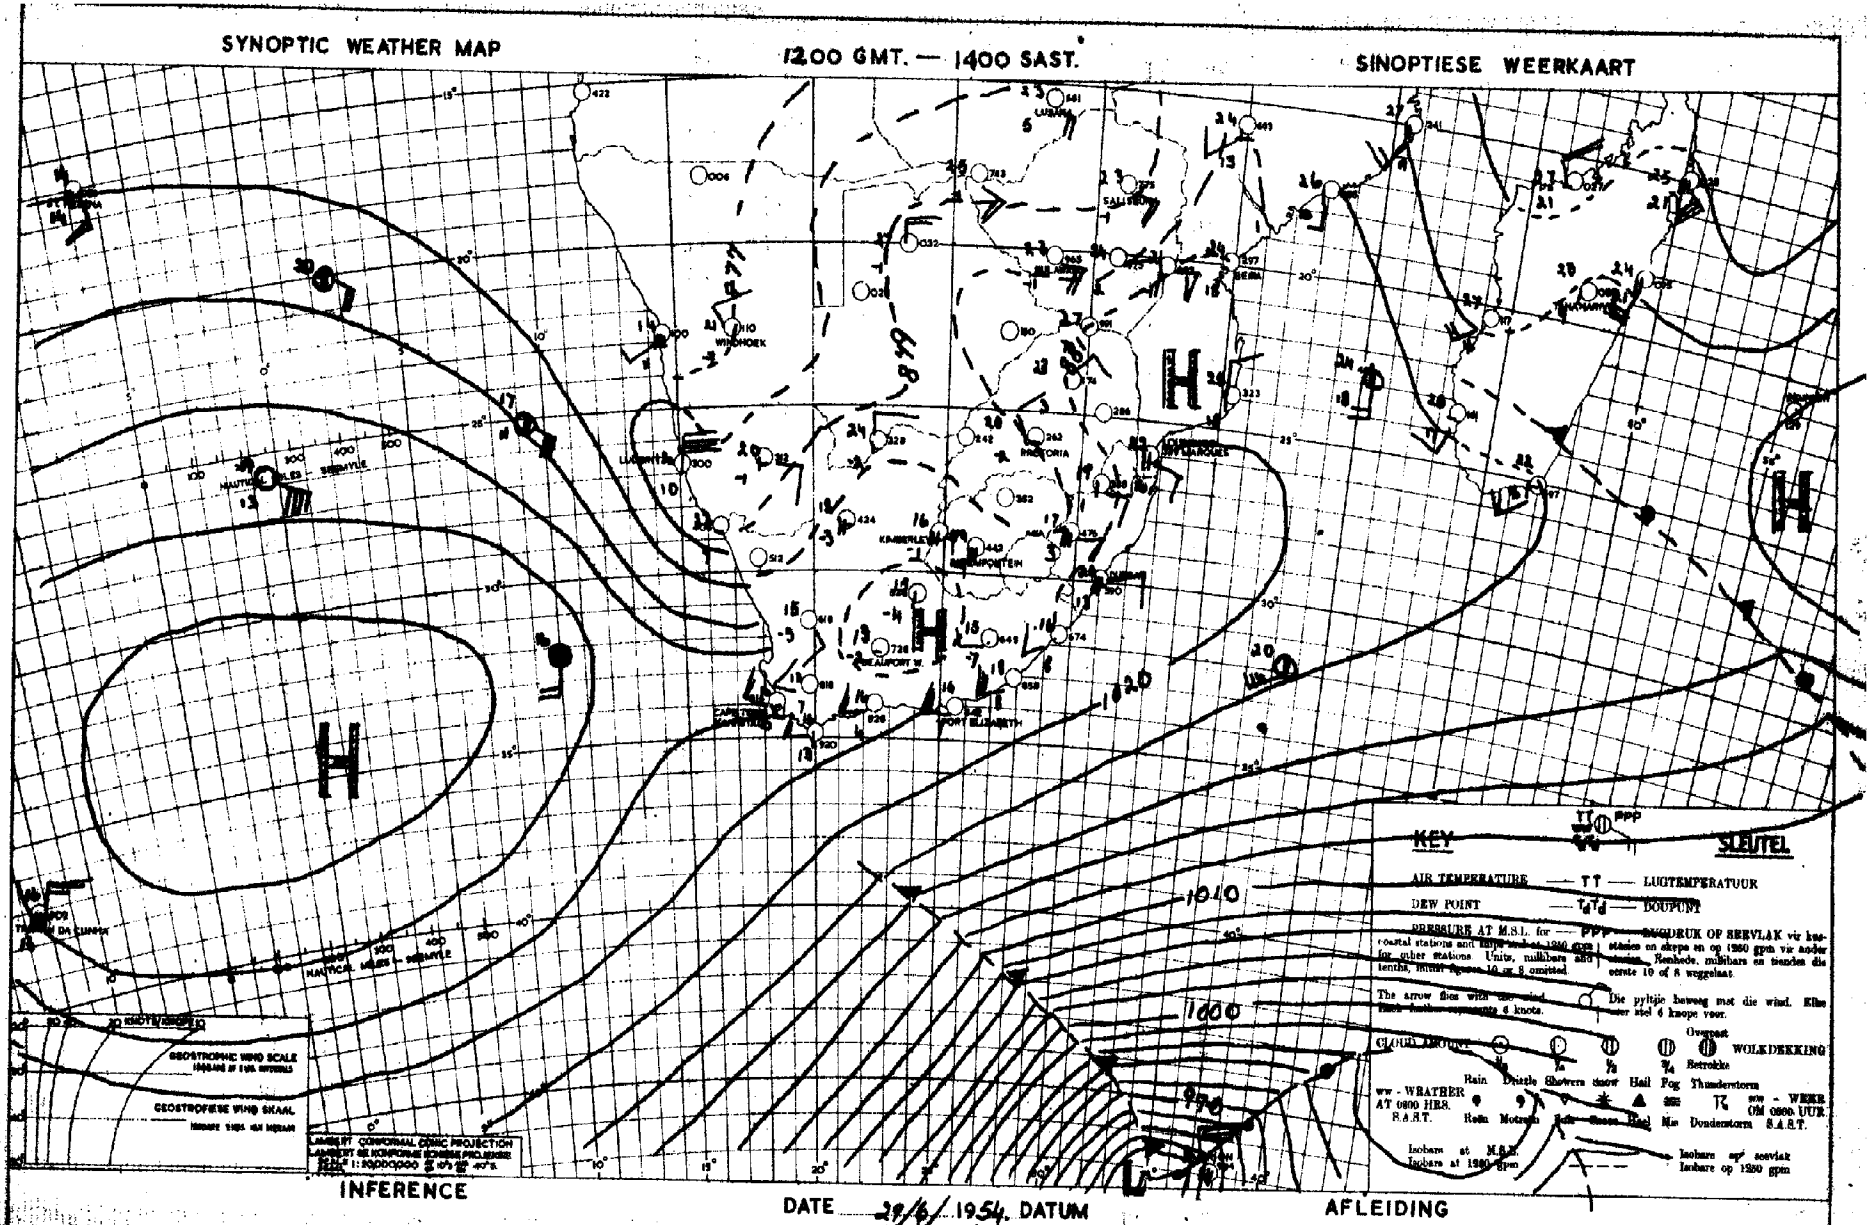
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE

Little change is expected and apart from high cloud over the Central parts of the Union it will be fine.

DATE 29/6/1954. DATUM

AFLEIDING

Min verandering word verwag en afgesien van hoë vlieswolke oor die middeldele van die Unie sal dit mooiweer wees.
