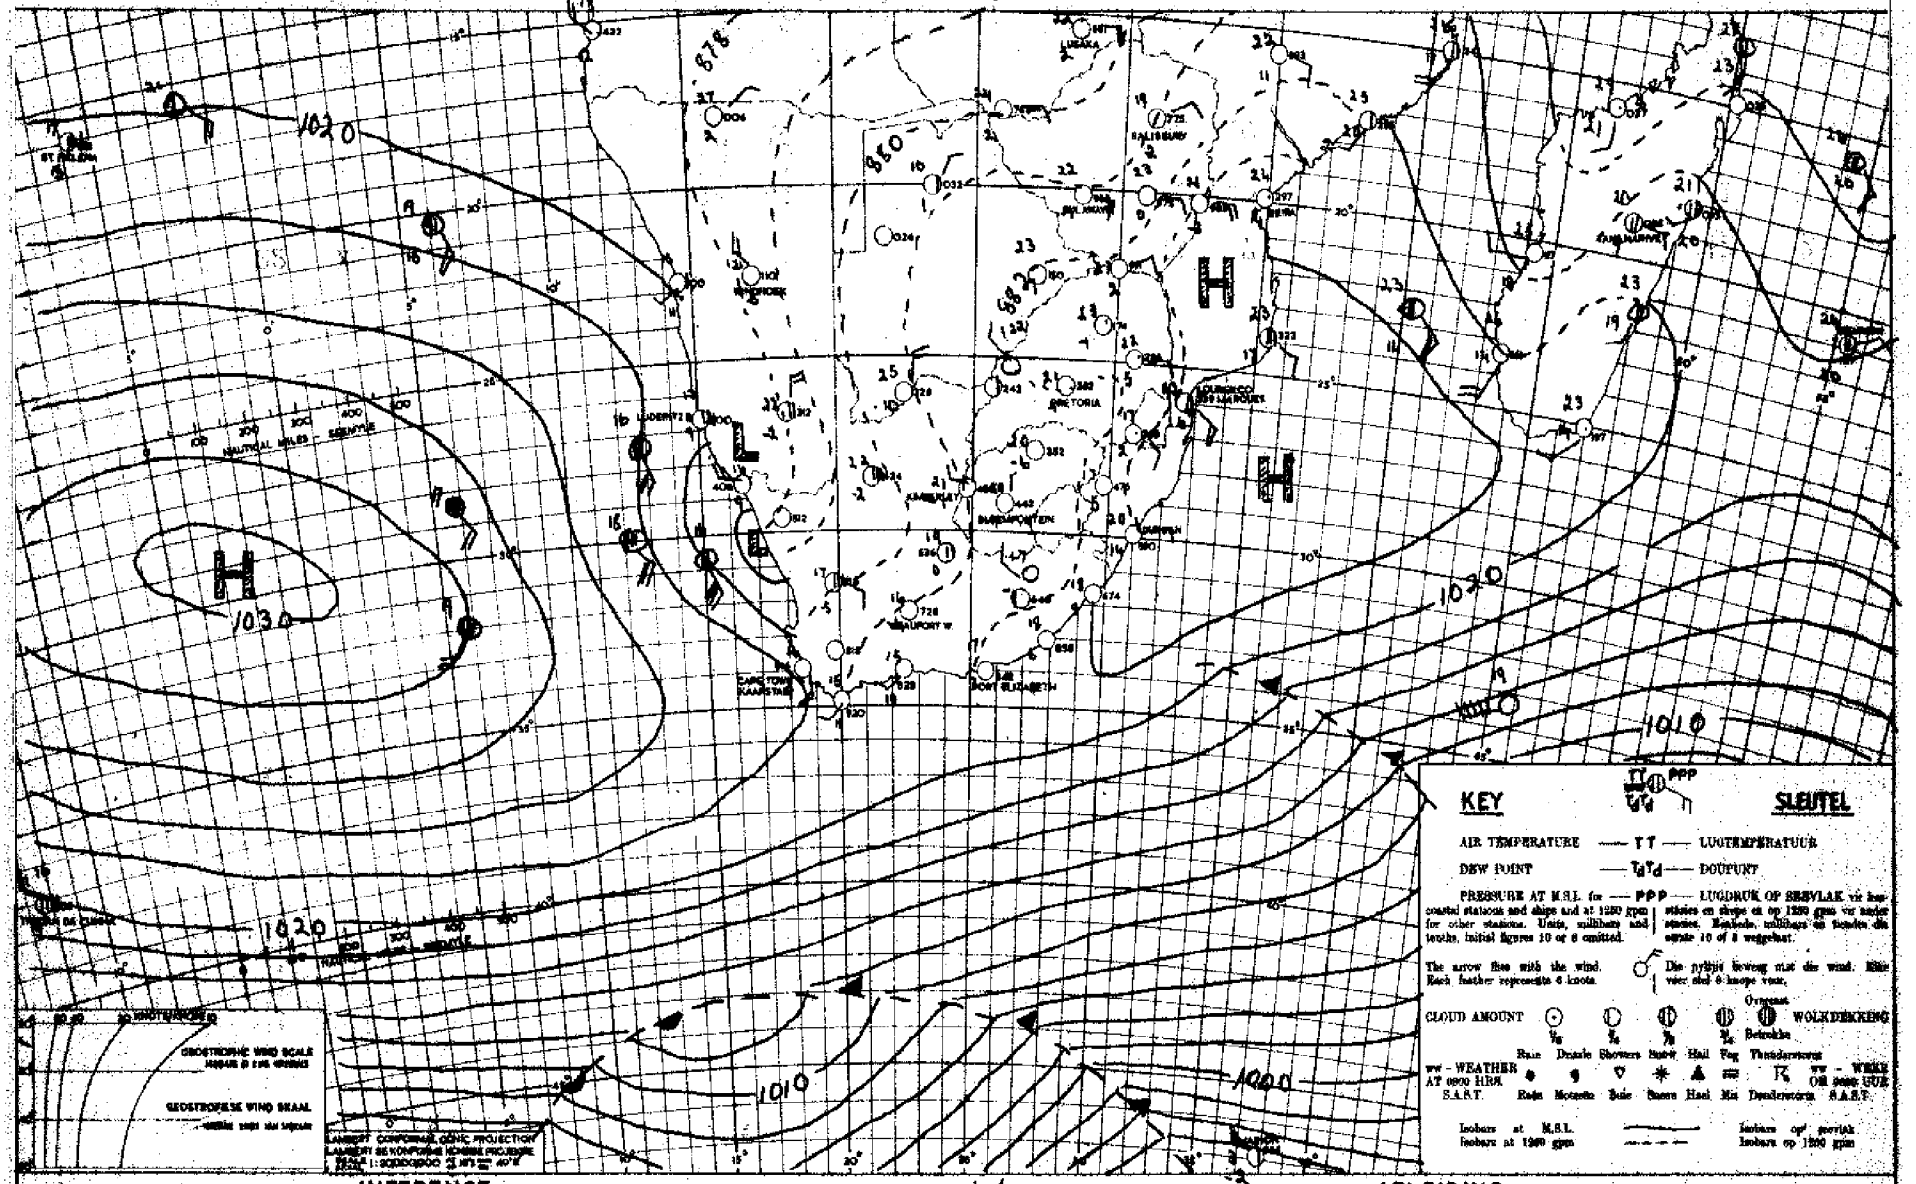
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 30/6/1954 DATUM AFLEIDING

The Atlantic anticyclone is remaining stationary and little change is likely over the Union. The middle cloud over western interior Cape should spread southeastwards and the warmer air north of the Orange River will cover the interior south of the River tomorrow.

Die Atlantiese antisikloon bly stasionêr en min verandering sal oor die Unie intree. Die middelbare wolke oor Wes-Kaapland sal na die suidooste beweeg en die warmer lug noord van die Oranje-rivier sal na die binneland suid van die rivier uitbrei.

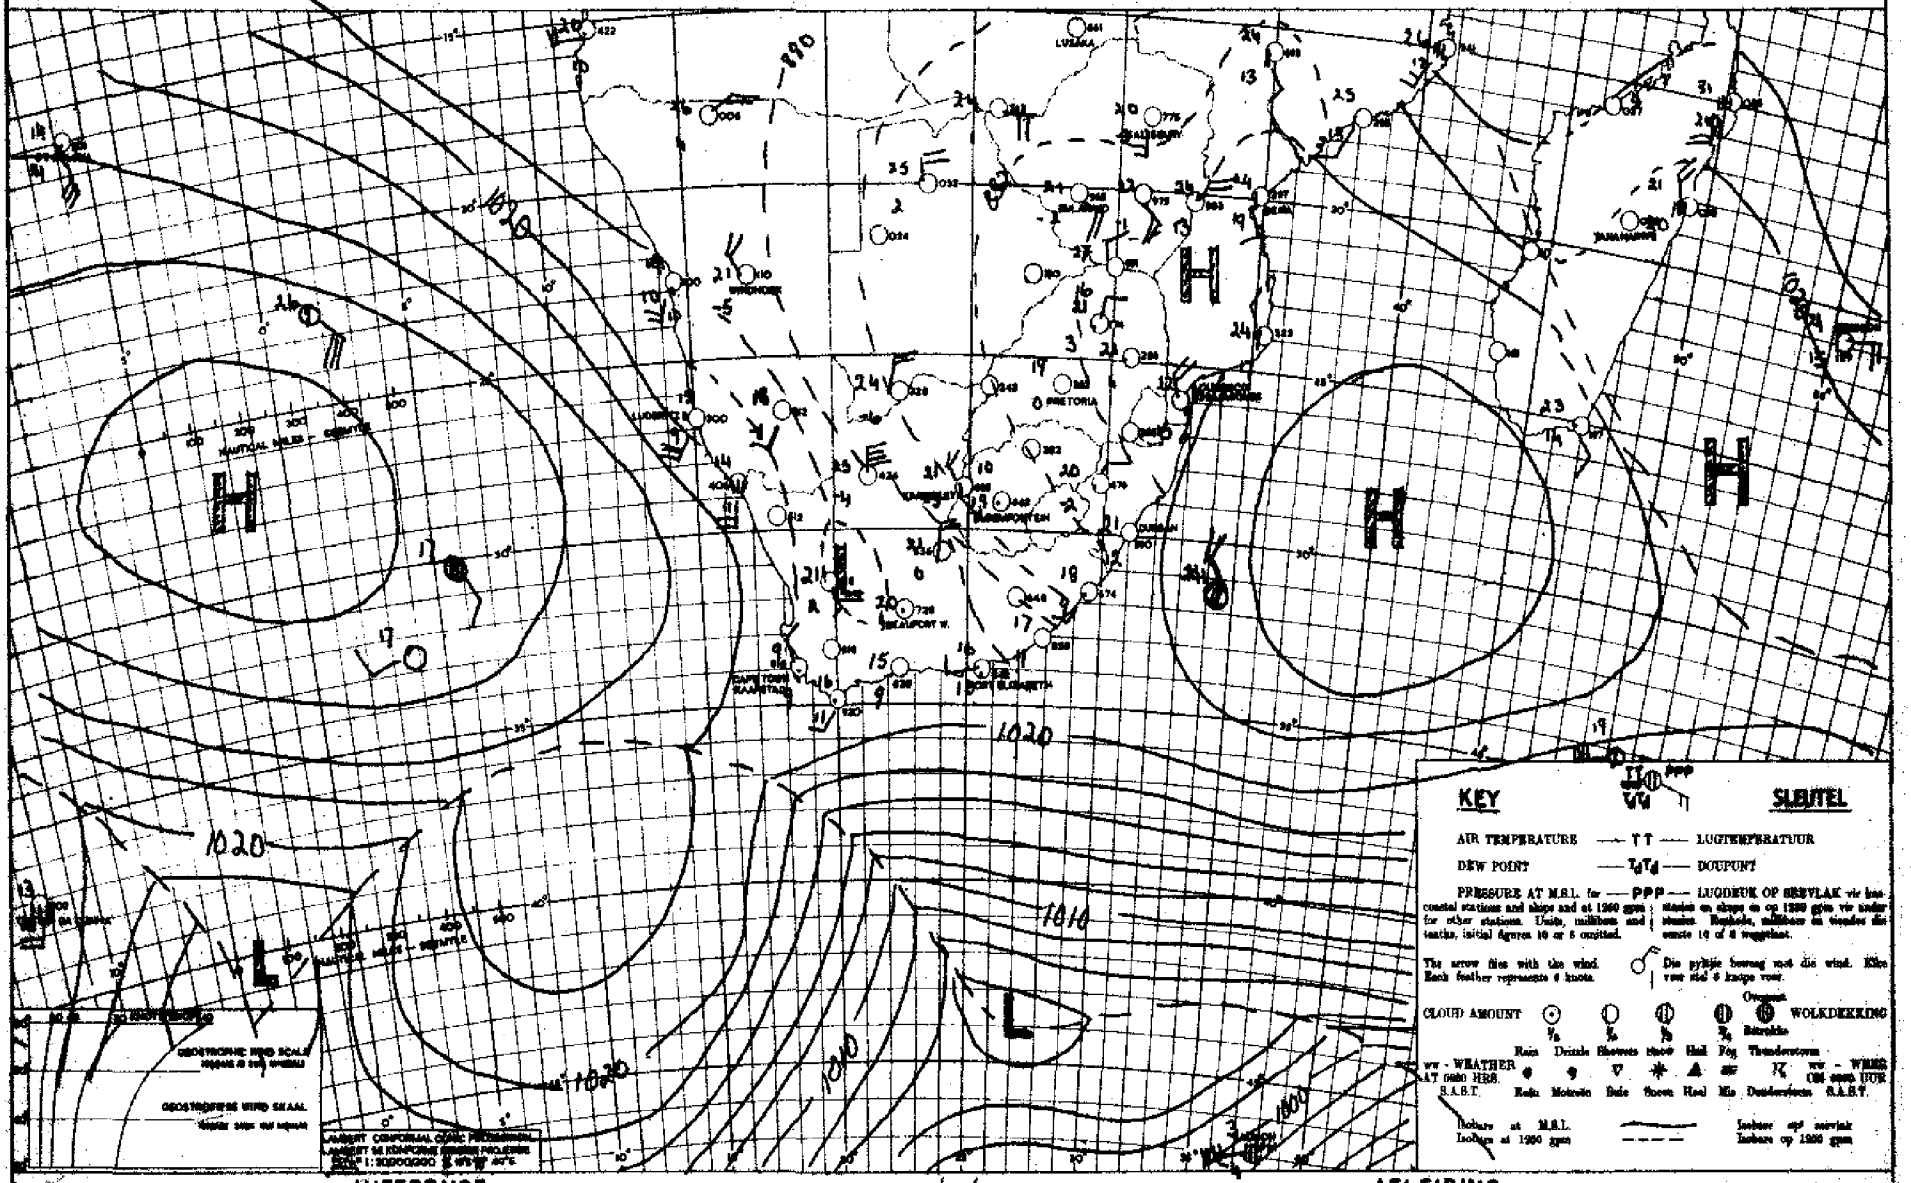
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 1/7/1954 DATUM — AFLEIDING

The Western and southwestern Cape is influenced by cooler Atlantic air. Cloudy conditions can be expected along the coastal areas tomorrow and will spread eastwards. The warm continental air will continue to dominate the remainder of the Union and the weather will thus remain fine.

Koel Atlantiese lug beïnvloed Suidwes Kaapland, en bewolkte toestande sal langs die kuste voorkom en wat geleidelik noswaarts sal uitbrei. Die warm kontinentale lug sal die res van die Unie bly beïnvloed en dit sal dus mooiweer bly.

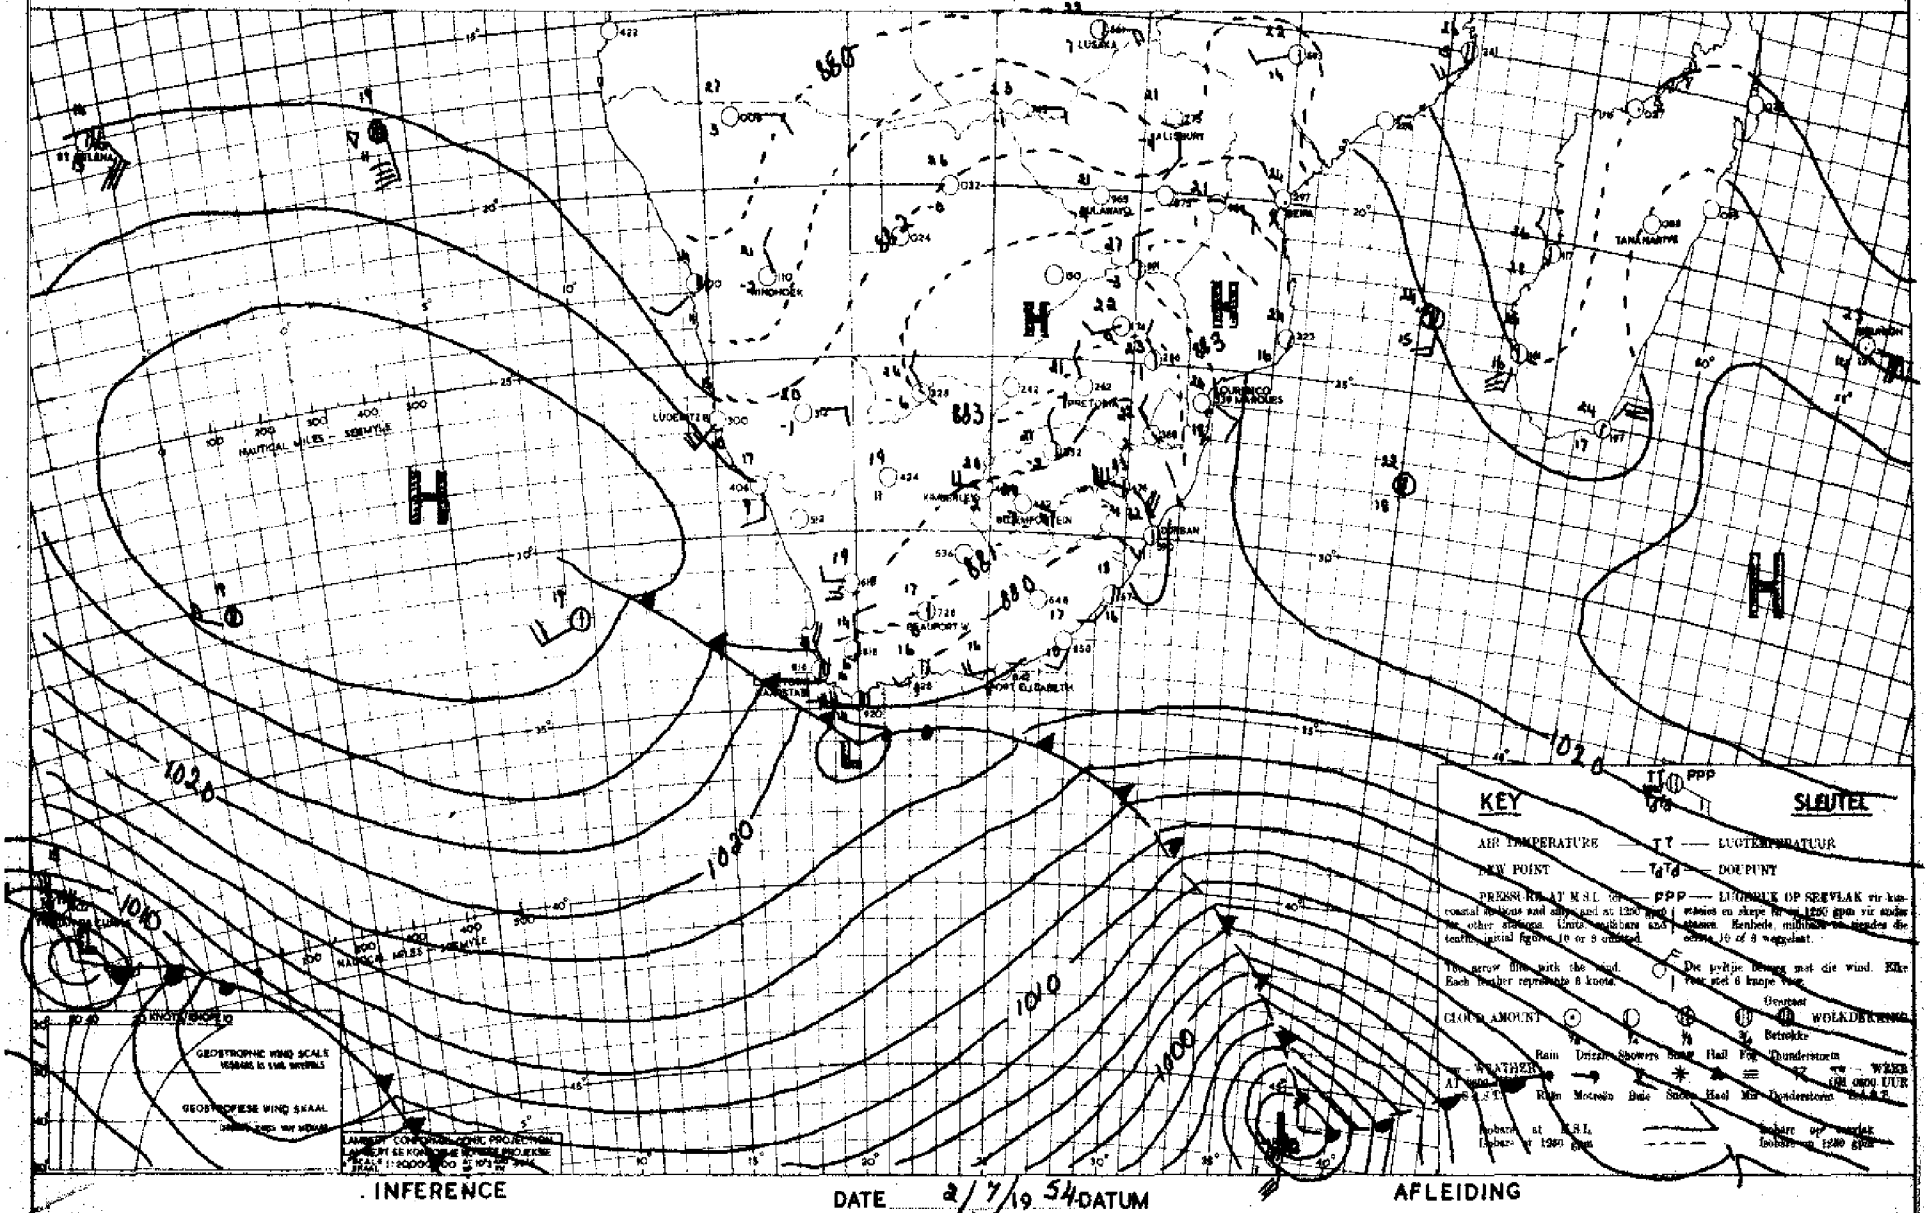
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 2/7/19 54 DATUM — AFLEIDING

Colder air in the rear of the cold front approaching the Cape this afternoon is expected to spread across the southern Cape. With the rapid approach of a fresh system of depressions in the South Atlantic winds will however, veer to Northwesterly or Westerly again by Sunday. Elsewhere over the Union there will be no change.

Kouer lug agter die koufront, wat vanmiddag die Kaap nader, sal na verwagting oor suidelike Kaapland indring. Met die vinnige nadering van 'n nuwe stelsel depressies in die Suid Atlantiese Oseaan sal die winde egter teen Sondag weer Noordwestelik tot Westelik draai. Elders oor die Unie sal daar min verandering wees

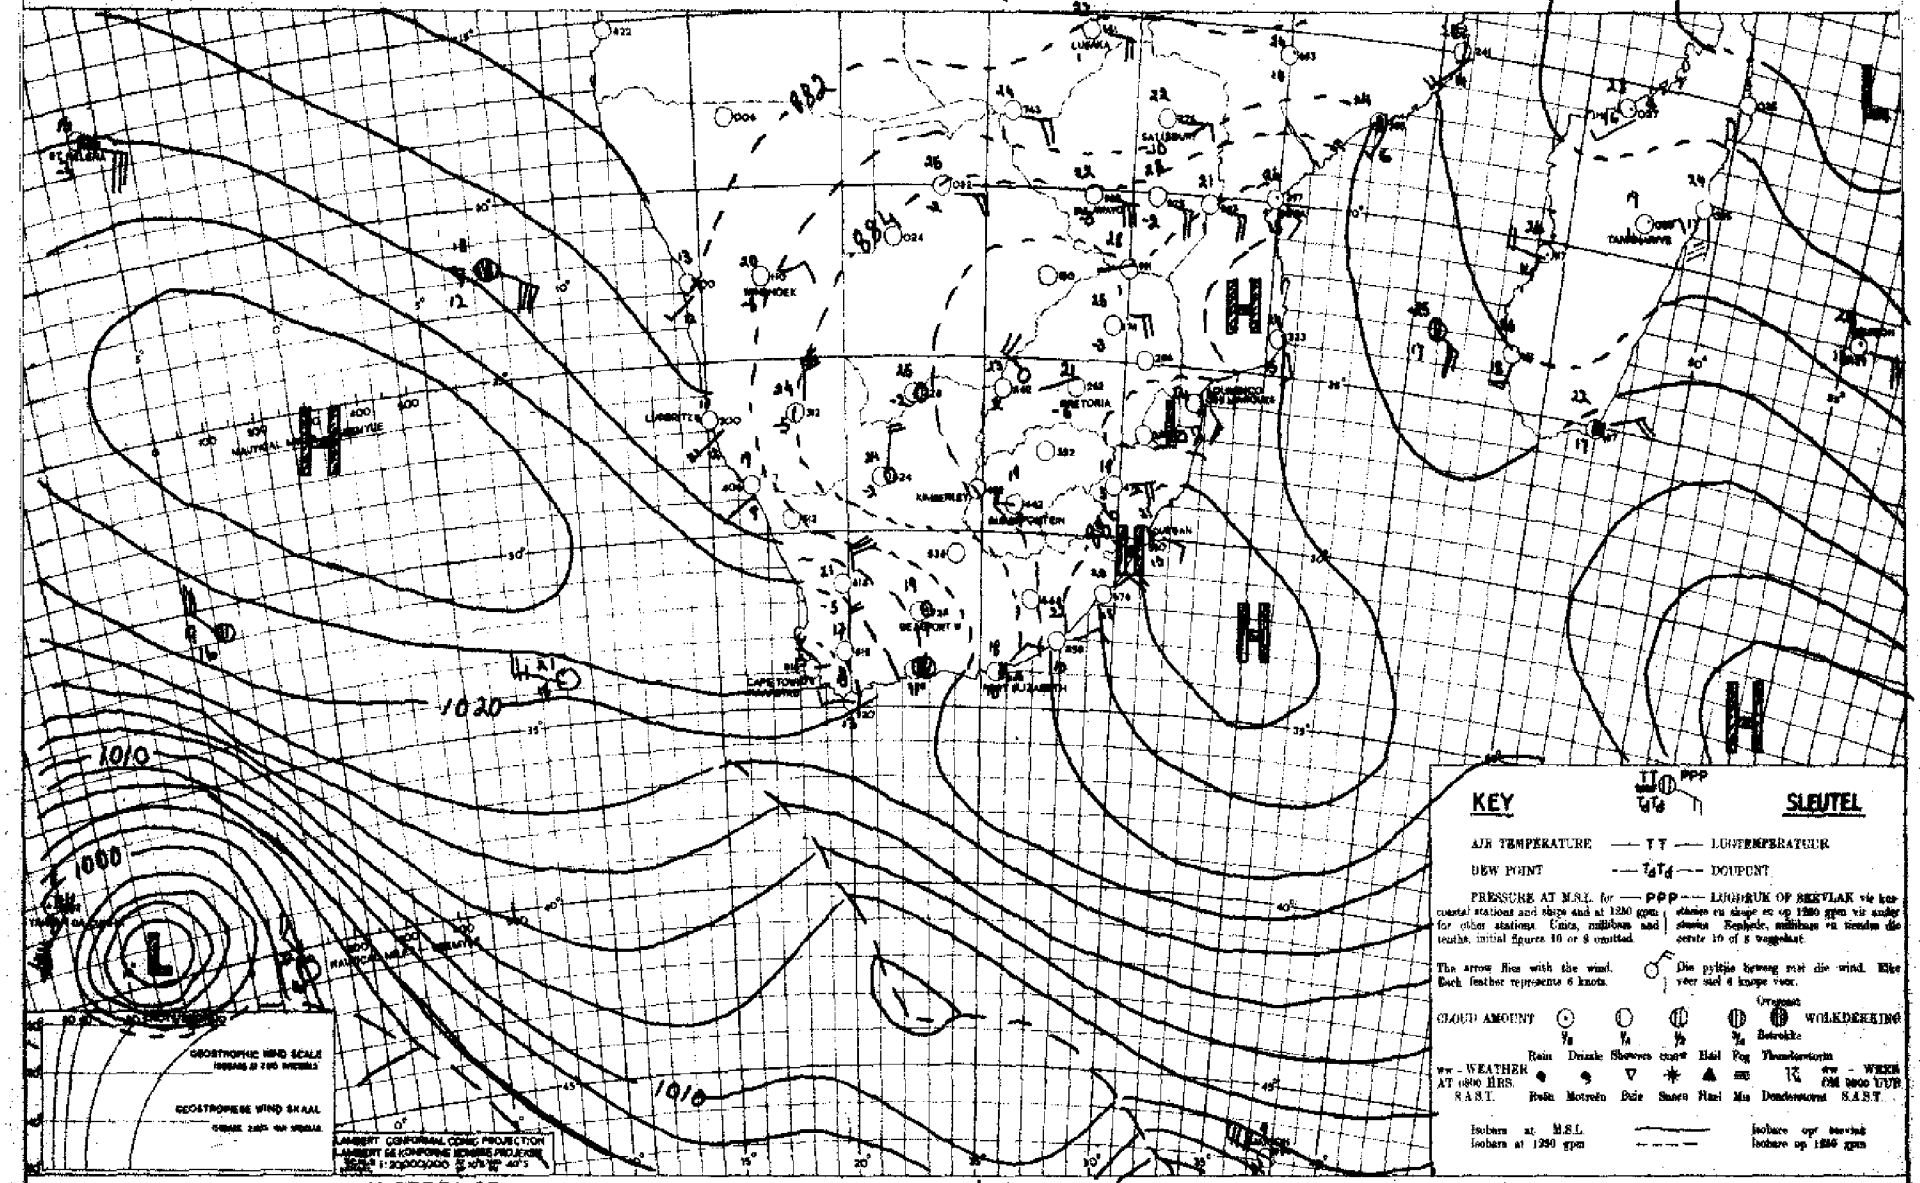
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 3/7/19 54 DATUM — AFLEIDING

Warm dry continental air continues to circulate over the Union, and consequently it was fine throughout the Union. A new disturbance occurred near Tristan da Cunha and may affect the Union in about three or four days.

Warm droë kontinentale lug bly die Unie beïnvloed en as gevolg hiervan bly die weerstoestande bestendig. 'n Nuwe steuring het naby Tristan da Cunha plaas gevind en sal waarskynlik die Unie binne drie of vier dae beïnvloed.

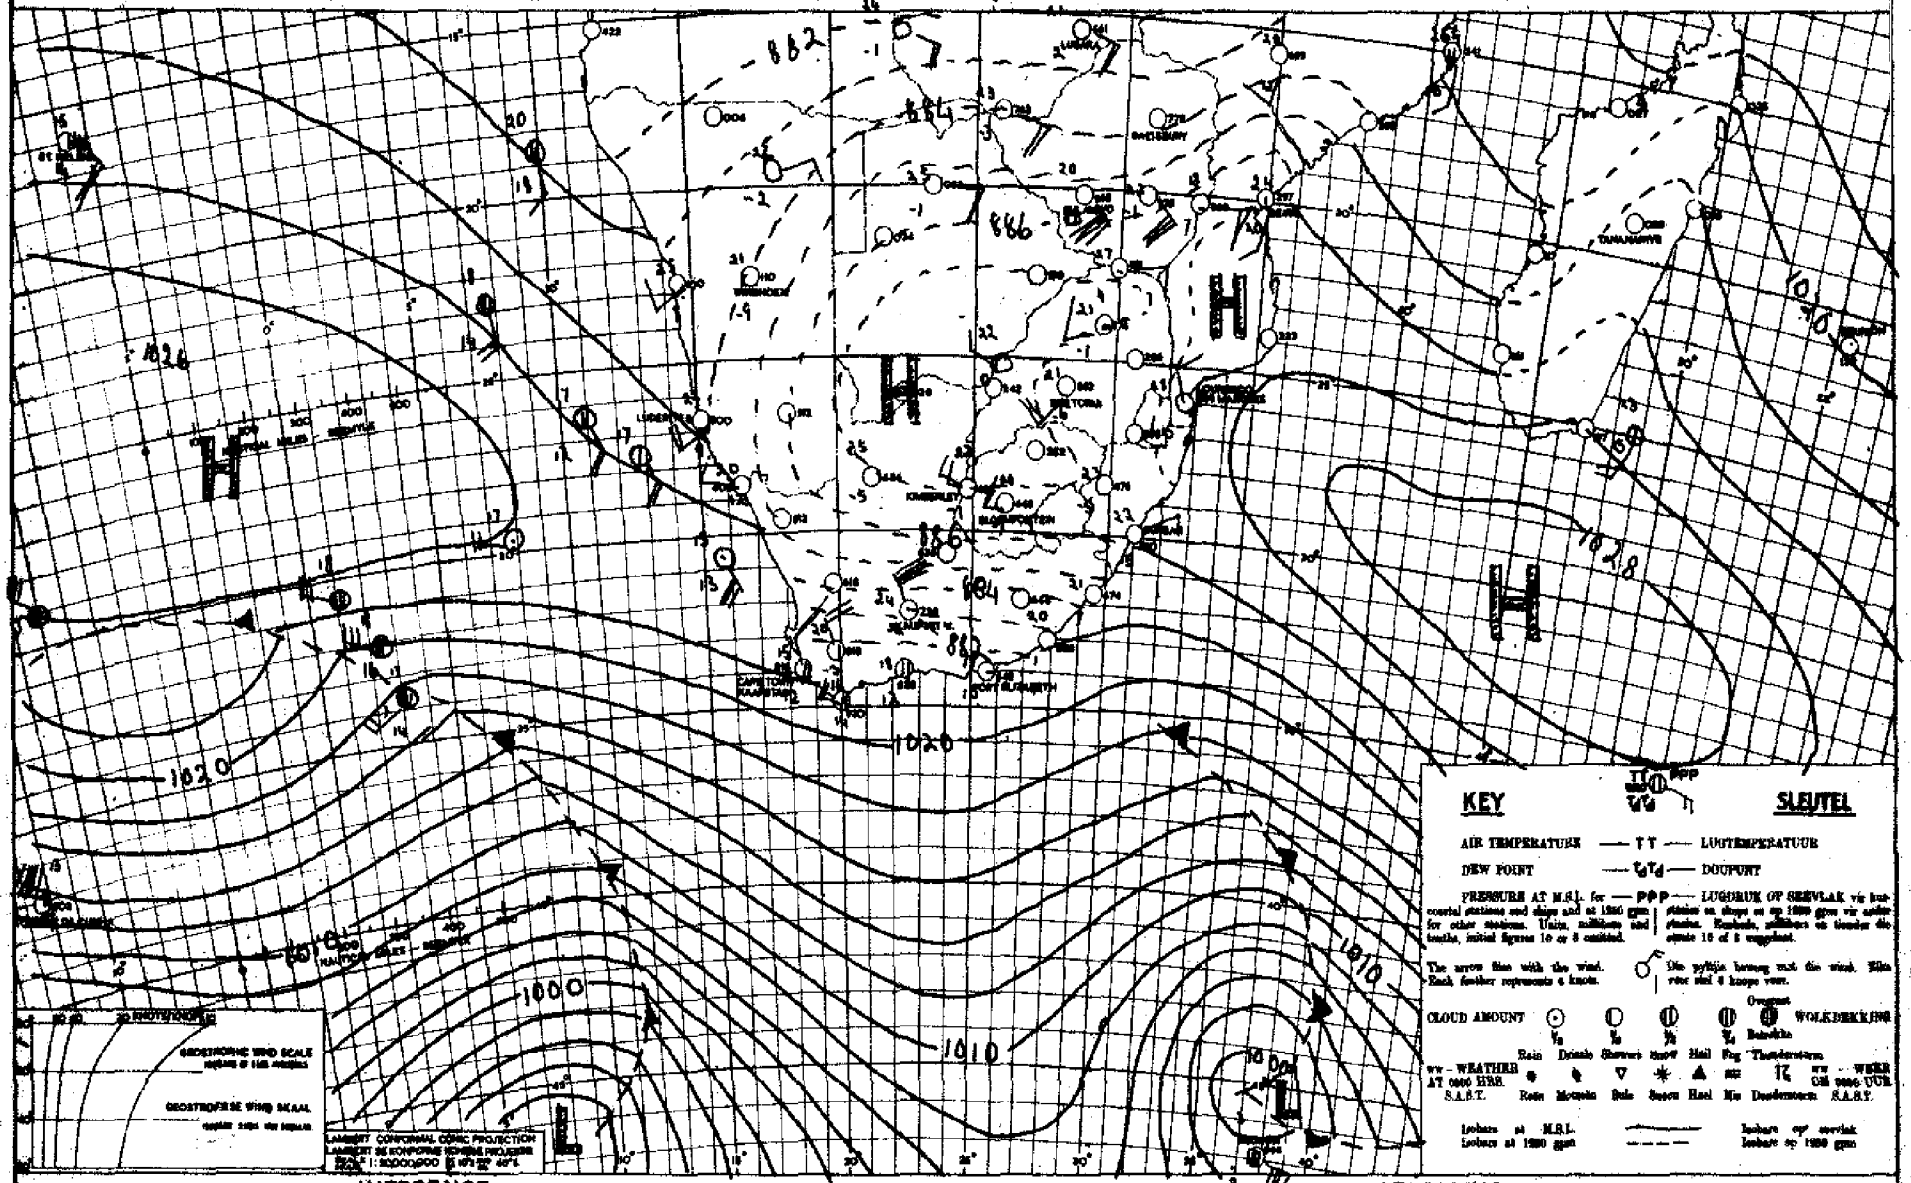
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 4/7/1954 DATUM — AFLEIDING

The circulation over the Union is anticyclonic and the air is dry and stable and consequently fine weather with day temperatures a few degrees above normal will persist. The trough halfway between Tristan and the Cape will, however, cause cooler, cloudy weather along the southwest coast tomorrow night.

Die lugbeweging oor die Unie is antisiklonies en die lug is droog en stabiel en gevolglik sal mooiweer met dagtemperatuur enkele grade bo normaal voortduur. Die trog halfpad tussen Tristan en die Kaap behoort egter aanleiding te gee tot koeler, bewolkte weer langs die Suid-weskus mörenag.

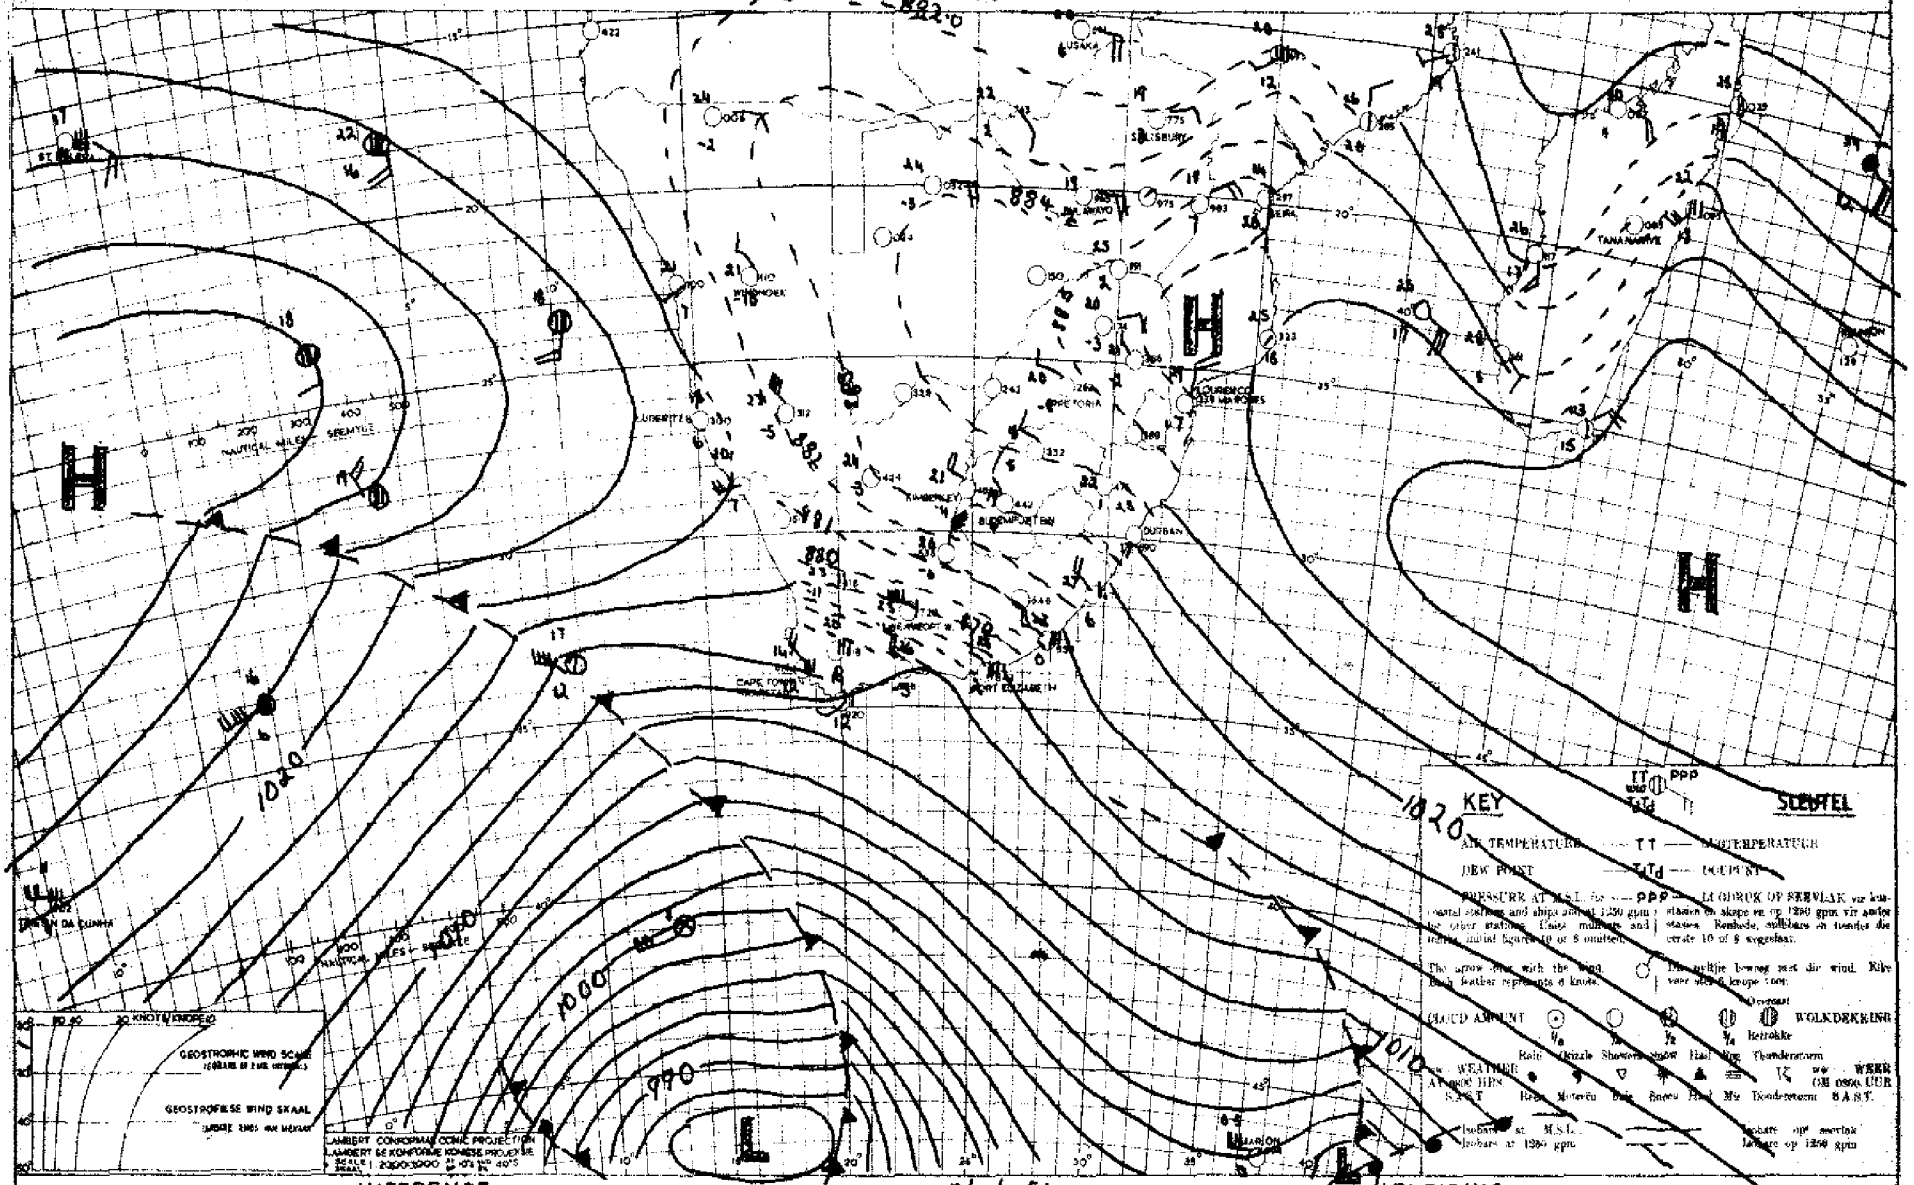
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 5/7/19 54 — DATUM — AFLEIDING

Met die nadering van die kouefront in die Atlantiese Oseaan sal ongestadigde toestande met reën oor Suidwes Kaapland en daarna oor Suid Kaapland ontwikkel. Dit is moontlik dat 'n groot deel van die land 'n inval deur koue suidwestewind gedurende hierdie week sal ondervind.

With the approach of the cold front in the Atlantic Ocean unsettled conditions with rain will develop over the southwestern Cape and subsequently over the southern Cape. It is possible that a large part of the Union will experience an invasion by cold southwesterly winds during this week.

INFERENCE

A strong trough is indicated between Tristan and the Union and unusually cold air is advancing northwards behind the trough. Pressure is falling rapidly over the Union and rising at Tristan, so that the system should move eastwards fairly rapidly. Strong northwesterly winds will blow over the Union and unsettled weather will continue over southwestern Cape.

DATE 6/7/1954 DATUM

AFLEIDING

'n Intensiewe trog word aangedui tussen Tristan en die Kaap en buitengewone koue lug stroom noordwaarts wes daarvan. Die druk daal vinnig oor die Unie omstyg vinnig by Tristan sodat die sisteem taamlik vinnig oswaarts behoort te beweeg. Sterk noordwestewind sal môre oor die Unie waai en ongestadige weer sal voortduur oor Suidwes-Kaapland.

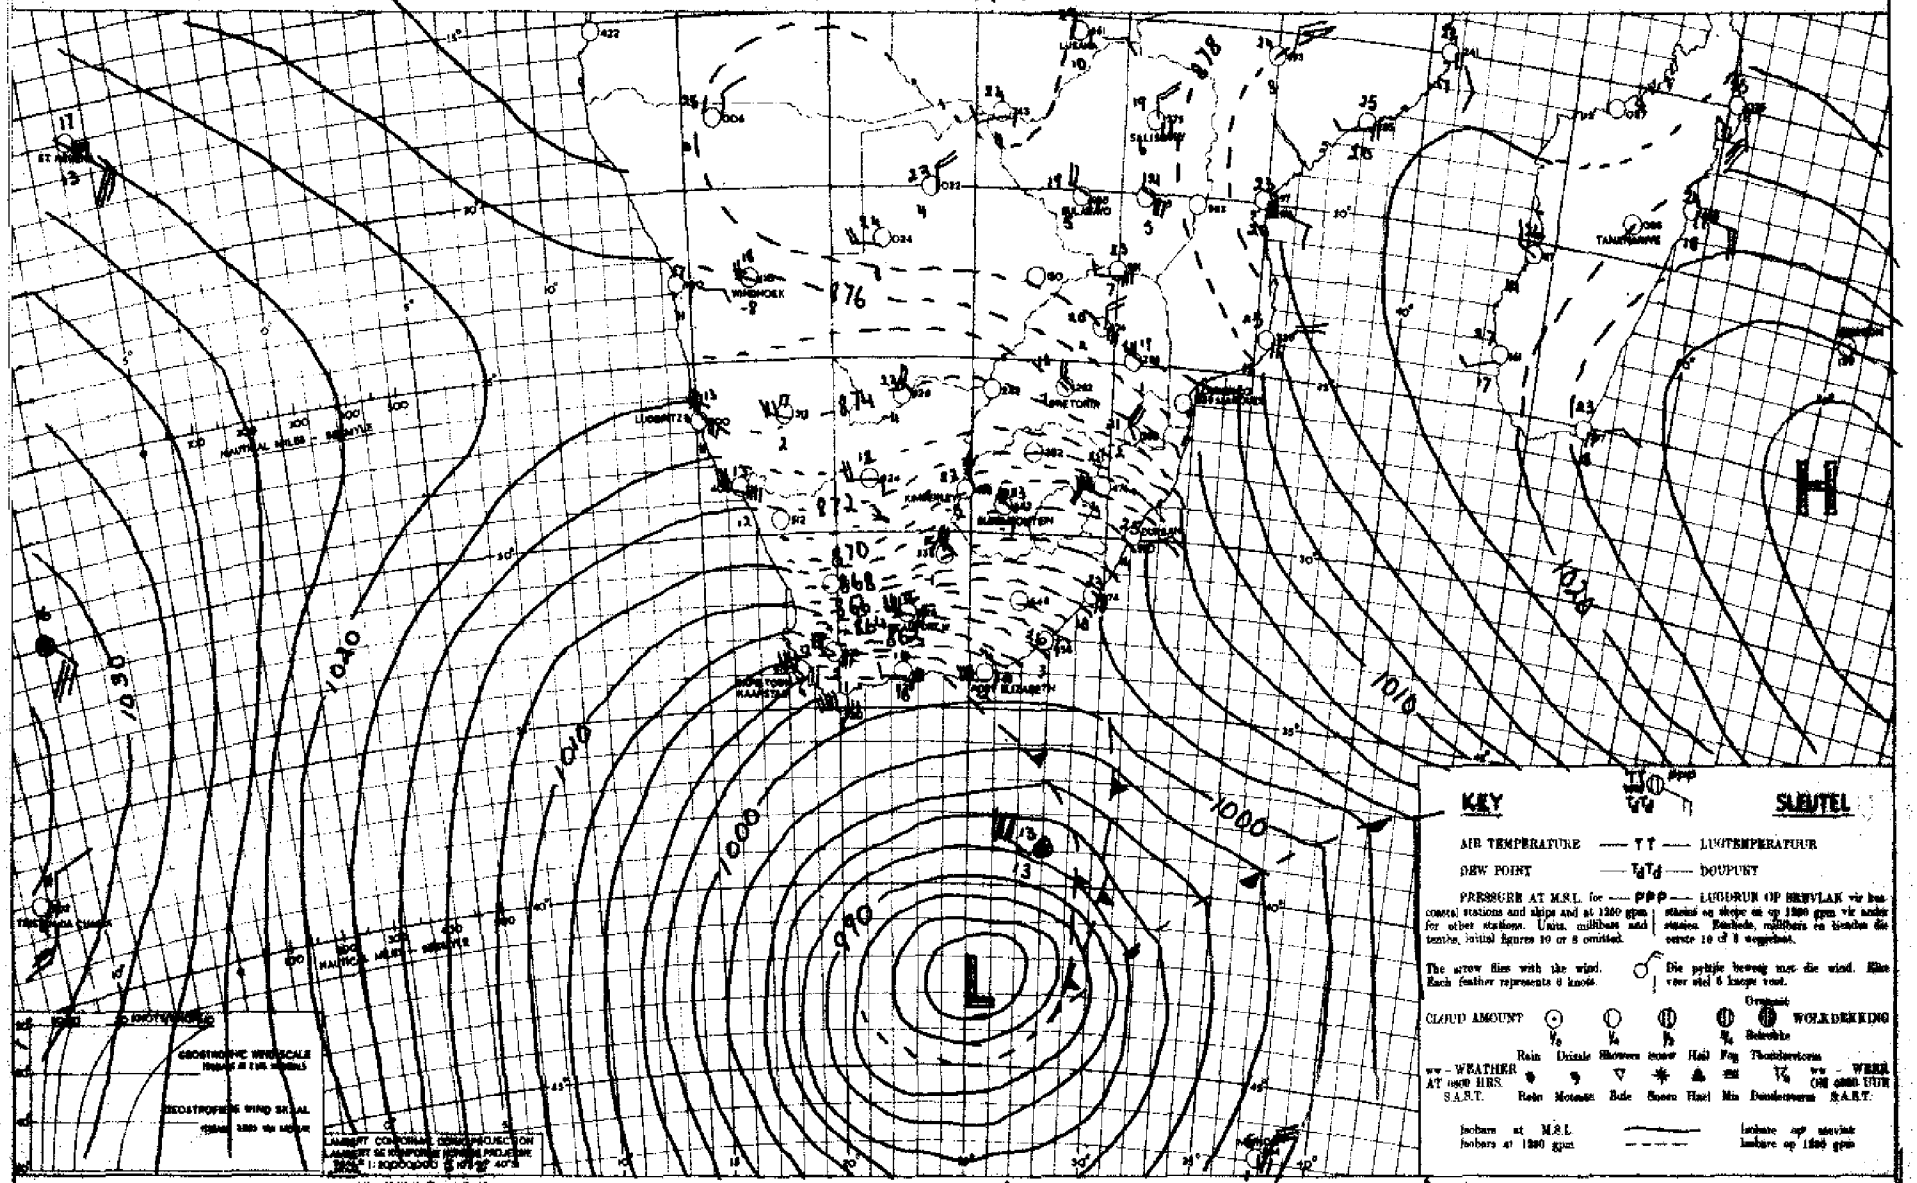
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 7/7/54 — DATUM — AFLEIDING

The deep depression south of the Union is moving steadily southeastwards. Cold air behind it has reached the southwestern tip of the Union. Cold cloudy and showery weather will continue over the Southwestern half of the Cape Province and snow will fall on the mountains. Elsewhere it will remain fine and warm, but colder air from the southwest will reach for the Free State to-

Die diep laagdrukstelsel [illegible]id van die Unie beweeg [illegible]eidelik in 'n suidoostelike rigting. Die koue lug agter die depressie het reeds die Suidwestelike [illegible]nt van die Unie bereik. Koue bewolkte reënagtige weer sal voorkom oor die Suidwestelike helfte van die Kaap Provinsie en sneeu sal op die bergreekse voorkom. Elders mooiweer maar koue lug sal môre geleidelik oor die Vrystaat beweeg.

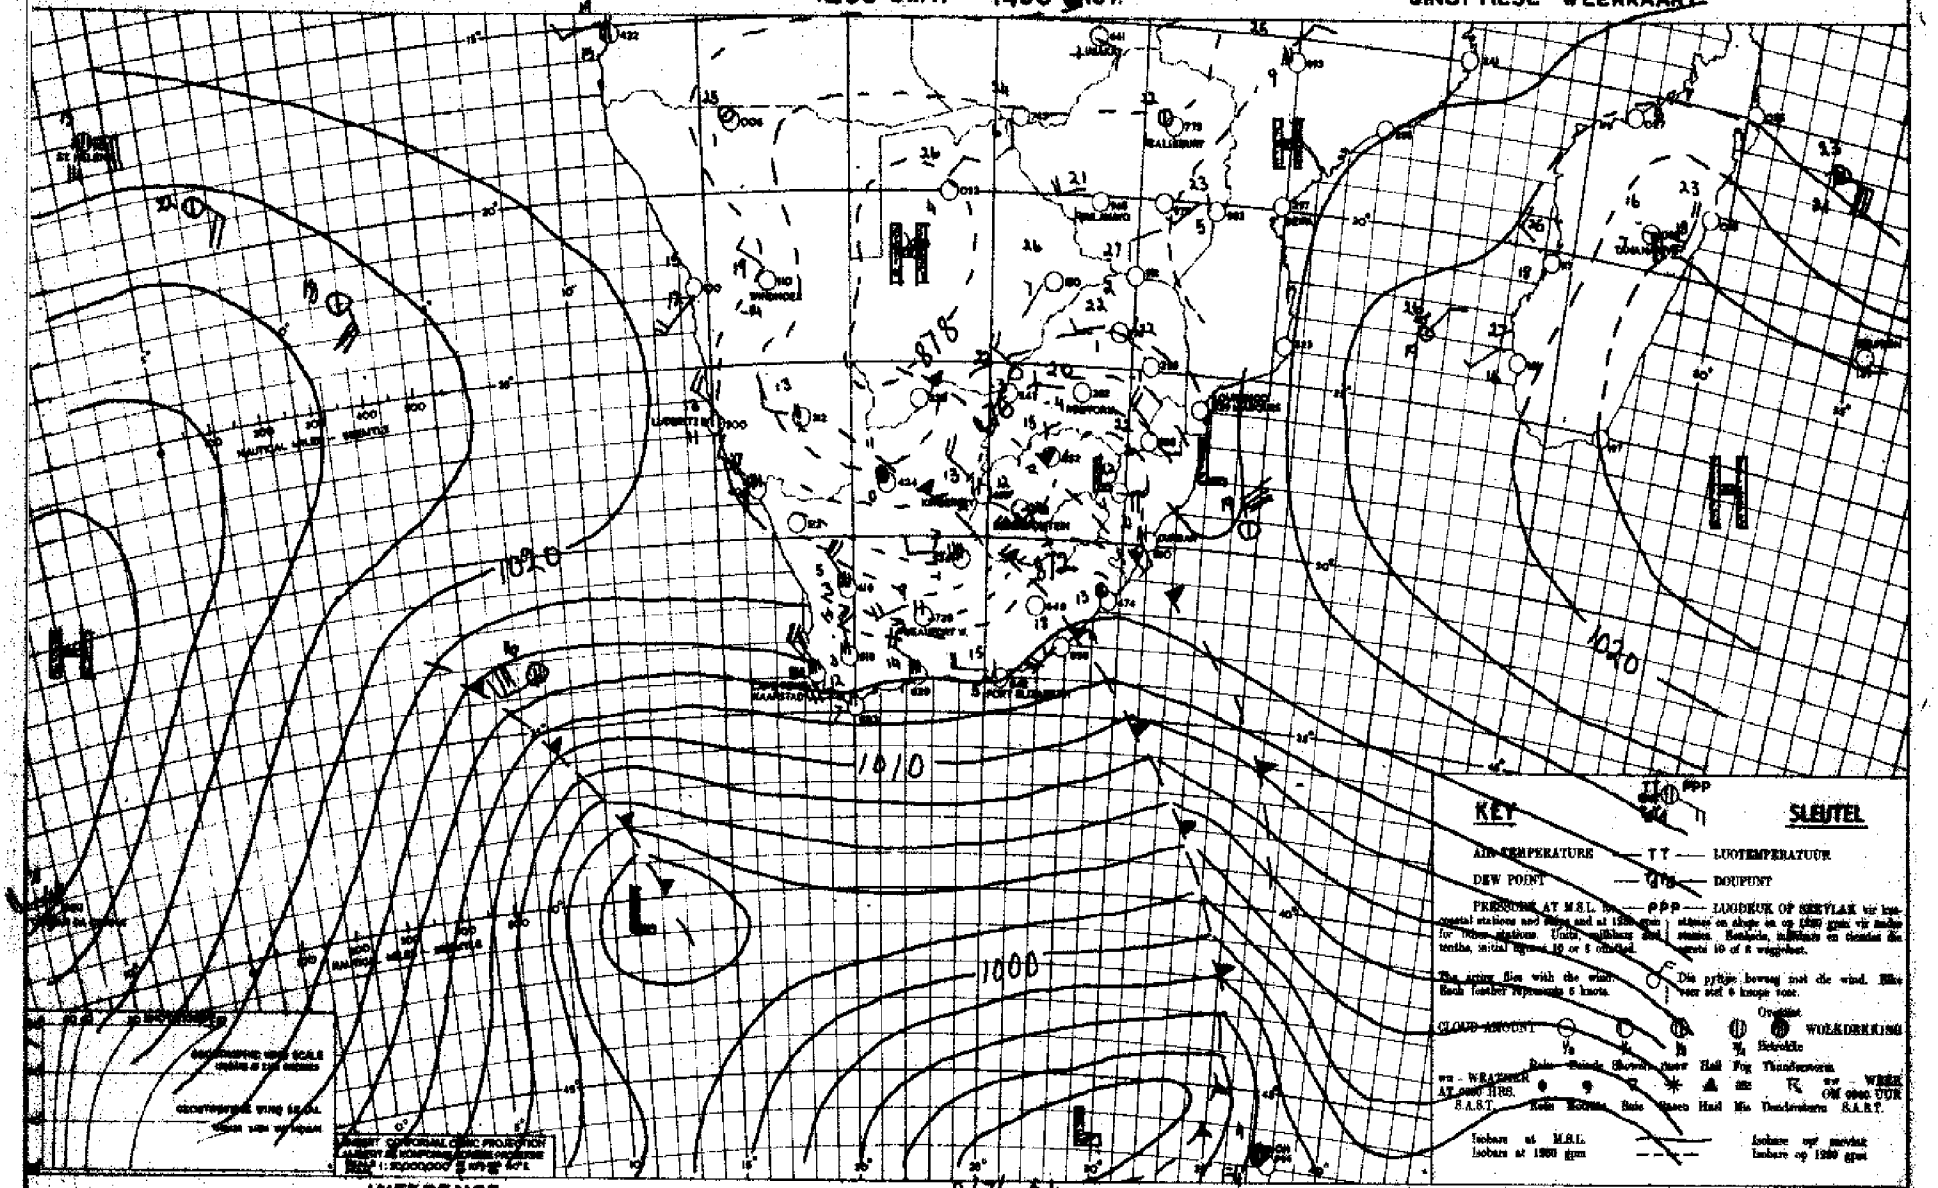
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE

It is suspected that a secondary low pressure system has developed in the trough of low pressure southwest of the Cape and this is causing a fall of pressures and a veering of winds. The progress of cold air northwards across the Union will be retarded and unsettled weather will continue at the Cape.

DATE 8/7/1954 DATUM

AFLEIDING

Dit word vermoed dat 'n sekondêre laagdruksisteem in die trog van lae druk Suidwes van die Kaap ontwikkel het en as gevolg daal die drukke en draai die wind weer noordwes. Die oorstroming van die Unie deur koue lug sal vertraag word en ongestadigde toestande sal by die Kaap voortduur.

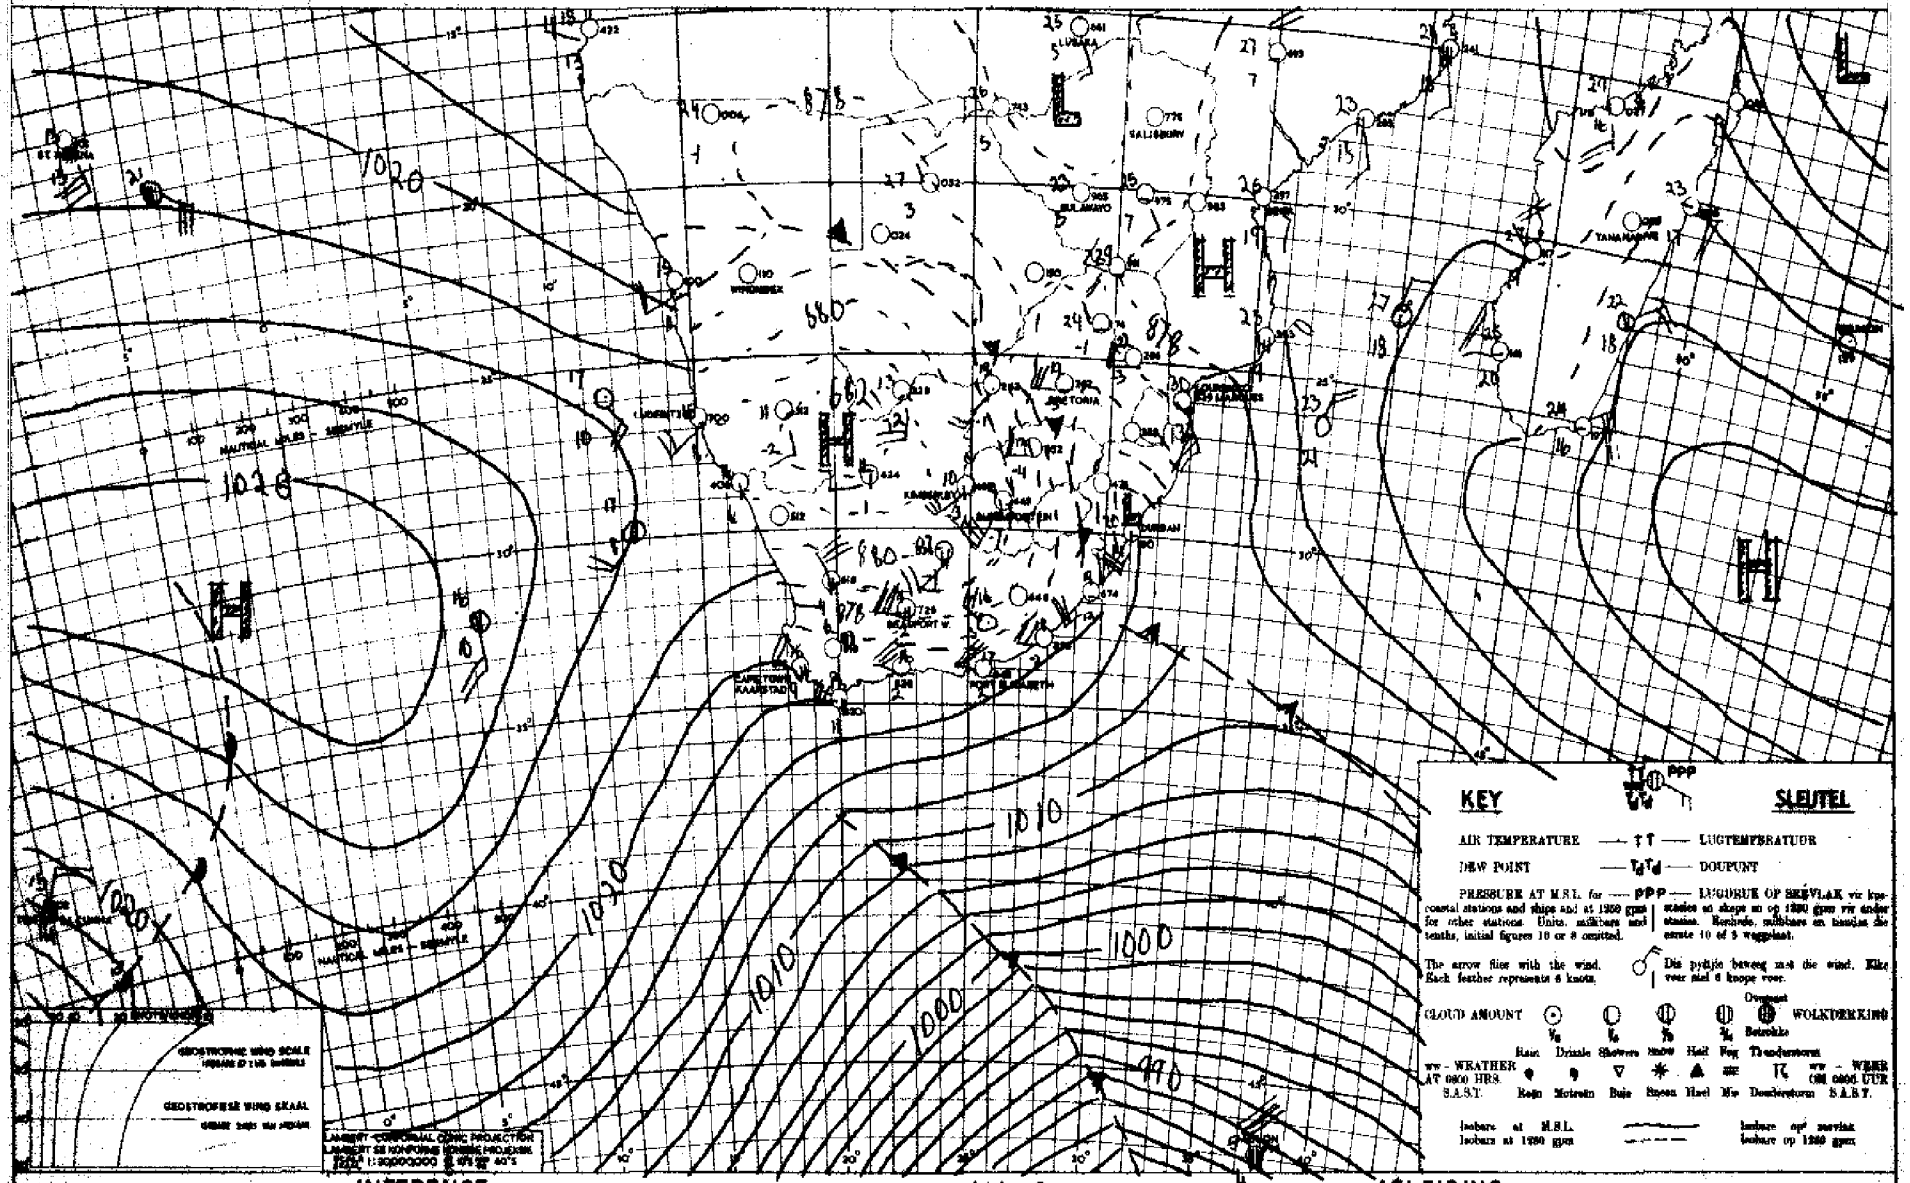
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 9/7/54 DATUM — AFLEIDING

Pressure is falling over Southwest Africa but rising over the Cape Province, Orange Free State and Natal. This indicates that the anticyclonic centre north of Upington will move eastwards and the Atlantic anticyclone will remain more or less stationary. The cold air will advance across Natal and Transvaal and it will be fair to fine and cold generally.

Die druk daal oor Suidwes-Afrika, maar styg oor die Kaapprovinsie, Vrystaat en Natal. Dit dui daarop dat die hoogdrukkern noord van Upington na die ooste sal beweeg terwyl die Atlantiese antisikloon ongeveer stationêr sal bly. Koue lug sal oor Transvaal en Natal gevoer word en dit sal redelike mooiweer en koud wees oor alle gebiede.

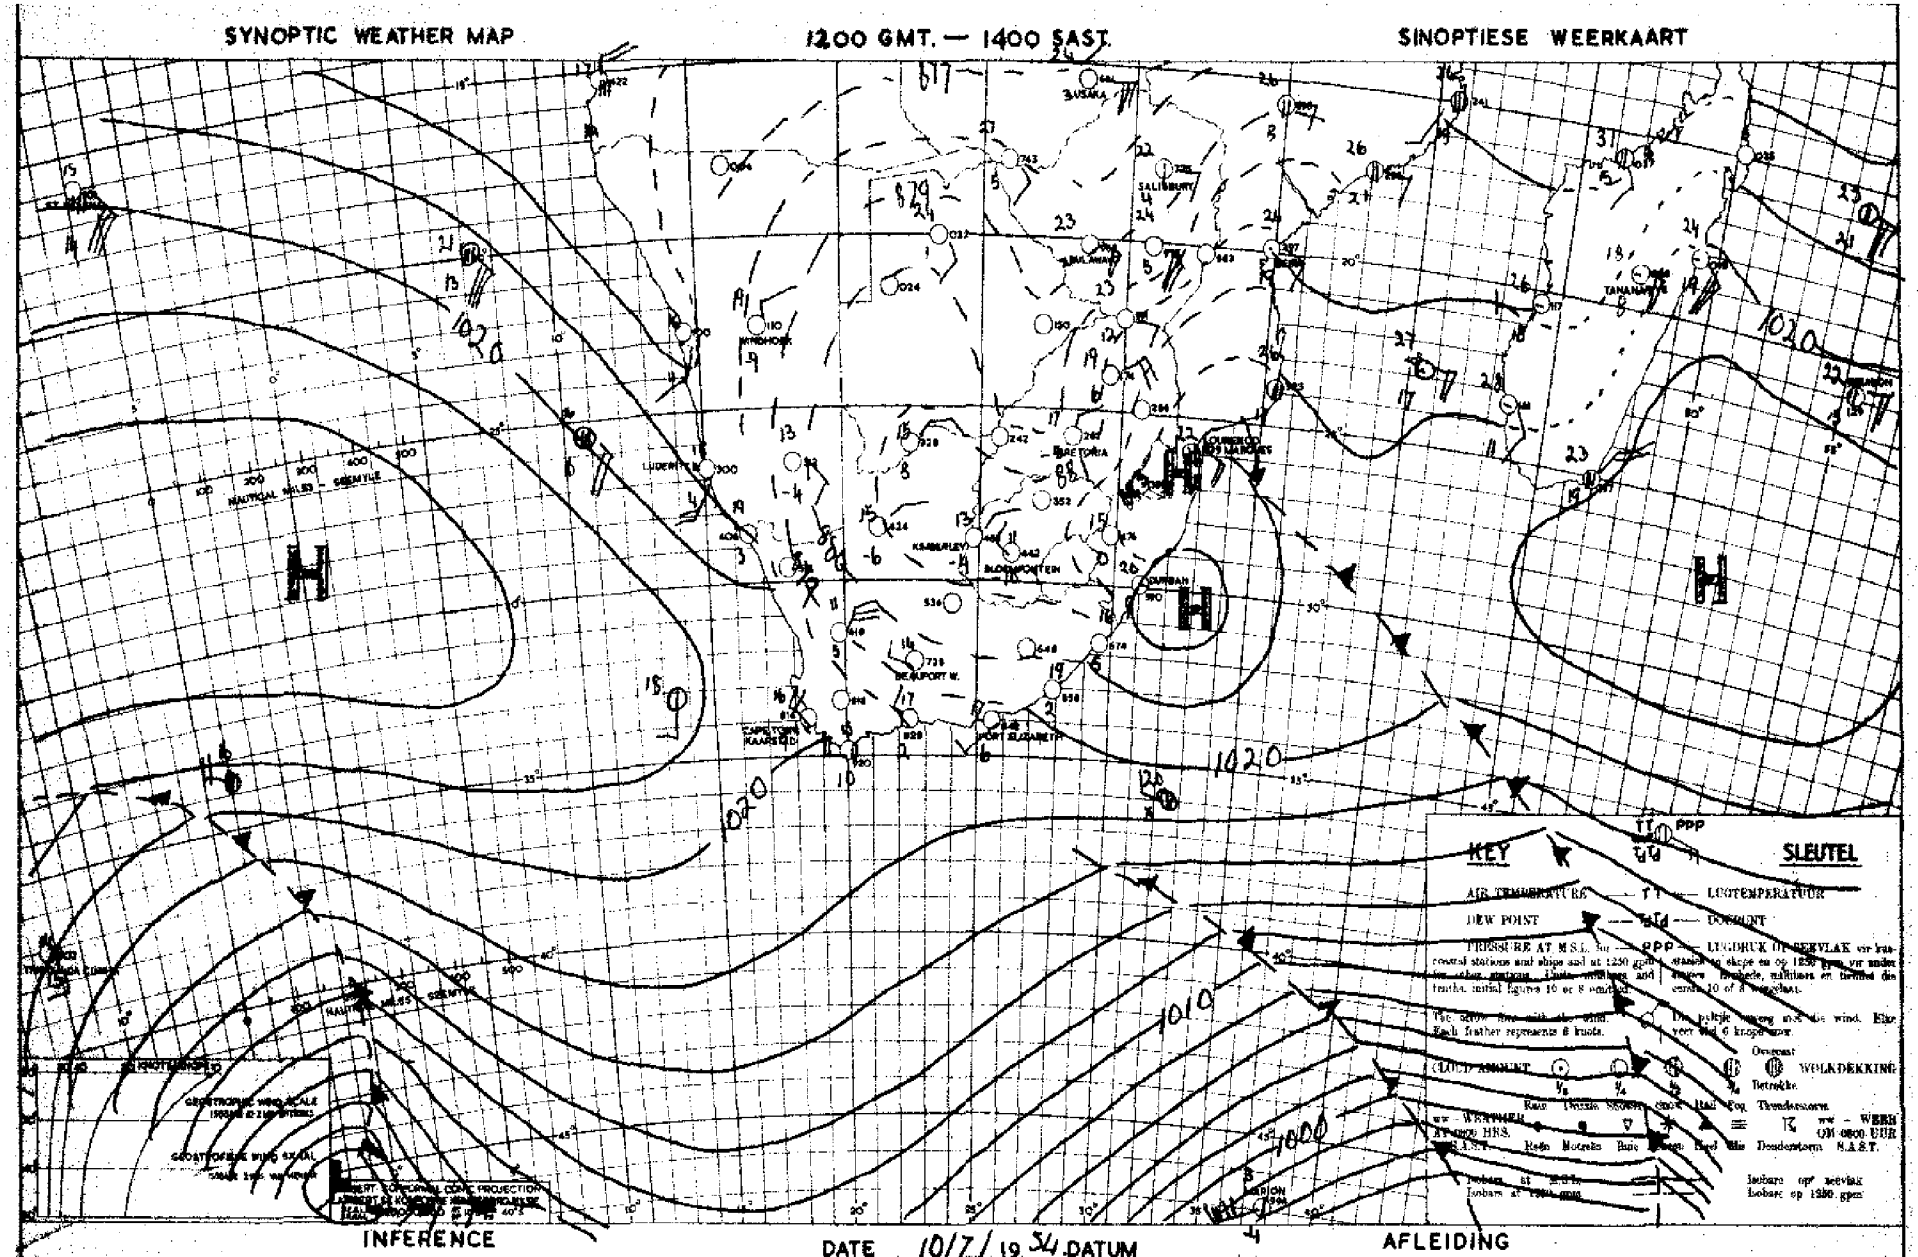
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 10/7/19 54 DATUM AFLEIDING

A separate cell of high pressure has become established off the east coast, but with the development of a trough of low pressure off the West coast, pressures are already falling sharply over the Western and Southern Union. This will result in a backing of winds to Northwesterly and day temperatures should rise rapidly. Fine weather will prevail over most of the Union for a few days.

'n Aparte sel van hoëdruk het aan die Ooskus ontstaan, maar met die ontwikkeling van 'n trog van lae druk in die omgewing van die Weskus daal drukke reeds skerp oor die westelike en suidelike dele van die Unie. Winde sal dus noordwes draai en dagtemperatuur behoort vinnig te styg. Mooiweerstoestande sal vir 'n paar dae oor 'n groot deel van die Unie onveranderd voortduur.

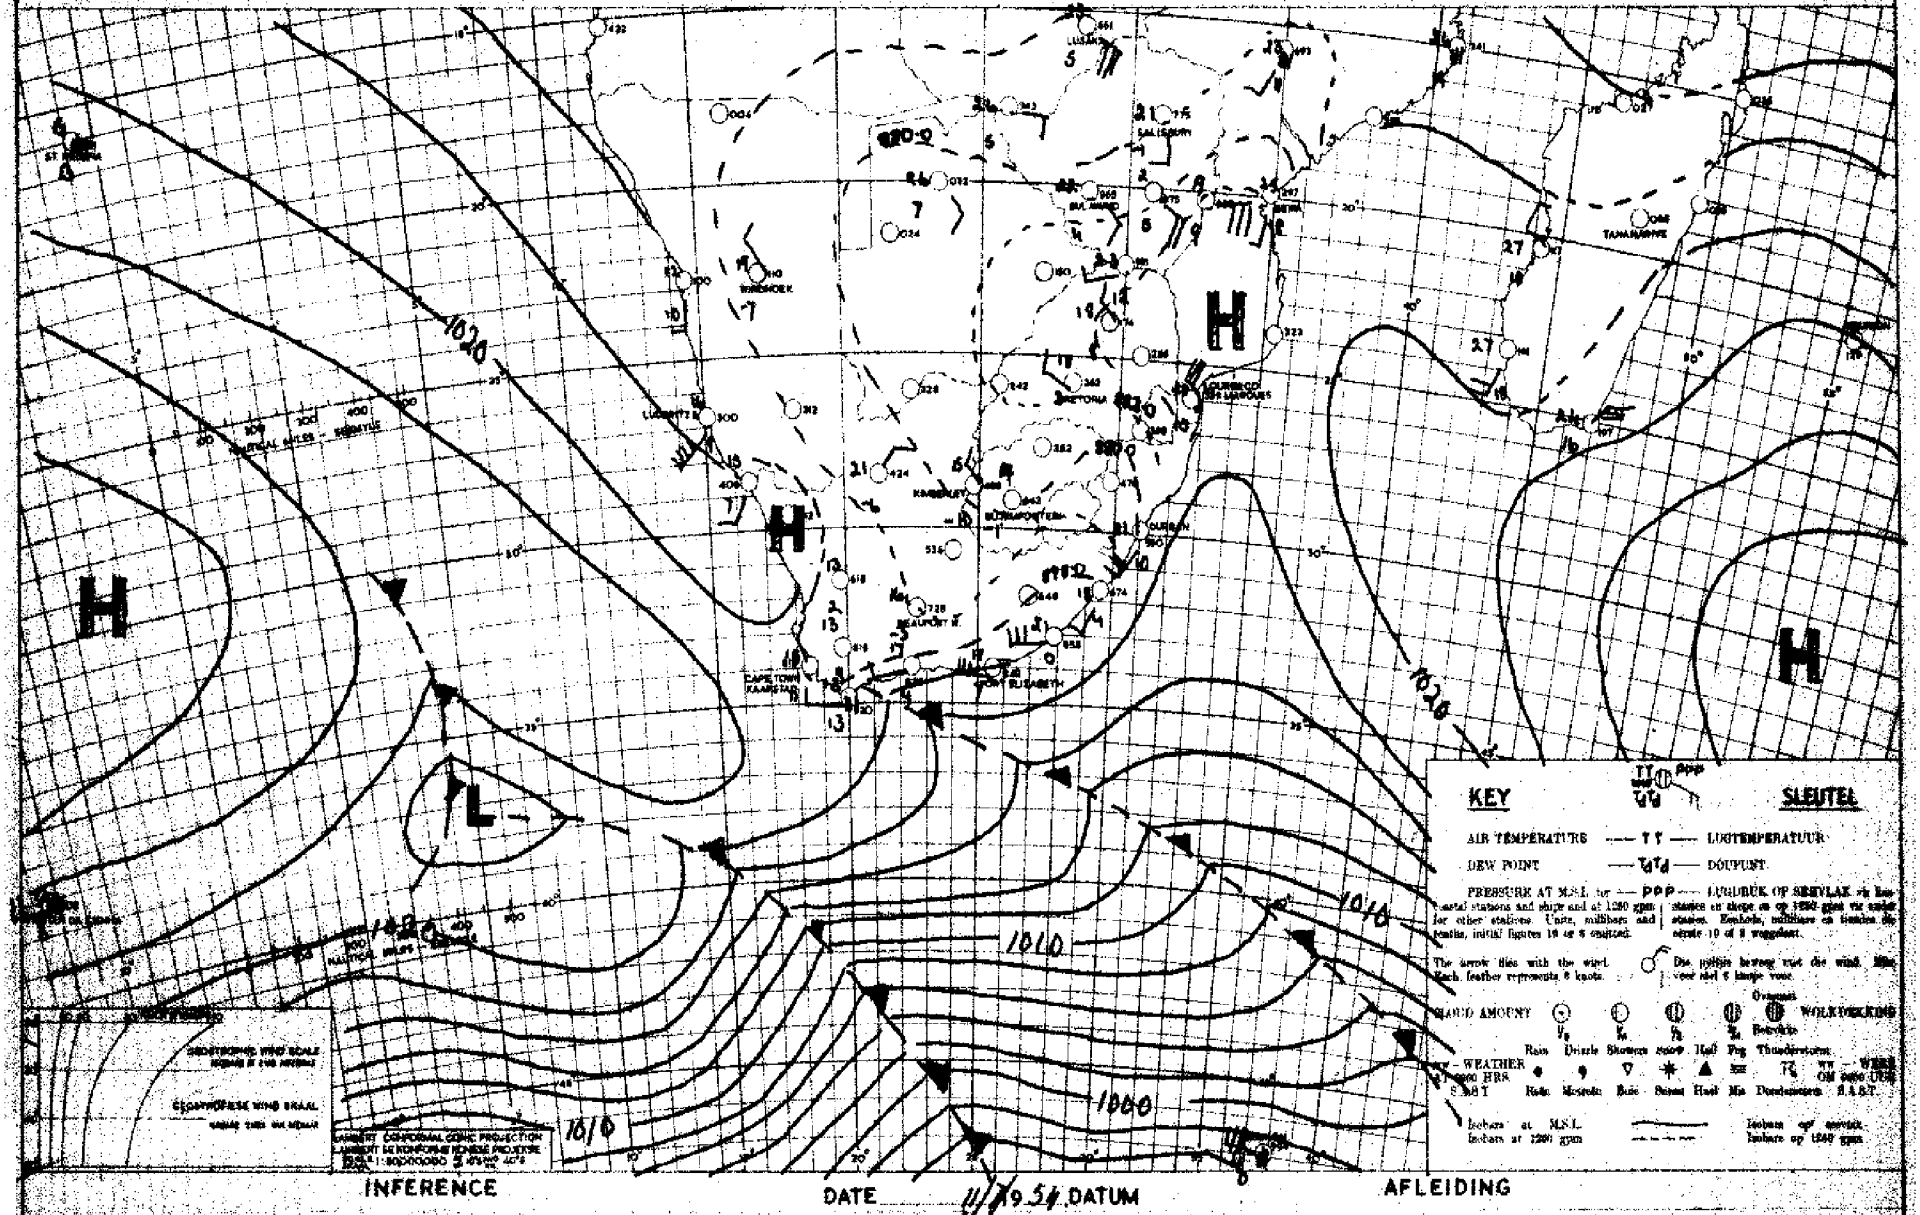
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 11/9/54 DATUM — AFLEIDING

Some cooler and moister Atlantic air is touching the fringes of the southwestern Cape and is expected to penetrate inland. It will be cloudy and the Southwestern Cape Coast and some local light rain will occur. Elsewhere over the Union it will remain fine.

Dit word koeler en vogtiger lug nader die Suidwestelike kuststreke van die Kaap, en sal geleidelik na die binneland indring. Langs die kus van Suidwes Kaapland sal dit bewolk wees en ligte reën sal uitsak. Elders oor die Unie sal dit mooiweer bly.

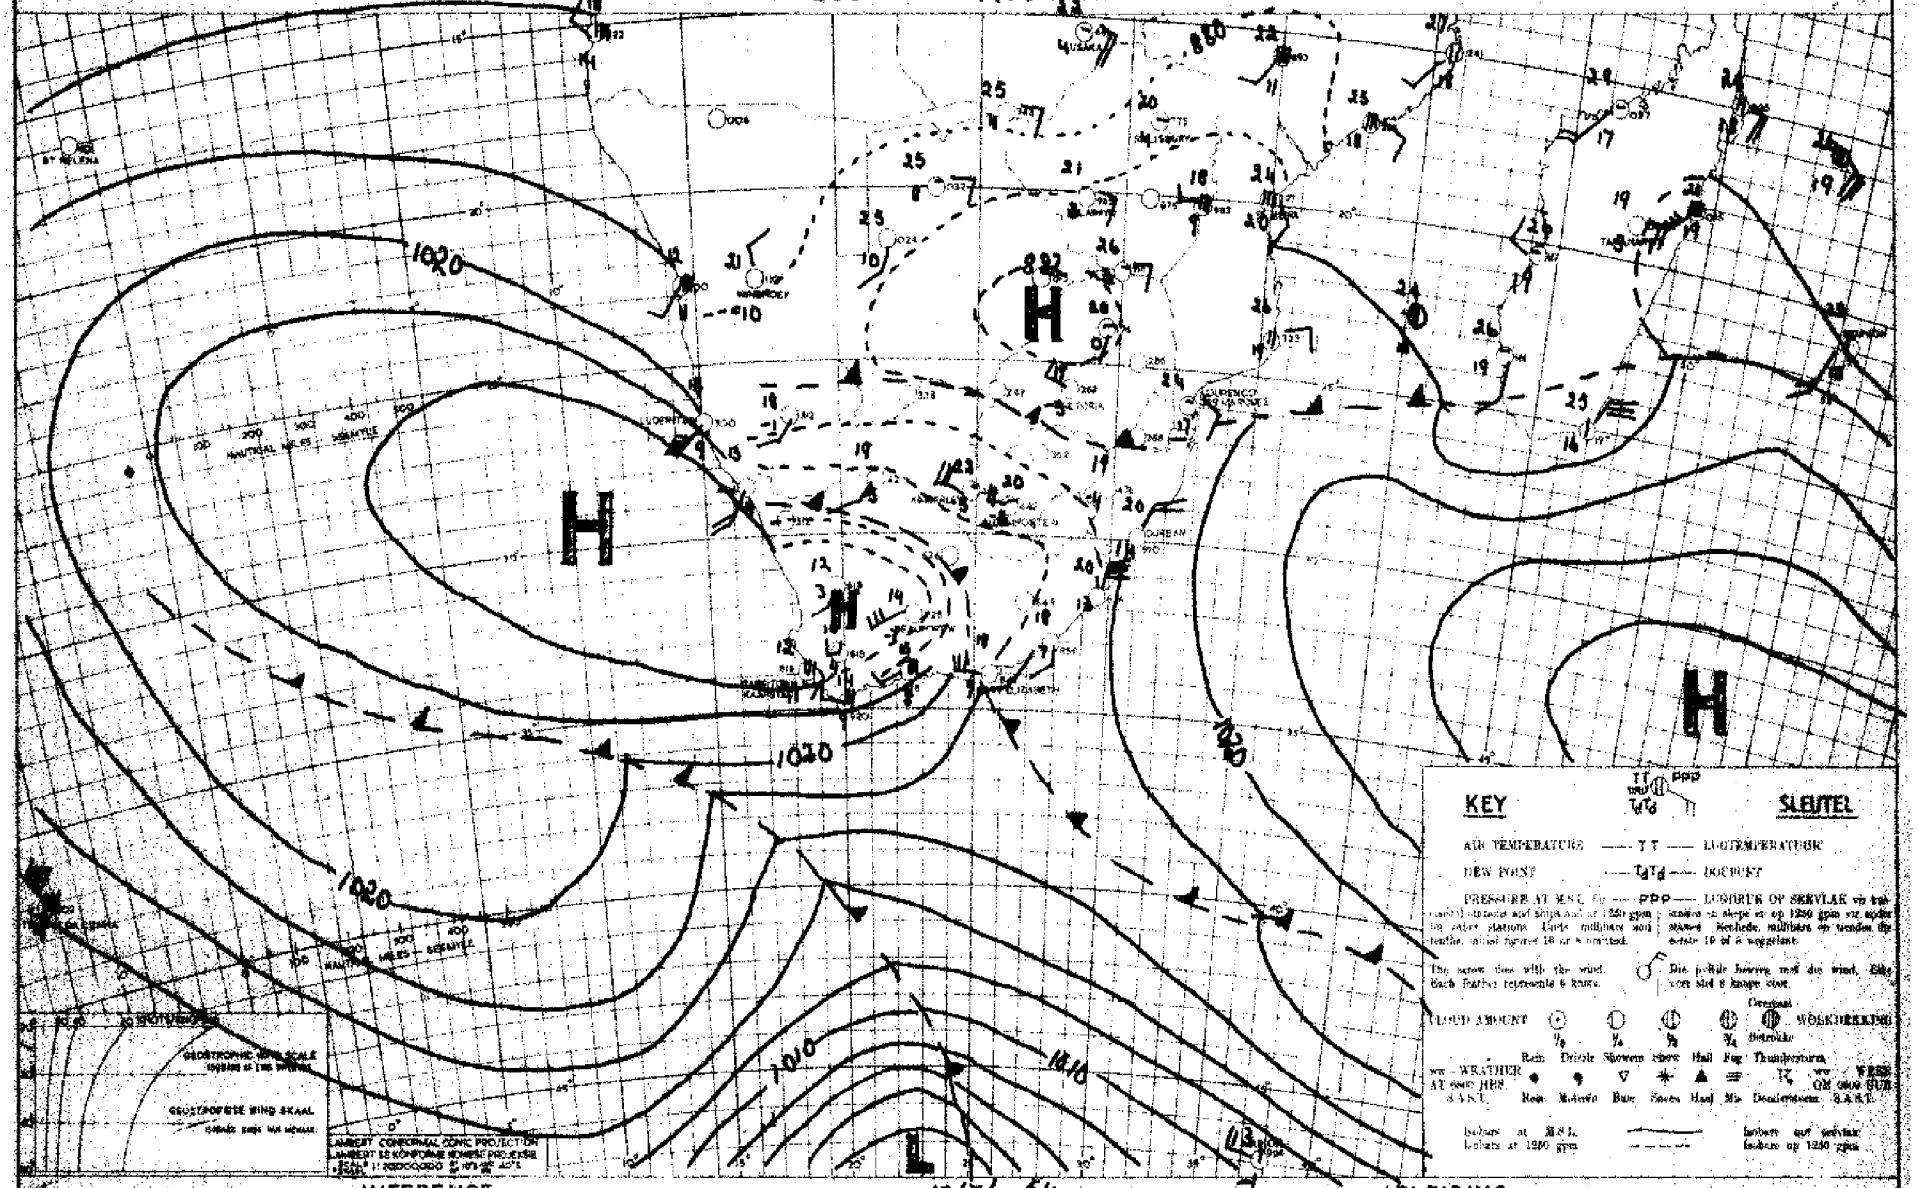
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

DATE 13 July 1954 DATUM

AFLEIDING

Part of the high pressure cell from the Atlantic has moved to the Southeast Cape and Natal coast. The pressures at the Southwest Cape again show a falling tendency. There will be a slight influx of shallow moist air into the eastern Union and over the Southwestern Cape shores and cloud patches will occur over these areas. Over Transvaal there will also be some high-level cloud, but elsewhere fine over the Union.

'n Deel van die Atlantiese hoog het van die Ooskus beweeg, en druk langs die kusstreek van Suidwes Kaapland toon weer 'n vallende neiging. Daar is 'n ondiepe invloei aan vogtiger lug oor die Oostelike Unie en oor Suidwes Kaapland, en verspreide wolke sal oor die streke voorkom. Middel wolke sal ook nog oor Transvaal ontwikkel maar elders sal dit mooiweer bly.

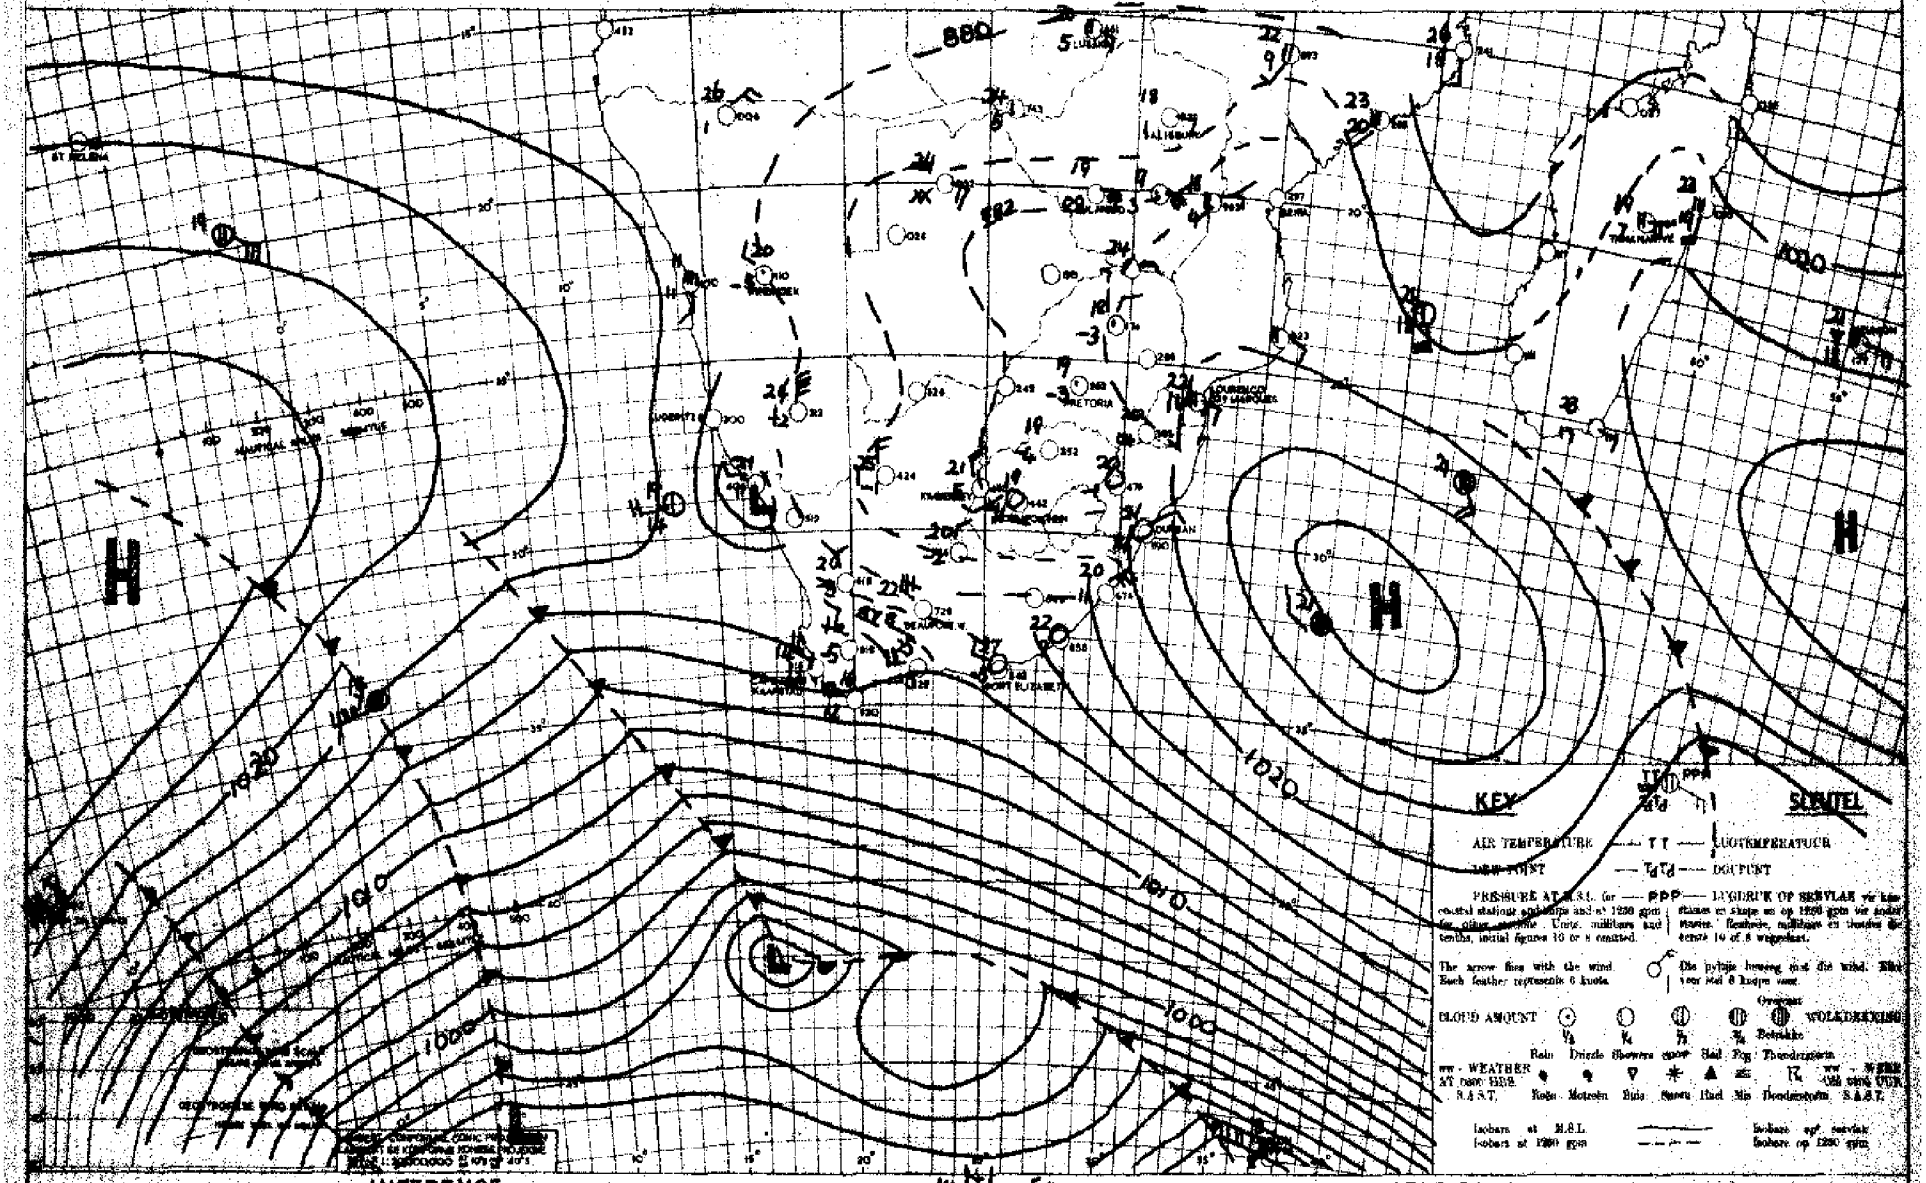
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

With the approach of a new system of fronts in the South Atlantic pressures are falling sharply over the Western Cape and it is expected that cloudy rainy weather will develop over the Southwestern Cape. Northwesterly winds will become strong over most of the Cape Province.

DATE 14/11/54 DATUM

AFLEIDING

Met die nadering van 'n nuwe stelsel fronte in die Suidelike Atlantiese Oseaan daal drukke oor Wes Kaapland reeds vinnig en dit word verwag dat onweerstoestande oor Suidwes Kaapland sal ontwikkel. Noordwestewind sal oor bykans die hele Kaapland sterk word.

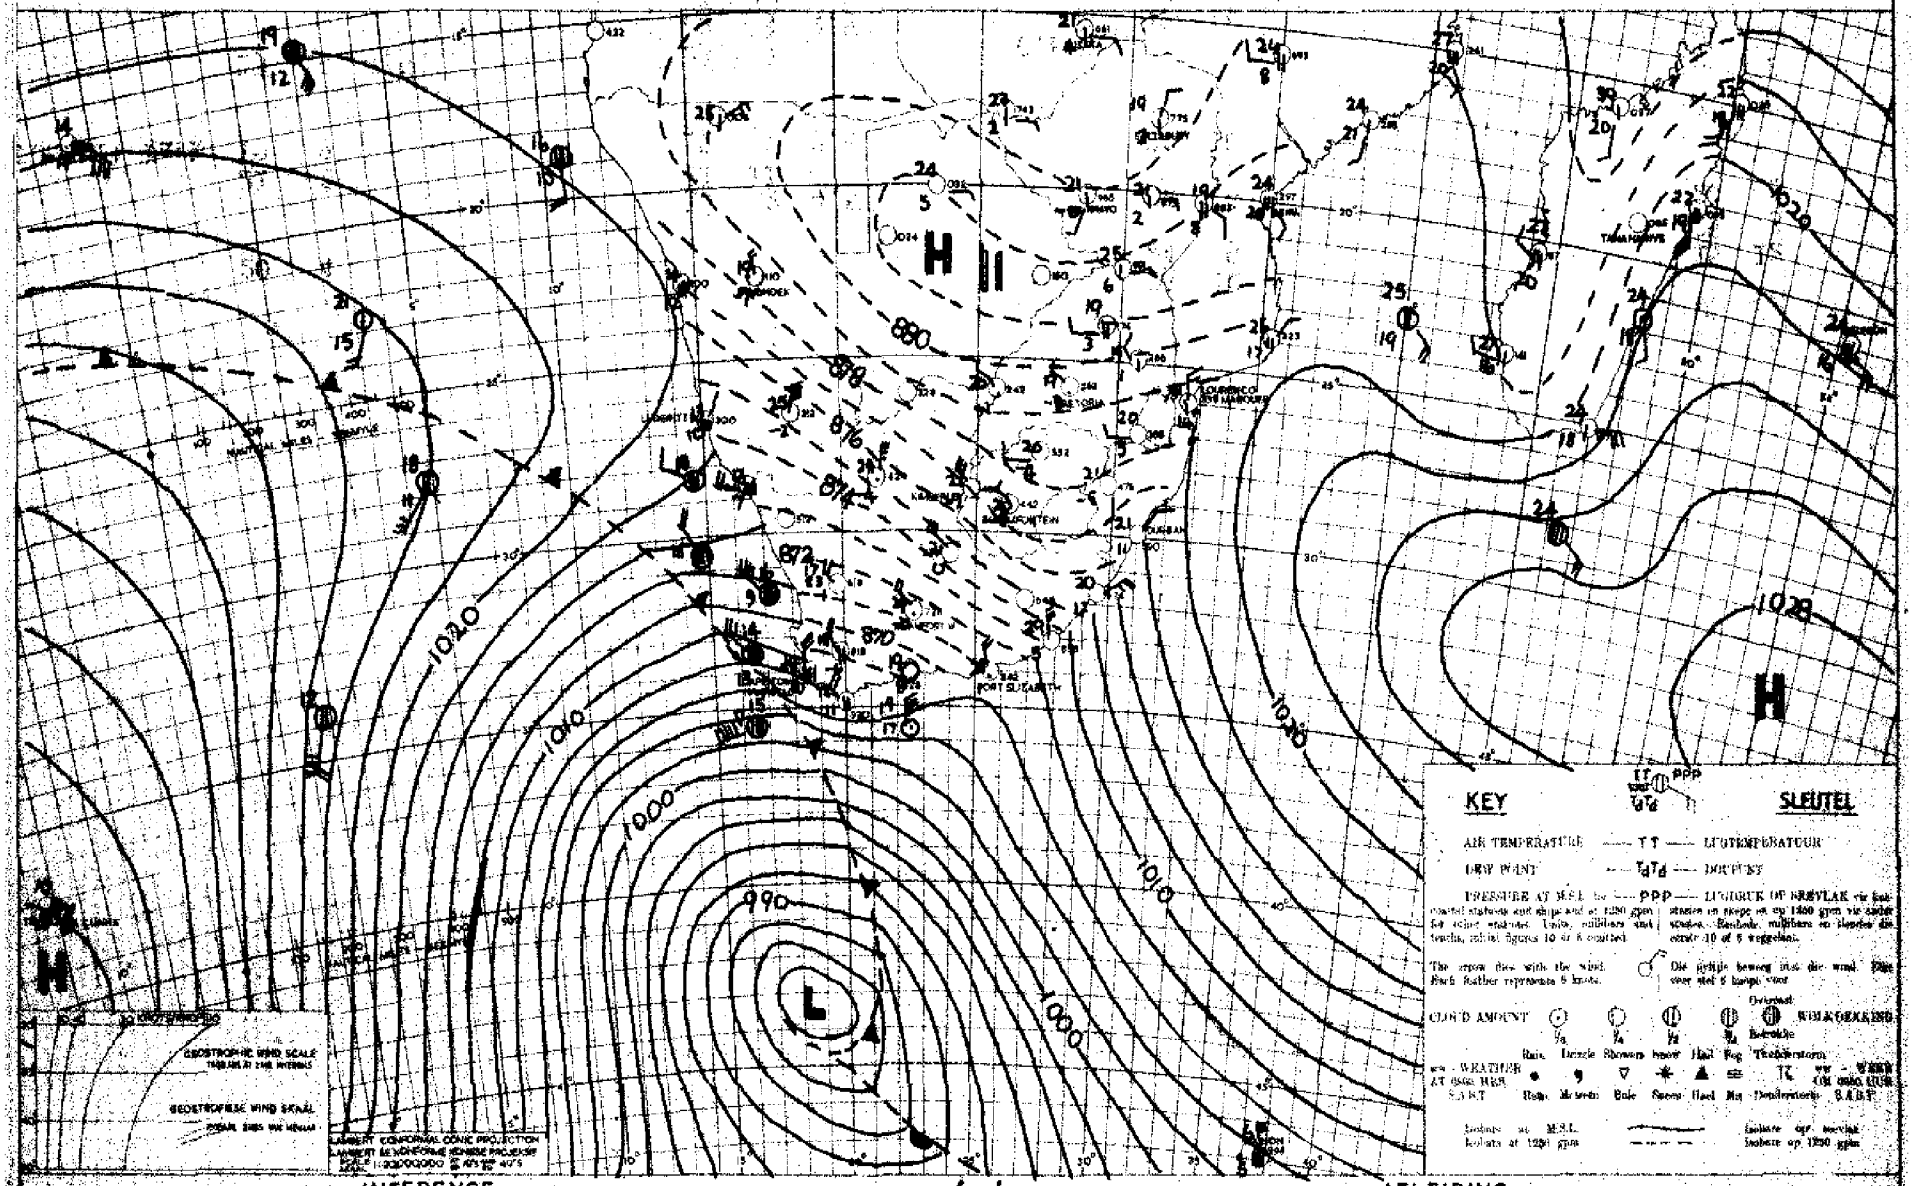
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 15/7/1954 DATUM AFLEIDING

An extensive current of cold air is approaching the Union behind a cold front near the west coast. Fresh northwesterly to westerly wind will blow over the northern and eastern regions, while cold, cloudy weather with rain will affect western and southern Cape, gradually spreading eastwards to central and northern Cape.

'n Sterk en uitgebreide stroom van koue lug nader die Unie agter 'n Koue front wat naby die weskus gelee is. Taamlike sterk noordweste tot westewind sal oor die noordelike en oostelike gebiede waai, terwyl koue, bewolkte weer met reën westelike en Suidelike Kaapland sal affekteer. Die koue weer sal geleidelik uitbrei na middel- en Noord-Kaapland.

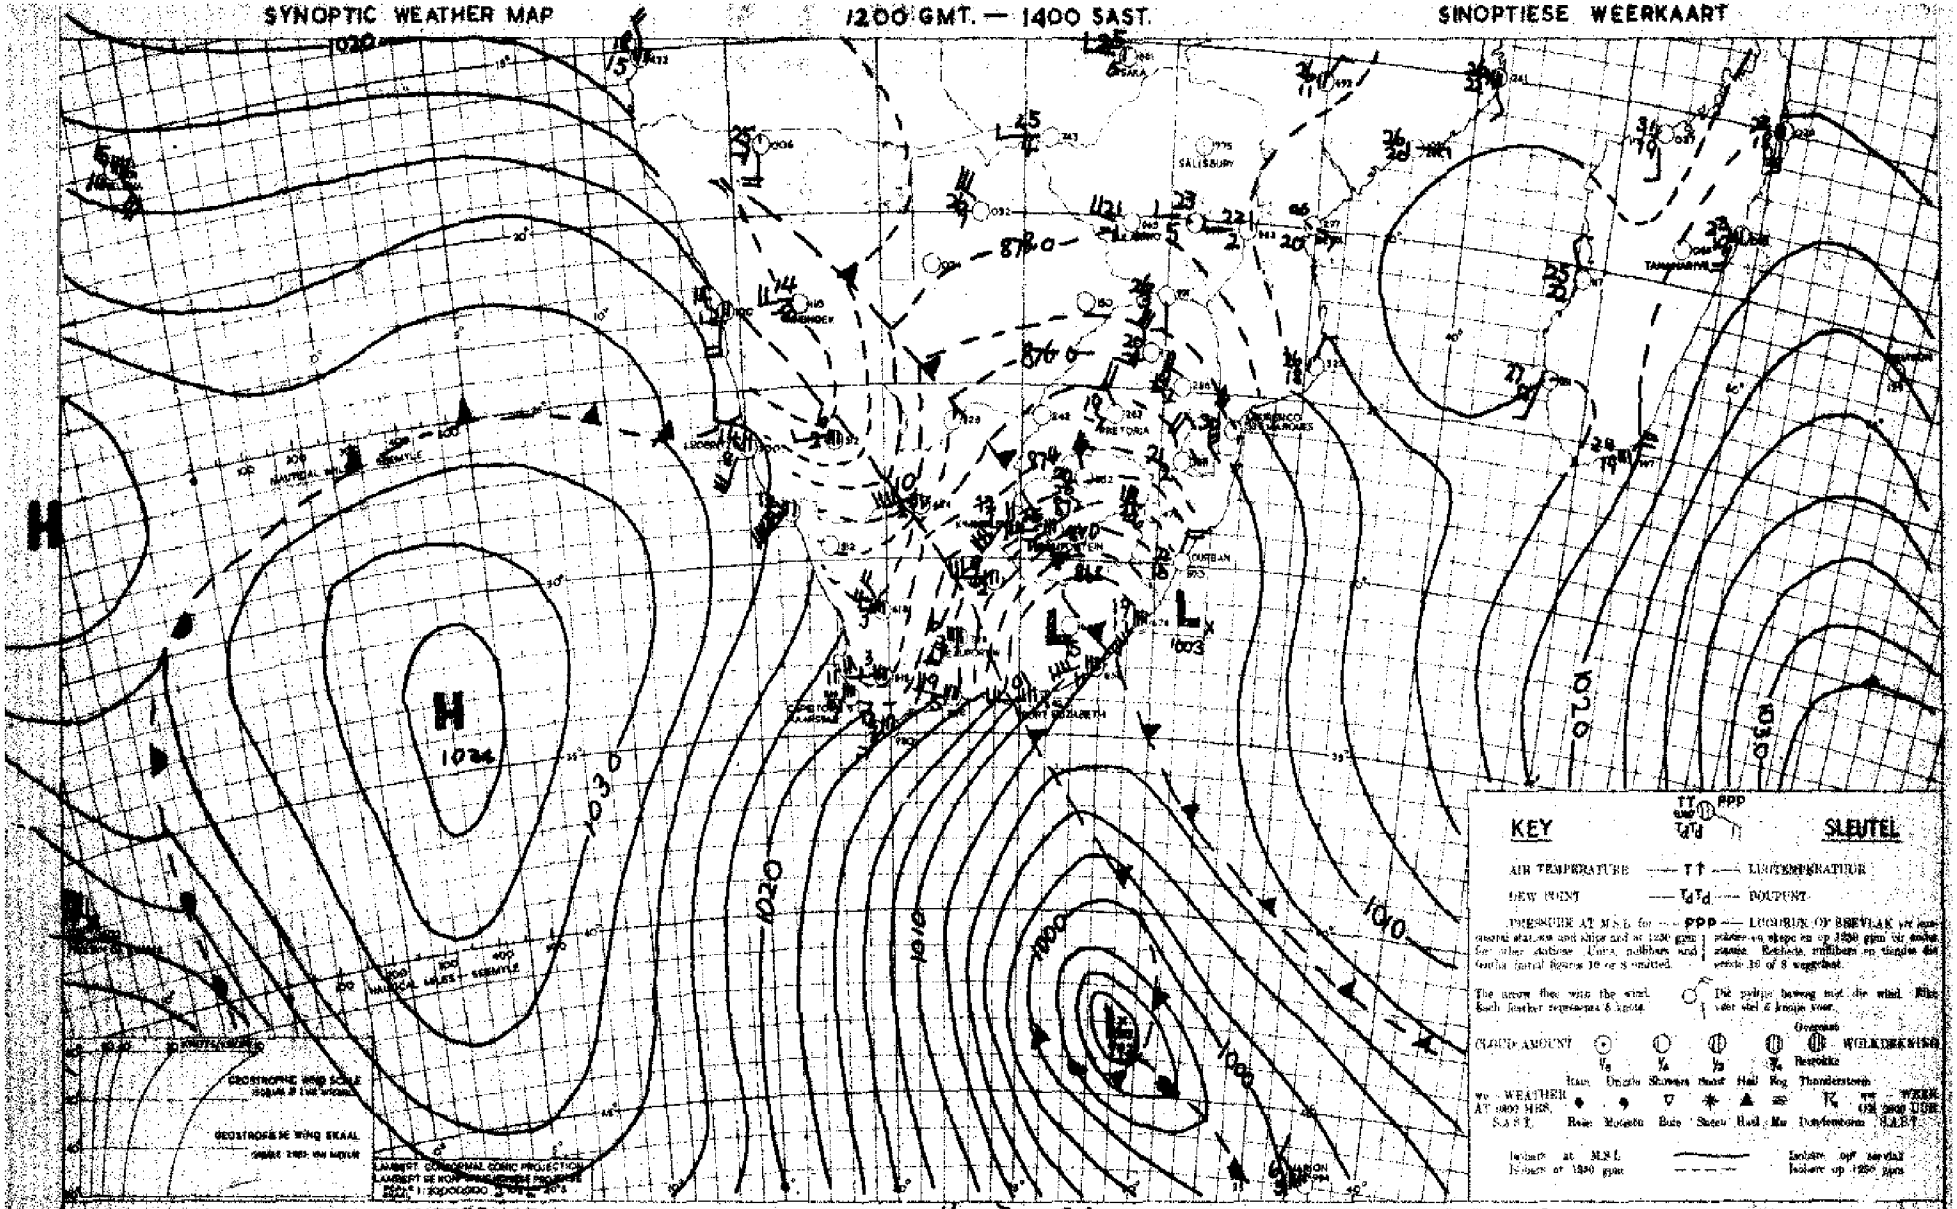
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 16-7-1954 DATUM AFLEIDING

Pressures are rising strongly over the Southwestern Union and cold polar air is penetrating the Union interior. Cloudy skies with temporary light showers will occur within the cold air. Snow will fall on high ground. The cold air will reach the Transvaal overnight.

Die lugdruk styg sterk oor die Suidwestelike Unie en koue polêre lug dring deur na die Unie binneland. Bewolkte toestand met plaaslike buie van tydelike aard sal in die koue lugmassa voorkom. Sneeu sal oor hoog gelee grond uitsak. Die koue lug sal Transvaal oornag bereik.

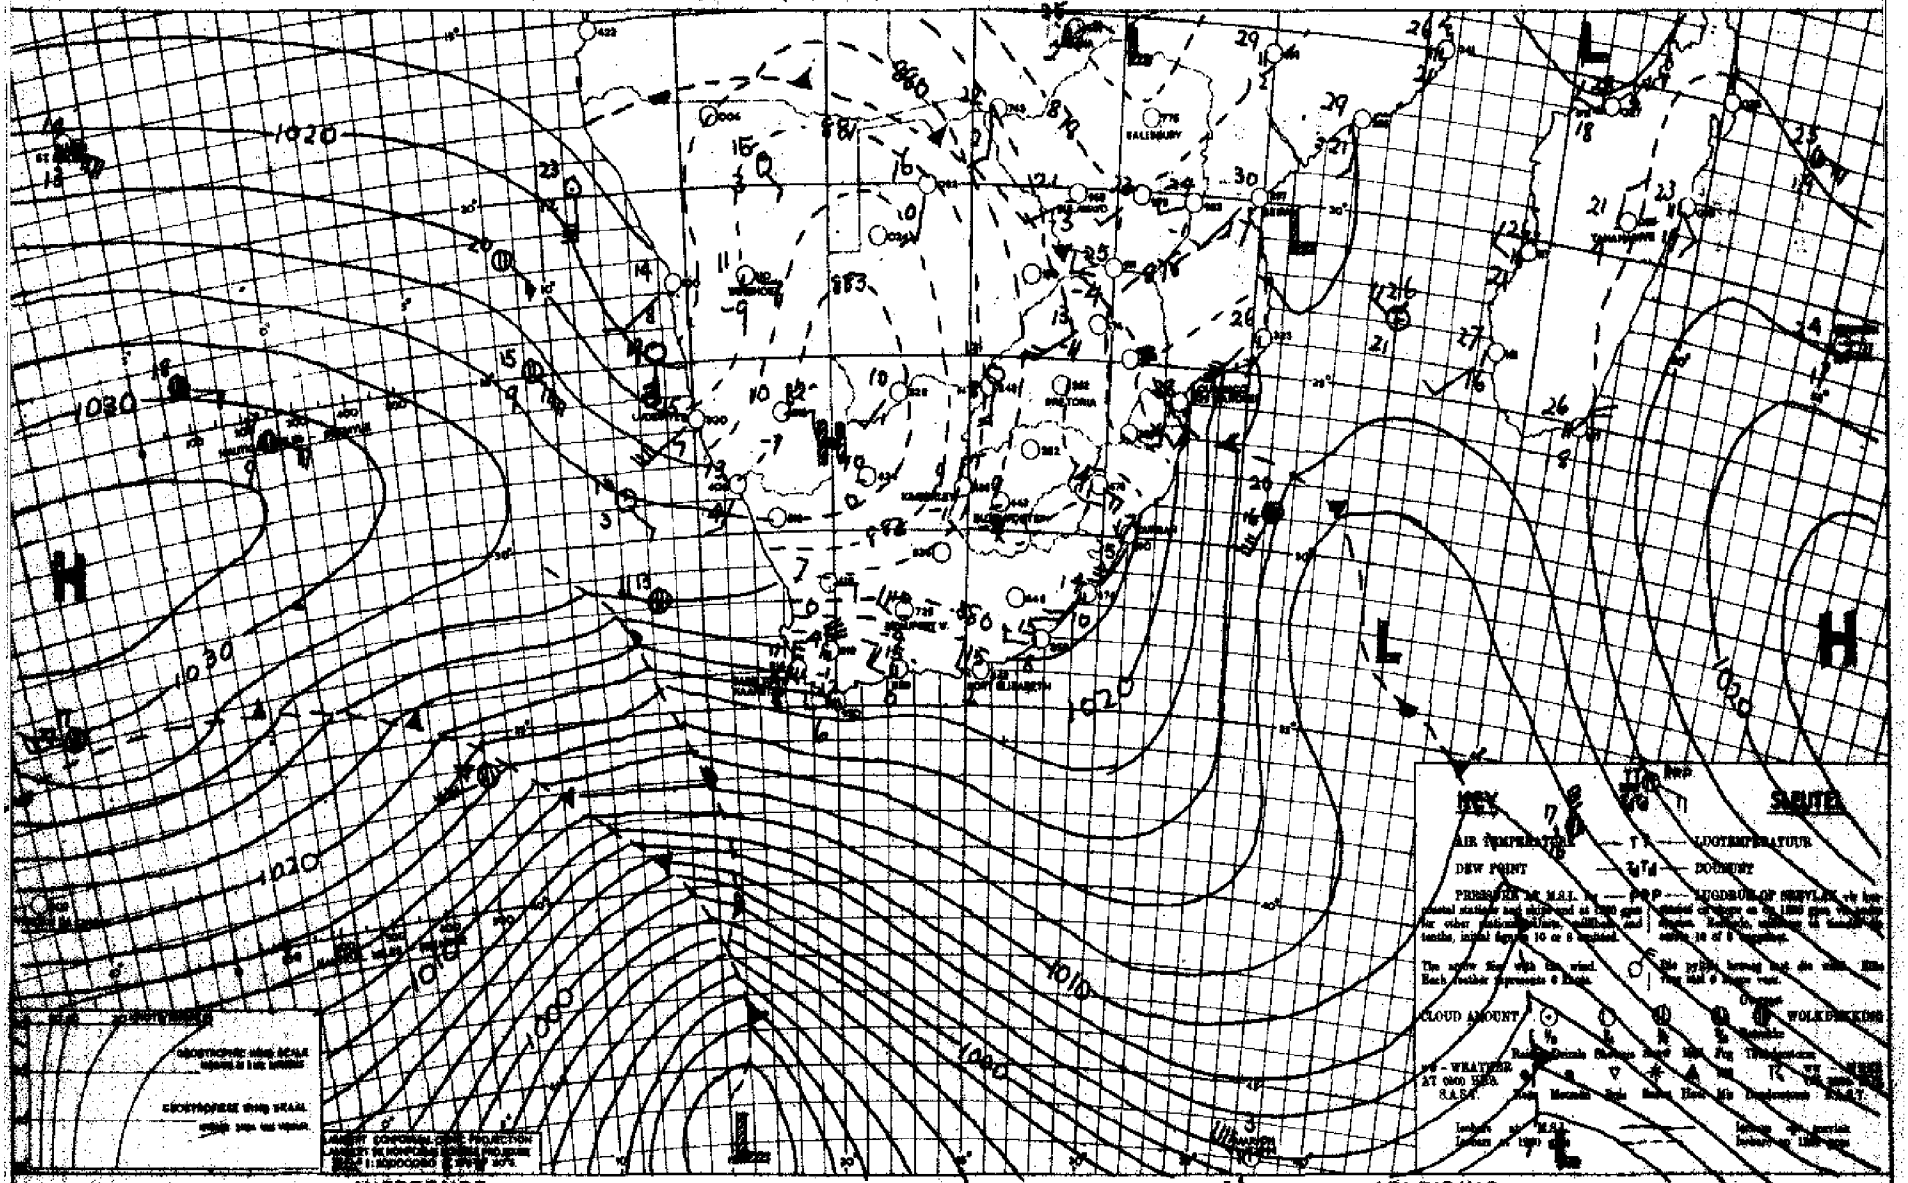
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 17 - 7 - 1954 DATUM AFLEIDING

A quick moving depression is situated far southwest of the Union and northwesterly wind will cause persistent unsettled weather over southwestern Cape. The cold over the Union will cause sharp frosts, but the wind will abate and become westerly due to the sharp fall in pressure over the Cape Province.

'n Snel bewegende laagdrukstelsel ver suidwes van die Kaap sal voortdurende ongestadige weer en noordweste wind oor Suidwes-Kaapland handhaaf. Die koue lug oor die Unie sal skerp ryp veroorsaak, maar die wind sal bedaar en na wes draai onder invloed van die sterk daling in die druk oor Kaapland.

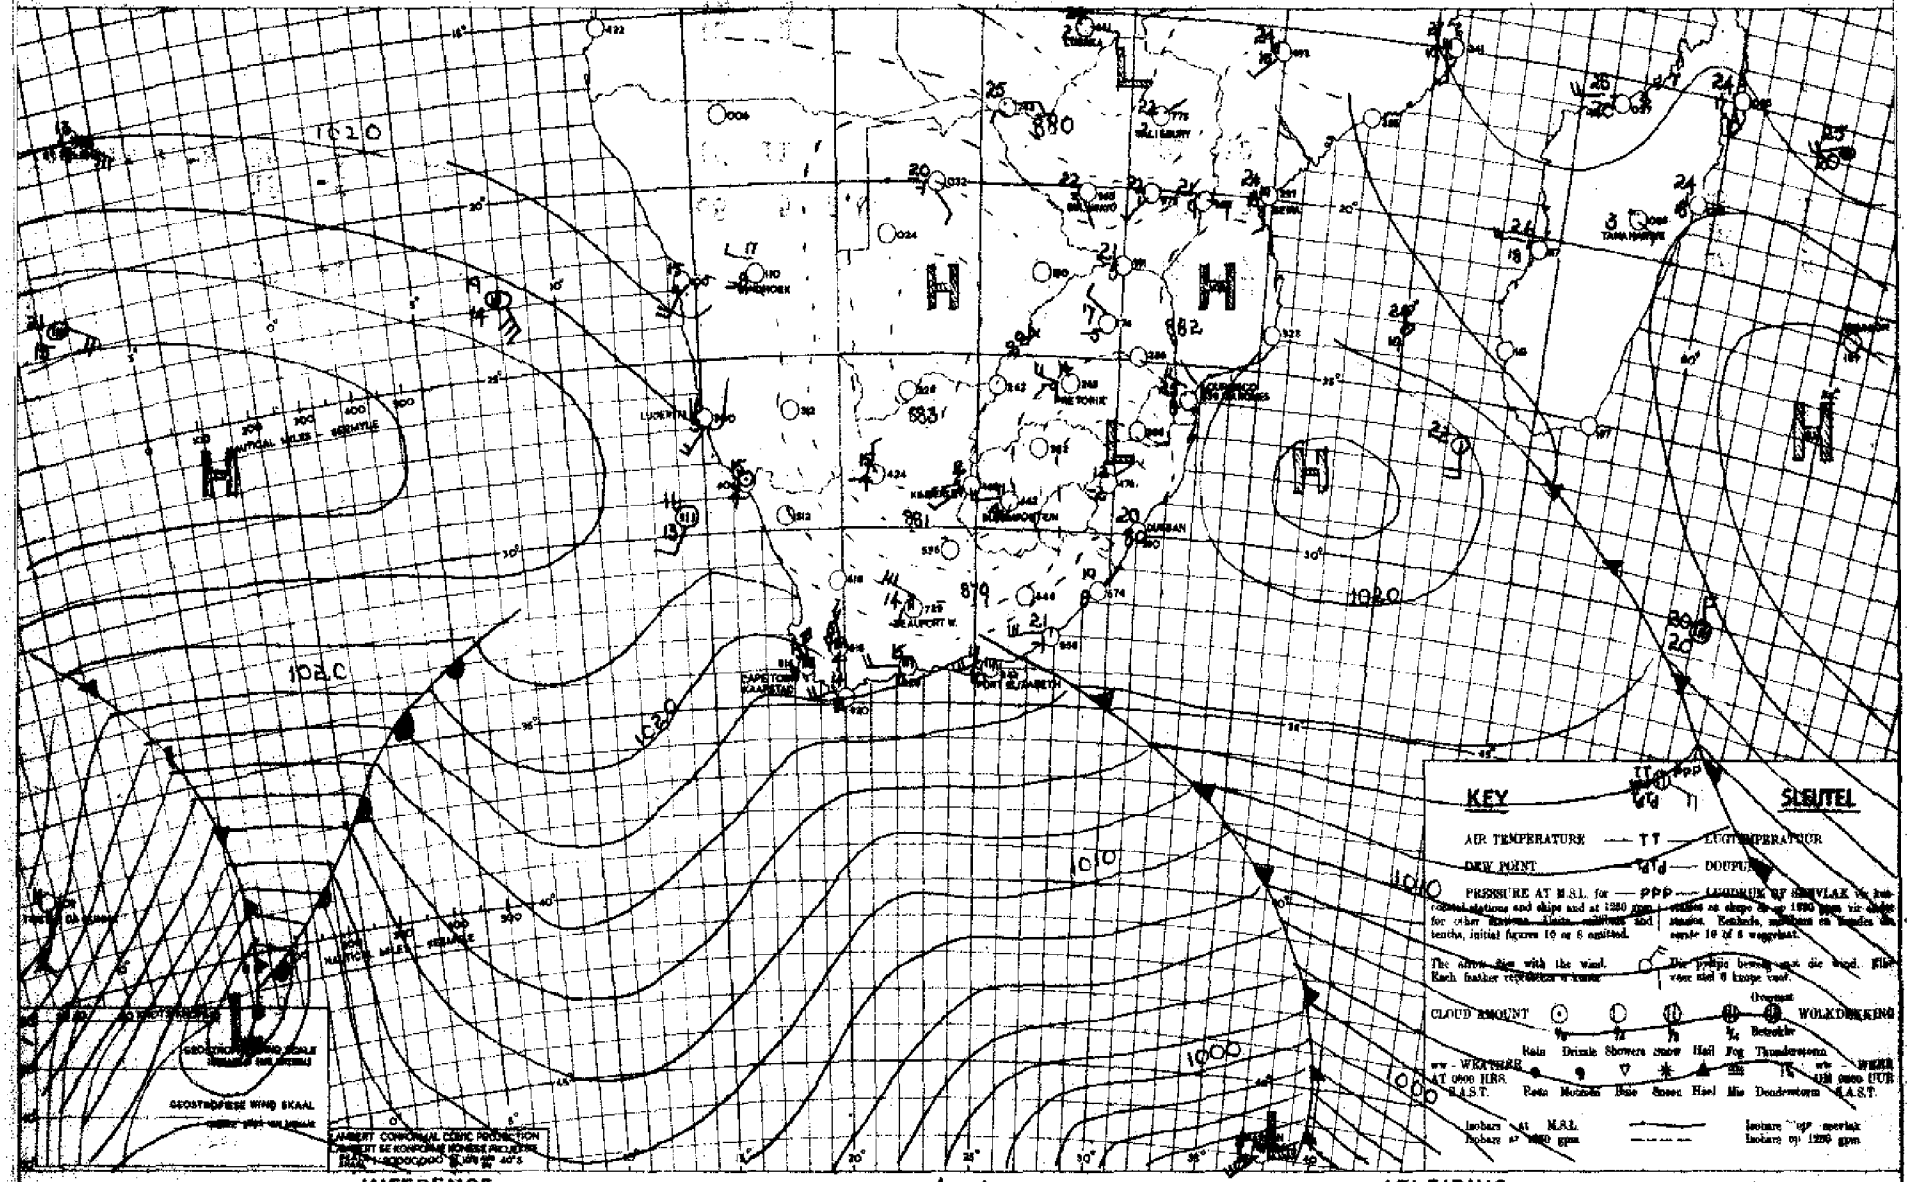
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 18 / 7 / 1954 DATUM AFLEIDING

Little change is expected in the prevailing NW'ly circulation across the southwestern Cape where unsettled rainy conditions will continue. Elsewhere over the Union it will be fine with temperatures gradually returning to normal.

Min verandering in die heersende Noordwestelike lugstroom word verwag oor Suidwes Kaapland, waar ongestadigde reënweer sal voortduur. Oor die res van die Unie sal dit mooiweer wees en temperatuur sal geleidelik na normaal terugkeer.

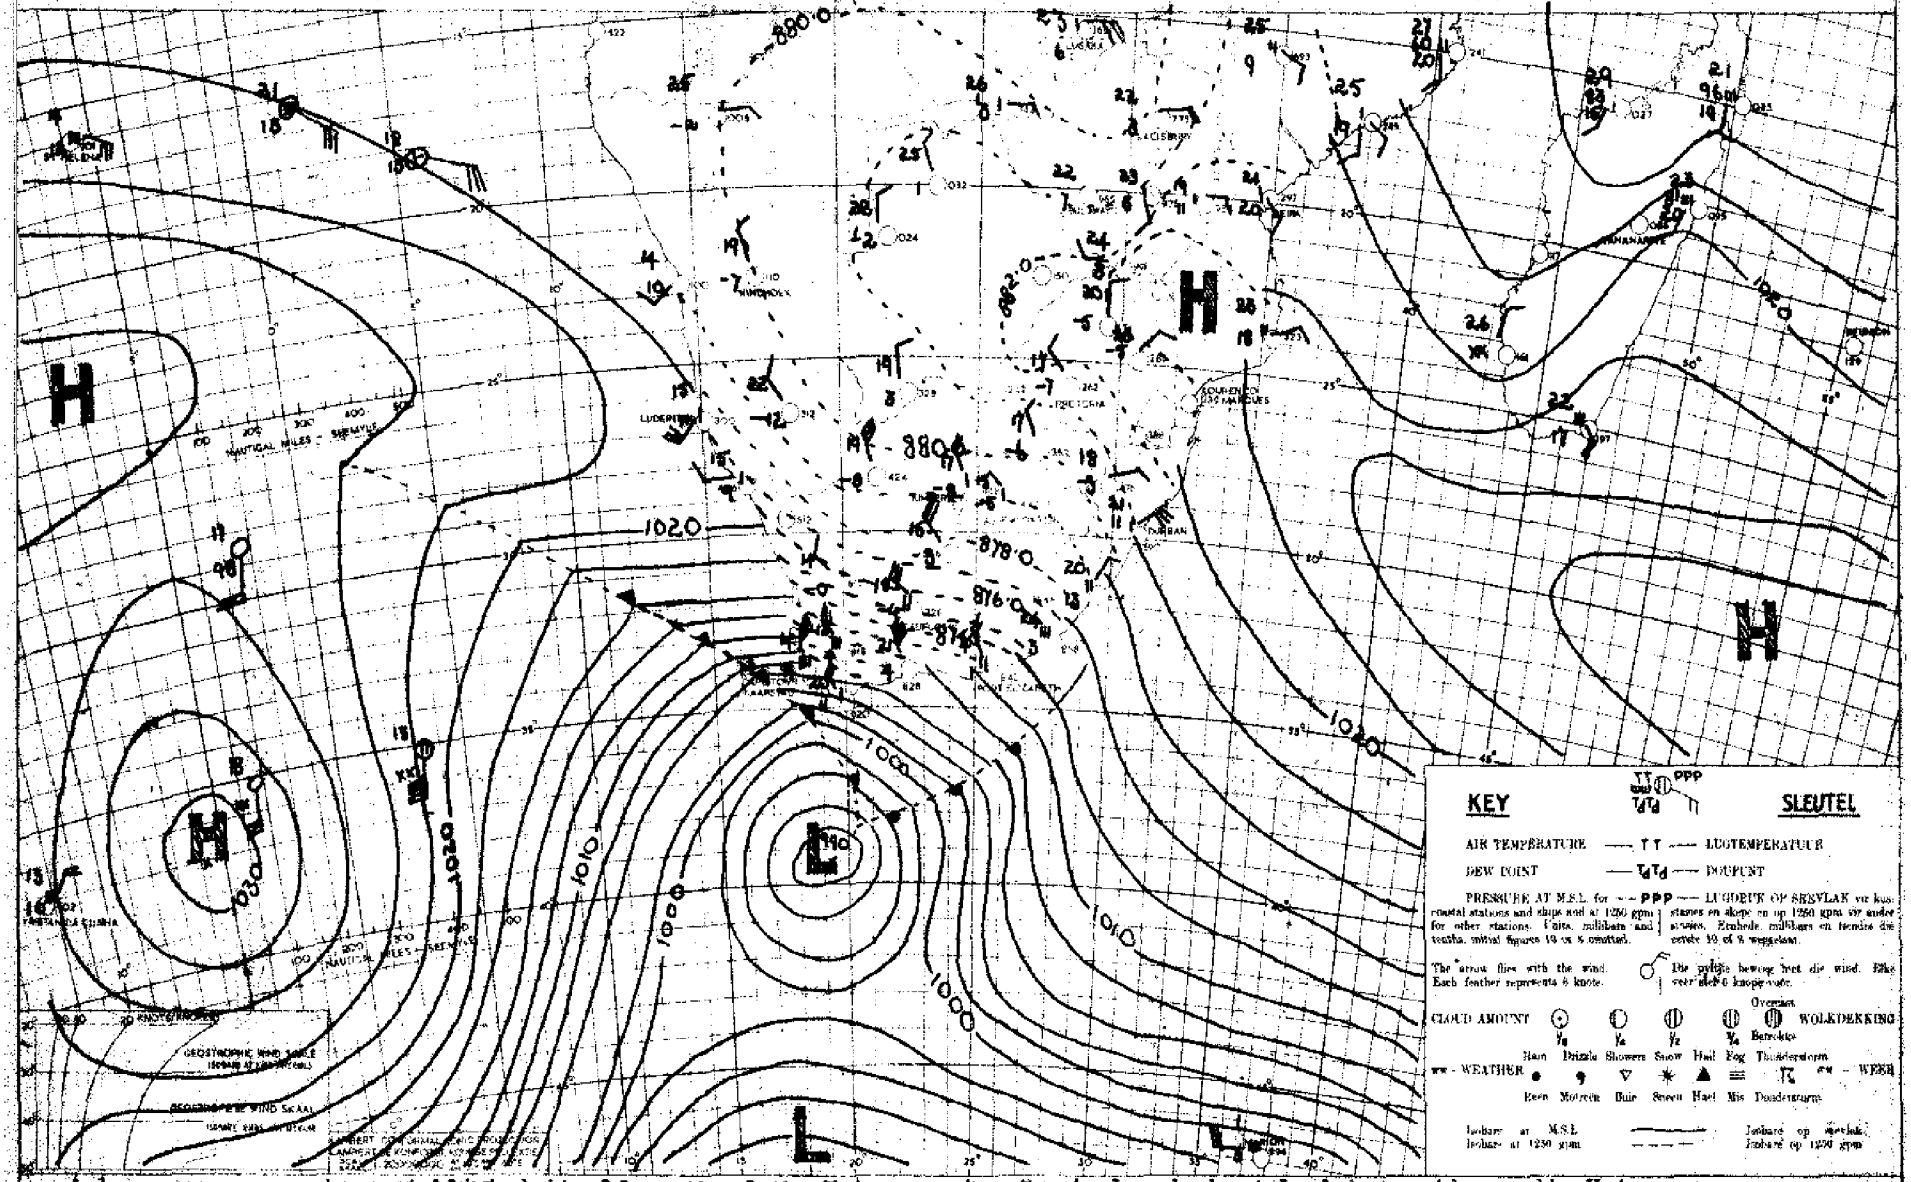
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



A low pressure system established itself south of the Union on DATE 19 Jul 54 DATUM and caused cyclonic circulation of cool moist air over the South-western Cape. Cloudy skies will occur over this area and local showers will occur along the coast. Clearing will take place after the passage of the cold front at present situated on the west coast. Over the remainder of the Union dry anticyclonic conditions will remain and the weather will be fine.

'n Laagdruk stelsel het suidwaarts van die Unie gevorm en veroorsaak sikloniese sirkulasie van koel vogtige lug oor Suidwes Kaapland. Bewolkte toestande sal oor hierdie streek voorkom. Plaaslike buie sal langs die kus uitsak. Opklaring sal plaasvind nadat die koue front net wes van die Kaap ooswaarts beweeg het. Oor die res van die Unie bly droë antisikloniese lugstroming voortduur en die weer sal bestendig bly.

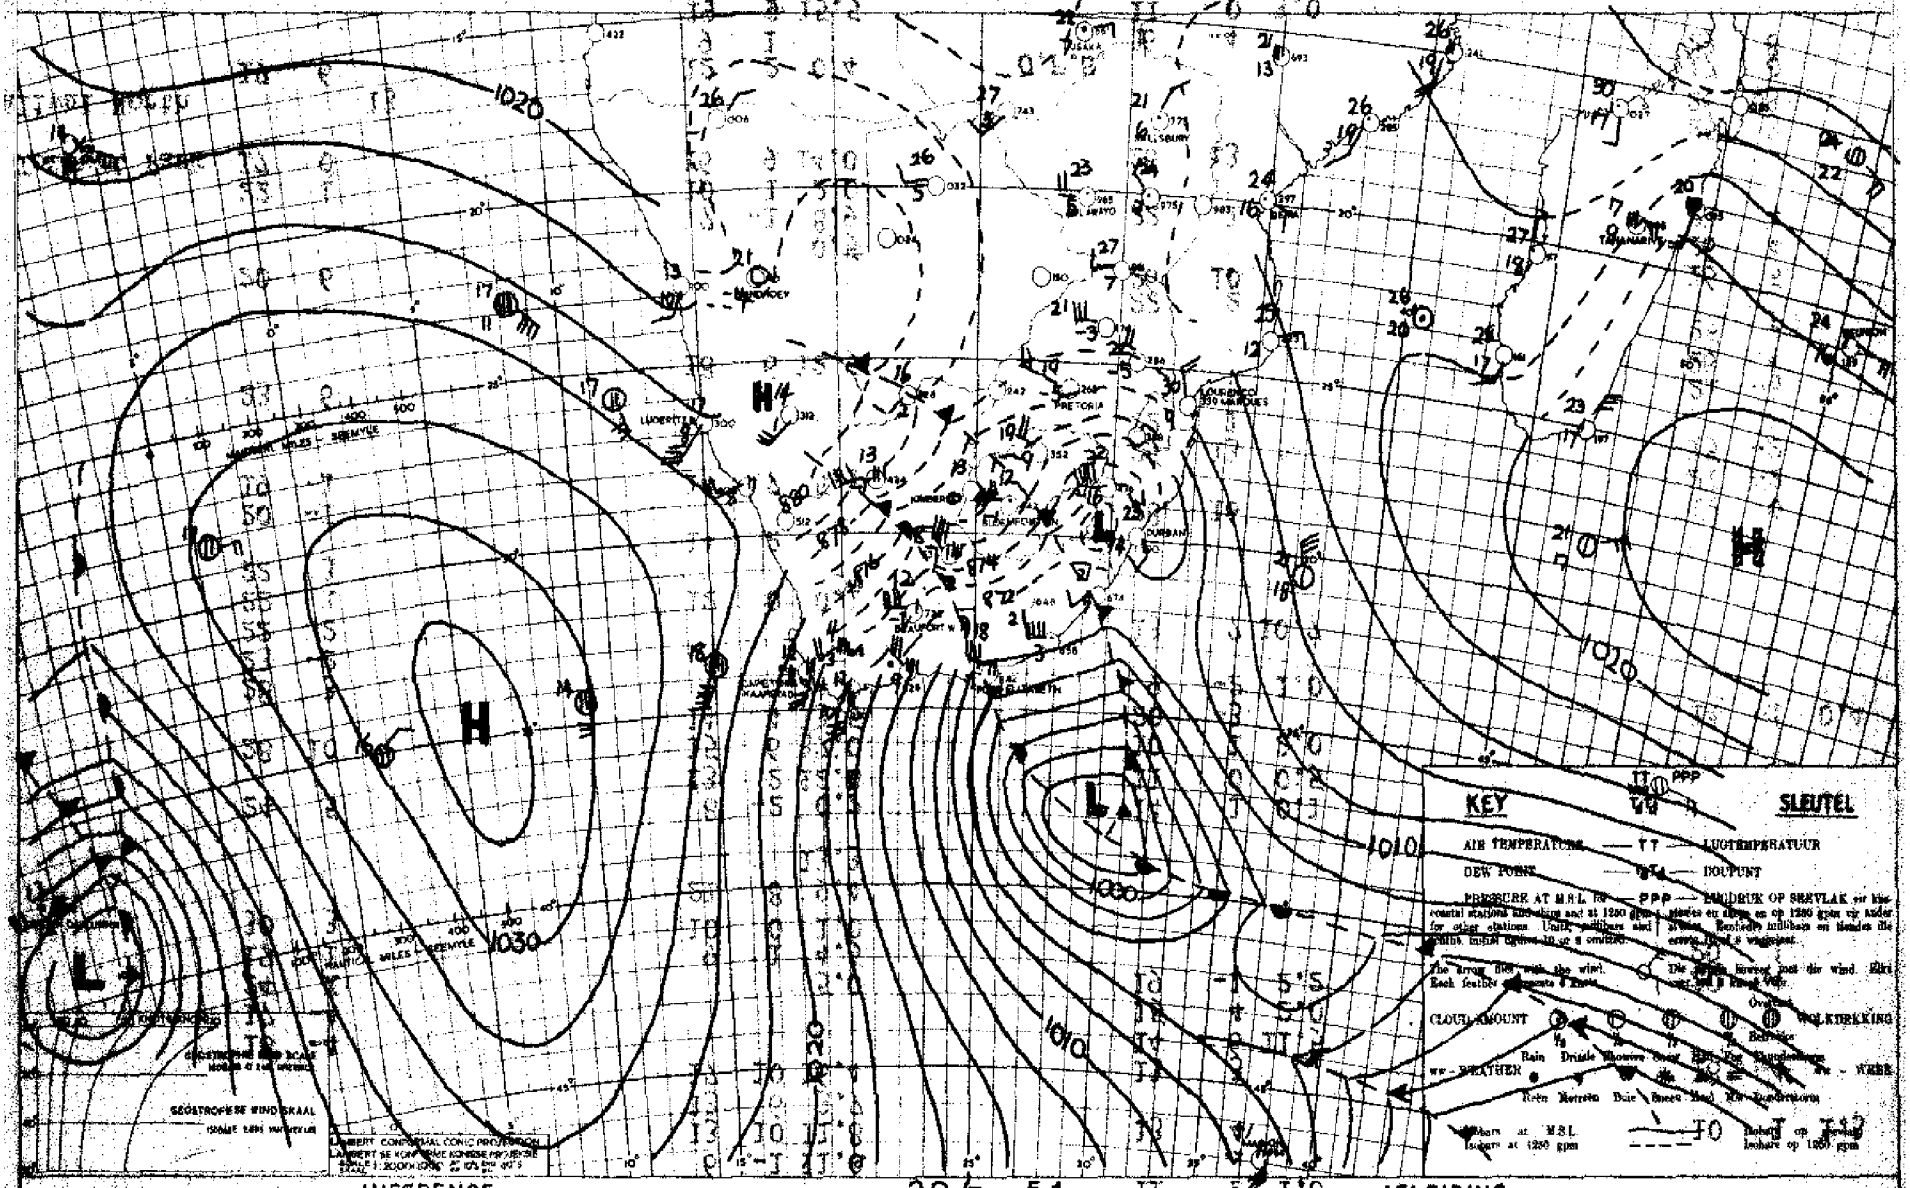
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 20/7/1954 — DATUM — AFLEIDING

Cold air will sweep northwards across the whole of the Union in the rear of the cold front. Cloudy weather, with showers along the coastal belt and light rain and snow over the Cape interior and the southern Free State, will prevail at first, but it will clear from the West to become mainly fine in a couple of days' time.

Koue lug sal noordooswaarts oor die hele Unie beweeg. Bewolkte toestande, met buie oor die kuststreke en met ligte reën en sneeu oor die Kaapse binneland en suidelike Vrystaat, sal aanvanklik voorkom, maar dit sal later uit die weste ooptrek en oor 'n paar dae sal dit algemeen mooiweer wees.

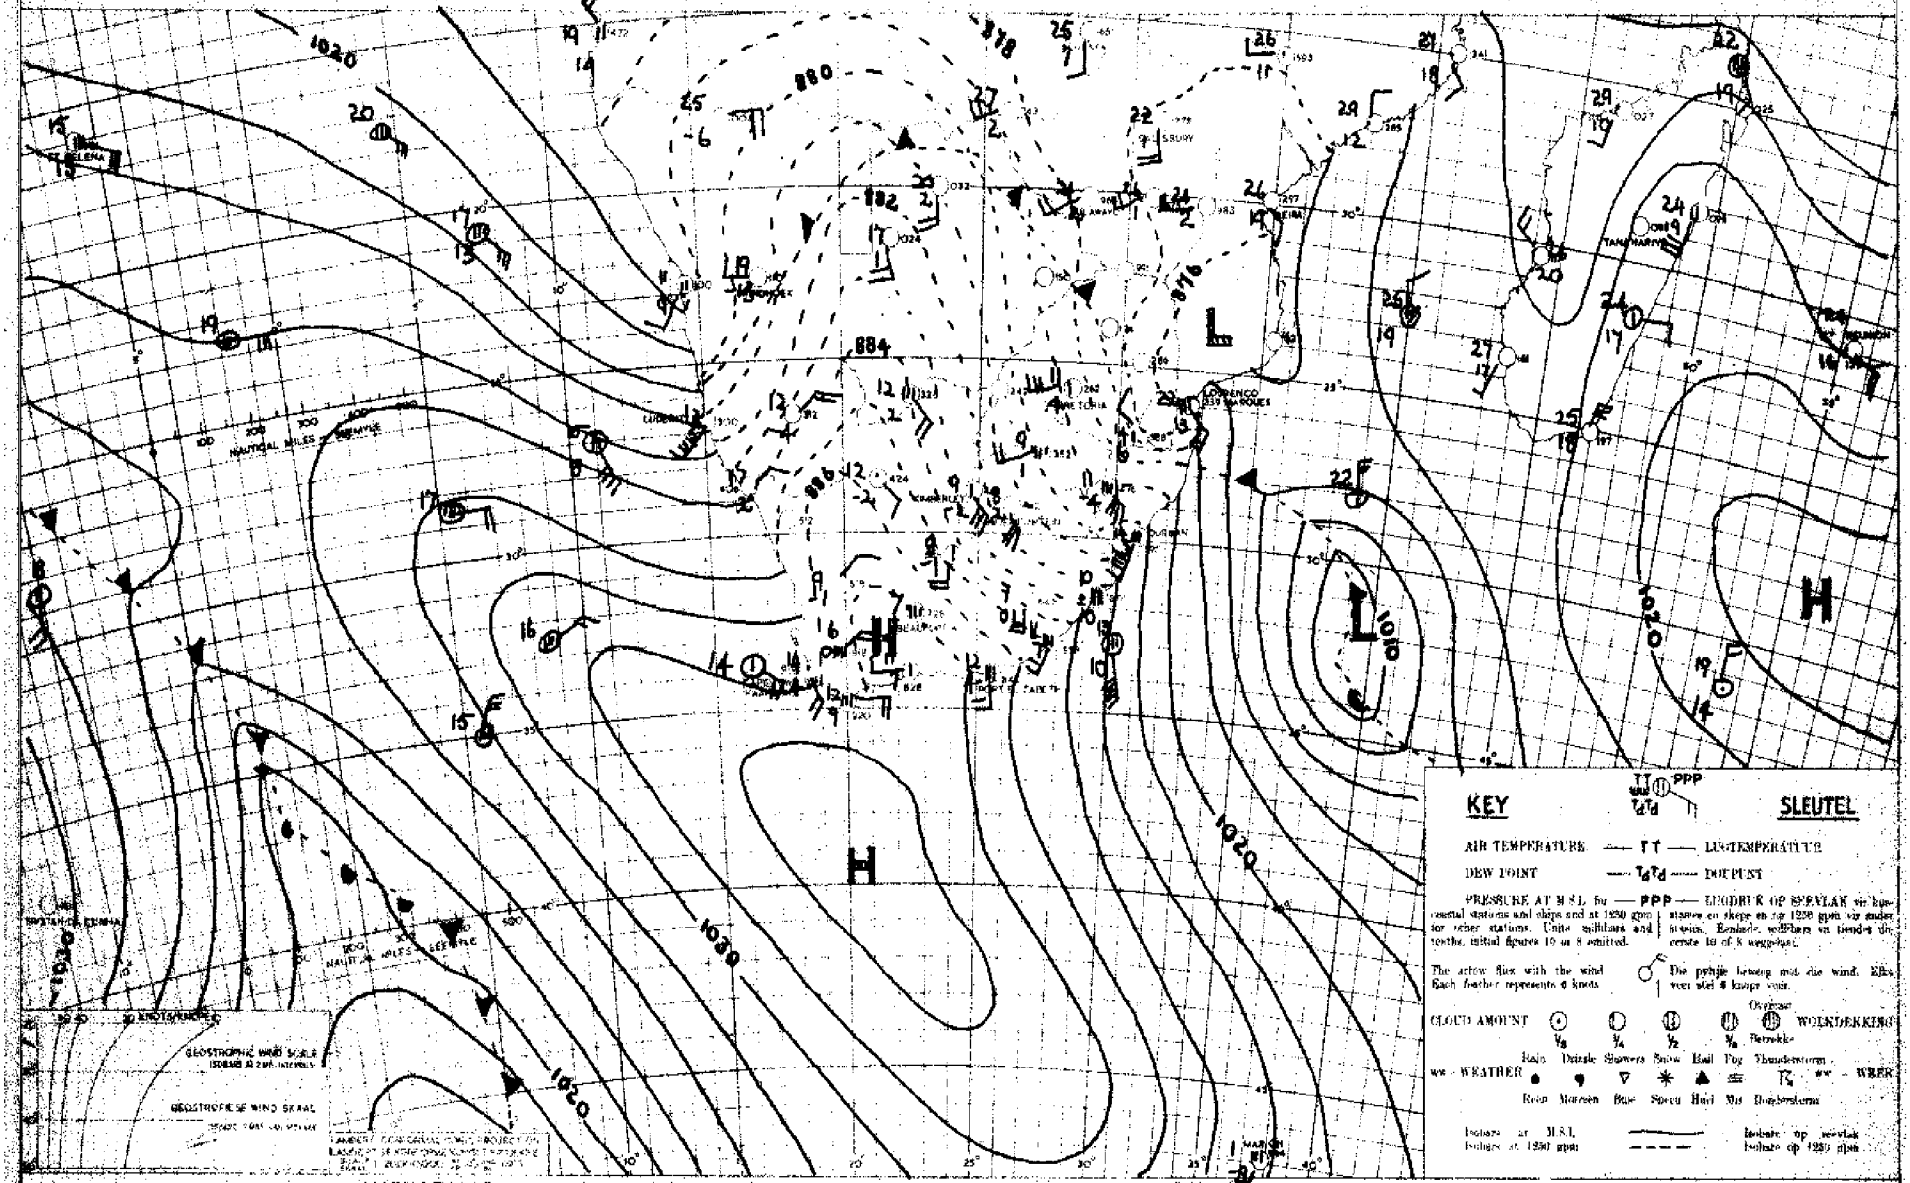
SYNOPTIC WEATHER MAP — 1200 GMT — 1400 SAST — SINOPTIESE WEERKAART



INFERENCE

DATE 21 7 1954 DATUM

Pressures are falling rapidly along the west coast, but is still rising along the east coast. Consequently the high south of the Union will rapidly move eastwards and the wind will back to easterly over the eastern half of the Union and northerly over S.W. Africa and western Cape. The air in circulation over the Union is dry and with further subsidence it will be fine generally tomorrow except along the east coast.

AFLEIDING

Die druk daal vinnig langs die weskus, maar styg nog langs die ooskus. Gevolglik sal die antisikloon suid van die Unie vinnig na die ooste uitwyk en die wind sal na oos draai oor die oostelike helfte van die Unie en noord oor S.W.Afrika en westelike Kaap. Die lug oor die Unie is droog en met verdere daling sal dit [illegible] oor word, behalwe langs die ooskus.

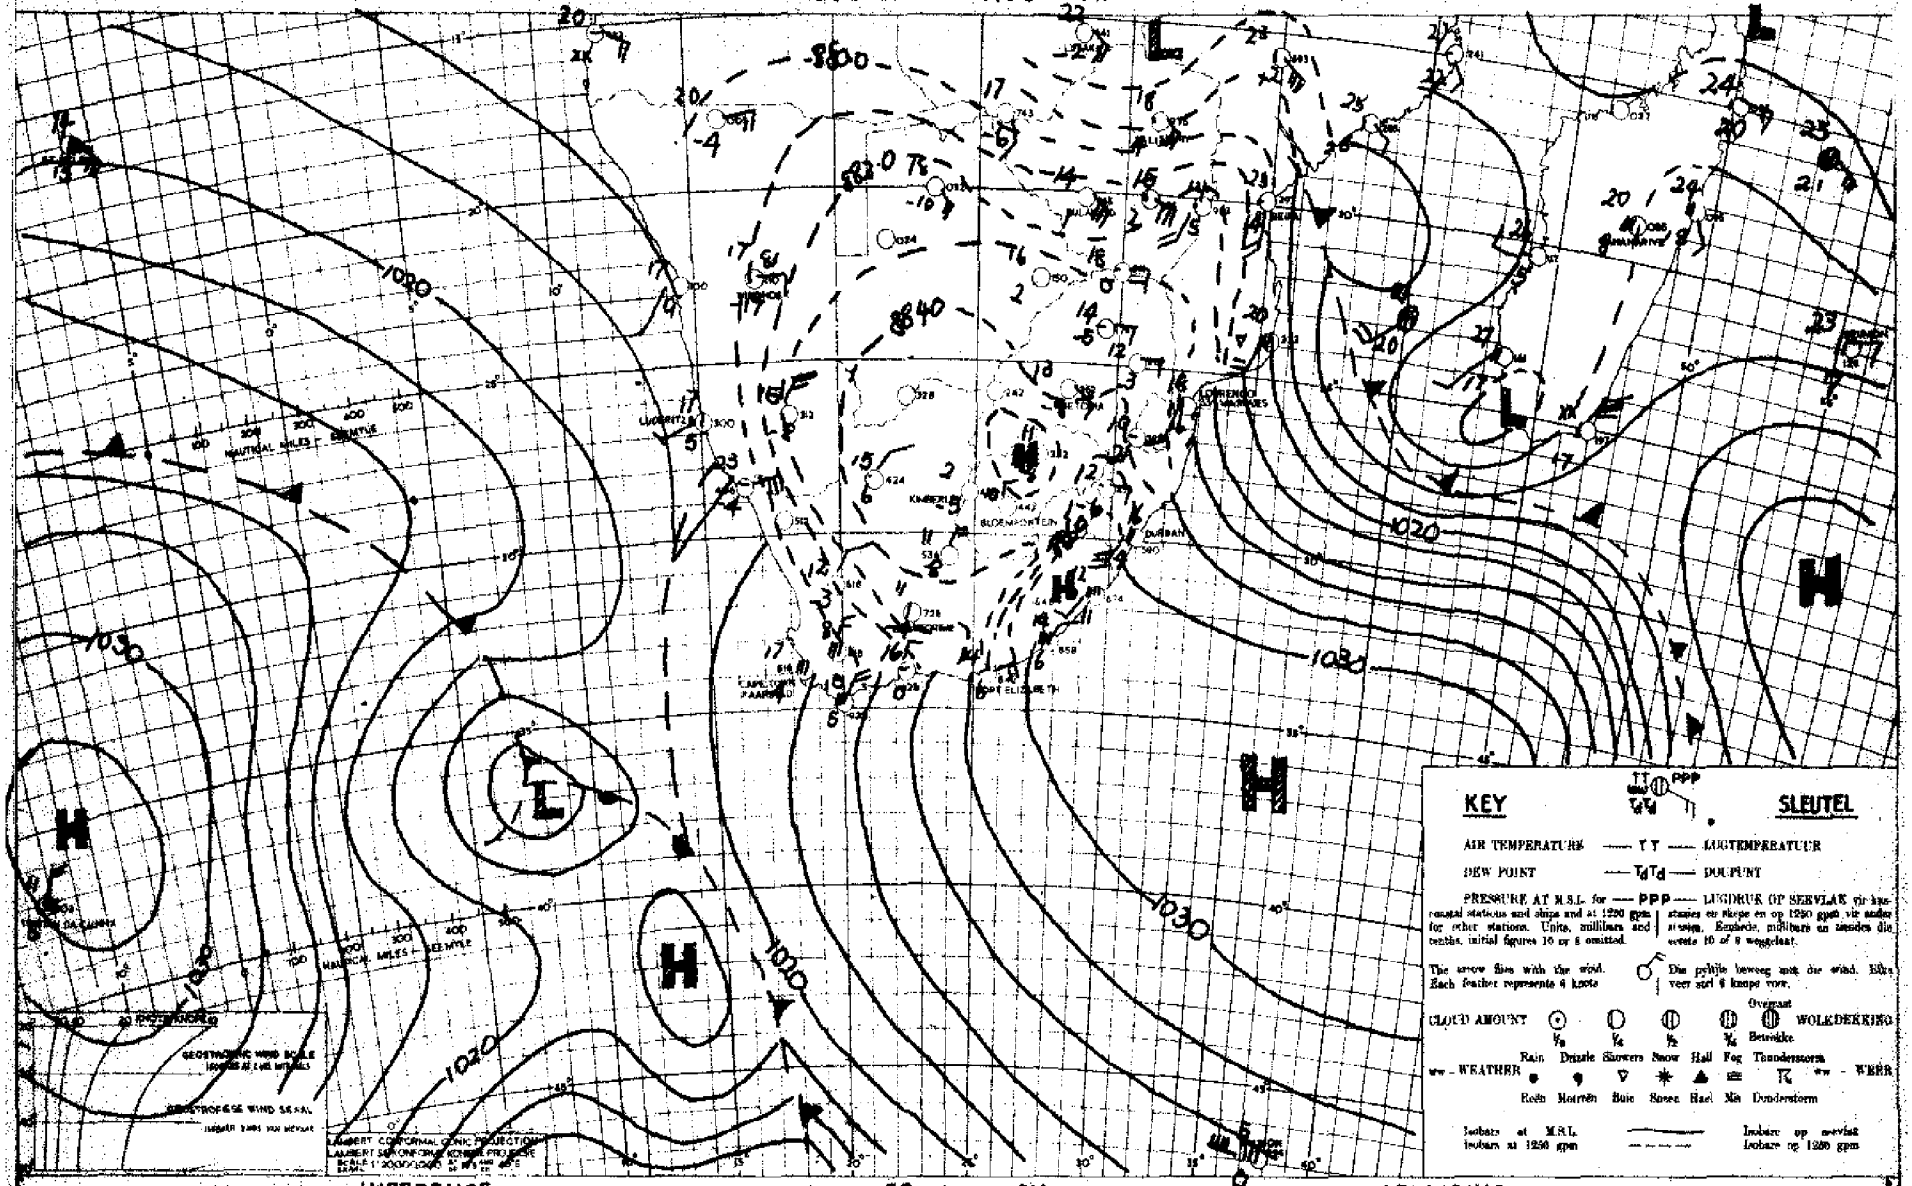
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

The anticyclonic circulation of cold dry air is now well established over the Union. Another disturbance has developed south-west of the Cape and will freshen the northwesterly winds over the Cape, which at the same time will draw in warmer air from the north. Apart from extensive high level cloud over the Southern Union, the weather will be fine with steadily rising temperatures.

DATE 22-7-1964 DATUM

AFLEIDING

Die antisikloniese sirkulasie van koue droë lug het sig nou deeglik oor die Unie gevestig. 'n Ander steuring het weer suid-wes van die Kaap ontwikkel, en dus sal van die noordwestelike winde oor die Kaapprovinsie versterk. Tewens sal ook warmer lug van die noorde oor hierdie streke ingevoer word. Met uitsondering van voorkoms van vlieswolke oor die suidelike Unie, sal dit mooiweer bly met geleidelik stygende temperature.

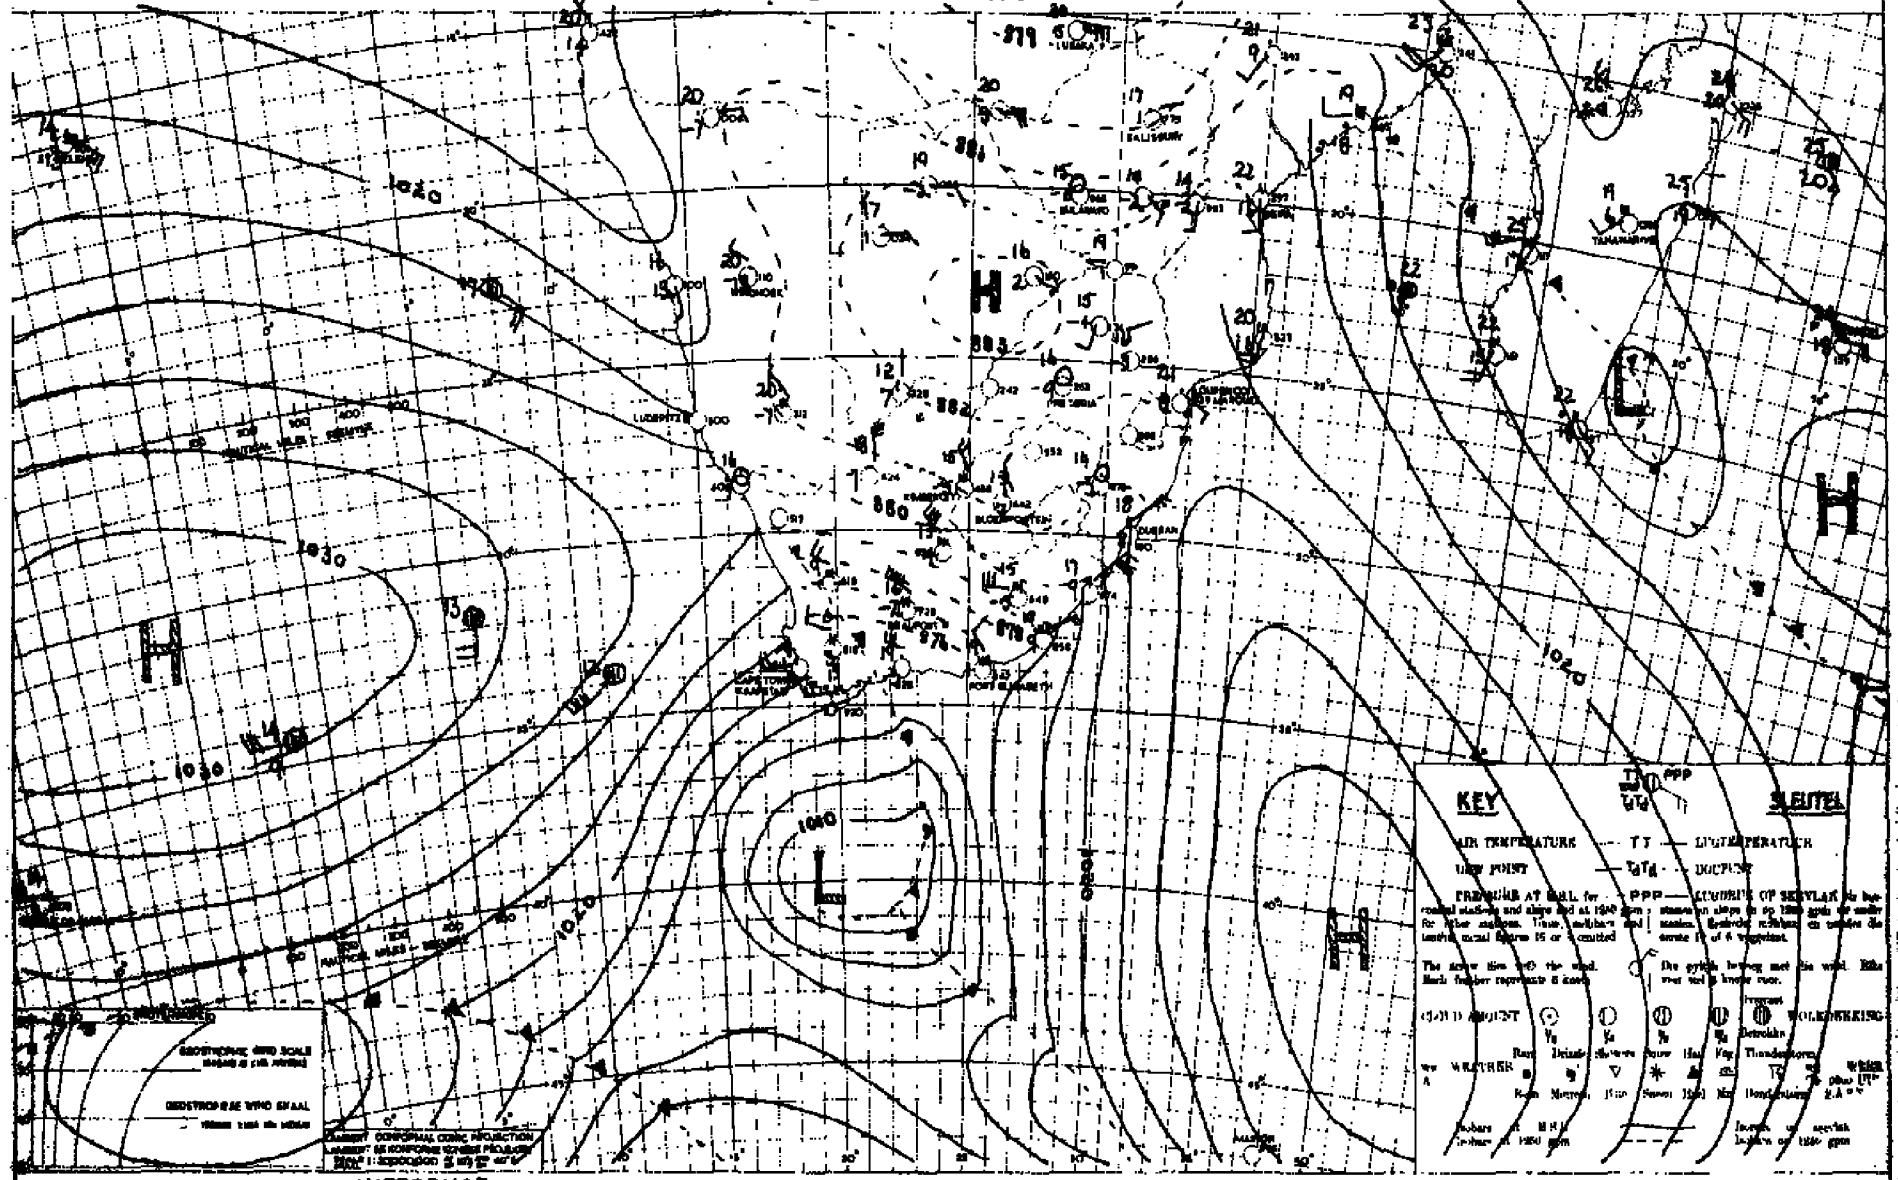
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 23 7 1954 DATUM — AFLEIDING

Colder air will extend eastwards across the Cape Province, but with the axis of the Atlantic high rather far northwards the cloudy showery weather will be confined mainly to the southwestern Cape, where winds will remain NW'ly to W'ly.

Kouerlug sal ooswaarts oor Kaapland uitbrei, maar aangesien die as van die Atlantiese hoogdruk stelsel taamlik ver noord is sal bewolkte weer en buie hoofsaaklik tot suidwes Kaap beperk wees en NW'like tot W'like winde sal voortduur.

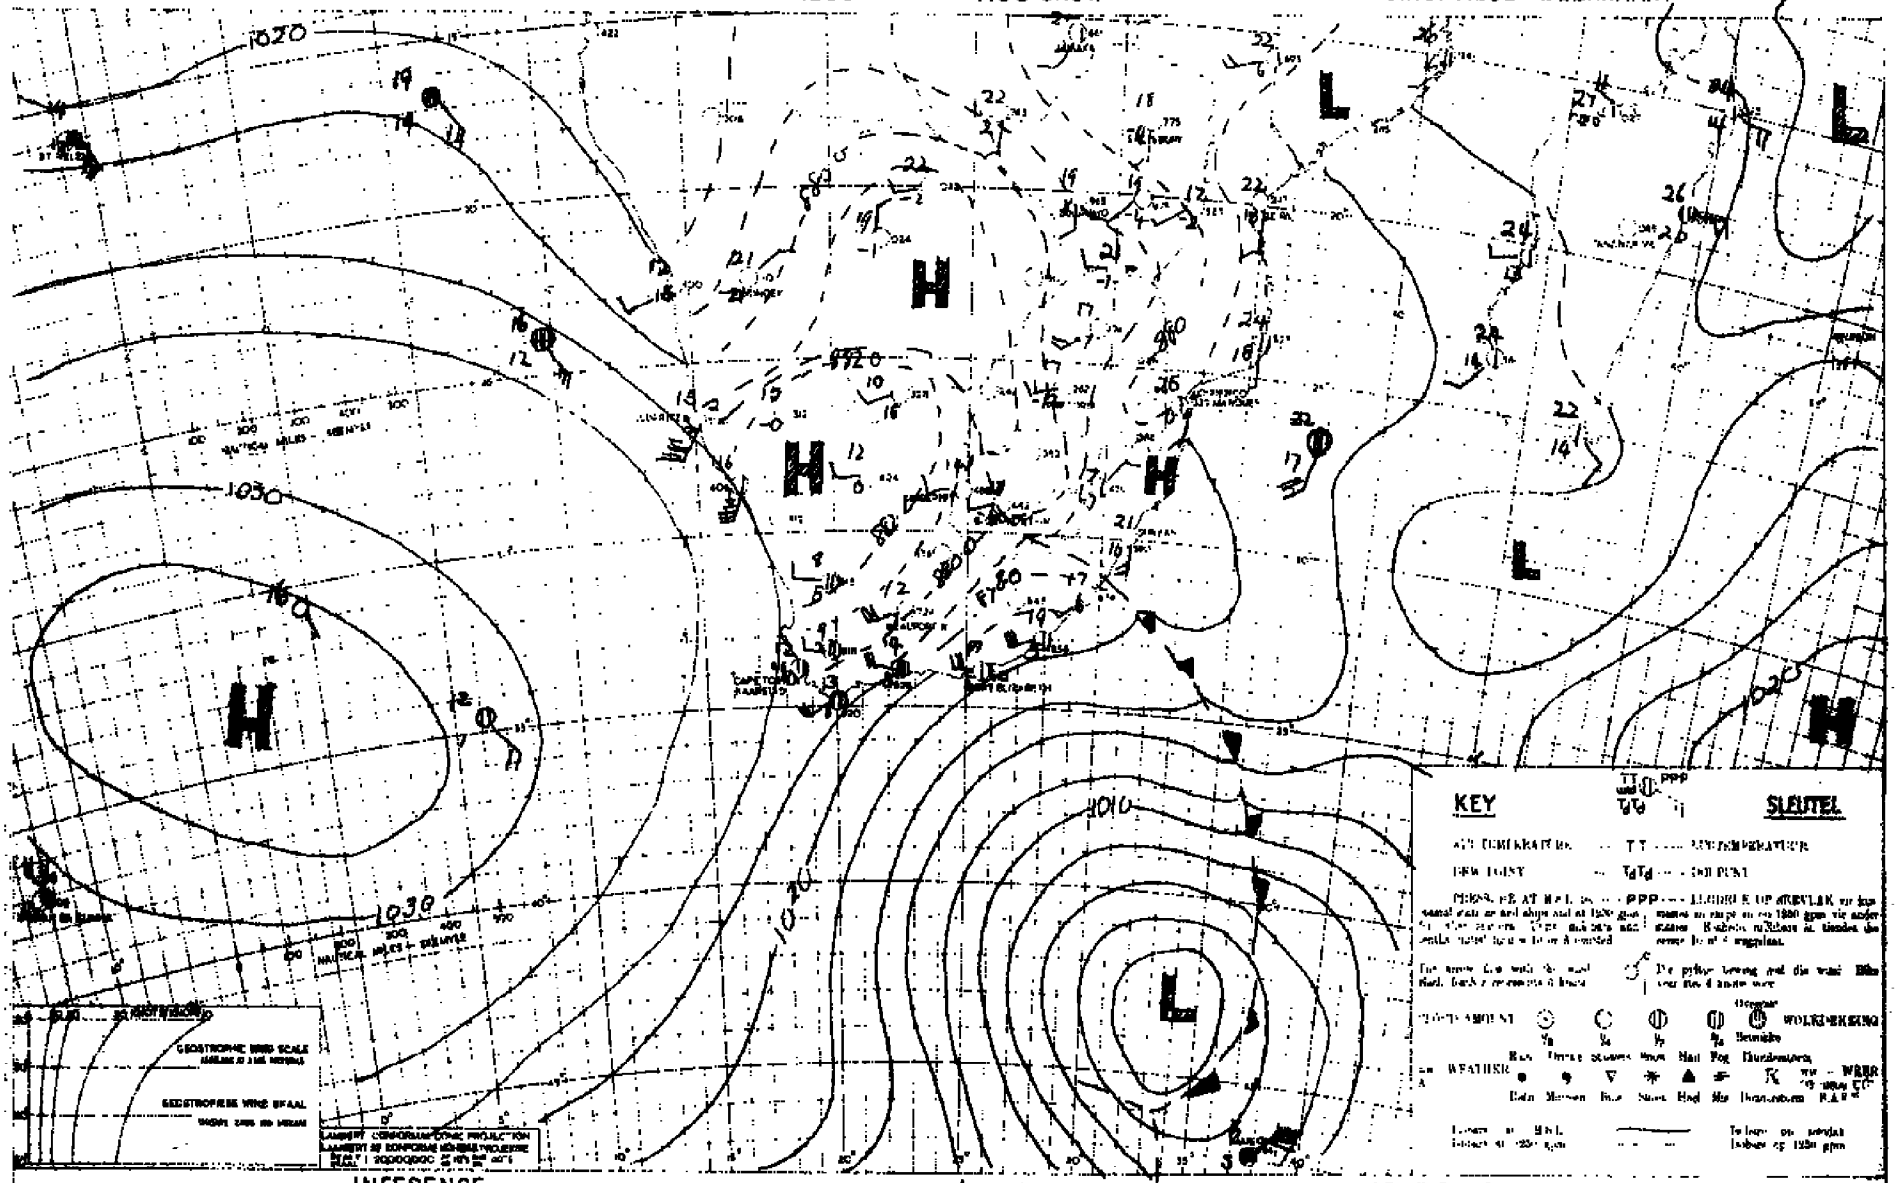
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

DATE 24/7 19 54 DATUM

AFLEIDING

The deep despression south of the Union is moving rapidly to the Southeast. Colder air from behind it is flowing over the Southwestern and southern Cape coastal areas and interior. Local showers will occur along the coast. Over the remainder of the Union the air remains dry, and the weather will remain fine.

Die diep laagdruk sisteem suid van die Unie beweeg taamlik vinnig na die suidooste. Kouer lug agter die laag vloei oor die Suidwes en Suidelike kusstreke van Kaapland en binneland. Plaaslike buie sal langs die kusstreek voorkom. Elders oor die Unie bly die lug droog en dit sal dus mooiweer bly.

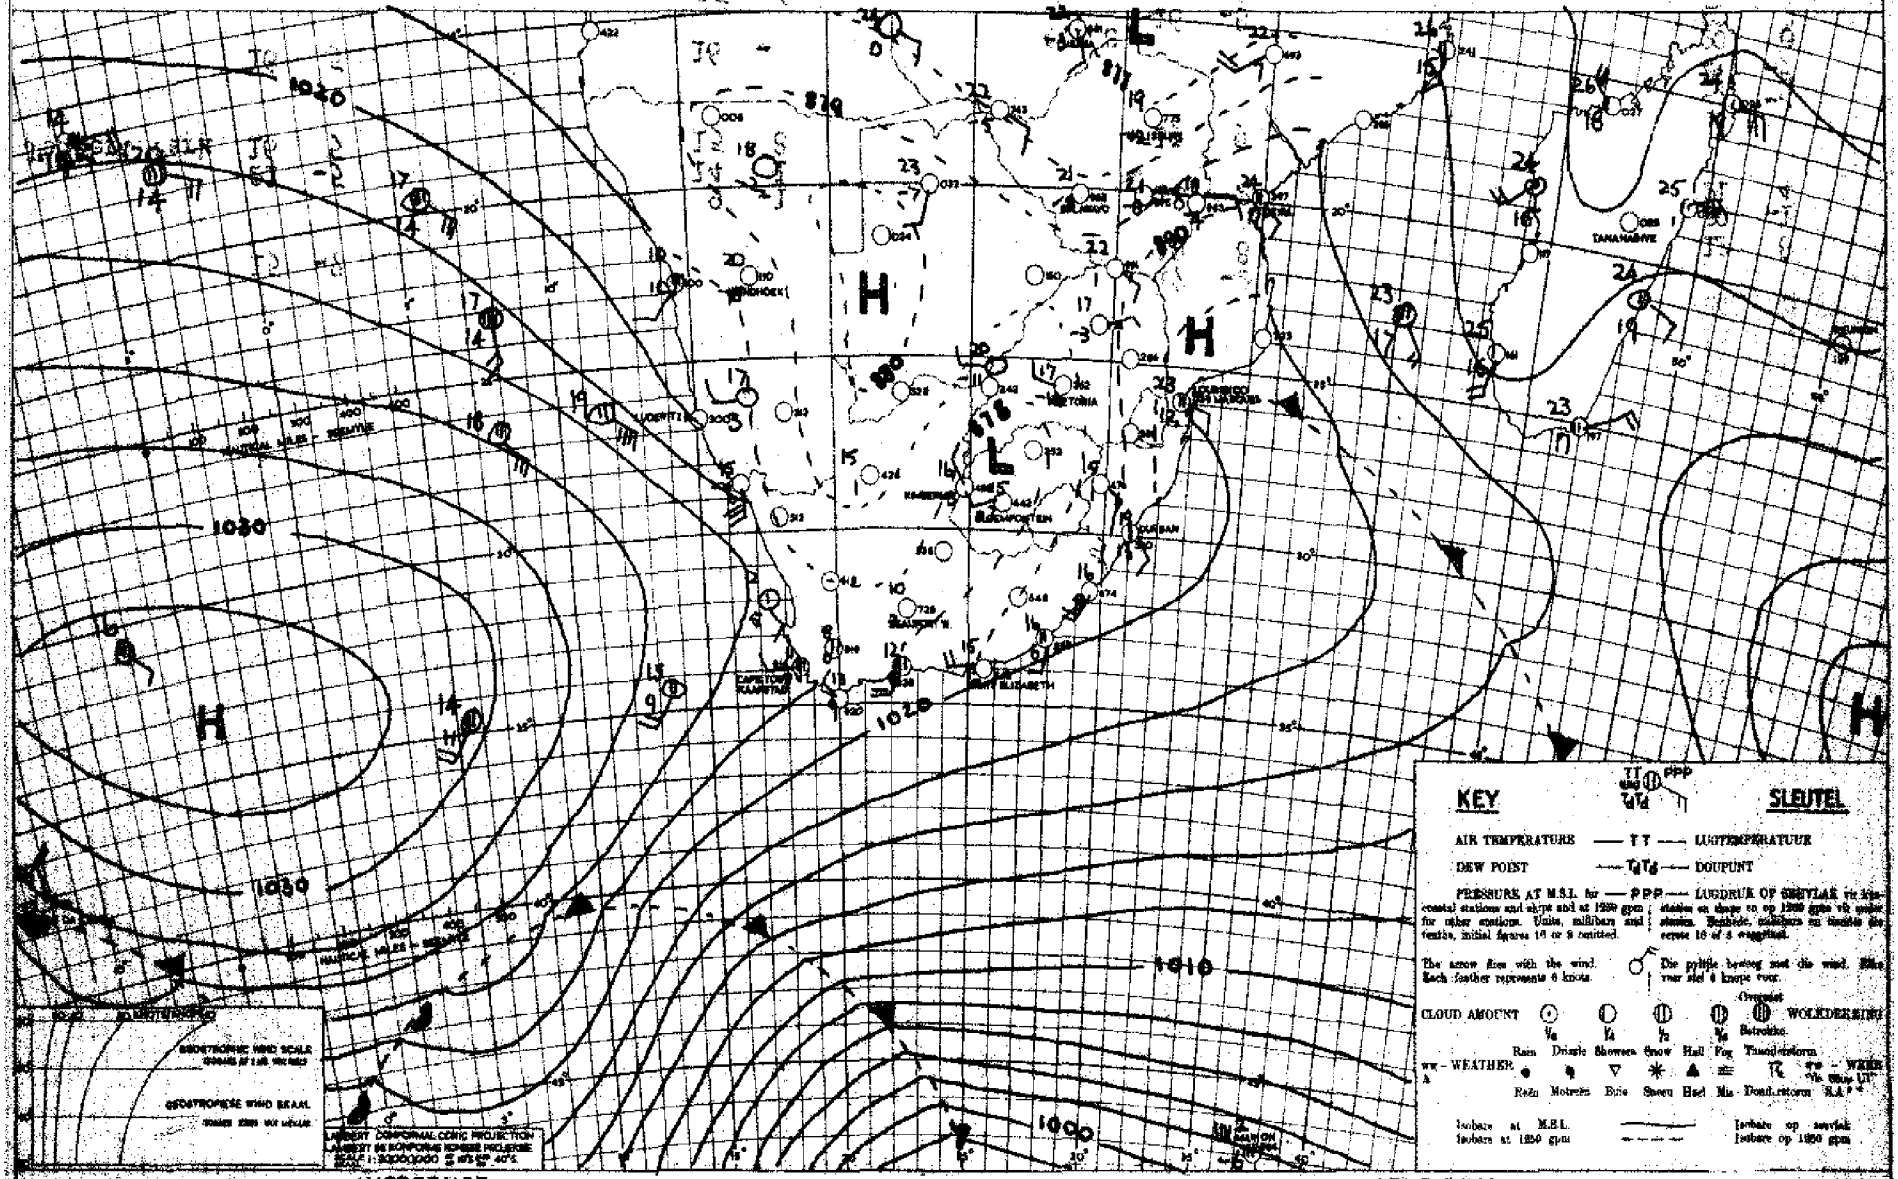
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 25 7 1954 DATUM — AFLEIDING

In spite of the anticyclone west of the Cape and the south-westerly winds off the Cape, pressures are falling generally over the Union. Little change is likely in weather and temperature. Cloudy conditions will persist along the southwest coast and western part of the south coast. It will be fine over the remainder of the Union with temperature unchanged.

Ten spyte van die antisikloon en die suidwestewind wes van die Kaap, daal die druk algemeen oor die Unie. Min verandering word verwag. Bewolkte weer sal voortduur langs die suidwestekus en westelike deel van die suidkus. Oor die res van die Unie sal dit mooiweer wees met onveranderde temperatuur.

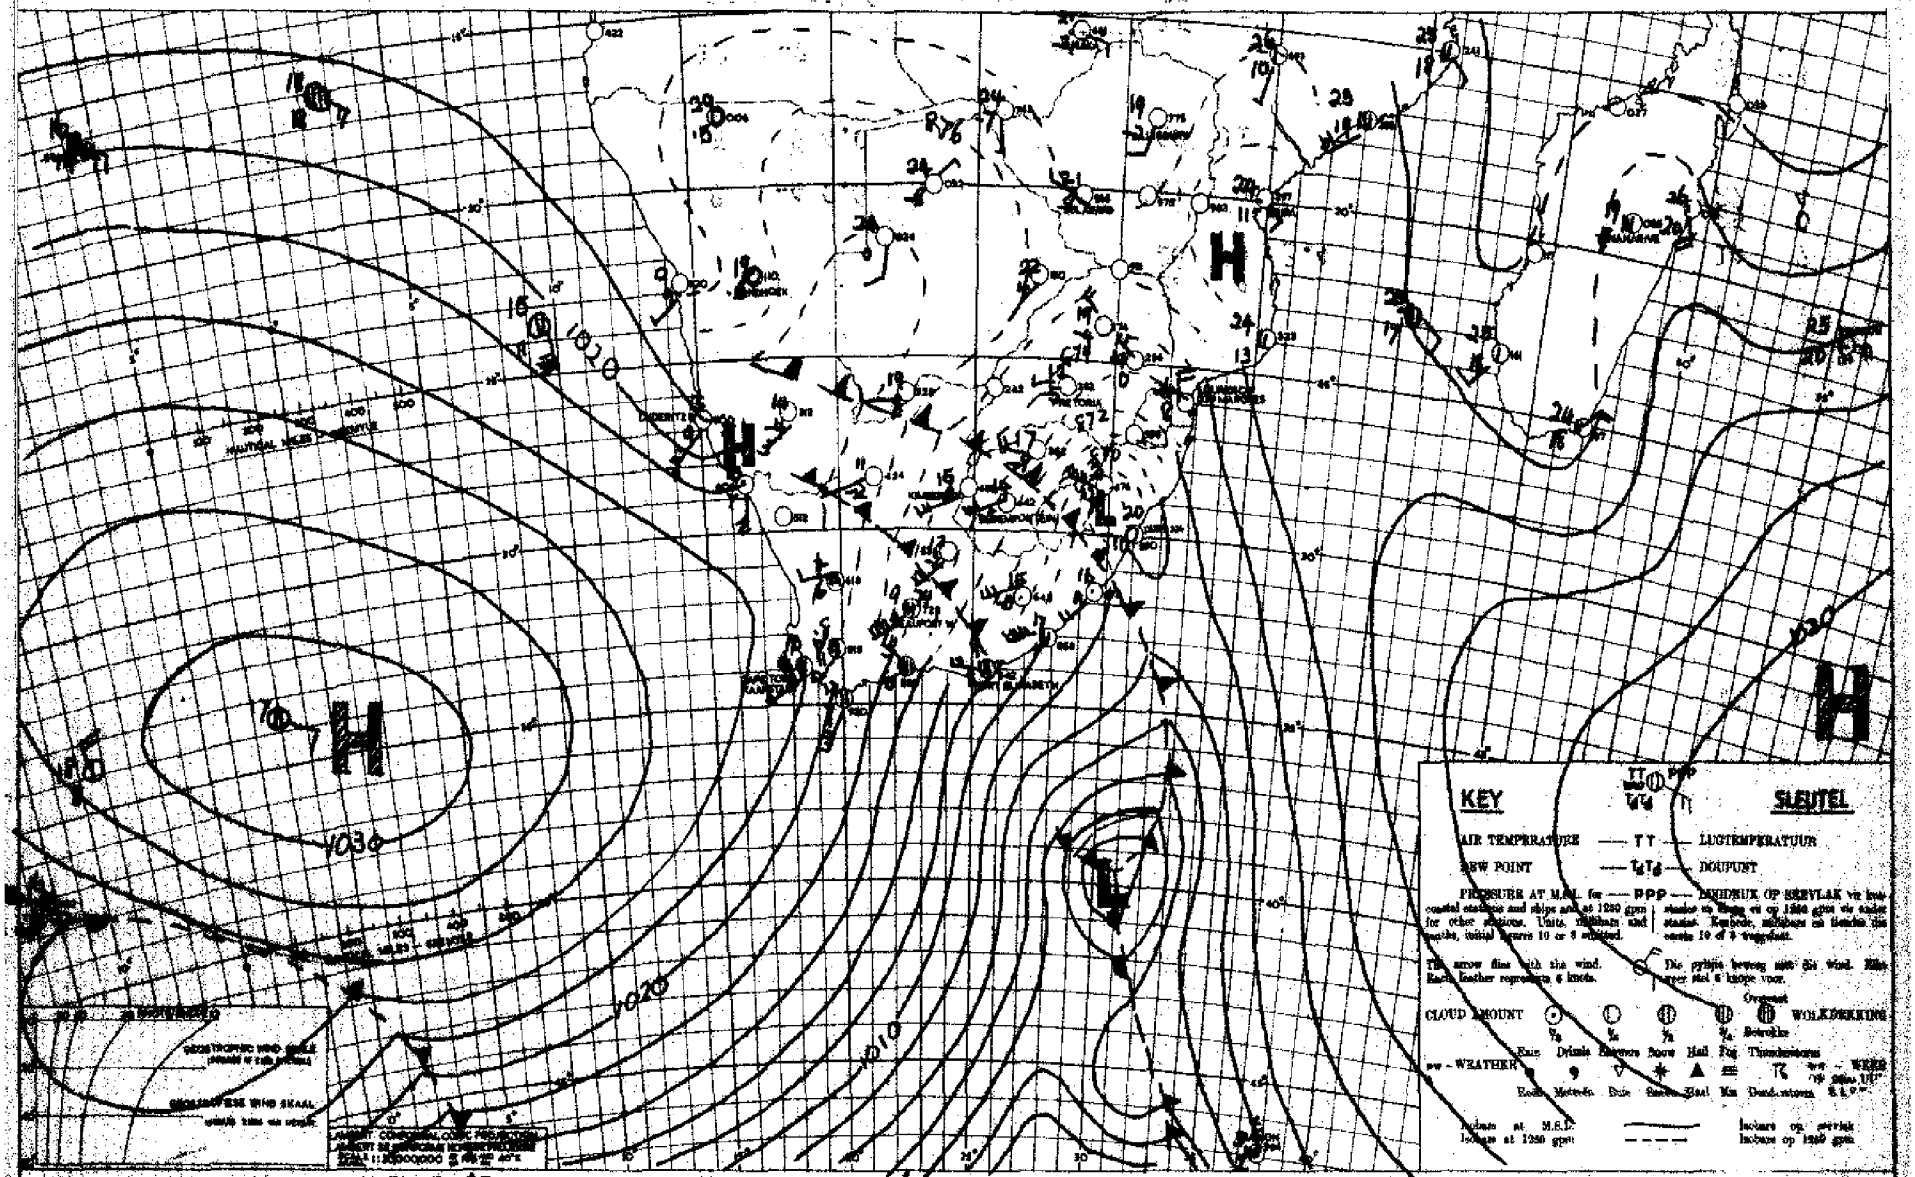
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 26-7 1954 DATUM AFLEIDING

Cold air is once again flooding across the Union in the rear of a cold front, which is associated with a depression to the South-east. Apart from temporarily cloudy and showery weather along the coast it will be mainly fine.

Koue lug beweeg weereens oor die Unie aan die agterkant van 'n kouefront, wat met 'n laag Suidoos van die land verbind is. Afgesien van tydelike bewolkte weer met buie oor die kuststreke sal dit meesal mooiweer wees.

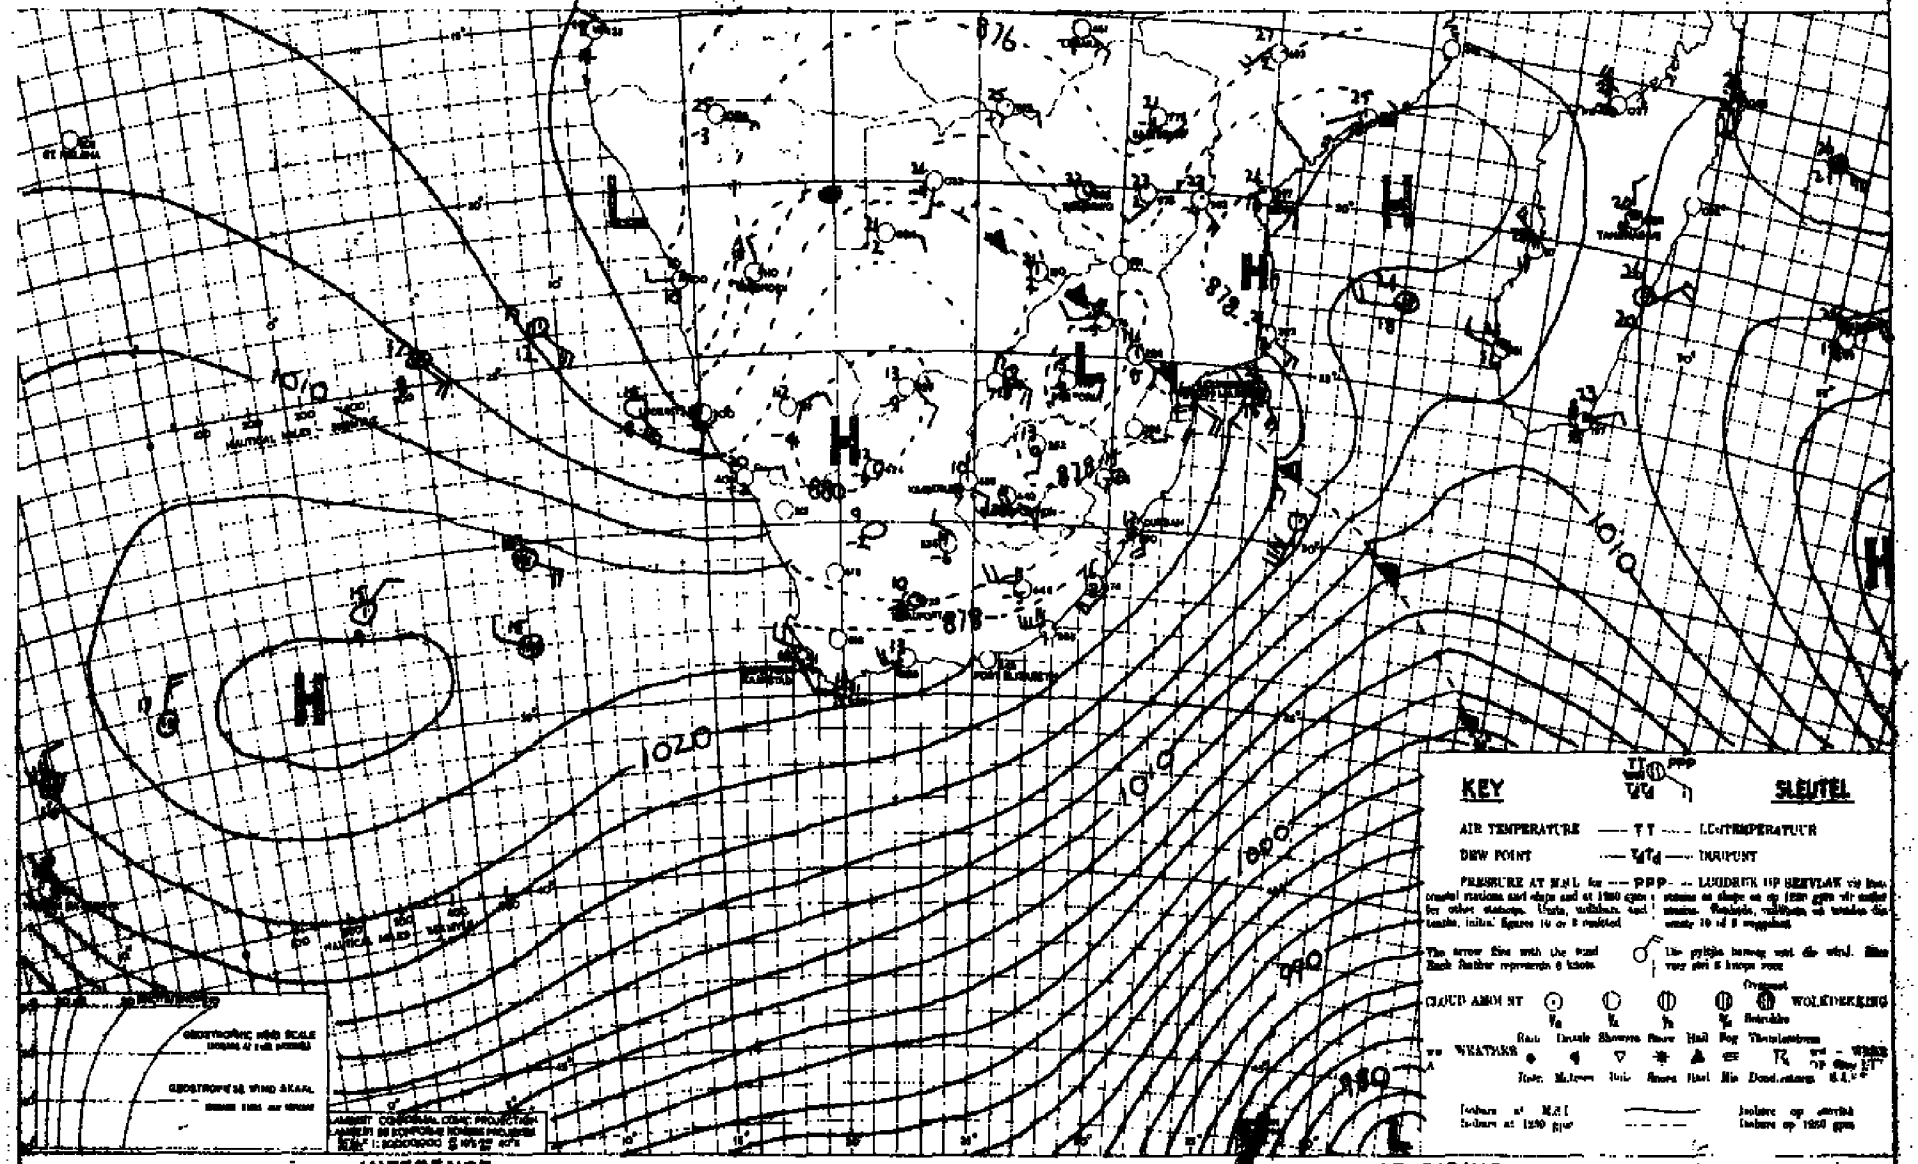
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 27-7-84 DATUM AFLEIDING

Pressure is falling generally and consequently the cold air will not advance further north and winds will be light. Moist air will invade Northern Transvaal and cause temporary cloudy conditions. Partly cloudy conditions will continue over the south-west but elsewhere it will be fine with rising temperature.

Die druk daal algemeen oor die Unie en gevolglik sal die koue lug nie verder noordwaarts beweeg nie en die wind sal lig wees. Vogtige lug sal Noord-Transvaal binnestroom en tydelike bewolkte weer in die oggend veroorsaak. Gedeeltelike bewolkte weer sal voortduur langs die suidwestkus maar oor die res van die Unie sal dit mooiweer wees met stygende temperatuur.

SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART

INFERENCE

The depression to the east of Tristan da Cunha and its associated cold front is not expected to influence the weather over the Cape for a day or two and it will remain fine and mild generally over the Union.

DATE 29-7-1954 DATUM

AFLEIDING

Die laagdrukstelsel oos van Tristan da Cunha en 'n meegaande kouefront sal volgens verwagting nie die weerstoestande oor Kaapland vir 'n dag of twee beïnvloed nie en dit sal oor die Unie algemeen mooiweer en matig bly.

Maximum en Minimum Temperatuur (°C) en Reënval (mm) vir die 24 uur wat om 08:00 vandag eindig op 31-7-1964

Maxima en Minima Temperatures (°C) and Rainfall for the 24 hours ending at 08:00 (SAST) on 31-7-1964

INFERENCE

Pressure is falling over southwestern Cape and the low pressure systems in the Atlantic will approach the Cape but apart from low clouds along the west coast and freshening northwesterly wind over the interior the Union will remain unaffected. The temperature will rise on the upgrade with the northerly wind component.

DATE 30 7 1954 DATUM

AFLEIDING

Die druk daal nou oor suidwestelike Kaapland en die laagdrukstelsels naby Tristan sal dus nader aan die Kaap beweeg. Afgesien van die lae wolke langs die weskus en versterkende noordwestewind sal dit egter mooiweer bly oor die Unie. Die temperatuur sal as gevolg van noordelike wind verder styg.

With the approach of the depression in the South Atlantic Ocean pressures are falling sharply over the Western and southwestern Cape, where cloudy and unsettled weather with rain and showers will develop. This weather is not expected to spread eastwards over the Cape interior and the Southern Cape before the passage of the cold front late tomorrow and on Monday.

REFERENCE DATE 31 7 1971 VERWYSING AFTEKENING

Met die nadering van die laagdrukstelsel in die Suid Atlantiese Oseaan daal drukke oor Wes en Suidwes Kaapland nou vinnig. Ongestadige toestande met reën en buie sal oor hierdie dele ontwikkel maar sal nie ooswaarts oor die Kaapse binneland en suidelike Kaapland uitbrei voordat die kouefront laat mōre en Maandag verby beweeg nie.

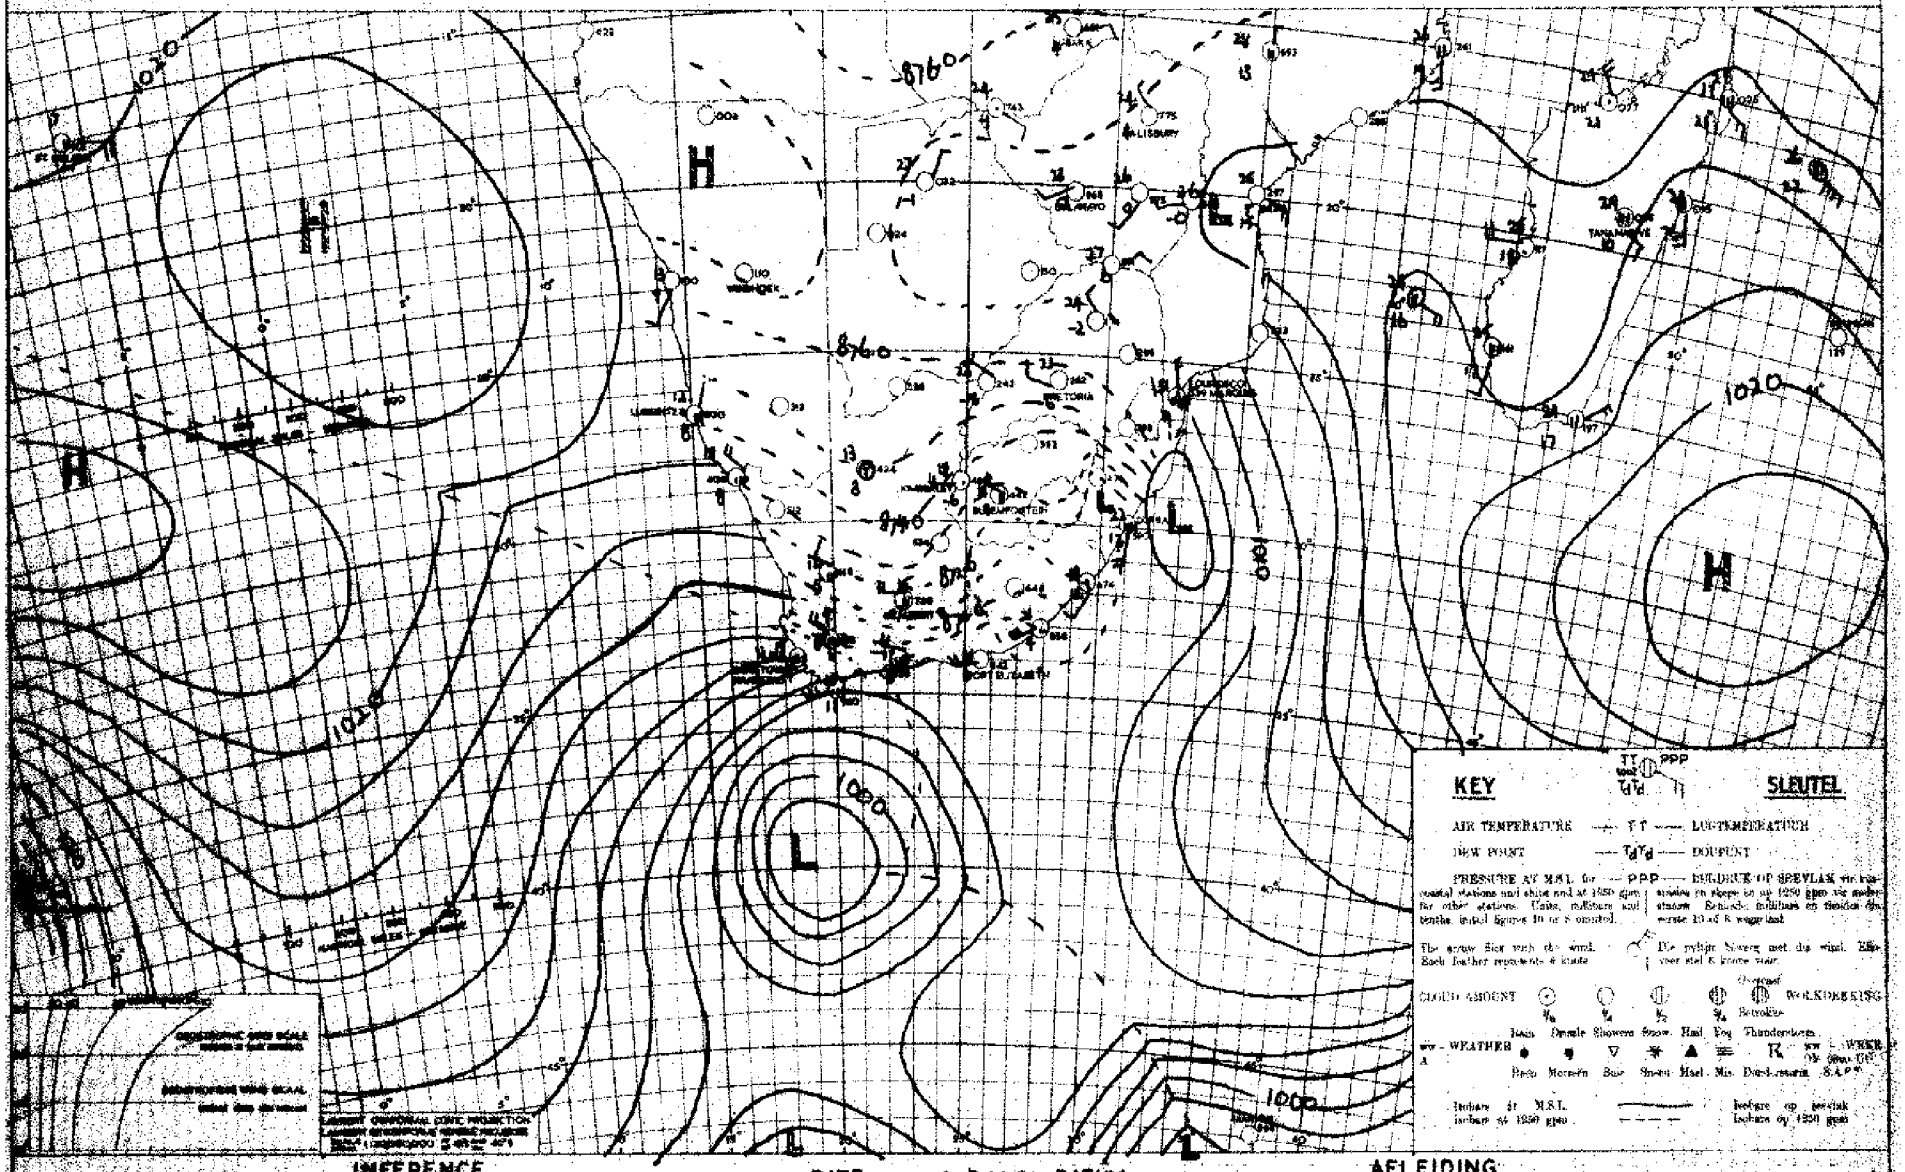
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 1-8 1964 DATUM AFLEIDING

Colder Atlantic air is once more advancing into the Union from the southwest and is expected to affect the Free State, southern Transvaal, Natal and the Eastern Cape by tomorrow cloudy conditions with occasional showers will occur over the southwestern and Southern Cape, but elsewhere it will be fair to fine.

Kouer Atlantiese lug dring weereens die Unie vanaf die suidweste binne en sal na verwagting die Vrystaat, Transvaal, Natal en Oos Kaapland teen môre affekteer. Bewolkte toestande met plaaslike buie sal oor Suidwes en Suid Kaapland voorkom, maar elders sal dit effens bewolk of mooiweer wees.

With the approach of the depression in the South Atlantic pressures are falling sharply over the Western and Southwestern Cape, where fresh NWly winds and unsettled weather with rain will be experienced for a day or two. Over the remainder of the Union it will be mainly fine and warmer.

Met die nadering van die laagdrukstelsel in die Suid Atlantiese Oseaan daal die drukke reeds vinnig oor Wes en Suidwes Kaapland, waar fris Noordwestewind en ongestadige weer met reën vir 'n dag of twee ondervind sal word. Oor die res van die land sal dit meesal mooiweer en warmer wees.

Cold polar air penetrated the southwestern half of the Cape Province and will advanced towards the Central Transvaal and Natal over night. Cloudy showery weather occurred within this cold air and principally on the west and south coast. Partial clearing will take place over these areas. Apart from lowering temperatures no change will take place over the remainder of the Union.

Koue polêre lug het die Suidwestelike helfte van die Kaap Provinsie binnegedring en sal oor nag middel Transvaal en Natal bereik. Bewolkte, buierige weer het hoofsaaklik langs die suidwes en suidkus voorgekom. Môre sal dit oor hierdie streke opklaar. Met uitsondering van dalende temperature sal geen verandering in die weer plaasvind oor die res van die Unie.

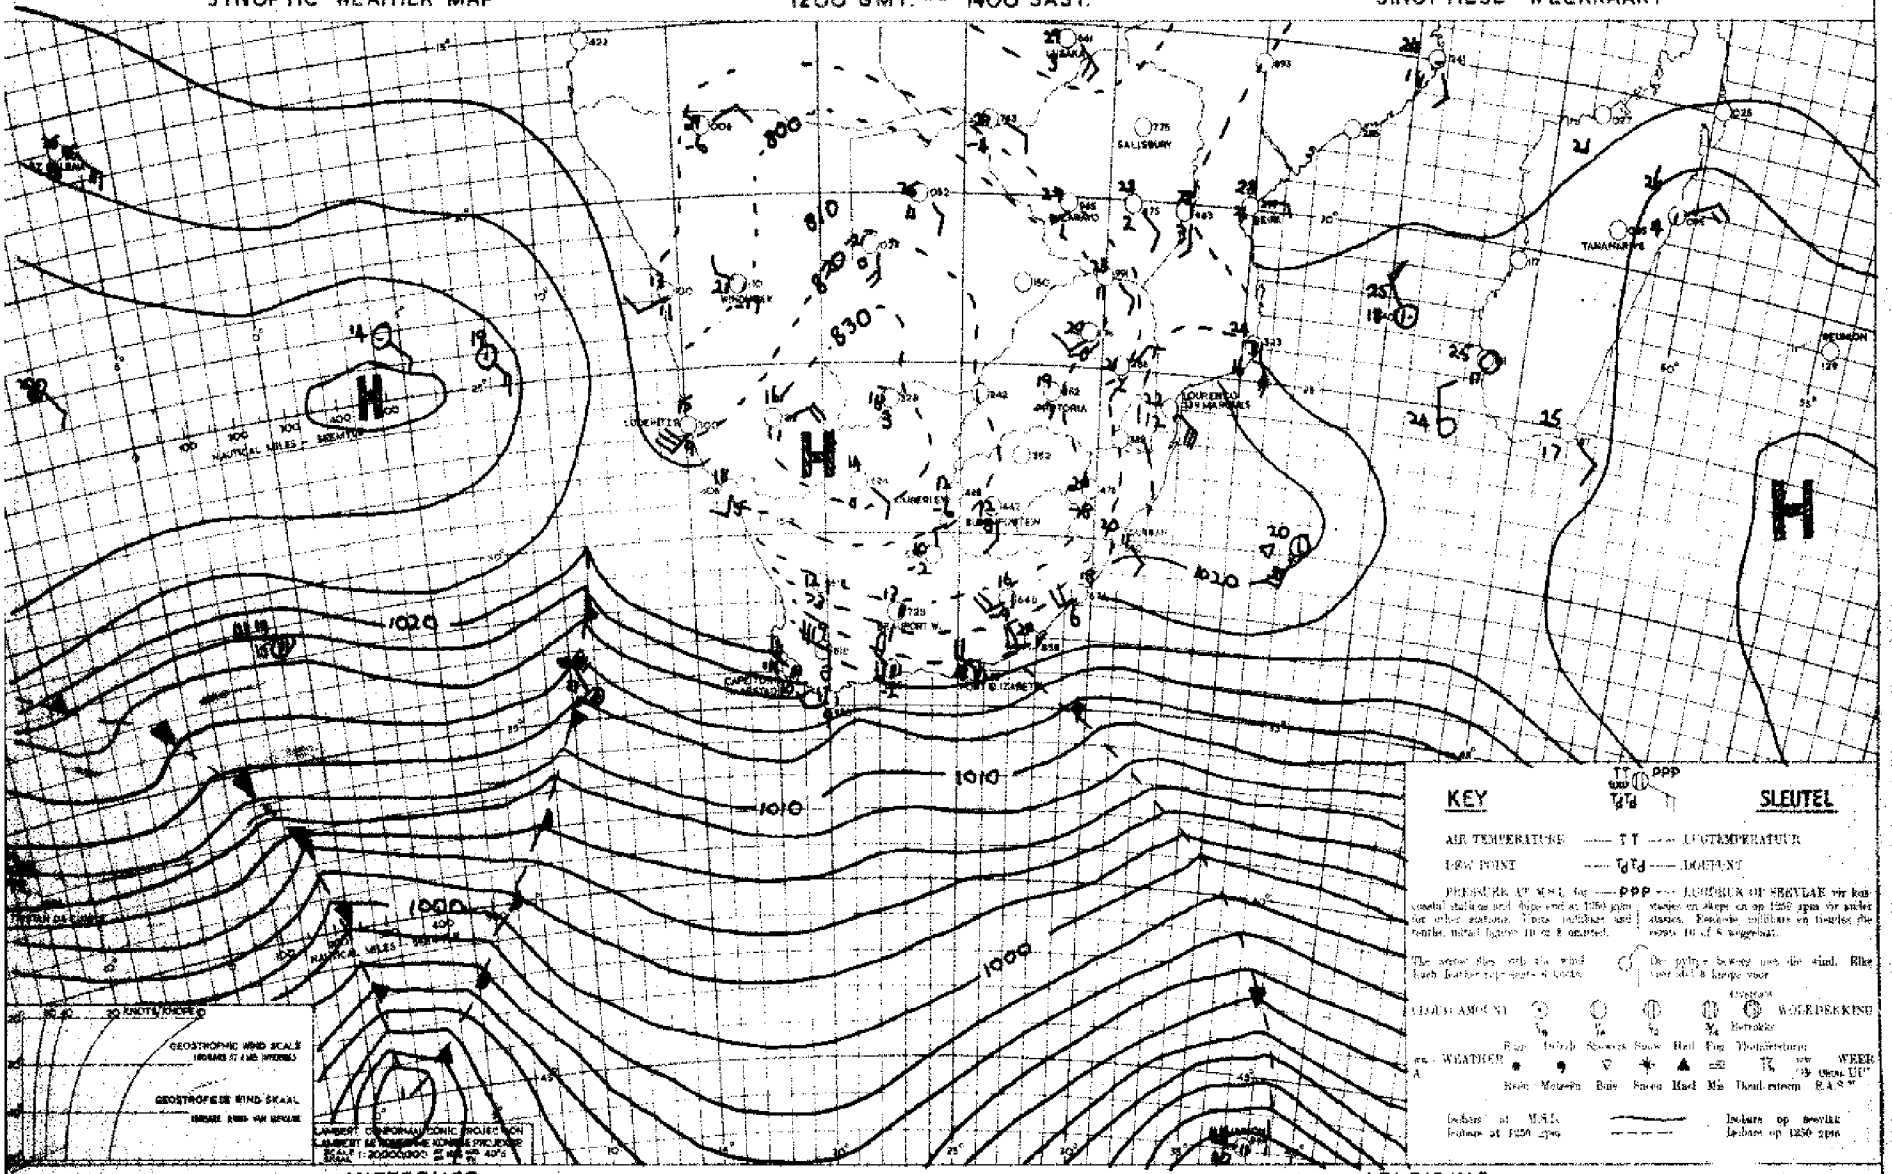
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



An extensive low pressure system SW of the Union is moving fairly rapidly eastwards, and will cause fresh to strong NW-ly winds over the SW Cape, with low clouds and rain over the coastal region and adjacent escarpment. There is, however, little indication that cold air west of the depression will move NEwards to the northern half of the Union.

'n Uitgebreide laedruk stelsel SW van die Unie beweeg taamlik vinnig O-waarts, en sal sterk NW-like wind oor SW Kaapland veroorsaak, met lae wolke en reën oor die kusstreke en aangrensende binneland. Daar is egter min aanduiding dat koue lug wes van die sisteem NO-waarts sal beweeg en die N-like helfte van die Unie bereik nie.

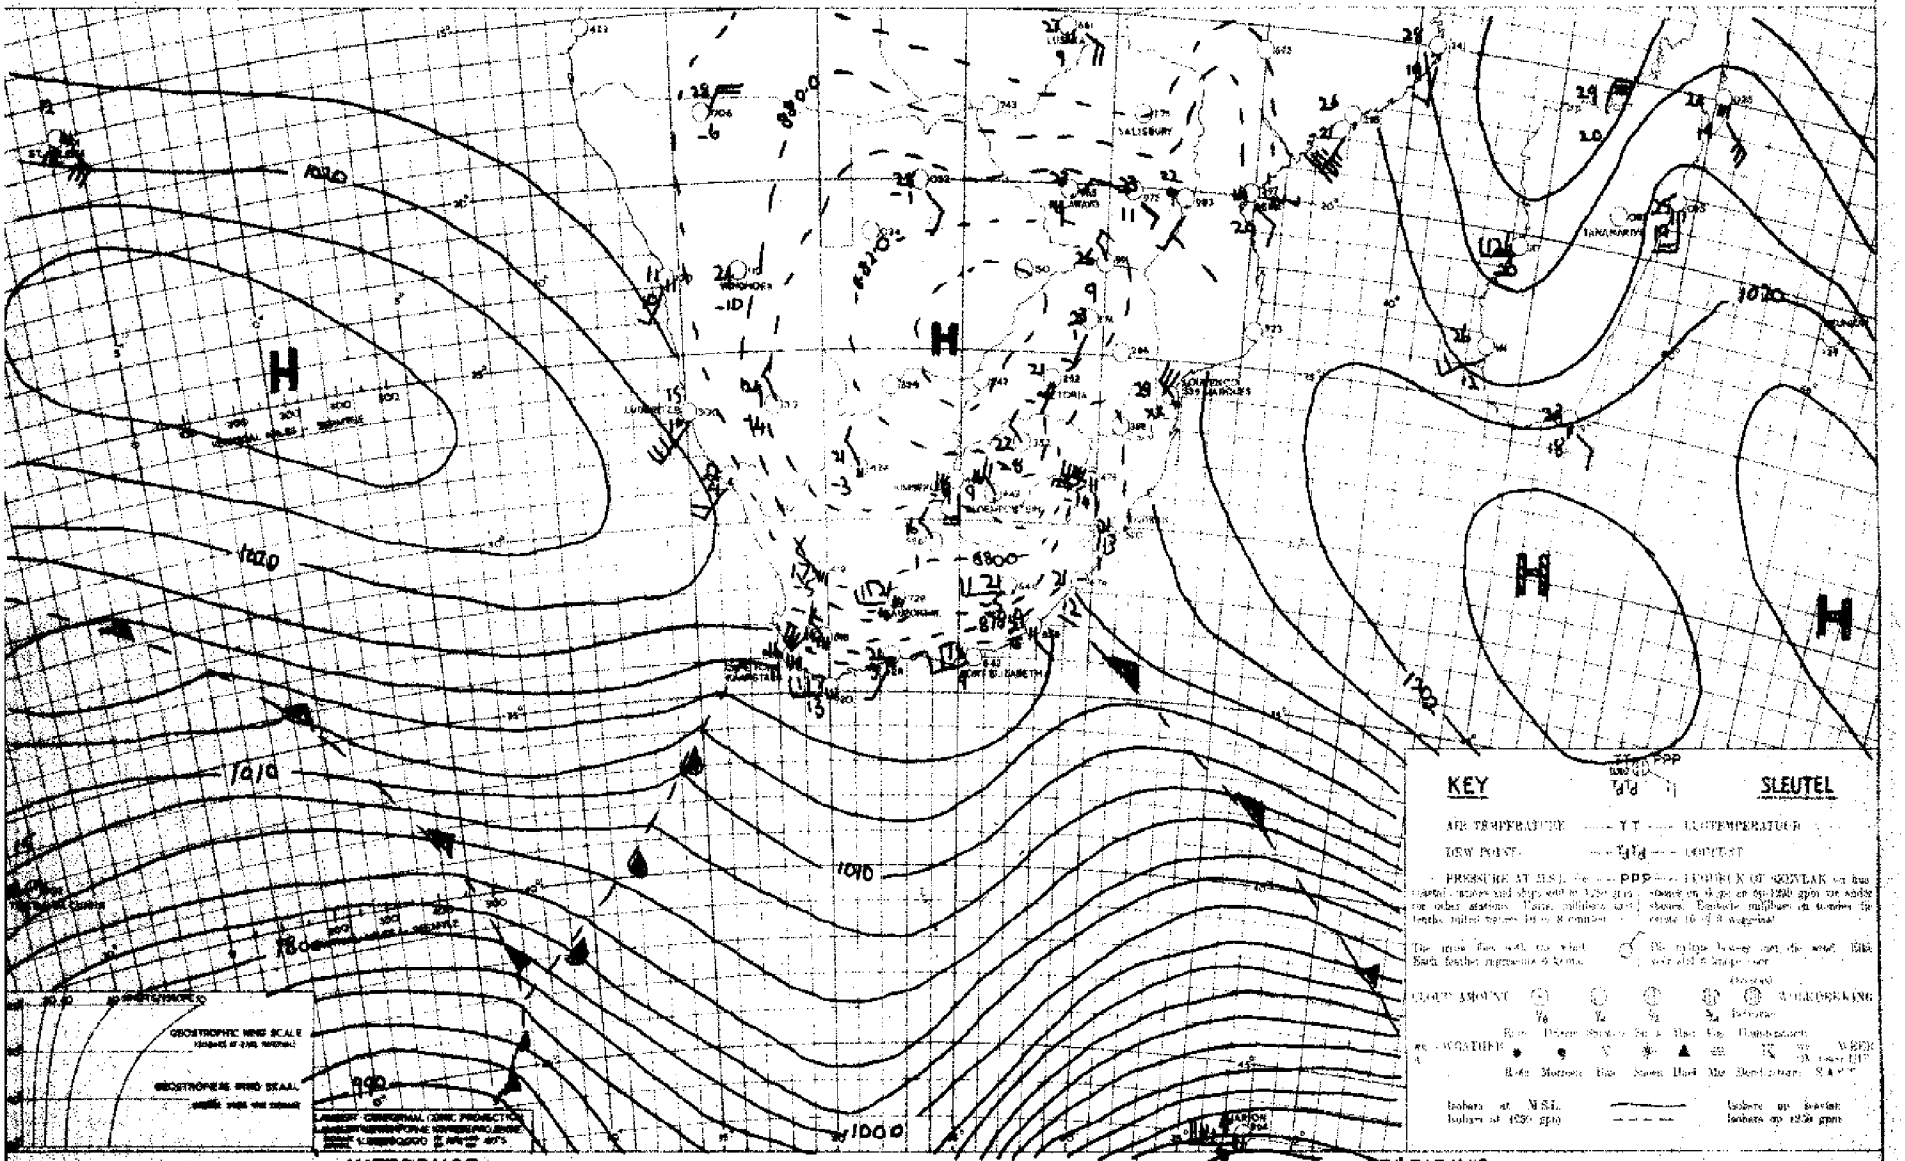
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 5 — 6 1964 DATUM AFLEIDING

Dry anticyclonic air circulation controls the weather over the Union. Apart from the southwest Cape coast where moist Atlantic air causes cloudy weather, it was fine over the Union. Over most districts above normal temperatures were recorded.

Droë antisikloniese lug sirkulasie beheer die weer oor die Unie. Met uitsondering van die suidwes kus van Kaapland waar vogtige Atlantiese lug bewolkte toestande veroorsaak, was dit mooiweer oor die Unie. Oor meeste distrikte is be normale temperature aangeteken.

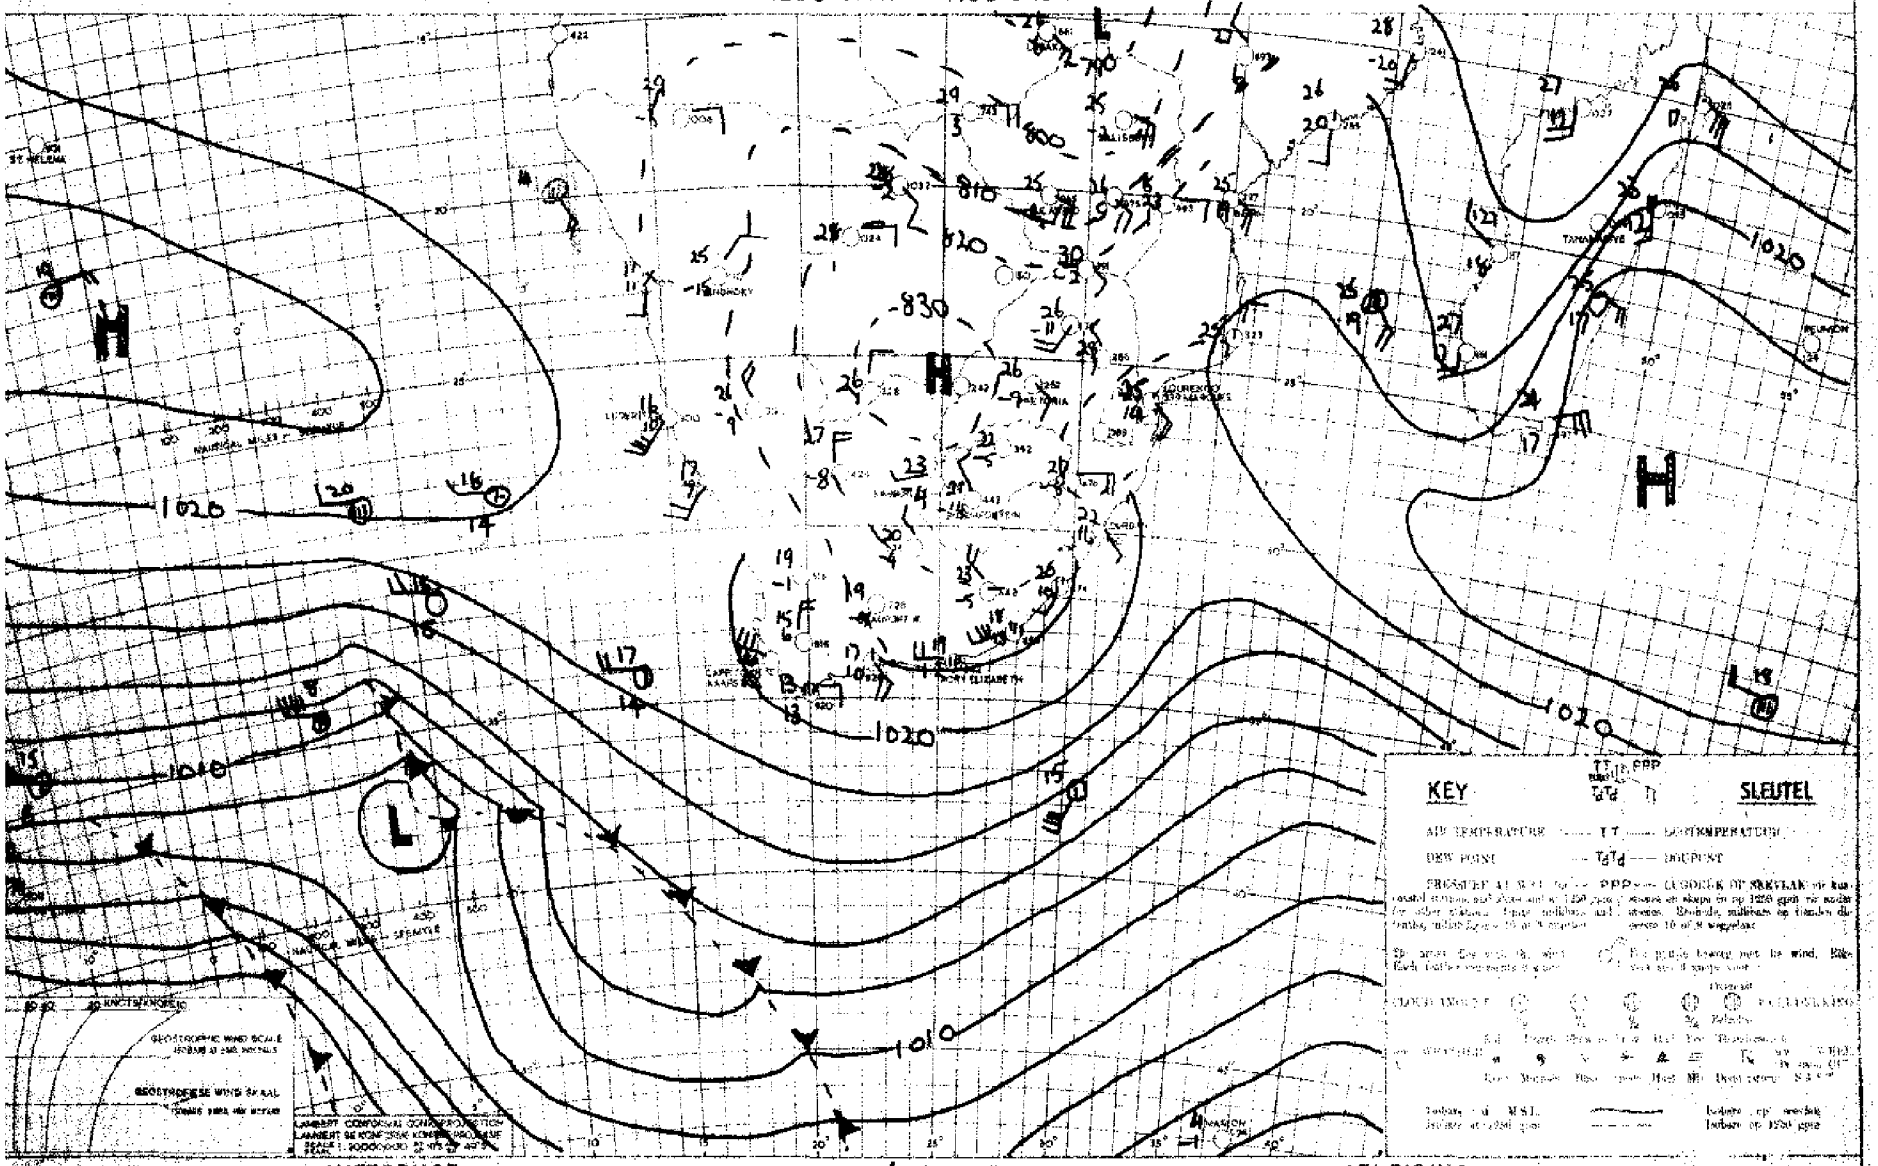
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 6-8 1954 DATUM AFLEIDING

With the dry air in circulation in the upper air as well as on the surface over the Union, and no apparent system between the Cape and Tristan likely to disturb it, no changes in weather conditions are expected.

Met die droë lug in sirkulasie beide in die belug en op die oppervlakte oor die Unie, en geen skynbare sisteem tussen die Kaap en Tristan wat dit kan versteur nie, word geen verandering in weerstoestande verwag nie.

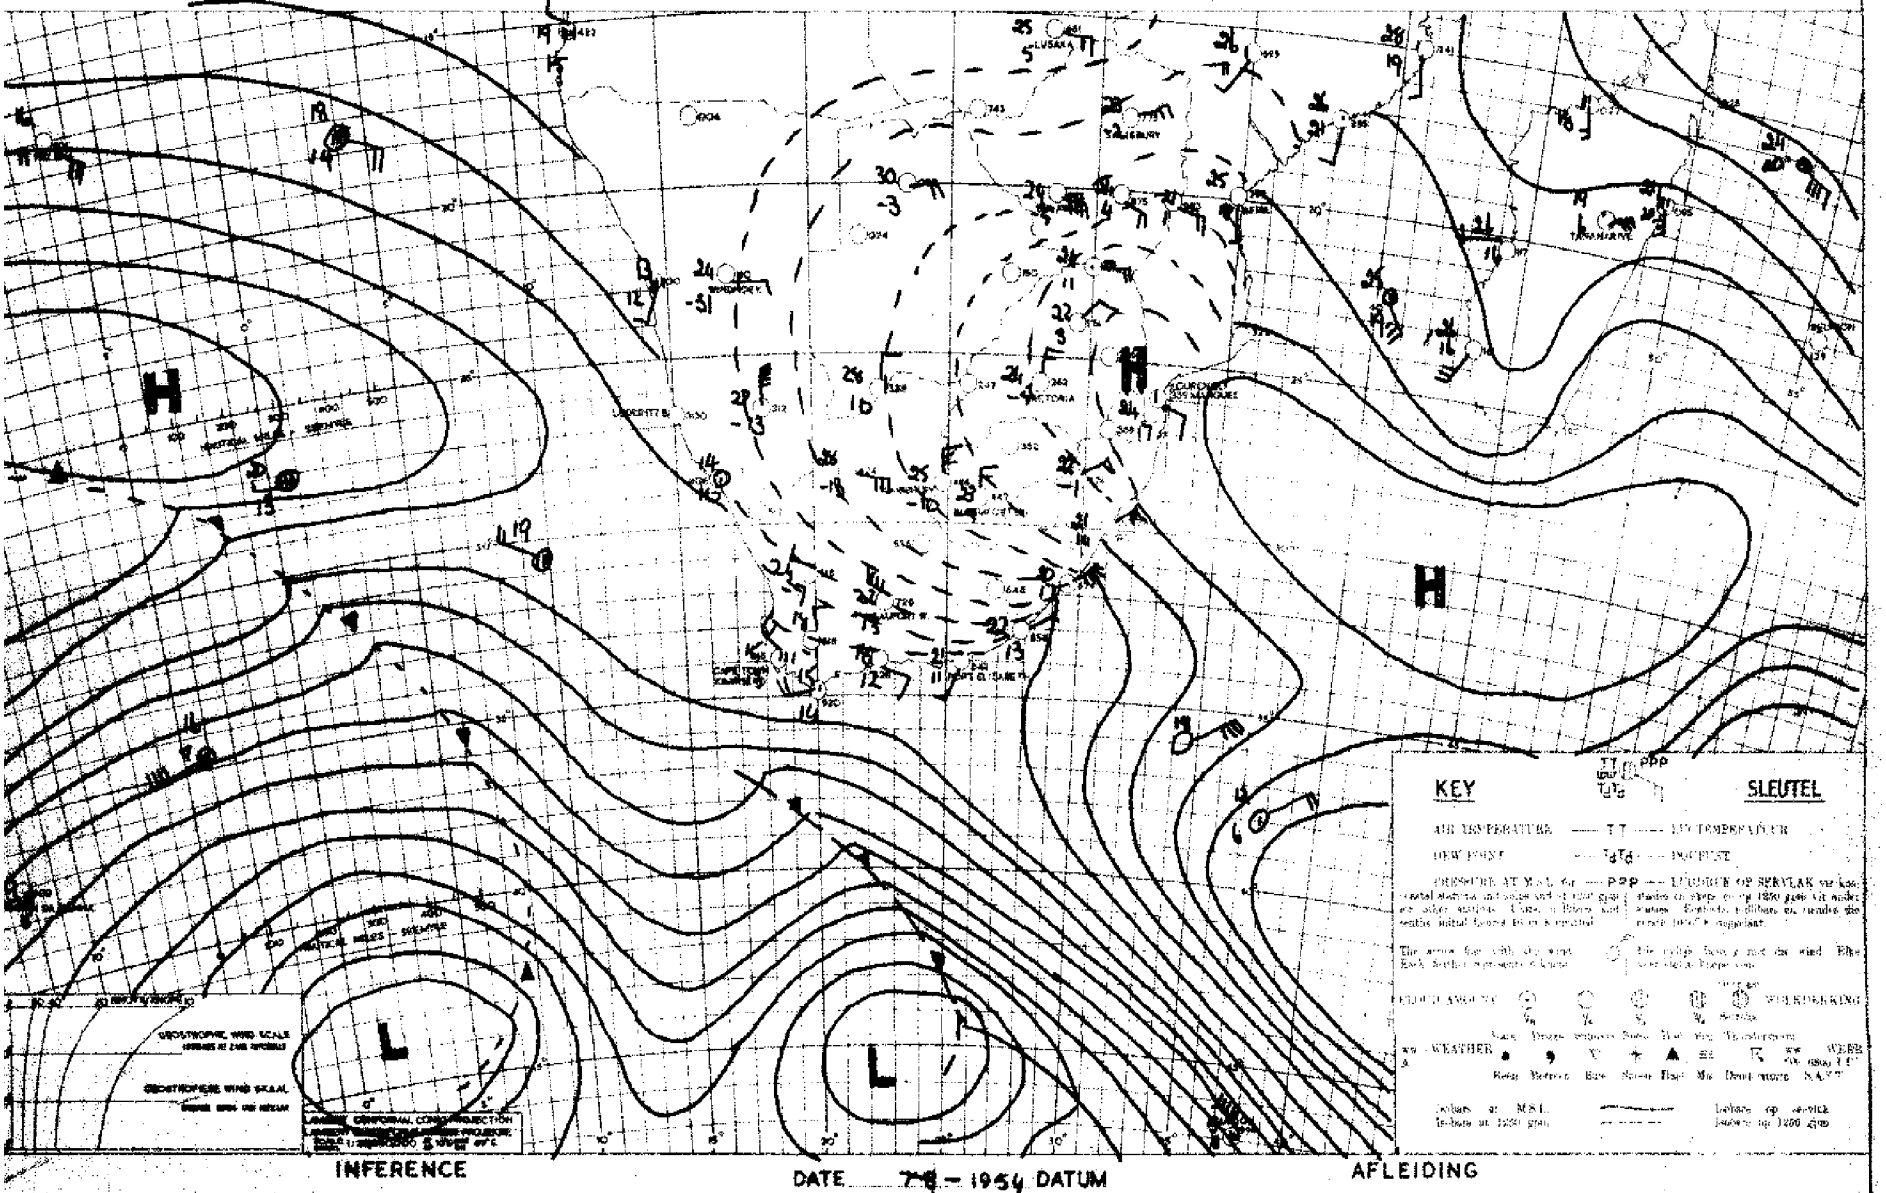
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 7-8 — 1954 DATUM AFLEIDING

Apart from some scattered cloud along the southwest coast, fine dry weather prevailed throughout the Union. Pressure falls southwest and southeast of the Union caused freshening winds over the western and southwestern interior and along the Natal coast.

Met uitsondering van verspreide wolke langs die suidwestelike kus, het droë mooiweerstoestande oor die Unie geheers. Lugdrukdalings langs die suidwes en suidoos kus het taamlik sterke winde oor die westelike en suidwestelike binneland en die kus van Natal veroorsaak.

The trough which has passed Tristan during the last 24 hours will cause strong NW-ly wind over the SW Cape Province, with unsettled weather on the coast, and may be followed by colder air over the southern half of the Union.

Die trog wat gedurende die afgelope 24 uur Tristan verbygesteek het, sal sterk NW-like wind oor die SW-like Kaapprovinsie veroorsaak, met ongestadige weer langs die kus, en dit mag gevolg word deur koue lug oor die suidelike helfte van die Unie.

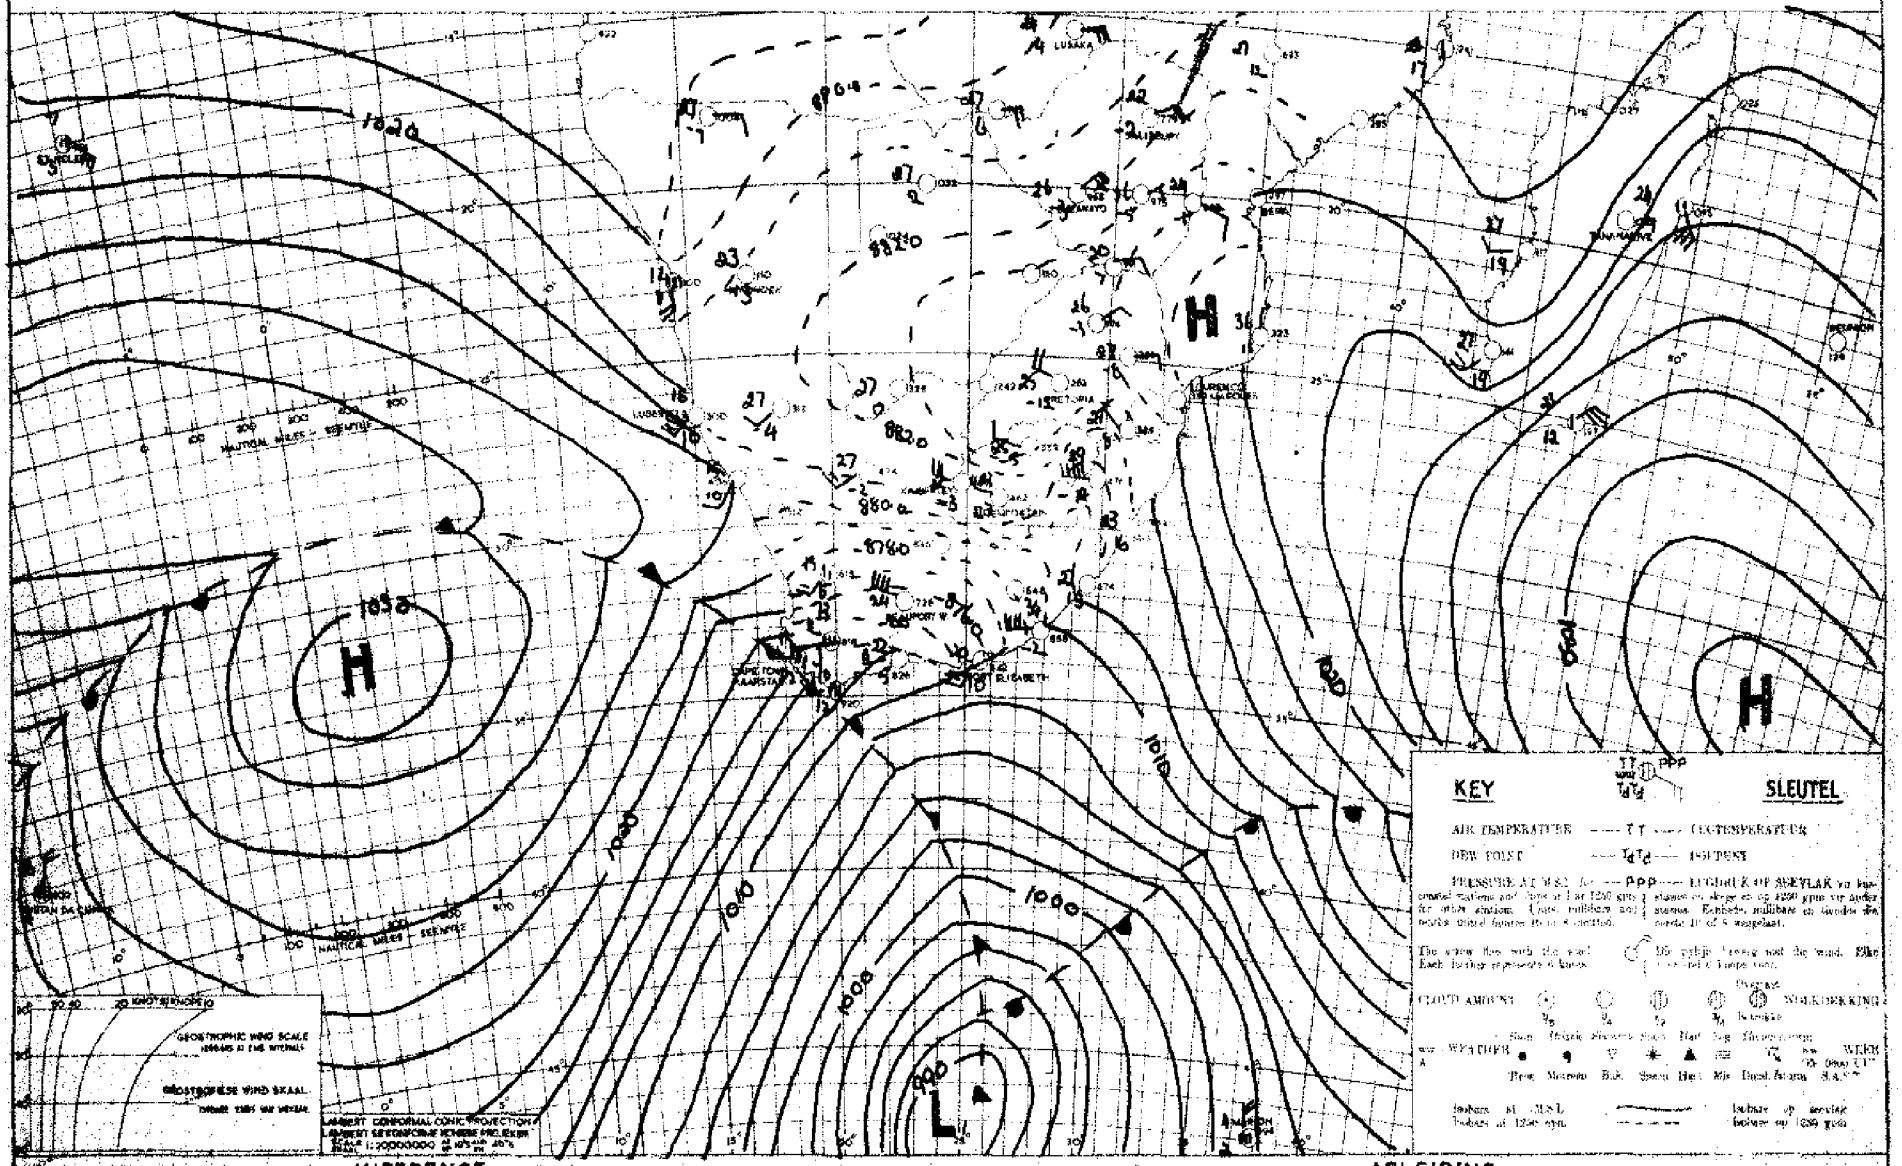
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 8 1954 DATUM AFLEIDING

Cooler Atlantic air is flooding the southwestern Cape and is followed up by cold air behind the cold front, which at present is just west of the Cape. Cloudy skies with local showers will occur over the southwestern and southern coastal region, but it will clear after the passage of the cold front. Cooler conditions will be experienced as far as the Northern Cape, the Southern half of the O.F.S. and Southern Natal. Elsewhere it will remain fine and warm.

Koeler Atlantiese lug beïnvloed die suidwestelike Kaap Provinsie en word gevolg deur koue lug agter 'n koue front wat op die oomblik net wes van die Kaap lê. Bewolkte, buierige weer sal oor die suidwestelike en suidelike kuststreke van Kaapland voorkom waar opklaring sal plaasvind nadat die koue front verby getrek het. Koeler toestande sal tot sover as Noord Kaapland, suidelike Vrystaat en suid Natal ondervind word. Elders sal dit mooiweer en warm bly.

The low pressure system which passed Marion Island early this morning has caused a rapid influx of colder air over the Cape Province and the SW half of the O.F.S. It is probable, however, that with further rapid movement of the system, this influx will cease fairly soon.

Die laedrukstelsel wat vroeg vanoggend Marion Eiland verbybeweeg het, het kouer lug oor die Kaap Provinsie en SW-like helfte van O.V.S. vinnig laat instroom. Dit is egter waarskynlik dat weens verdere vinnige beweging van die sisteem, hierdie instroming taamlik gou tot stilstand gebring sal word.

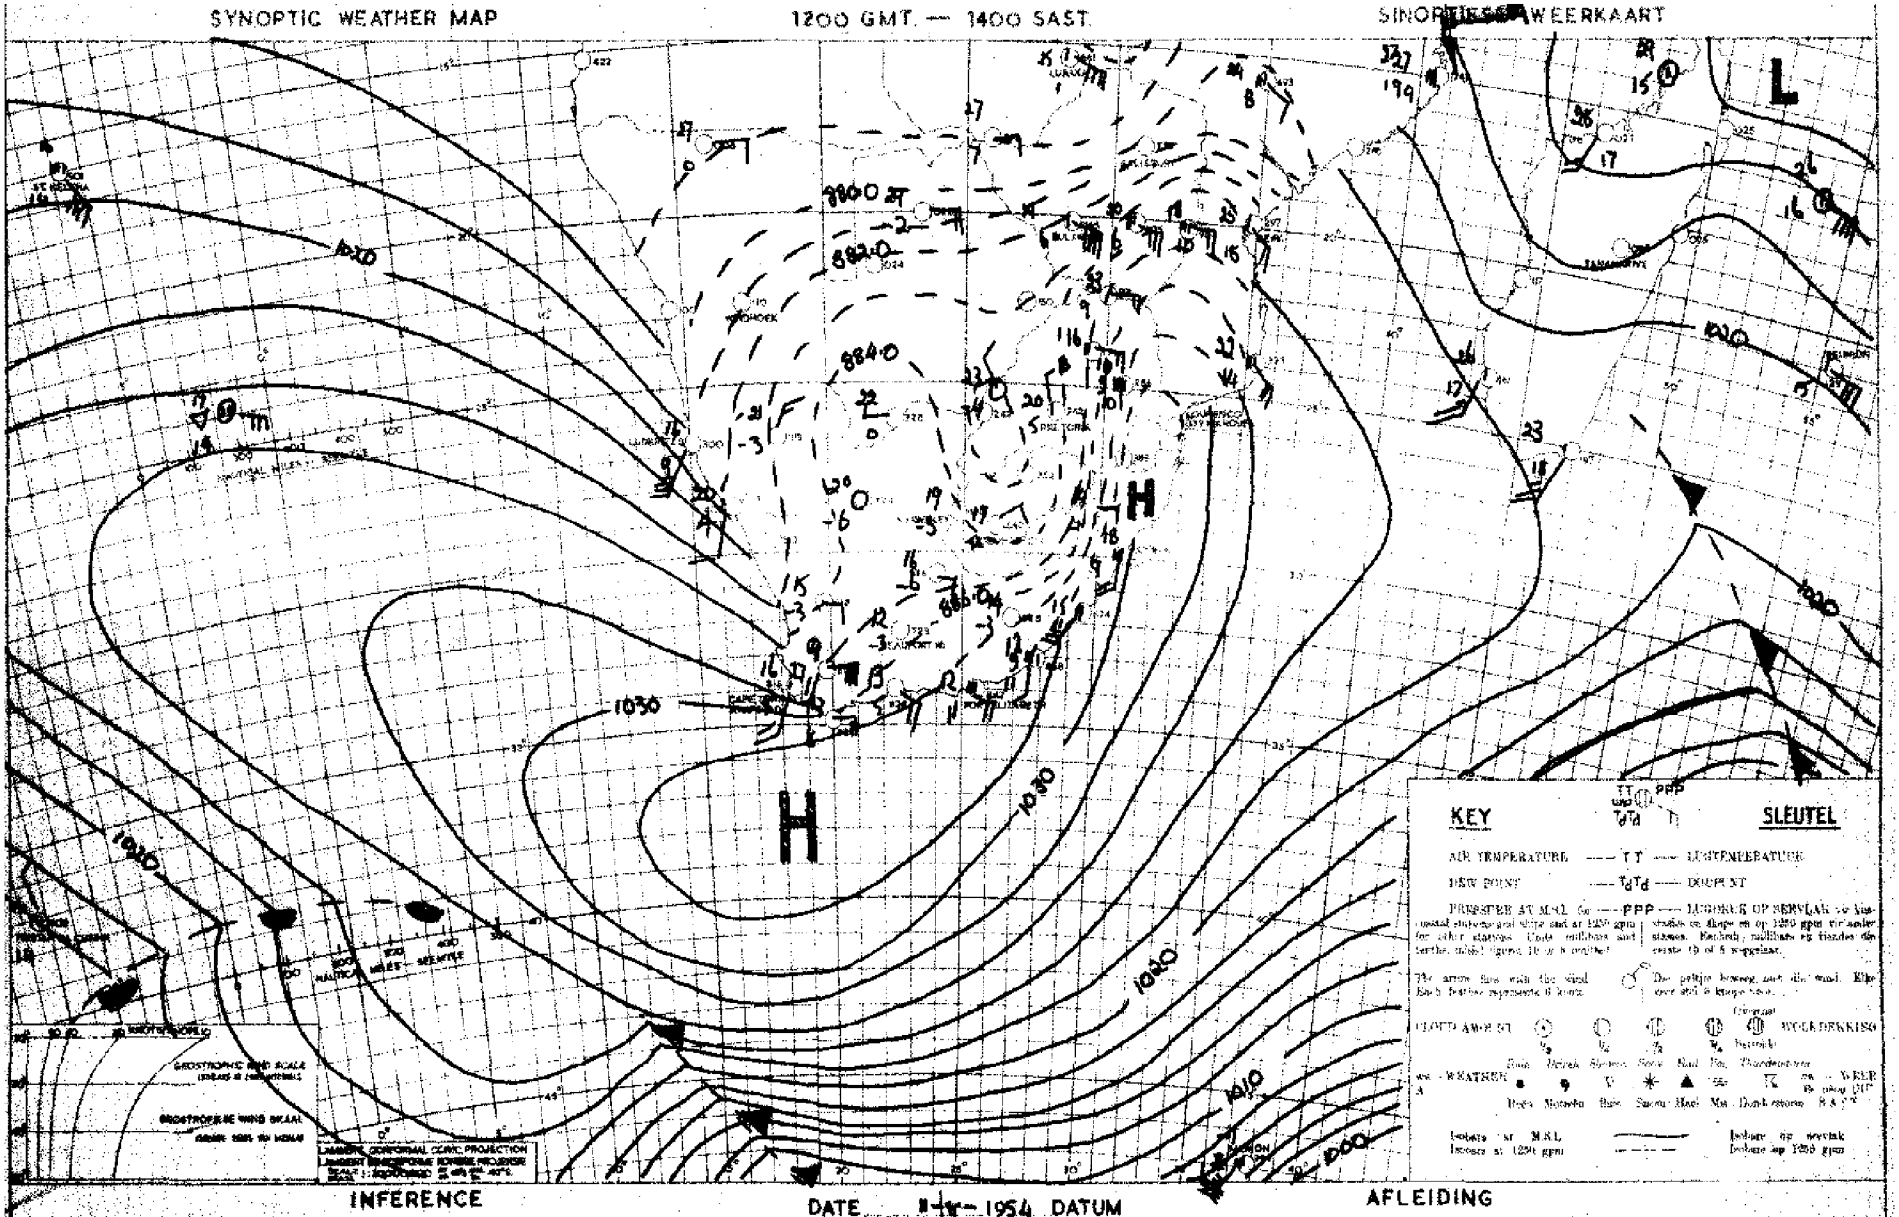
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST SINOPTIESE WEERKAART



With the gradual displacement of the Atlantic anticyclone, cool moist is flooding Natal and Transvaal and will gradually recurve into the Free State. The weather will be cloudy over Natal, Transvaal and northeastern O.F.S. orographic rain will occur along the Pondoland and Natal coast. Elsewhere over the Union it will remain fine with mild temperatures.

Met die geleidelike ooswaartse beweging van die Atlantiese Antisikloon word koeler en natter lug oor koeler lug oor Natal en Transvaal ingevoer en sal geleidelik suidwaarts oor die Vrystaat beweeg. Bewolkte weer sal oor Natal, Transvaal en Noordoos Vrystaat voorkom. Orografiese reën sal langs die kuststreke van Pondoland en Natal uitsak. Elders oor die Unie mooiweer met middelmatige temperature.

INFERENCE

A trough which is developing rapidly along the West coast, is splitting the big anticyclone around the Union coasts into two parts. The result of this will be that the eastern part of the anticyclone, which is responsible for the moist air over the eastern part of the Union, will be driven off eastwards, and its effect on the Union considerably diminished.

DATE 12-4-49 DATUM

AFLEIDING

'n Trog wat langs die Weskus vinnig ontwikkel is besig om die groot antisikloon rondom die Unie se kuste in twee dele te deel. As gevolg hiervan sal die O-like deel van die antisikloon, wat vir die vogtige lug oor die O-like deel van die Unie verantwoordelik is, verder O-waarts weggedryf word, en sal sy uitwerking op die Unie aansienlik verswak word.

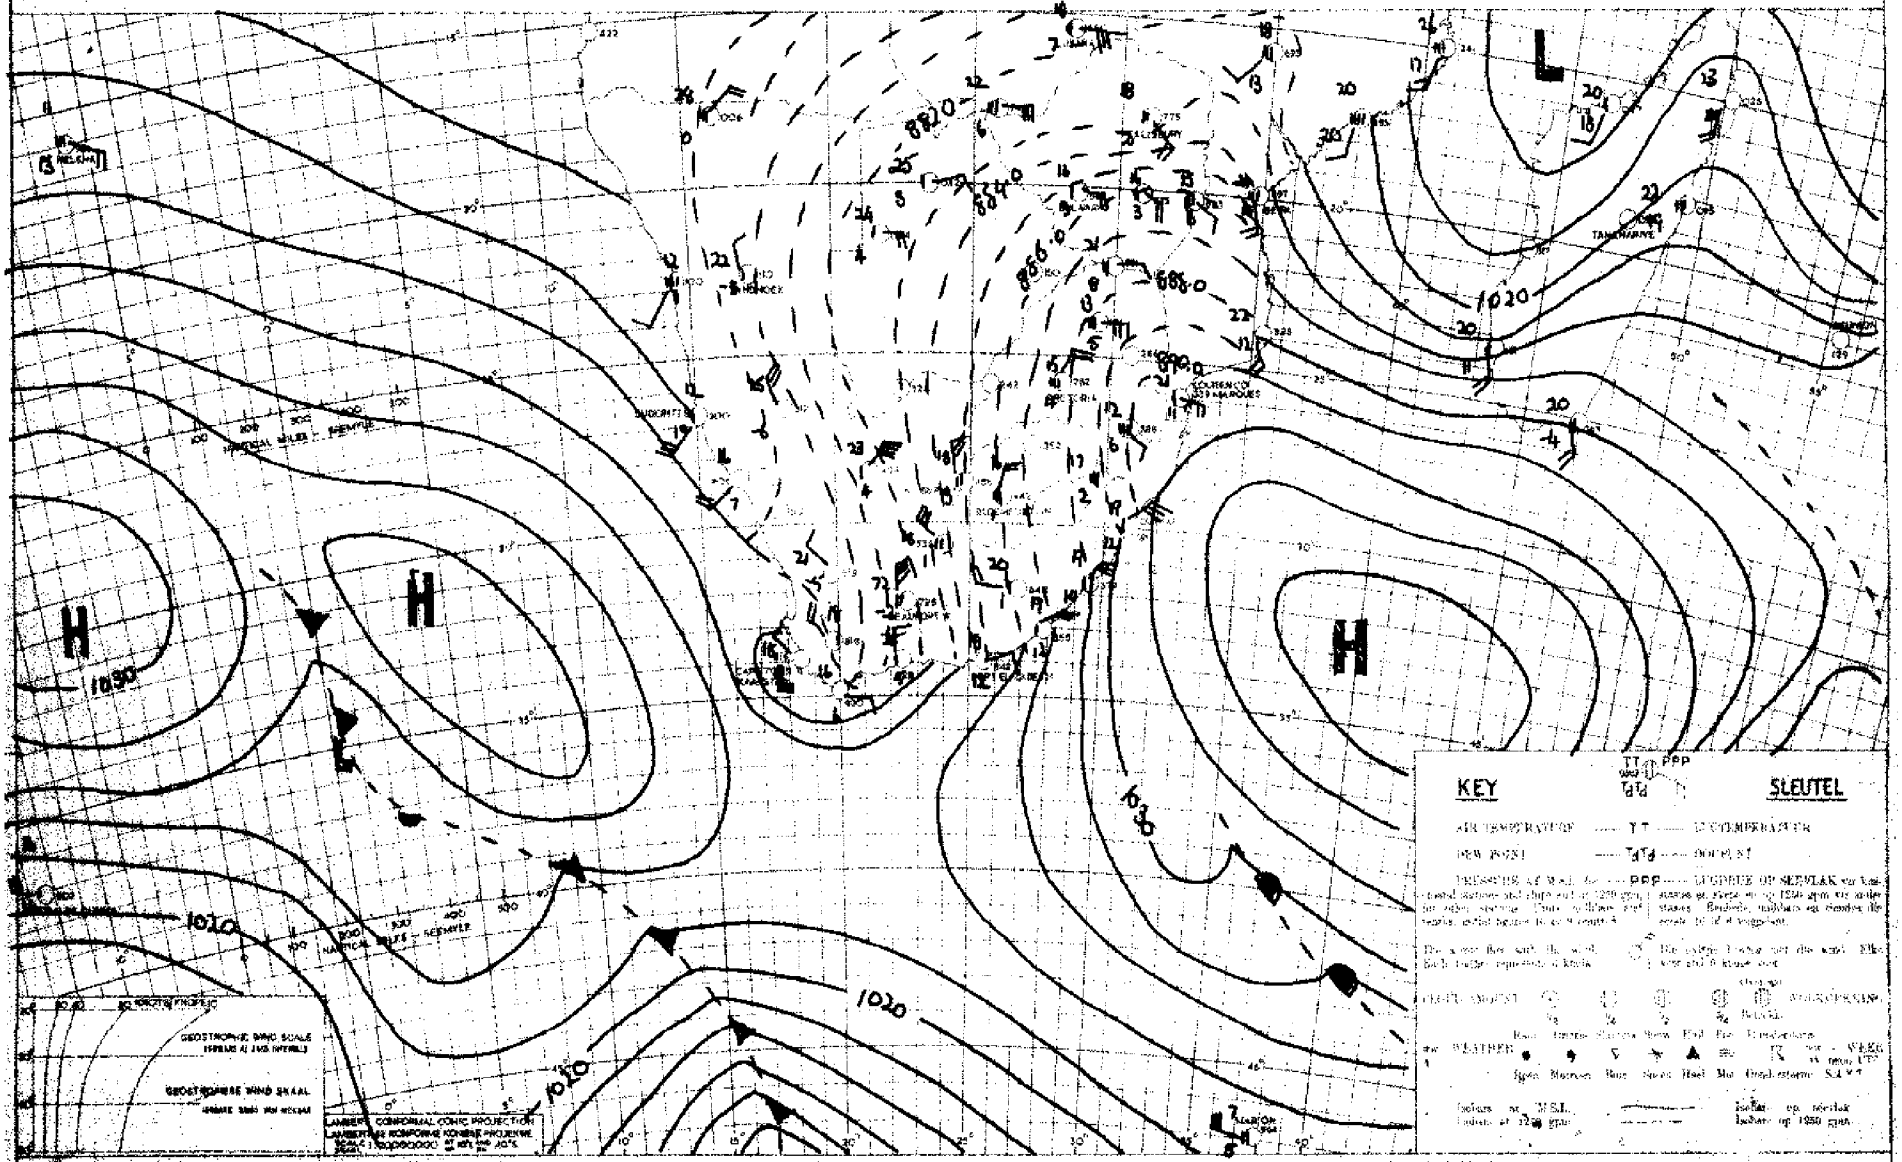
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 13-6-1954 DATUM AFLEIDING

A Stream cool moist air moved in a southerly direction between the Indian Ocean high and the pressure region of the West Coast. Apart from the western and southwestern Union, cloudy weather occurred over all areas. Due to the influx of somewhat drier air from the northeast and north a gradual clearance will take place. Winds over the interior will back and moderate.

'n Stroom koel vogtige lug het suidwaarts oor die Unie tussen die Indiese Oseaan hoogdruk gebied en die laagdruk gebied van van die wes kus beweeg. Behalwe vir die westelike Suidweste Unie het bewolkte toestande orals voorgekom. Weens invoering van ietwat droër lug oor die noordoostelike en noordelike Unie sal geleidelike opklaring plaasvind. Oor die binneland sal winde krimp en verswak.

INFERENCE

DATE 14-8-1964 DATUM

There is a depression south of the Union, but it appears that any wind changes which it is going to cause over the Union will be shallow, and will only affect the coastal regions.

AFLEIDING

Daar is 'n depressie suid van die Unie, maar dit lyk asof enige lugstroom-veranderings wat hy gaan veroorsaak oppervlakkig sal wees, en net die kusstreke sal raak.

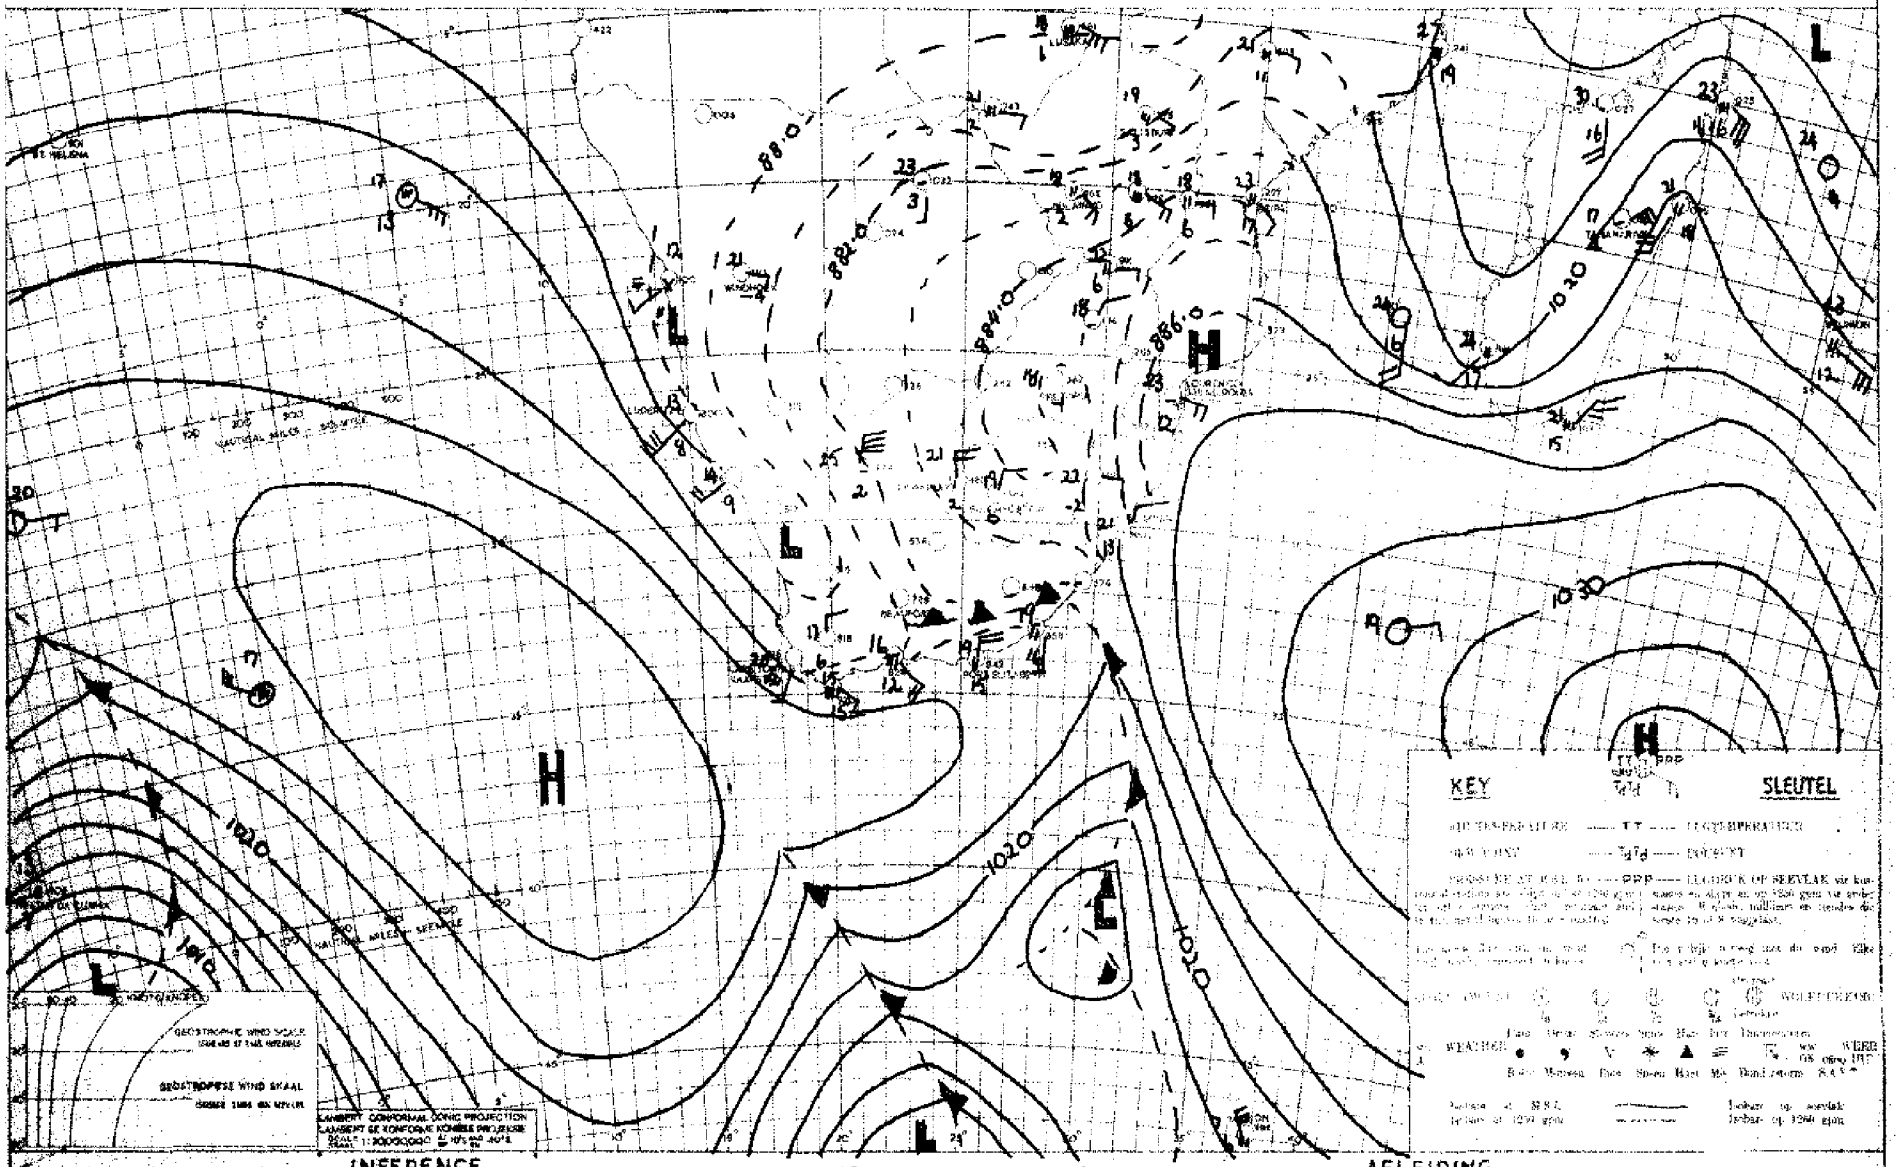
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 15-8-1954 DATUM AFLEIDING

The Cape west and south coast is influenced by a shallow inflow of moist Atlantic air from the southwest and cloudy misty weather occurred along these coastal regions. The air circulation over the remainder of the Union is however dominated by the Indian Ocean Anticyclone and apart from some local cloud patches over the Northeastern Transvaal, fine weather prevailed. Little change is expected during the forthcoming period.

'n Dun laag Atlantiese seelug affekteer die suid en weskus van Kaapland en bewolkte en mistige weerstoestande kom voor oor die streke. Die lugstroming oor die res van die Unie word beheer deur die Indiese Oseaan Antisikloon en met uitsondering van 'n paar wolke oor noordoos Transvaal het mooiweerstoestande oor hierdie streke voorgekom. Min verandering word gedurende die volgende tydperk verwag.

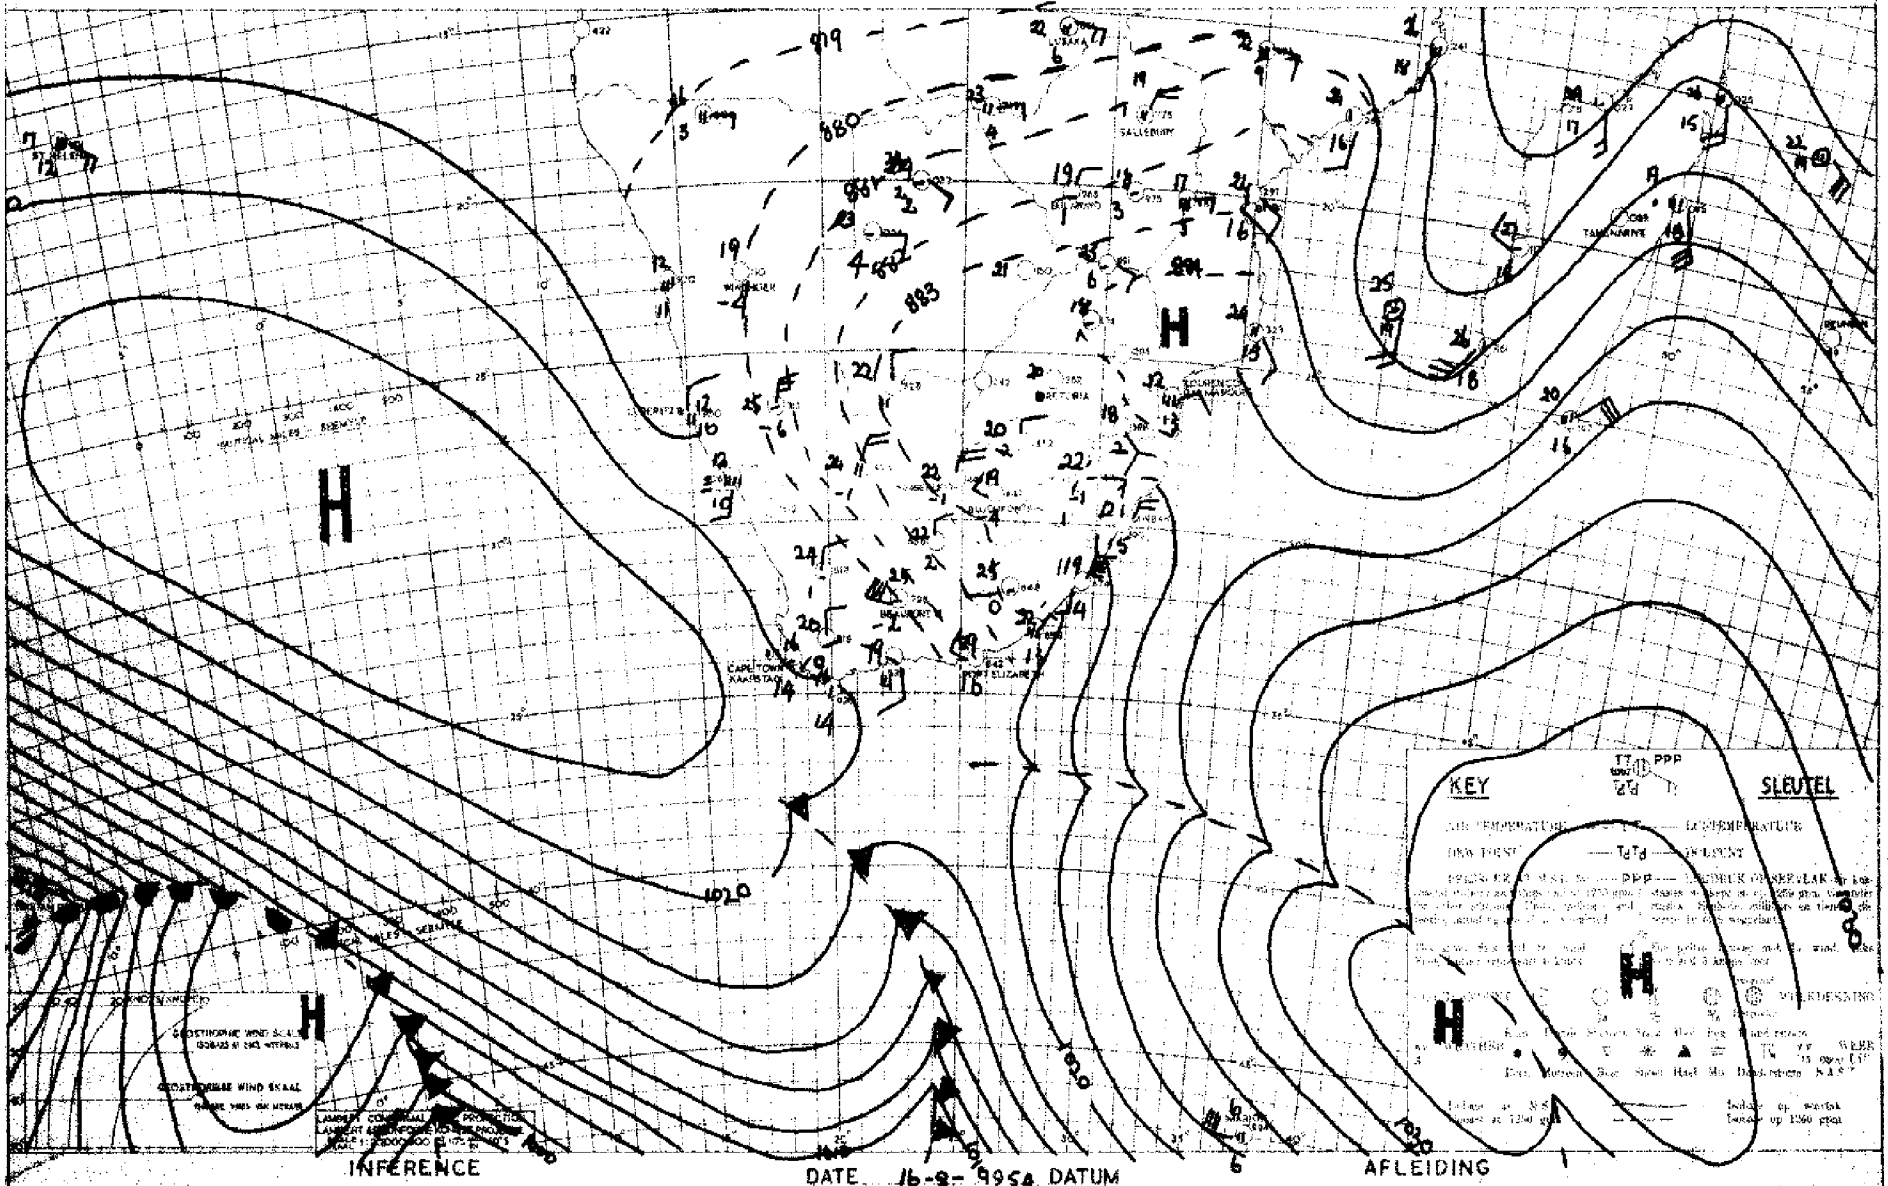
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



The low pressure at Tristan shows that the depression there is centred somewhat further north than is usual. On the other hand the effect of the depression on the Union will depend upon the directions of its movement, which is not yet clear from these maps.

Die lae druk by Tristan dui aan dat die laedruk sisteem aldaar ietwat verder noord as gewoonlik is. Die moontlike effek van hierdie sisteem op die Unie hang egter af van die rigting waarin dit gaan beweeg, en op die oomblik is hierdie rigting van beweging nog nie duidelik vanaf hierdie kaarte nie.

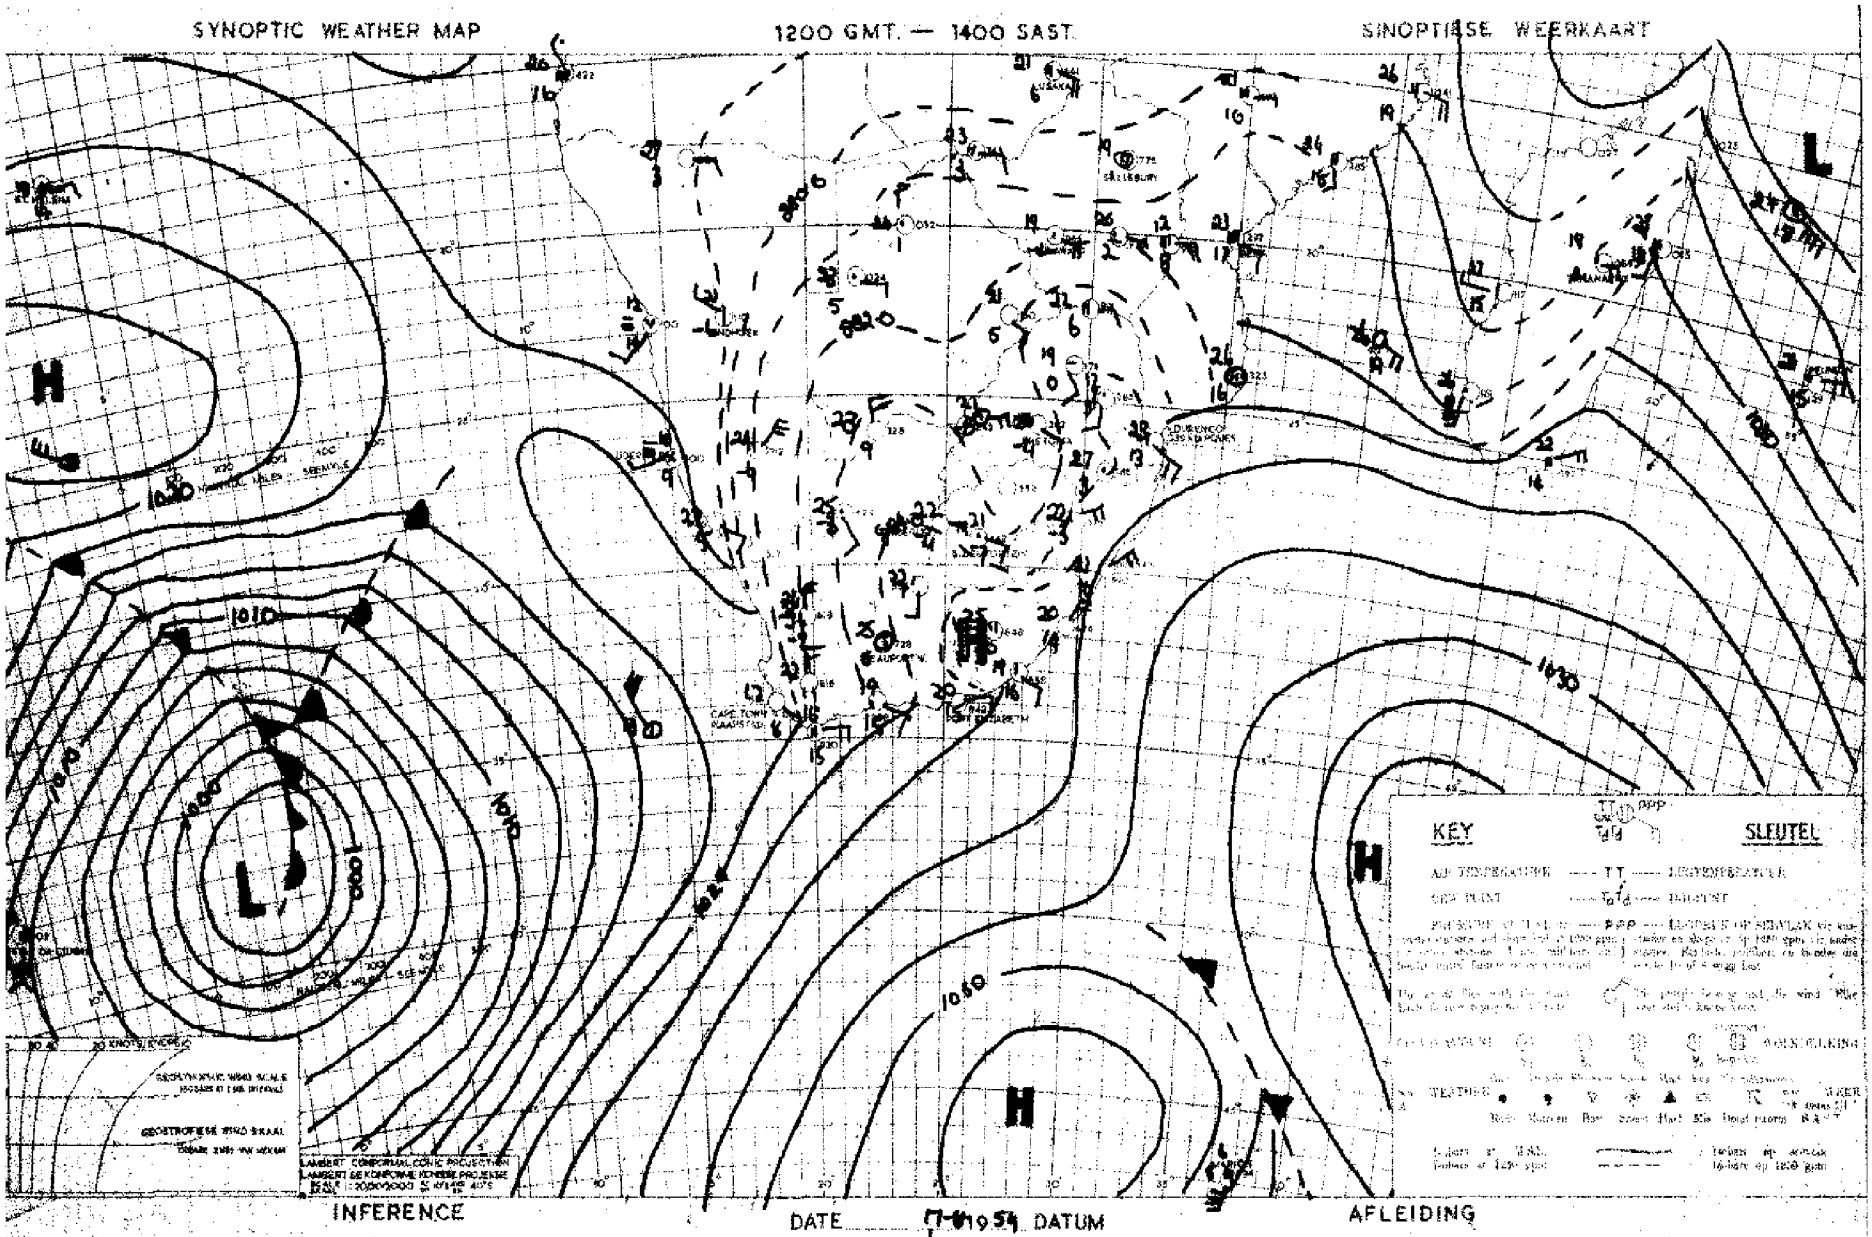
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST SINOPTIESE WEERKAART



INFERENCE DATE 7-6-1954 DATUM AFLEIDING

The Indian Ocean Anticyclone still dominates the air circulation over the Union. There is an influx of moister air over the Eastern Transvaal and Natal. And partly cloudy weather will occur over these areas. A strong disturbance between Tristan da Cunha and the southwestern continent will and the southwestern continent will begin to affect the Union

Die Indiese Oseaan Antisikloon beheer nog die lug-sirkulasie oor die Unie. Ietwat vogtige lug word oor Oos Transvaal en Natal ingevoer. Gedeeltelik bewolkte toestande sal oor hierdie streek plaasvind. 'n Sterk steuring tussen Tristan da Cunha en die suidwestelike kontinent sal teen môre sy invloed laat begin geld.

INFERENCE 14-6- 1954 DATE

The depression SW of the Union will cause rather stormy weather over the SW Cape Province, but it appears doubtful whether the cold air to west of it will be driven far northwards over the Union.

Die laedrukstelsel van AANTEKENING sal ietwat stormagtige weer oor die SW van Kaap Provinsie veroorsaak, maar dit is twyfelagtig dat die koue lug wes van die sisteem ver noordwaarts oor die Unie sal indring.

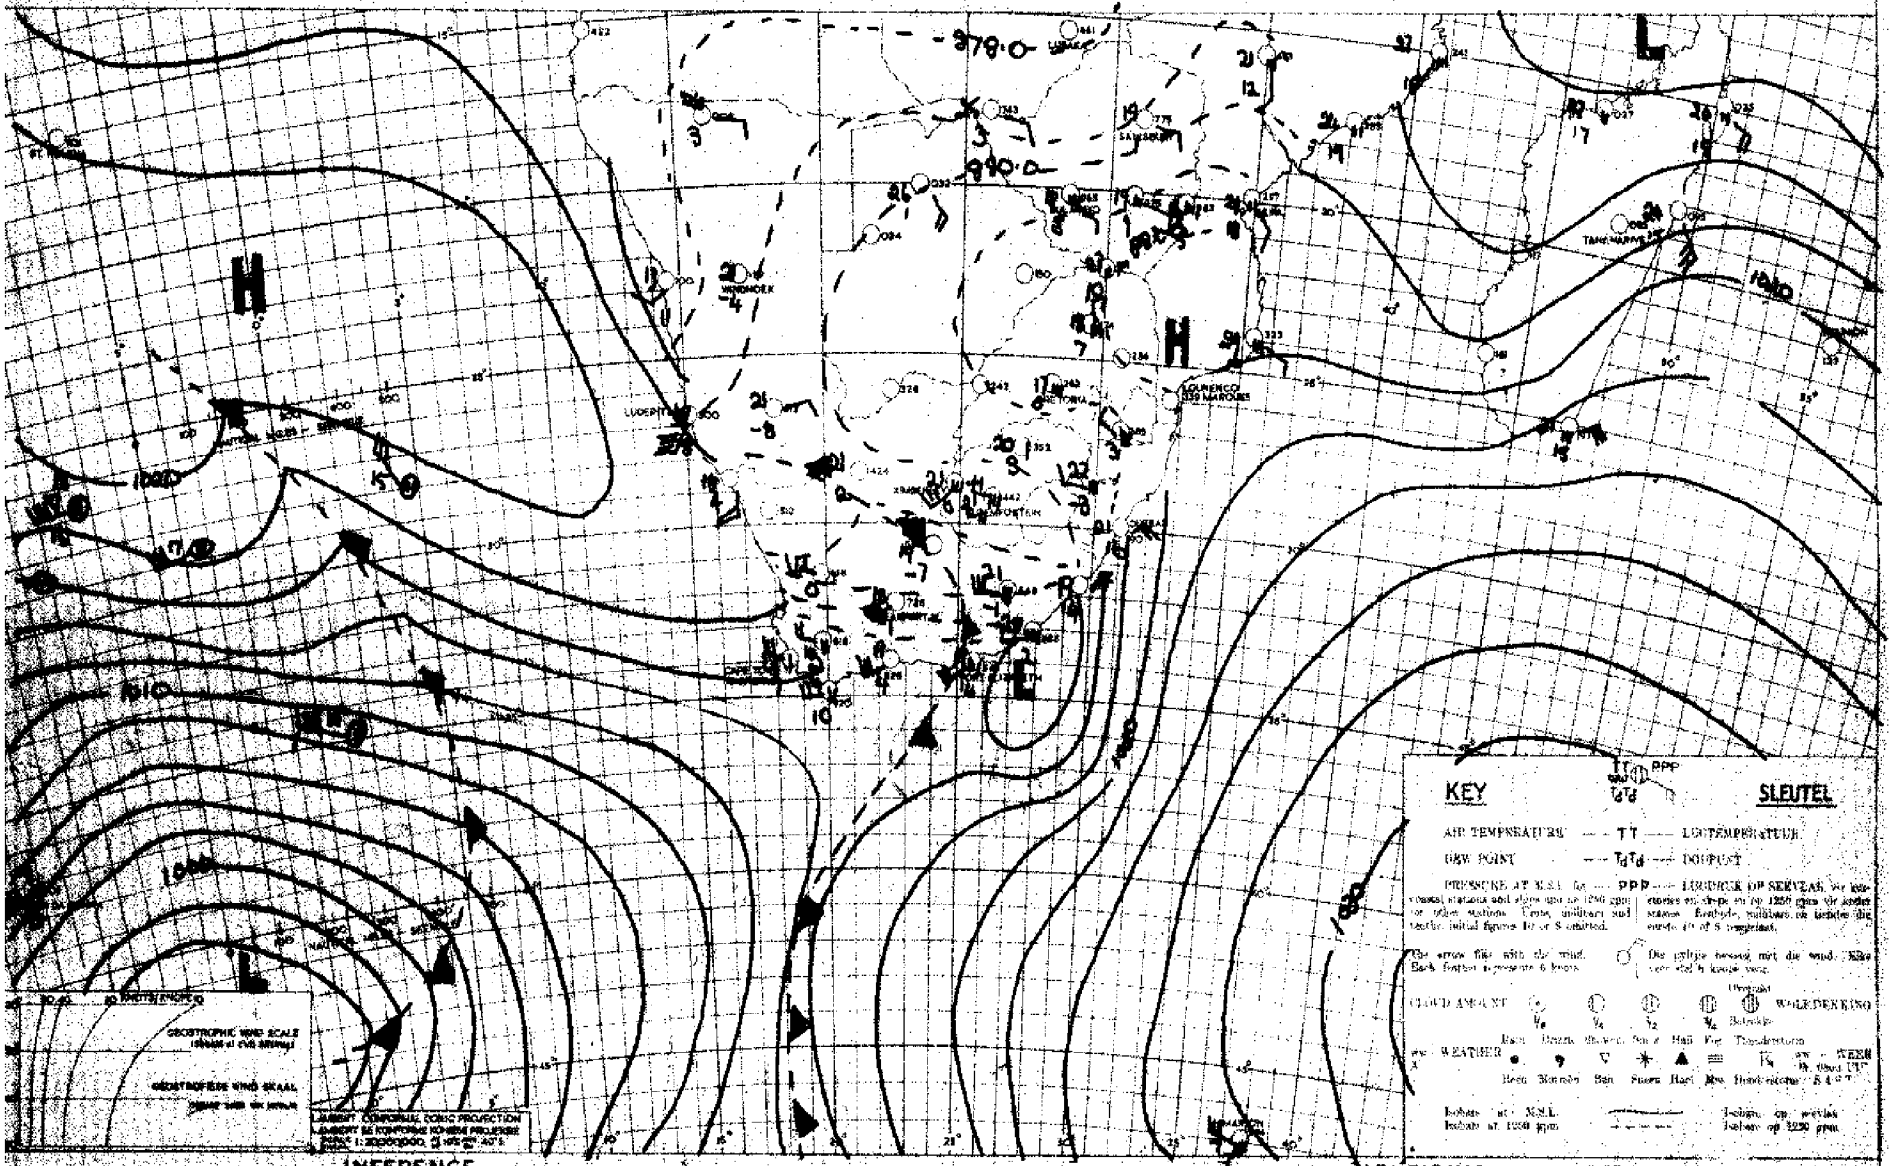
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST SINOPTIESE WEERKAART



INFERENCE

Cooler Atlantic air penetrated the southwesten half of the Cape Province but sharp pressure falls due to another cold front between Tristan and the Southwest Cape will prevent further penetration onland. It will clear generally and apart from unstable weather developing along the Cape southwest coast tomorrow afternoon, the weather will be fine generally.

DATE 14 - 9 - 1948 DATUM

AFLEIDING

Koeler Atlantiese lug het die Suidwestelike helfte van Kaapland binnegedring, maar sterk dalende drukneigings as gevolg van 'n ander aankomende koue front tussen Tristan en die Kaap sal verdere indringing verhoed. Die weer sal oor die algemeen opklaar en uitgesonderd van ongestadige weersontwikkeling môre-middag oor die suidwes Kaap, sal dit mooiweer wees oor die Unie.

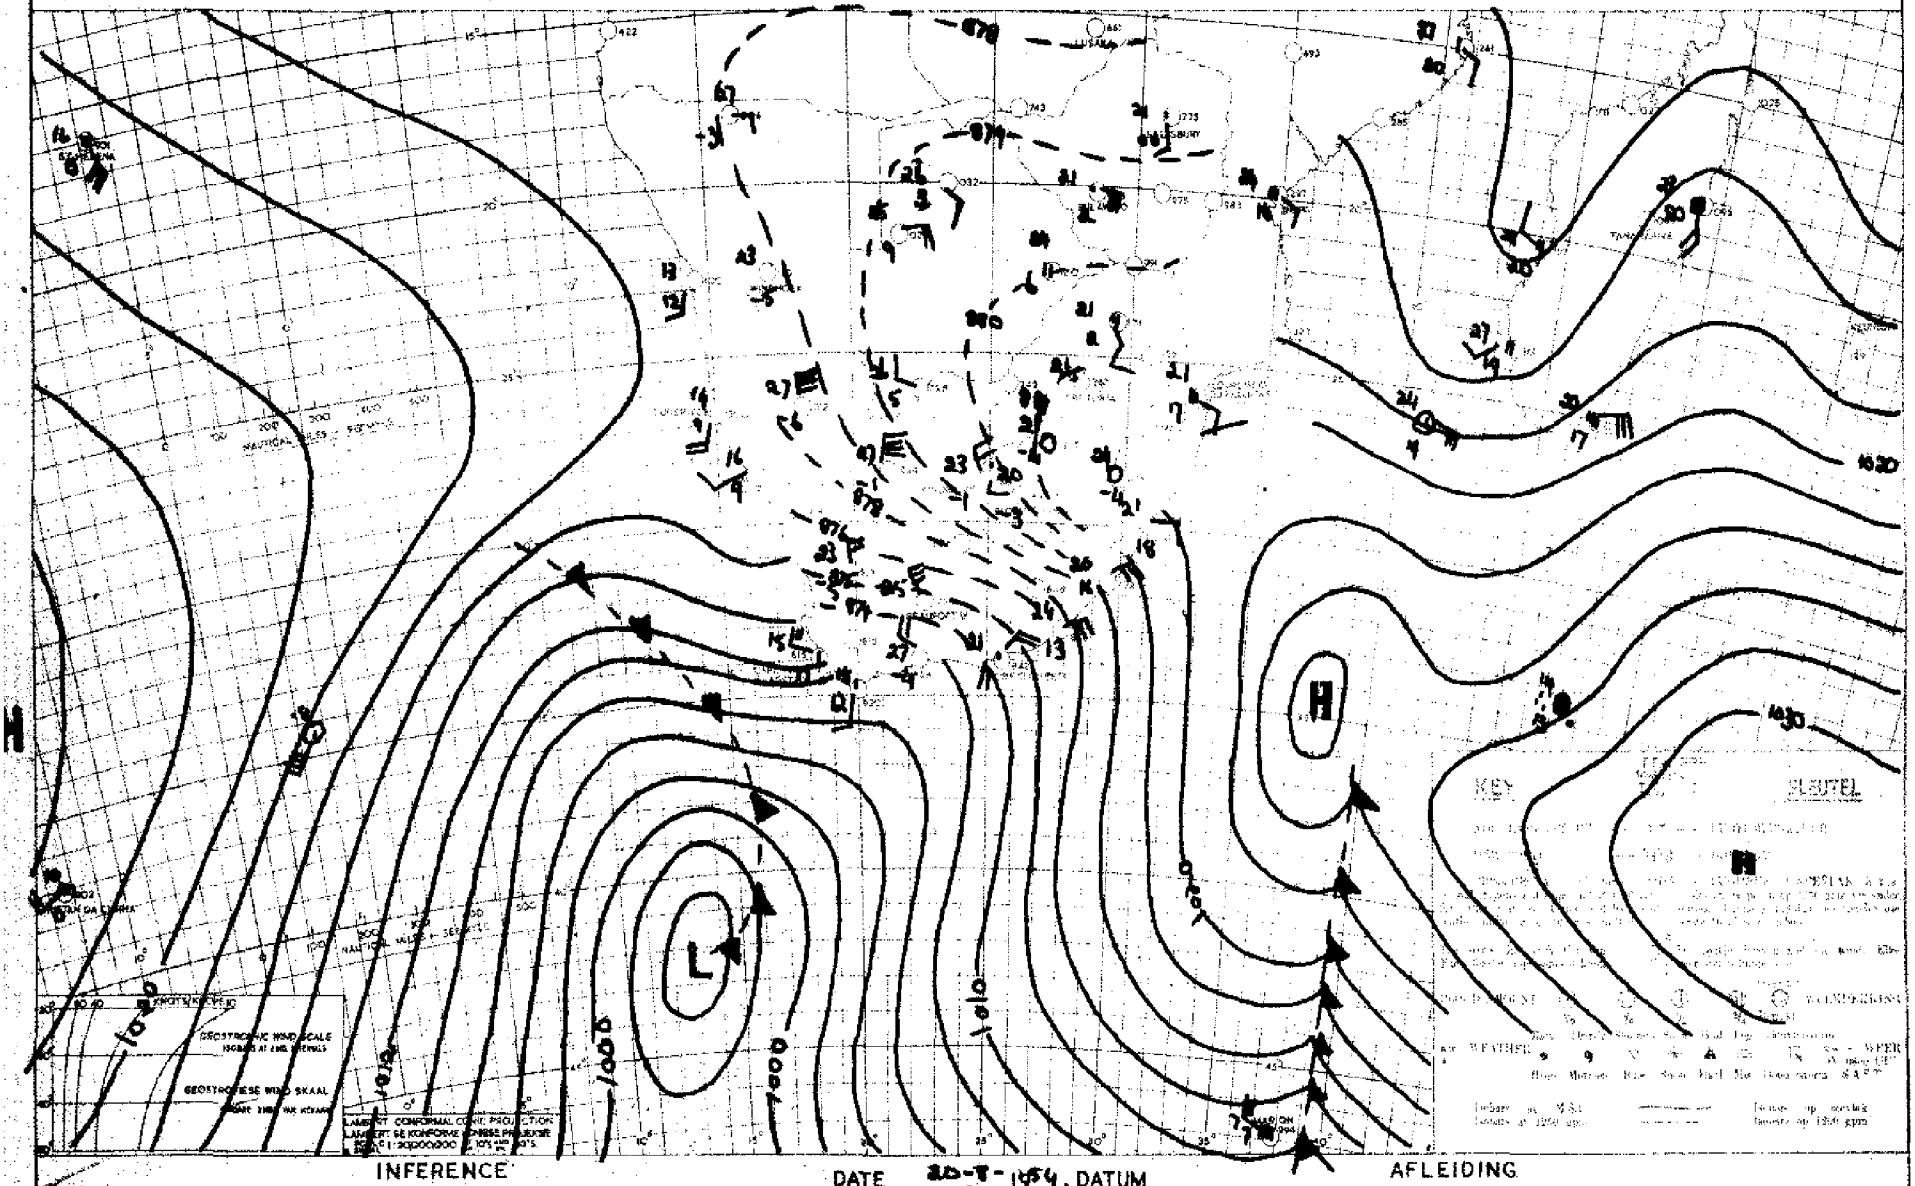
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

The strong SW.ly winds between Tristan da Cunha and the depression SSW of the Union will cause an inrush of cold air over at any rate the southern half of the Union.

DATE 20-7-1954. DATUM

AFLEIDING

Die gebied van sterk SW-like wind tussen Tristan da Cunha en die depressie SSW van die Unie sal 'n instroming van koue lug oor ten minste die S-like helfte van die Unie veroorsaak.

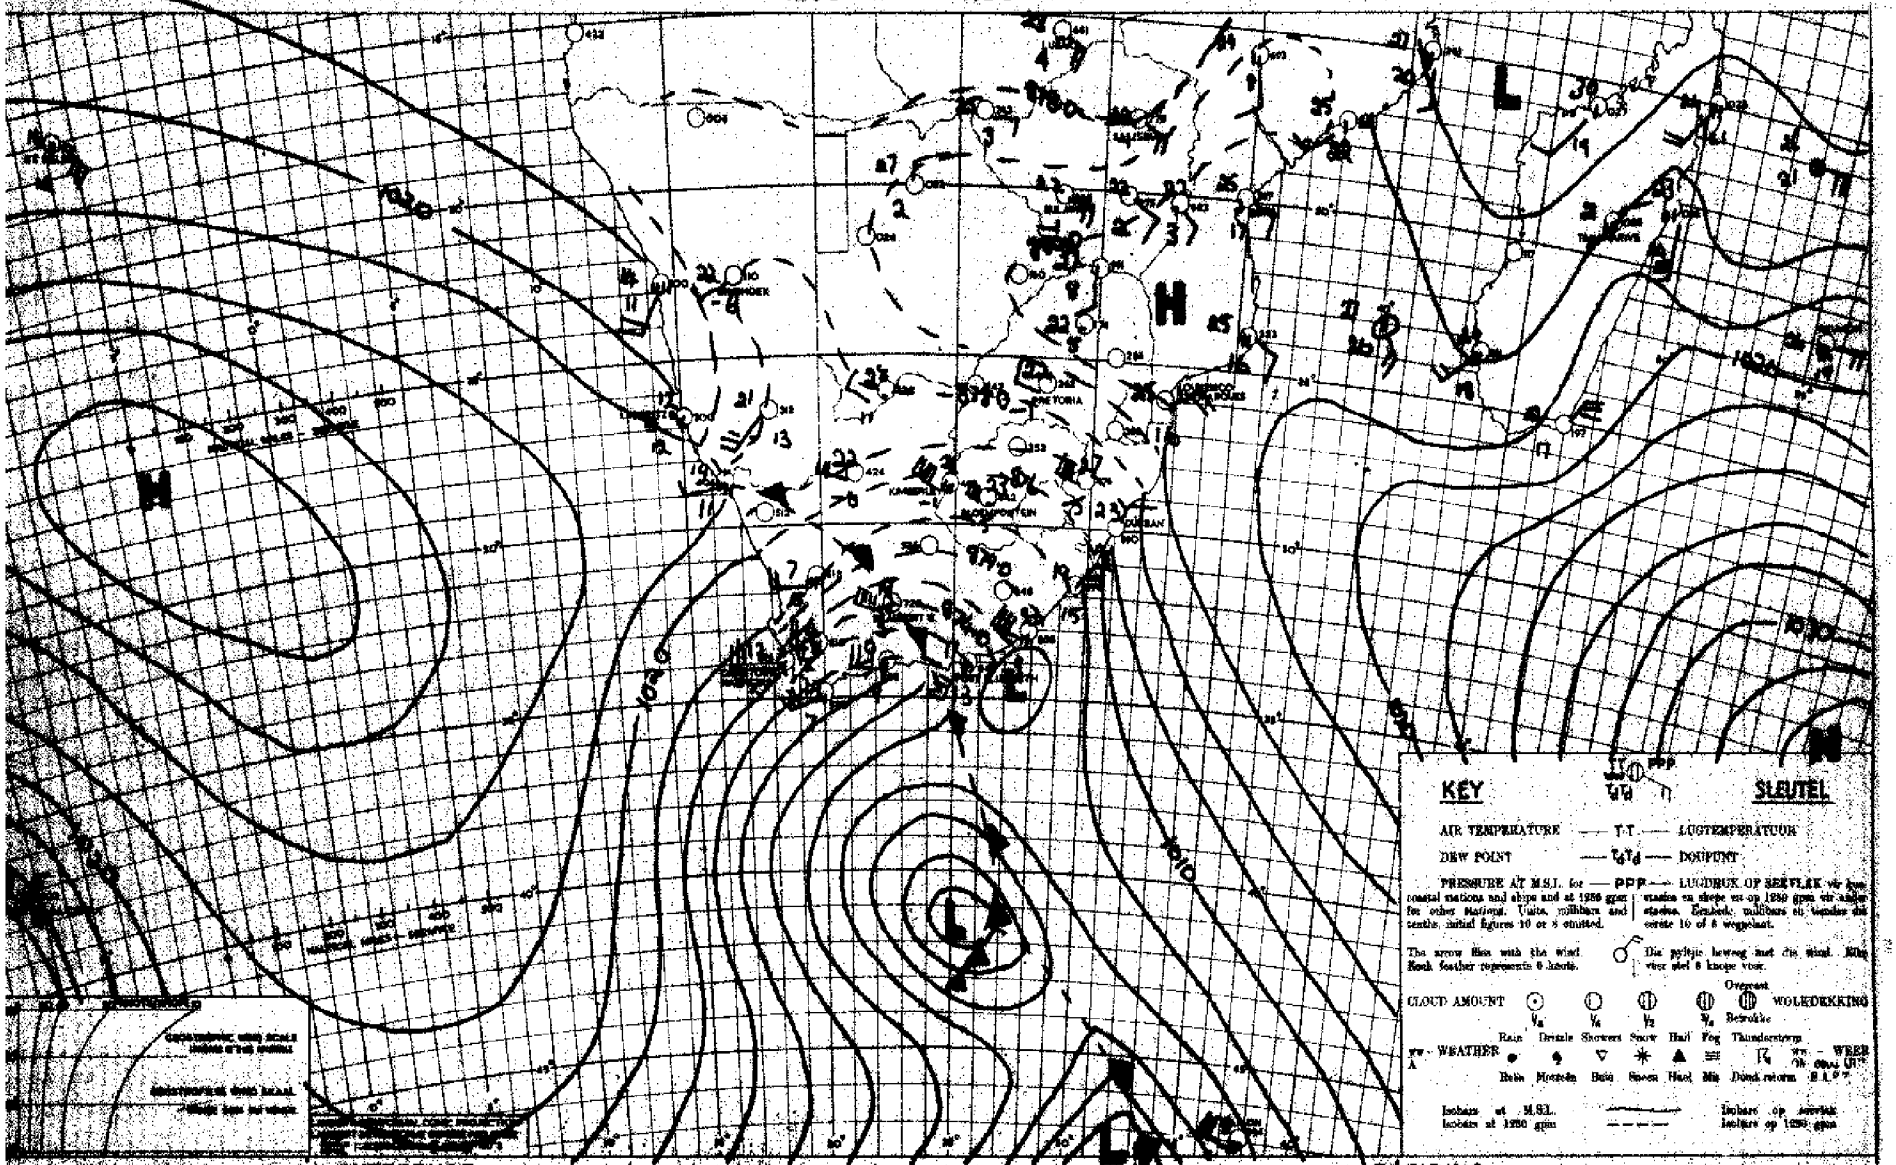
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 4 Dec 1944 DATUM AFLEIDING

Cold air is steadily advancing into the Cape Province from the southwest. The remainder of the Union is still under the influence of the rear of the Indian Ocean Anticyclone. With the further advance of the cold air northeastwards, temperatures will drop rapidly over the remainder of the Cape Province and over Southern Transvaal. Local cloudy weather will occur temporarily but it will clear to fine generally.

Koue lug vanuit die Suidweste dring geleidelik die Kaap Provinsie binne. Die res van die Unie is nog steeds onderdie invloed van die Indiese Oseaan antisikloon. Met geleidelike verdere indringing van die koue lug noordooswaarts sal temperature sterk daal oor die res van Kaapland, die Vrystaat en Suid Transvaal. Tydelike bewolkte weerstoestande sal plaaslik ontwikkel, maar oor die algemeen sal dit tot mooiweer opklaar.

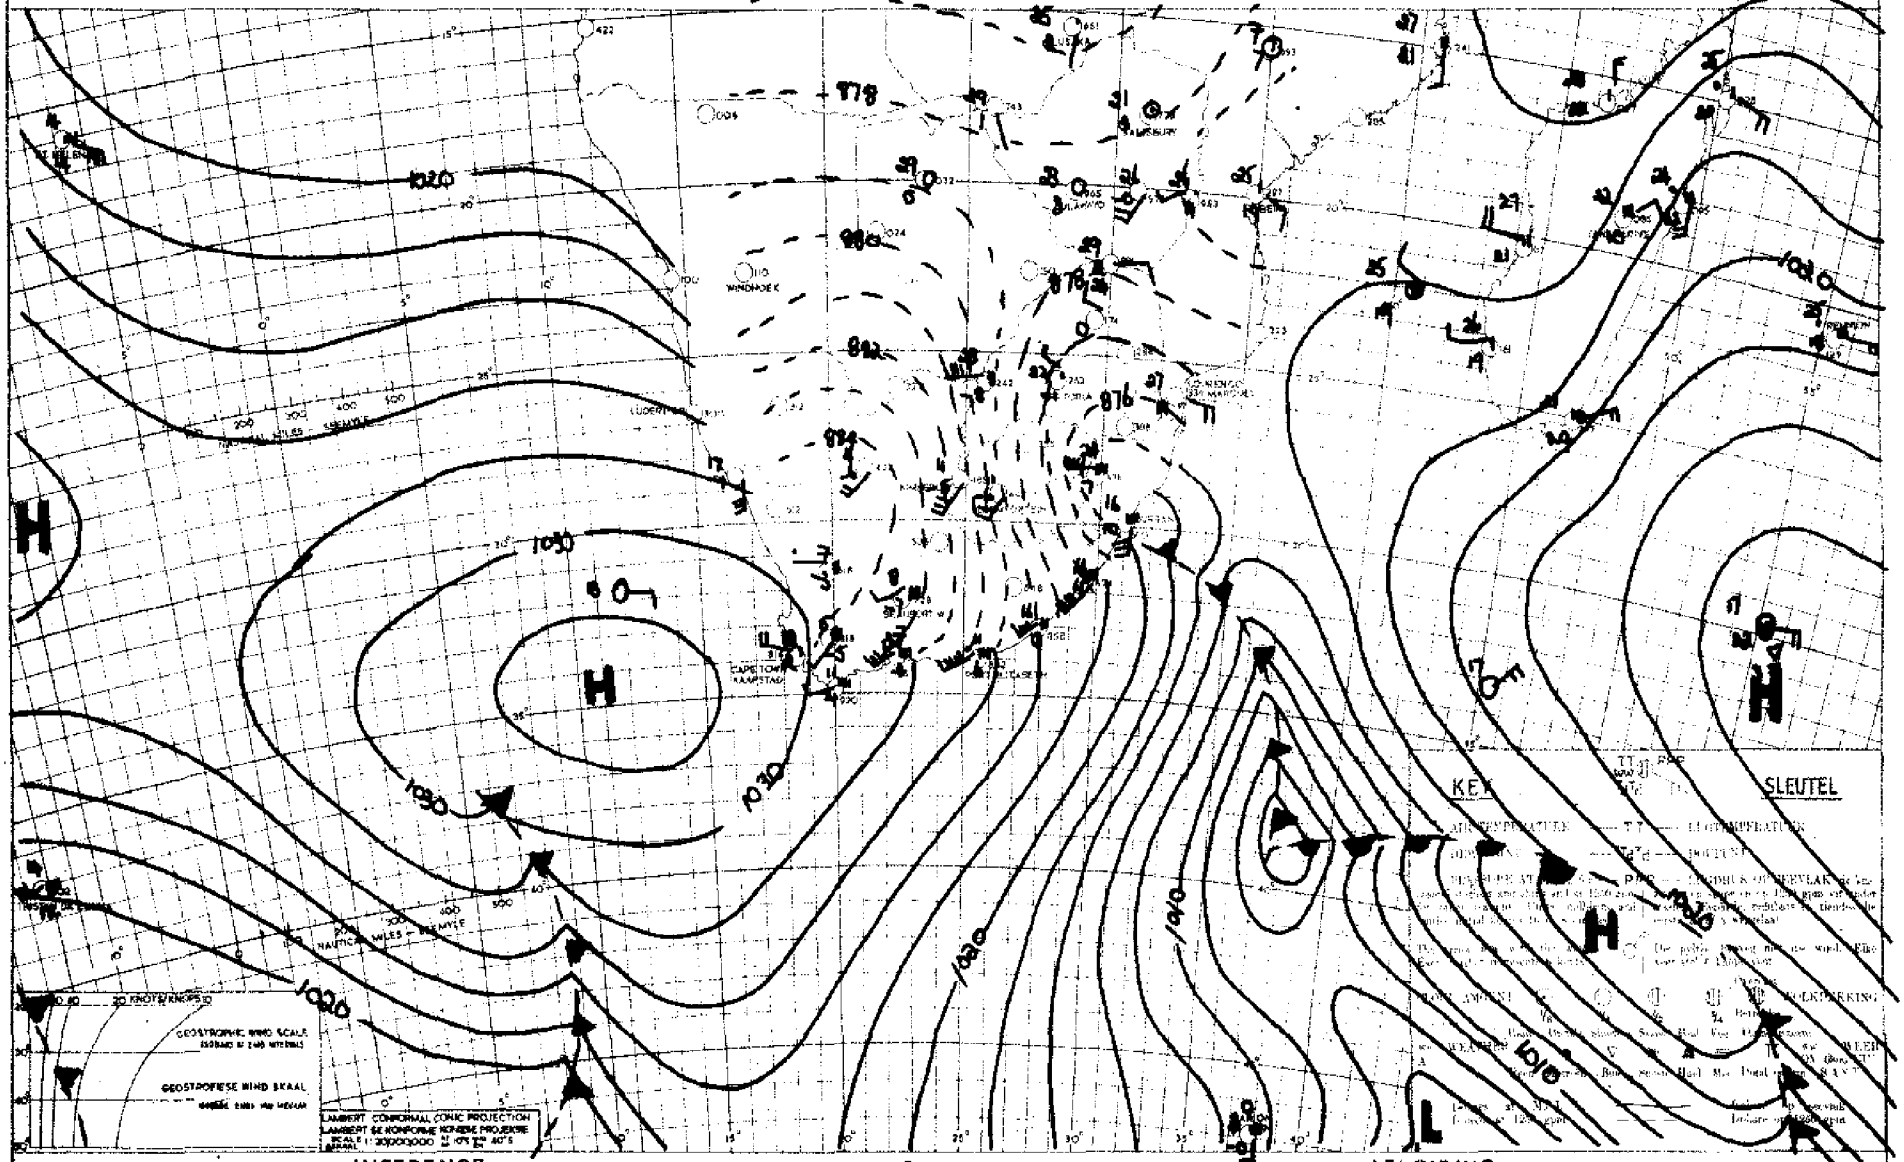
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 3-2-1972 DATUM — AFLEIDING

Cold air has extended over the Cape Province and most of the O.F.S., and is likely to extend over the interior of Natal, and to reach the Transvaal.

Koue lug het oor die Kaap Provinsie en die meeste van O.V.S. uitgebrei, en waarskynlik sal dit die binneland van Natal indring en Transvaal ook bereik.

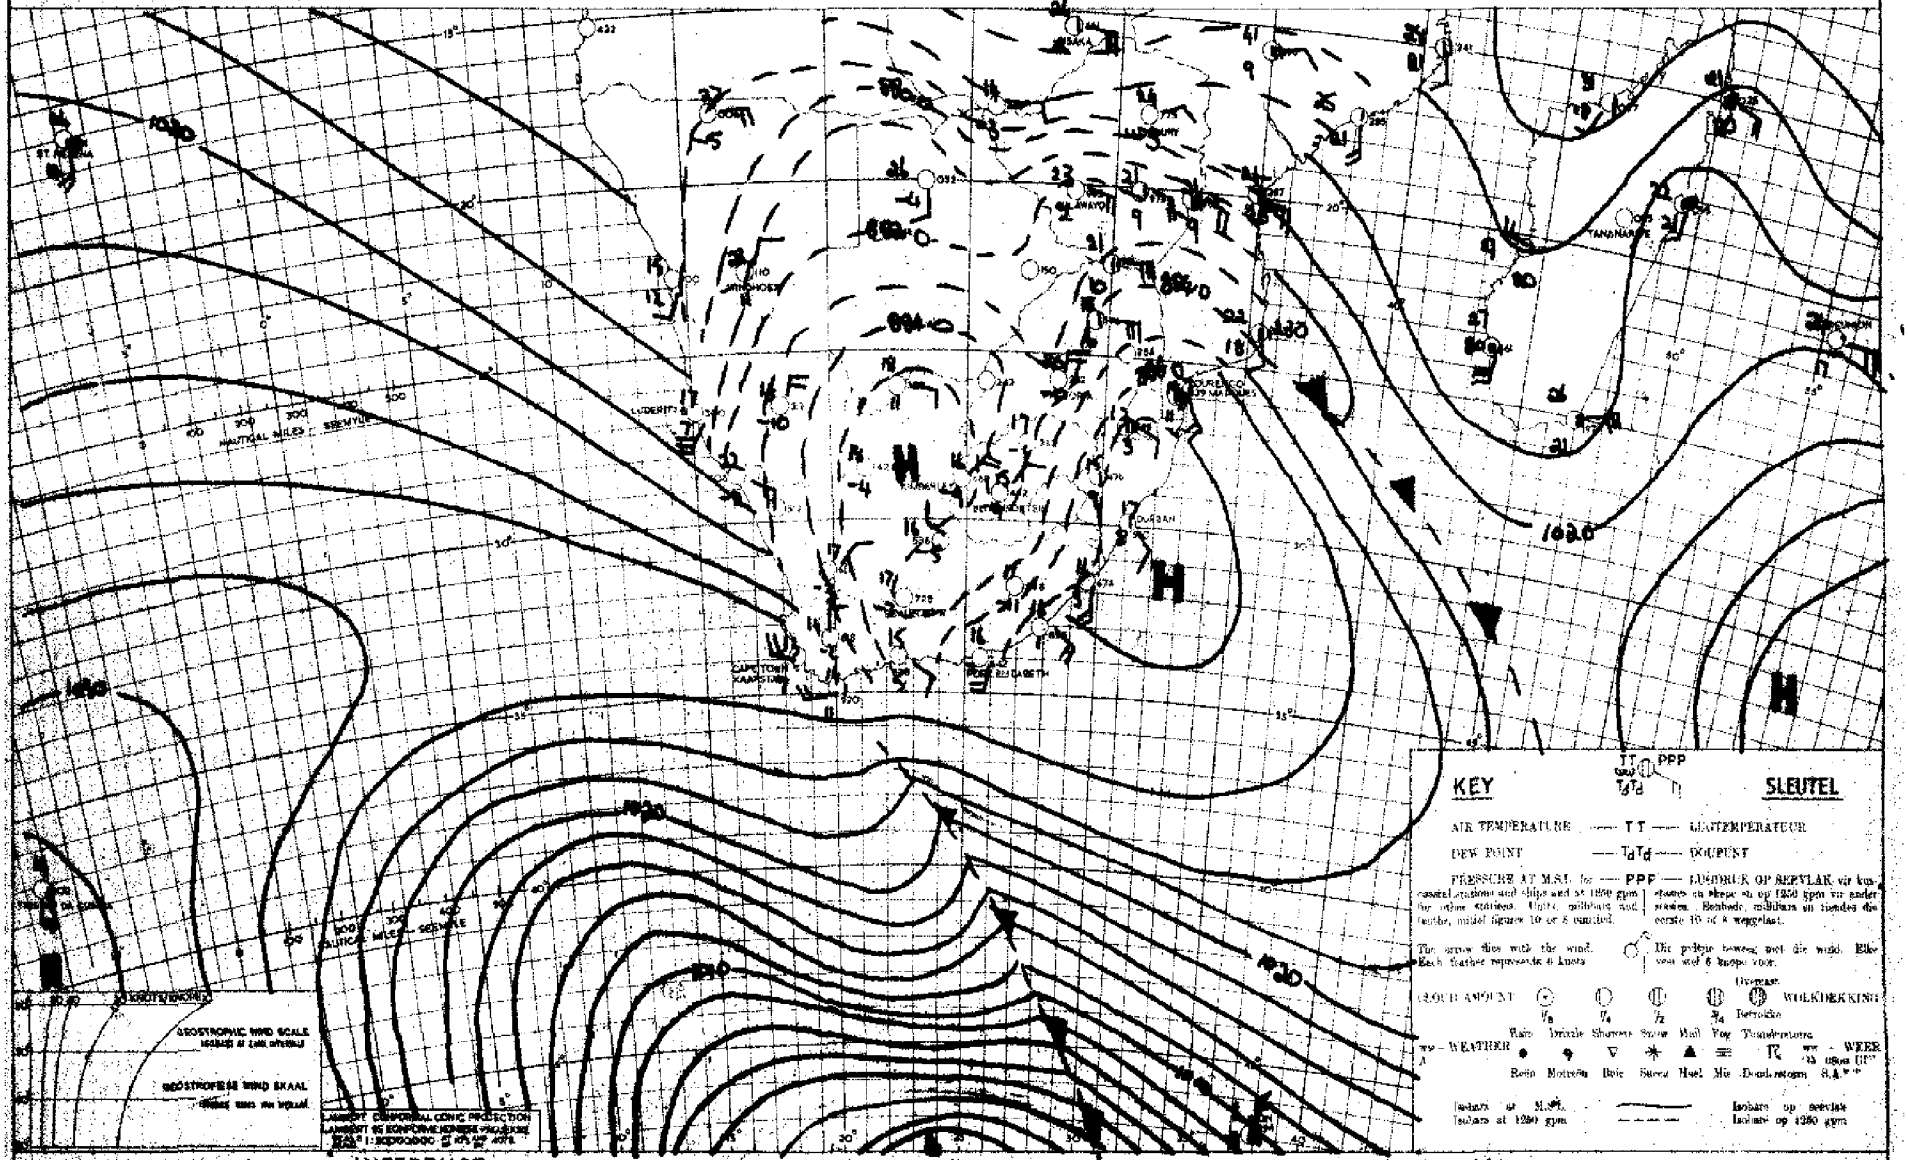
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 13-14 SEP 69 DATUM AFLEIDING

Cooler moister air flooded the Eastern Union, resulting in cloudy to overcast weather over Natal and Eastern and Northern Transvaal. Elsewhere was fine but temperatures were rather below normal. Apart from the Northeastern half of the Transvaal were moist air still cause partly cloudy weather, dry air over the remainder of the Union will cause the weather to remain fine. Temperatures will rise steadily.

Koel vogtige lug het oor die oostelike Unie binnegestroom, met die gevolg dat bewolkte tot betrokke weerstoestande oor Natal en Oos en Noord Transvaal voorgekom het. Elders was die lug droog en wolklose weerstoestande het geheers. Min verandering word verwag. Die vogtige lug oor Noordoos Transvaal sal nog wolksontwikkeling teweeg bring, maar die droë lug sirkulasie oor die res van die Unie sal mooiweers toestande laat behoue.

INFERENCE

DATE 24/8 1954 DATUM

AFLEIDING

It will be noticed from the report of ship Romandie that showers have occurred in her neighbourhood. It appears, therefore, that the big anticyclone WSW of the Union contains fairly deep moisture; and its eastward movement may cause rain over the southern parts of the Union.

Uit die berig van die skip Romandie sal opgelet word dat reën-buie in sy omgewing plaasgevind het. Dit blyk, daarom, dat die groot antisikloon WSW van die Unie taamlik diep vogtigheid bevat; en die ooswaartse beweging daarvan mag wel reën oor die suidelike dele van die Unie veroorsaak.

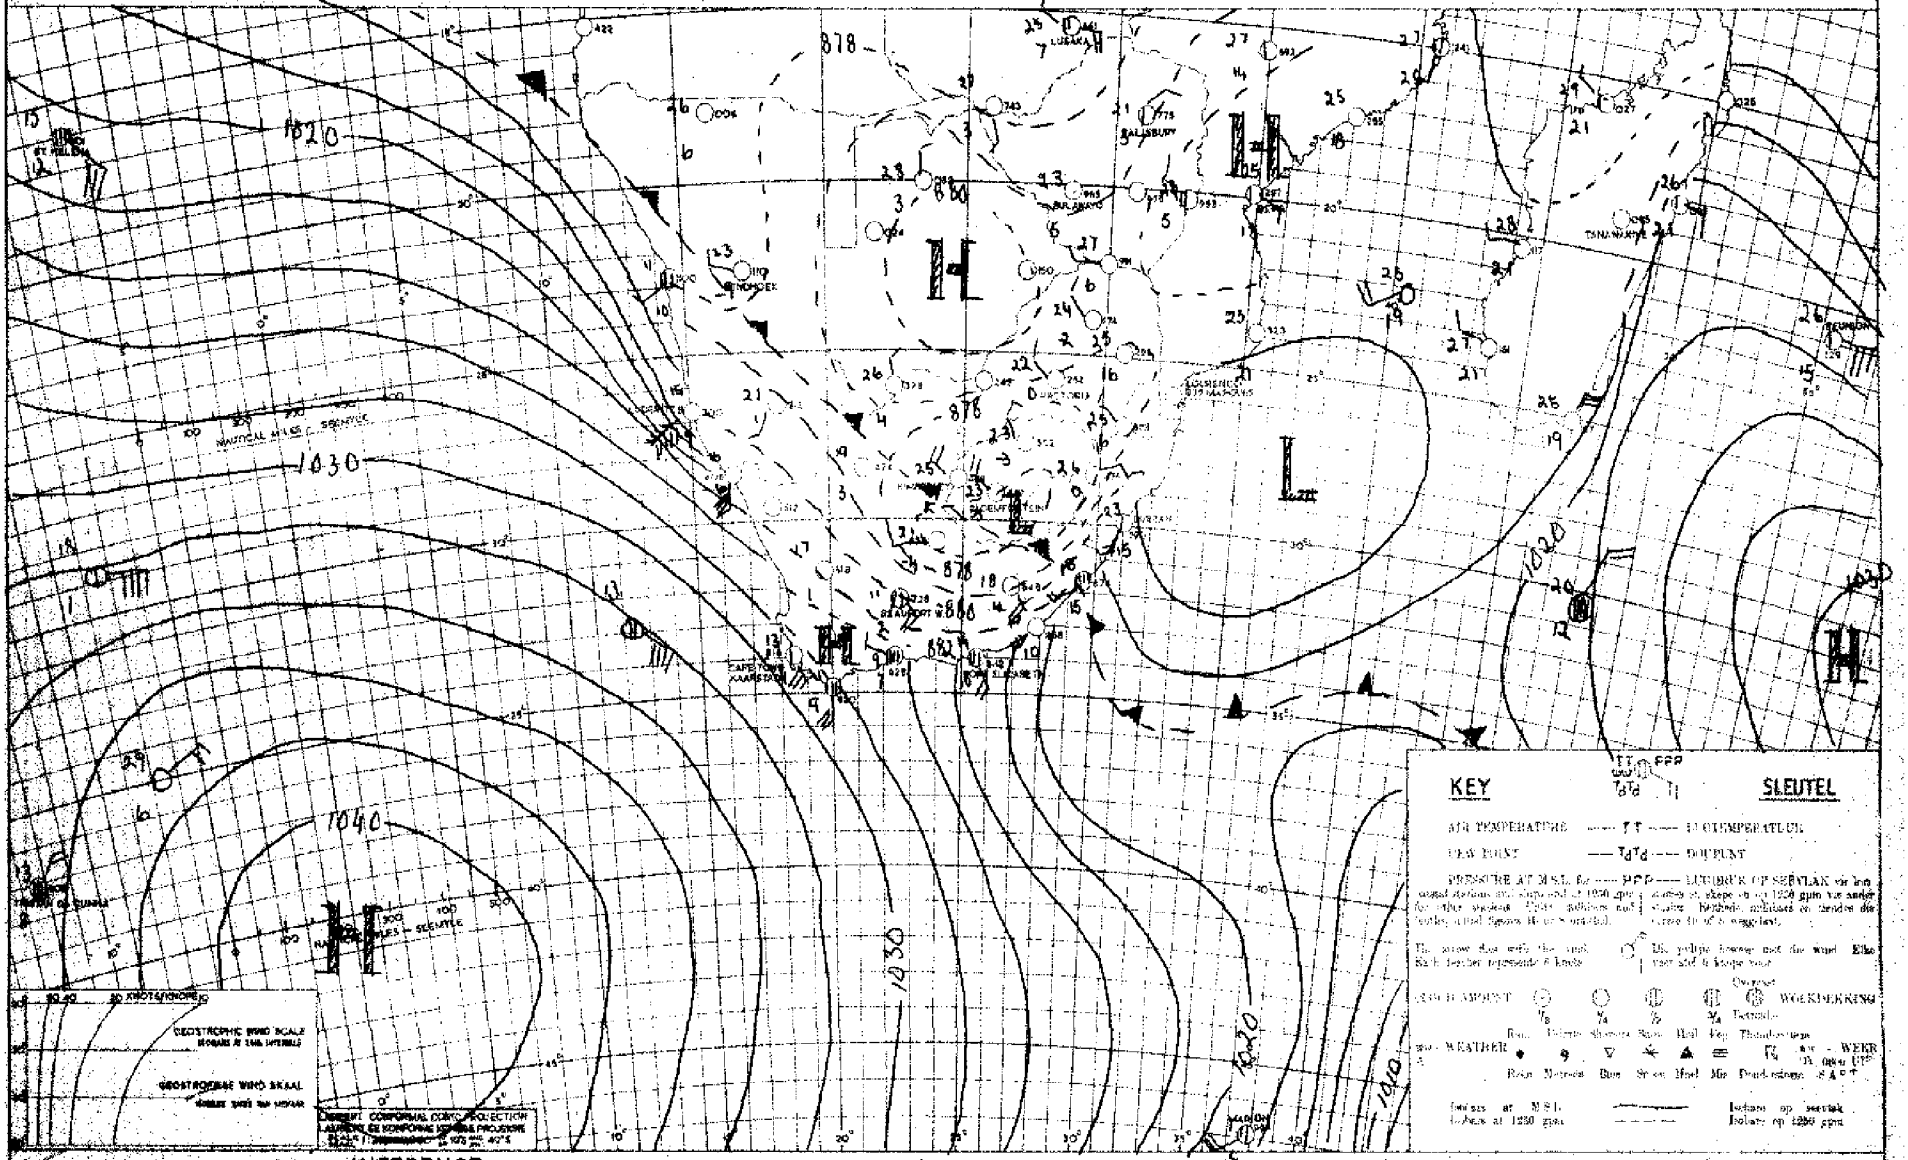
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 25 8 1954 DATUM — AFLEIDING

The extensive cold anticyclone southwest of the Union is beginning to dominate the air circulation over the southwestern Union. The remainder of the Union is still under the influence of the continental anticyclone. Due to cyclonic circulation cloudy to overcast weather with rain is expected to occur over the Southwestern Cape coastal areas. Clouds will also move in into Natal, Northeastern Free State and Eastern Transvaal. Elsewhere it will be fine.

Die sterk koue antisikloon suidwes van die Unie begin nou om die lug sirkulasie oor die suidwestelike Unie te domineer. Die res van die Unie is nog onder die invloed van die kontinentale antisikloon. Weens sikloniese sirkulasie sal bewolkte weer met reën oor die kusstreke van Suidoos Kaapland voorkom. Oor Natal, Noordoos Vrystaat en Oos Transvaal sal dit ook bewolk word. Elders mooiweer.

The cool moist air from the anticyclone SSW of the Union is now pushing in strongly over the south coastal regions of the Cape Province, and will cause fairly heavy rains over this area. A cyclonic circulation has developed over the centre of the Union.

Die koel, vogtige lug vanuit die antisikloon SSW van die Unie dring nou sterk in oor die S-like kuststreke van Kaapland, en sal taamlik swaar reën oor hierdie gebied veroorsaak. 'n Sikloniese sirkulasie het oor die middel van die Unie ontwikkel.

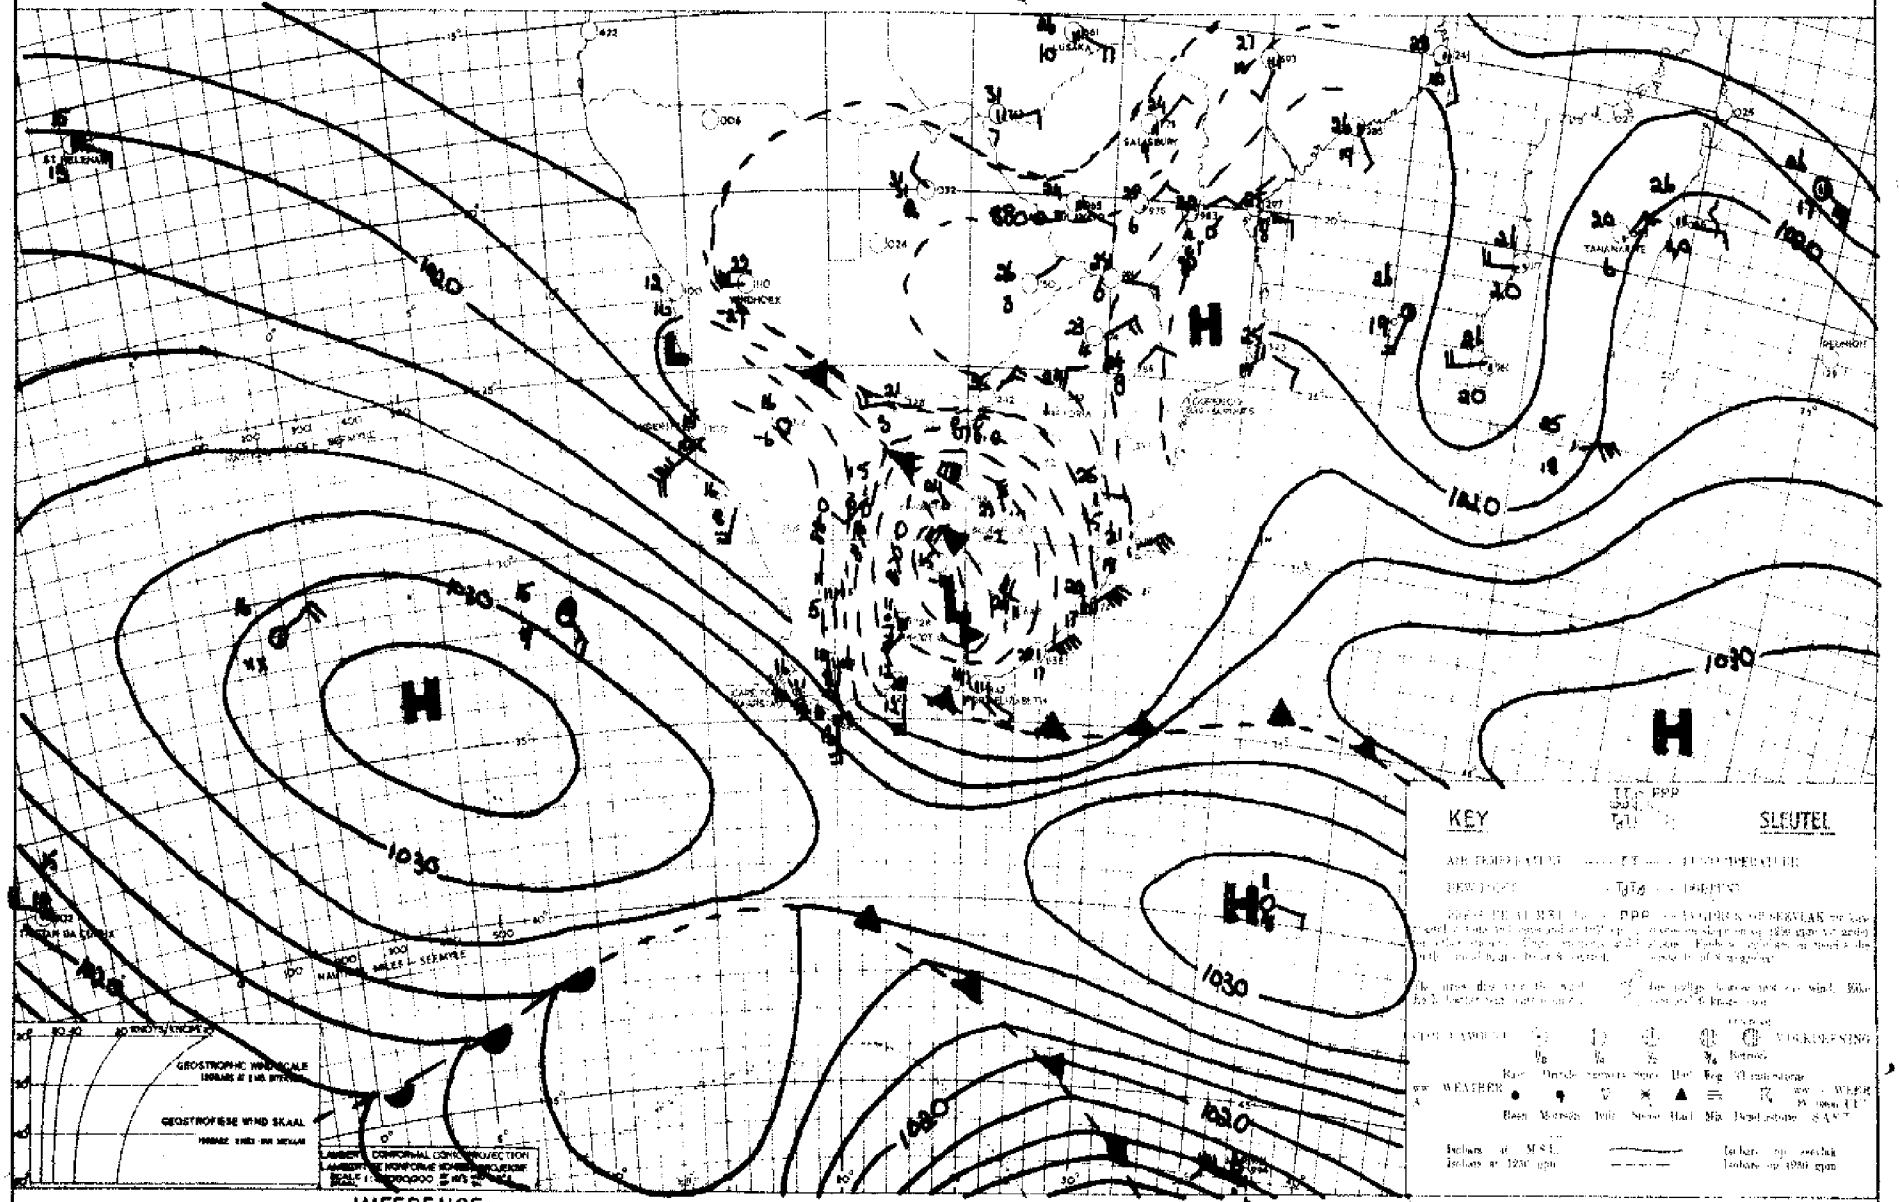
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 27 - 8 - 1954 DATUM AFLEIDING

A deep depression is still dominating the central and South-eastern Union. This depression feeds moist air into the Cape Province from the southeast and south, and cloudy, rainy weather will persist along the South coast and the Southern Cape, interior. The dry continental air is still circulating over Bechuanaland, Free State, Transvaal and Natal and stable weather conditions will pers st.

'n Diep sikloniese sirkulasie beheer nog die lugstroming oor die Unie. Vogtige lug word vanuit die suidooste oor Suid Kaapland ingevoer, en bewolkte, reënagtige toestande sal langs die suidkus en die binneland van Suid Kaapland bly voortduur. Oor Betsjoeanaland, Vrystaat, Transvaal en Natal is die lug nog droog en warm en bestendige weerstoestande sal hier bly voort-

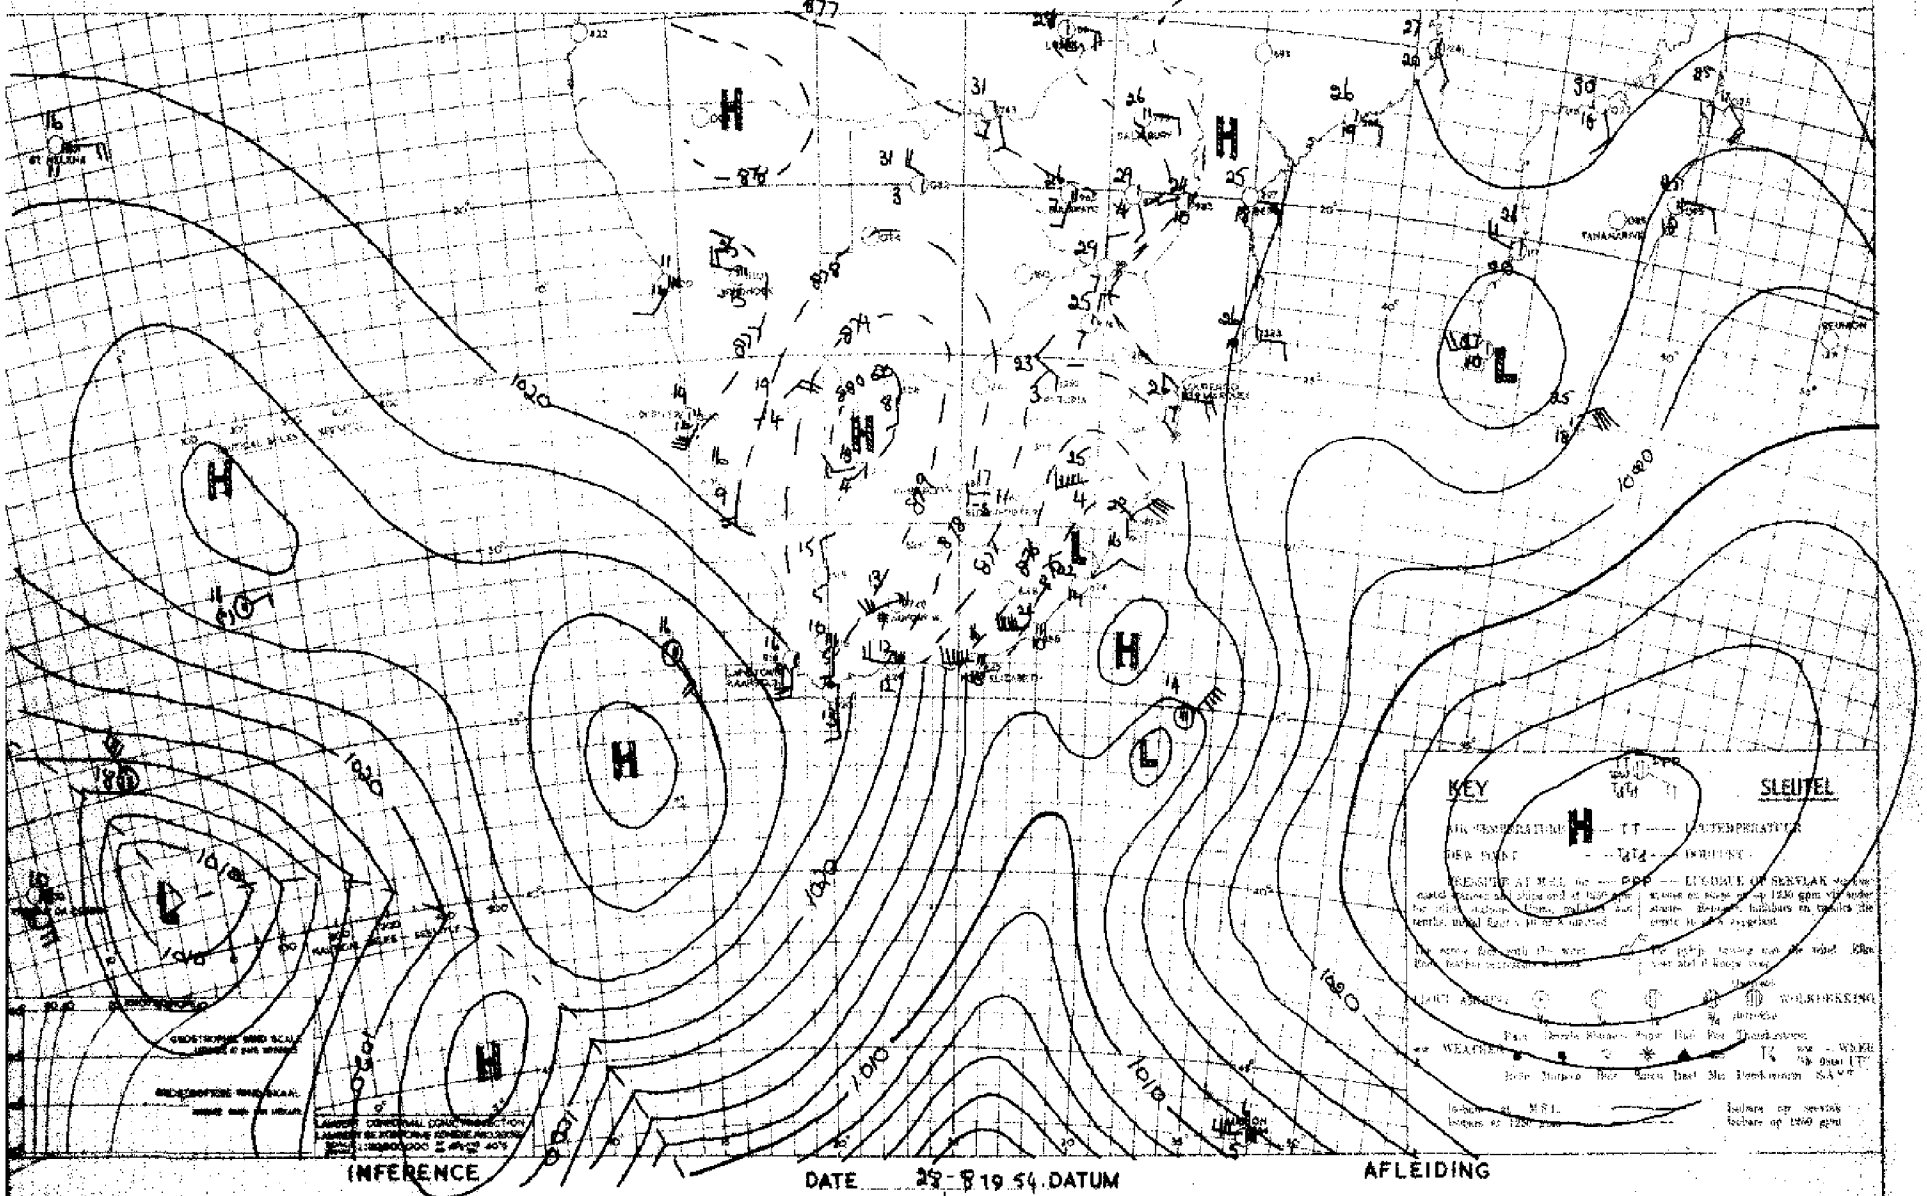
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 29-8-1954 DATUM AFLEIDING

The low pressure system has been causing rain over the south coastal regions is now moving away from the Union ESE-wards. When the anticyclone SW of the Union has also moved further eastwards, the weather on the South coast will clear.

Die laedrukstelsel wat reën langs die suidkuststreke veroorsaak het is nou besig om weg van die Unie OSO-waarts te beweeg. Toe die antisikloon SW van die Unie ook verder ooswaarts beweeg het, het die weer langs die suidkus opgetrek.

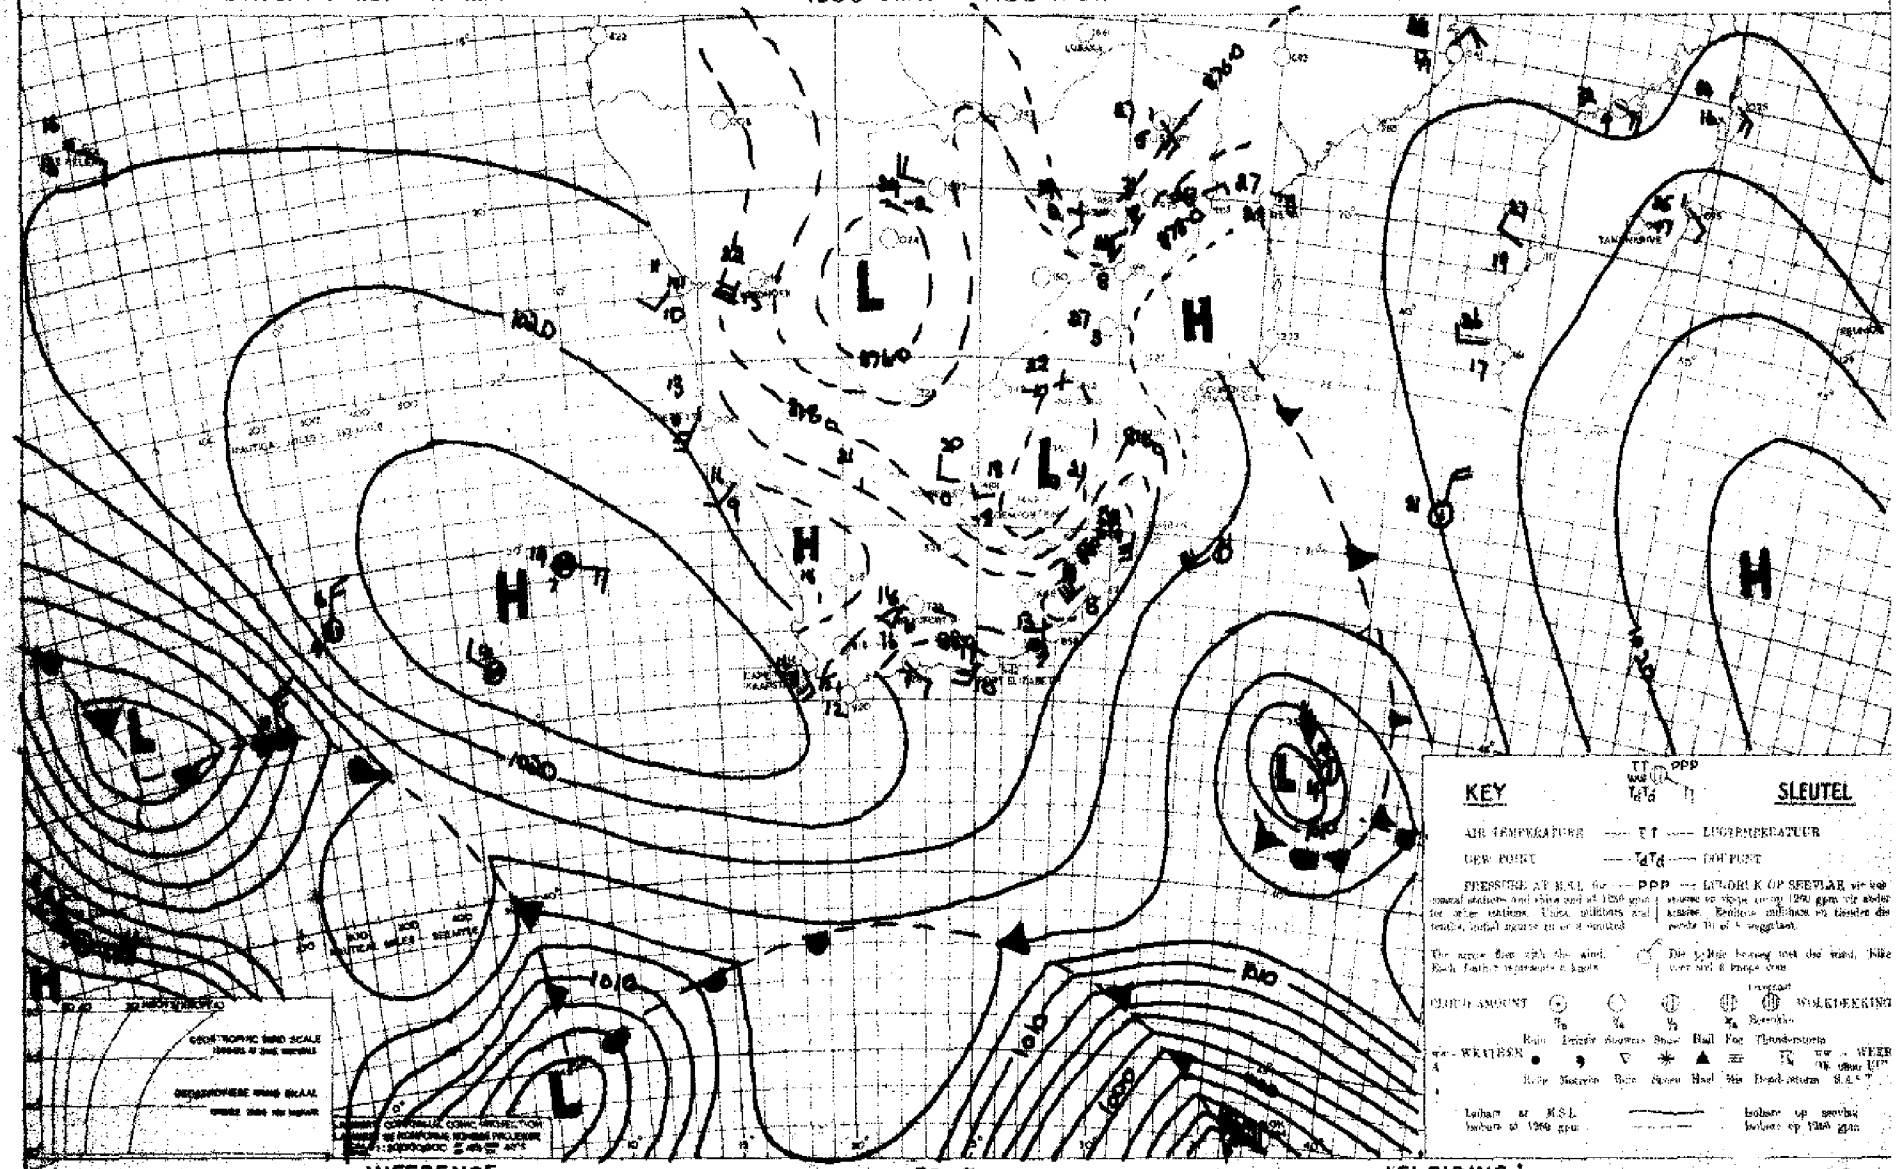
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

With the southeast movement of the depression southeast of the Union pressures will again rise along the Natal coast and some moist air will be brought into the Transvaal from the south-east. Apart from cloudy to partly cloudy weather over the Transvaal, the weather will be fine throughout the Union.

DATE 29-8-1974 DATUM

AFLEIDING:

Met die suidoostwaartse beweging van die laagdruk sisteem suid-oos van die Unie sal die lugdruk langs die Natal kus weer styg. Vogtiger lug sal vanuit die suidooste oor Natal na Transvaal ingevoer word en bewolkte tot gedeeltelik bewolkte toestande sal ontwikkel. Elders oor die Unie sal dit mooiweer bly.

An anticyclone ESE of the Union is bringing in moist air over the Transvaal. It is probable, however, that the low pressure systems which are approaching the Union from the west will drive it away fairly soon.

'n Antisikloon OSO van die Unie bring vogtige lug oor die Transvaal in. Dit is egter waarskynlik dat die laedrukstelsels wat die Unie vanuit die Weste nader dit taamlik gou sal wegdryf.

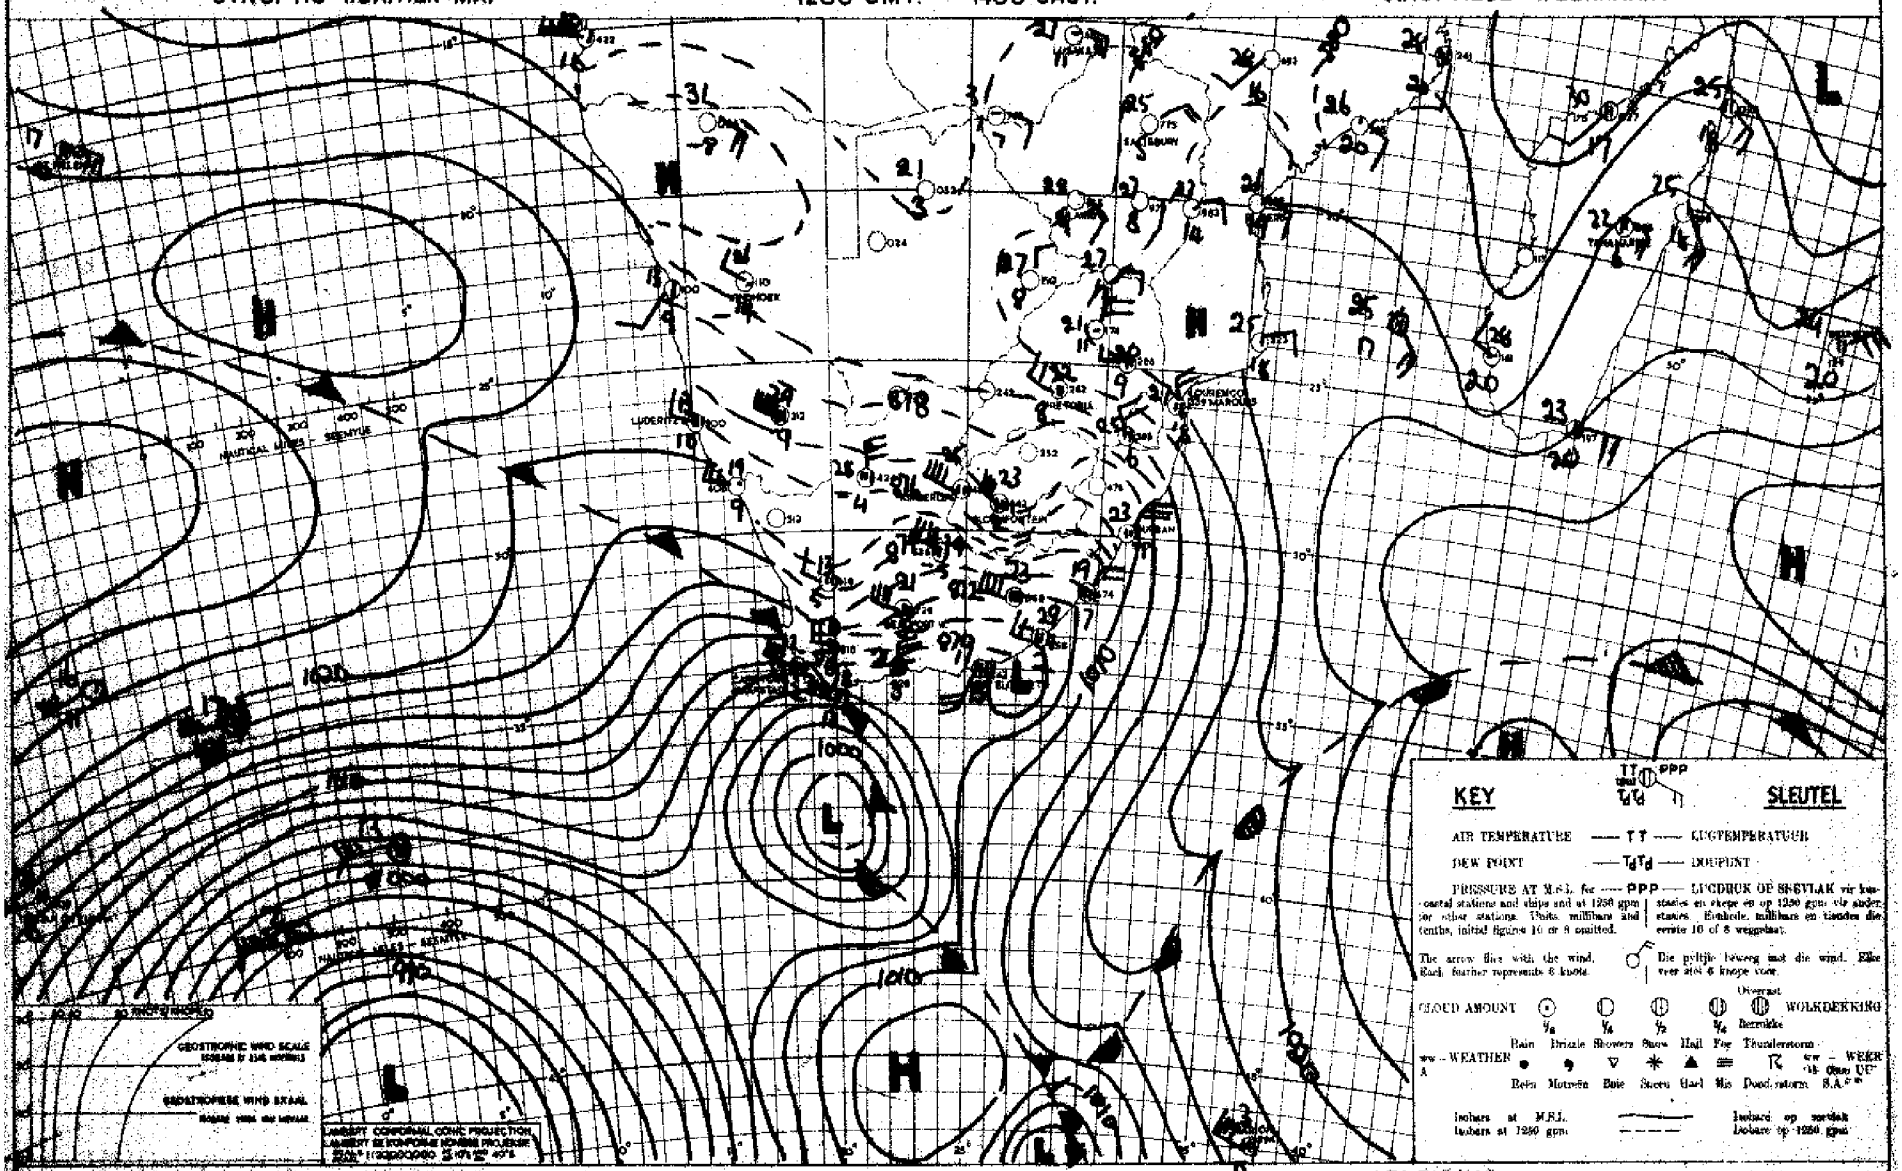
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 31-8-1954 DATUM AFLEIDING

Polar sea air advancing behind a cold front has reached the Southeastern Cape regions. The remainder of the Union still remains under the influence of dry continental air except for the Northeastern Union where moist Indian Ocean air is still present. This air, however, will gradually withdraw and continental air will take its place. Showery along the Cape southwest coast, partly cloudy over the Eastern Transvaal and and apart from high level clouds, fine over remainder of Union.

Polêre seelug wat agter 'n koue front voorwaarts beweeg het die suidwestelike kusstreek van Kaapland bereik. Vogtige Indiese Oseaan lug is ook nog teenswoordig oor die noordoostelike Unie, maar die res van die Unie is onder die invloed van droë kontinentale lug. Die vogtige lug oor die noordoostelike dele sal geleidelik ooswaarts beweeg. Bewolkte, buierige weer sal oor die Suidwes kus van Kaapland voorkom. Oor Oos Transvaal sal dit ook nog ietwat bewolk wees, elders oor Unie mooiweer - vlieë wolke

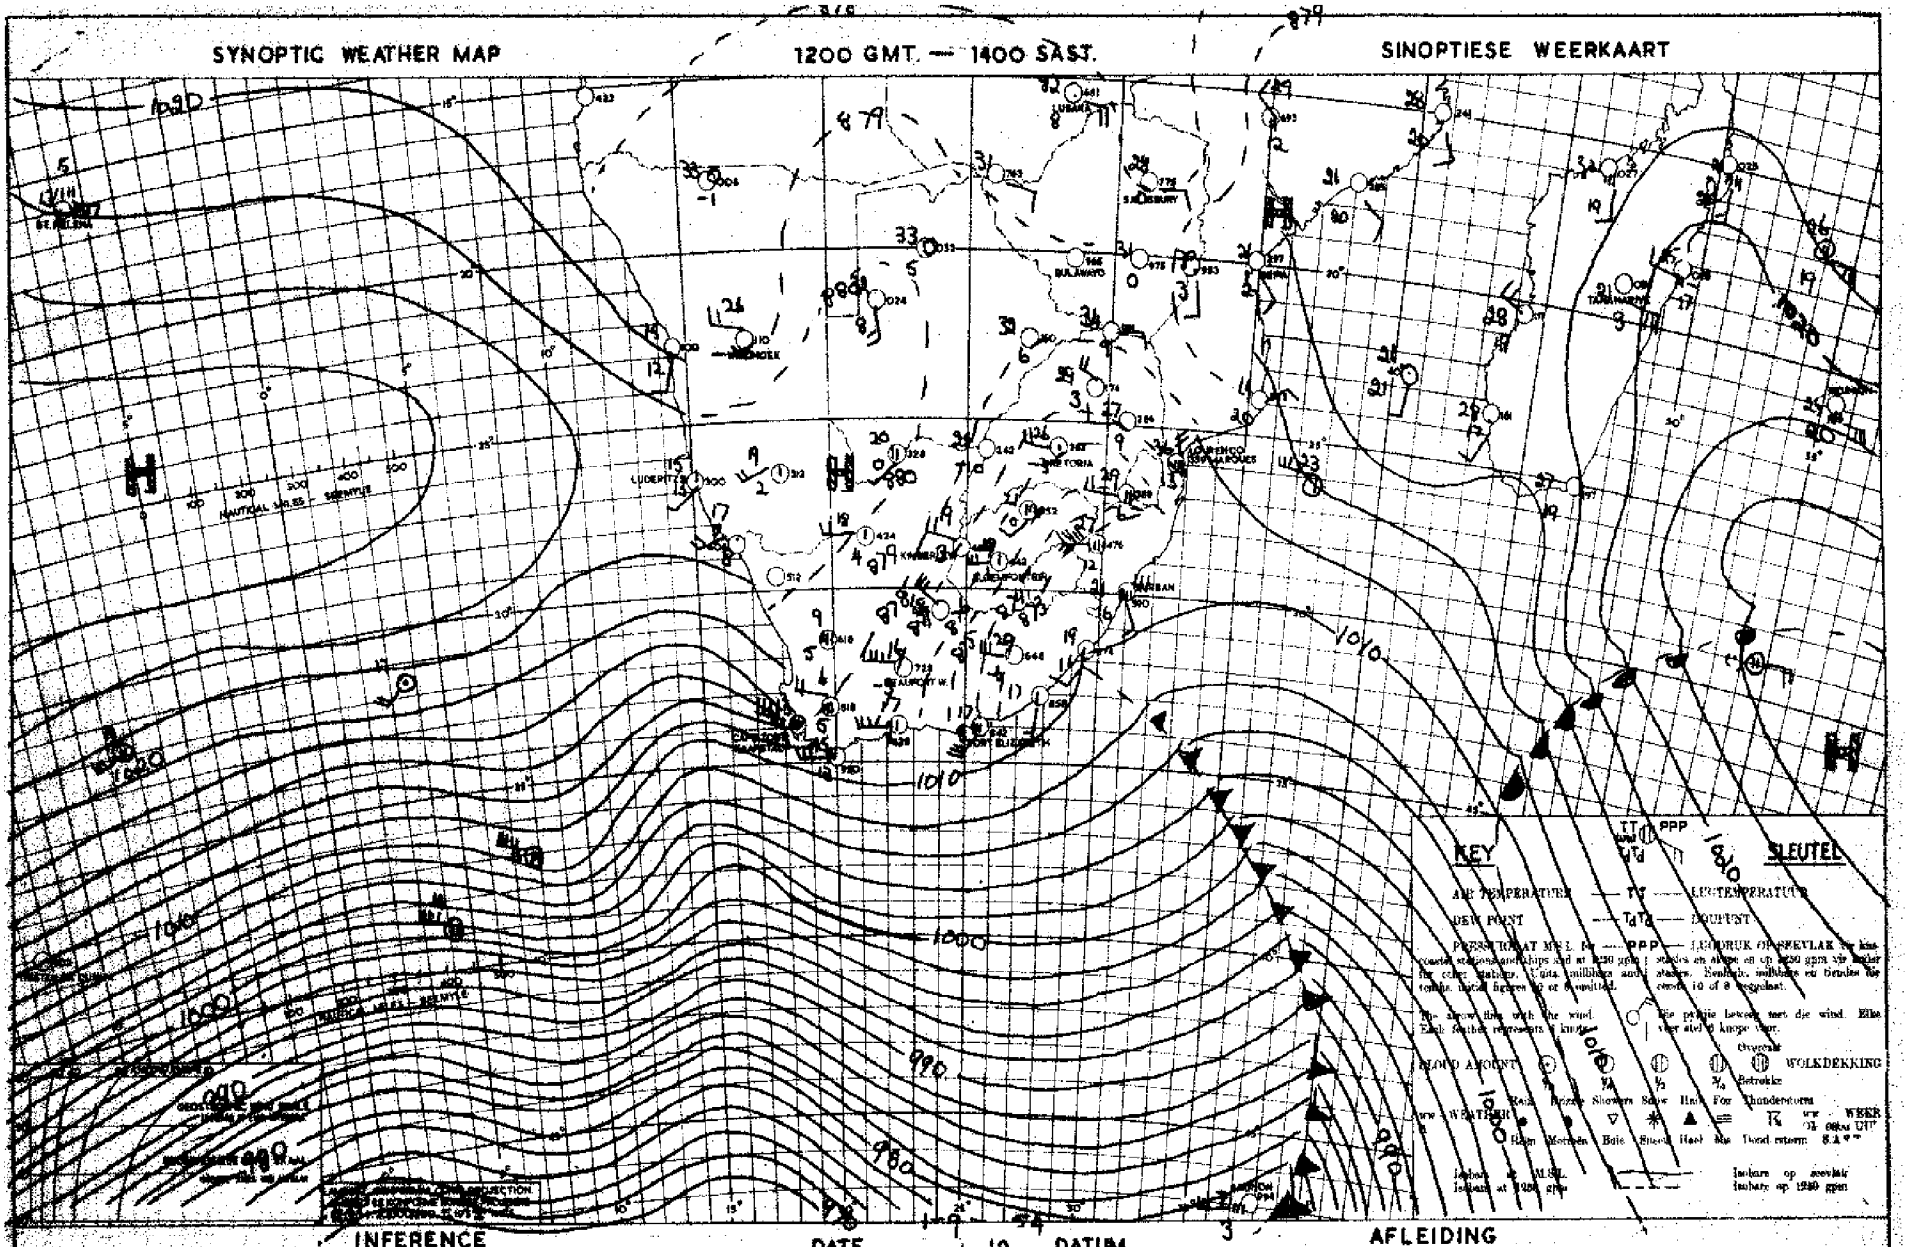
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 19 DATUM AFLEIDING

The Atlantic anticyclone remains fairly far to the north. This means that the air over the interior will remain fairly dry, and that cloudy weather or rain will be confined to the SW coastal and escarpment areas of the Cape Province.

Die Atlantiese antisikleon bly taamlik ver na die Noorde toe. Dit beteken dat die lug oor die Binneland taamlik droog sal bly en dat bewolkte weer of reën tot die suidwes kusstreke en platorand van Kaapland beperk sal word.

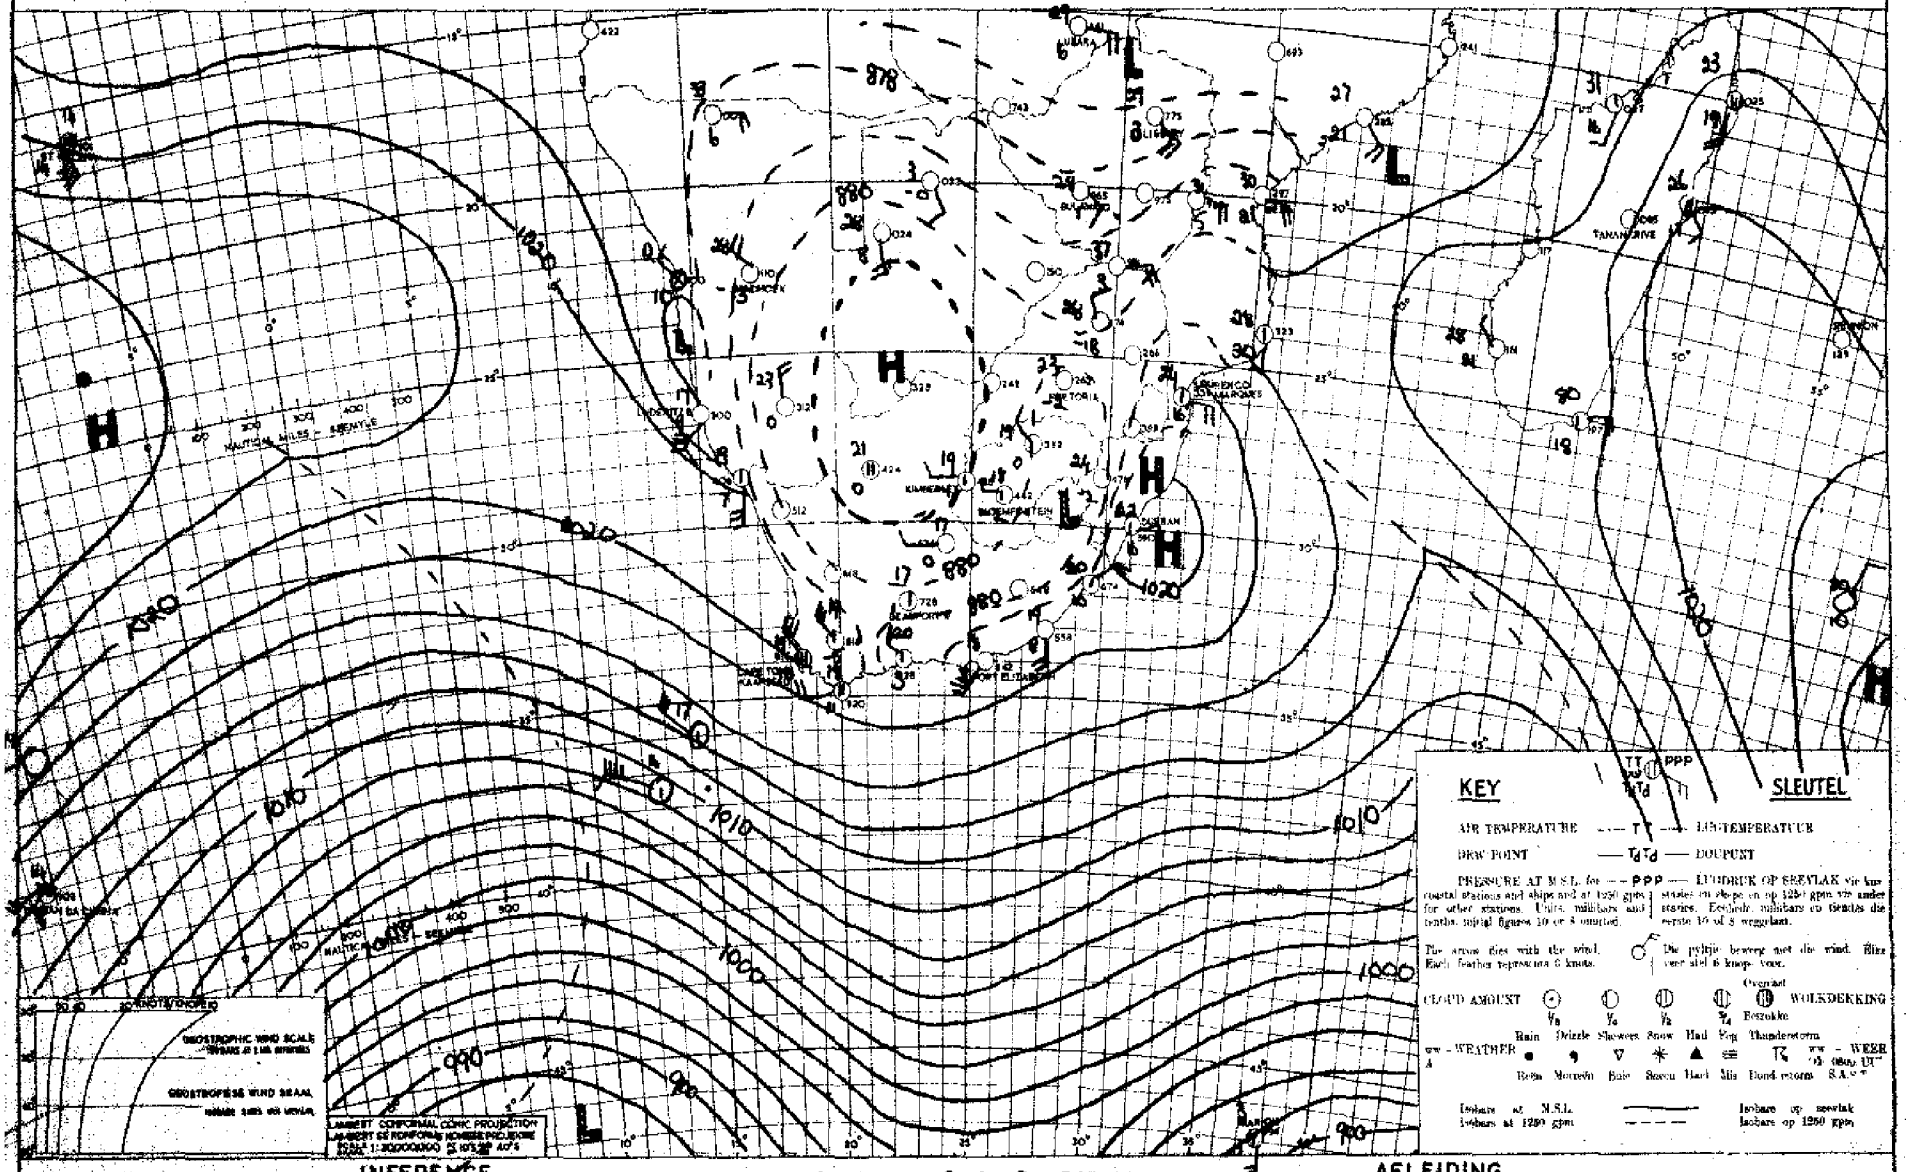
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 2-9-1954 DATUM AFLEIDING

Due to very low pressures south of Tristan and Marion a broad stream of westerlies is being maintained between latitudes 30 and 50 degrees south. Its wave-like pattern will give occasional cloudiness and high showers on the Cape Southwest coast, but the weather over the remainder of the Union will remain fine.

Weens baie lae lugdrukke suid van Tristan en Marion word 'n breë band van weste winde tussen breedtegrade 30 en 50 suid instand gehou. Die golfagtige patroon sal nou en dan bewolking en ligte buie langs die suidwes kus van Kaapland veroorsaak, maar oor die res van die Unie sal mooiweerstoestande bly voortduur.

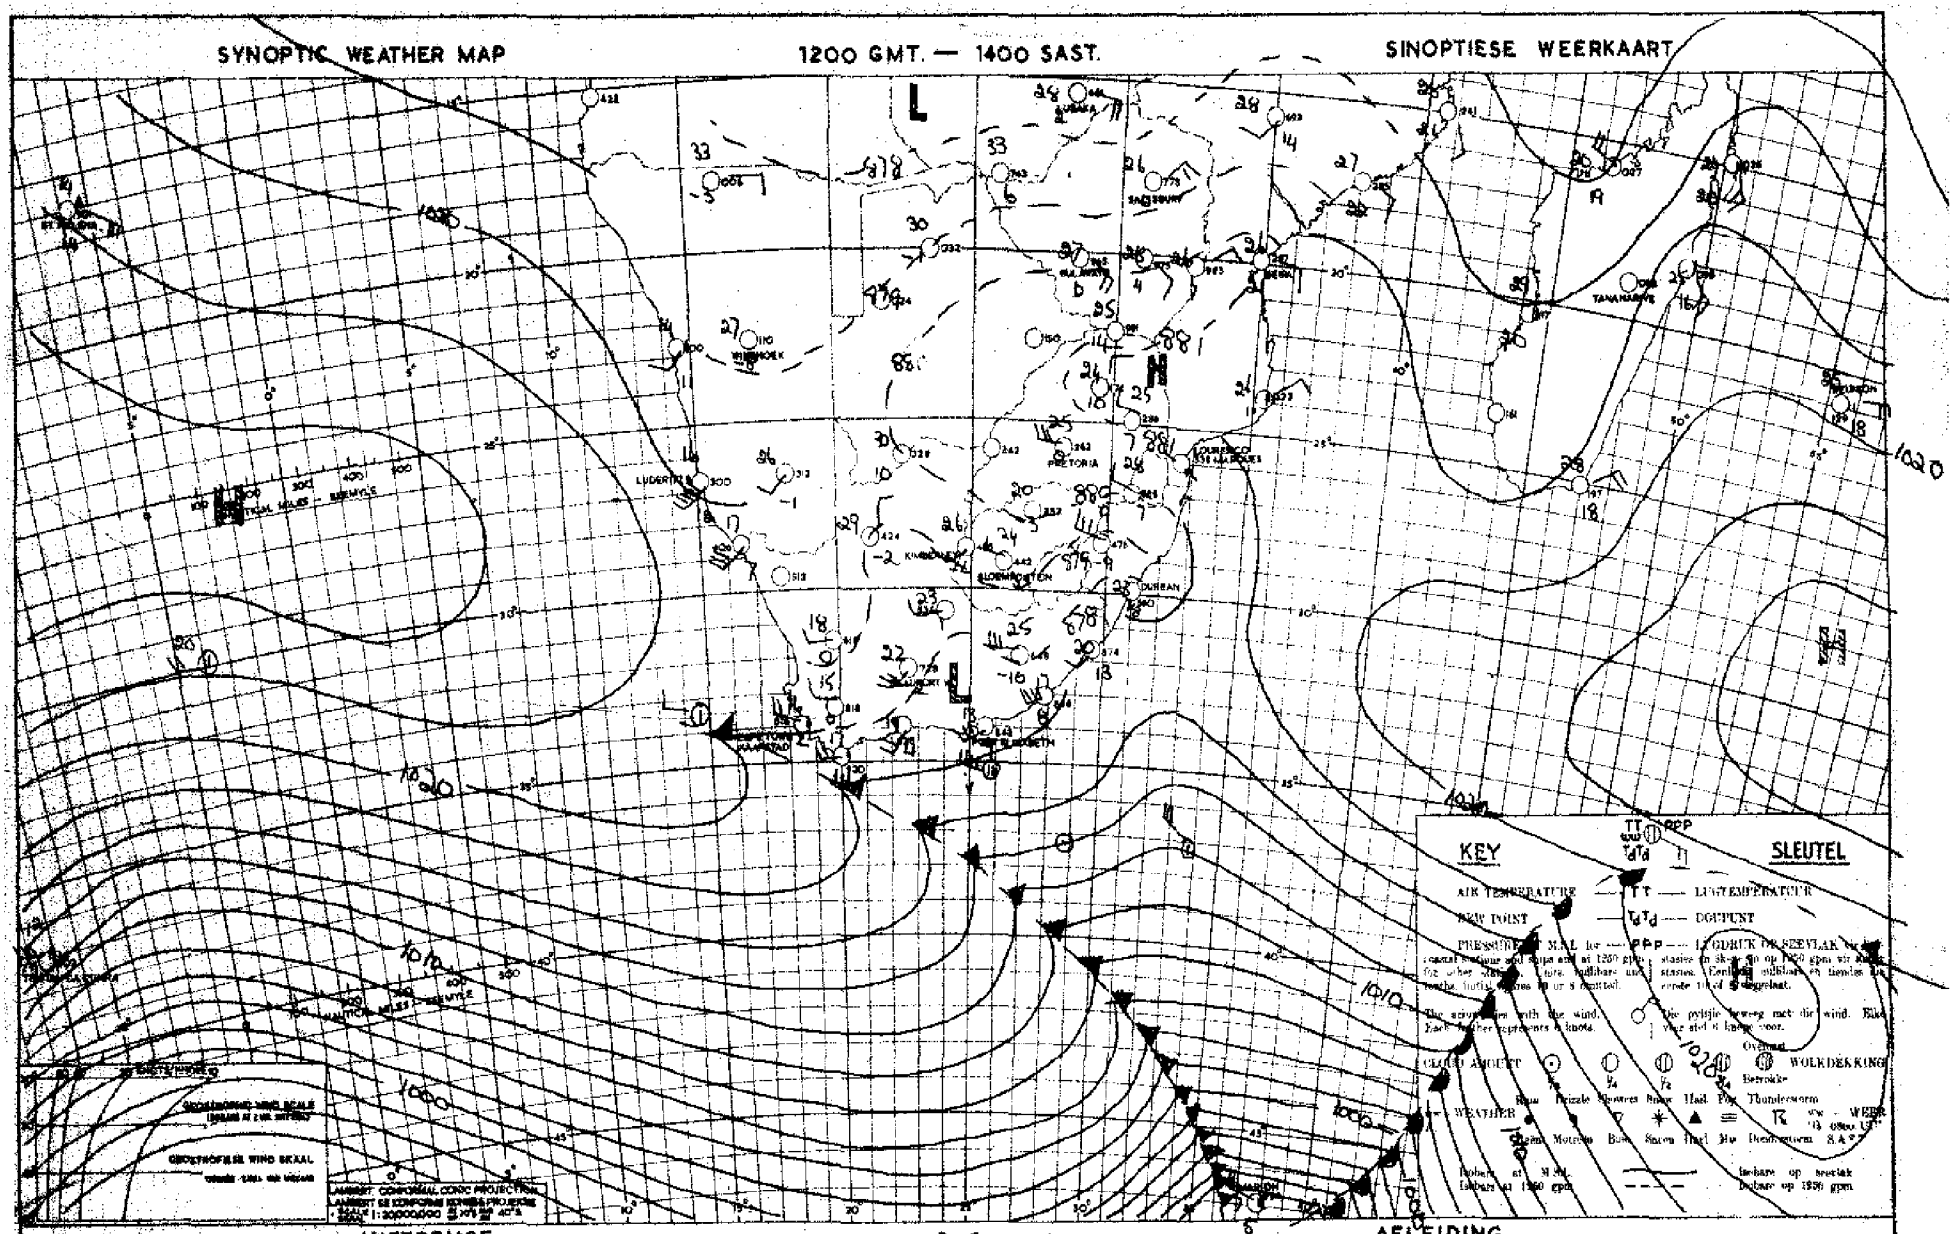
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 3-9-19 54 DATUM AFLEIDING

A cold front is now very near the SW coast. The winds between the cold front and Tristan da Cunha are, however, mainly WNW-ly. It is therefore unlikely that cold air will move NE-wards over the Union during the next 24 hours.

'n Koue front is nou baie naby aan die Suidwestkus. Die wind tussen die koue front en Tristan da Cunha is egter hoofsaaklik WNW-lik. Daarom lyk dit nie waarskynlik dat koue lug binne die volgende 24 uur NO-waarts oor die Unie gaan beweeg nie.

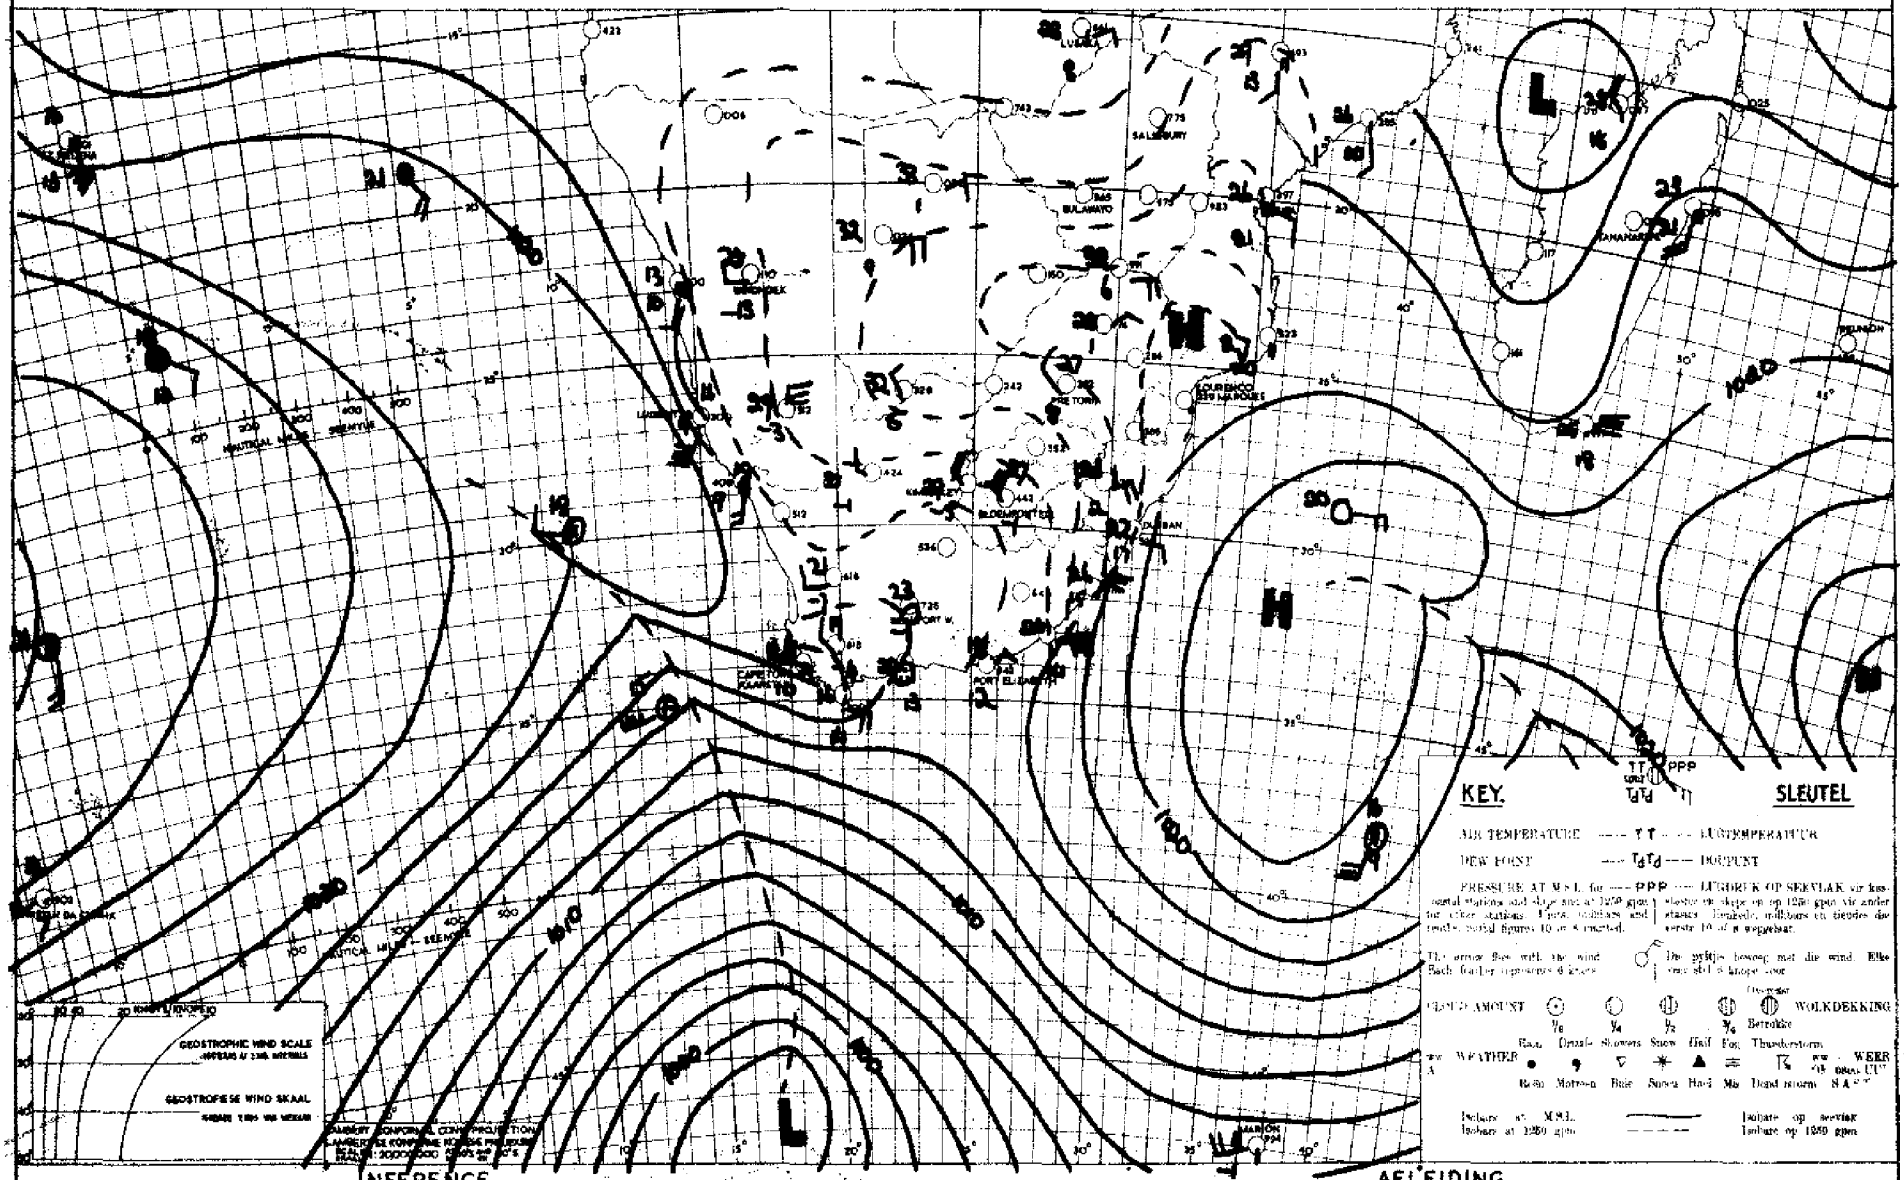
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



Dry air circulation over the Union gave fine weather conditions everywhere. A cold front approaching the west coast will cause some cloudy weather along the southwest and south coast. Otherwise there will be little change in the next day or two.

Die sirkulasie van droë lug het mooiweerstoestande oor die Unie laat voortduur. 'n Naderende koue front wes van Kaapland sal bewolkte weerstoestande langs die suidwes en suidkus veroorsaak. Andersins word min verandering vir die volgende paar dae verwag.

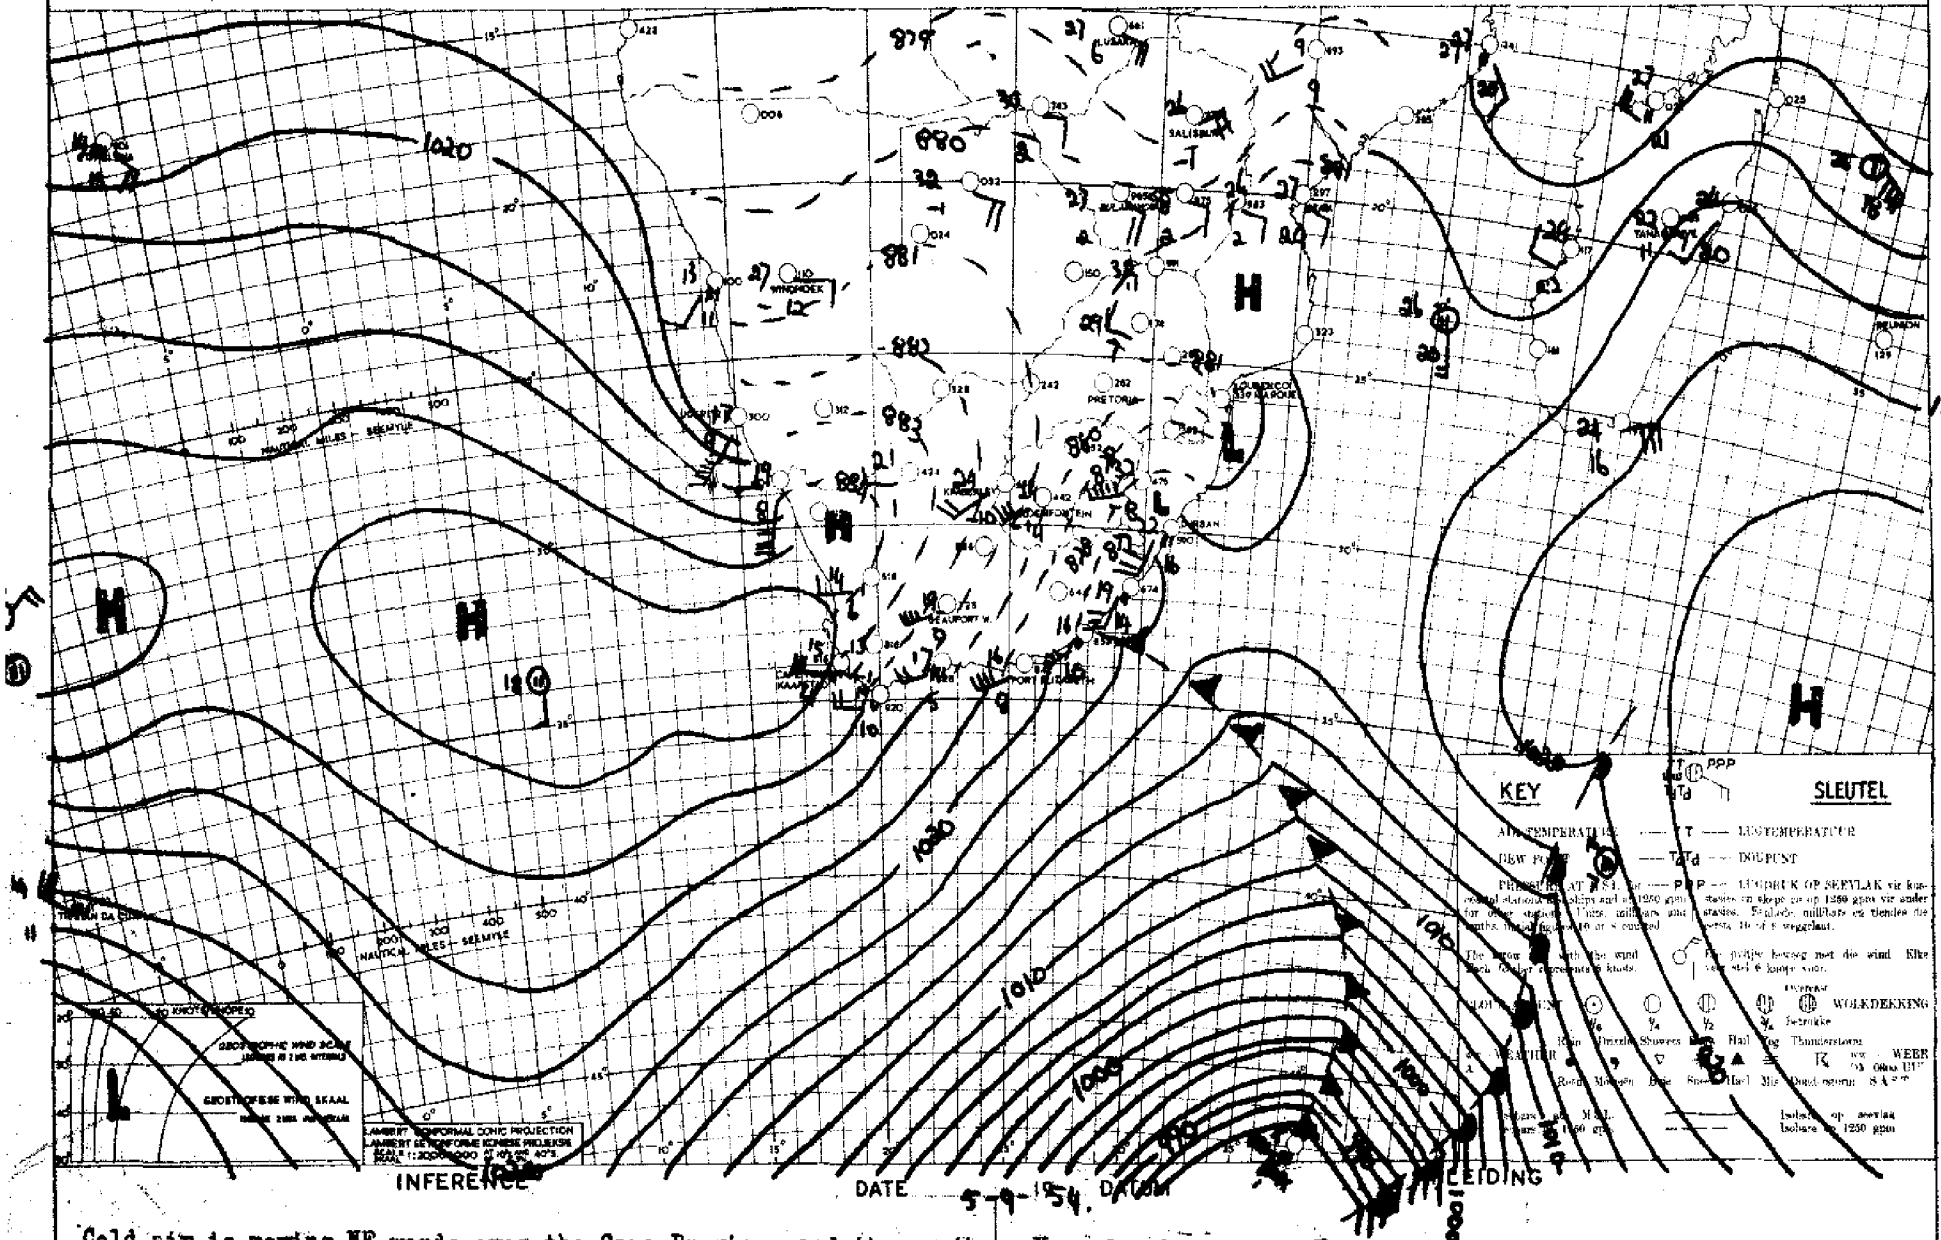
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



Cold air is moving NE-wards over the Cape Province and the southern half of the O.F.S.; but the area of SW-ly winds south of the Union, which is causing this, will not remain there very long.

Koue lug beweeg nou NO-waarts oor die Kaap Provinsie en oor die Suidelike helfte van O.V.S.; maar die gebied van SW-like wind suid van die Unie, wat dit veroorsaak, sal nie lank daar bly nie.

INFERENCE

DATE 6-9-1954. DATUM

AFLEIDING

A cold front from the Atlantic Ocean moved eastwards and the anticyclone behind it is now settled along the Natal coast. The invasion of cool moist air over Natal and the Eastern Transvaal caused cloudy weather over these areas, but due to sharp falls of pressure on the west coast this cool air invasion will be of short duration. With the approach of a cold front, the weather will again become cloudy along the Cape west coast.

'n Koue front het ooswaarts vanuit die Atlantiese Oseaan na die Indiese Oseaan beweeg en die antisikloon wat agter die front gevolg het, het Natal bereik. Die invloei van koel lug oor Natal en Oos Transvaal het bewolkte toestande oor hierdie streke veroorsaak, maar weens skerp drukvalle langs die weskus sal dit maar van korte duur wees. Met die aankoms van 'n nuwe koue front vanuit die weste sal bewolkte weerstoestande weer langs die Kaapse weskus ontwikkel.

The low pressure system SSW of the Union will bring in cold air tomorrow over the southern half of the Union, and showers will extend along the south coast and adjacent interior.

Die laedrukstelsel SSW van die Unie sal koue lug oor die S-like helfte van die Unie, môre laat instroom en reënbuie sal oor die suidkusstreke en aangrensende binneland uitbrei.

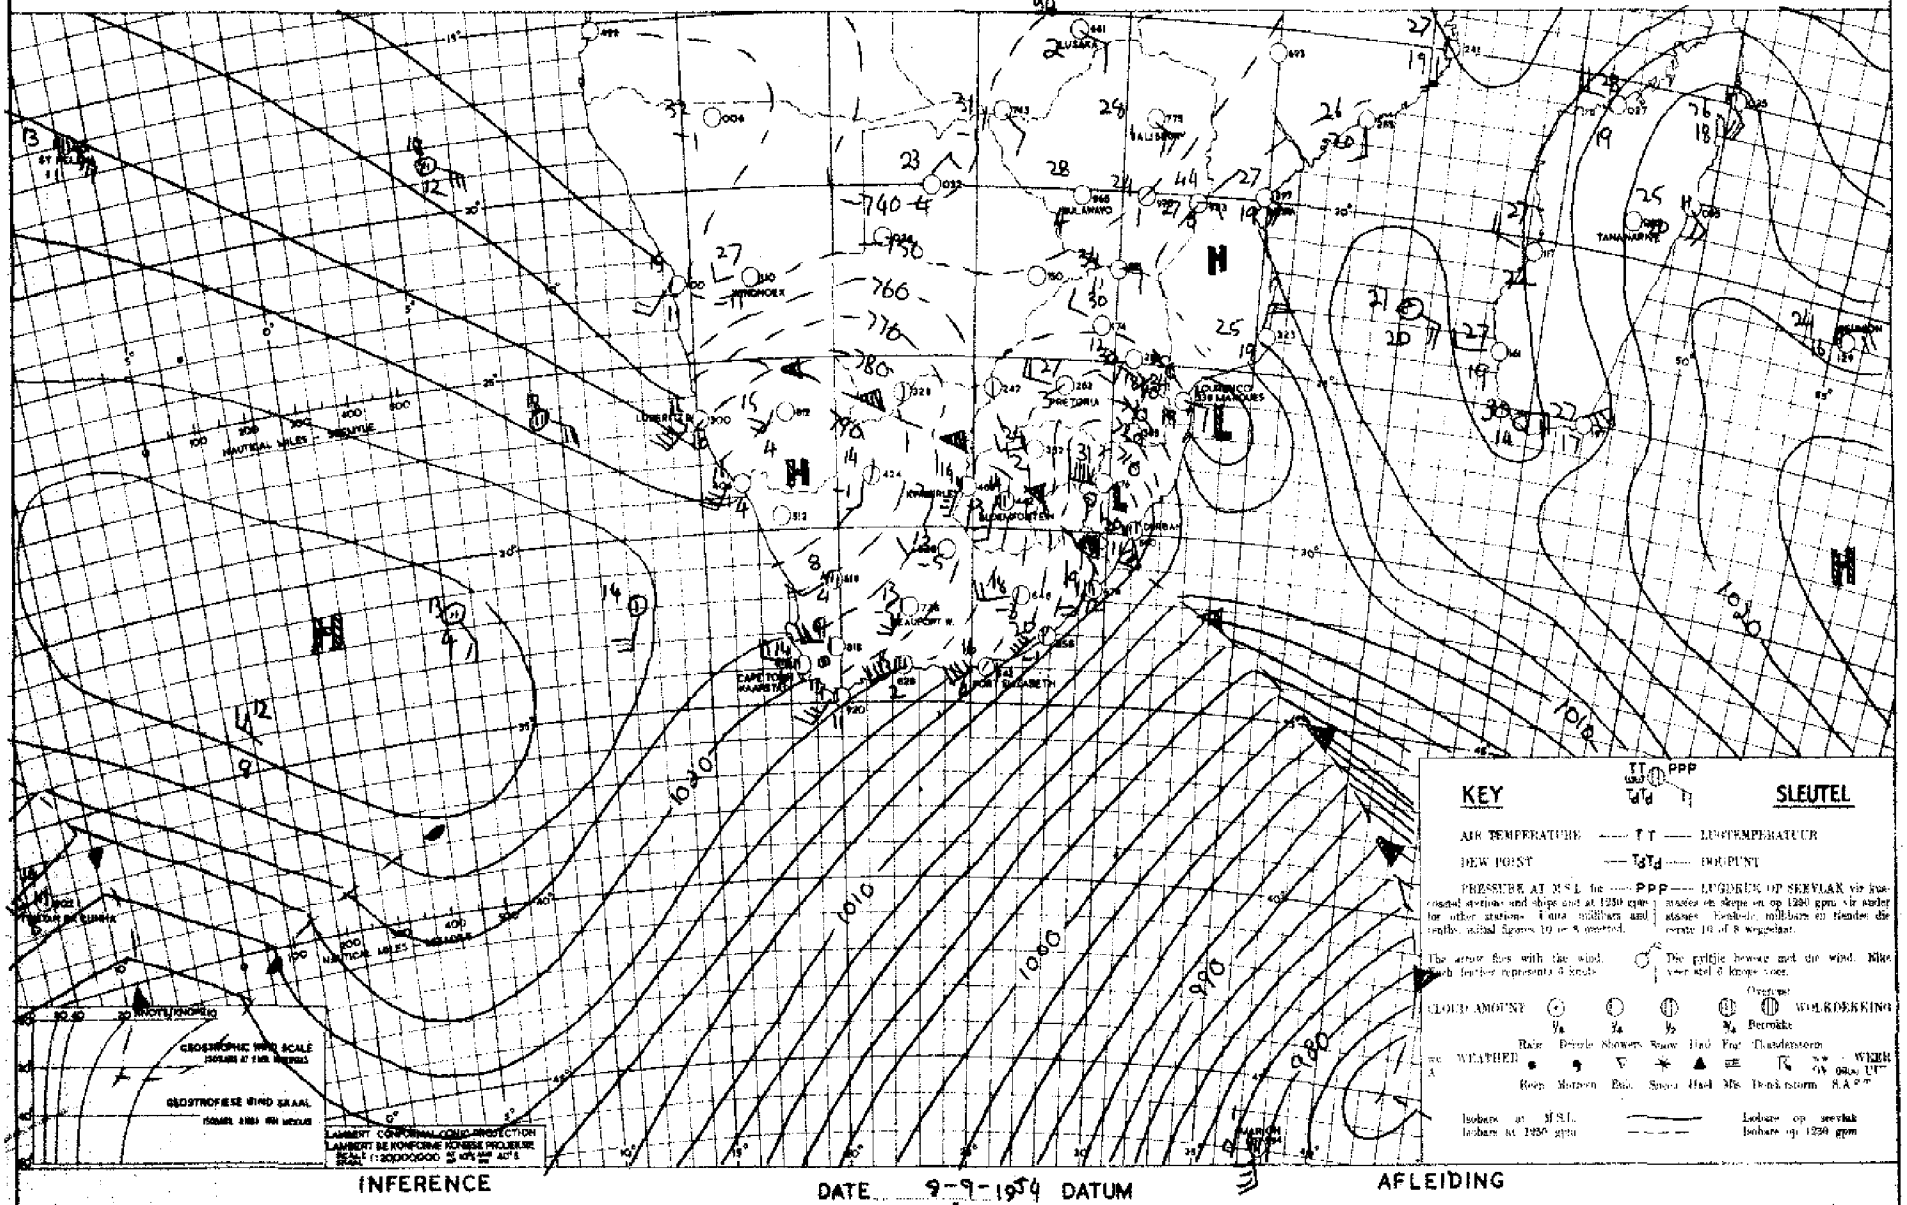
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 9-9-1954 DATUM — AFLEIDING

Kouer lug wat oor die suidelike helfte van die Unie beweeg het, het gepaard gegaan met bewolkte toestande oor suidwes Kaapland en suid Vrystaat. Die res van die Unie was egter nog onder invloed van warm, droër lug. Na verwagting sal koeler lug instroom oor Natal en Oos Transvaal en bewolkte weer veroorsaak.

Colder air has moved over the southern half of the Union and was accompanied by cloudy weather over southwestern Cape and southern Freestate. The remainder of the Union was however, still under influence of warm, dry air. It is expected that cooler air will move over Natal and eastern Transvaal causing cloudy conditions.

INFERENCE

There is an anticyclone ESE of the Union, which is bringing in moist air over the eastern parts of the Transvaal and also over Zululand; and another one SW of the Union, which is causing low cloud patches over the SW and south coasts. The depression SSW SSW of the Union looks too weak to bring about much change in this situation.

DATE 9-9-1954 DATUM

AFLEIDING

Daar is 'n antisikloon OSO van die Unie wat vogtige lug oor die O-like dele van Transvaal asook Soeloeland laat instroom; en 'n ander een SW van die Unie wat miswolke oor die SW en suidkusstreke veroorsaak. Die laedrukstelsel SSW van die Unie lyk te swak om veel verandering in hierdie toestand te veroorsaak.

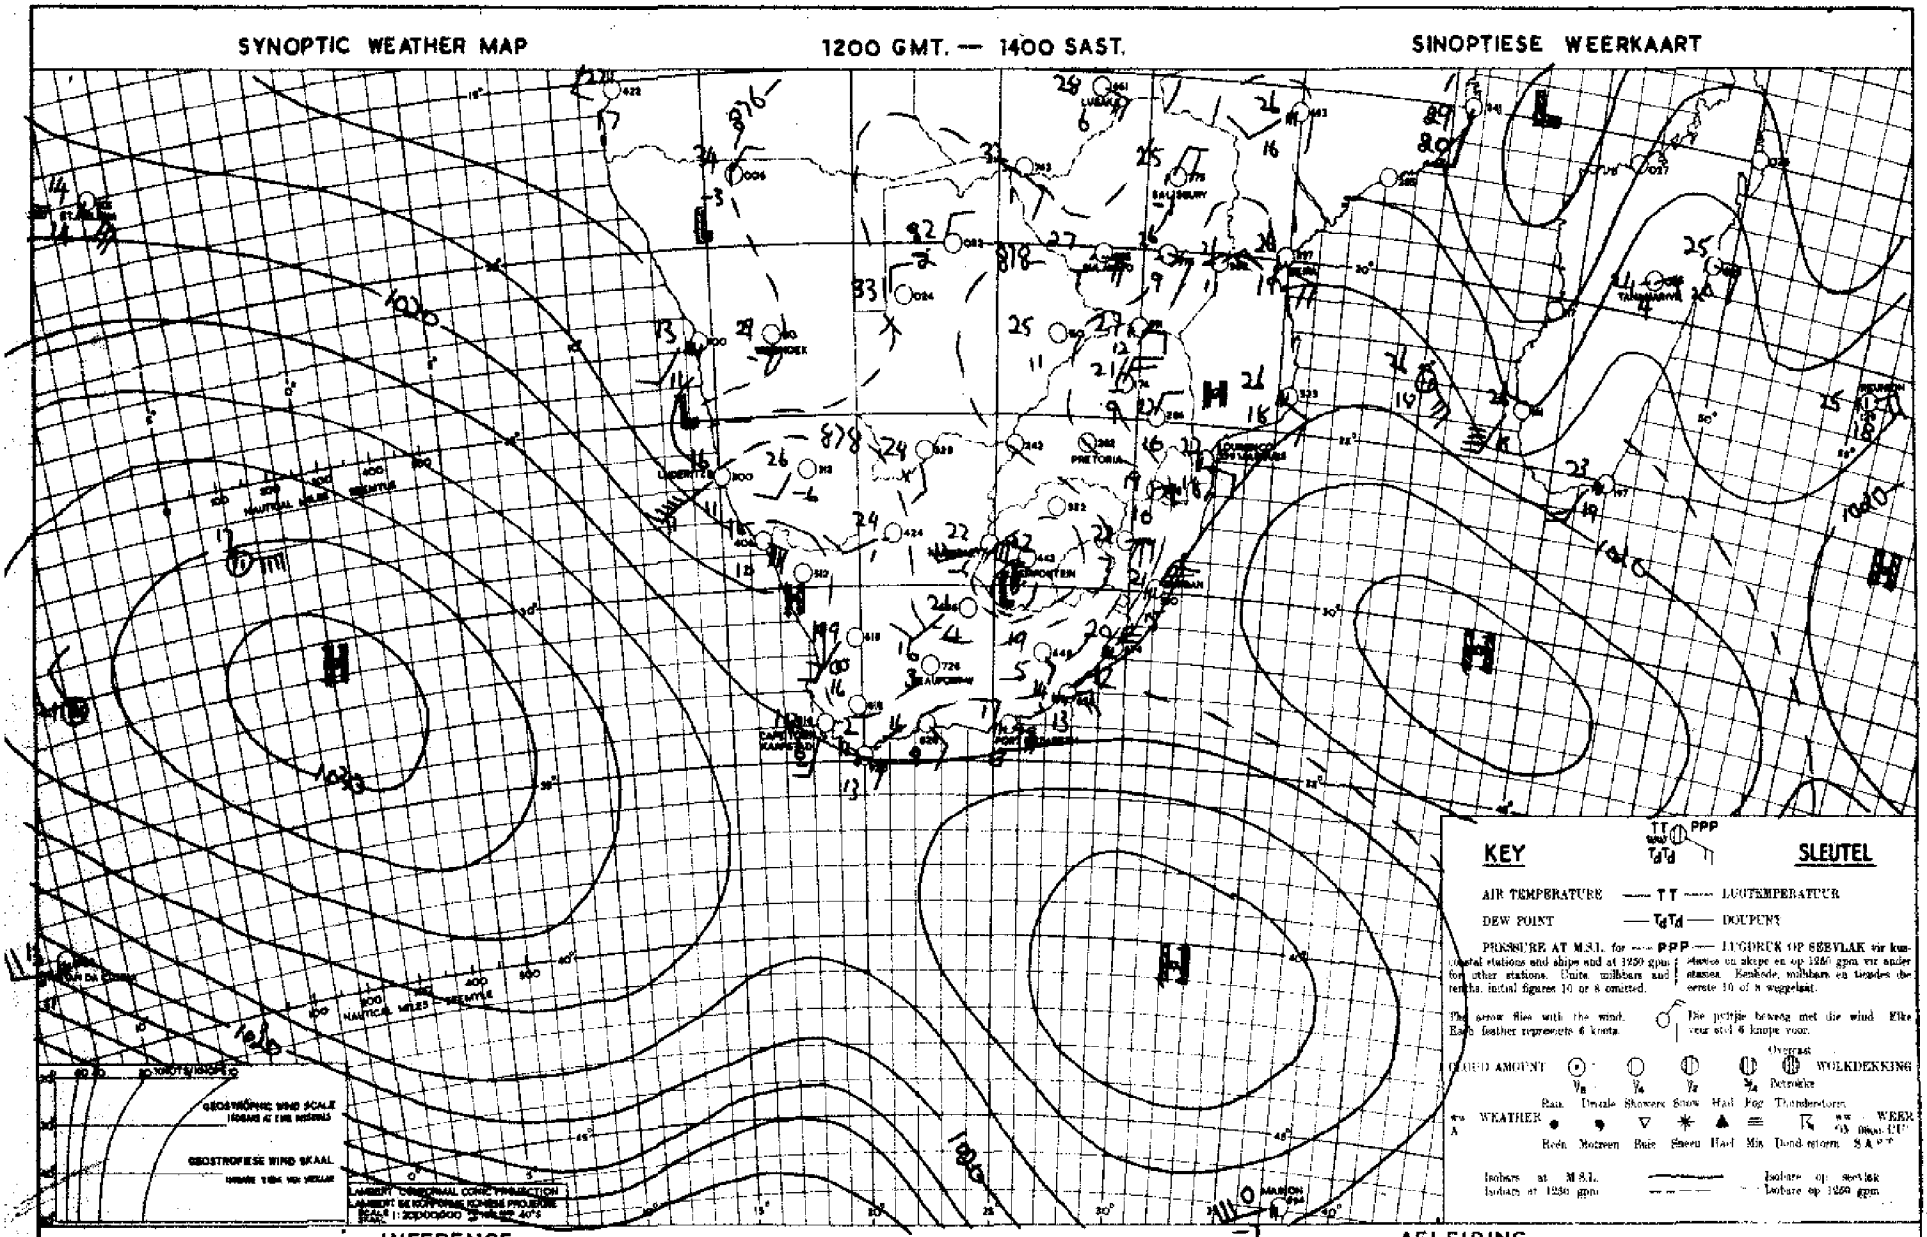
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 10-9 1954 DATUM — AFLEIDING

Anticyclonic circulation dominates the ocean area whilst a weak cyclonic circulations controls the air flow over the Union. Apart from some scattered clouds along the eastern and south-eastern Union, the weather will remain fine. Temperatures will be approx. normal.

Antisikloniese sirkulasie beheer die oseaan gebiede terwyl 'n swak sikloniese stroming oor die Unie voorkom. Met uitsondering van 'n paar verspreide wolke oor die oostelike en suid-oostelike Unie egter, sal mooiweers toestande voorkom. Temperatuur sal ongeveer normaal wees.

The weak anticyclone SW of the Union is moving E-wards, and the areas of low pressure on the east coast and over the interior are being pushed NE-wards. Cooler air from the anticyclone will invade the southern parts of the Cape Province.

Die swak antisikloon SW van die Unie is besig om ooswaarts te beweeg en die gebied van lae druk langs die ooskus, asook dié oor die binneland, word NO-waarts gestoot. Koeler lug vanuit die antisikloon sal die suidelike dele van Kaapland binnedring.

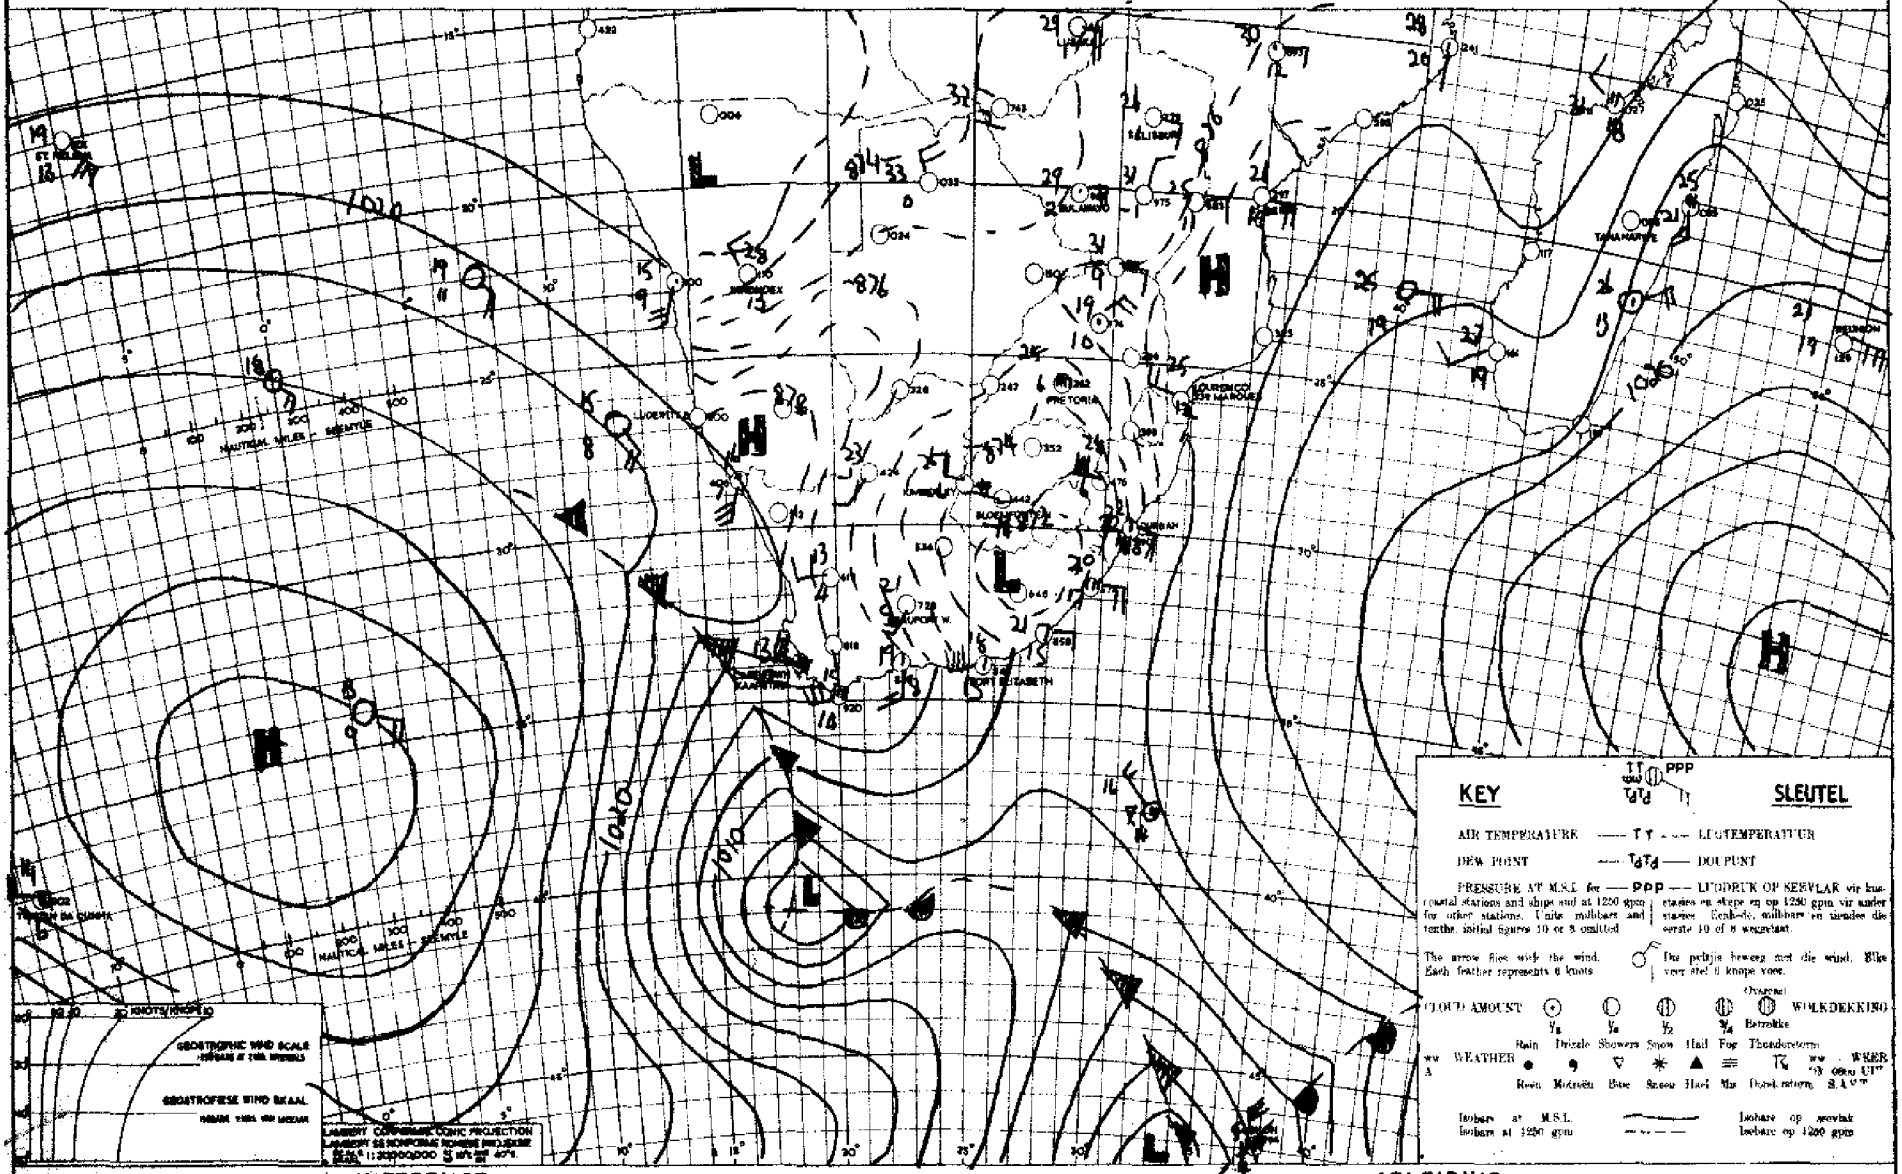
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 12-9-1954 DATUM — AFLEIDING

A cold front is approaching the Cape from the west and the anticyclone behind it will influence the southern half of the Union. The weather will be fine over these areas, but the temperature will drop somewhat. The remainder of the Union will still be under the influence of moist. Indian Ocean air and partly cloudy to cloudy conditions will thus persist over Natal and the Eastern Transvaal.

'n Koue front nader die Kaap vanuit die weste en die antisikloon wat agter aankom sal teen môre die westelike helfte van die Unie beheer. Dit sal mooiweer wees oor hierdie dele alhoewel dit ietwat koeler sal wees. Die res van die Unie is nog onder die invloed van vogtige Indiese Oseaan lug en dus sal gedeeltelik bewolkte tot bewolkte weerstoestande oor Natal en Oos Transvaal bly voortduur.

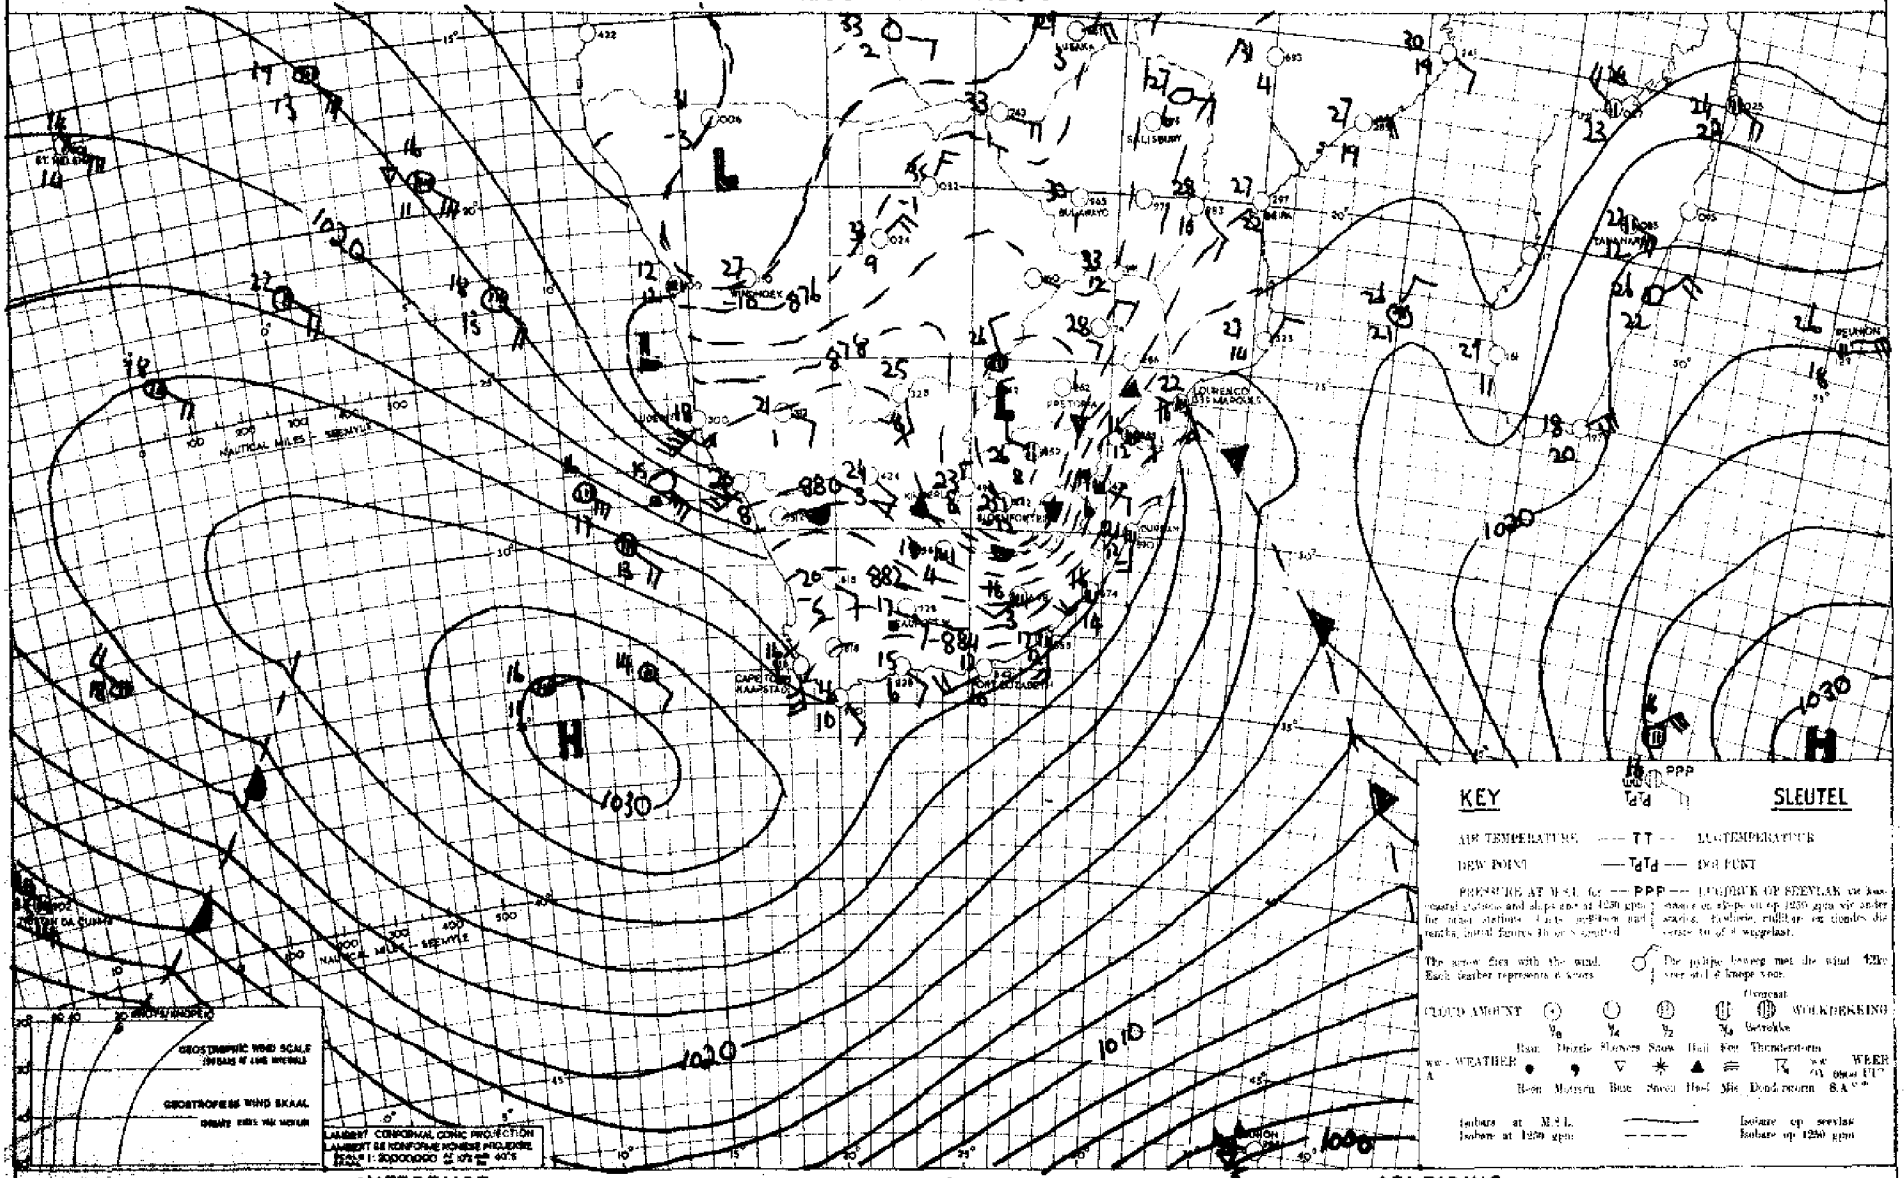
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 13-9-1954 DATUM — AFLEIDING

Falling pressure tendencies along the west coast indicate that the west coastal low will extend southwards and the high pressure system SW of the Cape will split with one cell moving to the SE coast tomorrow. Cool, moist air will spread to Transvaal and northern Free State and partly cloudy conditions will exist over these areas and over Natal.

Dalende drukneigings langs die weskus dui daarop dat die kuslaag suidwaarts sal beweeg en die hoogdrukstelsel suidwes van die Kaap sal in twee verdeel, waarvan die oostelike sel môre langs die suidooskus aanwesig sal wees. Koel, vogtige lug sal Transvaal en Noord-Vrystaat binnestroom en oor hierdie gebied en Natal sal dit gedeeltelik bewolk wees.

SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART

INFERENCE — DATE 15-9-19 54 — DATUM — AFLEIDING

Pressure is falling rapidly over the southern Cape coasts and wind over the Cape Province will become more westerly, but the humid air over S.W.A. will continue to move towards Transvaal and and Freestate, causing cloudy weather.

Lugdrukke daal vinnig oor die suidelike kusstreke van die Kaapprovinsie. Wind sal wes word oor Kaapland, maar die vogtige lug oor S.W.A. sal aanhou om in die rigting van die Transvaal en Vrystaat te beweeg en bewolkte weer sal gevolglik voorkom.

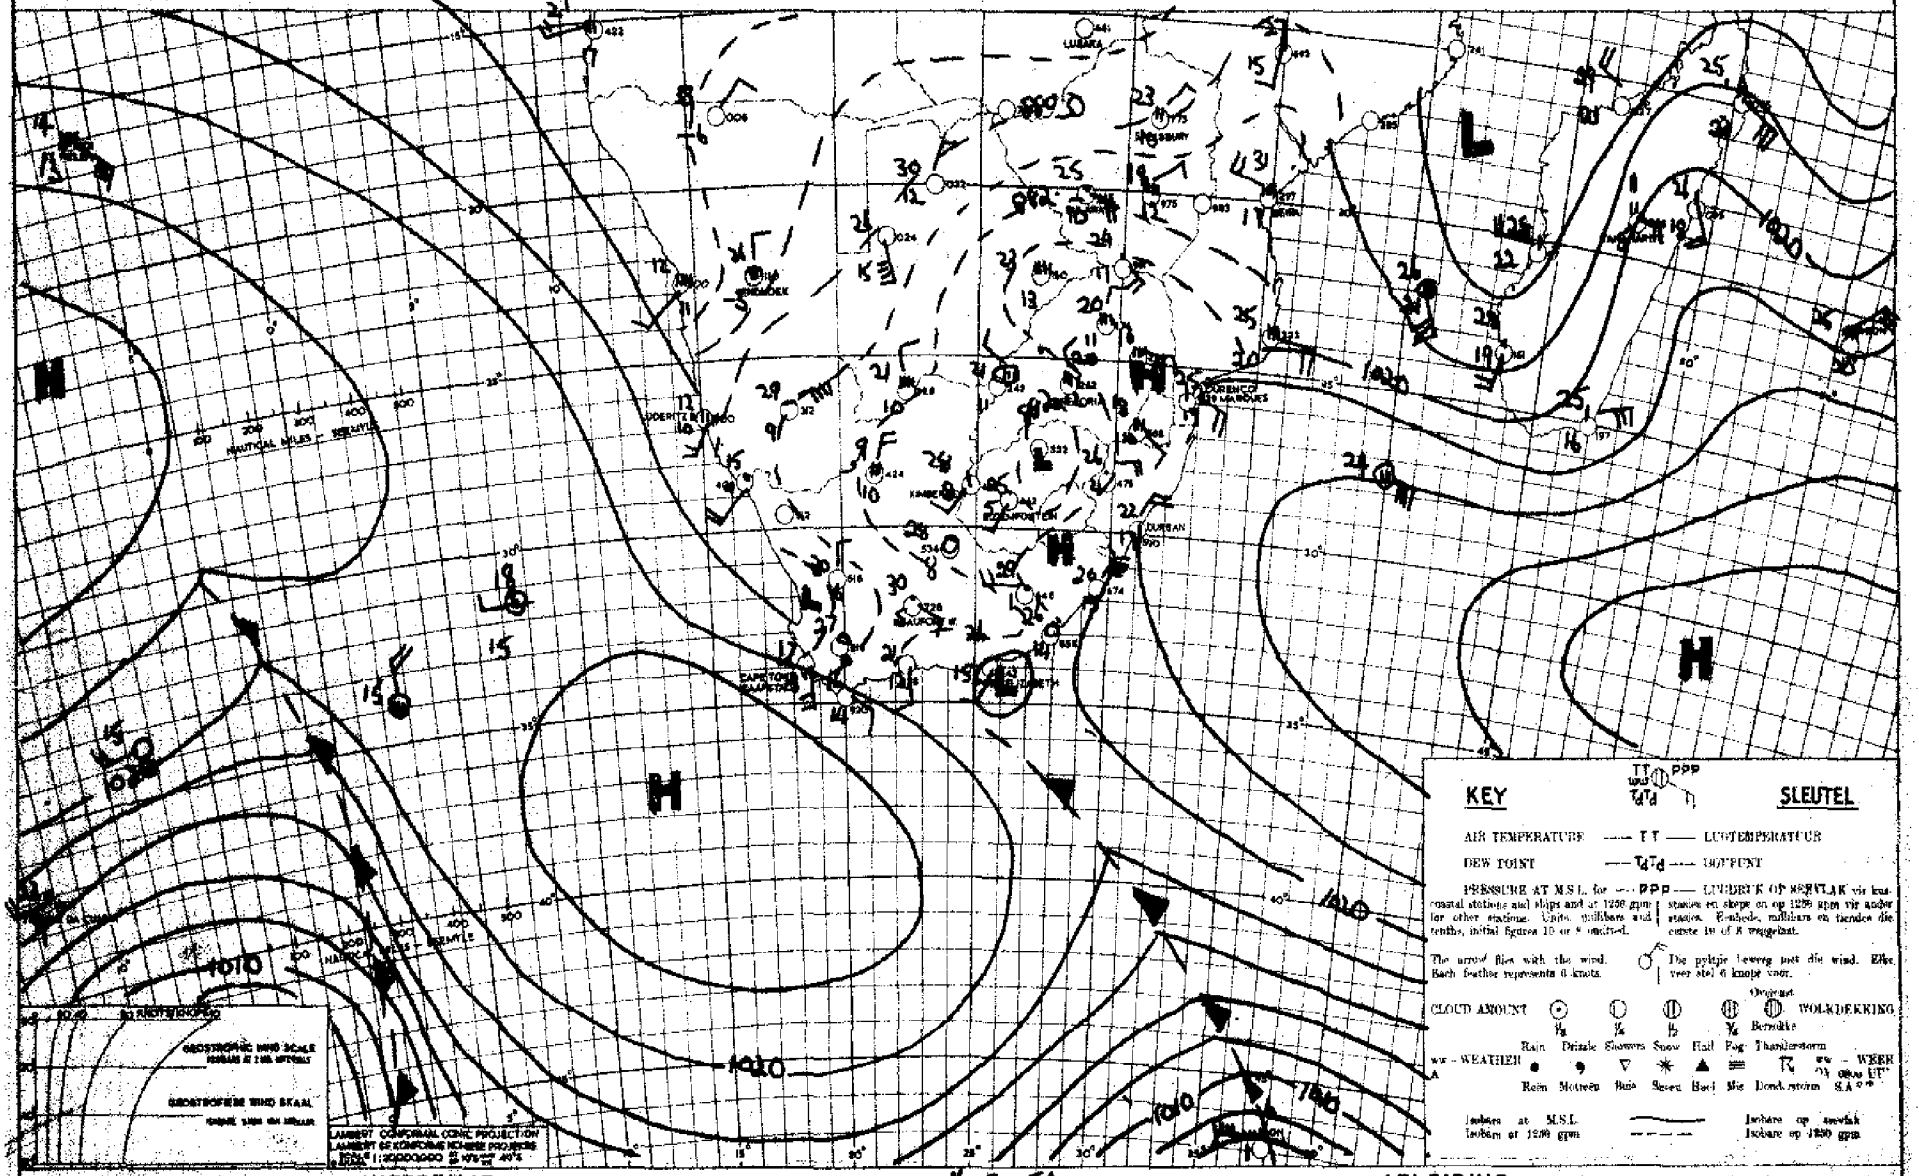
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 6-9-1954 DATUM — AFLEIDING

A weak anticyclone just south of the Cape moves slowly eastward causing temporary cloudy weather along the South and southeast Cape coast. Humid air is still present over the major part of the eastern Union and scattered clouds will still develop over these areas, but thunder conditions will be confined mainly to the Eastern and N. Transvaal. Over the remainder of the Union it will be fair to fine.

'n Swak antisikloon wat net suid van die Kaap lê, beweeg stadig ooswaarts en sal tydelike bewolkte toestande langs die suid en suidwes kus van Kaapland veroorsaak. Vogtige lug is nog oor die Oostelike Unie teenwoordig en verspreide wolke sal nog oor hierdie gebiede ontwikkel, maar donderweers ontwikkeling sal hoofsaaklik tot Oos en Noord Transvaal beperk wees.

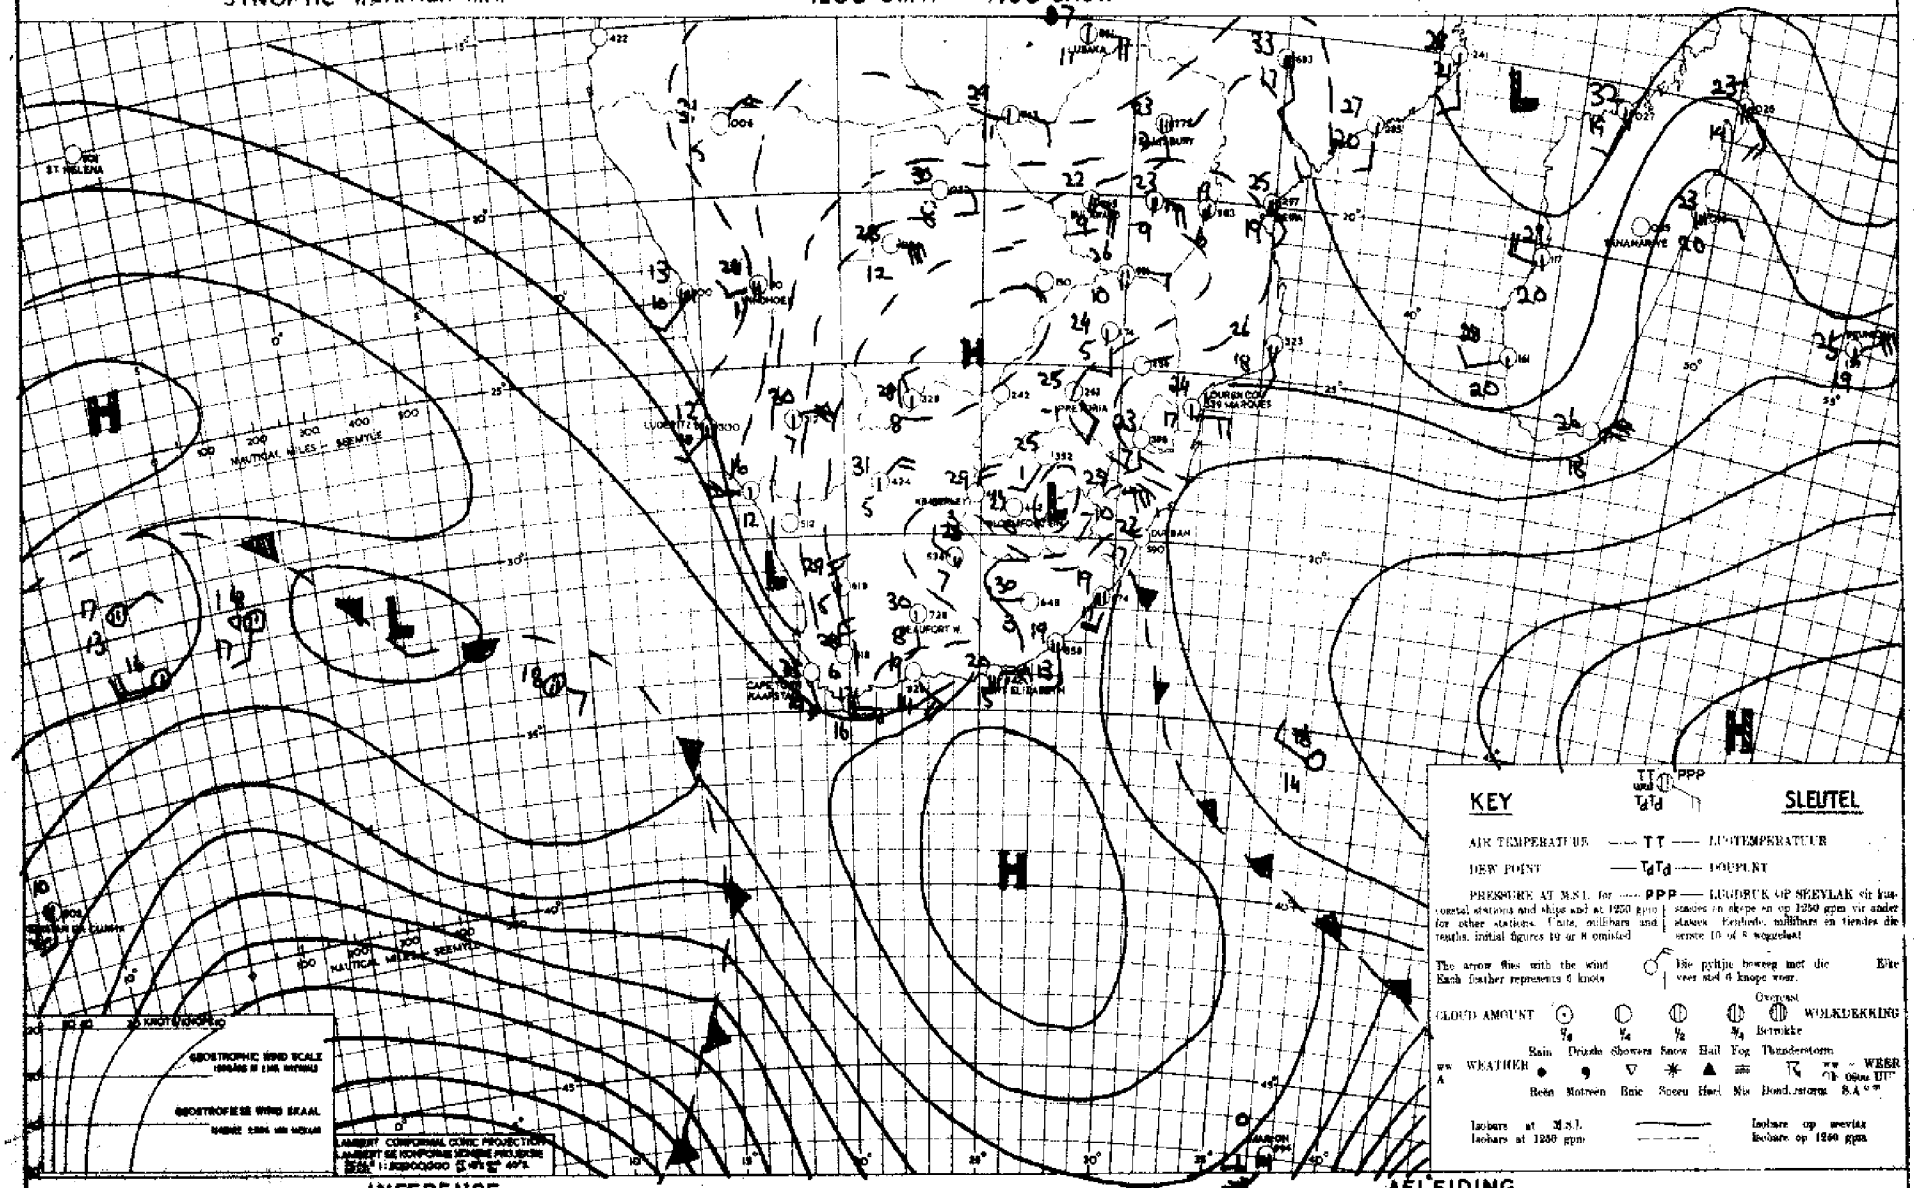
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 17-9-1954 DATUM AFLEIDING

Very dry air invaded Natal, Transvaal and the Free State, thereby clearing the unsettled weather of the previous days. A developing anticyclone is now situated south of Port Elizabeth, and will probably cause a re-influx of moist air over Natal and Transvaal. With favourable upper air flow, suitable conditions for thunder or rainshowers will recur over Northern Natal and Transvaal.

Baie droë lug beïnvloed Natal, Transvaal en die Vrystaat en het die bewolkte toestande van die afgelope paar dae opgeklaar. 'n Hoogdruk sisteem suid van Port Elizabeth is nog in die ontwikkelings stadium en sal moontlik weer vogtige lug oor Natal en Transvaal invoer. Met gunstige bolug toestande sal donder of reënweer weer oor Noord Natal en Transvaal ontwikkel.

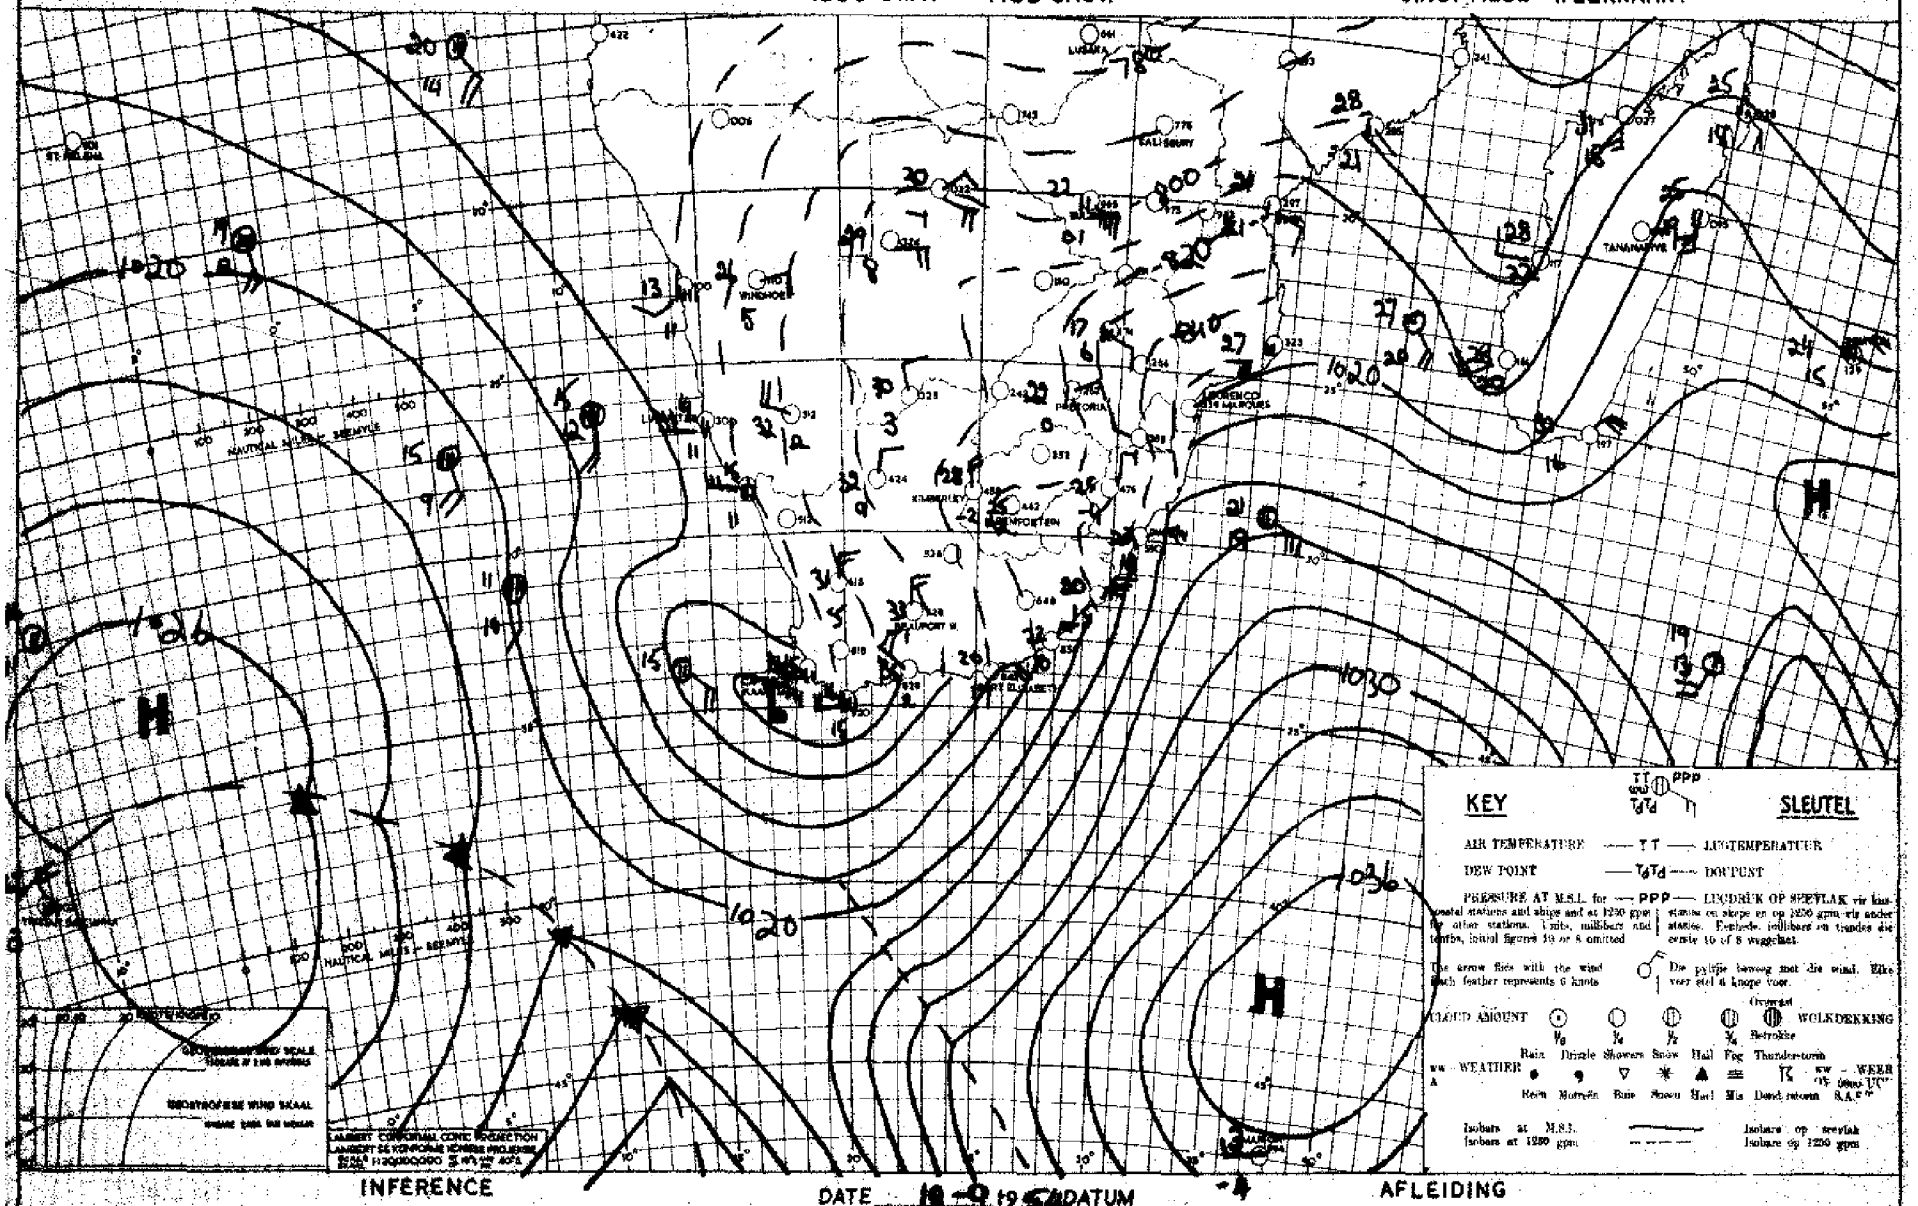
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



Under influence of the strong anticyclone over the Indian Ocean moist air will penetrate the eastern half of the Union, and with expected favourable upper air conditions rain and thunder conditions will occur over Transvaal and the northern parts of the O.F.S. and Natal. With the expected movement of the systems eastwards it will clear over the eastern half of the Union and cooler air will move over the southwestern Cape.

Onder invloed van die sterk antisiklone oor die Indiese Oseaan sal vogtige lug die oostelike helfte van die Unie binnedring en met verwagte gunstige bolug toestande sal reën en donderweer voorkom oor Transvaal en die noordelike dele van die Vrystaat en Natal. Met die verwagte beweging van die sisteme oostwaarts sal dit opklaar oor die oostelike helfte van die Unie terwyl koeler lug oor die Suidwestelike Kaapprovinsie sal beweeg.

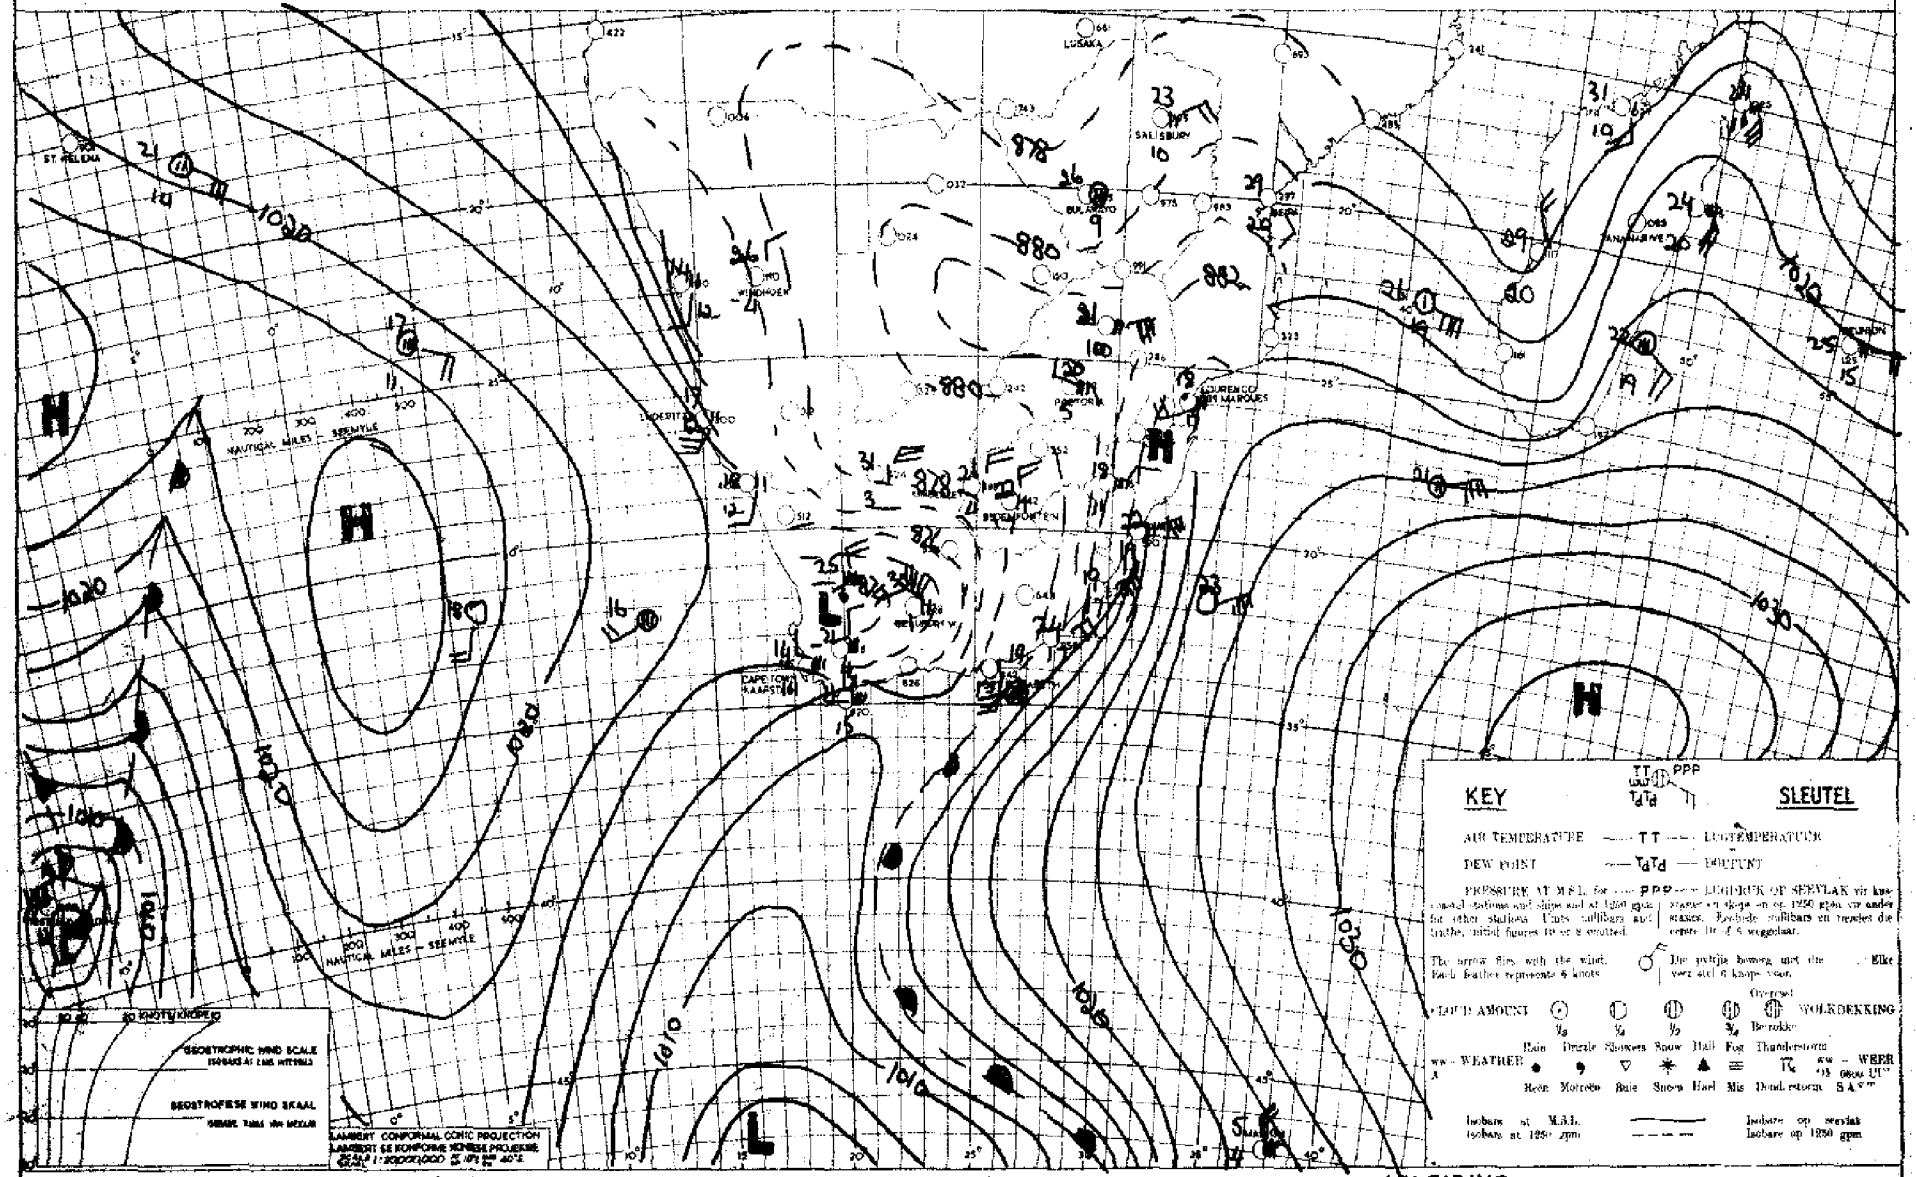
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 19-9-1954 DATUM AFLEIDING

A strong anticyclone circulation over the Indian Ocean caused an influx of moist air over Transvaal, Natal and the Northeastern Free State. The presence of an upper low pressure centre over Northern Transvaal gave rise to scattered thunder conditions over the Northeastern Union. With the influx of moist air over the Southwestern Cape due to the eastward advance of the atlantic Anticyclone, cloudy weather also developed over these areas.

'n Sterk antisikloniese sirkulasie oor die Indiese Oseaan het vogtige lug oor Transvaal, Natal en Noordoos Vrystaat ingevoer. Die teenswoordigheid van 'n laagdrukstelsel oor Noord Transvaal in die bolug het daartoe bygedra om donder en reën toestande oor hierdie streke te veroorsaak. Met die invoer van vogtige lug oor suidwes Kaapland weens die geleidelike oostwaartse beweging van die Atlantiese Hoog het bewolkte toestande ook oor hierdie streke ontwikkel.

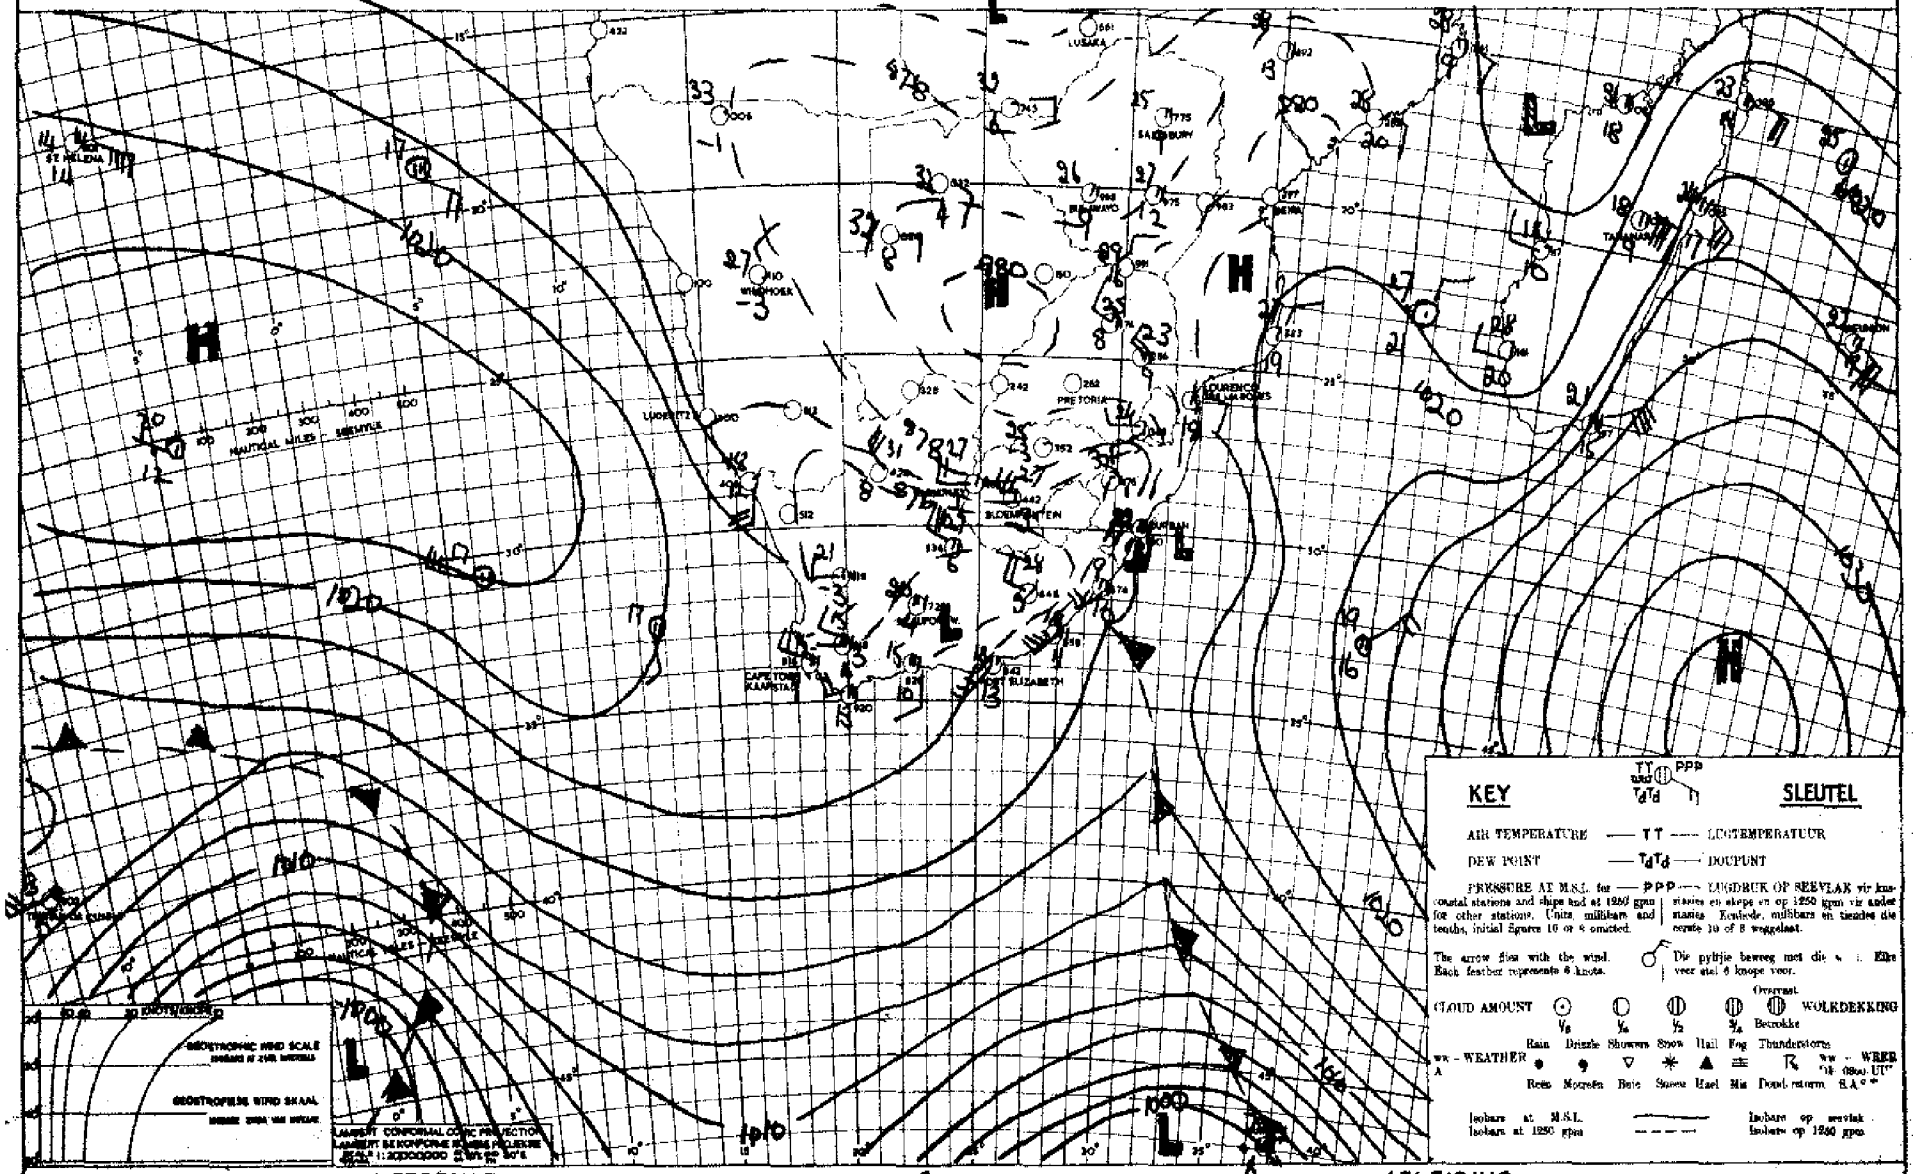
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 20-9-1954 DATUM — AFLEIDING

With the eastward movement of the Indian Ocean anticyclone, its influence over the Eastern Union is diminishing rapidly. At the same time the eastward movement of the Atlantic Anticyclone South of the Cape is very weak and will only affect the East Cape and Natal coast. It will be cloudy along the Cape Coastal areas and the Natal coast. Scattered clouds will also occur over Transvaal - remainder of the Union - fine.

Met die oostwaartse beweging van die Indiese Oseaan antisikloon, verminder sy invloed op die oostelike dele van die Unie vinnig. Terselfdertyd is die oostwaartse beweging van die Atlantiese Hoog baie swak en sal net Natal affekteer. Dit sal bewolk wees langs die kusstreke van Kaapland en Natal. Verspreide wolke sal ook oor Transvaal ontwikkel, maar elders oor die Unie sal dit hoofsaaklik mooiweer wees.

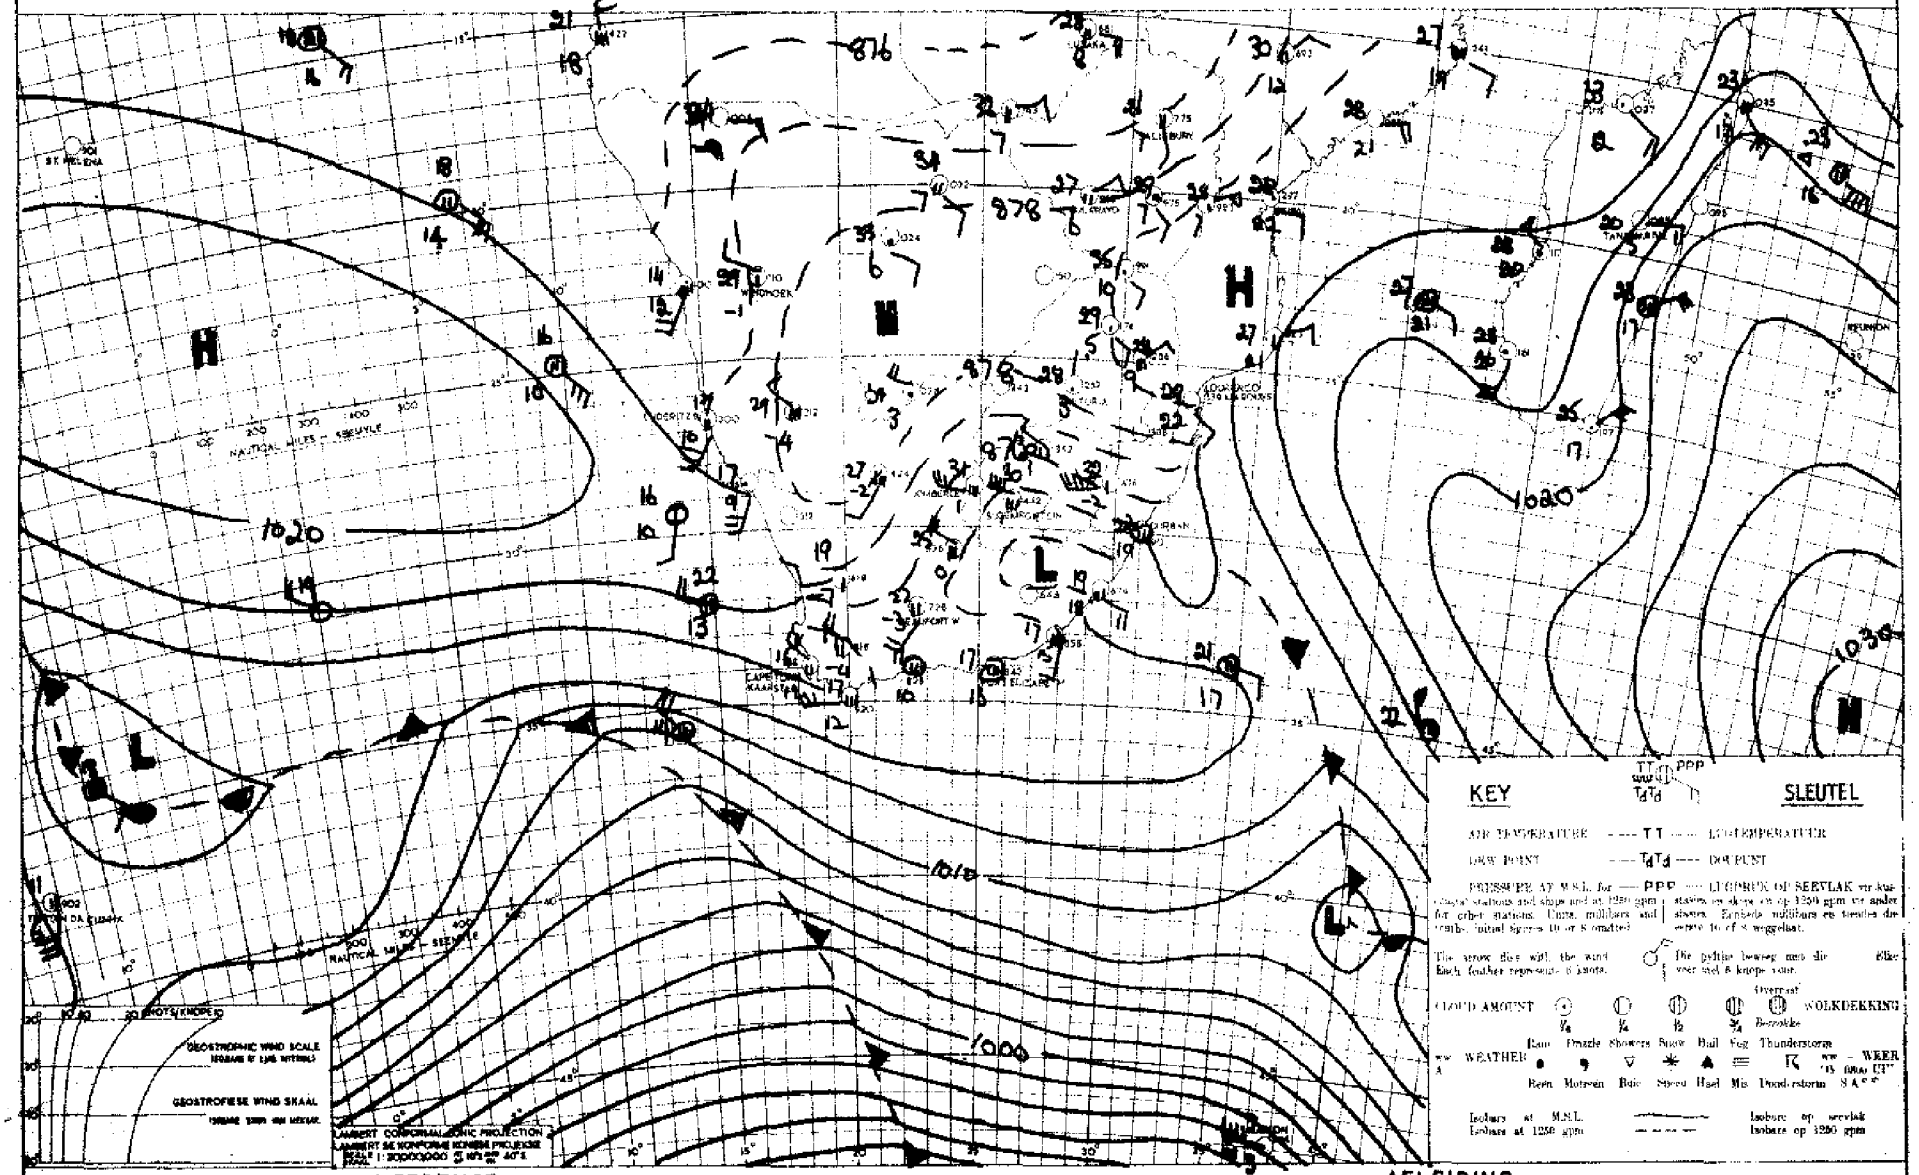
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE

DATE 21-9-1954 DATUM

AFLEIDING

A trough is approaching the west coast and this should result in cloudy weather and light rain along the southwest coast extending to the south coast during the day. Over the land upper westerly winds will maintain fair to fine, warm weather.

'n Trog nader die weskus en dit behoort bewolkte weer met ligte reën aan die suidweskus en later ook aan die suidkus te bring. Westelike bowinde sal warm mooiweerstoestande oor die binneland handhaaf.

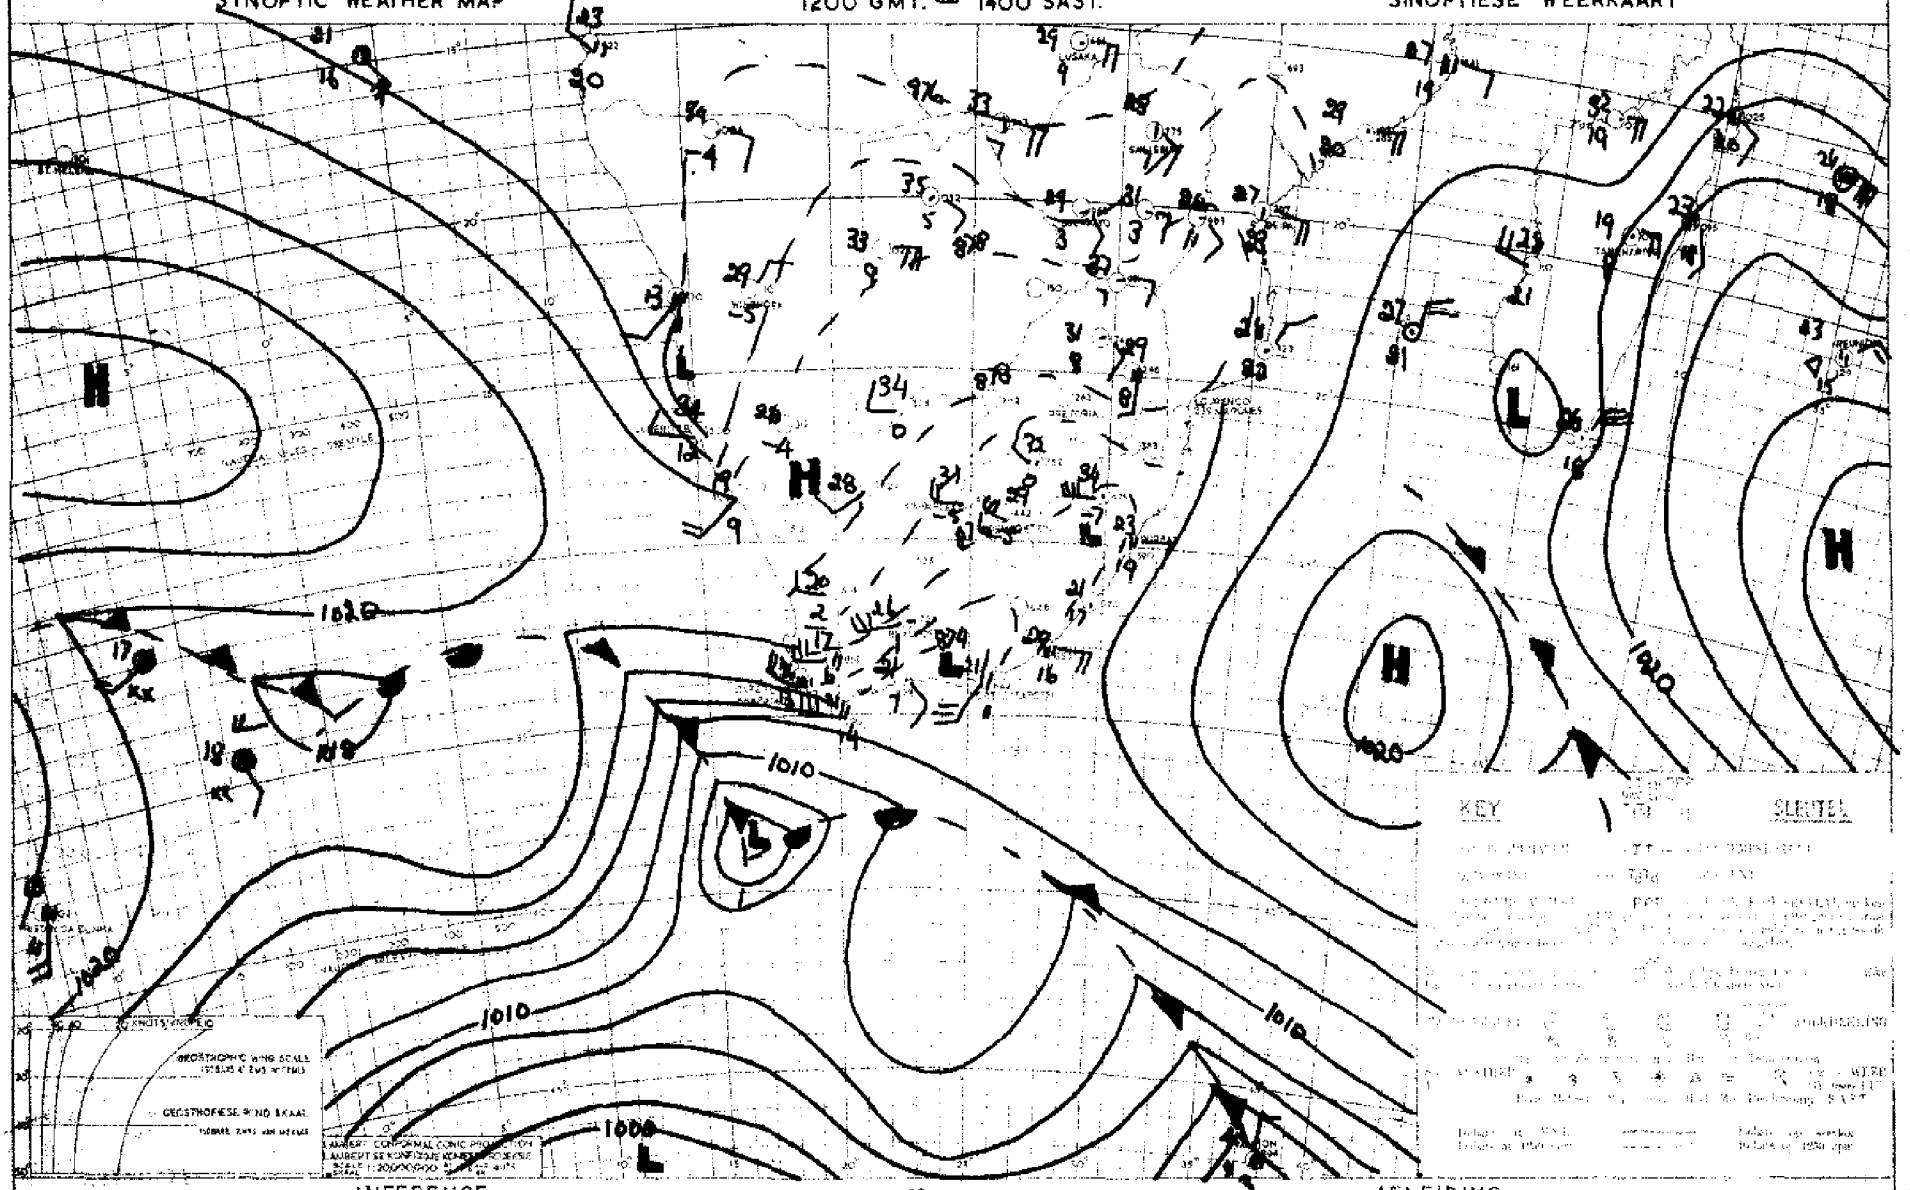
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 22-9 1964 DATUM AFLEIDING

Minor waves are forming on the cold front south and west of the **Union. These will causes shallow influxes of sea air along** the Cape coastal regions and the Natal coast. Variable cloud amounts will occur over these areas. The remainder of the Union will remain fine and hot as the air circulating over these areas is dry and very warm.

Klein golwe op die koue front beweeg van wes na oos, suid van die Unie. Die passering van hierdie golwe sal ondiepe stroming van seelug langs die Kaapse kuststreke en die van Natal veroorsaak. Veranderlike hoeveelhede wolke sal oor hierdie streke voorkom. Die res van die Unie word beïnvloed deur warm en droë lug en dus sal mooiweerstoestande met hoë temperature voorkom.

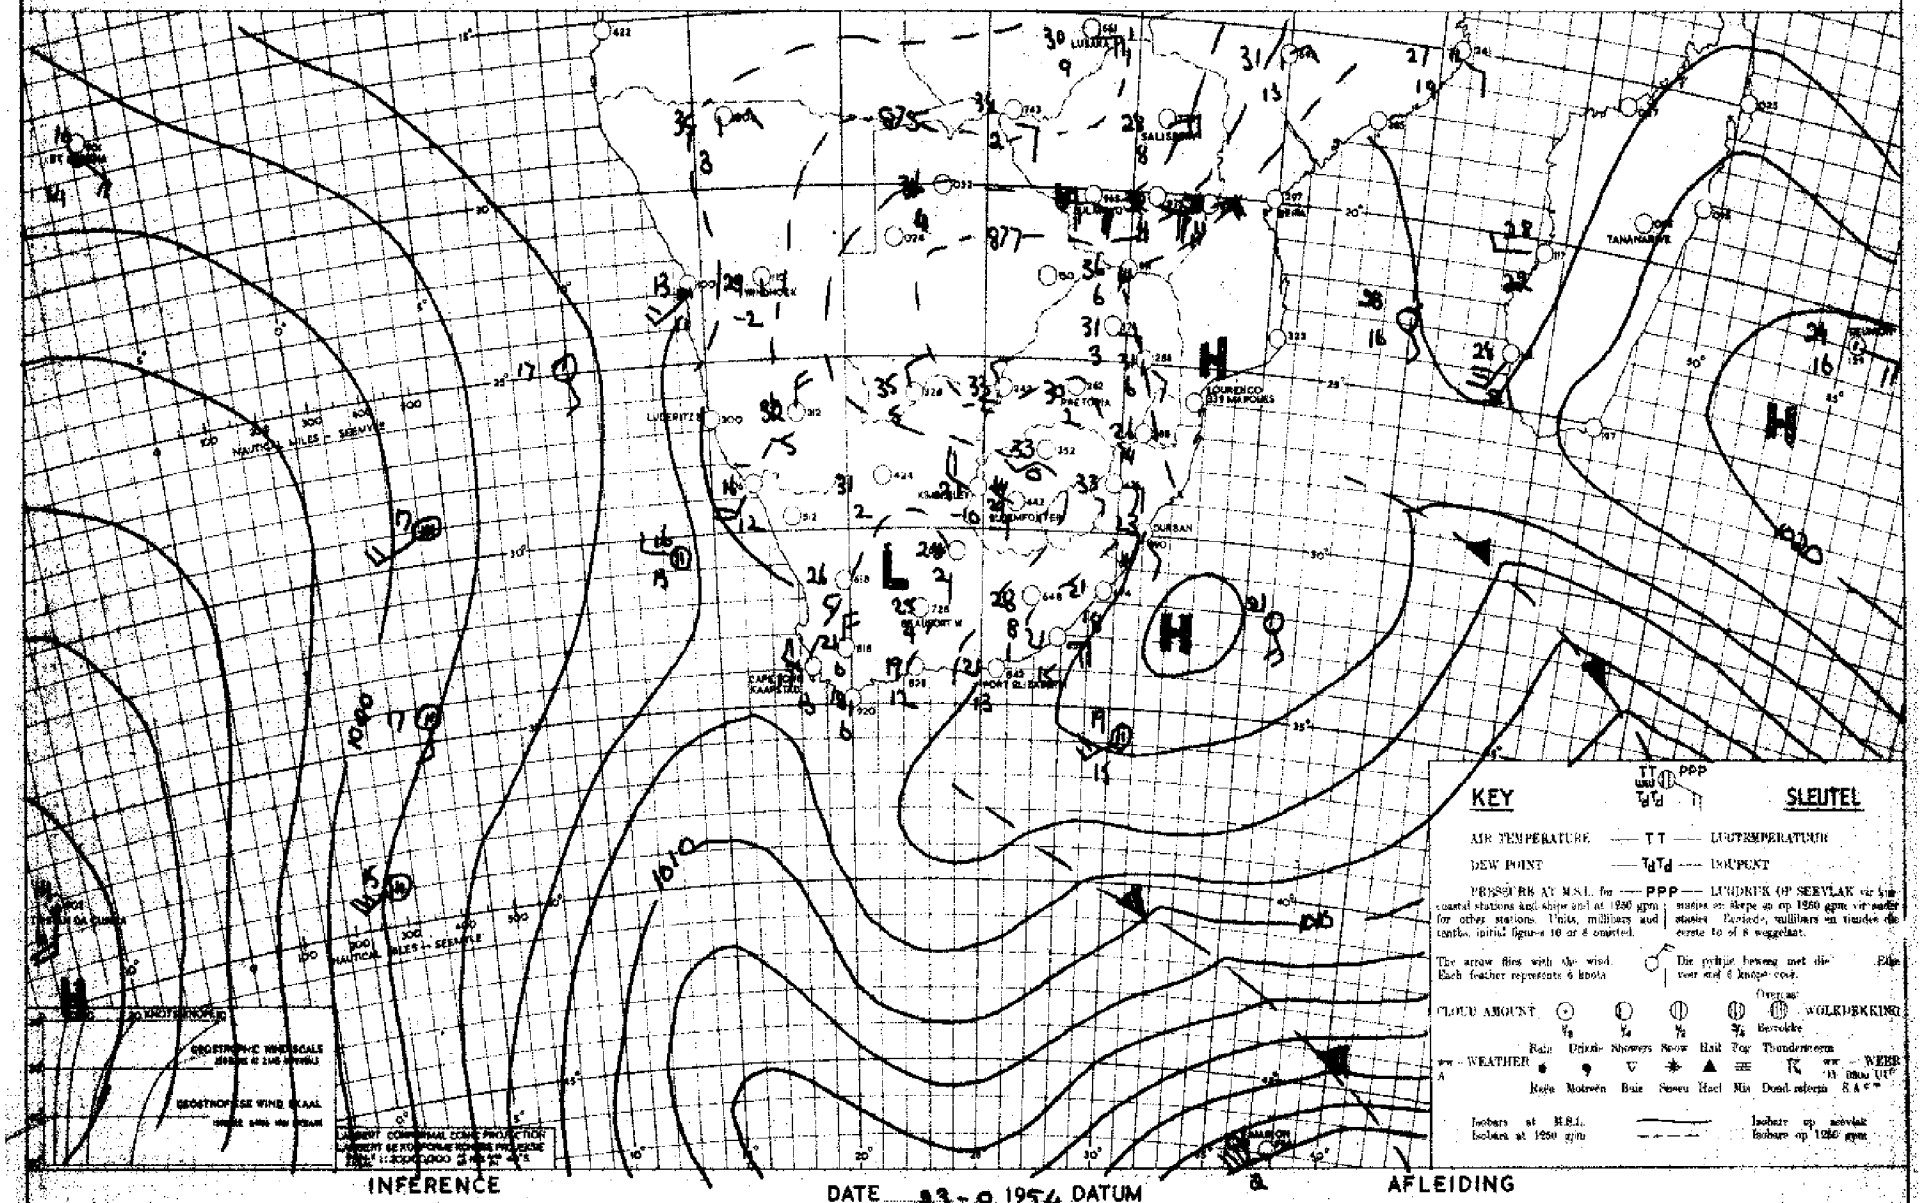
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 23-9 1954 DATUM — AFLEIDING

Pressure is falling rapidly over the western half of the Union and weather development is likely over the Cape Province. The high over the Atlantic will only move eastwards slowly.

Lugdrukke daal vinnig oor die westelike helfte van die Unie en daar sal ontwikkelings plaasvind oor die Kaapprovinsie. Die Hoog oor die Atlantiese Oseaan sal maar stadig ooswaarts beweeg.

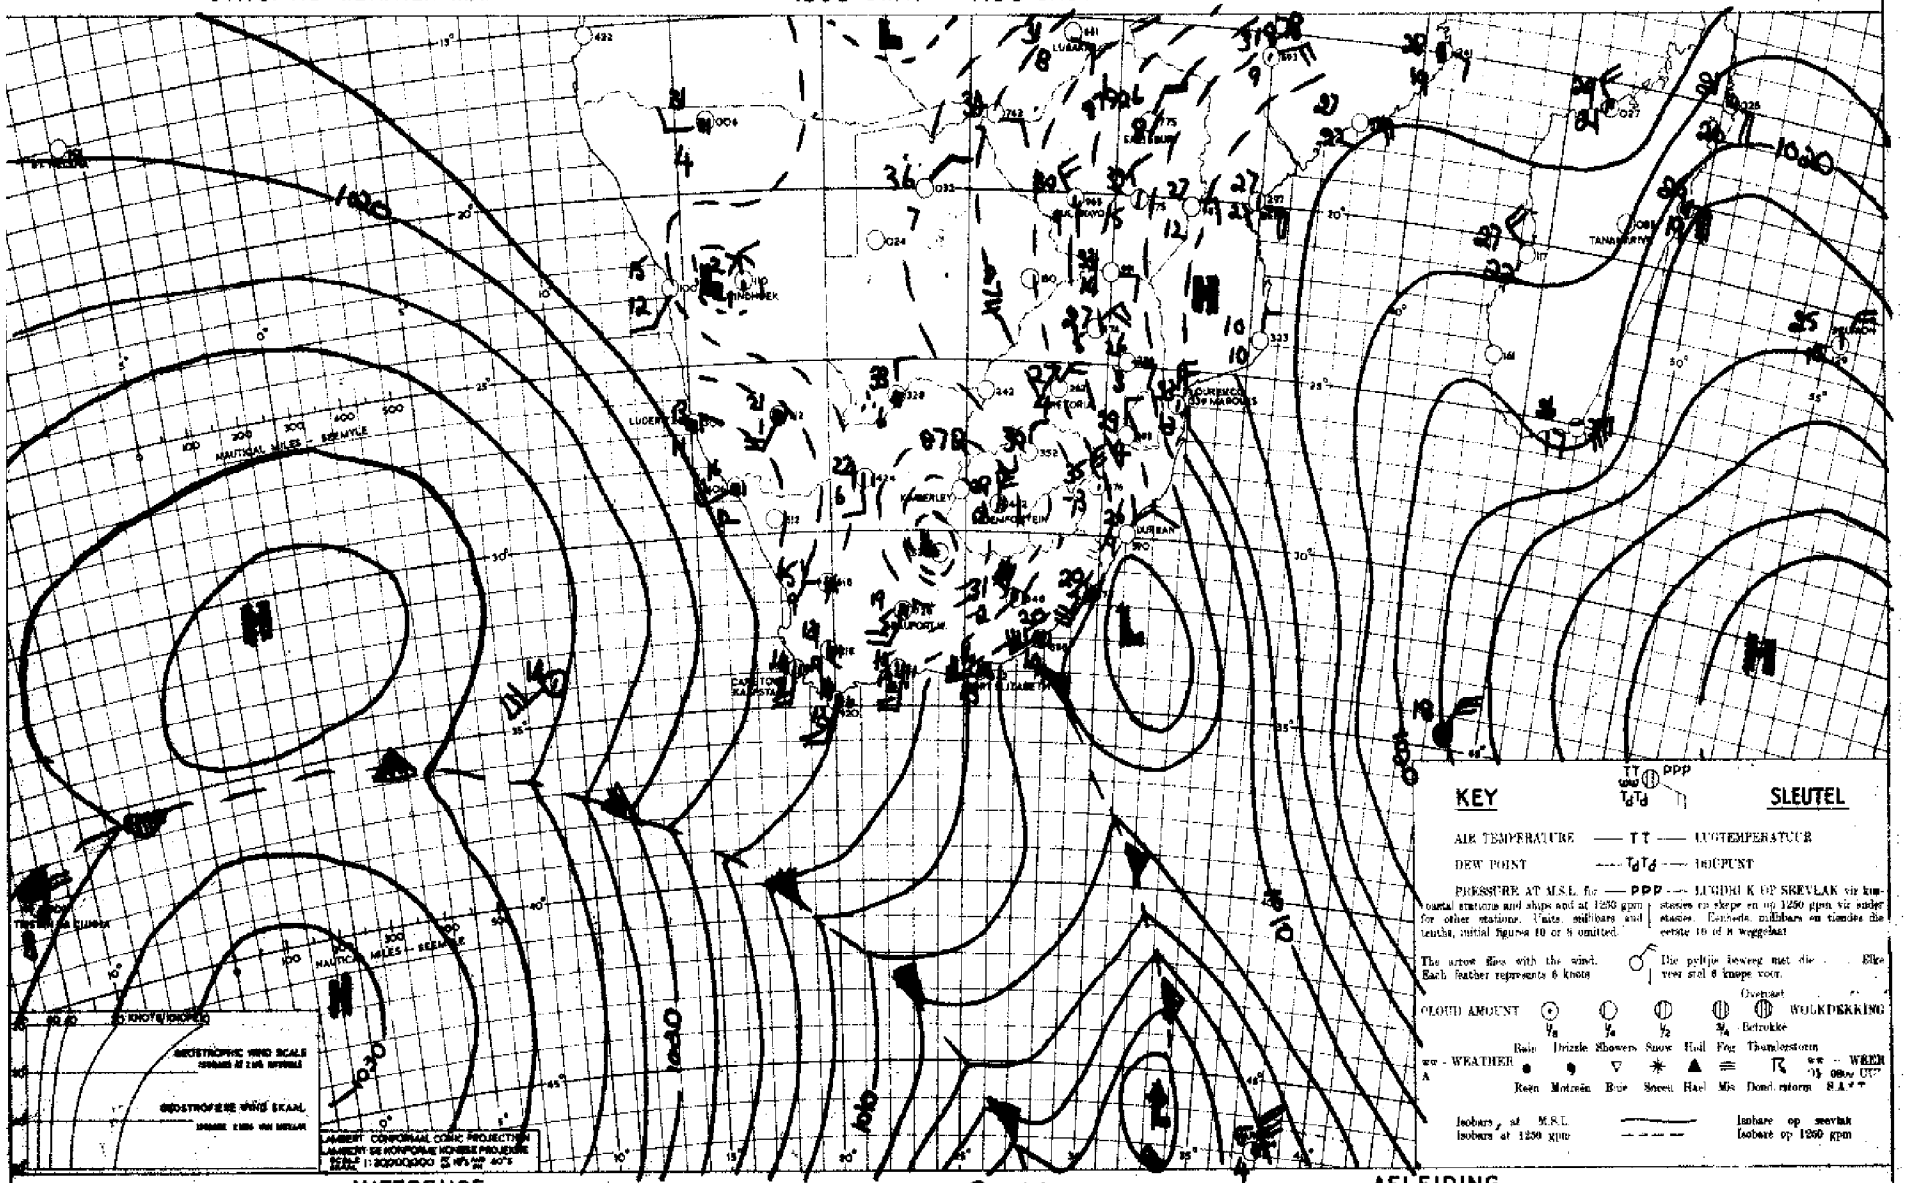
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 24-9-1954 DATUM AFLEIDING

An intense cyclonic circulation has established itself over the Central Union. Dry air is drawn into the Union to the west of it, but over the eastern Union the air is moist. Rain and thundershowers can therefore be expected over the Southeastern Transvaal, Northeastern Free State, Natal and teh Eastern half of the Cape Province.

'n Sterk sikloniese sirkulasie het oor die binneland van die Unie ontwikkel. Droë lug word noordwaarts ingetrek aan die weste kant van die laag, maar oor die Oostelike Unie beweeg vogtige lug suidwaarts. Reën en donderbuie kan dus oor suidoos Transvaal, noordoos Vrystaat, Natal en die Oostelike helfte van Kaapland verwag word.

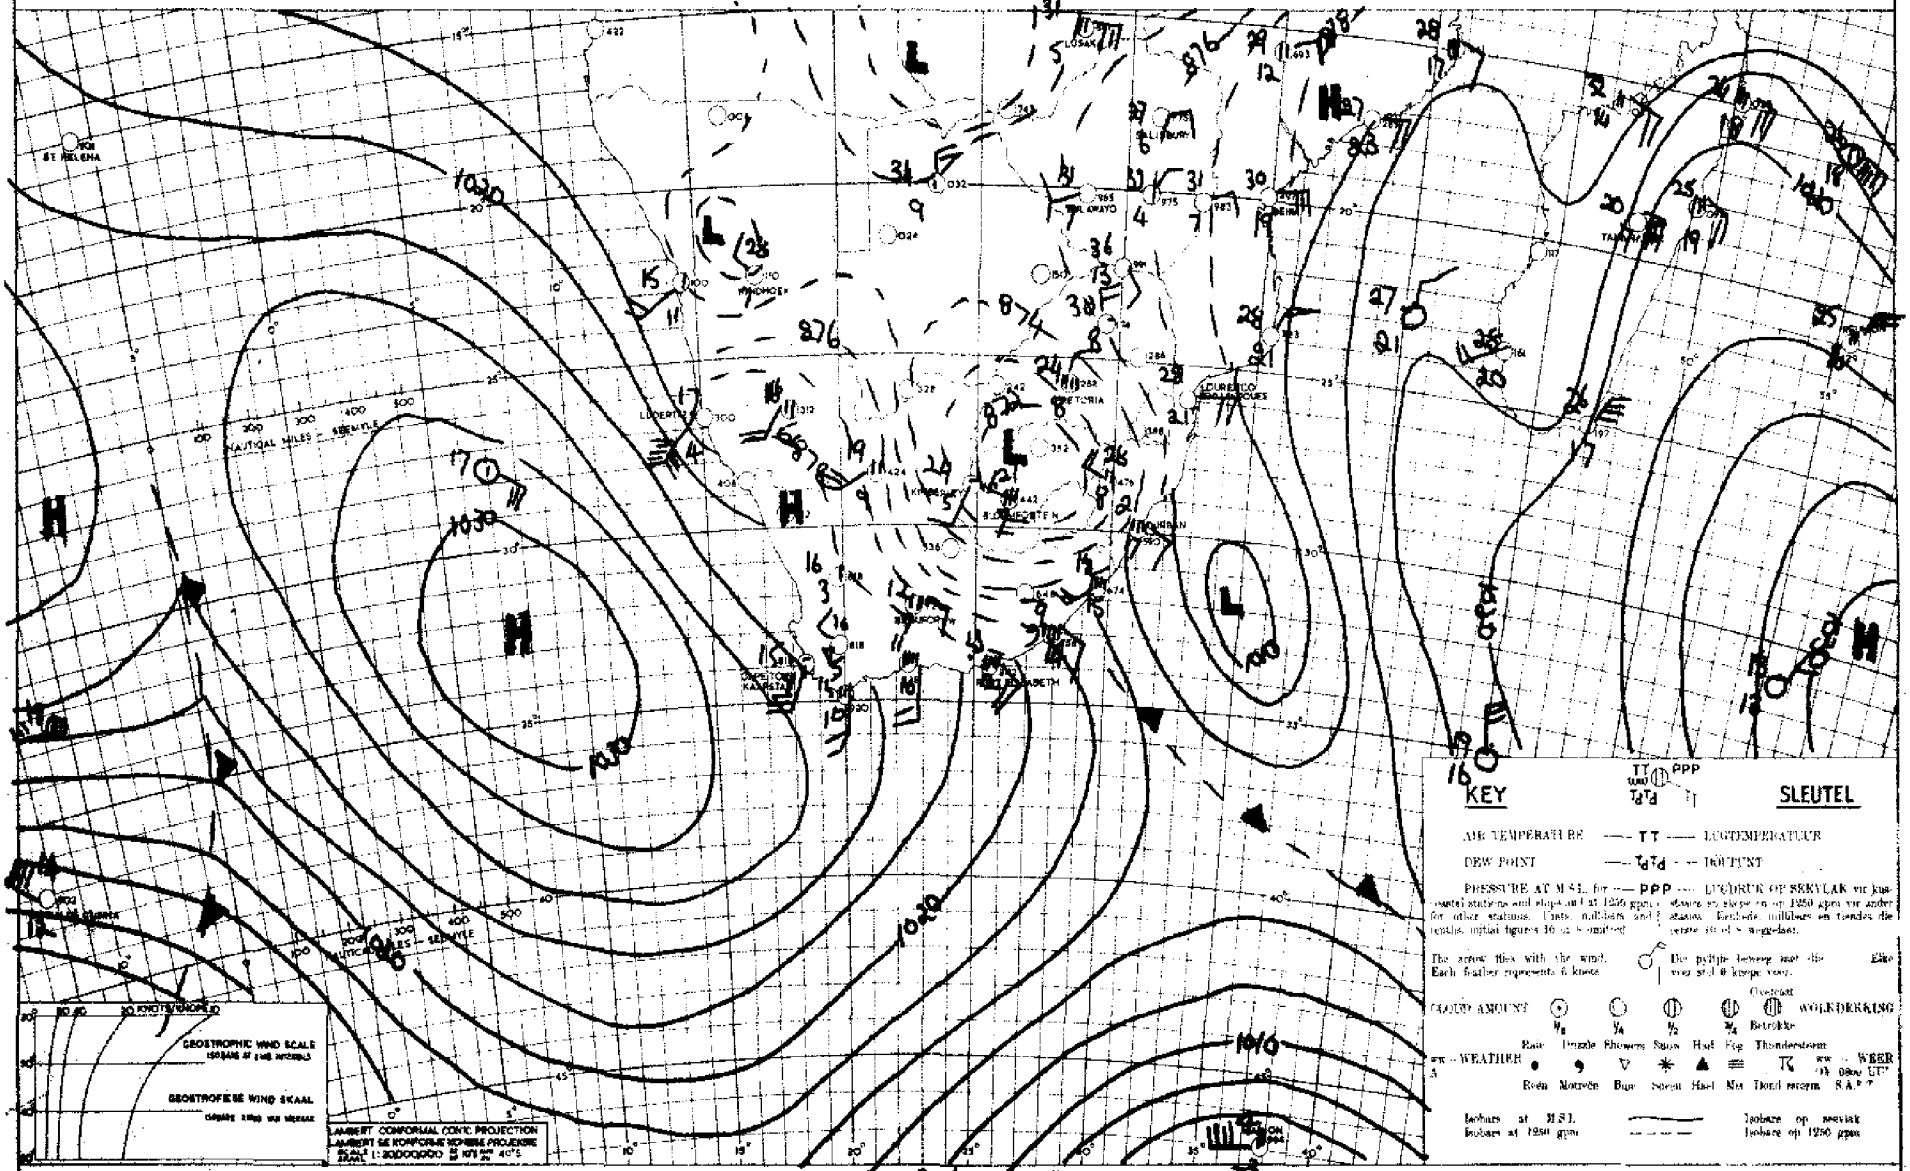
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 25/9-1954 DATUM AFLEIDING

Cold air in advance of the Atlantic anticyclone, situated just west of the Cape, is fed into the southern and western Union to the west of intense depression over the Free State. To the east of this depression moist air from the rear of the Indian ocean still circulates in a north-south direction over the Transvaal and Natal. Rain and thundershowers will occur over these areas while the cold atlantic air will gradually move northwards over Natal, to the southwestern Transvaal.

Koue lug ten ooste van die Atlantiese antisikloon, stroom suid en wes Kaapland, en aan die westekant van die Vrystaat depressie binne. Oos van die depressie is die lug nog vogtig en warm. Oor Transvaal en Natal sal dus reën en donderbuie uitsak terwyl die koue lug geleidelik oor Natal na Suidoos Transvaal beweeg.

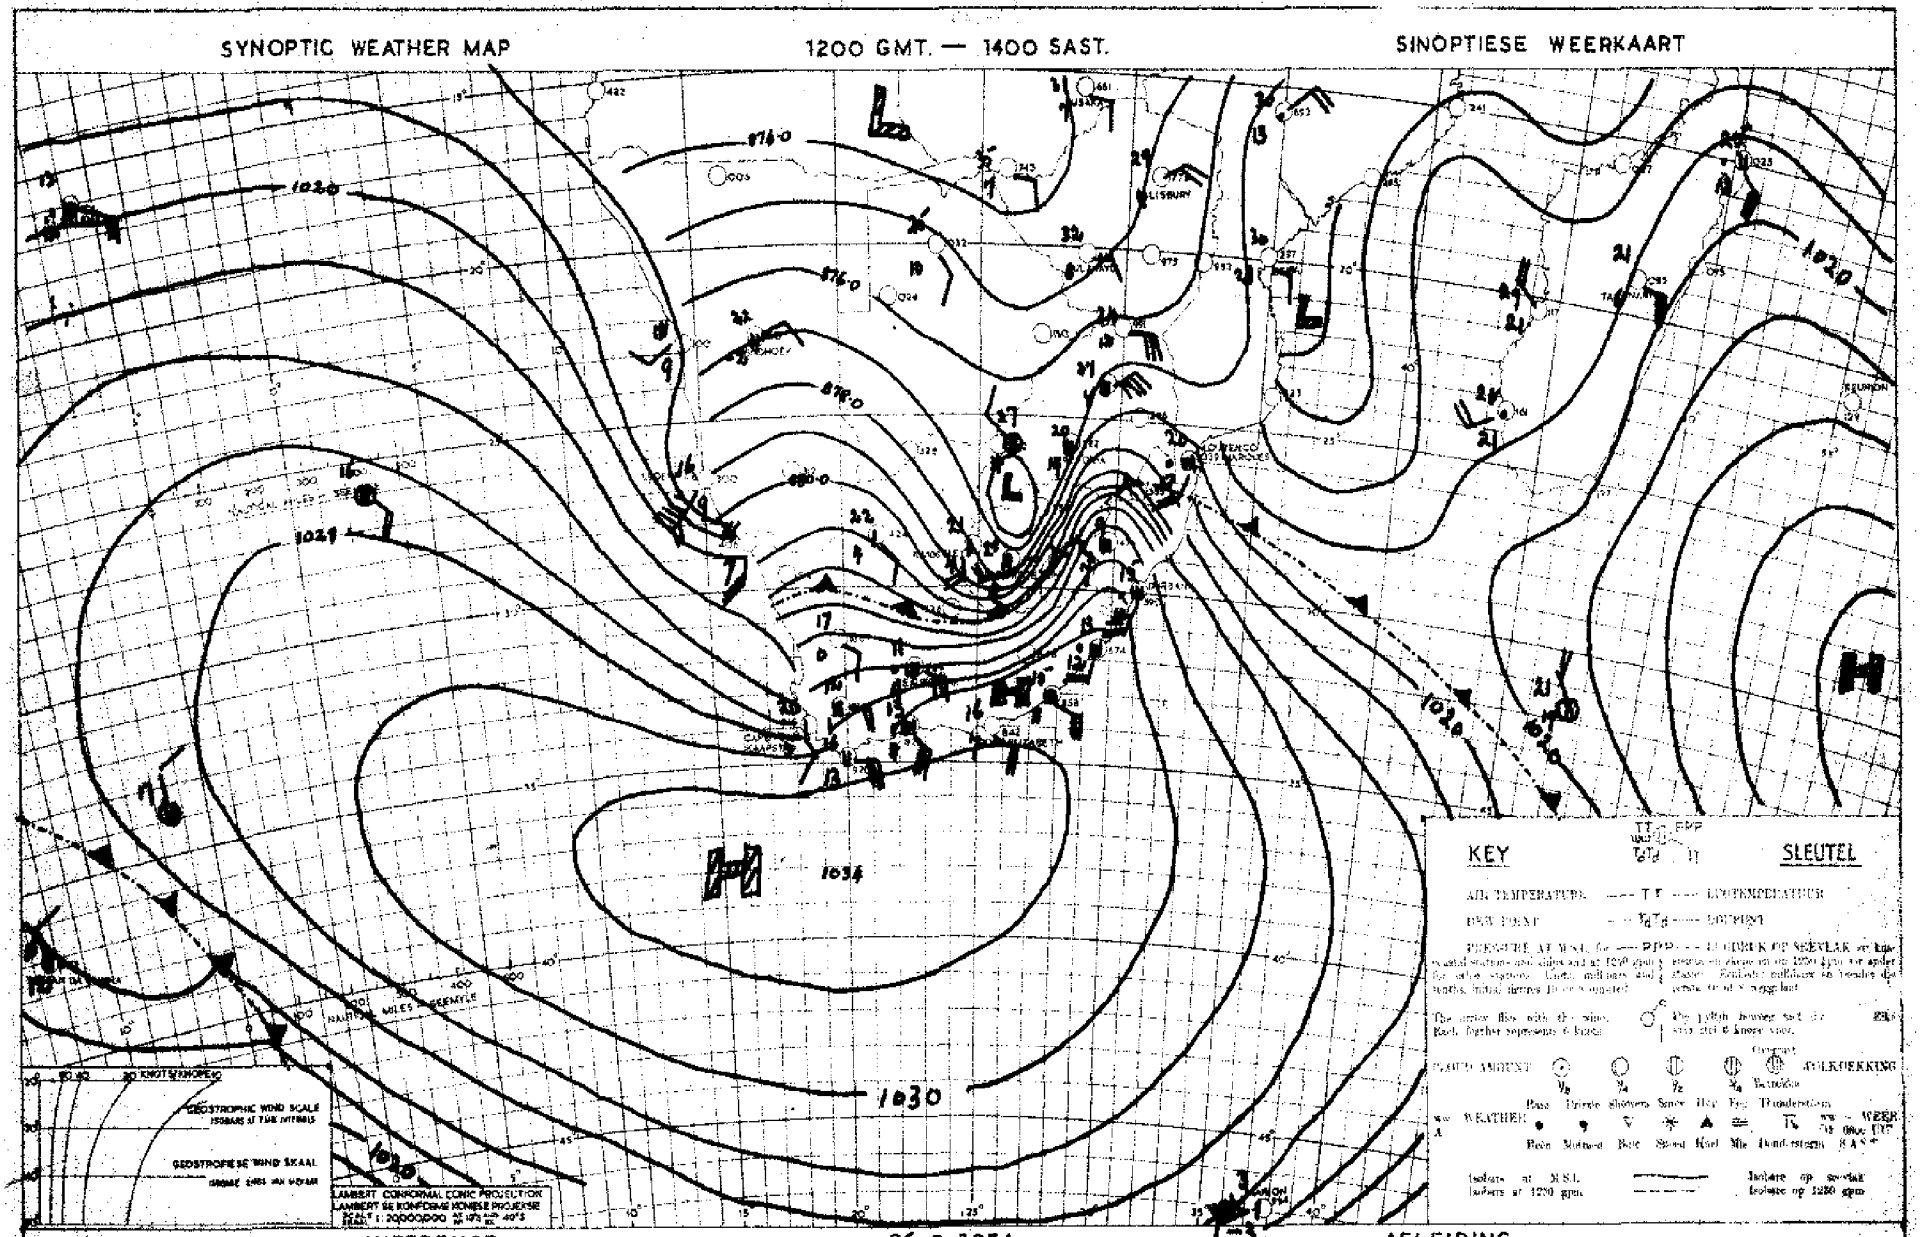
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 26-9-1954 — DATUM — AFLEIDING

An intense anticyclone is moving around the coast to Transvaal via Natal. The Free State depression is still present and strong pressure gradients will build up over the Eastern Union. Cloudy weather with occasional rain or thundershowers will occur over the Eastern Transvaal, Natal and the Transkeian Territories. Over the remainder of the Union it will be mainly fair.

'n Sterk antisikloon beweeg langs die kus na Transvaal, oor Natal. Die Vrystaat depressie is nog teenwoordig en sterk druk gradiete bou op tussen die twee sisteme. Bewolkte weer met reën of donderbuie sal oor die Oostelike Unie, Natal en die Transkei gebied voorkom. Oor die res van die Unie sal dit hoofsaaklik mooiweer wees.

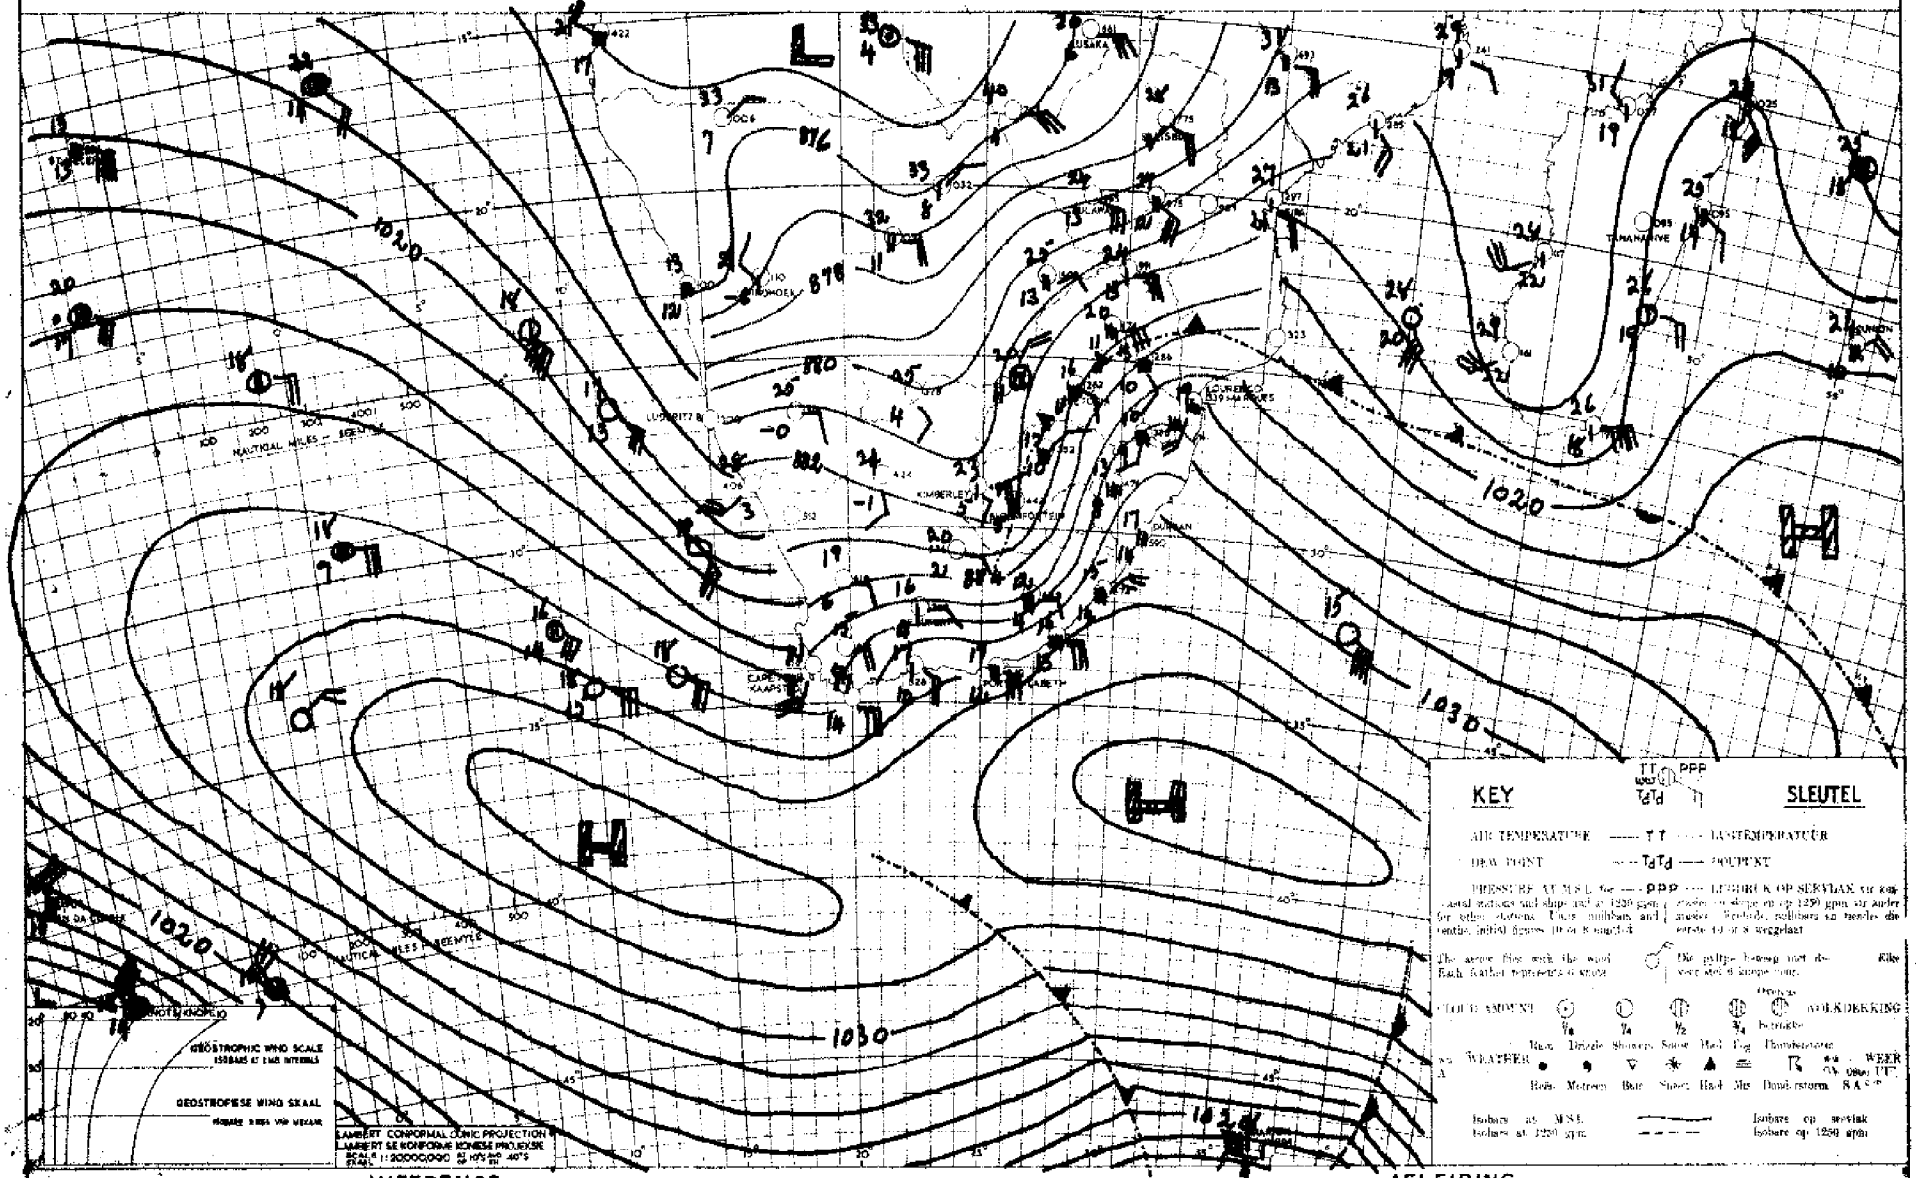
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 27-9-1954 DATUM AFLEIDING

The anticyclone south of the Union split into two cells and the west coast trough is extending southwards. With pressure falling over western and southern Cape the cool moist air over the eastern regions will spread to west and south and cloudy conditions will occur over the northern three provinces and over northern and eastern Cape. Temperatures will rise over western Cape.

Die hoogdrukstelsel suid van die Unie het in twee selle verdeel terwyl die weskustrog suidwaarts beweeg. Met dalende druk oor westelike en suidelike Kaapland sal die koel, vogtige lug oor die oostelike dele weswaarts en suidwaarts beweeg en bewolkte toestande sal voorkom oor die noordelike drie provinsies, asook oor Noord en Oos-Kaapland. Die temperatuur sal styg oor westelike Kaapland.

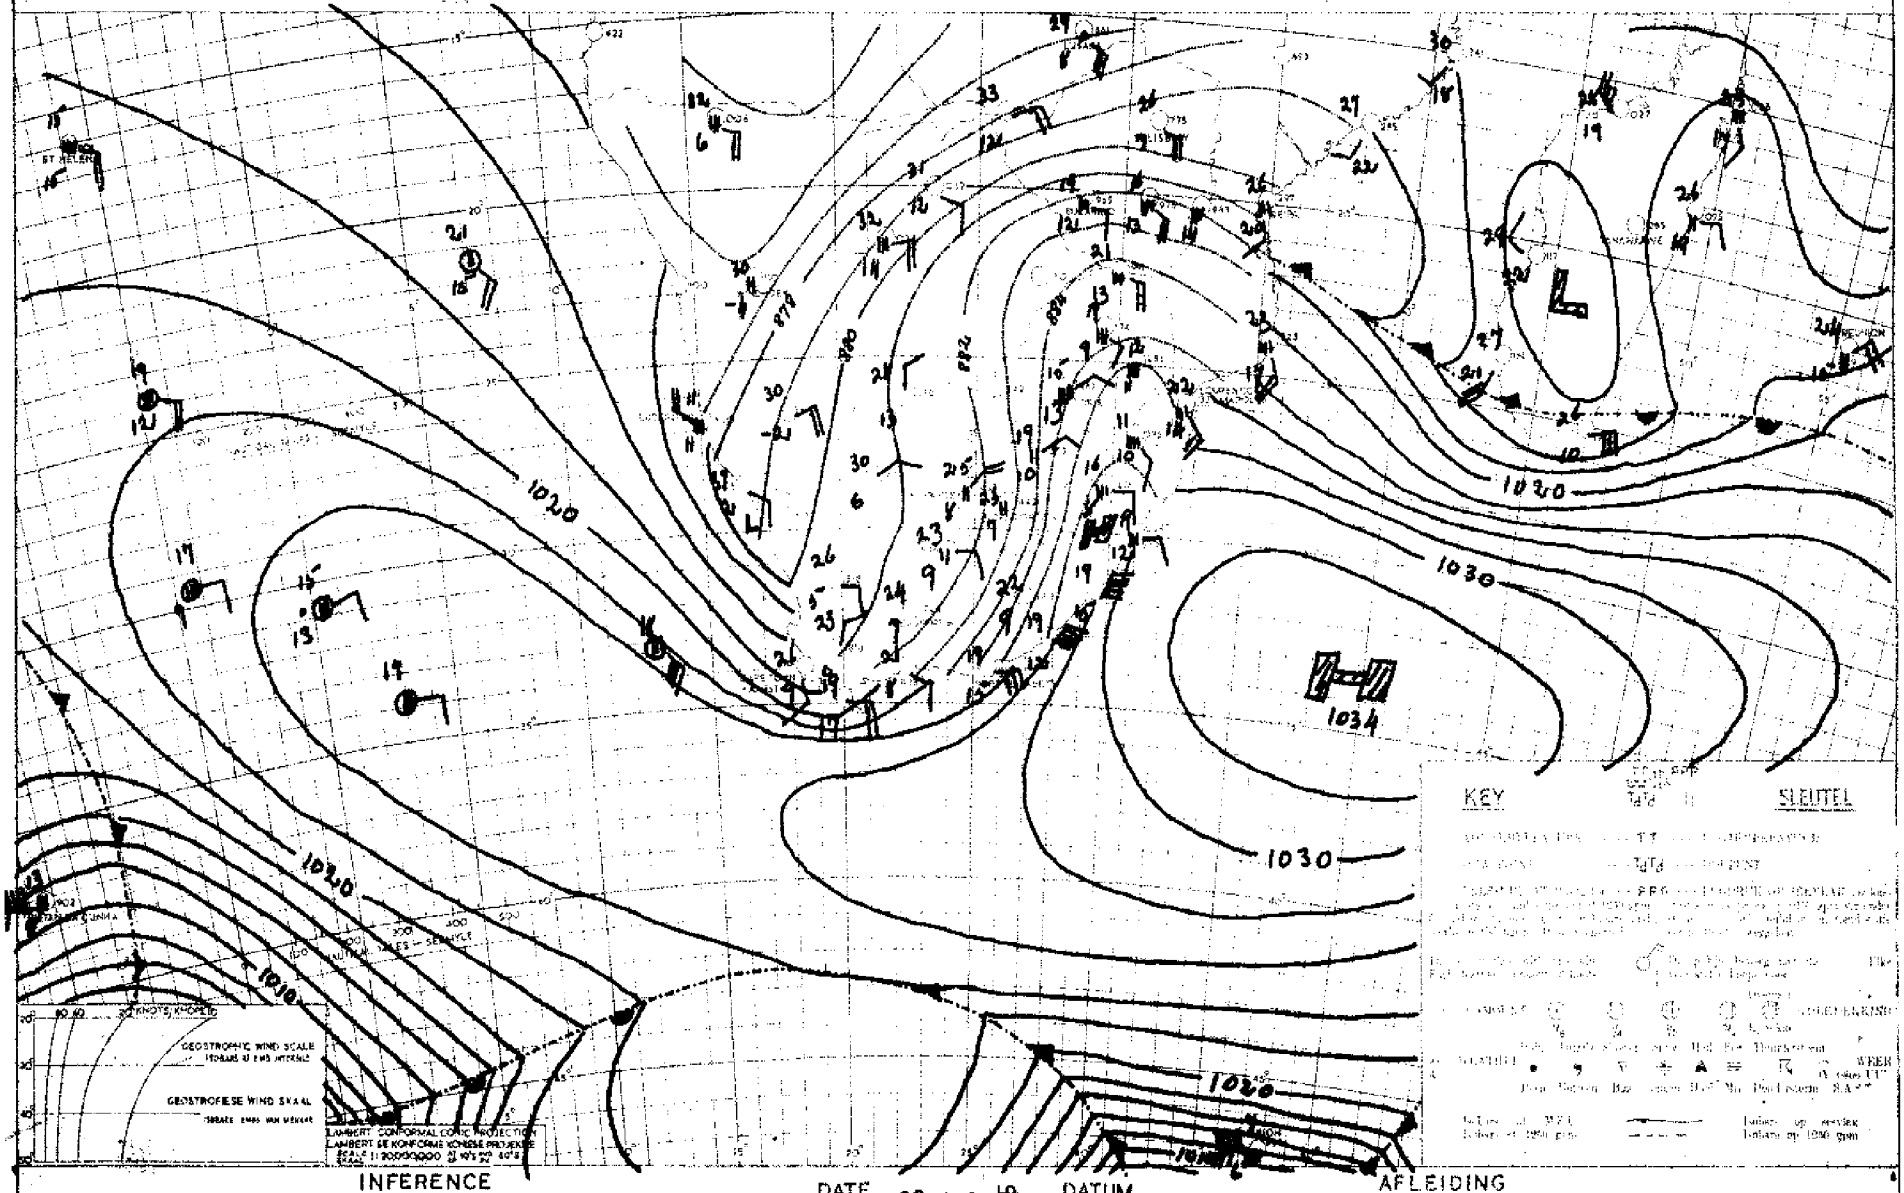
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

DATE 28-9-1954 DATUM

AFLEIDING

The high pressures over the Eastern Union and the low pressures in the west maintain a broad current of air flowing in an approx north-south direction over the Union. Over the Eastern half of the Union this air is moist and cloudy weather will therefore persist over Transvaal, Free State and Natal. Over the remainder of the Union it will be fine. Temperatures over the eastern Union will [illegible] below normal for the next 24 hours.

Hoë drukke langs die ooskus en lae drukke in die weste hou 'n breë stroom lug, wat noord-suid oor die Unie beweeg, in stand. Aangesien die lug oor die oostelike Unie nog vogtig is, bly toestande oor Transvaal, Natal en Vrystaat voortduur. Oor die res van die Unie bly dit mooiweer. Temperature oor die oostelike dele sal geleidelik styg maar sal vir die volgende 24 uur nog onder normaal wees.

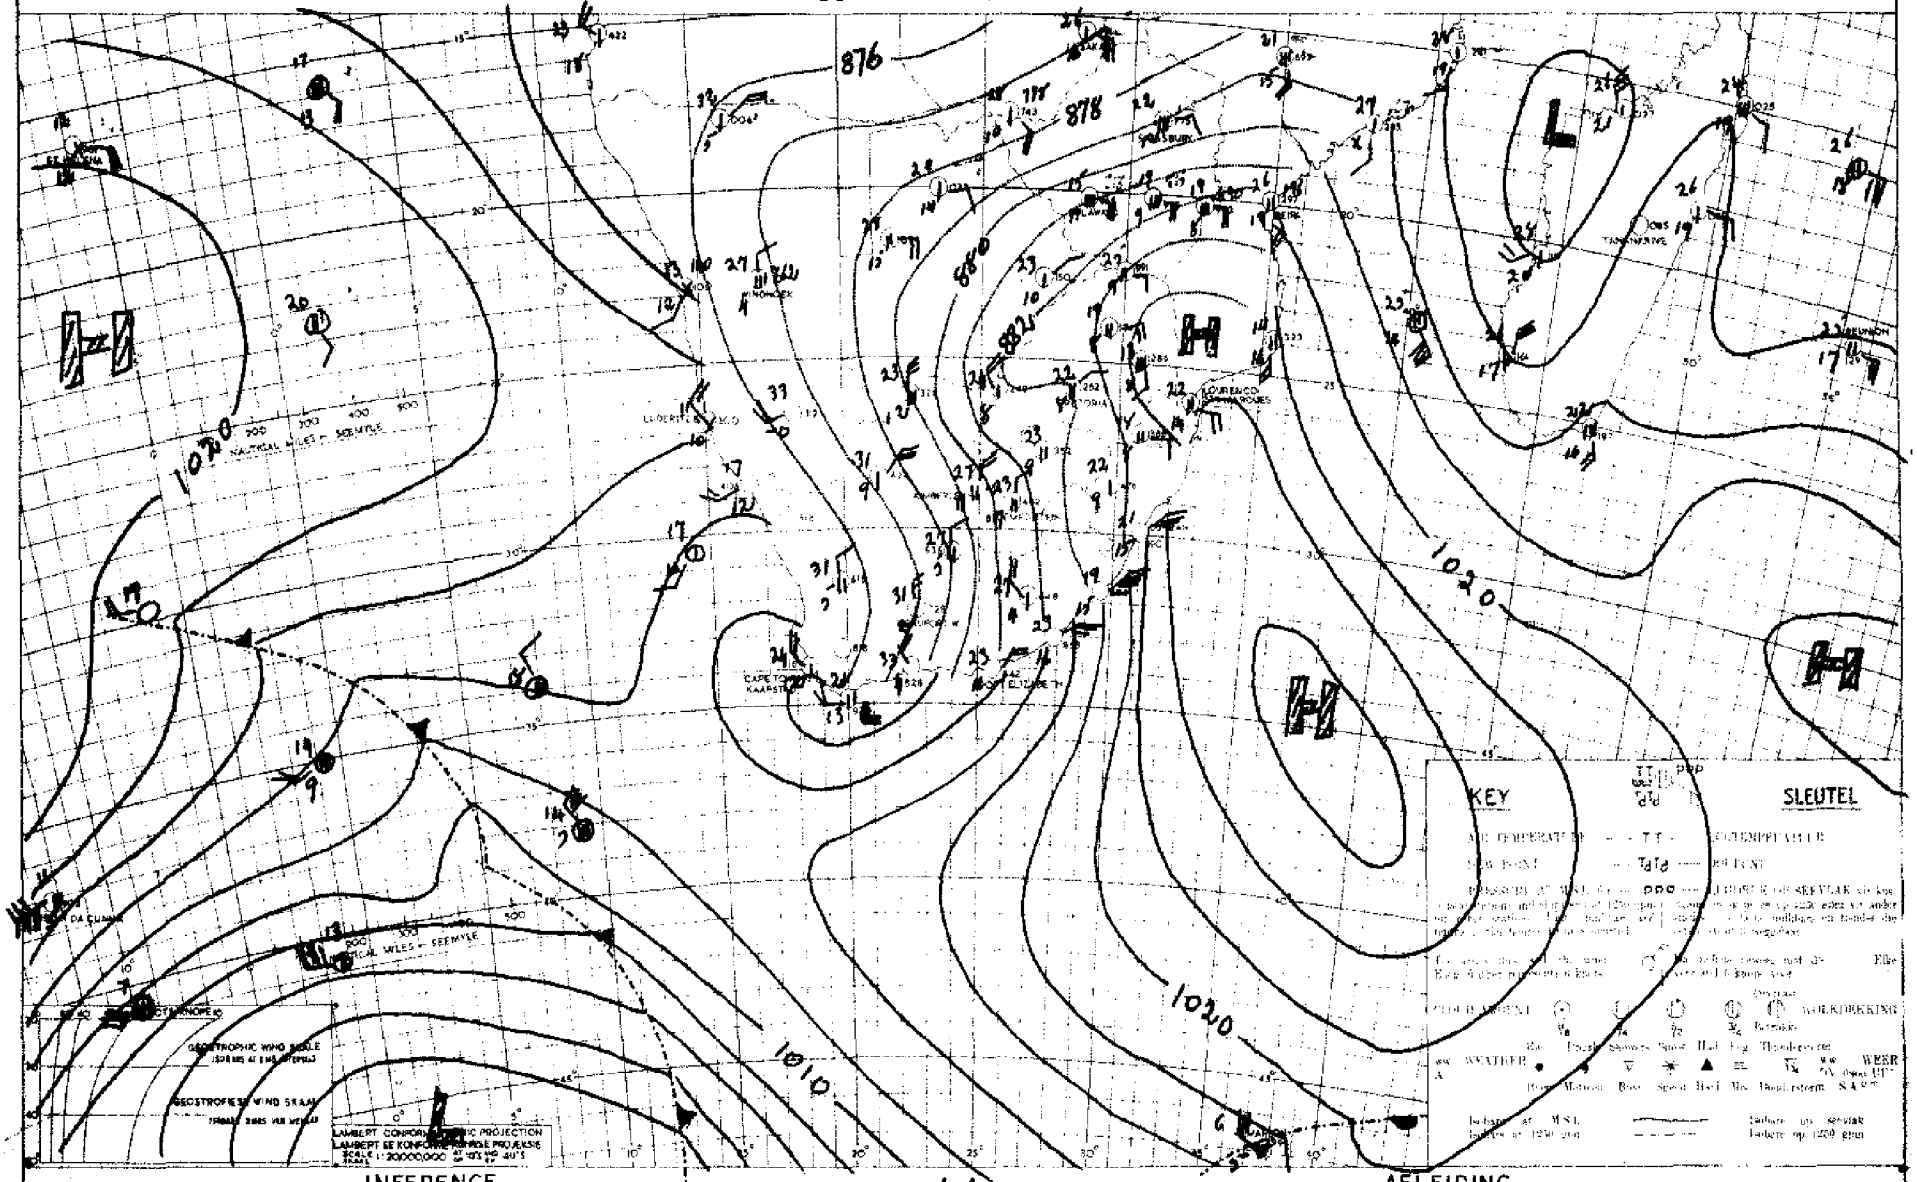
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 29/9/1954 DATUM AFLEIDING

A low pressure area is developing southwest of the Cape and cool humid sea air from the northwest will move over the southwestern Cape Province. Thundershowers will also develop over the northern Cape, the Free State and over the southwestern Transvaal.

'n Laag ontwikkel suidwes van die Kaap en koel, vogtige seelug uit die noordweste sal oor die suidwestelike Kaapprovinsie beweeg. Donderbuie sal voorkom oor noord Kaapland, oor die Vrystaat en oor suidwestelike Transvaal.

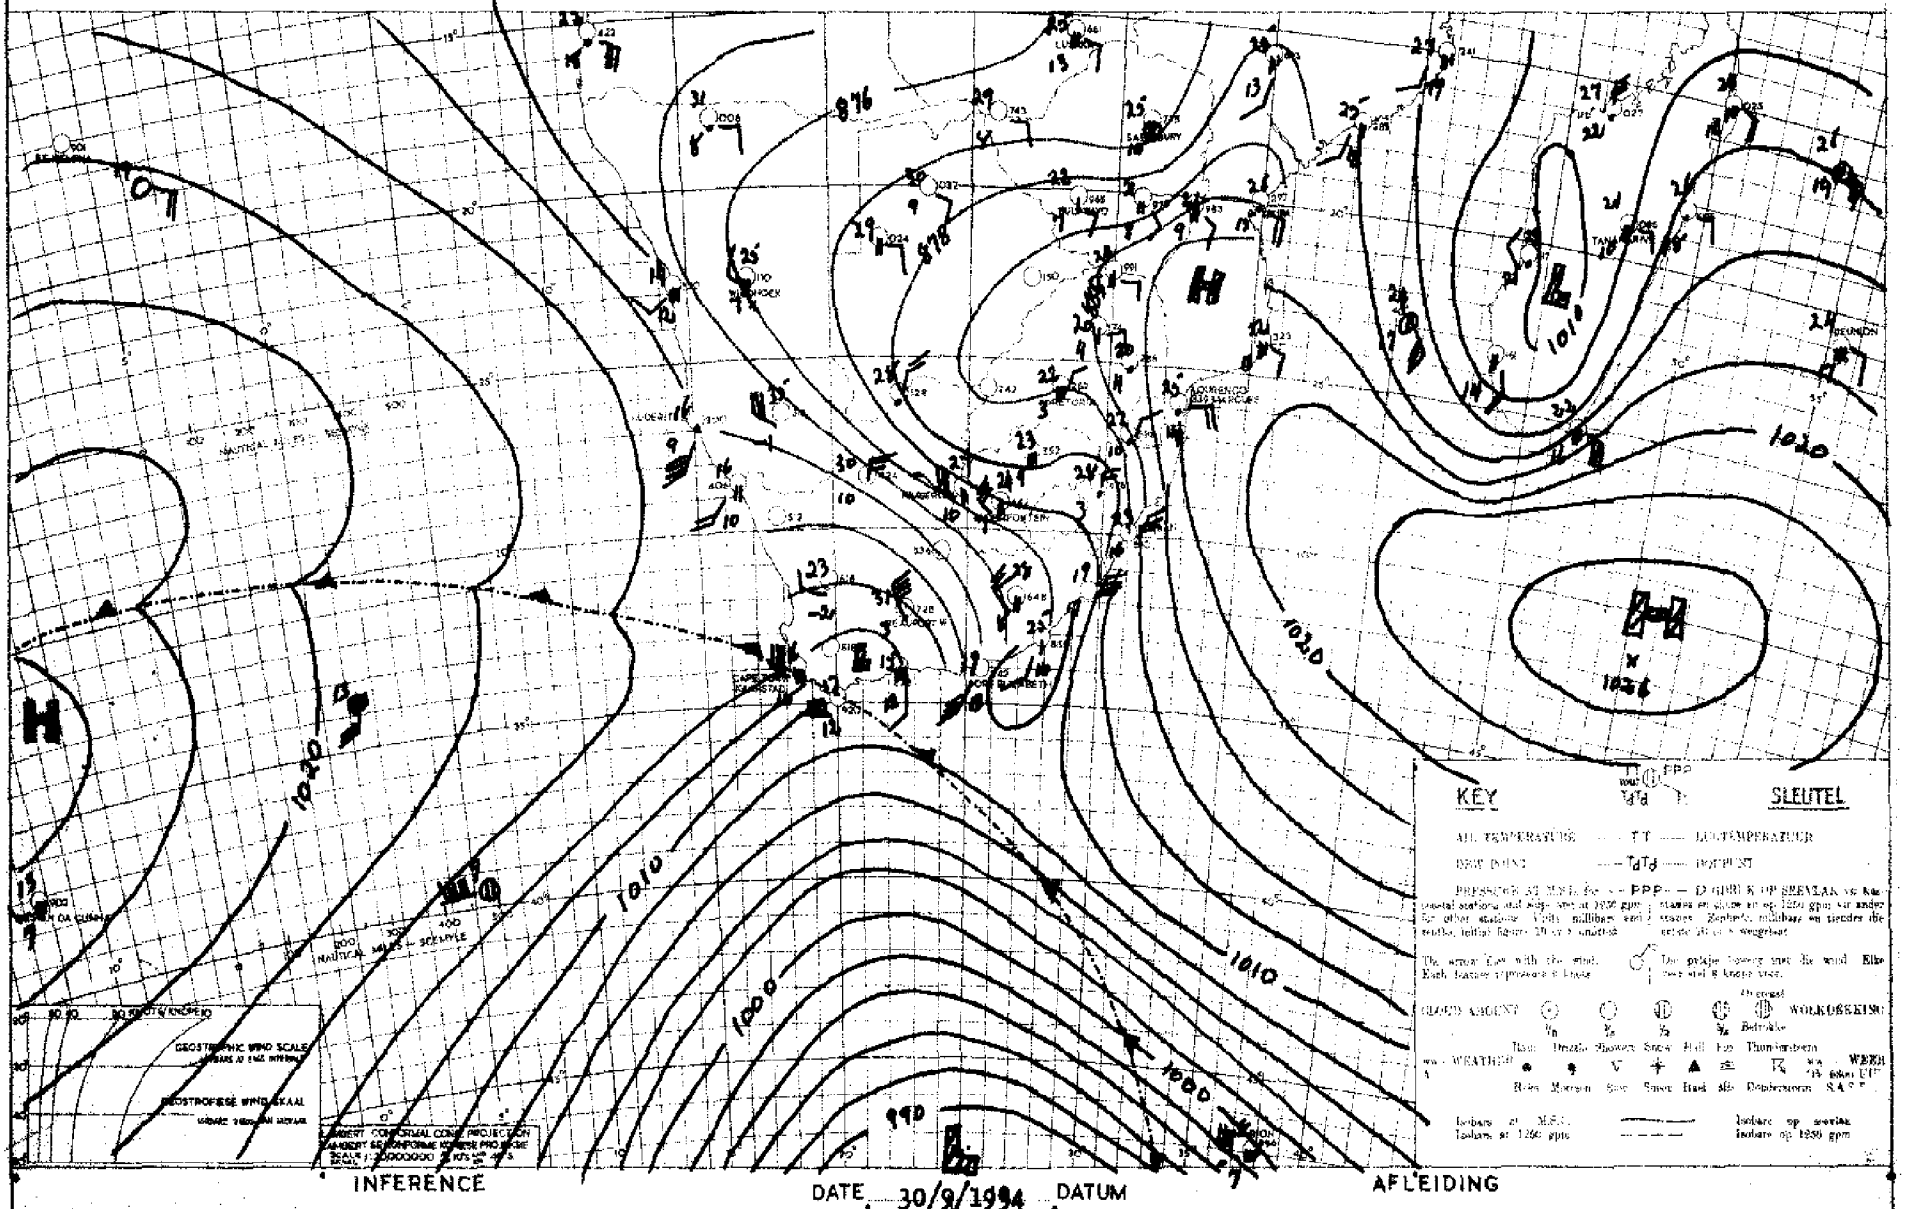
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 30/9/1994 DATUM AFLEIDING

Colder air behind a cold front is influencing the southwestern Cape, and will spread gradually to the southeast Cape and Natal. Cloudy showery weather will occur along the southern and south-eastern Cape coastal areas. Apart from the Central Union, where the moisture content is still fairly high and local thunderstorms will develop, but elsewhere it will remain fine.

Kouer lug agter 'n koue front beïnvloed die suidwestelike Kaap Provinsie en sal geleidelik na Suidoos Kaapland en Natal uitbrei. Bewolkte, buierige weer sal langs die kusgebied van suid en suidoos Kaapland voorkom. Oor die sentrale dele van die Unie is die lug nog taamlik vogtig en donderbuie sal ontwikkel. Elders oor die Unie sal dit agter mooiweer bly.

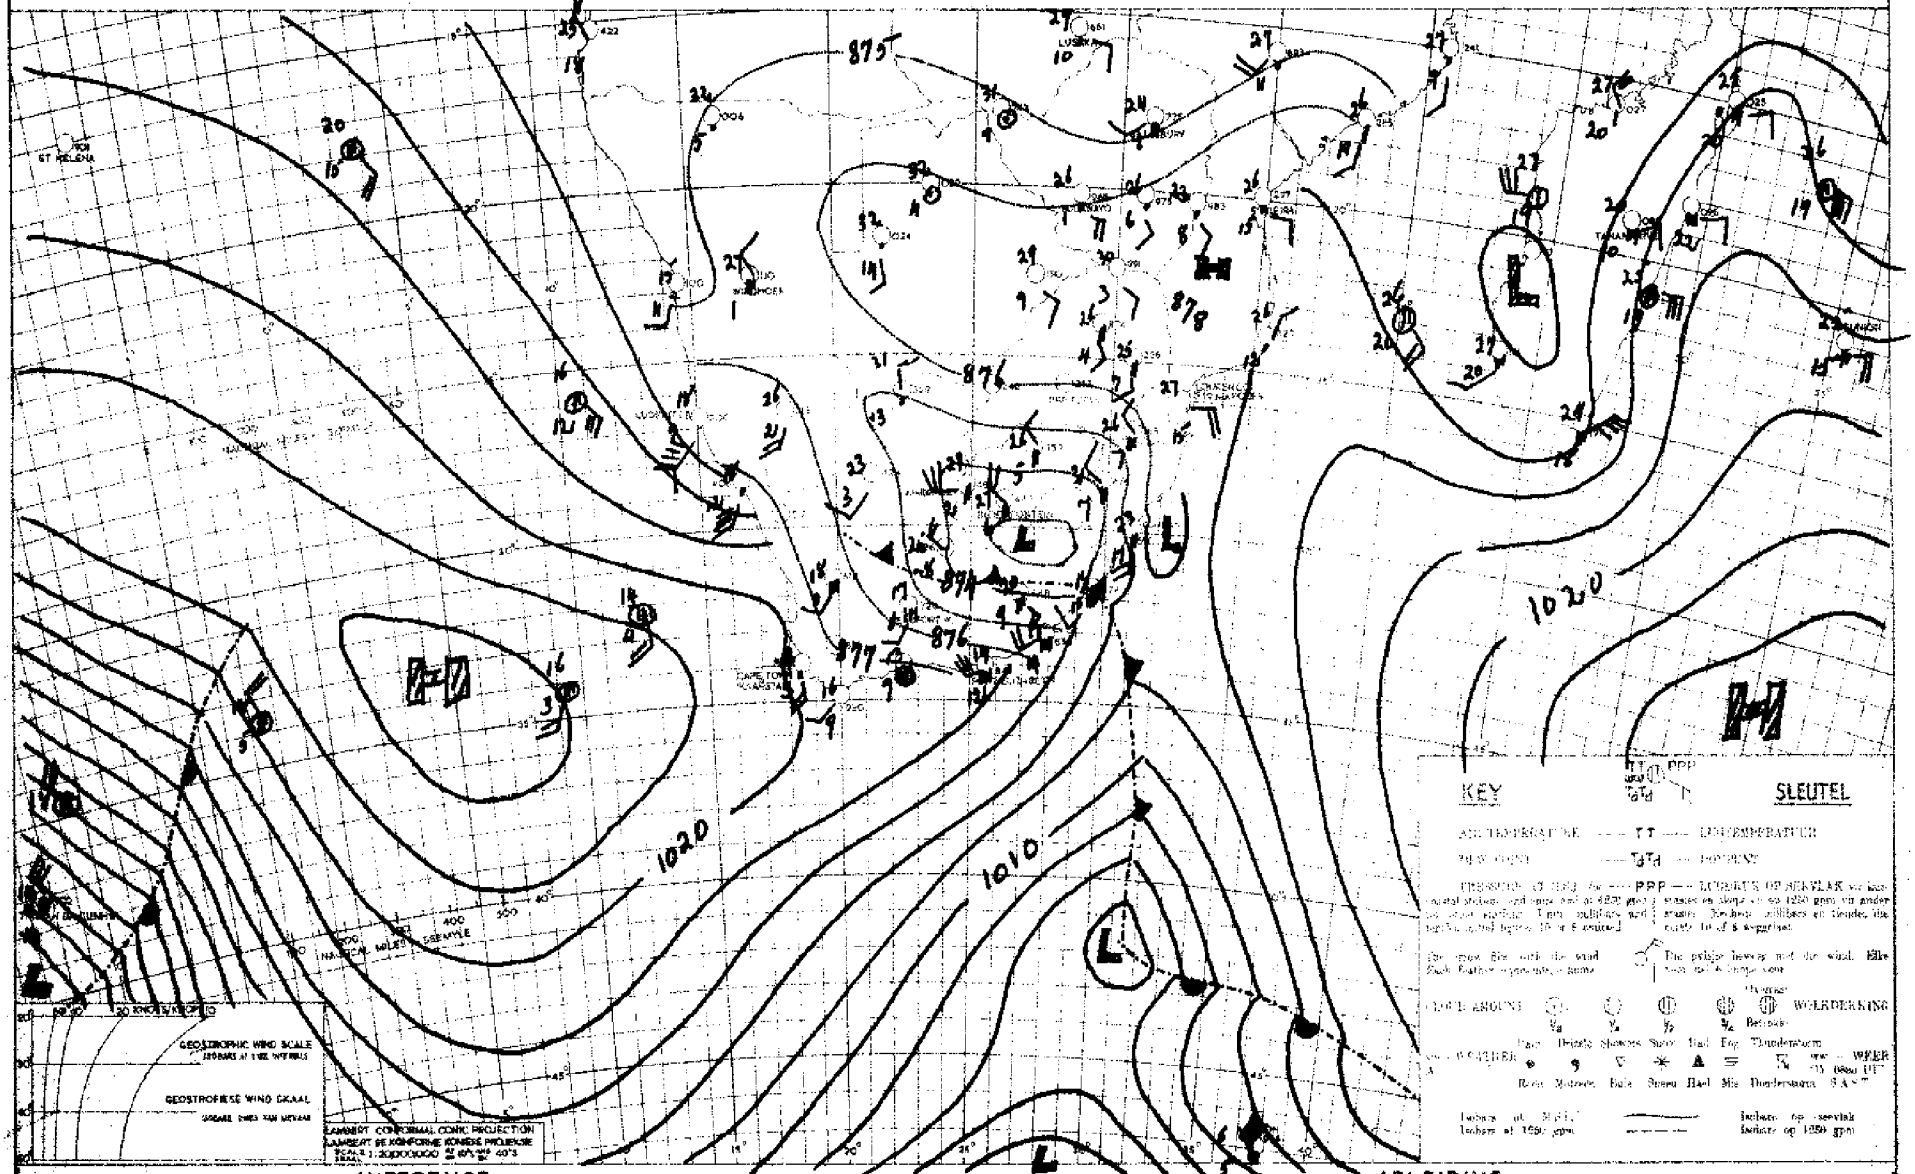
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 1-10-1954 — DATUM — AFLEIDING

The high west of the Cape is slowly moving eastwards followed by a deep depression near Tristan. Pressure is, however, rising only slowly along the south and east coasts and consequently the cool, moist air will only advance over Natal and the southeastern Transvaal Lowveld. Light thunder conditions will occur over southern Transvaal and northeastern Free State.

Die hoogdrukstelsel wes van die Kaap beweeg stadig ooswaarts, gevolg deur 'n diep laagdrukstelsel naby Tristan. Die druk styg egter min langs die suid- en ooskus en gevolglik sal koel, vogtige seelug slegs oor Natal en die suidelike Laeveld van Transvaal indring. Ligte donderweerstoestande sal in die namiddag oor Suidoos-Transvaal en Noordoos-Vrystaat ontwikkel.

SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART

INFERENCE DATE 3/10/1954 DATUM AFLEIDING

A cold front is approaching the south west Cape and the cold air behind it will influence the Cape coastal areas and the adjoining interior. Local light showers will occur along the Cape west and southwest coast. Over the remainder of the Union it will be fine and warm to hot, as the air circulating over these regions is continental in character.

'n Koue front nader die suidwes kus van Kaapland en die koue lug agter dit sal die Kaapse kusstreke en die aangrensende binneland beïnvloed. Ligte reënbuie sal plaaslik langs die suidwes en suidkus uitsak. Oor die res van die Unie sal dit mooiweer bly aangesien die lug wat oor die streke sirkuleer, kontinentale eienskappe het.

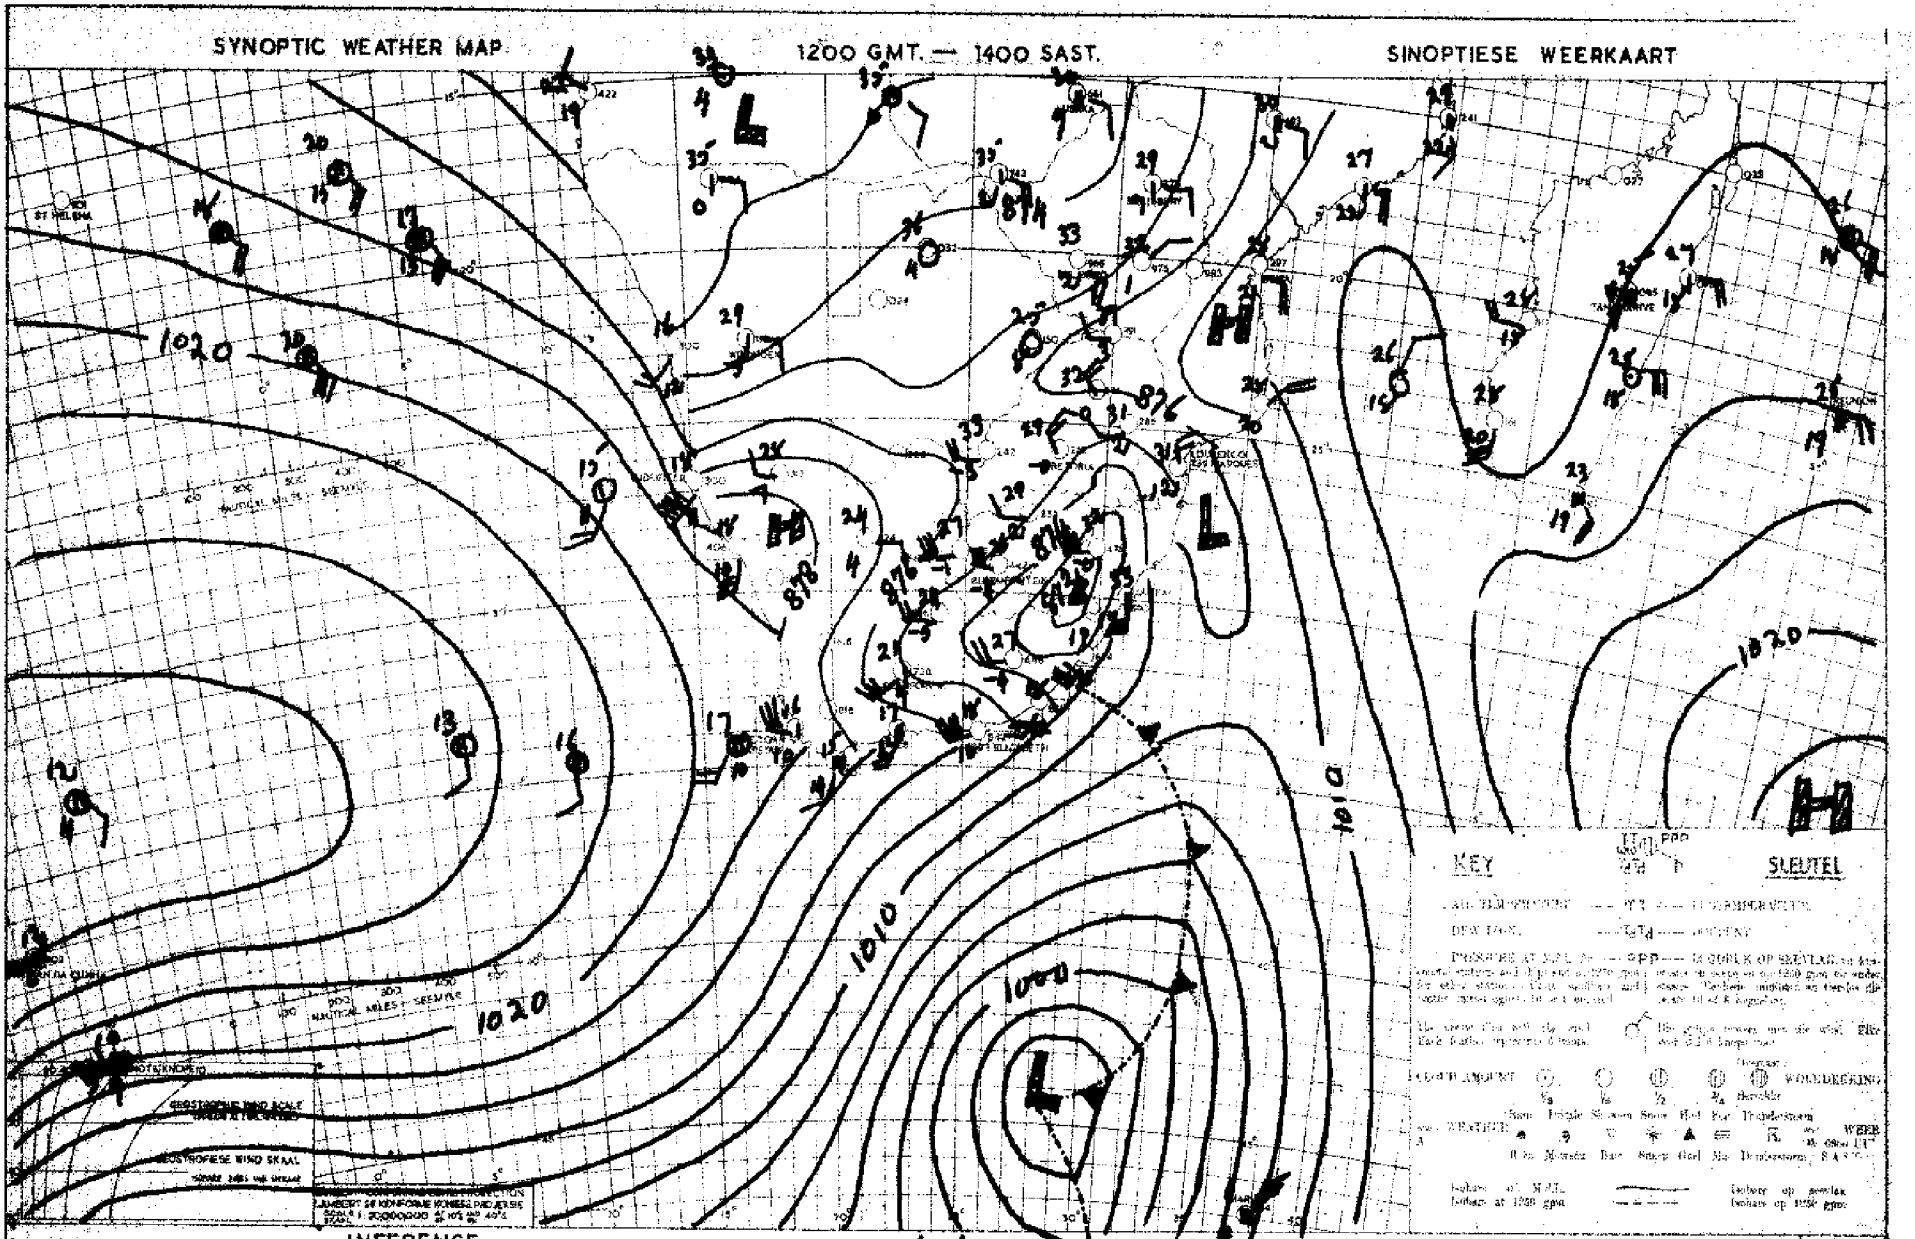
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

DATE 4/10/1954 DATUM

AFLEIDING

Pressure is rising slightly along the south and east coasts and falling along the west coast. Hence pressure should be higher over the eastern than over the western regions of the Union tomorrow. Cool, moist air will affect the south and east coastal areas, but over the interior it will remain fine and hot.

Die druk styg effens langs die Suid- en Ooskus, maar daal langs die Weskus. Gevolglik sal die druk môre hoër wees oor die oostelike dele as oor die westelike dele van die Unie. Koel, vogtige lug sal aanwesig wees oor die suidelike en oostelike kusstreke, maar oor die binneland sal warm, droë weer voortduur.

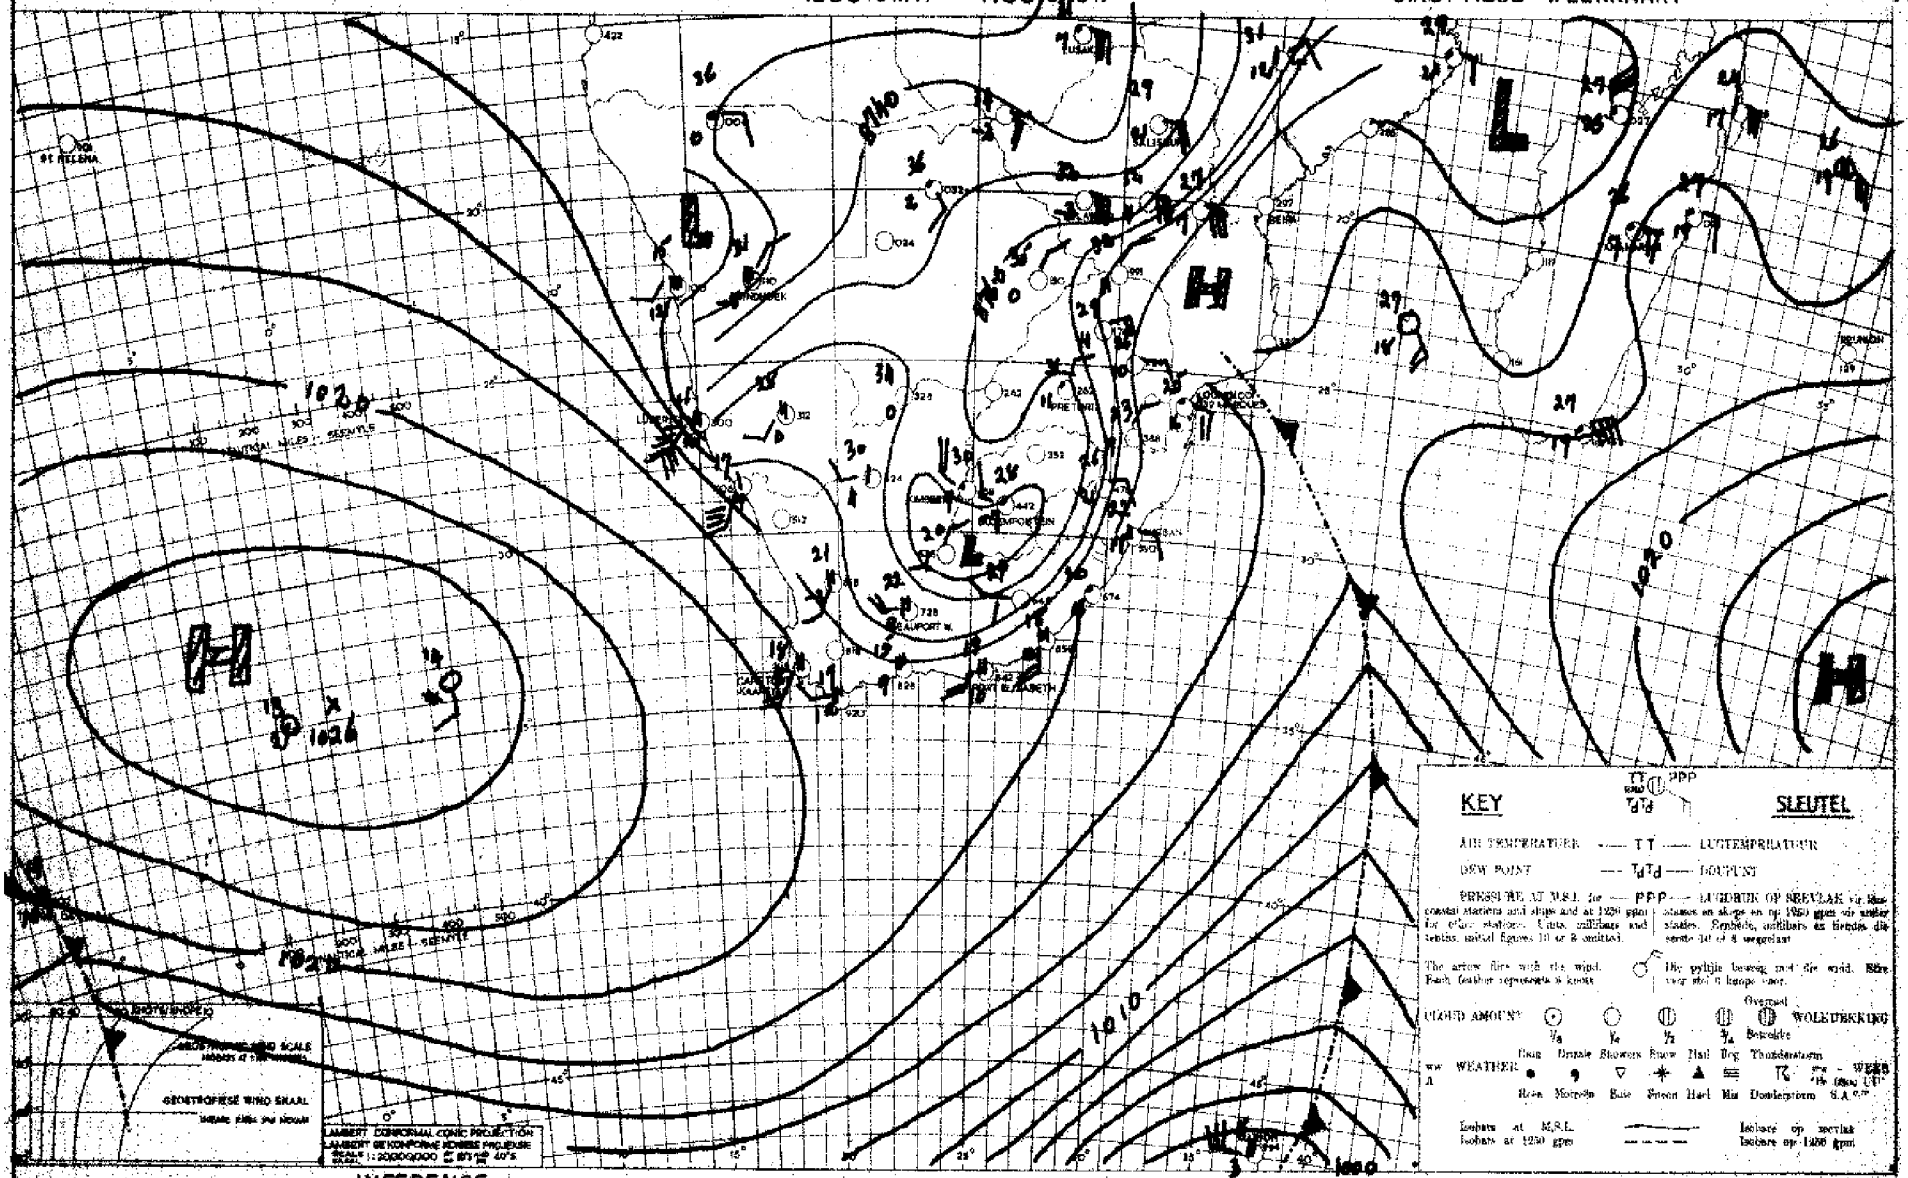
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 5/10/1954 DATUM AFLEIDING

The Atlantic High has now extended a ridge along the East Cape and Natal coast, and will consequently feed moister air into Natal and Eastern Transvaal. A depression is still present over the Southern Free State and thus the moist air will be directed southwards towards the Orange River. Thunder conditions will develop over the Central Cape and Southern Free State district. Scattered clouds will also appear over the Eastern Cape, Natal and Transvaal.

Die Atlantiese Antisikloon het 'n uitloper na die oos kus van Kaapland en na Natal gevorm en as gevolg hiervan sal vogtige lug oor Natal en Oos Transvaal ingevoer word. 'n Laagdruk stelsel is nog teenswoordig oor Suid Vrystaat en dus sal die vogtige lug daar ingevoer word. Donderweerstoestands sal oor die sentrale dele van Kaapland en die Vrystaat ontwikkel. Verspreide wolke sal ook oor Kaapland, Natal en Transvaal verskyn.

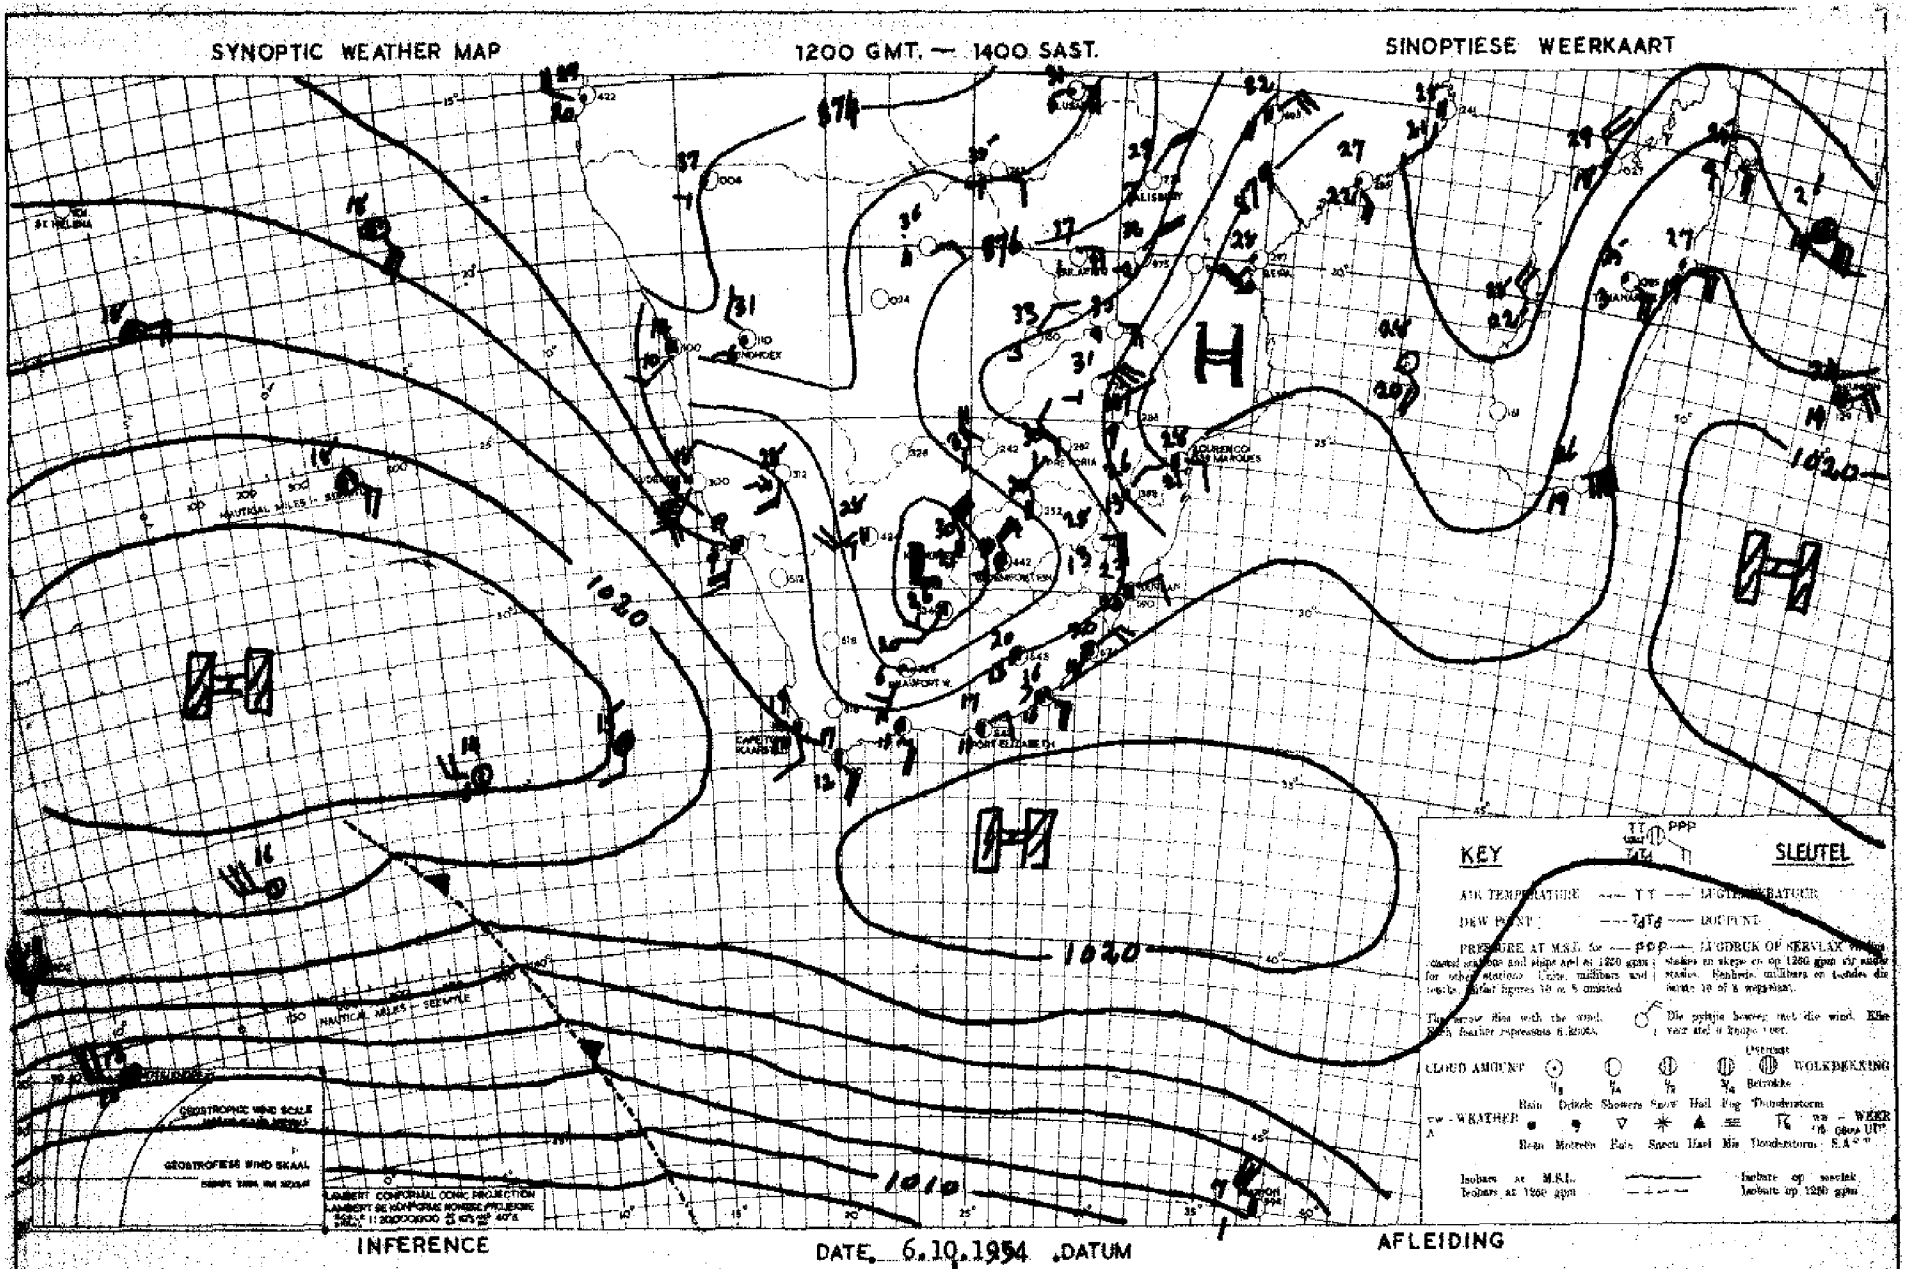
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 6.10.1954 DATUM AFLEIDING

The Atlantic High will move over the southern Cape coasts causing cloudy conditions. In the slightly humid air over the eastern Transvaal and over Natal isolated thunder conditions will develop. Temperature over the interior will rise to above normal.

Die Atlantiese Hoog sal oor die suidelike kusstreke van Kaapland beweeg en bewolkte weer sal voorkom. In die redelike vogtige lug oor die oos Vrystaat en oor Natal sal los donderweerstoestande ontwikkel. Temperatuur oor die binneland sal bo normaal wees.

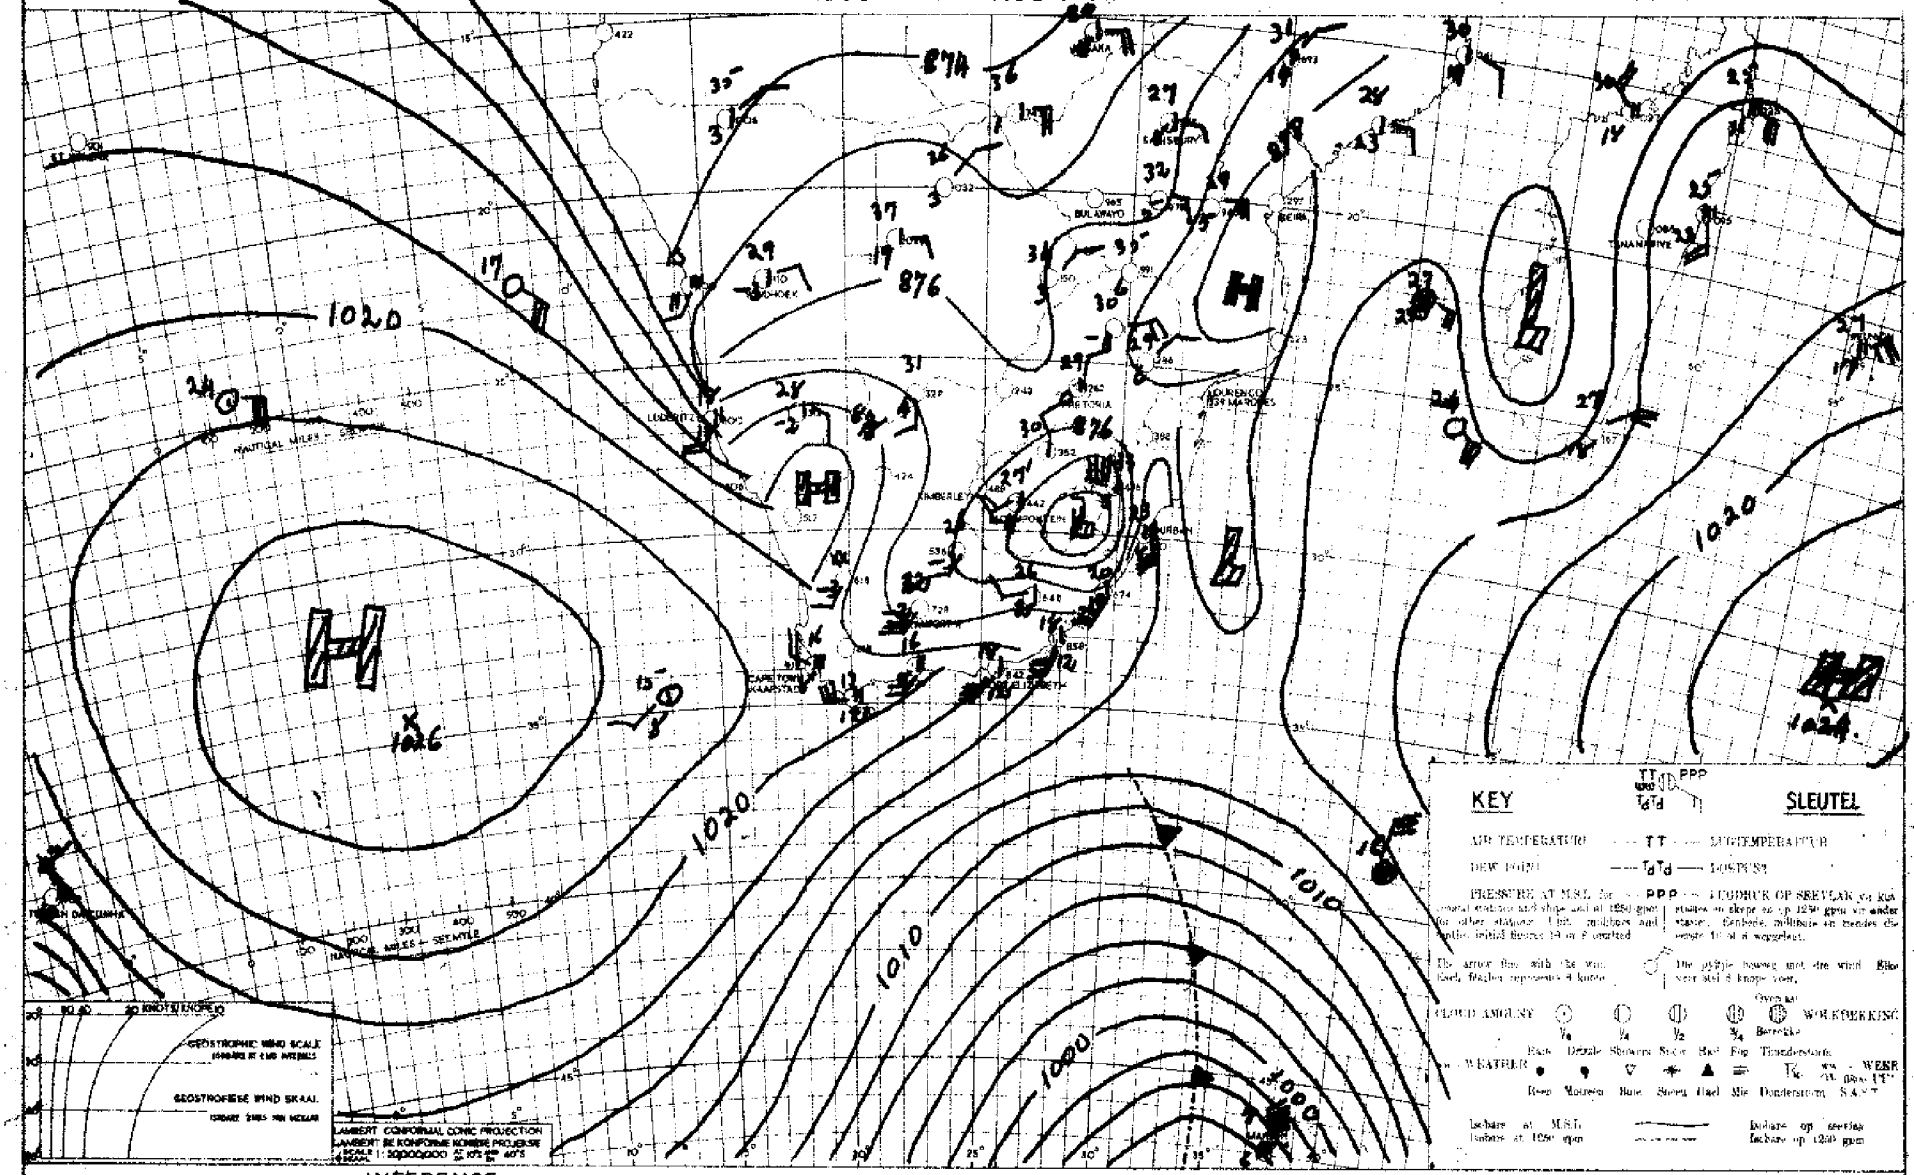
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE: 7.10.1954 DATUM — AFLEIDING

Pressure will rise slightly over the south and east coasts and will be cool and cloudy over these coastal belts. Cooler air will also affect Eastern Transvaal but otherwise it will be fair to fine and warm to hot over all inland regions.

Die druk sal ietwat styg langs die suid- en ooskus en dit sal koel en bewolk wees oor hierdie kusstreke. Koeler lug sal ook Oos-Transvaal bereik, maar origens sal dit redelike mooi-weer en baie warm wees oor alle binnelandse gebiede.

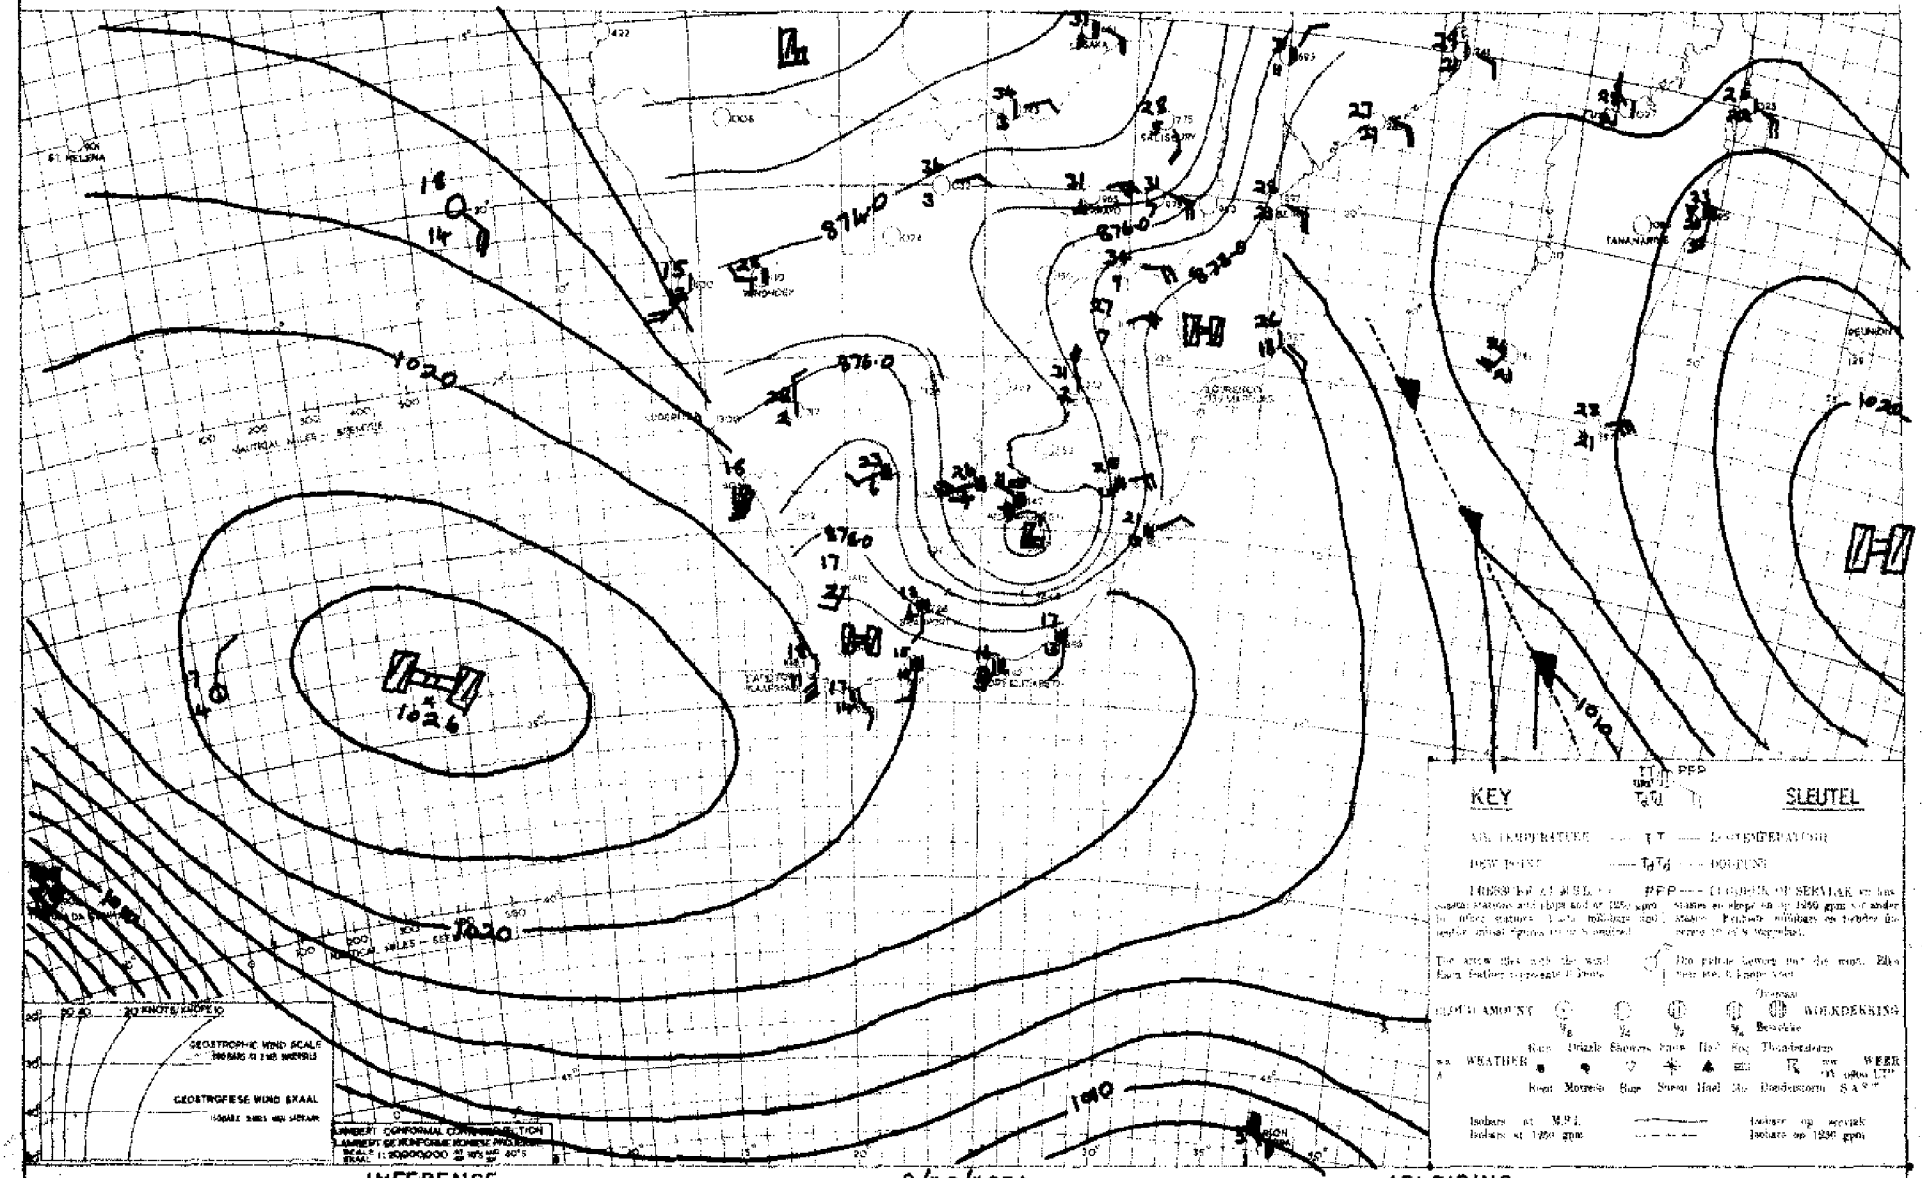
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST SINOPTIESE WEERKAART



INFERENCE

An extension of the Atlantice High has now reached the East coast. Due to influx of sea air over the coastal districts the weather will be cloudy over these areas. Due to favourable upper air conditions, cloudy weather prevails over the Union erior. Local thunder conditions will develop and is likely to extend to the southern Transvaal by tomorrow.

DATE. 8/10/1954

DATUM

AFLEIDING

'n Uitloper van die Atlantiese Hoog het die ooskus bereik. Weens die invloei van seelug oor die kusgebiede sal bewolkte toestande oor hierdie dele voorkom. Gunstige bolug toestande veroorsaak bewolkte weer oor die binneland. Donderweerstoestande sal oor die sentrale dele van die Unie ontwikkel en sal mêre ook n Suid Transvaal uitbreid.

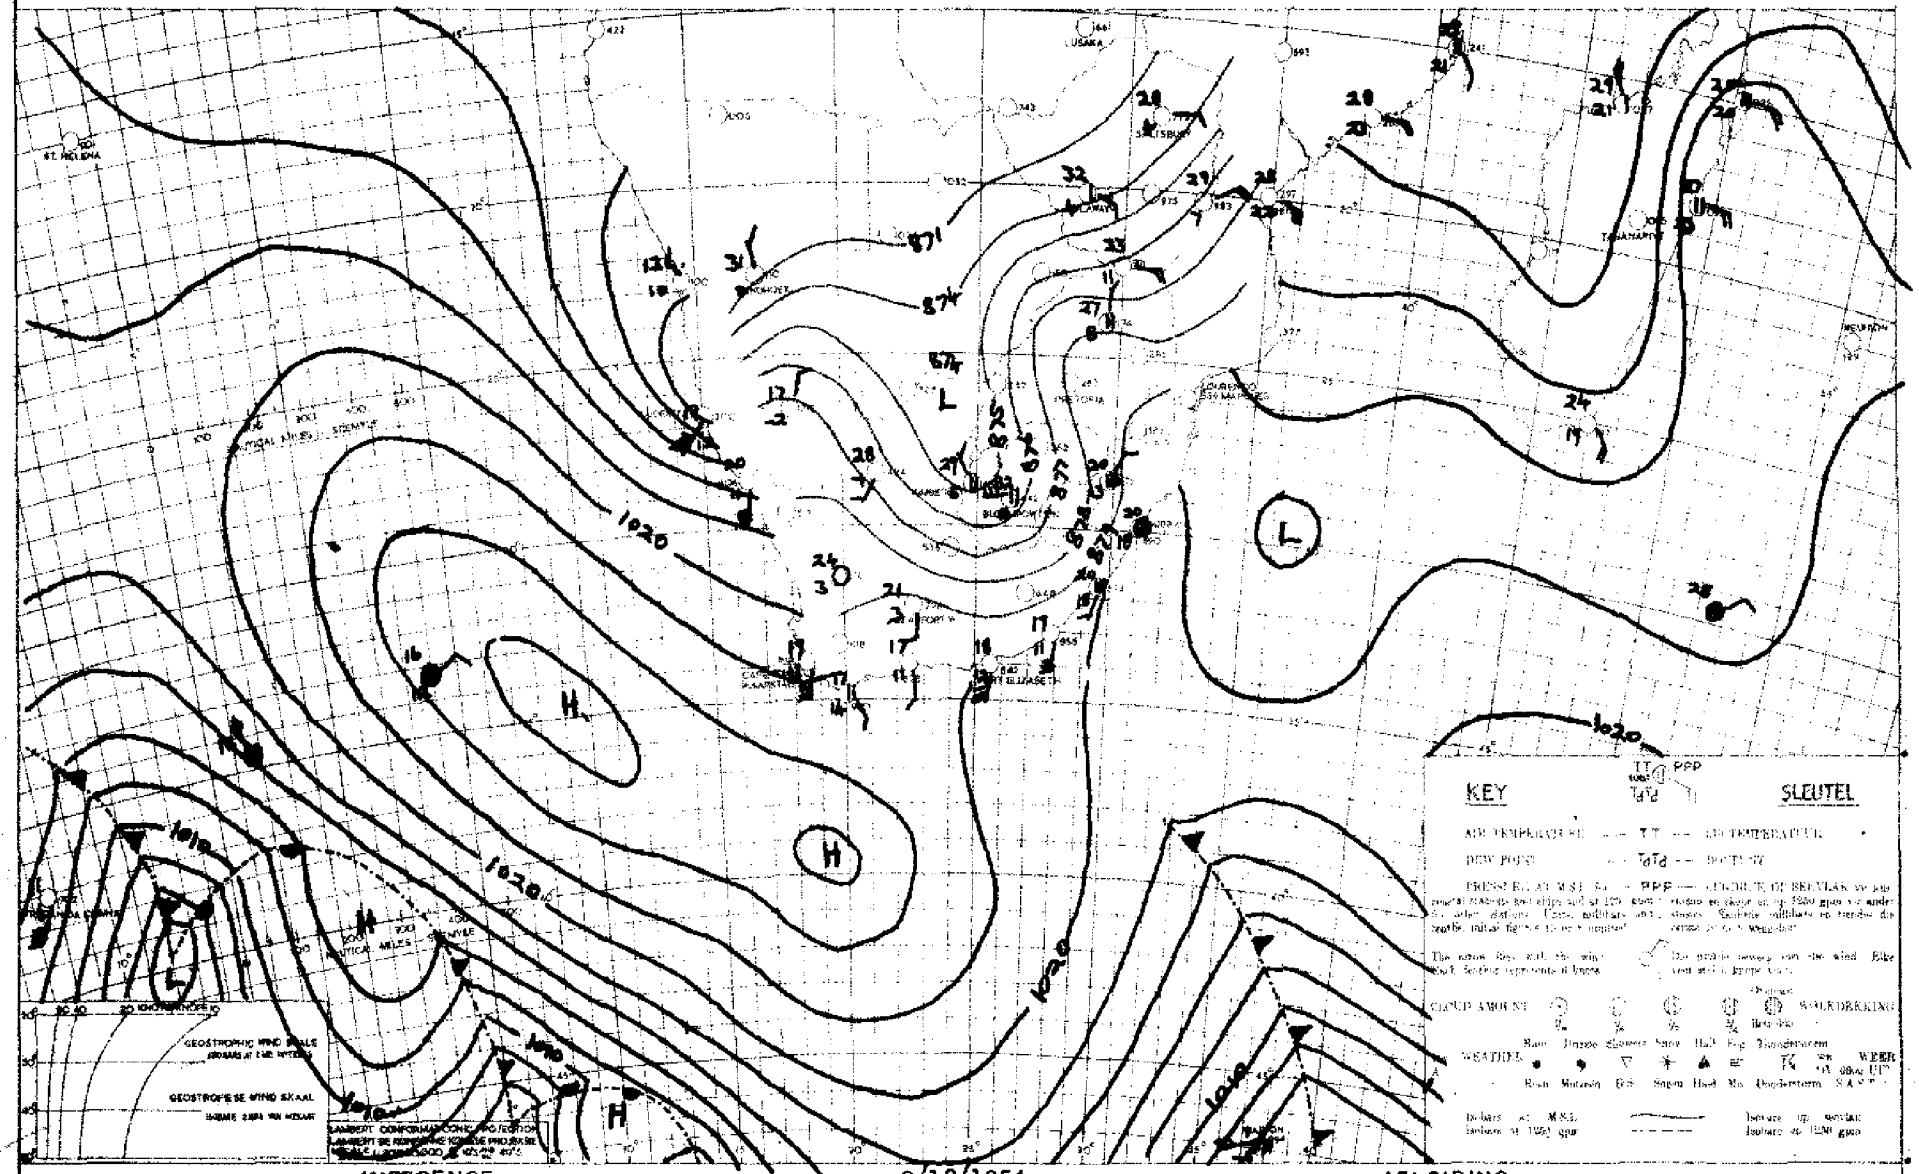
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

The front which has just passed Marion is causing a deep trough over the Union, which is responsible for the thunder conditions over Transvaal. This weather will clear tomorrow, but the movement ESE-wards of the Atlantic High will bring a stream of moist air over the Transvaal eastern lowveld.

DATE. 9/10/1954

DATUM

AFLEIDING

Die front wat Marion ne so pas verby beweeg het veroorsaak 'n diep trog oor die Unie, wat verantwoordelik is vir die donderweerstoestande oor Transvaal. Hierdie weer sal môre opklaar, maar die OSO-waartse beweging van die Atlantiese Hoog sal vogtige lug oor die O-like laeveld van Transvaal laat instroom.

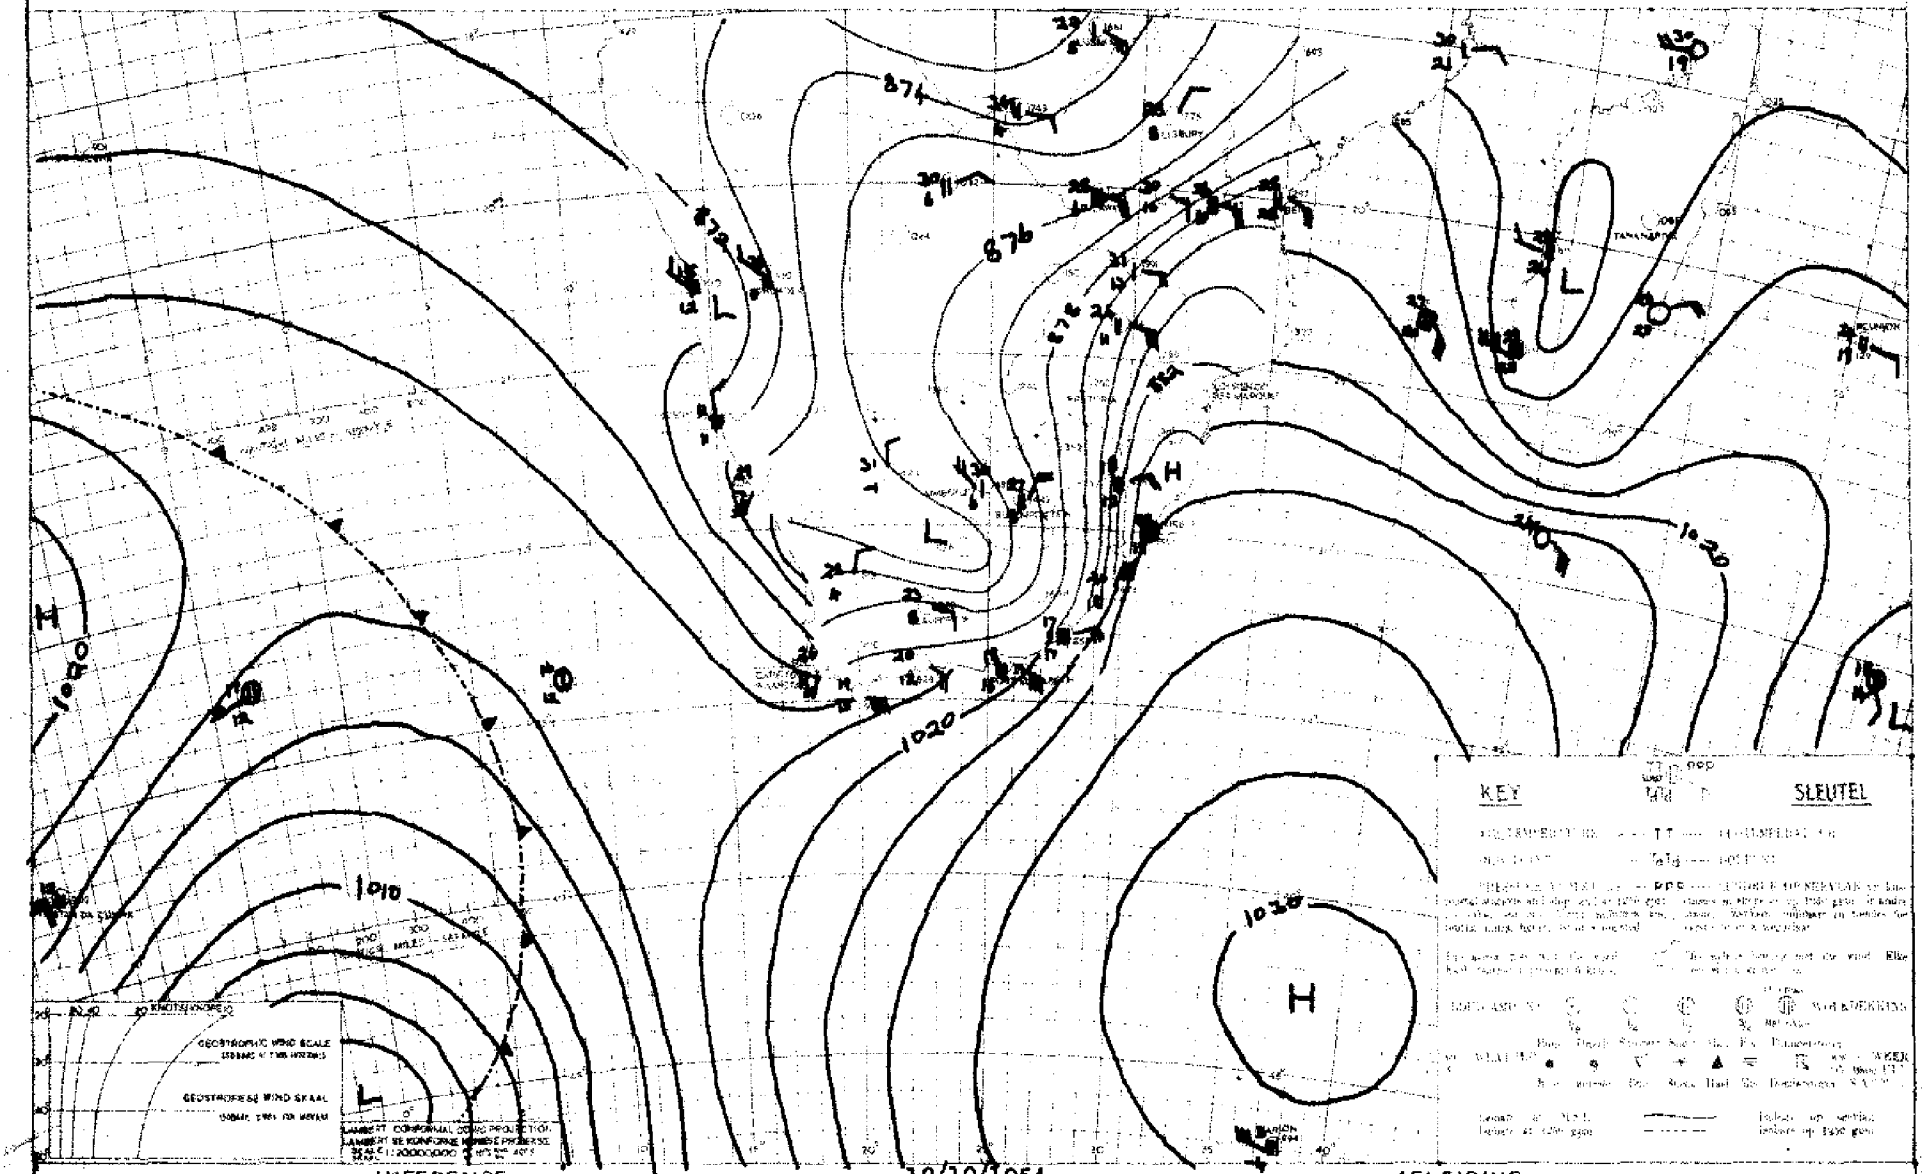
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 10/10/1954 DATUM AFLEIDING

The Indian Ocean Anticyclone, with its centre northeast of Marion, dominates the surface circulation over the eastern Union. A trough on the west coast influences the circulation over the western Union. Over Transvaal, Natal and the Free State the air is moist and cloudy to partly cloudy conditions will prevail. Light thunder activity will occur over the northern Free State and the Central Cape Provinces. Elsewhere fine.

Die Indiese Oseaan antisikloon wat sy sentrum net noordoos van Marion het, beheer die lugsirkulasie oor die Oostelike Unie. Die trog langs die weskus beïnvloed die lug. Stroming van westelike dele. Die lug oor Transvaal, Vrystaat en Natal is vogtig en bewolkte tot gedeeltelik bewolkte toestande sal voorkom. Ligte donderweerstoestande sal oor uid Vrystaat en sentrale Kaapland ontwikkel. Elders mooiweer.

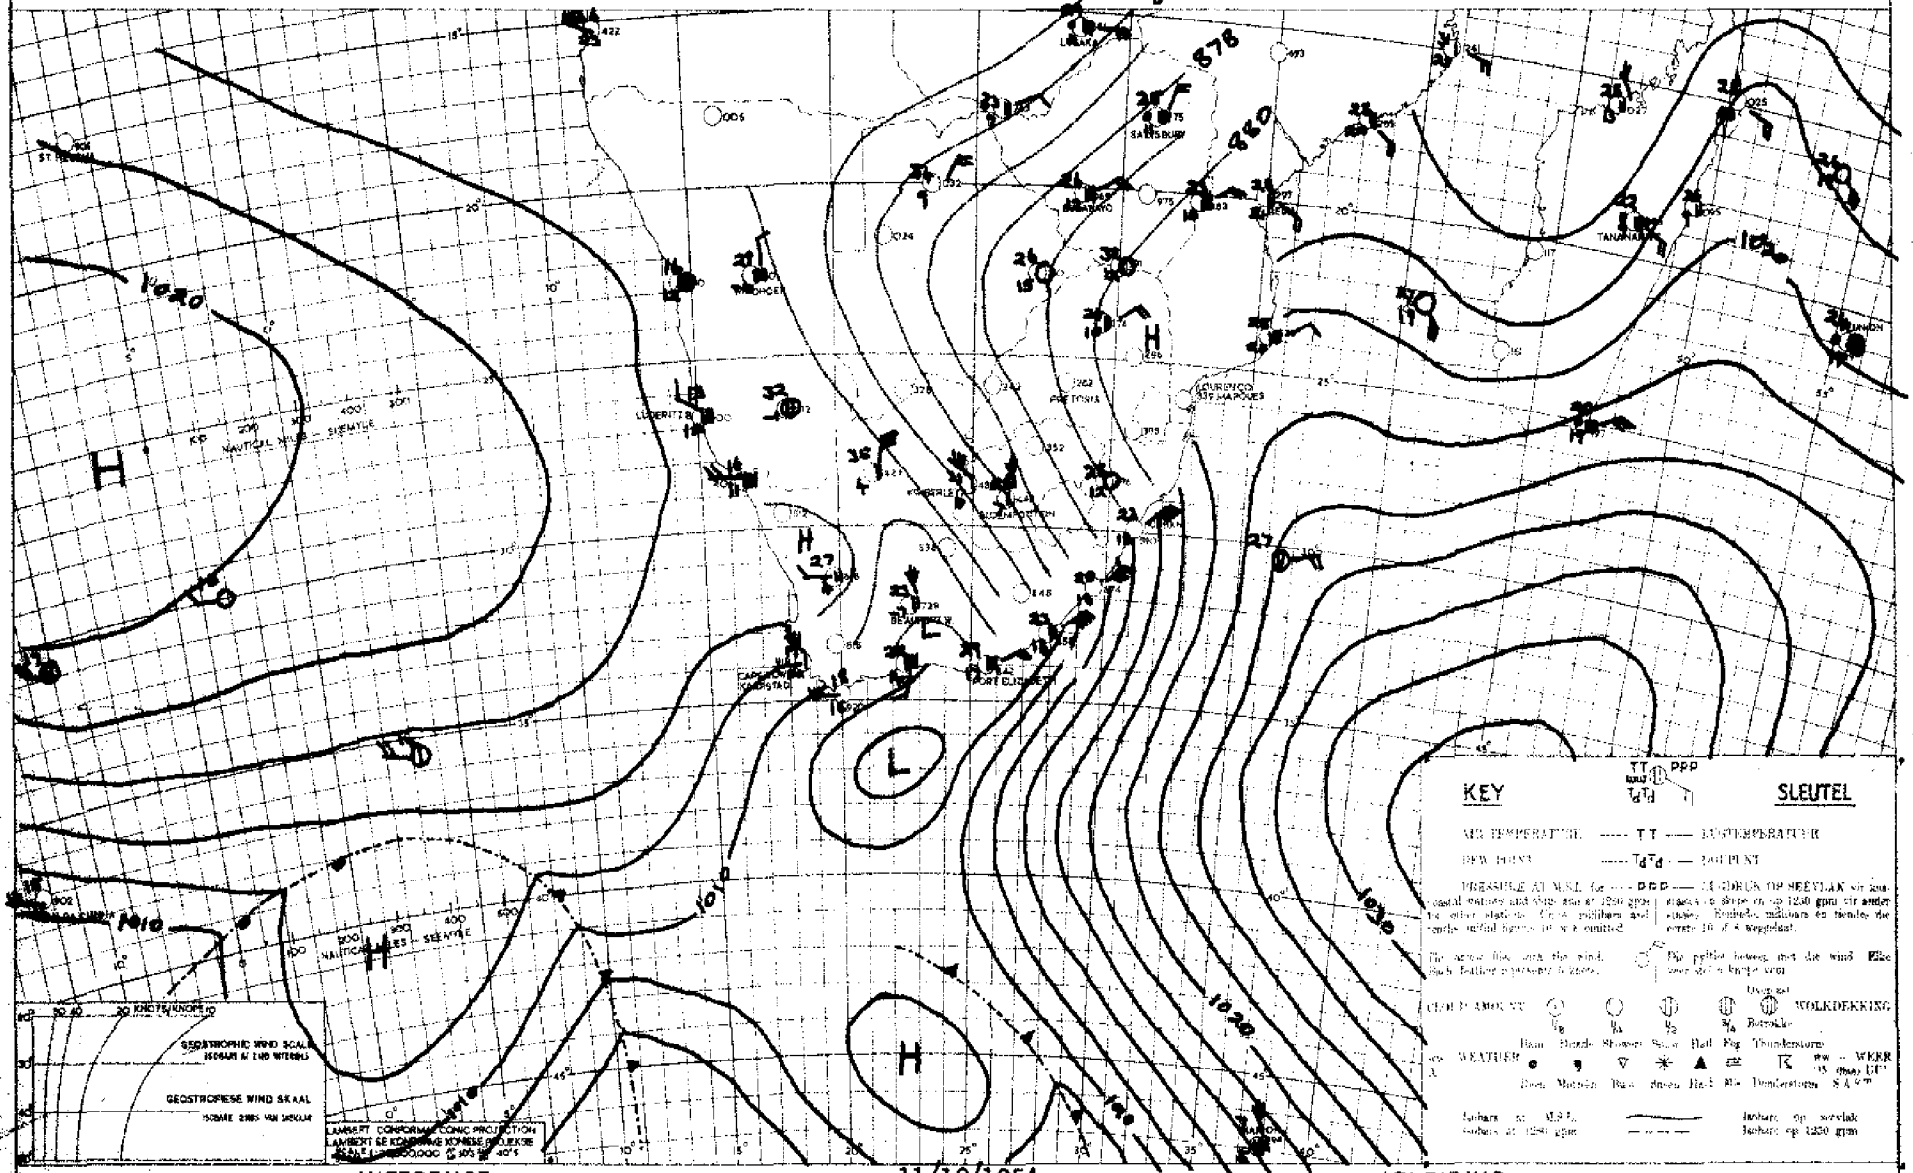
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 11/10/1954 DATUM AFLEIDING

The influence on the Union of the big anticyclone on the eastern side is now rapidly disappearing. The low pressure system which is now approaching Marion Island has caused a noticeable trough over the Cape Interior, which may cause thunder conditions over the eastern parts of the Union.

Die invloed op die Unie van die groot antisikloon op sy Oostekant verdwyn nou vinnig. Die laedrukstelsel wat Marion Eiland nader het 'n opmerkbare trog oor die Kaapse Binneland veroorsaak, wat donderweerstoestande oor die O-like dele van die Unie mag veroorsaak.

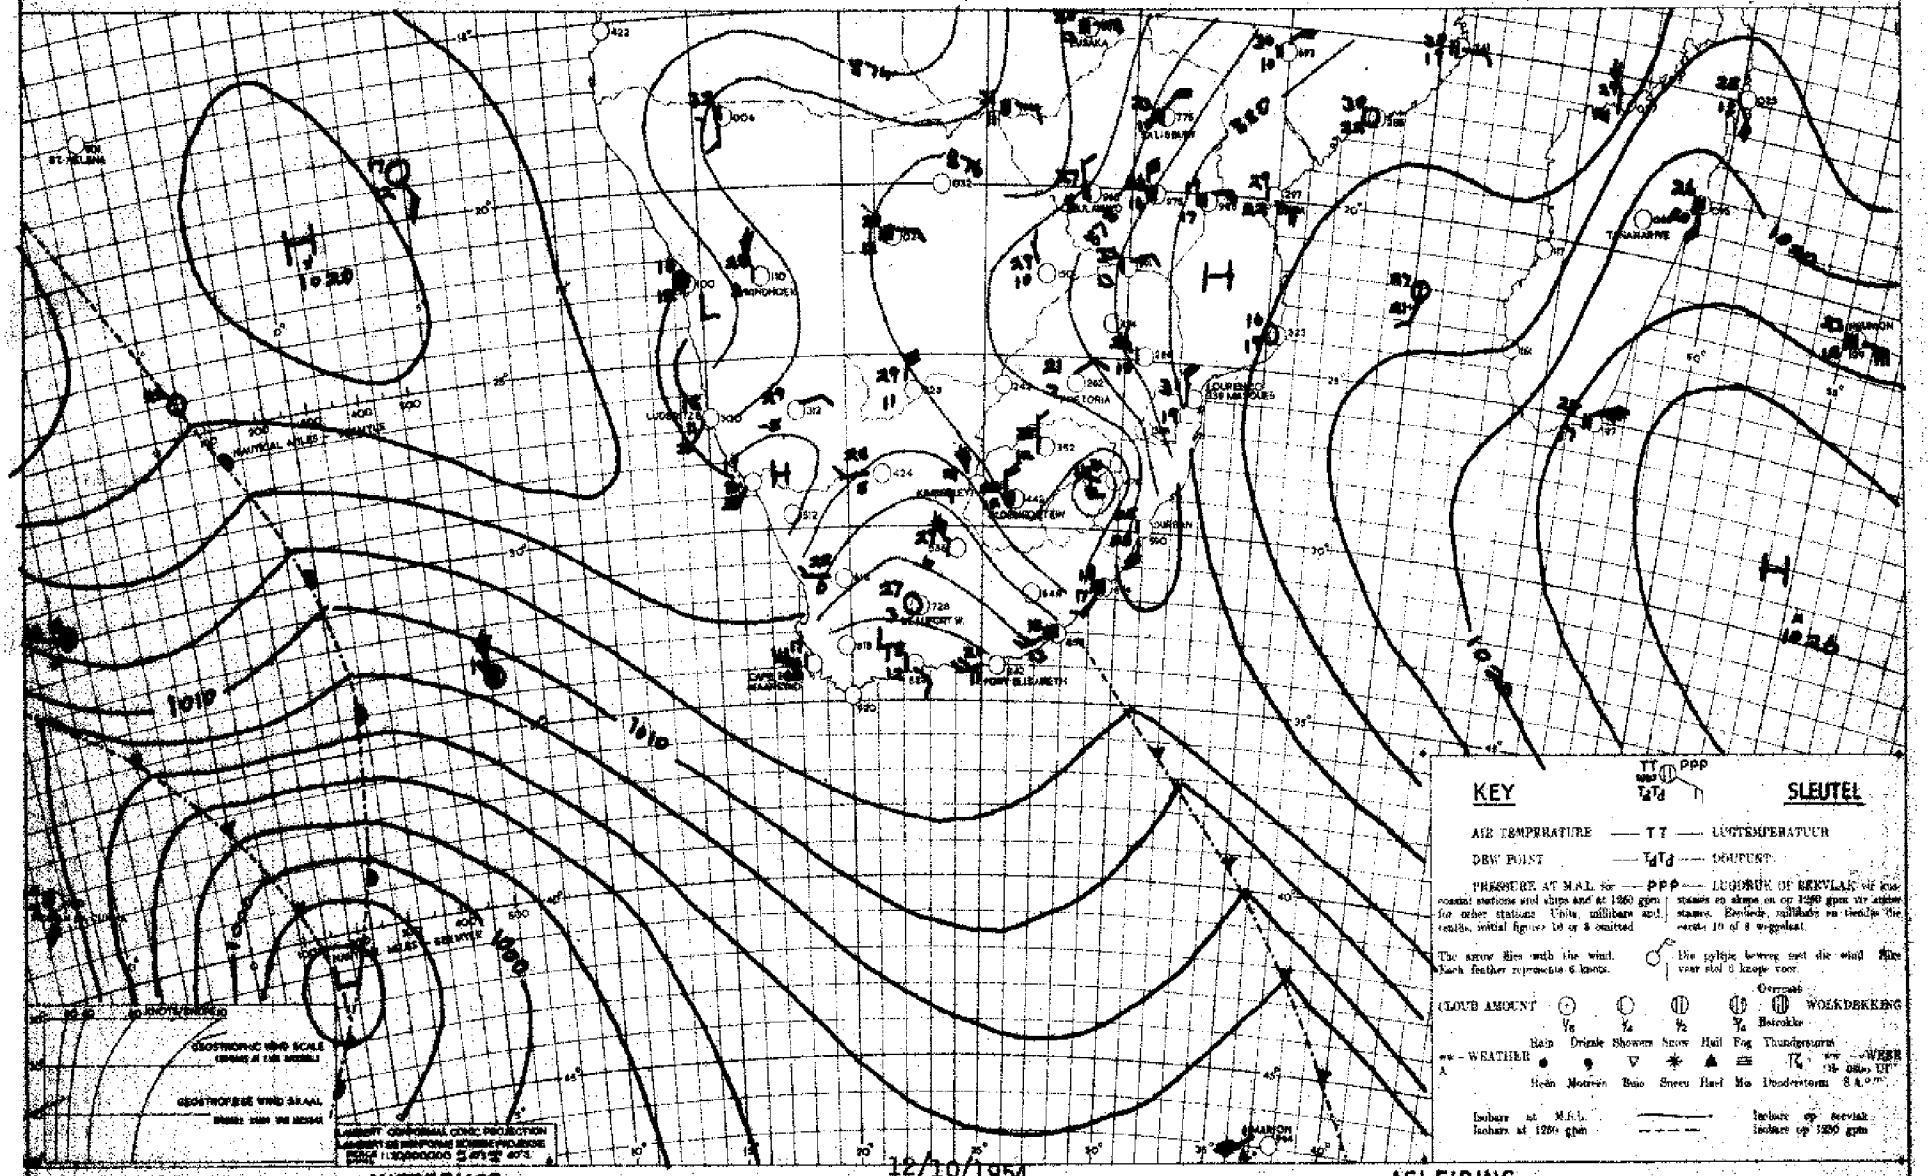
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



DATE 12/10/1954 DATUM

INFERENCE

Although the air over the eastern half of the Union is still moist and clouds will continue to develop over these areas, drier air over the western Union is gradually creeping towards the Central and southern Union and clear weather can at least be expected over the Western half of the Union. Thunder activity will still take place over the southern Transvaal, the Free State and the Natal interior.

AFLEIDING

Droër lug dring geleidelik vanuit die weste na die sentrale suidelike en suidoostelike Unie. Die lug is egter nog vogtig oor die Vrystaat, Transvaal en Natal. Geleidelik bewolkte toestande sal oor hierdie dele voorkom en donderweerstoestande sal in die namiddag ontwikkel.

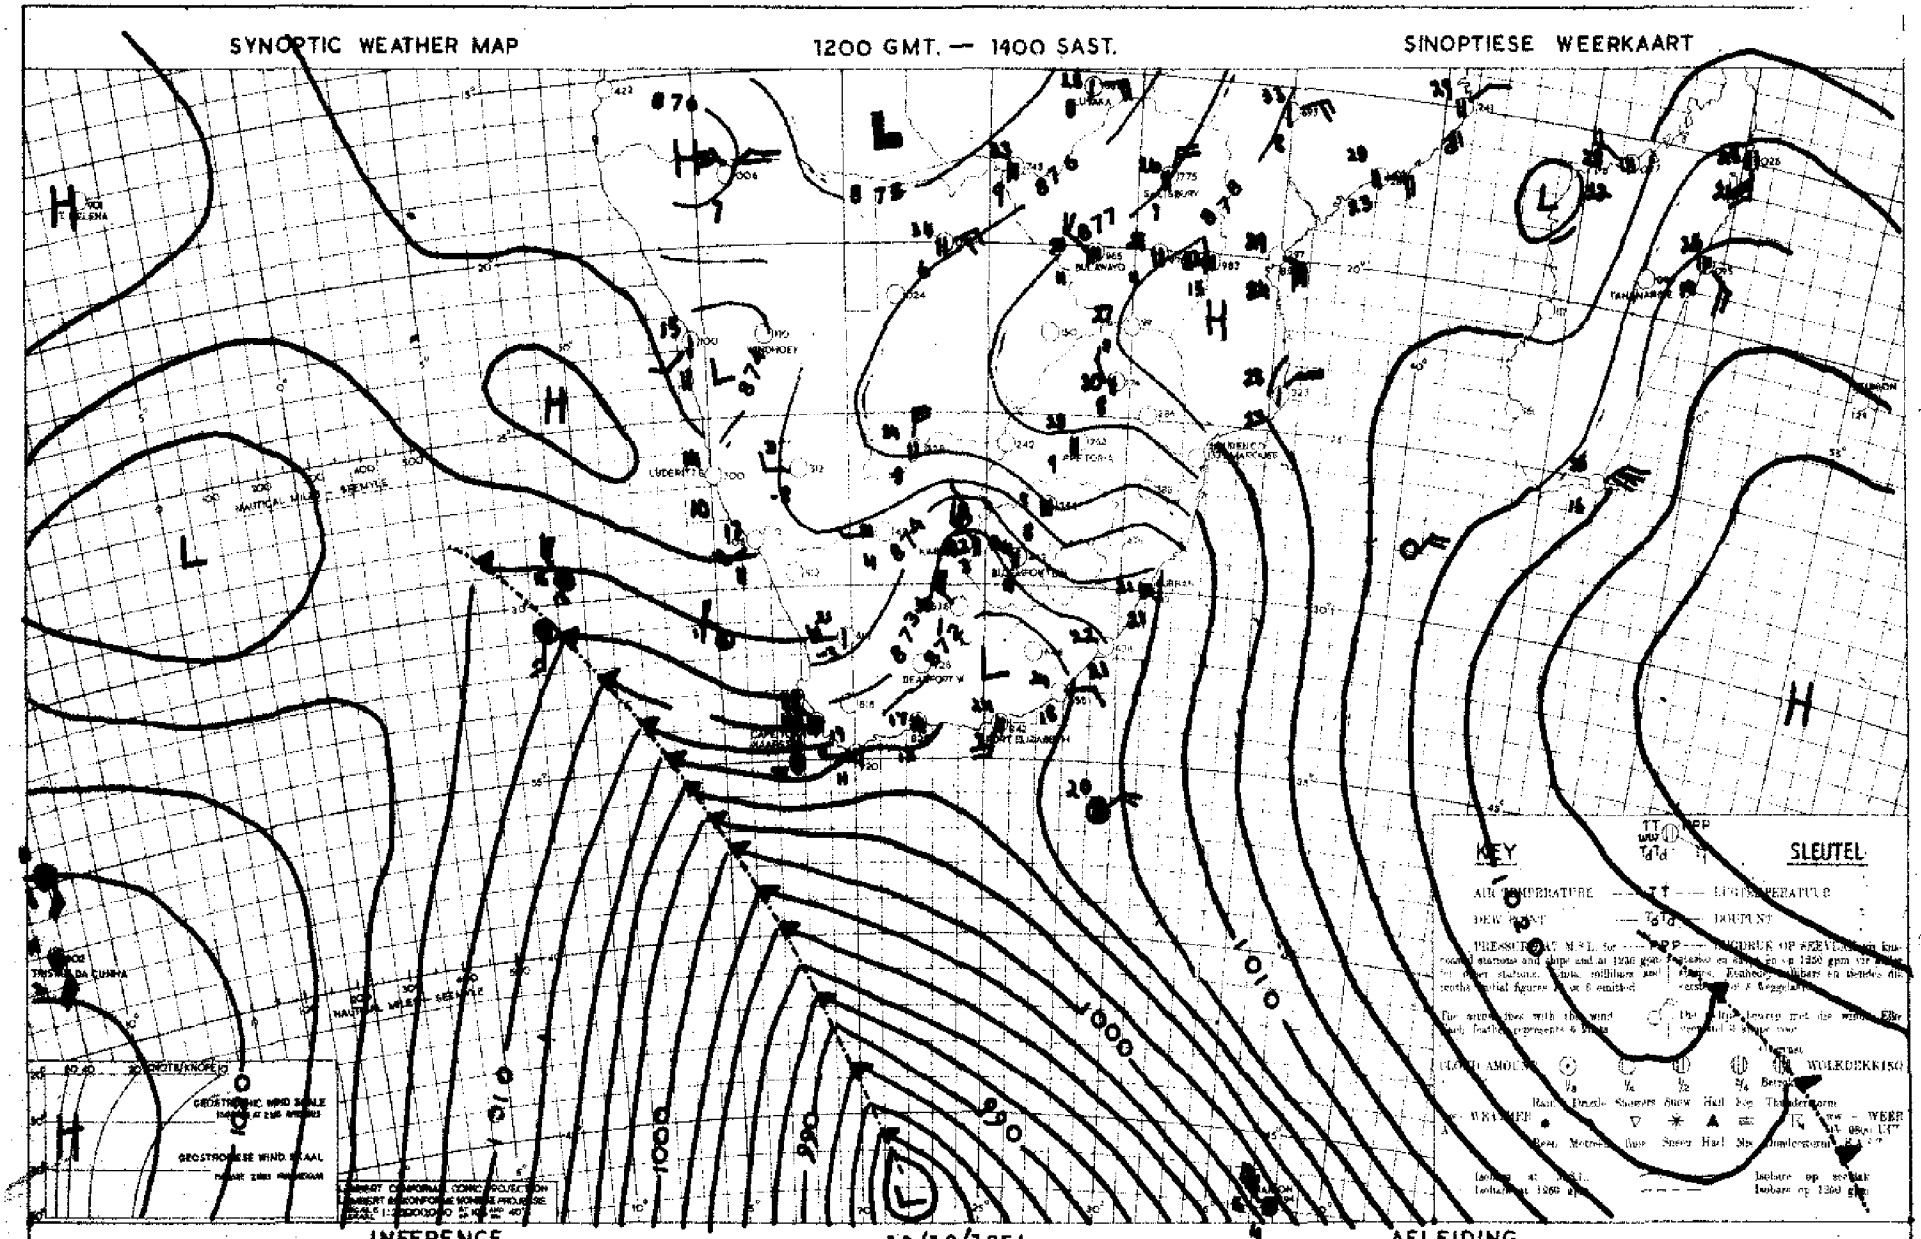
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 13/10/1954 DATUM AFLEIDING

A cold front is approaching the SW coast, and if the gradients between this front and Tristan have been correctly drawn (it will be observed that there are no ships' reports over this area), then fairly good rain should result along the South Coast.

'n Koue front nader die SW-kus; en as die gradiente tussen hierdie front en Tristan korrek geteken is (daar sal opgemerk word dat geen skeepsberigte oor hierdie gebied bestaan nie) dan behoort taamlik goeie reën langs die Suidkus plaas te vind.

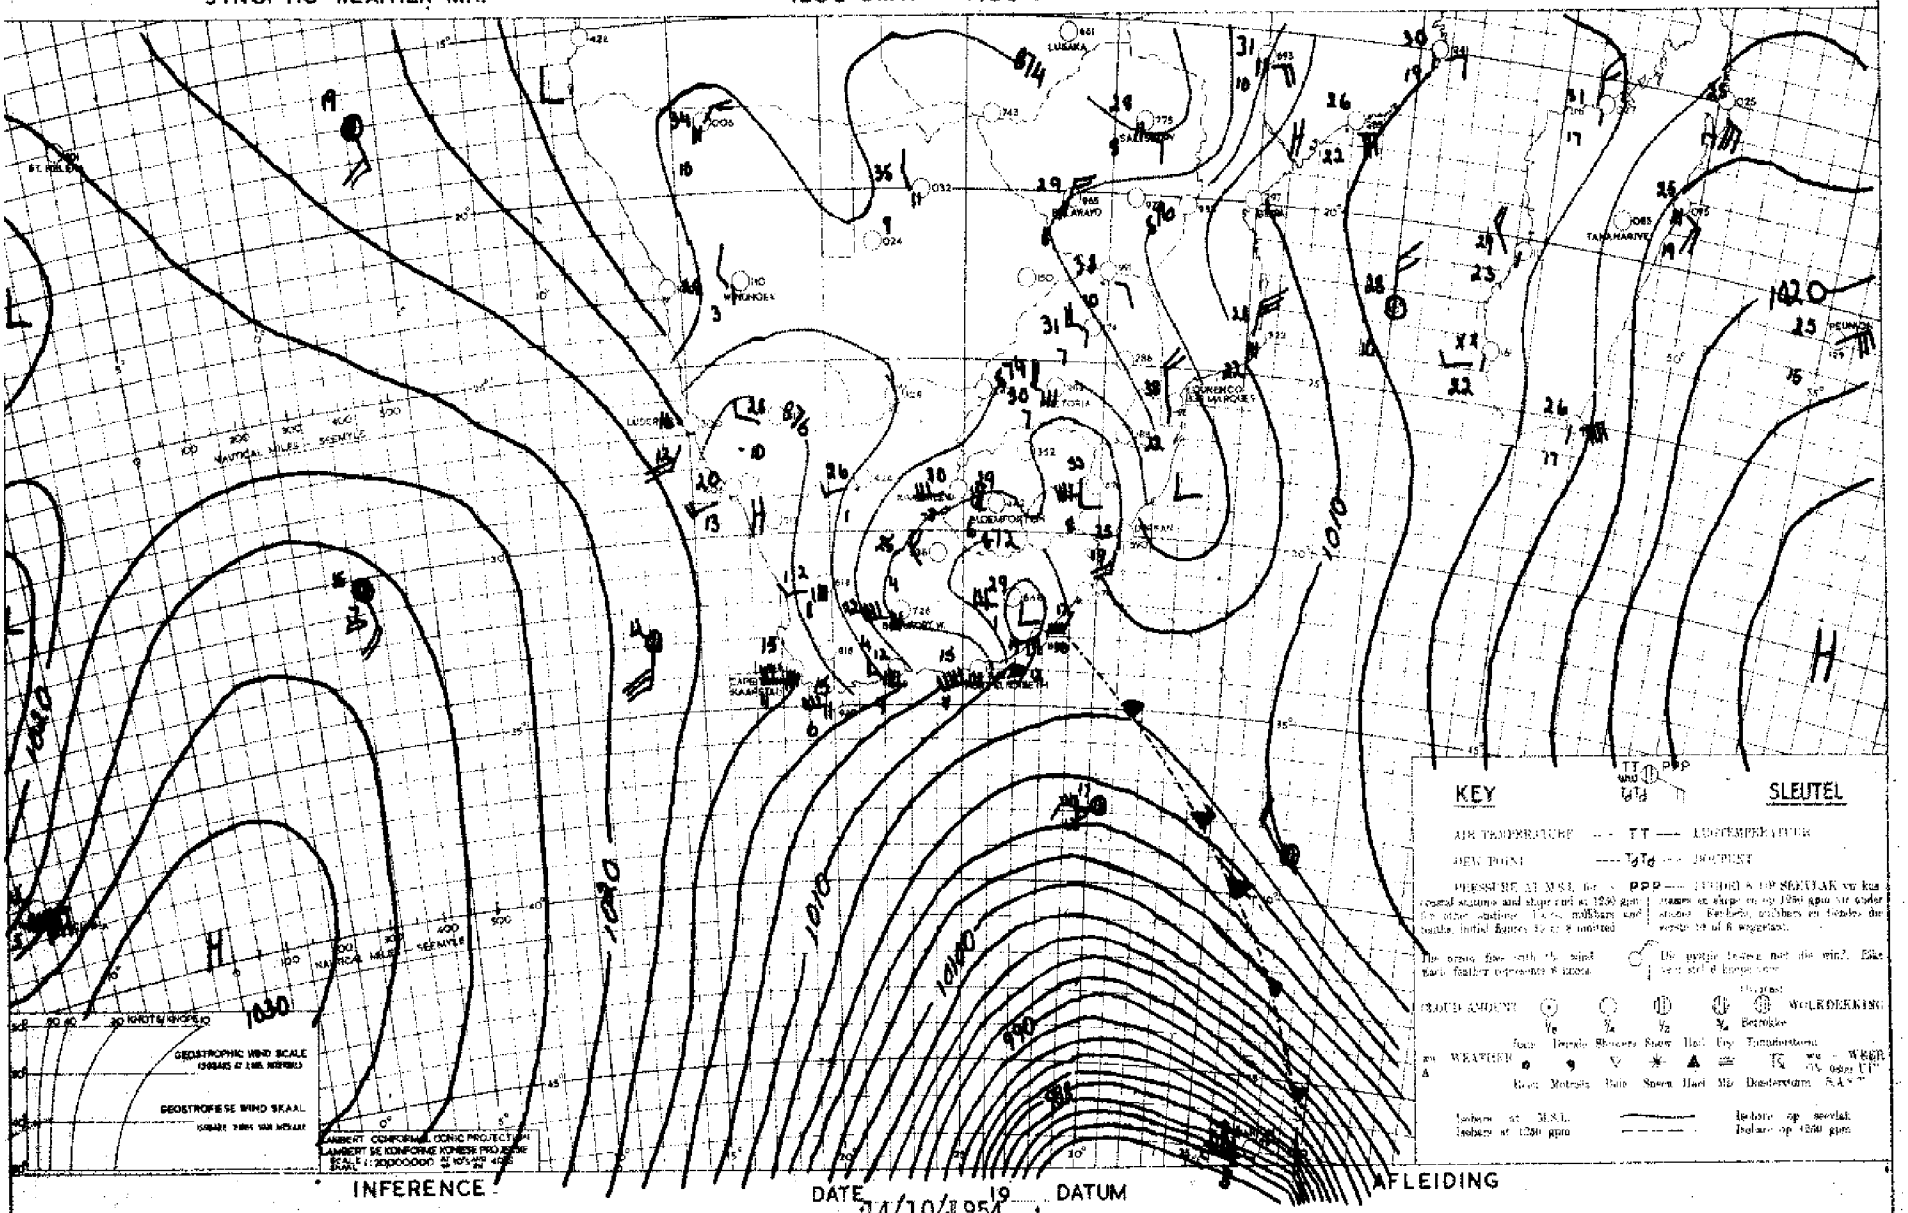
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE AFLEIDING

DATE 14/10/1954 DATUM

The gradual eastward movement of the Atlantic High will encourage the influx of dry air towards the central and southeastern Union and consequently clear skies will prevail over the western and southern Union. The air over the Transvaal, the Northeastern half of the Free State and Natal is still moist and with the influx of polar air from the South and Southeast into the Union, tender conditions will develop over these areas.

Die geleidelike oostwaartse beweging van die Atlantiese Hoogdruk gebied bevorder die invloei van droë lug na die sentrale en suidoostelike Unie en die weerstoestande oor die westelike en suidelike Unie sal dus bestendig wees. Die lug oor Transvaal, Natal en die Vrystaat is nog vogtig en met die [illegible] van koue lug vanuit die Suide en Suidoosten oor die Unie sal gunstige donderweerstoestande oor hierdie [illegible] vorm.

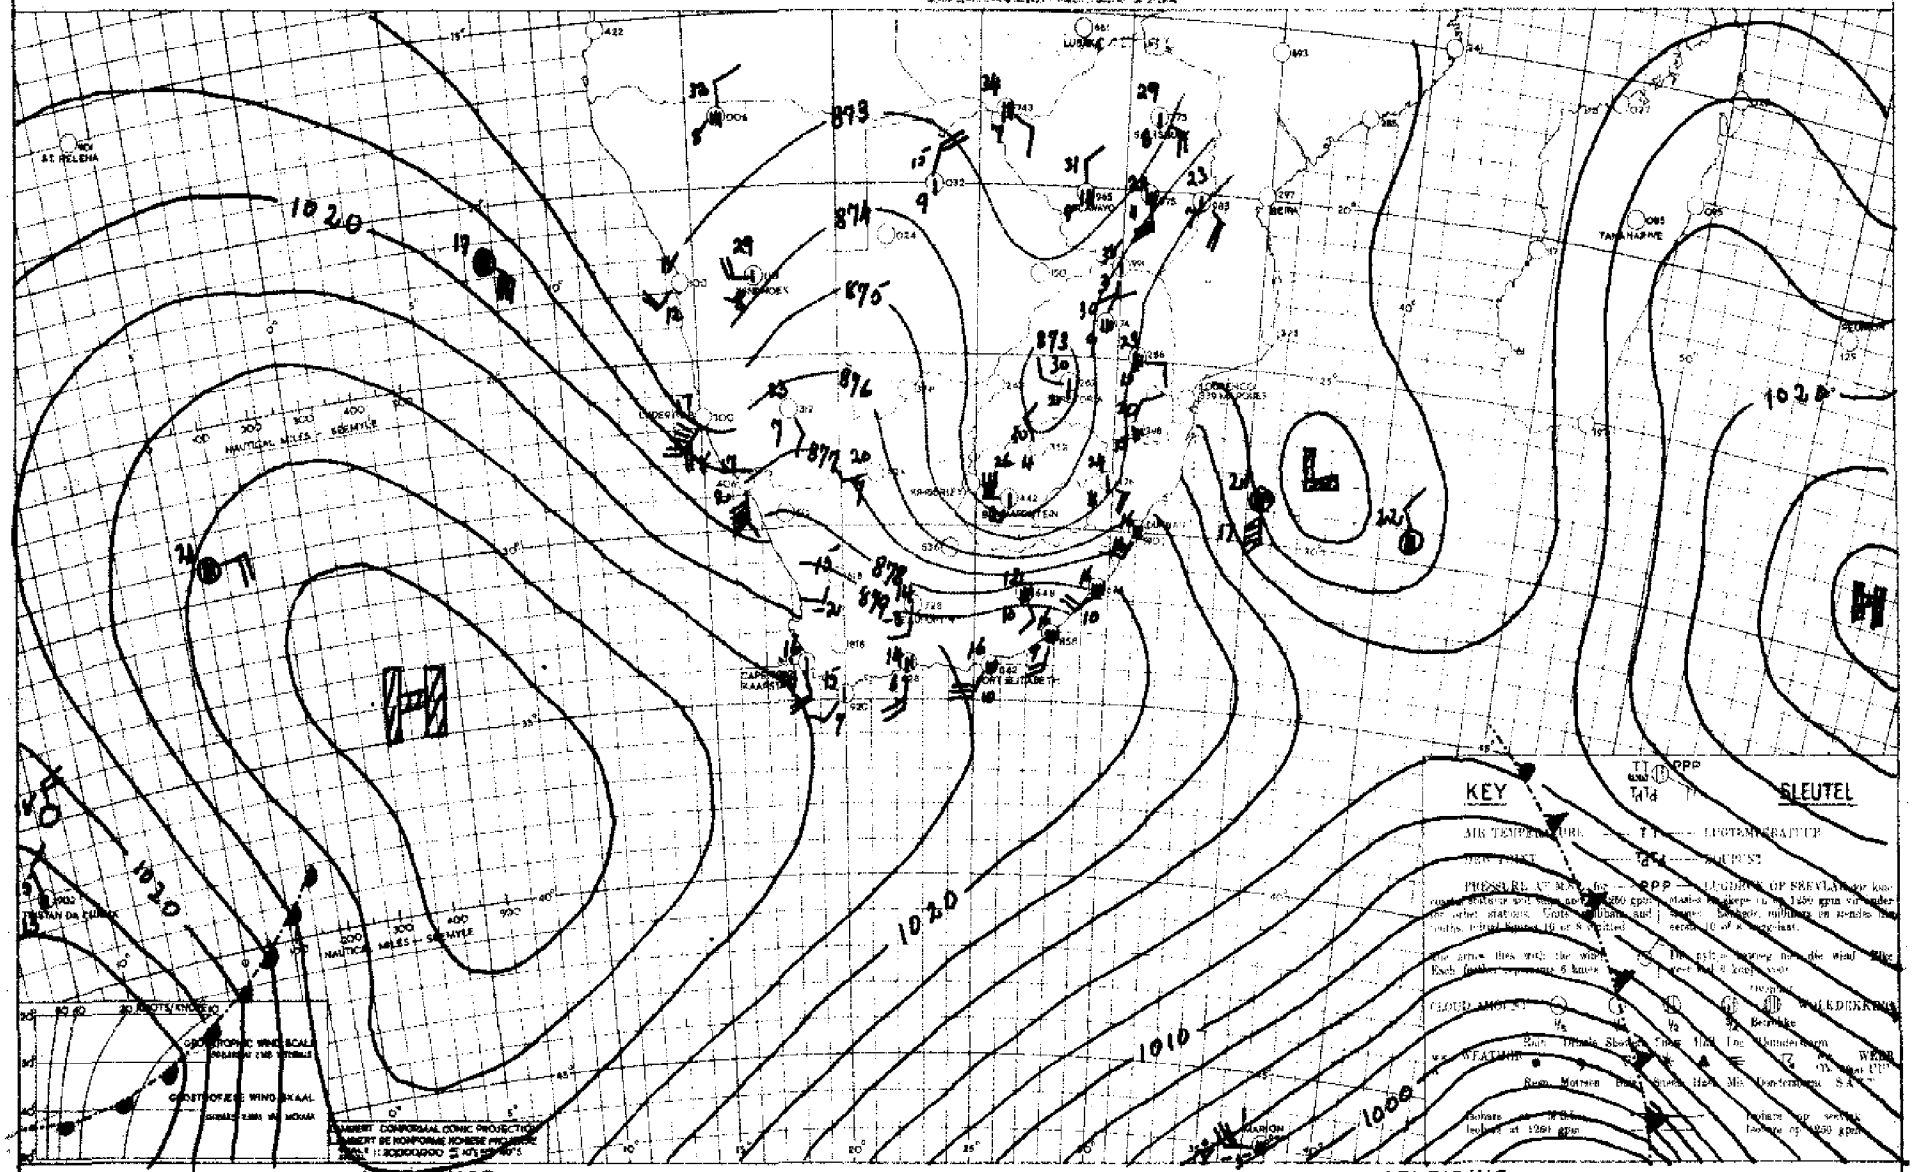
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 15-10-1954 DATUM AFLEIDING

The situation is now largely controlled by the big anticyclone west of the Union. Its further eastward movement should cause rain on the SE coast and over the eastern Transvaal lowveld.

Die situasie word nou hoofsaaklik deur die groot antisikloon wes van die Unie beheer. Die verdere oostwaartse beweging daarvan behoort reën oor die SO-kus en oor die O-like laeveld van Transvaal te veroorsaak.

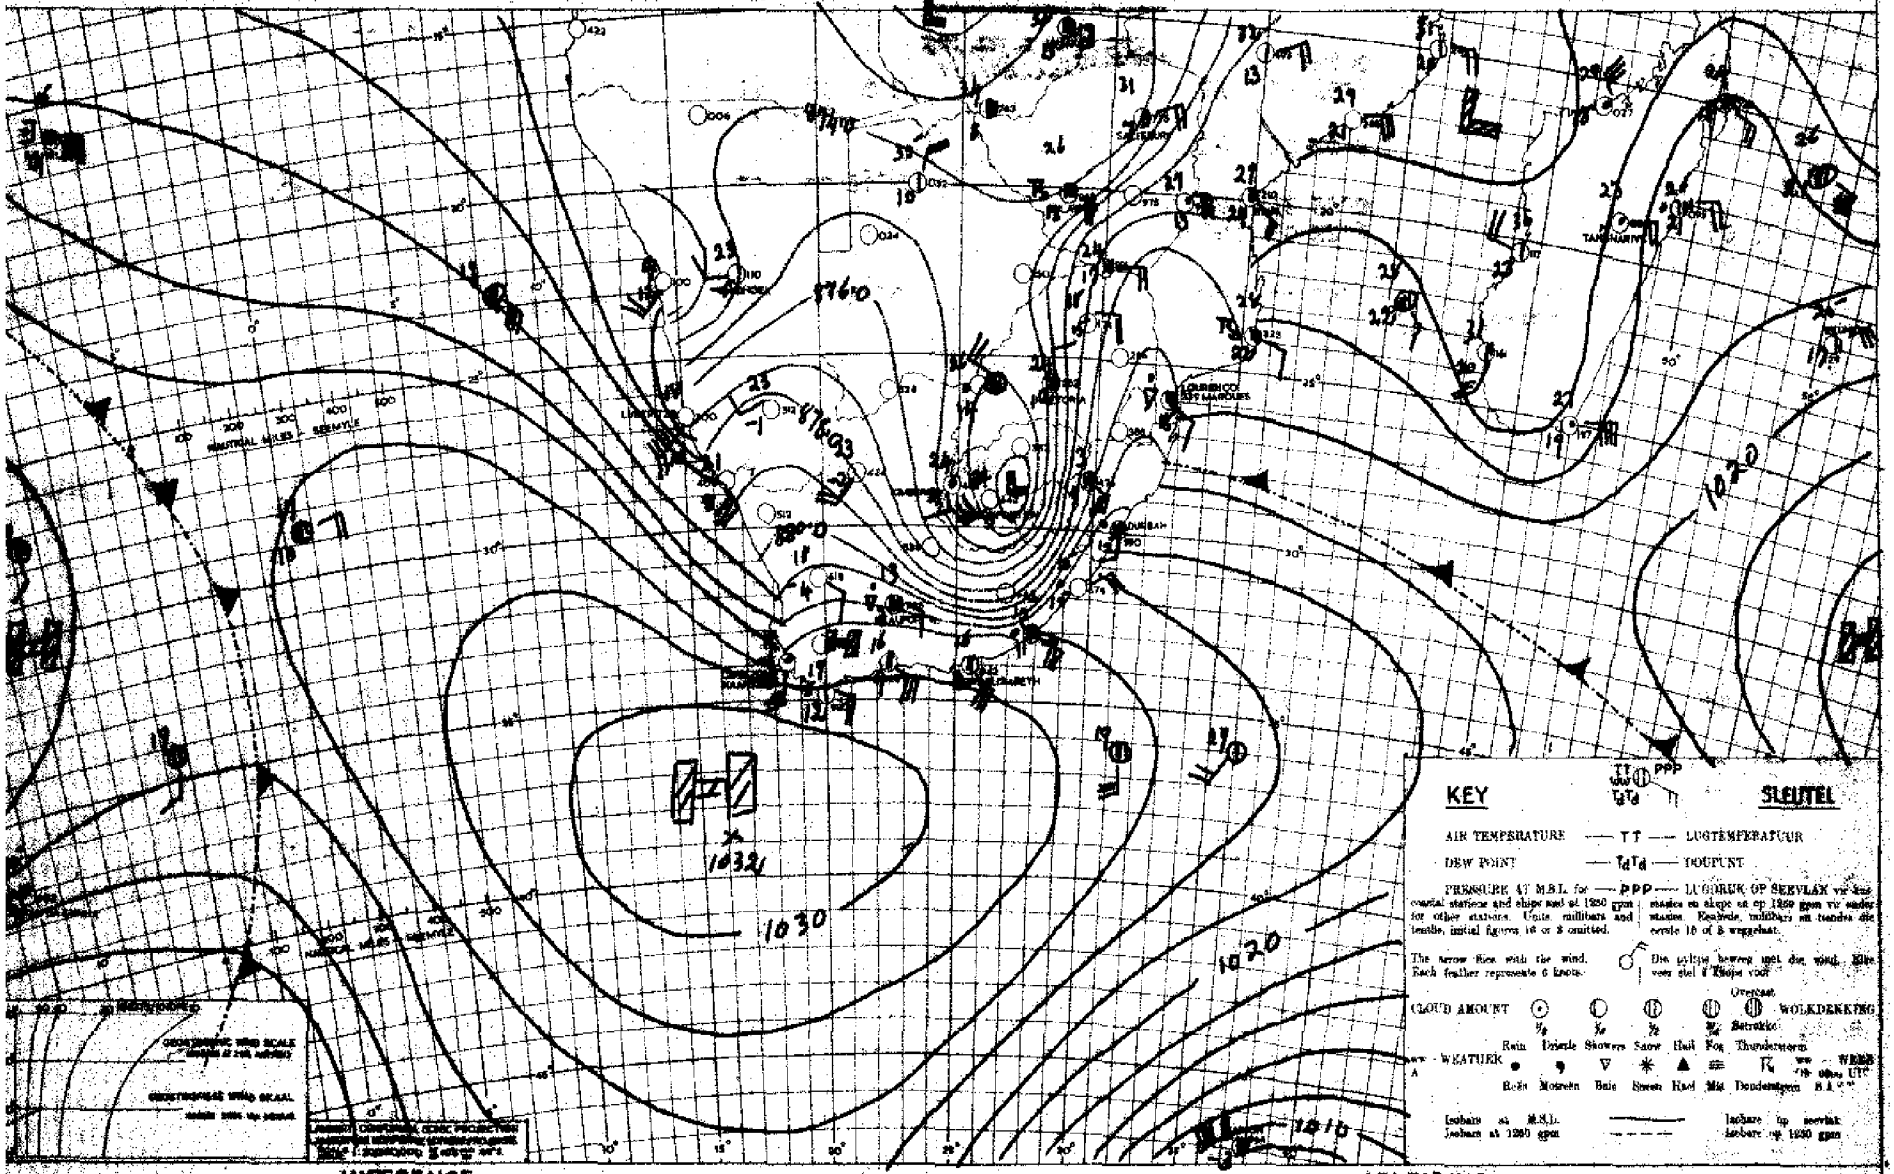
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 16-10-1964 — DATUM — AFLEIDING

The Atlantic Anticyclone is building up a strong wedge over the western Union, whilst the Free State depression remains more or less stationery. As the upper air flow is also favourable, good rains can be expected over Natal, Transvaal and the Northeastern Free State during the next 24 or 36 hours. Over the remainder of the Unions the weather will generally be fine and mild.

Die opbouing van 'n uitloper van die Atlantiese Hoog gepaard met die min of meer stasionêre posisie van die Vrystaat depressie en gunstige bolug toestande, sal goeie reëntoestande gedurende die volgende 24 of 26 uur oor Natal, Transvaal en Noordoos Vrystaat veroorsaak. Oor die res van die Unie sal dit hoofsaaklik mooiweer en matig wees.

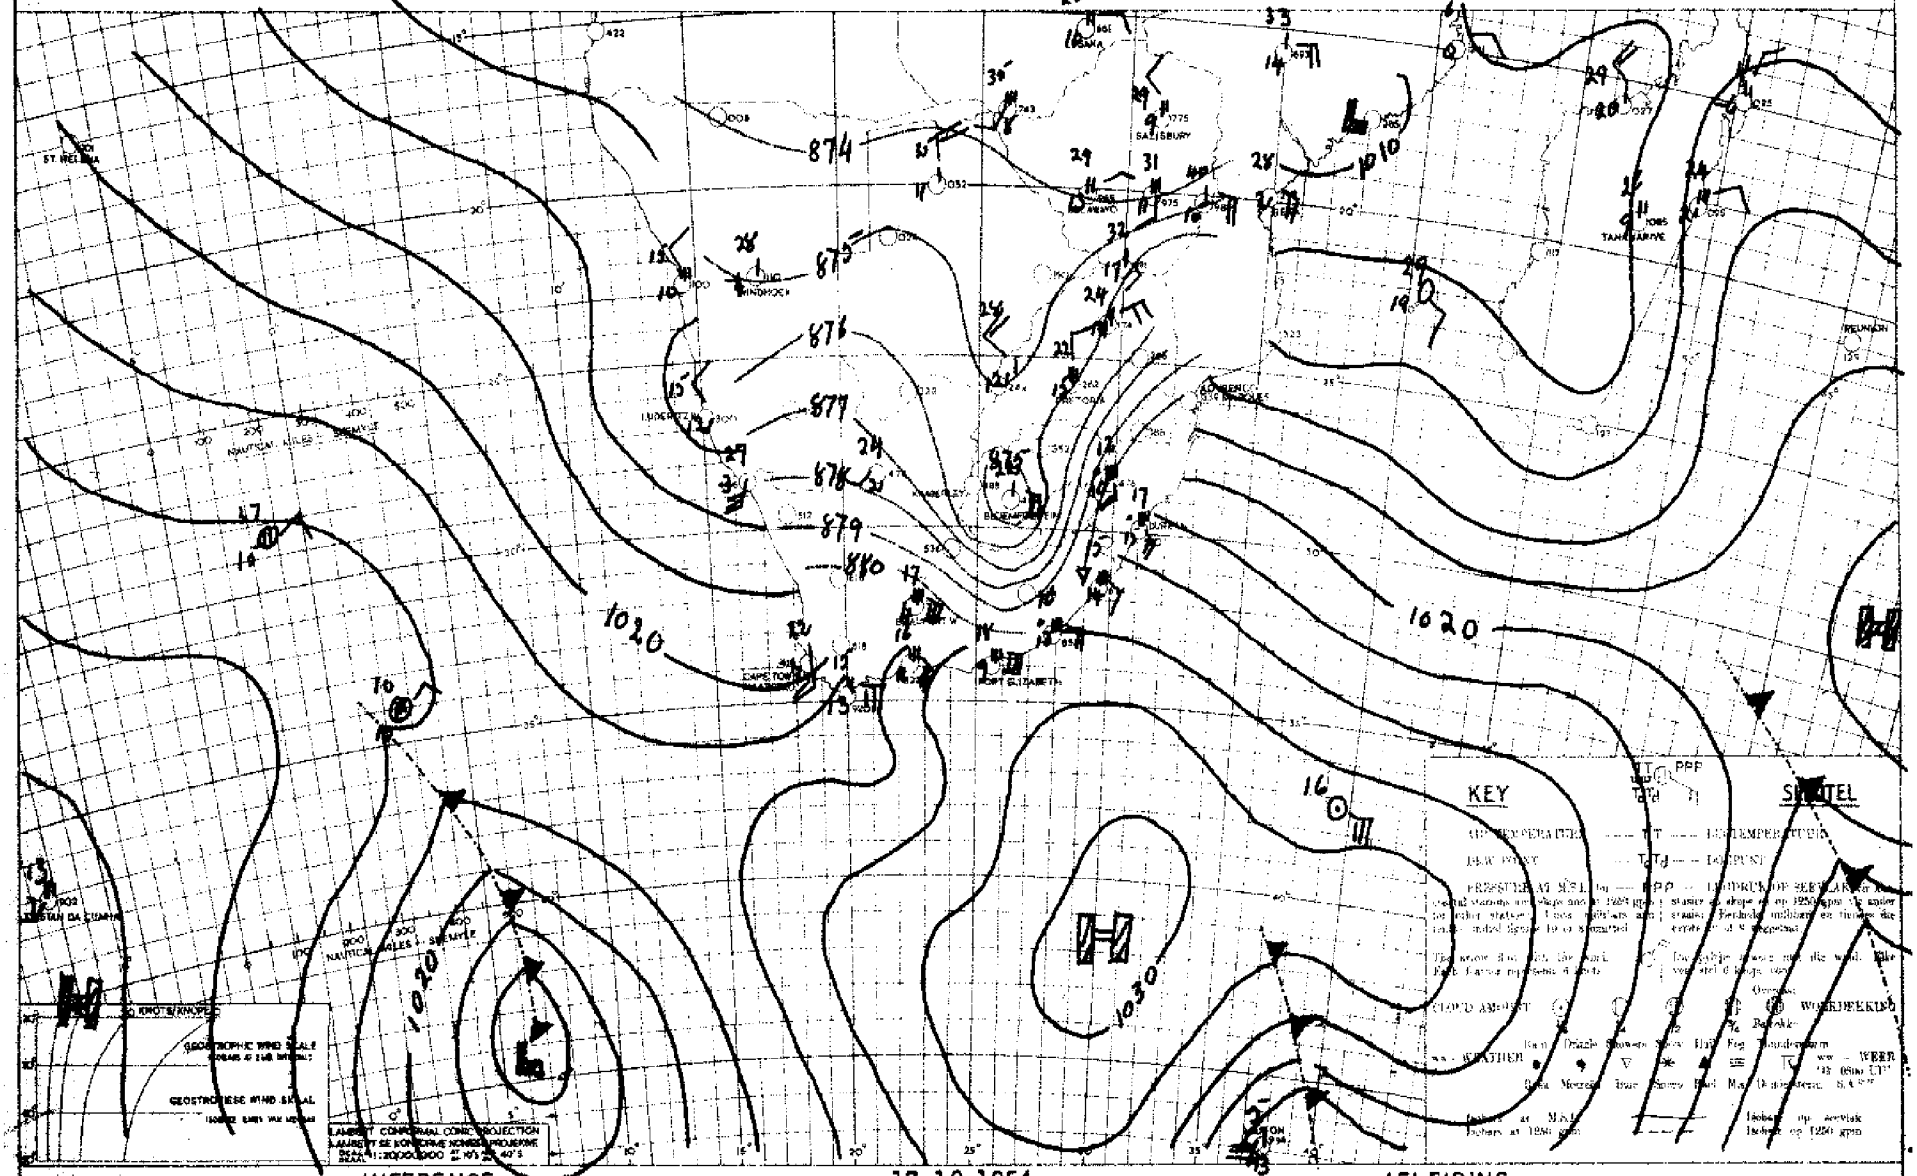
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

The high pressure area SSE of the Union is not moving very fast, and it is probable that rain will continue over the coastal and escarpment areas of Natal and Zululand, and over the eastern lowveld and escarpment areas of Transvaal.

DATE. 17-10-1954 DATUM

AFLEIDING

Die hoëdrukgebied SSO van die Unie beweeg nie baie vinnig nie en dit is waarskynlik daar reën langs die kusstreke en platorand van Natal en Soeloeland, asook oor die O-like laeveld en platorand van Transvaal, sal voortduur.

Moist air is still flooding the Northeastern Union, but with falling pressures along the southeast coast, it will be replaced gradually by drier air from the west. A new Atlantic High have little effect on the Southeastern Union as yet. Cloudy to partly cloudy weather will prevail over the Transvaal, Natal and Free State, but elsewhere it will be fair to fine.

Vogtige lug stroom nog steeds die noordoostelike Unie binne, maar vallende drukke langs die suidoos kus sal die invloei van droër lug vanuit die weste veroorsaak. 'n Nuwe atlantiese Hoog bou op suidwes van die Unie, maar sal vereers min effek op die suidwestelike Unie hê. Bewolkte tot gedeeltelik bewolkte toestande sal oor Transvaal, Natal en Vrystaat

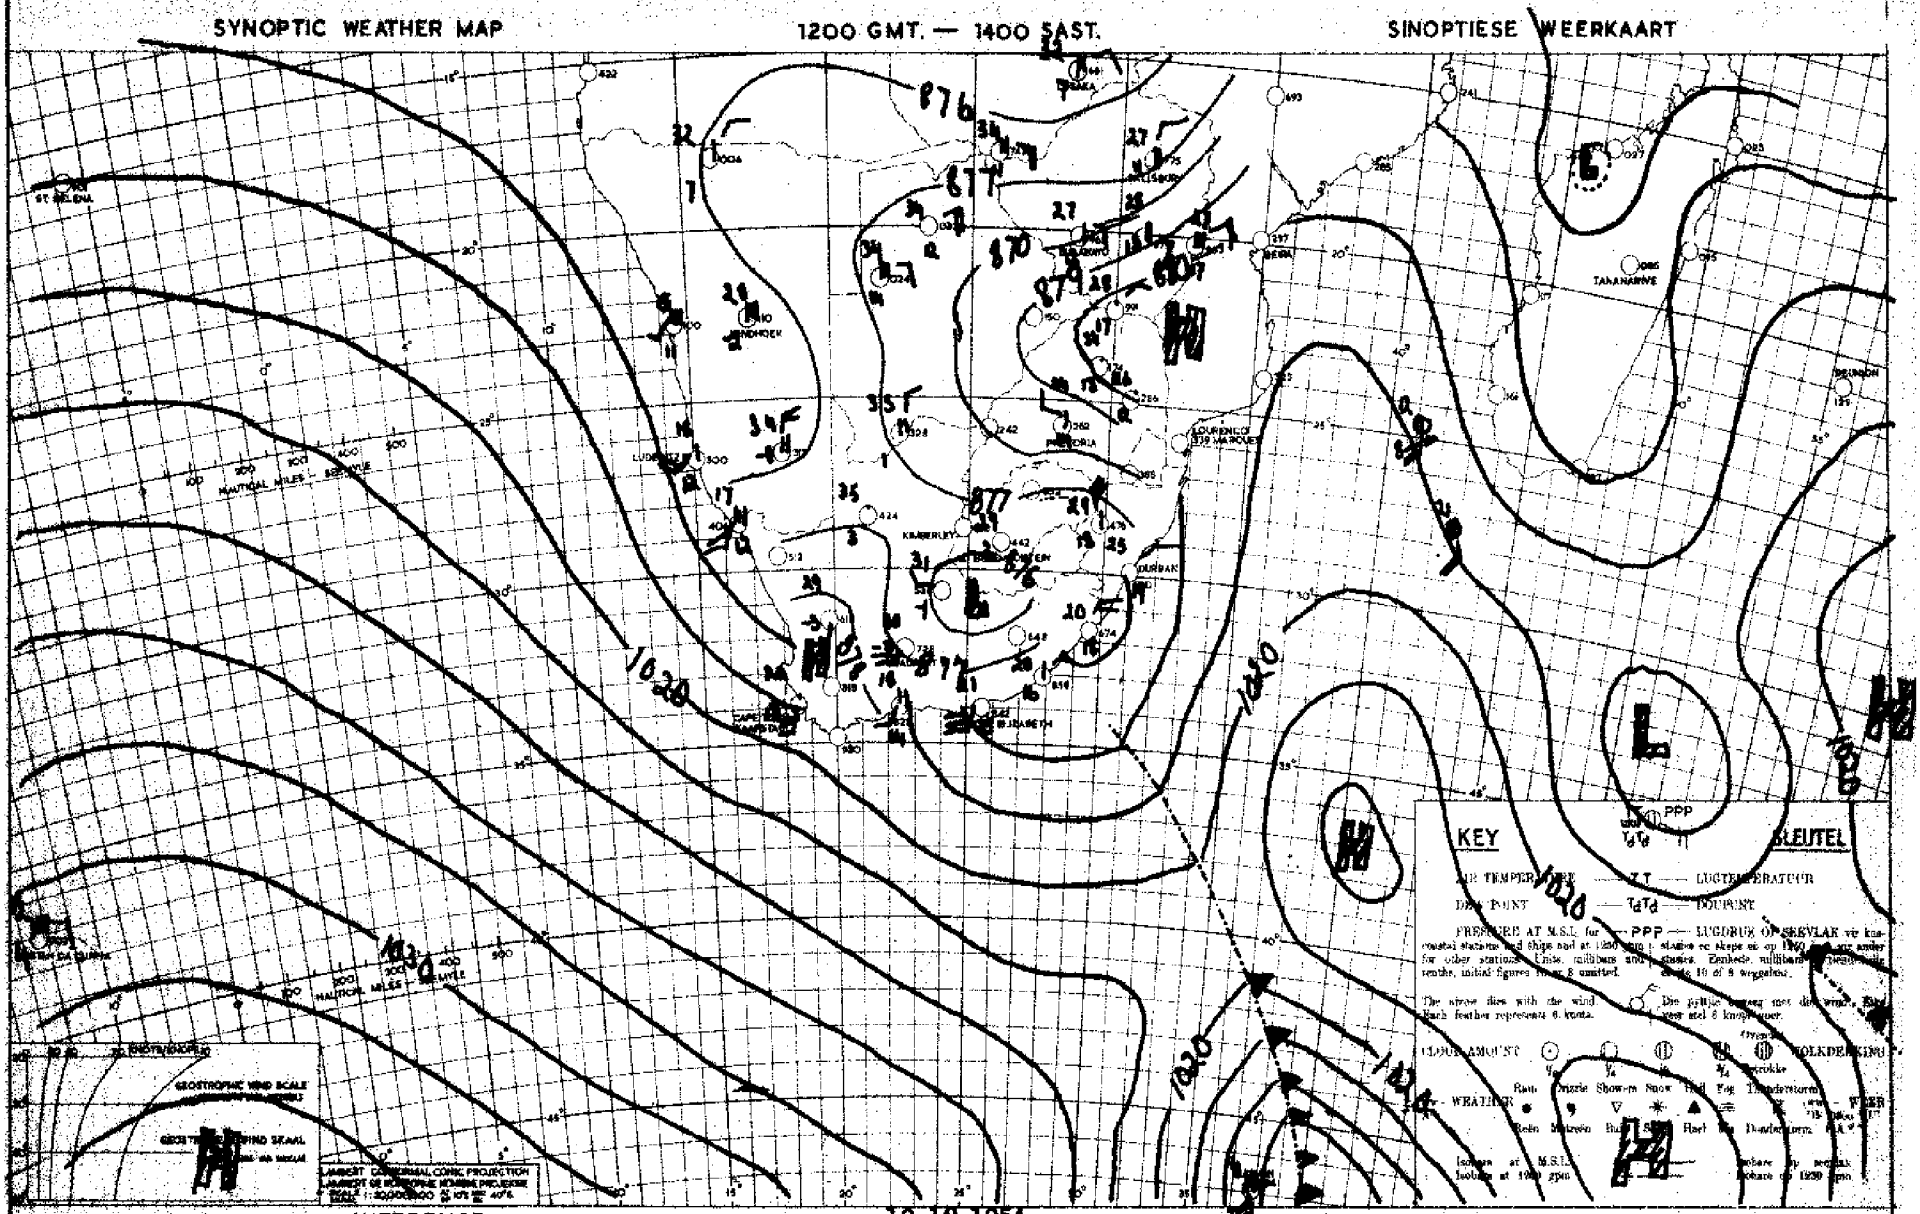
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE: 19-10-1954 — DATUM — AFLEIDING

A big anticyclone lies to the SW of the Union, but the gradients are not strong, and it is doubtful whether any strong influx of moist air over the south and southeast coasts will occur.

'n Groot antisikloon lê SW van die Unie, maar die gradiënte is nie sterk nie, en dit is twyfelagtig of 'n sterk instroming van vogtige lug oor die S-like en SO-like kuststreke gaan plaasvind.

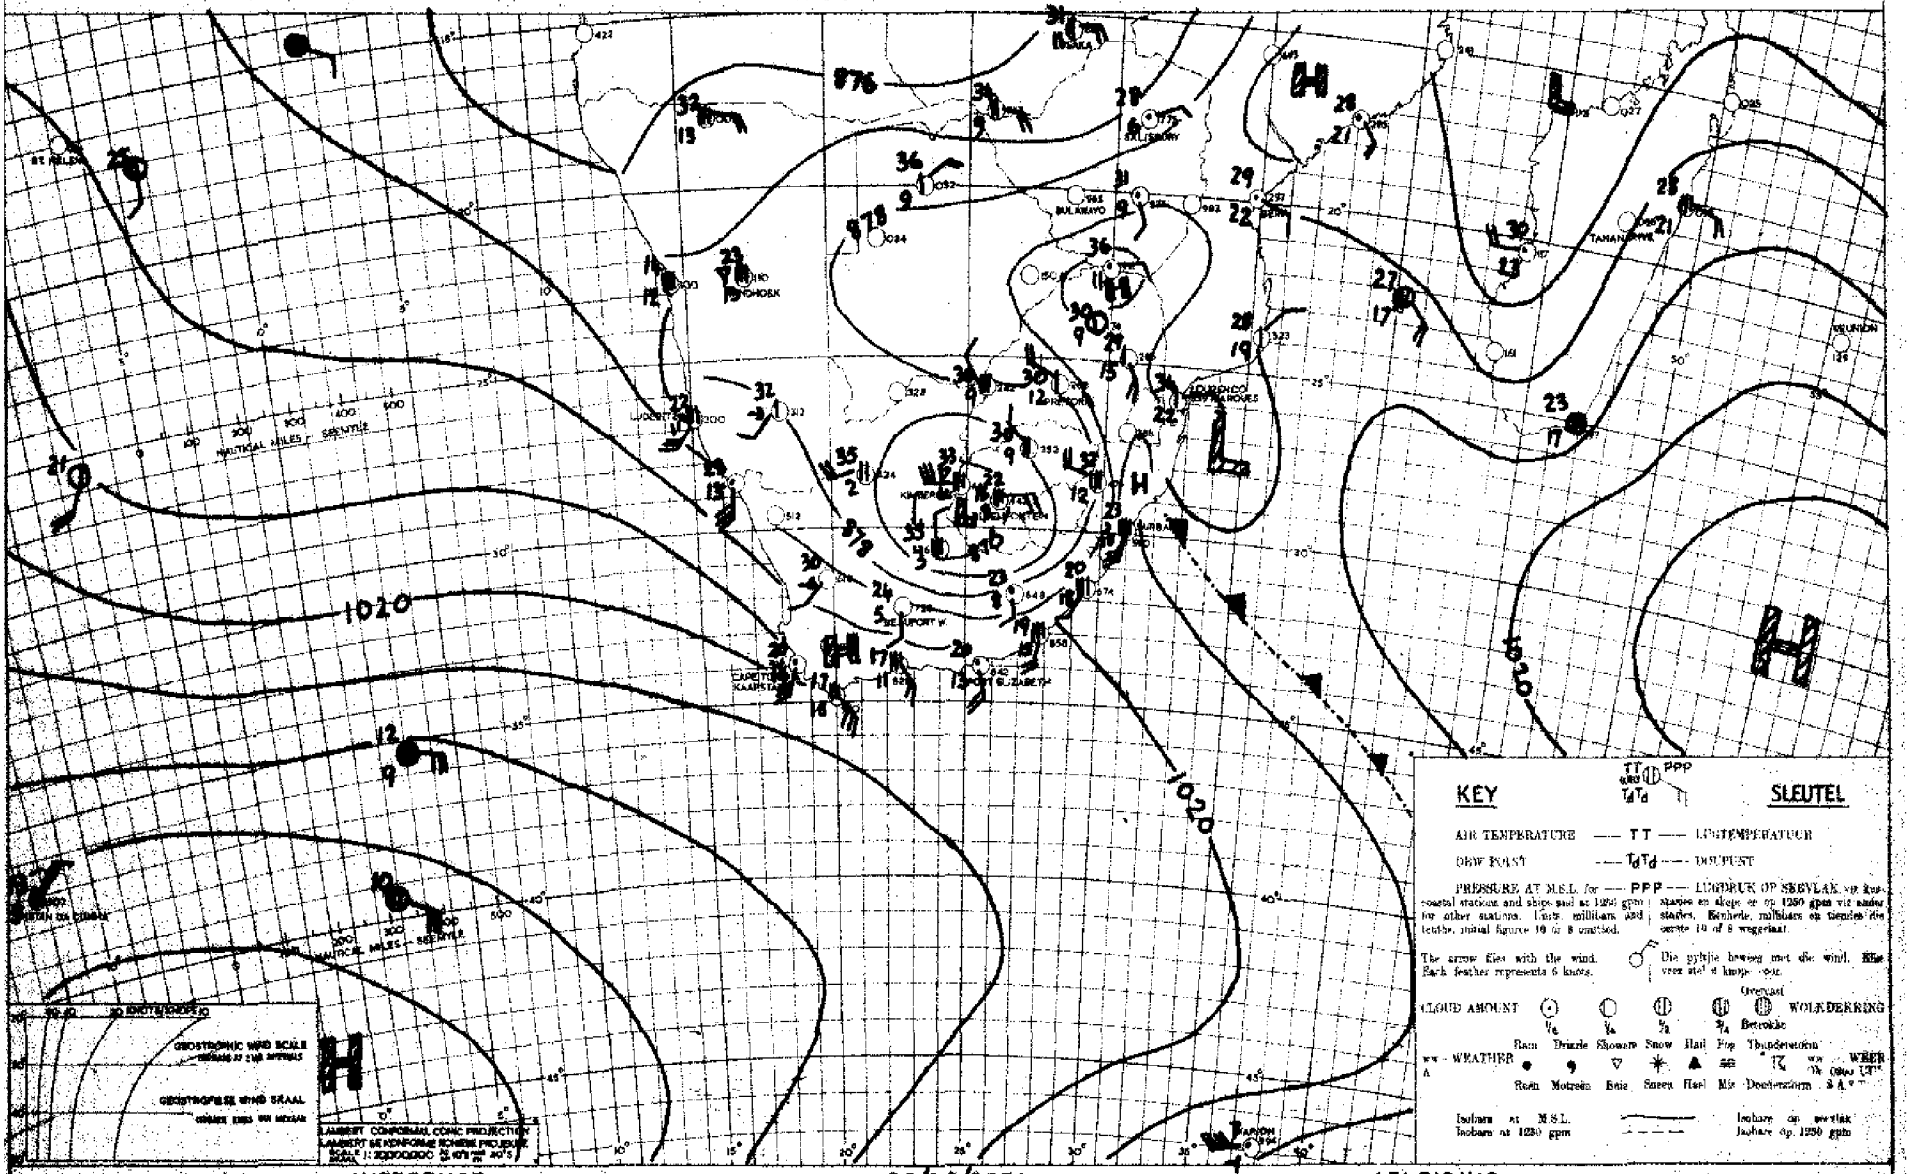
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 20/10/1954 DATUM — AFLEIDING

The Atlantic High is extending to the Natal coast, and the feeding of moist air will give temporary cloudy conditions along the East Cape and the Natal coast. The surface air over the interior and north of the Orange River is warm and moist. The upper air over these regions is also moist and and cloudy weather with scattered thundershowers can be expected over the E. Cape, Free State and the southern half of Transvaal. Remainder of Union fine weather.

Die Atlantiese Hoog strek nou tot by die Natal kus en die invoer van vogtige seelug sal tydelik bewolkte toestande langs die Kaapse Oos-en Natal kus veroorsaak. Oor die binneland, noord van die Oranje rivier is die lug wat oor die dele sirkuleer warm en vogtig en bewolkte toestande gepaard met verspreide donderbuie sal oor Noord Kaapland, Vrystaat en die suidelike helfte van Transvaal voorkom. Elders oor die Unie sal dit mooimaar bly.

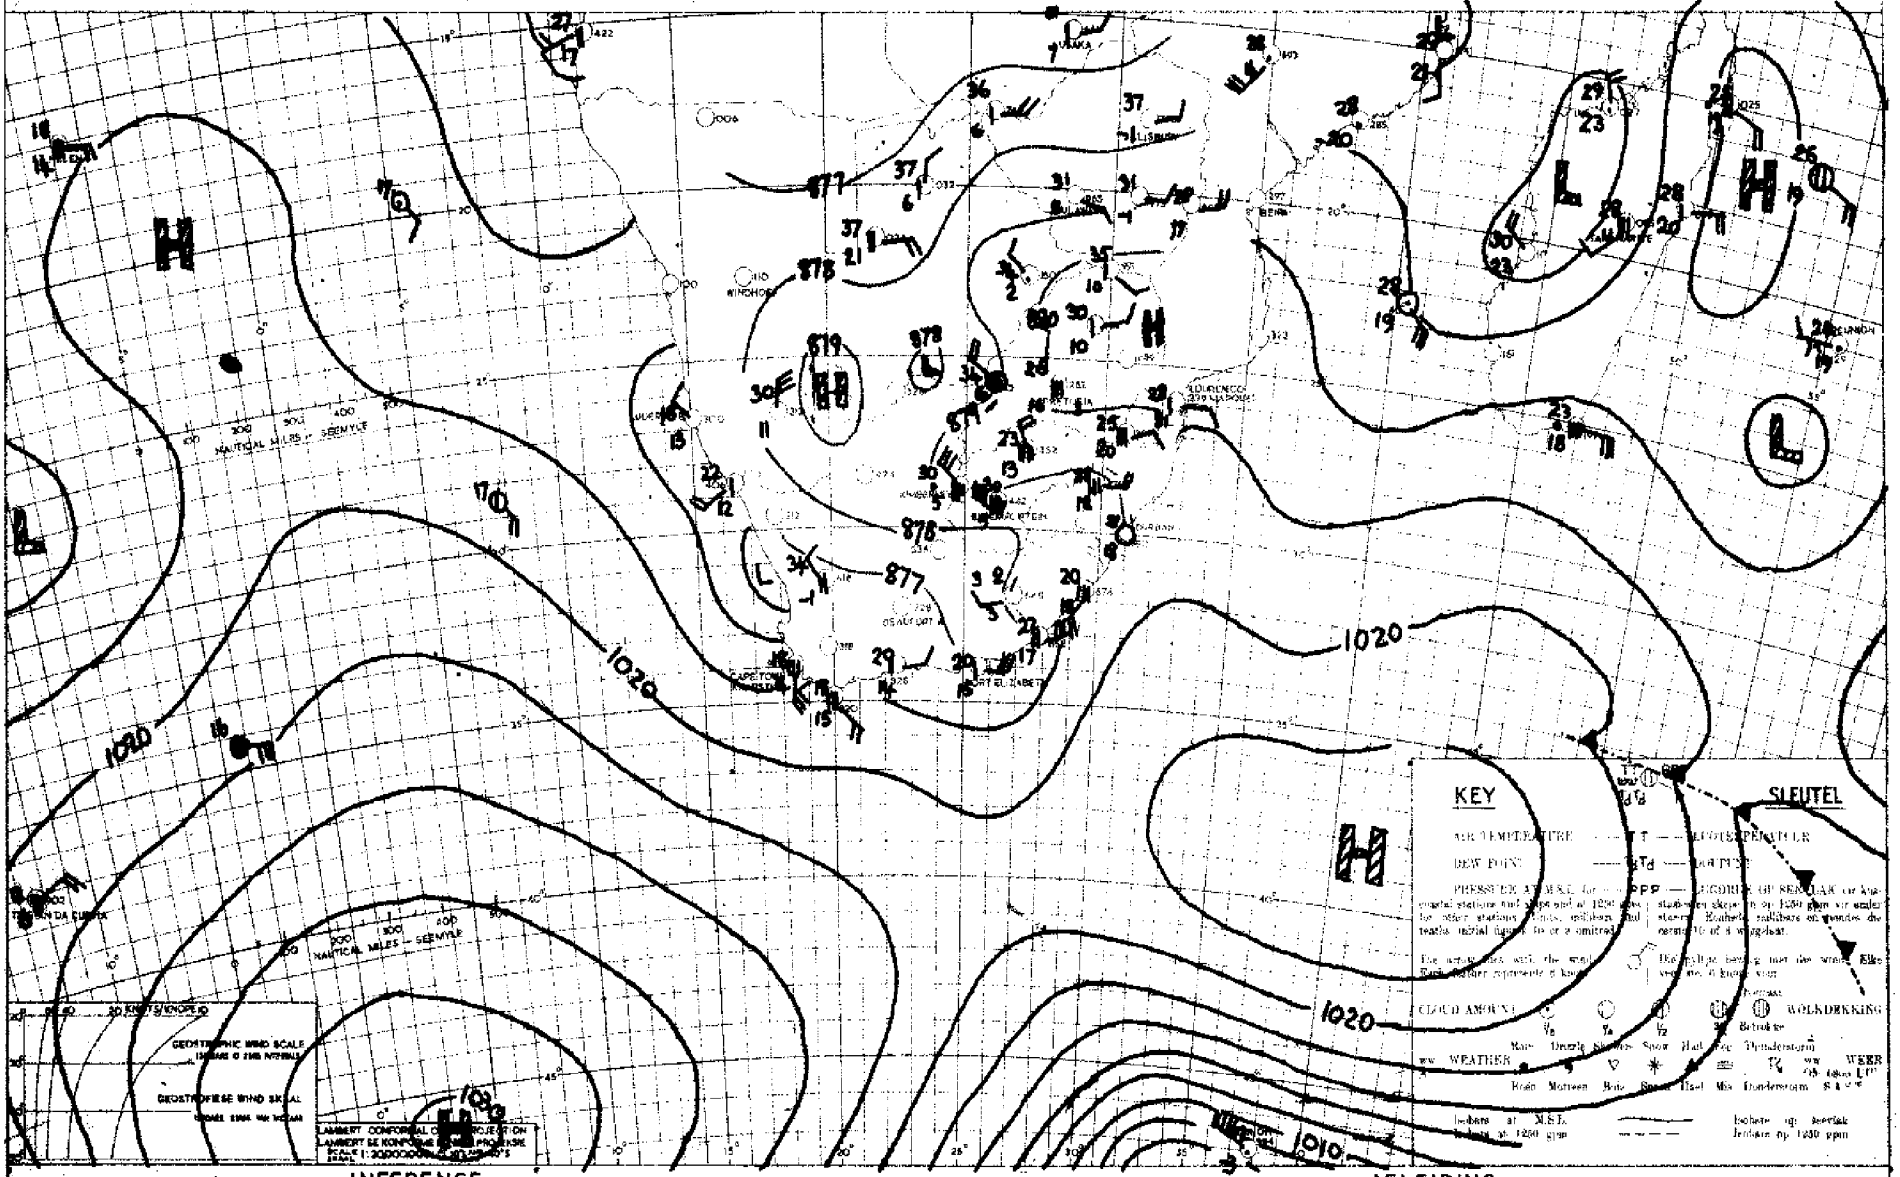
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 21/10/1954 — DATUM — AFLEIDING

Not much change, but the low which is approaching Marion will cause a trough over the southern half of the Union, and this will probably made conditions move favourable for thunder-rains over O.F.S., northern Cape, SE Cape and Natal.

Nie veel verandering nie, maar die laag wat Marion nader sal 'n trog oor die suidelike helfte van die Unie veroorsaak en dit sal waarskynlik toestande gunstiger maak vir donder-reën oor O.V.S., N.Kaapland, SO-Kaapland en Natal.

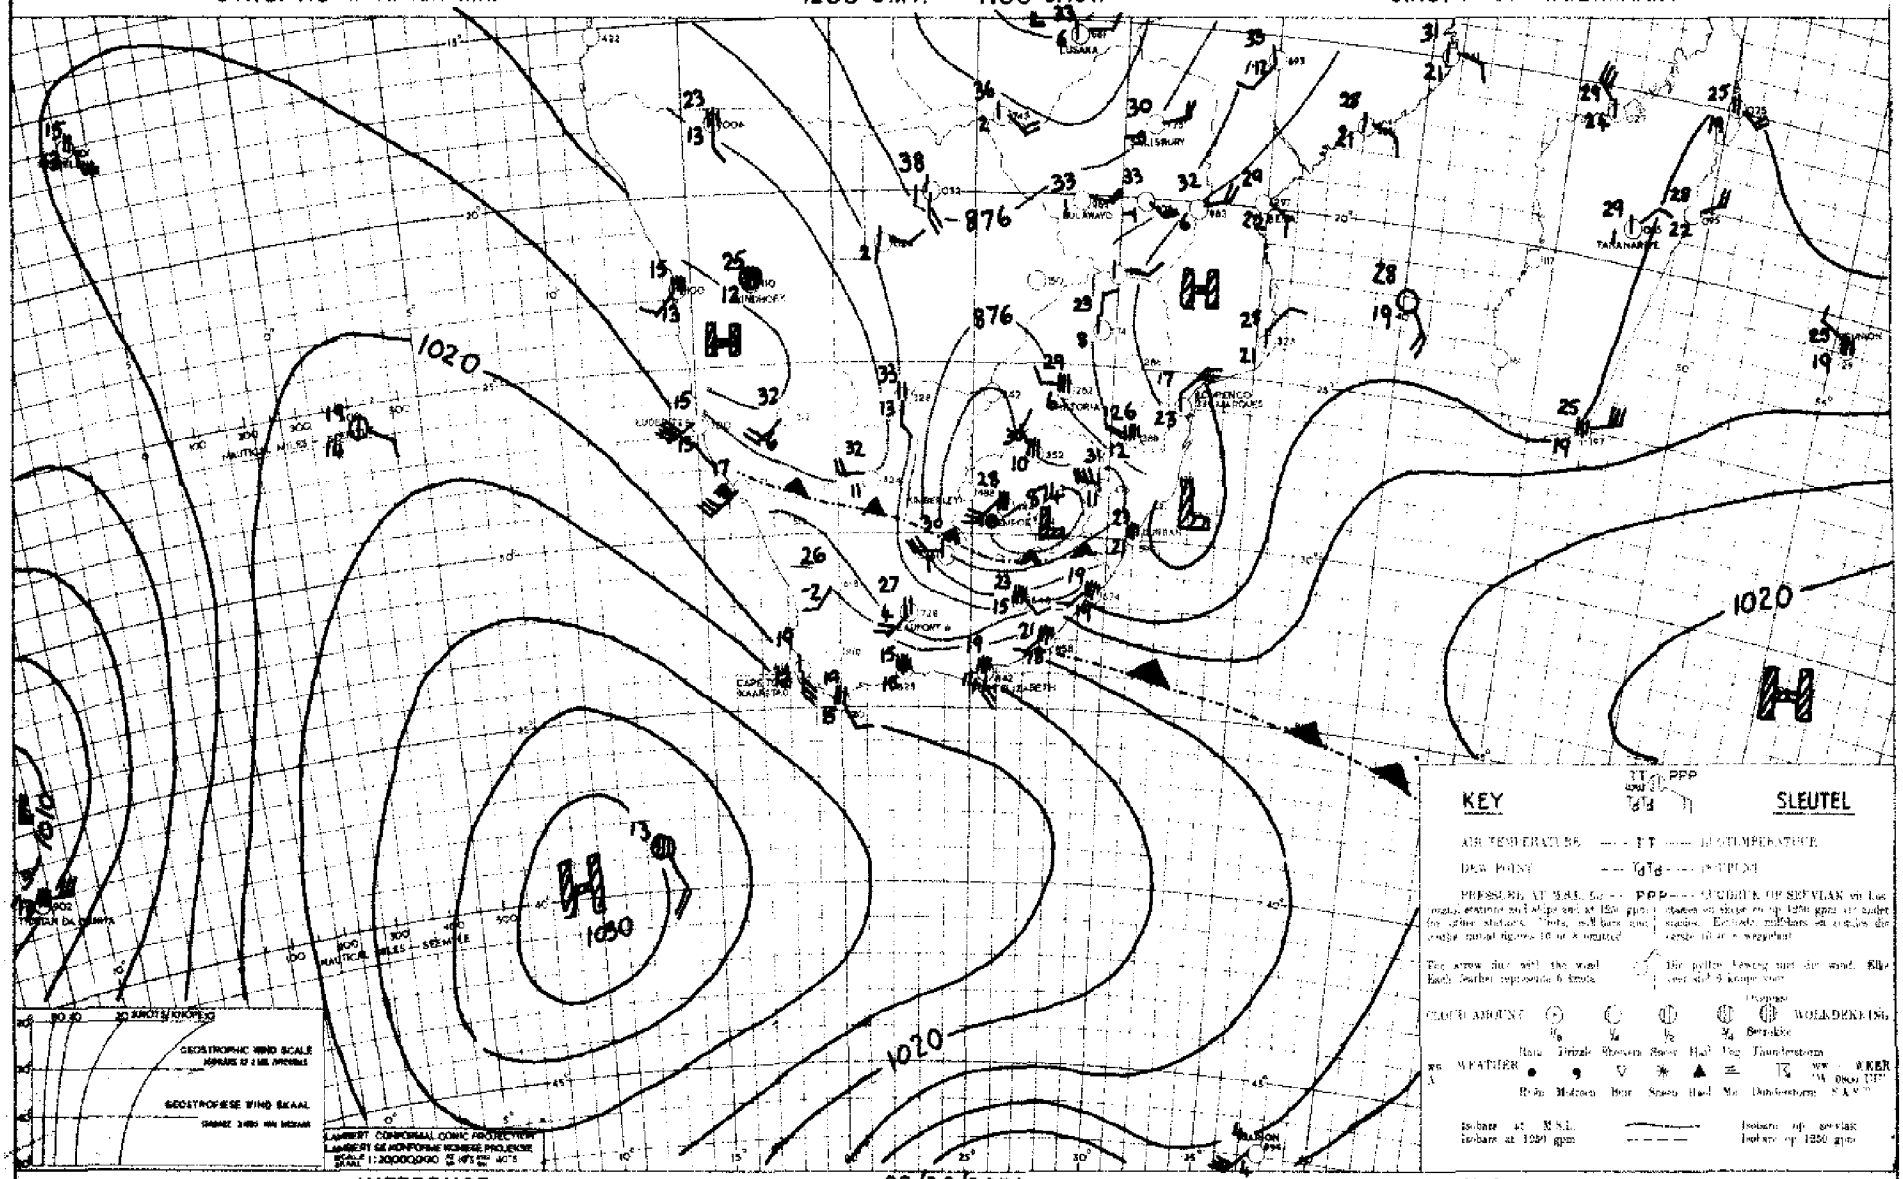
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



DATE: 22/10/1954 DATUM

INFERENCE

The Atlantic High, southwest of Cape Town is circulating some cool moist air over the Southwestern and Southeastern Cape Districts, and temporary cloudy conditions will occur over these areas. The air over the Free State, Transvaal and Natal is still warm and moist, but it is gradually replaced by dry continental air from the west. Apart from isolated thunderstorms the weather will be fair to fine and hot over these areas.

AFLEIDING

Die Atlantiese Hoog, suidwes van Kaapstad stoot koel, vogtige lug oor die Suidwestelike, suidelike en suidoostelike distrikte van Kaapland. Tydelik bewolkte toestande sal voorkom. Oor die Vrystaat, Transvaal en Natal is die lug nog warm en vogtig, maar word geleidelik deur droë kontinentale lug vanuit die weste vervang. Met uitsondering van los donderweerstoestande sal dit effens bewolk of mooiweer wees oor hierdie streke.

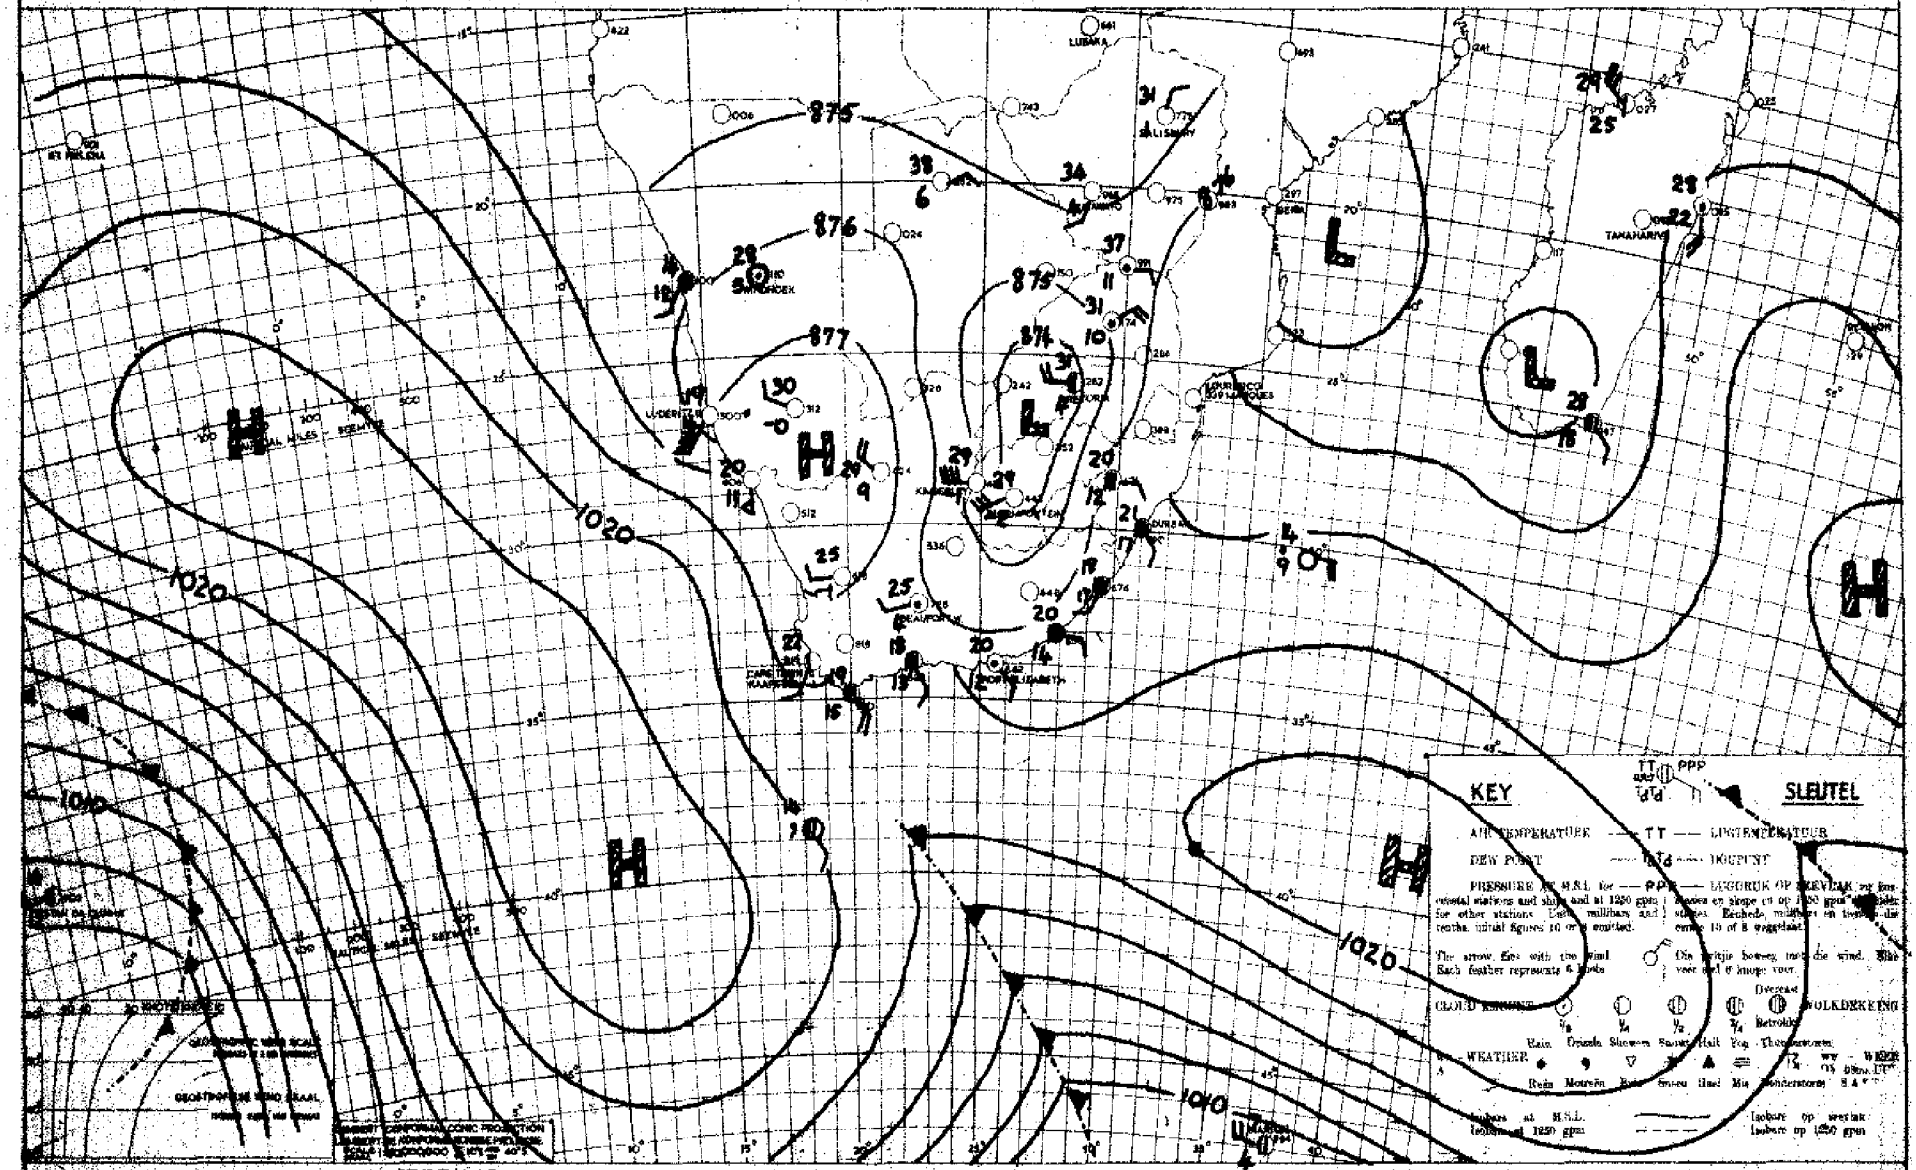
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 23/10/1954 DATUM AFLEIDING

With further eastward movement of the low pressure system south of the Union, and of the high SE of the Union, the stream of moist air over Natal and the Eastern Transvaal will weaken. It is probable, however, that a weak influx of moist air over the south and SE coastal areas will continue.

Met verdere oostwaartse beweging van die laedrukstelsel suid van die Unie en van die hoog SO van die Unie, sal die instroming van vogtige lug oor Natal en Oos-Transvaal verswak word. Dit is egter waarskynlik dat 'n swak instroming van vogtige lug oor die suid- en suidooskuststreke sal voortduur.

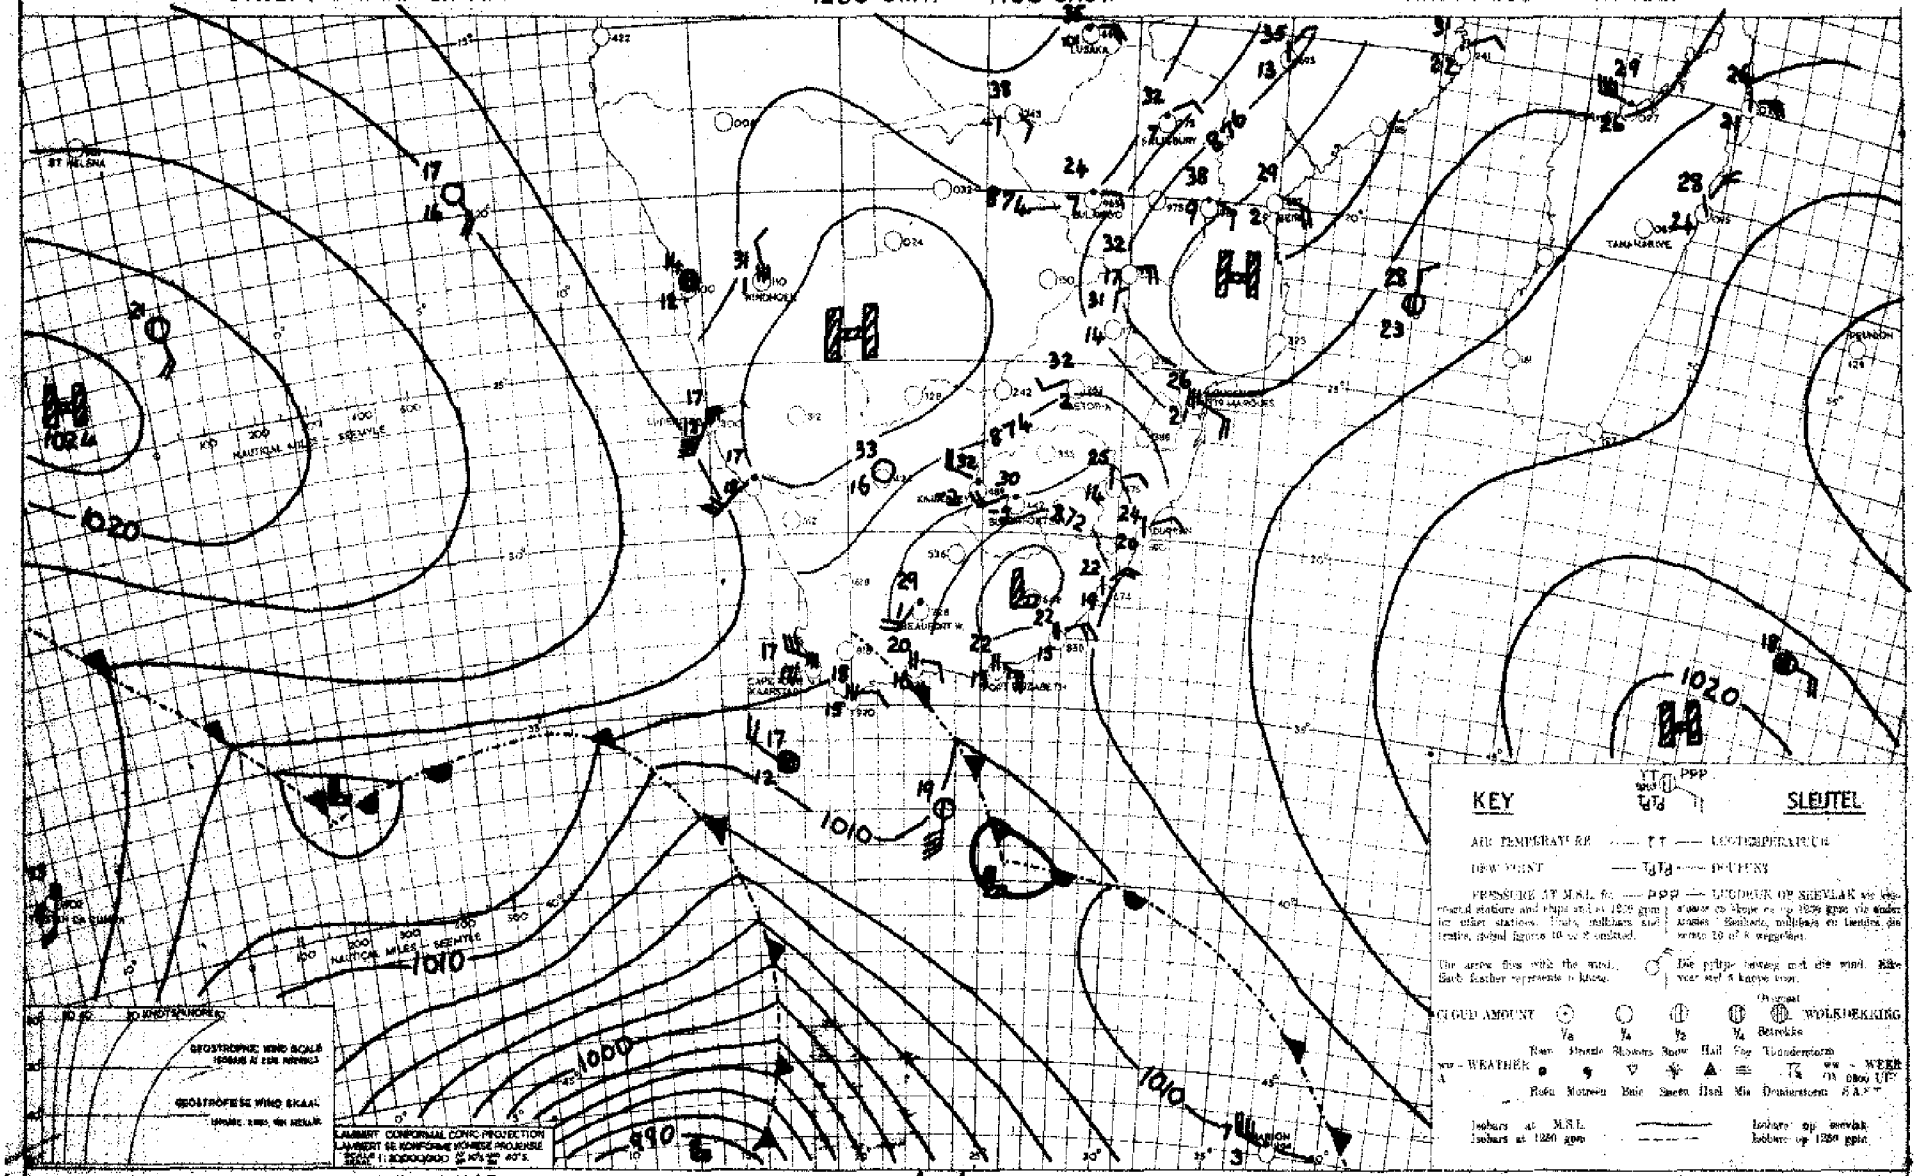
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE

DATE 24/10/1954

DATUM

AFLEIDING

The anticyclone southwest of Cape Town has collapsed completely and has been replaced by the westerlies. A cold front southwest of the Cape is gradually moving eastward and cloudy weather with local showers will develop along the Cape coast and southwest coast. The air over the interior is dry and warm and the weather will thus be mainly fine and hot.

Die antisiklloon suidwes van Kaapstad het geheel en al in drie gestort en die westelike windstrome het meer noordwaarts beweeg. 'n Koue front suidwes van die Kaap beweeg geleidelik ooswaarts en bewolkte toestande gepaard met ligte reënbuie sal langs die suidwestelike en suidelike kuststreke van Kaapland voorkom. Oor die binneland is die lug droog en warm en mooiweerstoestande sal oor hierdie streke voortduur.

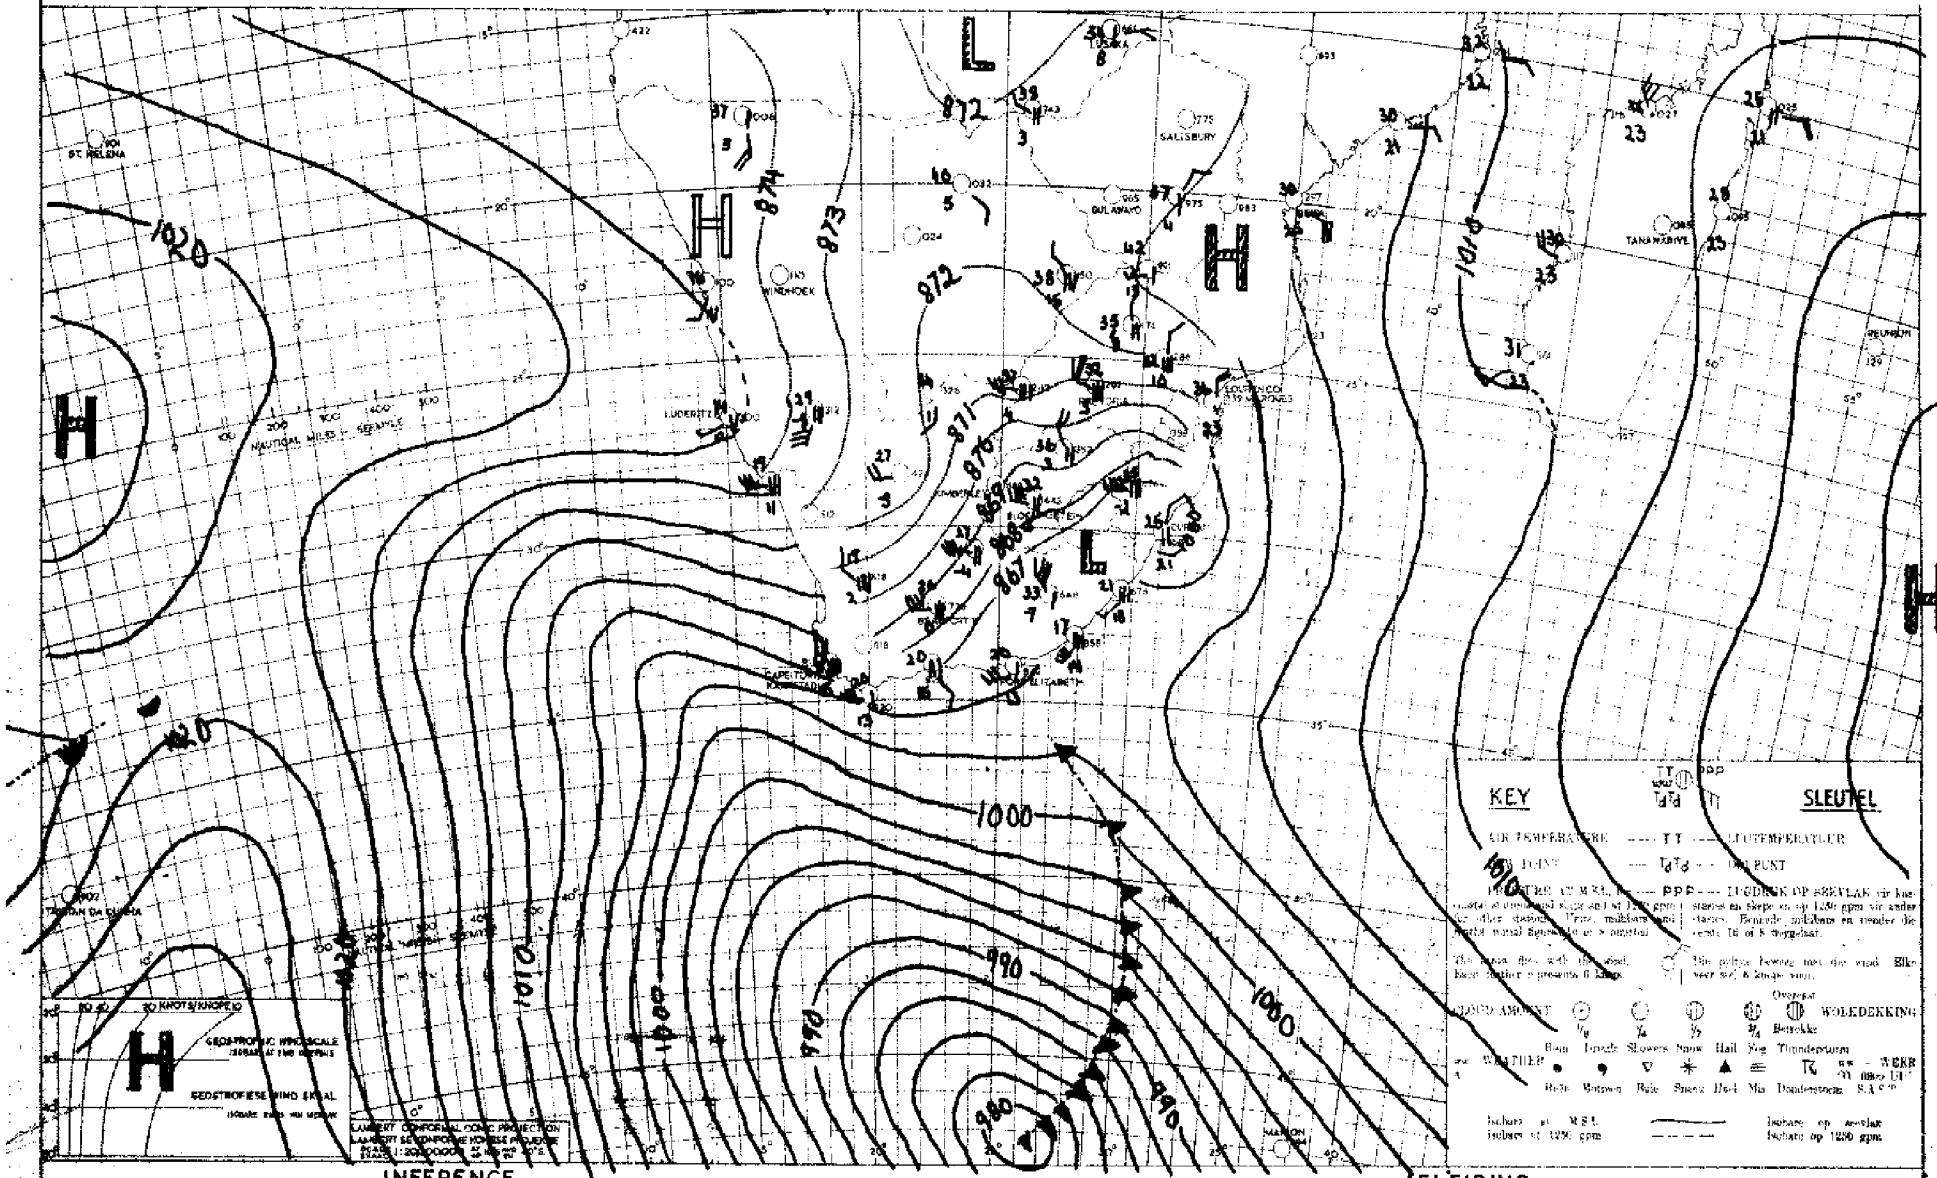
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 25/10/1994 DATUM AFLEIDING

Almost a winter situation.
Showery weather with fresh to strong W-ly to SW-ly winds will continue along the SW and south coastal areas and adjacent interior, and cool air will move NE wards over the Union.

Amper 'n winterstoestand.
Ongestadige weer met reënbuie en taamlike sterk W-like tot SW-like wind sal oor die SW en suidkusstreke en aangrensende binneland voortduur en koel lug sal NO-waarts oor die Unie beweeg.

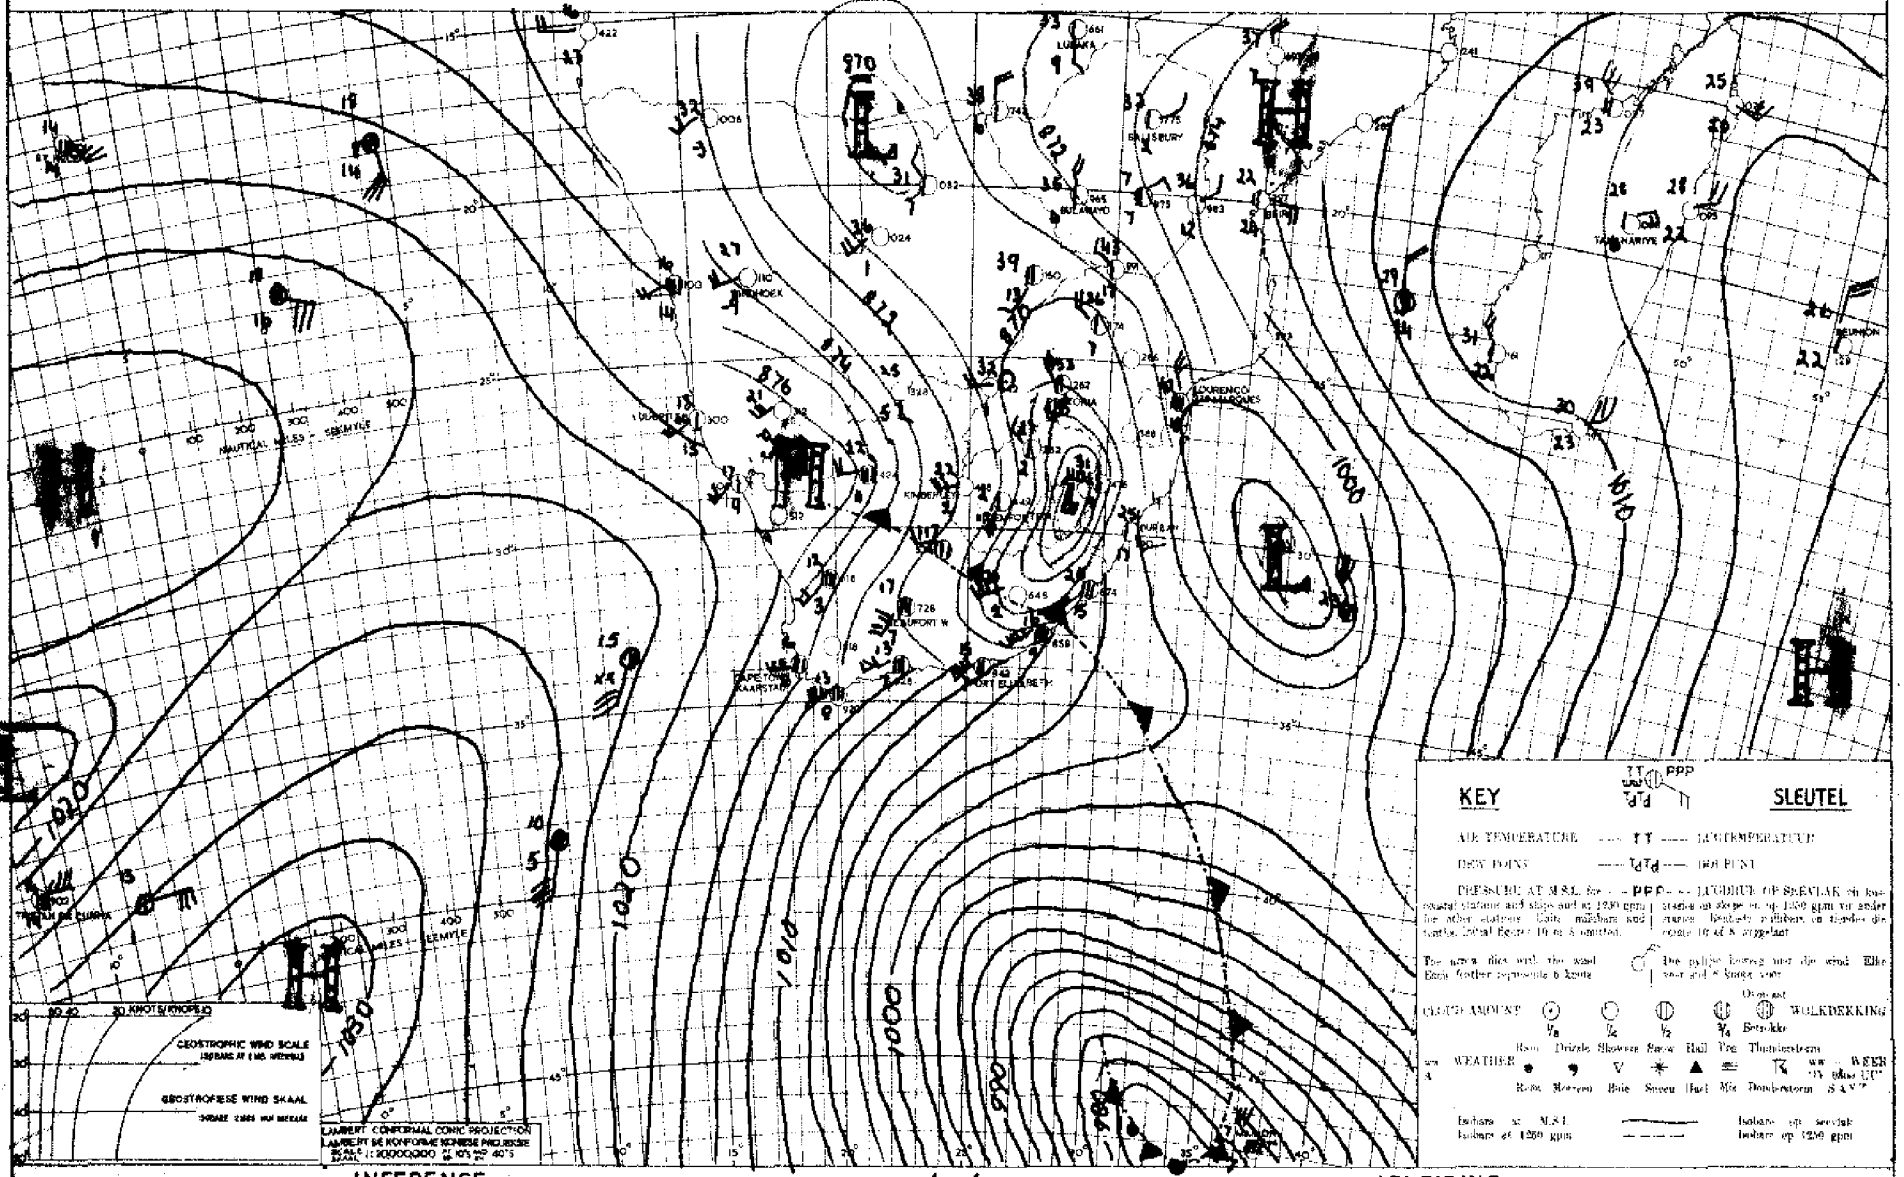
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE. 26/10/1954 DATUM AFLEIDING

Colder air invaded the southwestern and southern Cape Province from the southwest. The air, however, is dry, and apart from coastal showers, only partly cloudy conditions will be experienced. Cooler air has also advanced over the Free State and Natal, and will gradually relieve the exceedingly hot weather conditions over the Transvaal. Thunderstorms can be expected to develop over the Central and Northern Transvaal.

Kouer lug vanuit die suidweste het die suidwestelike en suidelike Kaap Provinsie binnegeval. Aangesien die lug egter droog is, sal met uitsondering van kus buie, gedeeltlik bewolkte toestande voorkom. Koeler lug het oor die Vrystaat en Natal binnegedring en sal geleidelik die buitengewone weerstoestande oor Transvaal verlig. Donderbuie sal oor Middel en Noord Transvaal ontwikkel.

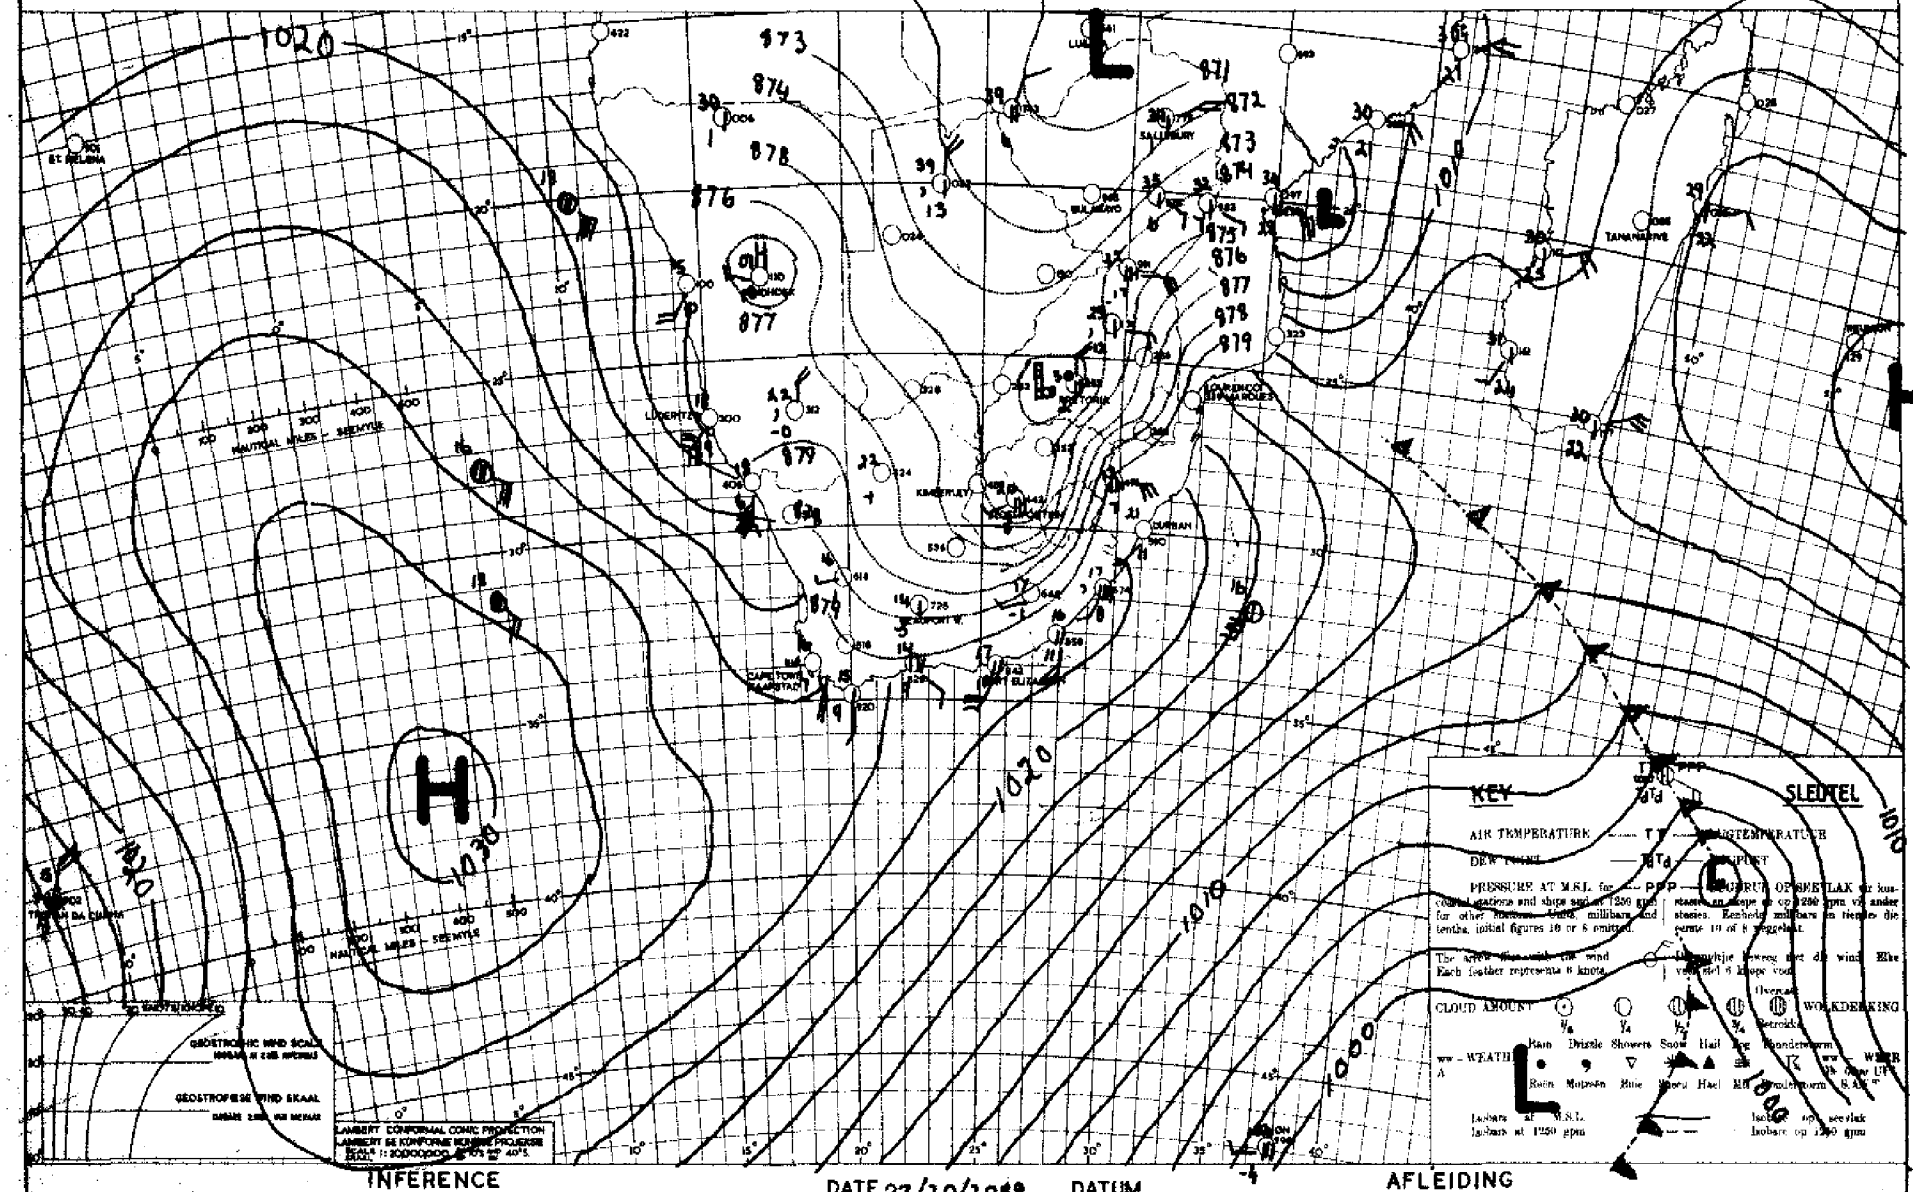
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 27/10/1948 DATUM AFLEIDING

The further eastward movement of the Atlantic high will bring moist air over the interior of Transvaal and of northern O.F.S.

Die verdere oostwaartse beweging van die Atlantiese hoog sal vogtige lug oor die binneland van Transvaal en van N-like O.V.S. laat instroom.

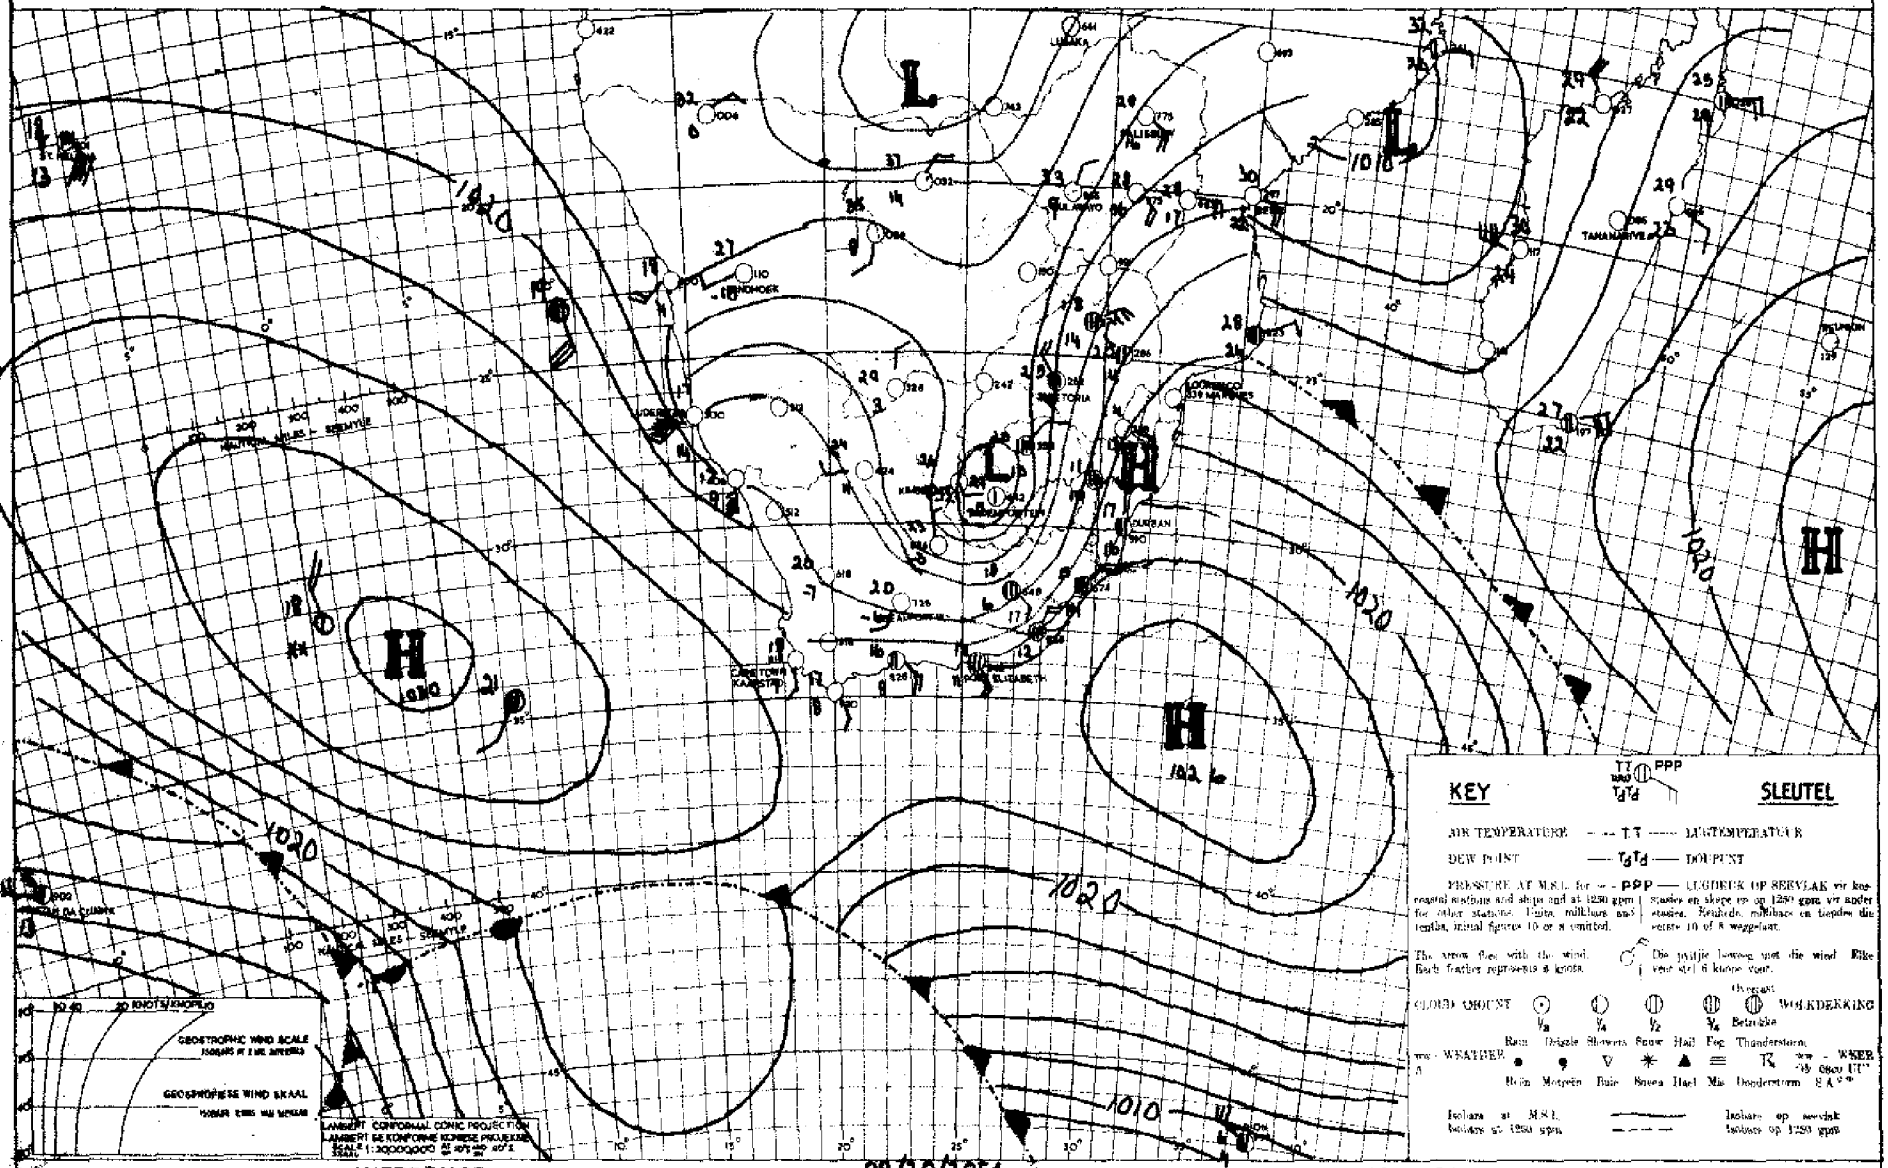
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 28/10/1954 DATUM AFLEIDING

A build-off high pressure cell from the Atlantic High is now situated southeast of Durban and causes moist air circulation over the eastern half of the Union. The weather will be cloudy over these areas. Scattered rain or thundershowers will occur over Natal and the Pondoland coast. Local thunderstorms will develop during the afternoons over the southern half of Transvaal and the northeastern Free State. Over the remainder of the Union the air is dry and fine weather conditions will continue.

'n Hoogdruk sel wat van die Atlantiese Hoog weggebreek het en wat nou suidoos van Durban gelee is, veroorsaak invoering van vogtige lug oor die oostelike helfte van die Unie. Bewolkte toestande sal oor hierdie dele voorkom. Verspreide reën of donderbuie sal oor Natal en die Pondoland kus uitsak en donderbuie sal plaaslik oor die suidelike helfte van Transvaal en Noordoos Vrystaat ontwikkel. Oor die res van die Unie is die lug droog en mooiweerstoestande sal bly voortduur.

SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART

INFERENCE

Cooler air has invaded Natal and the Eastern Transvaal and will move gradually westward and southward during the night. Cloudy to overcast weather will be experienced over the Eastern Union and local thunder or rainshowers can be expected over Transvaal, Natal and the Northeastern Free State. Over the remainder of the Union it will remain fine as the air circulating over these areas is dry.

DATE 30/10/1954

DATUM

AFLEIDING

Koeler lug het Natal en Oos Transvaal binnegestroom en sal oor nag geleidelik wes en suidwaarts beweeg. Bewolkte tot betrokke weerstoestande sal oor die Oostelike Unie ondervind word en plaaslike reën of donderbuie kan oor Transvaal, Natal en Noordoos Vrystaat verwag word. Oor die res van die Unie sal dit mooiweer bly aangesien die lug wat oor hierdie streke sirkuleer, droog is.

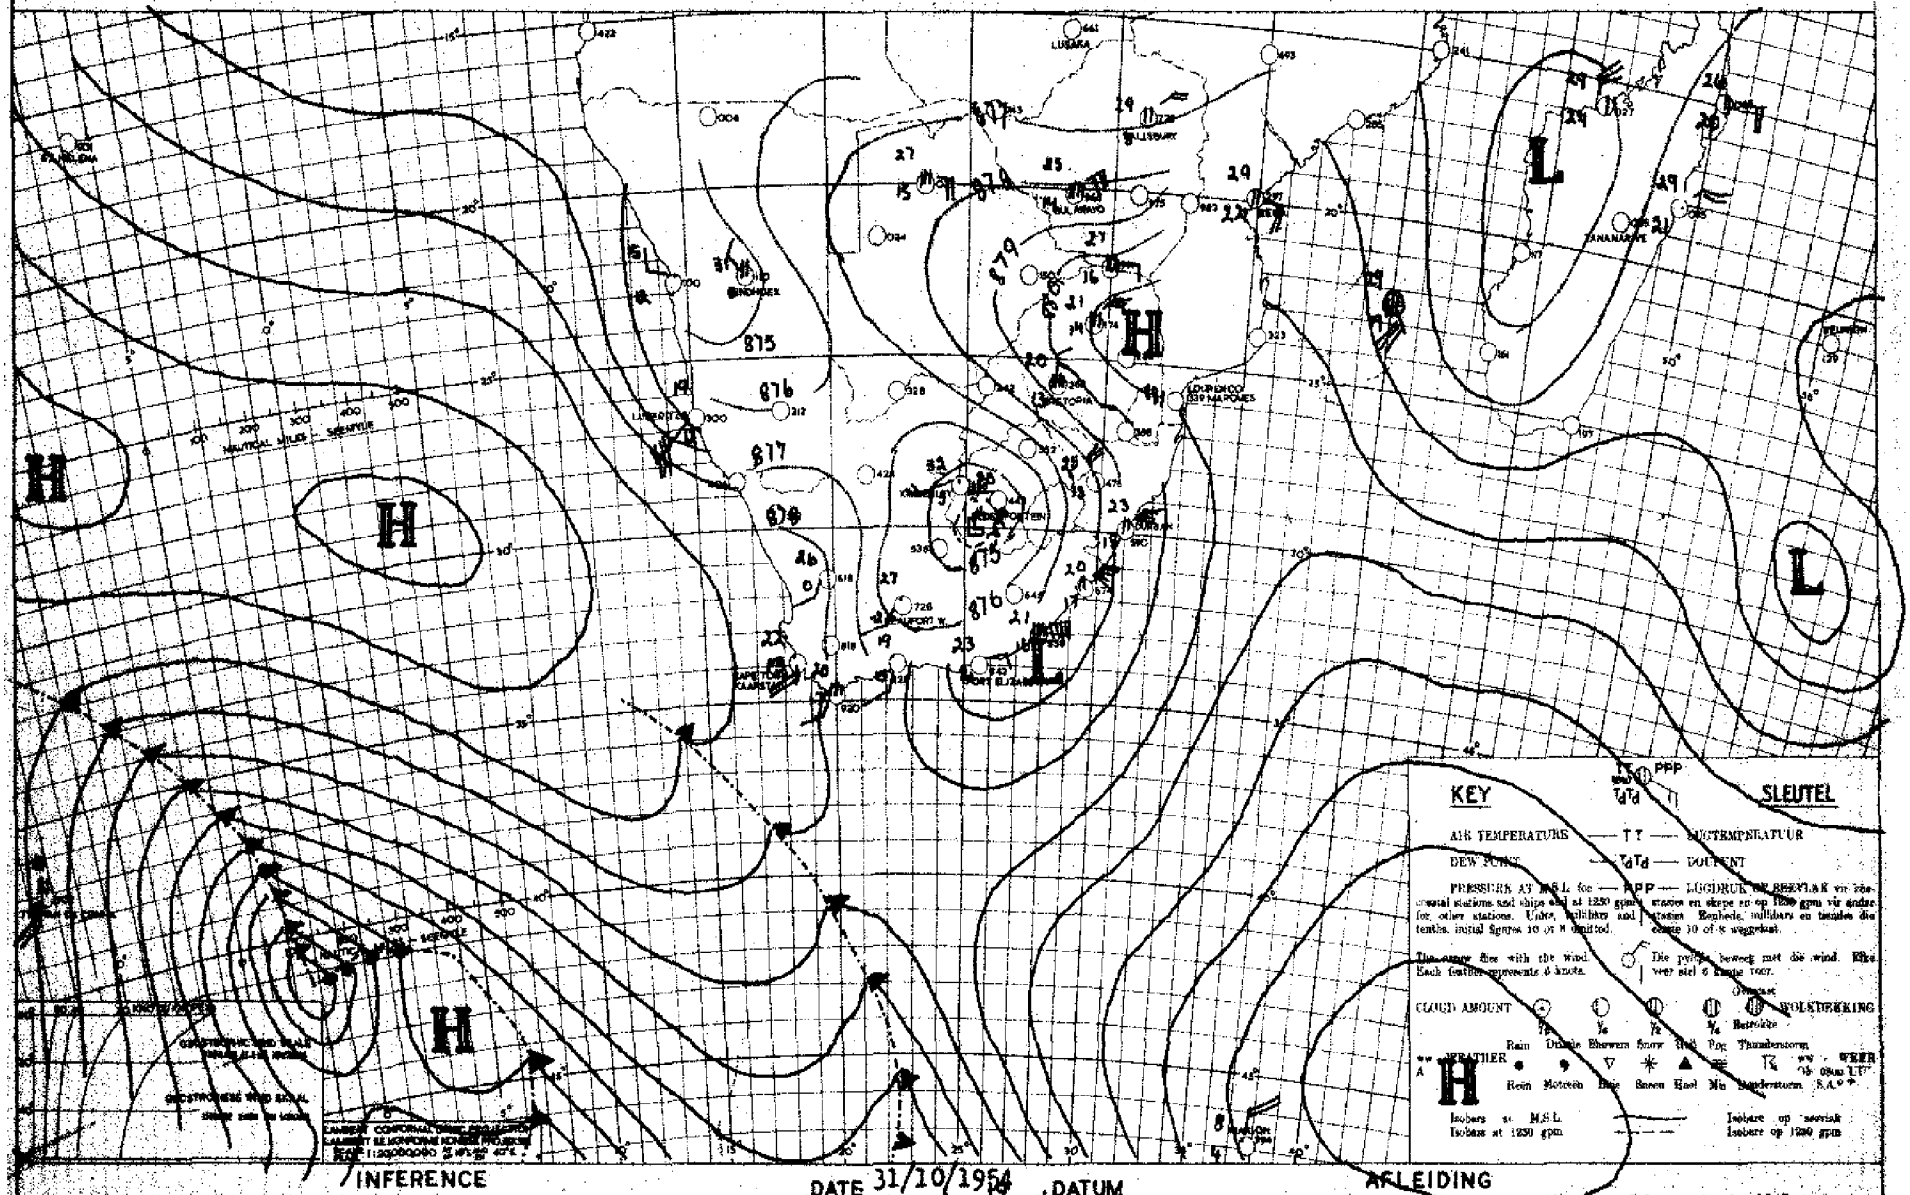
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

The eastward movement of the anticyclone SE of the Union will diminish the supply of moist air to the Transvaal and Natal.

DATE 31/10/1954 DATUM

AFLEIDING

As gevolg van die oostwaartse beweging van die antisikloon SO van die Unie sal die instroming van vogtige lug oor Transvaal en Natal verminder.

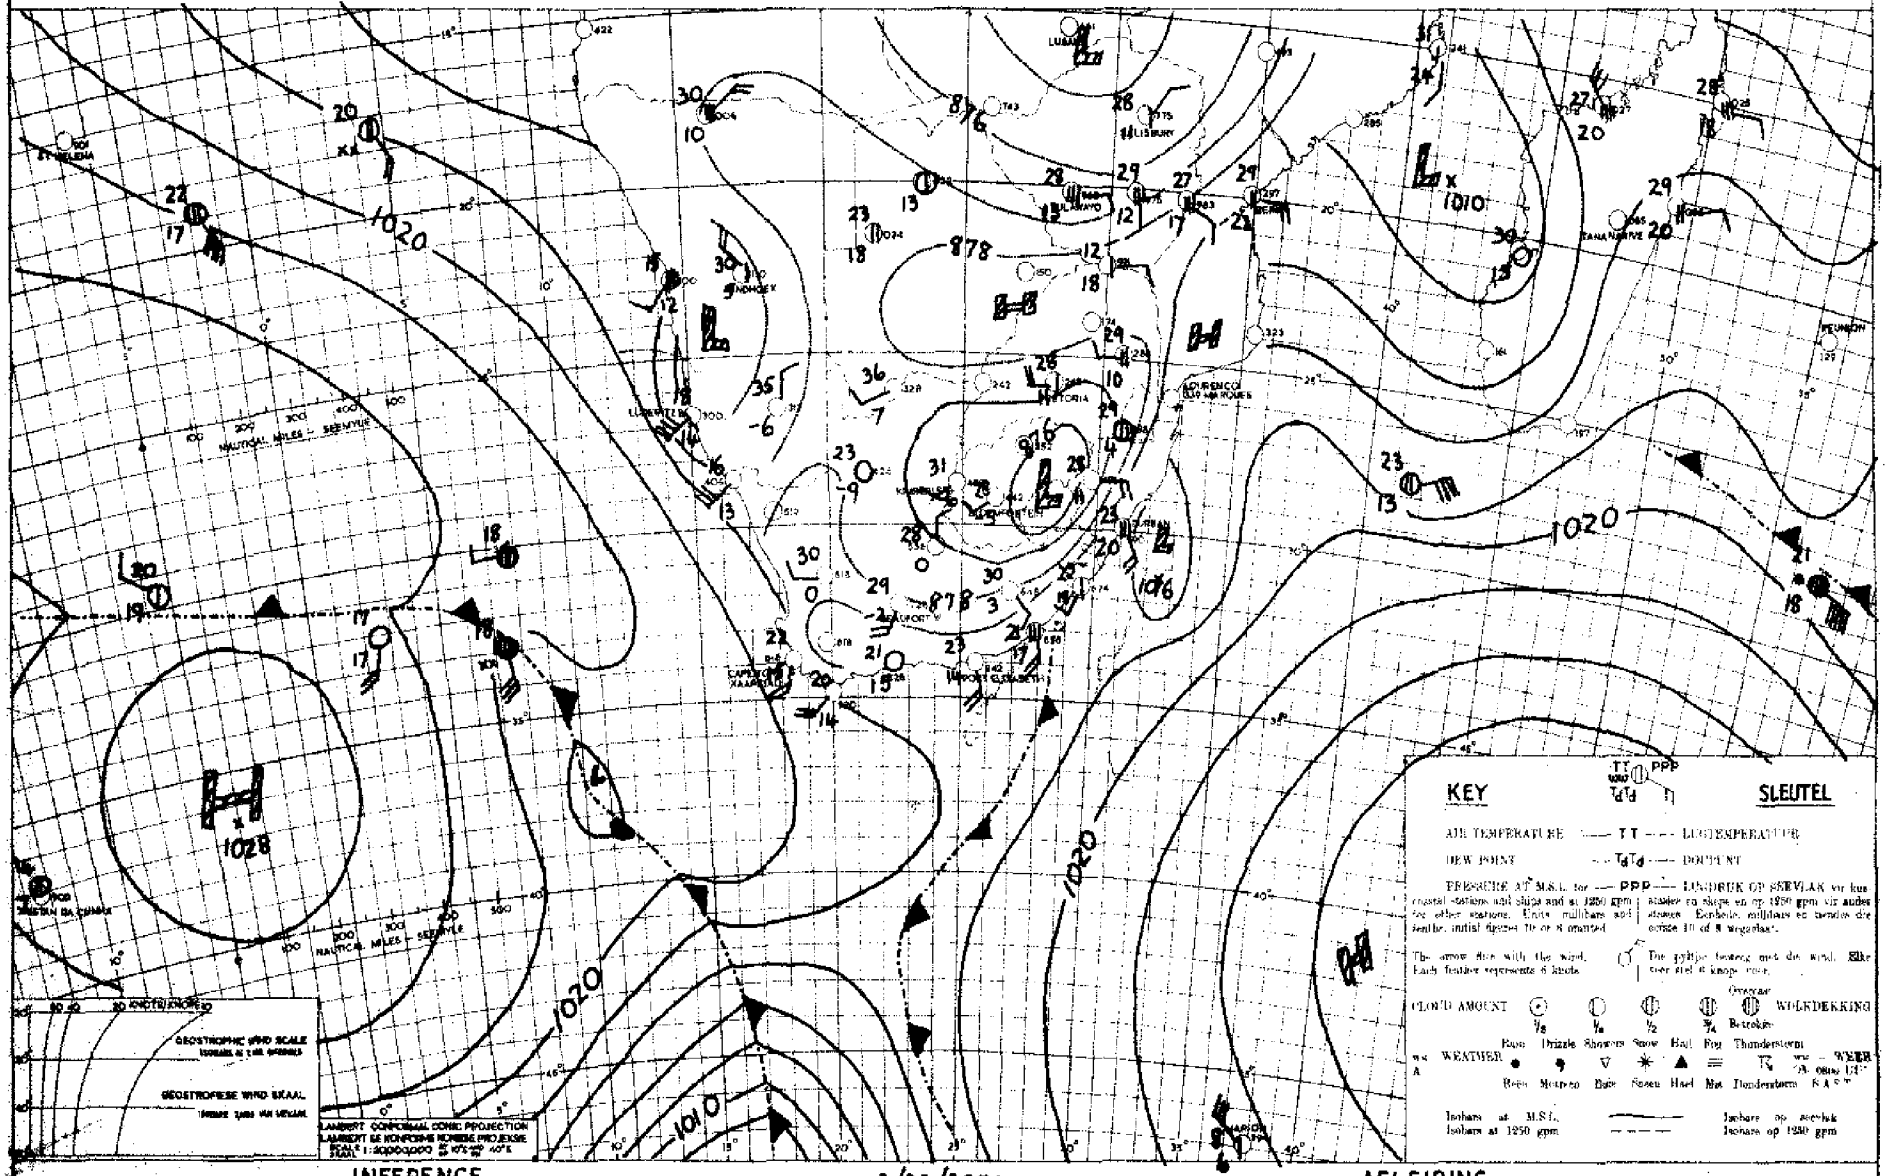
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE

DATE 1/11/1954

DATUM

AFLEIDING

A humid air-flow is still maintained over Transvaal and Natal and isolated thunderstorms will develop in the afternoons over the Central Transvaal, the Eastern Highveld, the Escarpment and the Natal interior. Over the remainder of the Union dry air will maintain fine weather conditions.

'n Vogtige lugstroom word nog oor Transvaal en Natal in stand gehou, en dus sal los donderbuie in die namiddag oor Middel Transvaal, die Oostelike Hoëveld en die Platorand, en die Natalse binneland ontwikkel. Oor die res van die Unie sal, weens die aanwesigheid van droë lug, mooiweerstoestande voortduur.

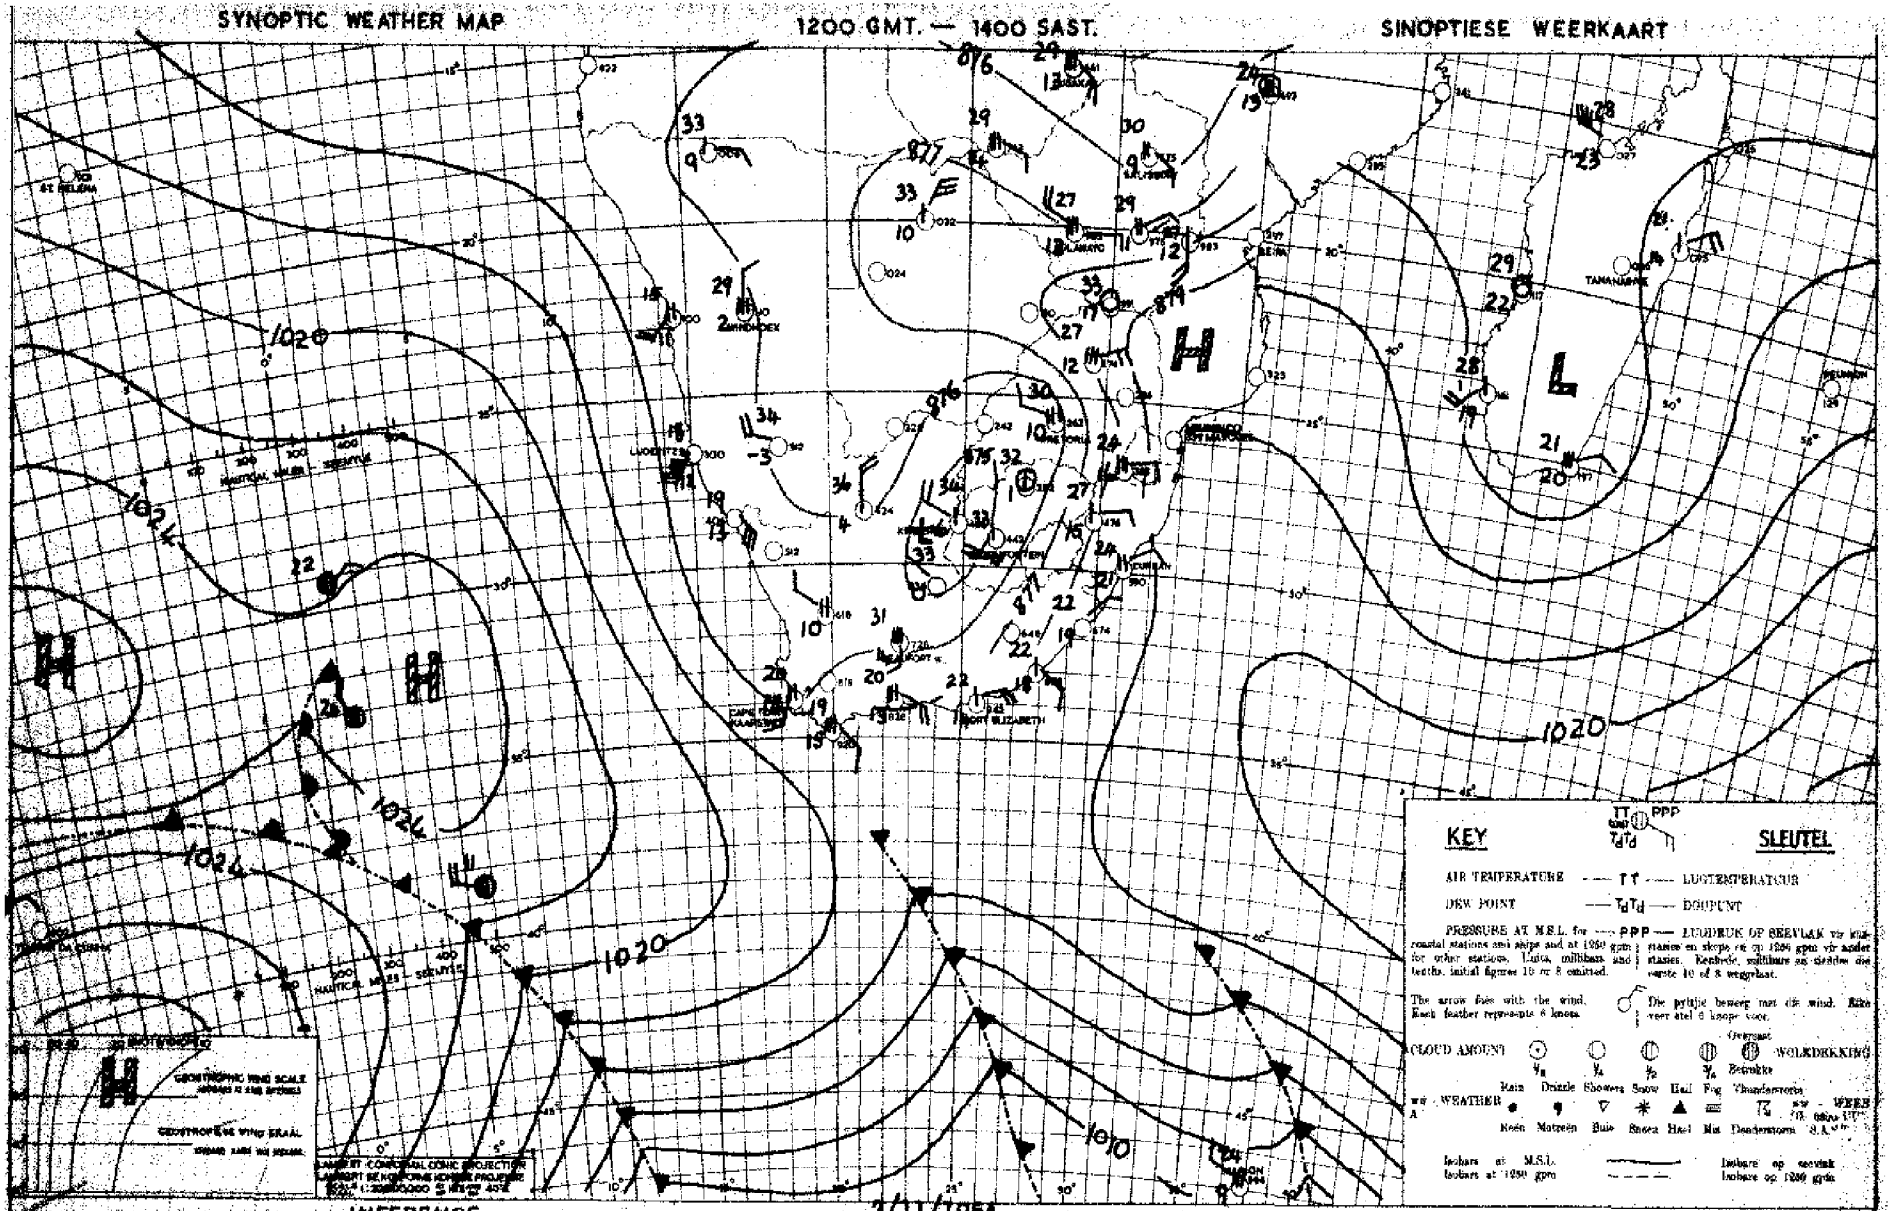
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

A fairly strong anticyclone is now in evidence south of Tristan, and it seems probable that the south and SE coastal areas will soon receive more rain.

DATE: 2/11/1954 DATUM

AFLEIDING

'n Taamlik sterk antisikloon maak nou sy verskyning suid van Tristan en dit lyk asof die suid- en suidoostelike kuststreke binnekort nog reën sal kry.

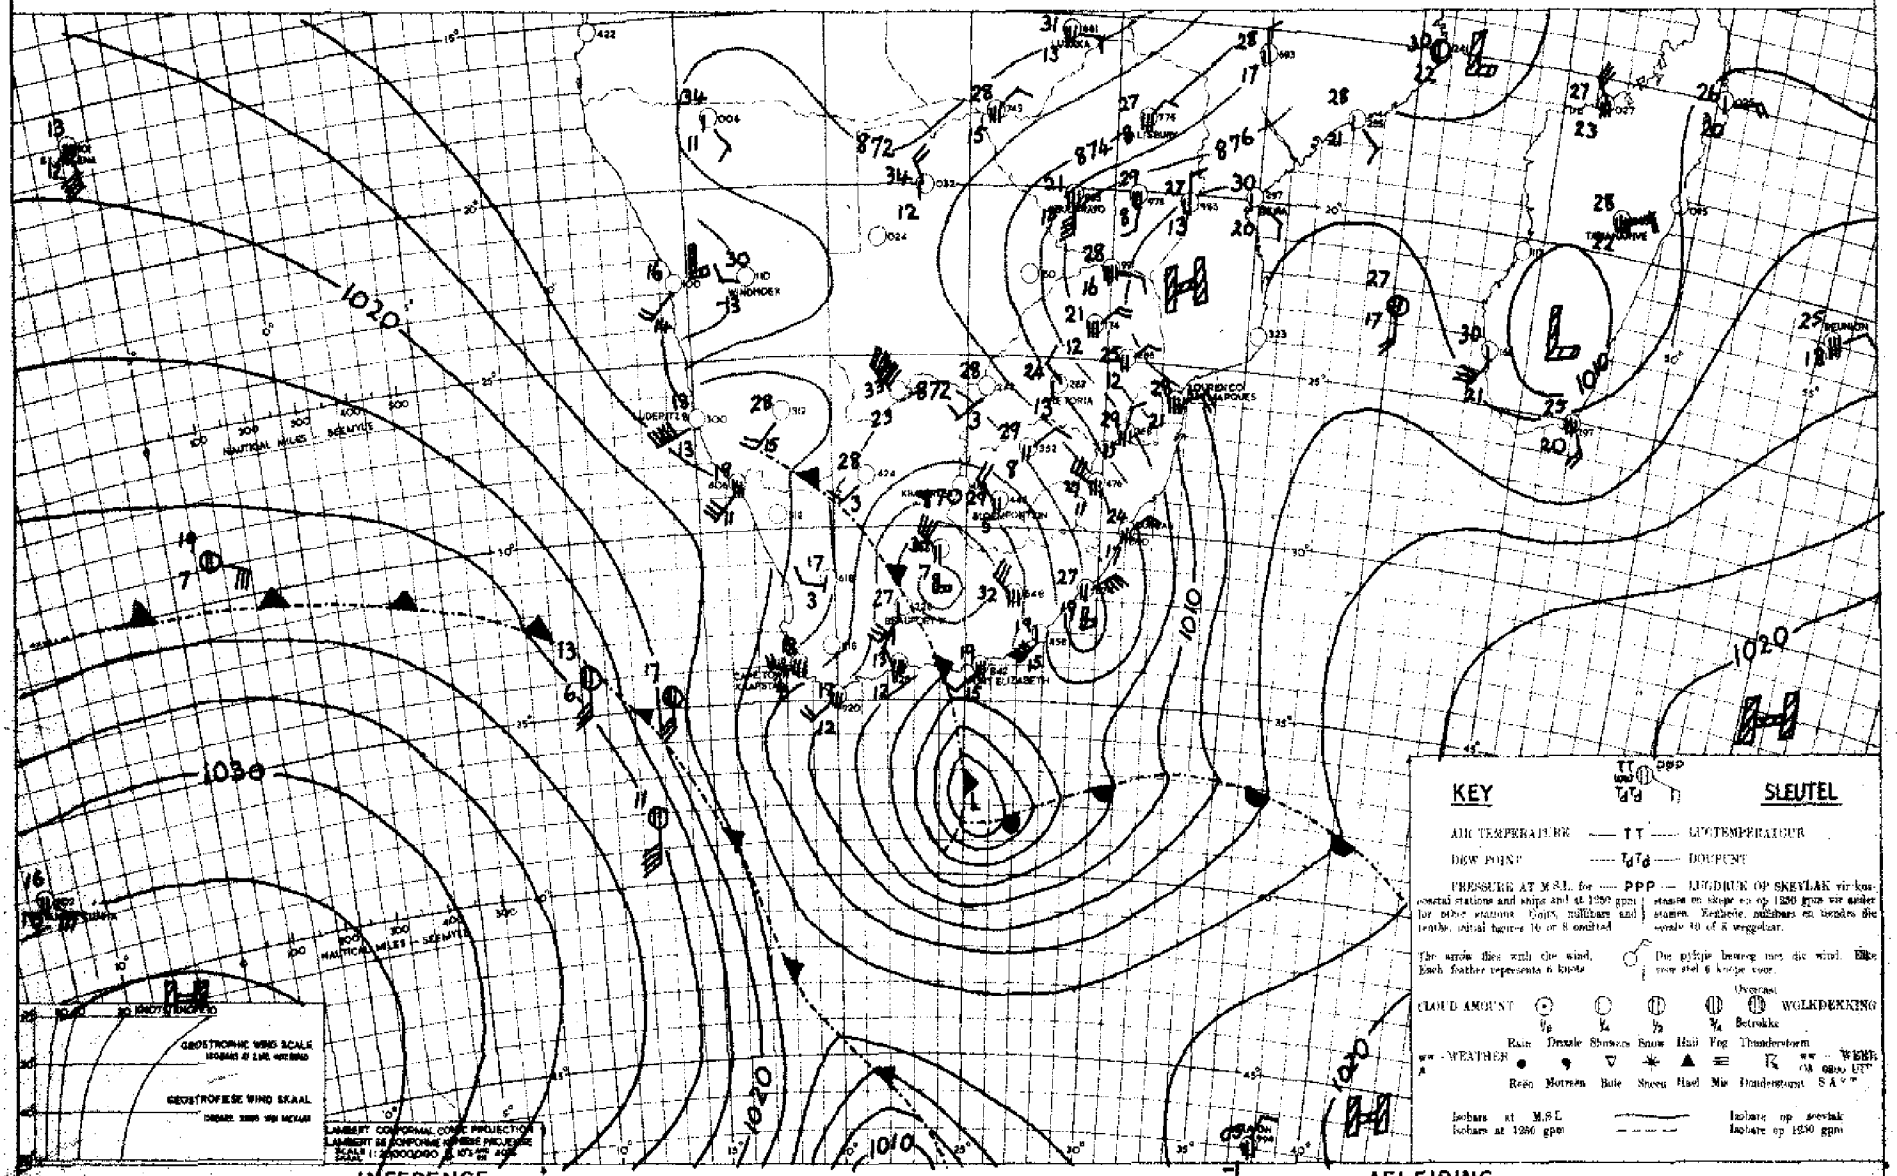
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 3/11/1954 DATUM AFLEIDING

Cooler air from the Atlantic High, south west of Cape Town is penetrating the western and southern Cape. Cloudy weather will develop along the coastal regions and local light showers will occur. The air circulating over the remainder of the interior is moist, and partly cloudy weather will prevail over most districts. Afternoon thundershowers can be expected locally over the Free State, Southern and Eastern Transvaal and the districts of Mafeking, Vryburg and Griqualand West.

Koeler lug wat om die Atlantiese Hoog beweeg, dring die westelike en suidelike distrikte van Kaapland binne. Bewolkte weerstoestande sal langs die kuststreke voorkom en plaaslike ligte buie sal uitsak. Die lug wat oor die res van die Unie sirkuleer is vanaf die noorde en is vogtig. Gedeeltelik bewolkte toestande sal oor meeste distrikte voorkom en donderweersontwikkeling kan plaaslik oor Suid en Oos Transvaal, die Vrystaat en oor die distrikte Mafeking, Vryburg en Grikwaland West verwag word.

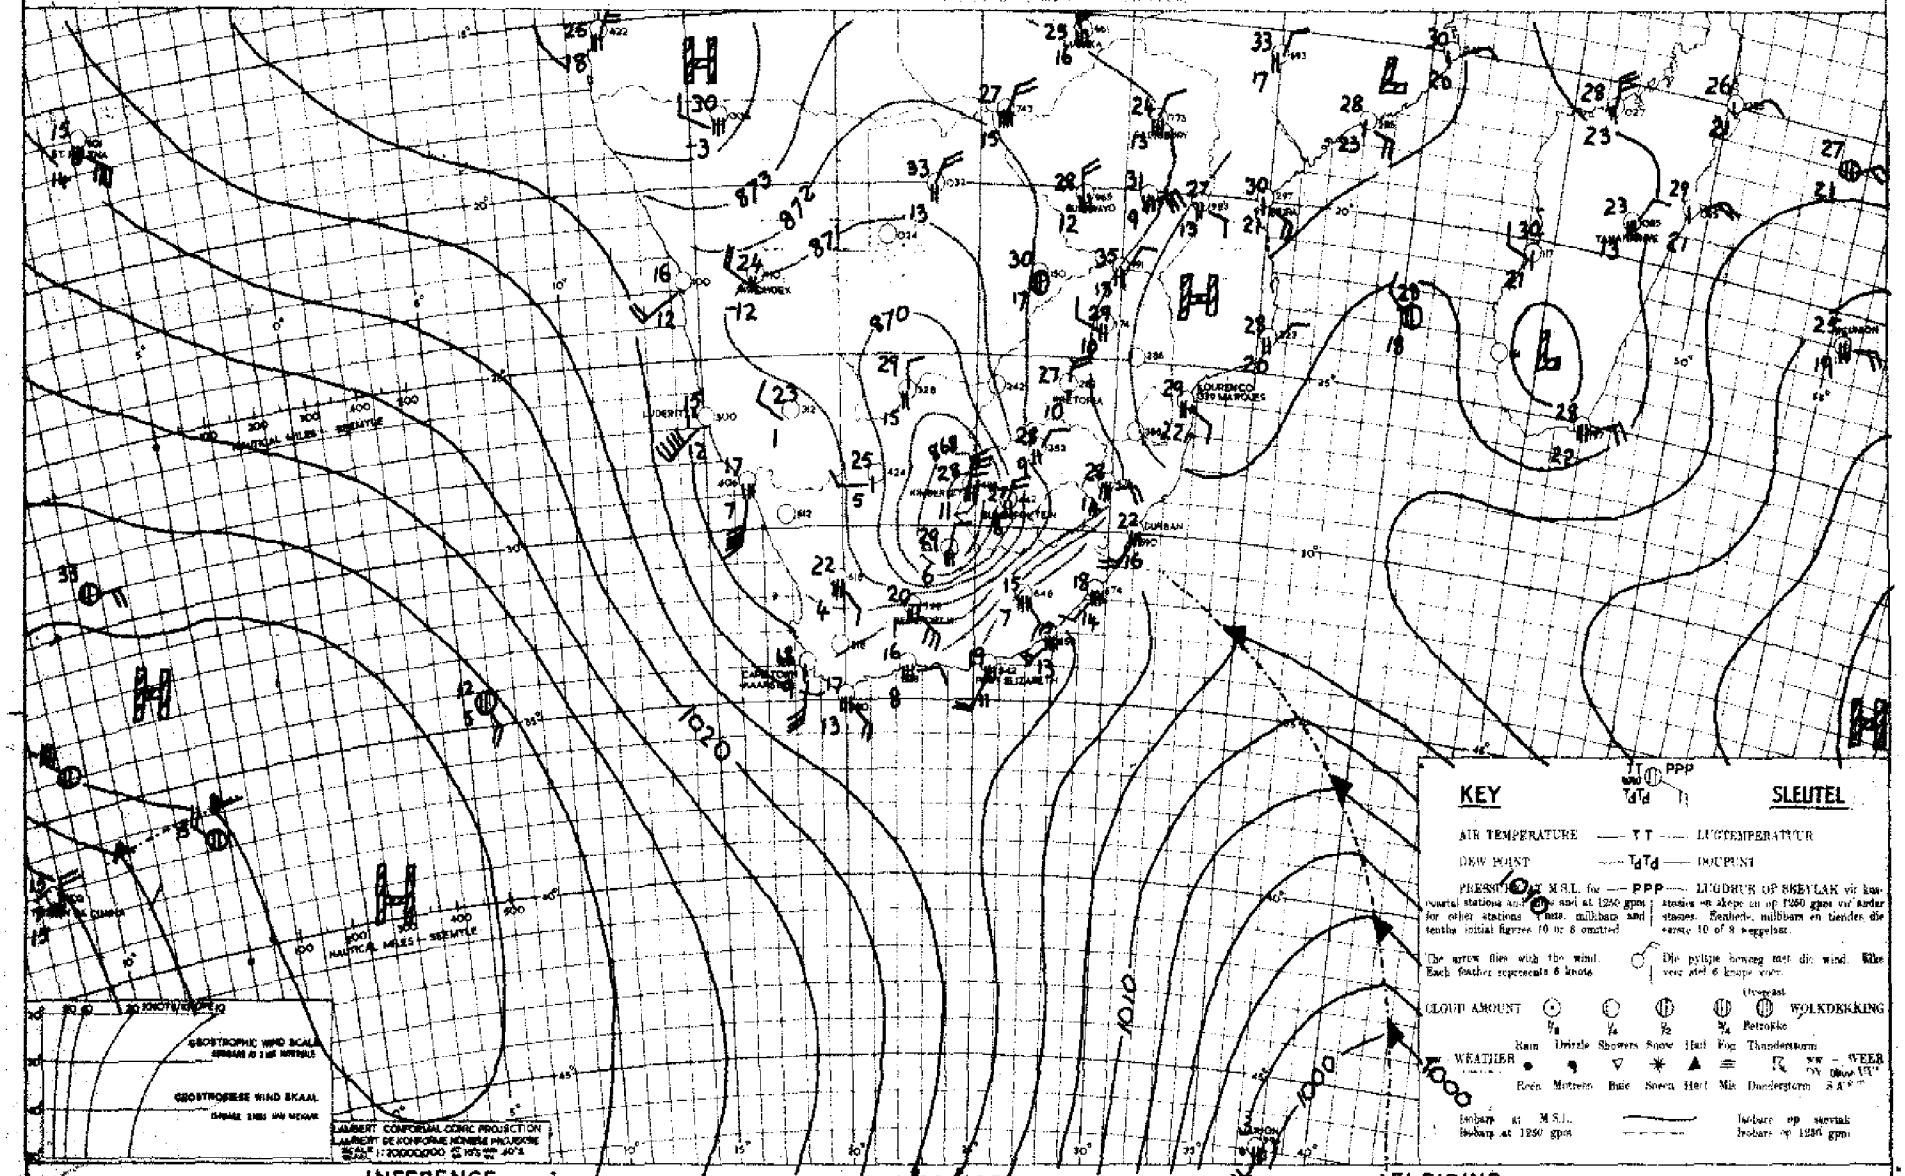
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 4/11/1954 DATUM AFLEIDING

A deep low is now developing over the interior of the Union. This will have the effect of bringing moist air from the north, eastwards over the Union, and will also strengthen the inflow of moist sea air over the SE coastal areas.

'n Diep laag ontwikkel nou oor die Unie se binneland. As gevolg hiervan sal vogtige lug vanuit die Noorde, suidwaarts oor die Unie beweeg en sal die instroming van vogtige seelug oor die SO-like kusstrobe ook versterk word.

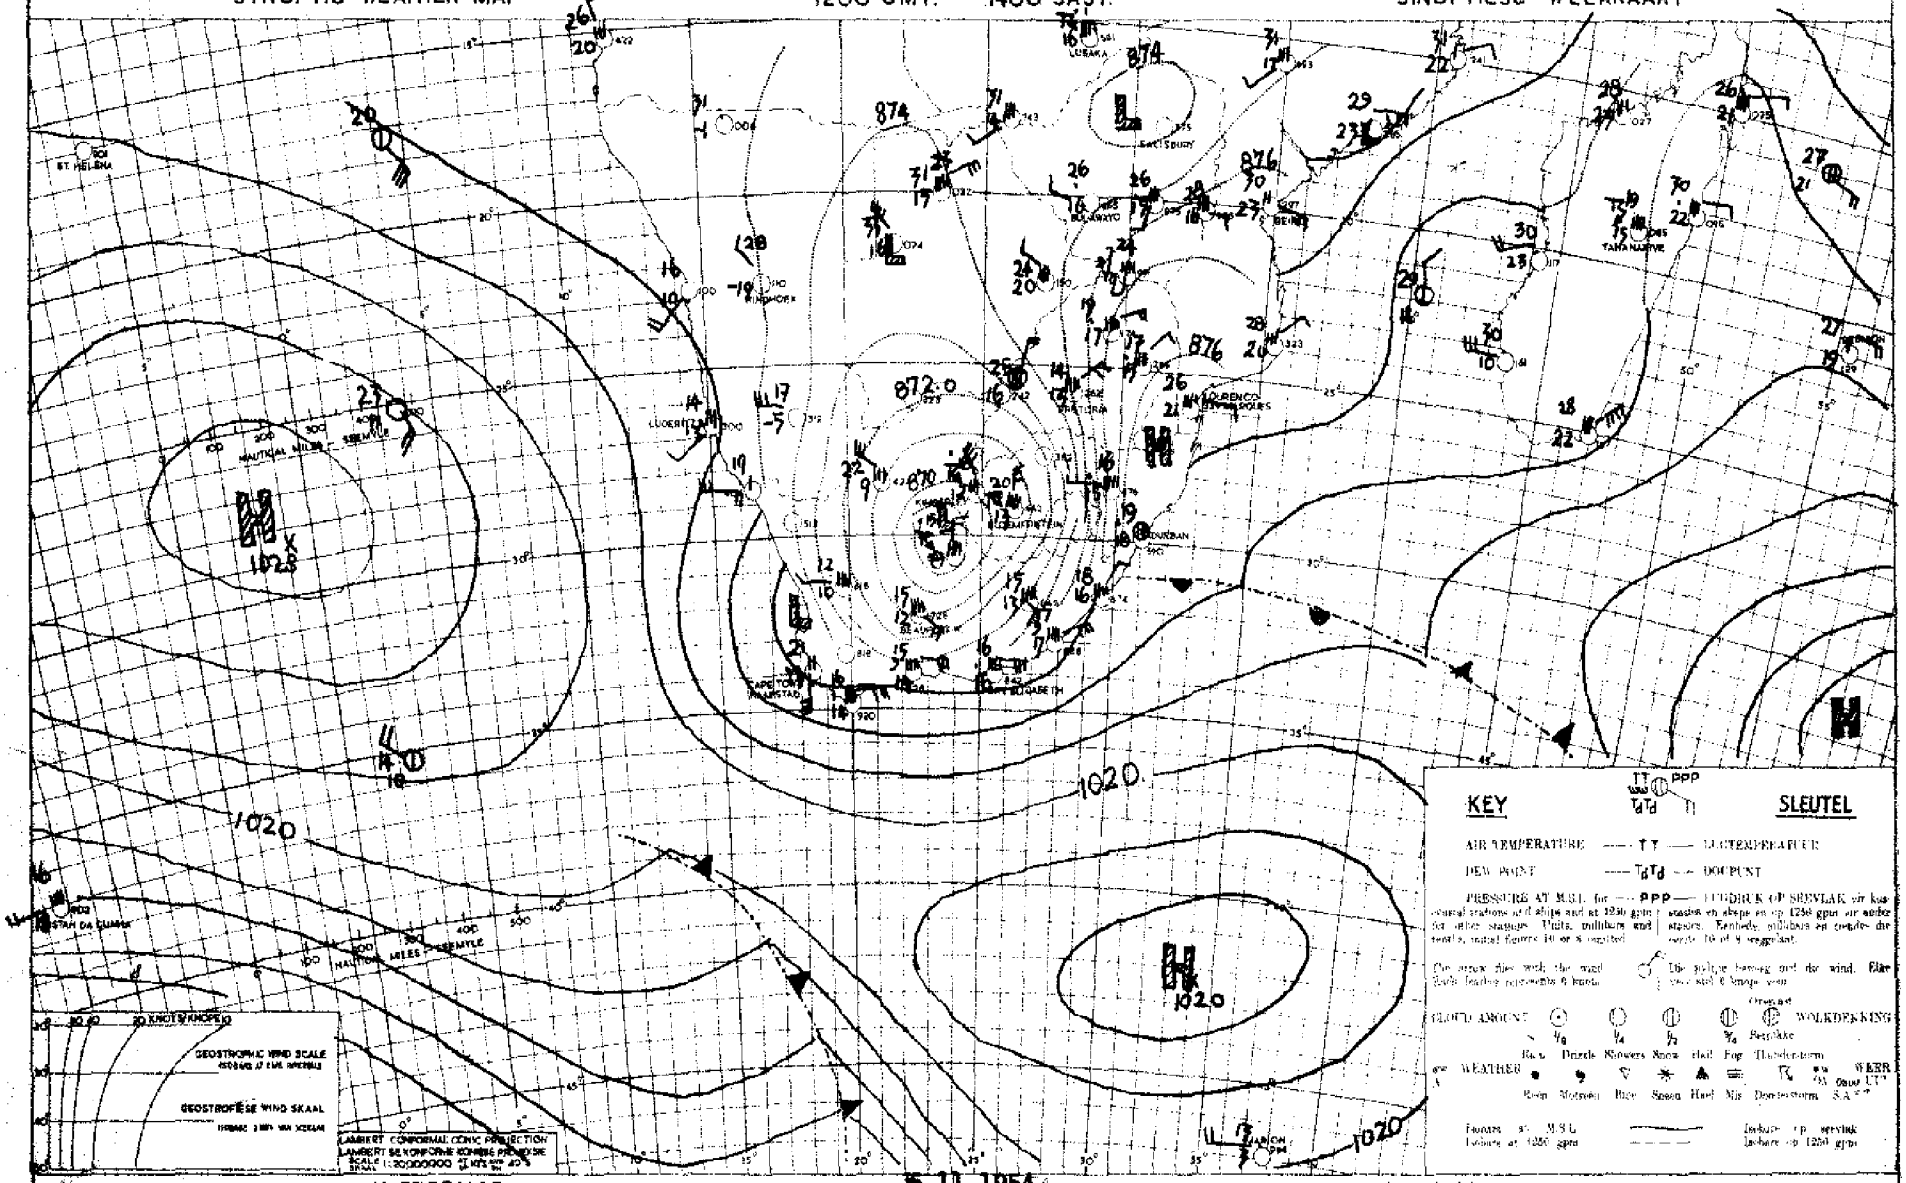
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 5-11-1954 — DATUM — AFLEIDING

The deep low centred over the Union is now moving eastwards, followed by dry cooler air. It will clear over the western half of the Union, but unsettled conditions will persist over the eastern half of Transvaal.

Die diep laagdrukstelsel oor die Unie beweeg nou ooswaarts gevolg deur droër, koeler lug. Gevolglik sal dit opklaar oor die westelike helfte van die Unie, maar ongestadigde toestande sal voortduur oor die noord-oostelike helfte van Transvaal.

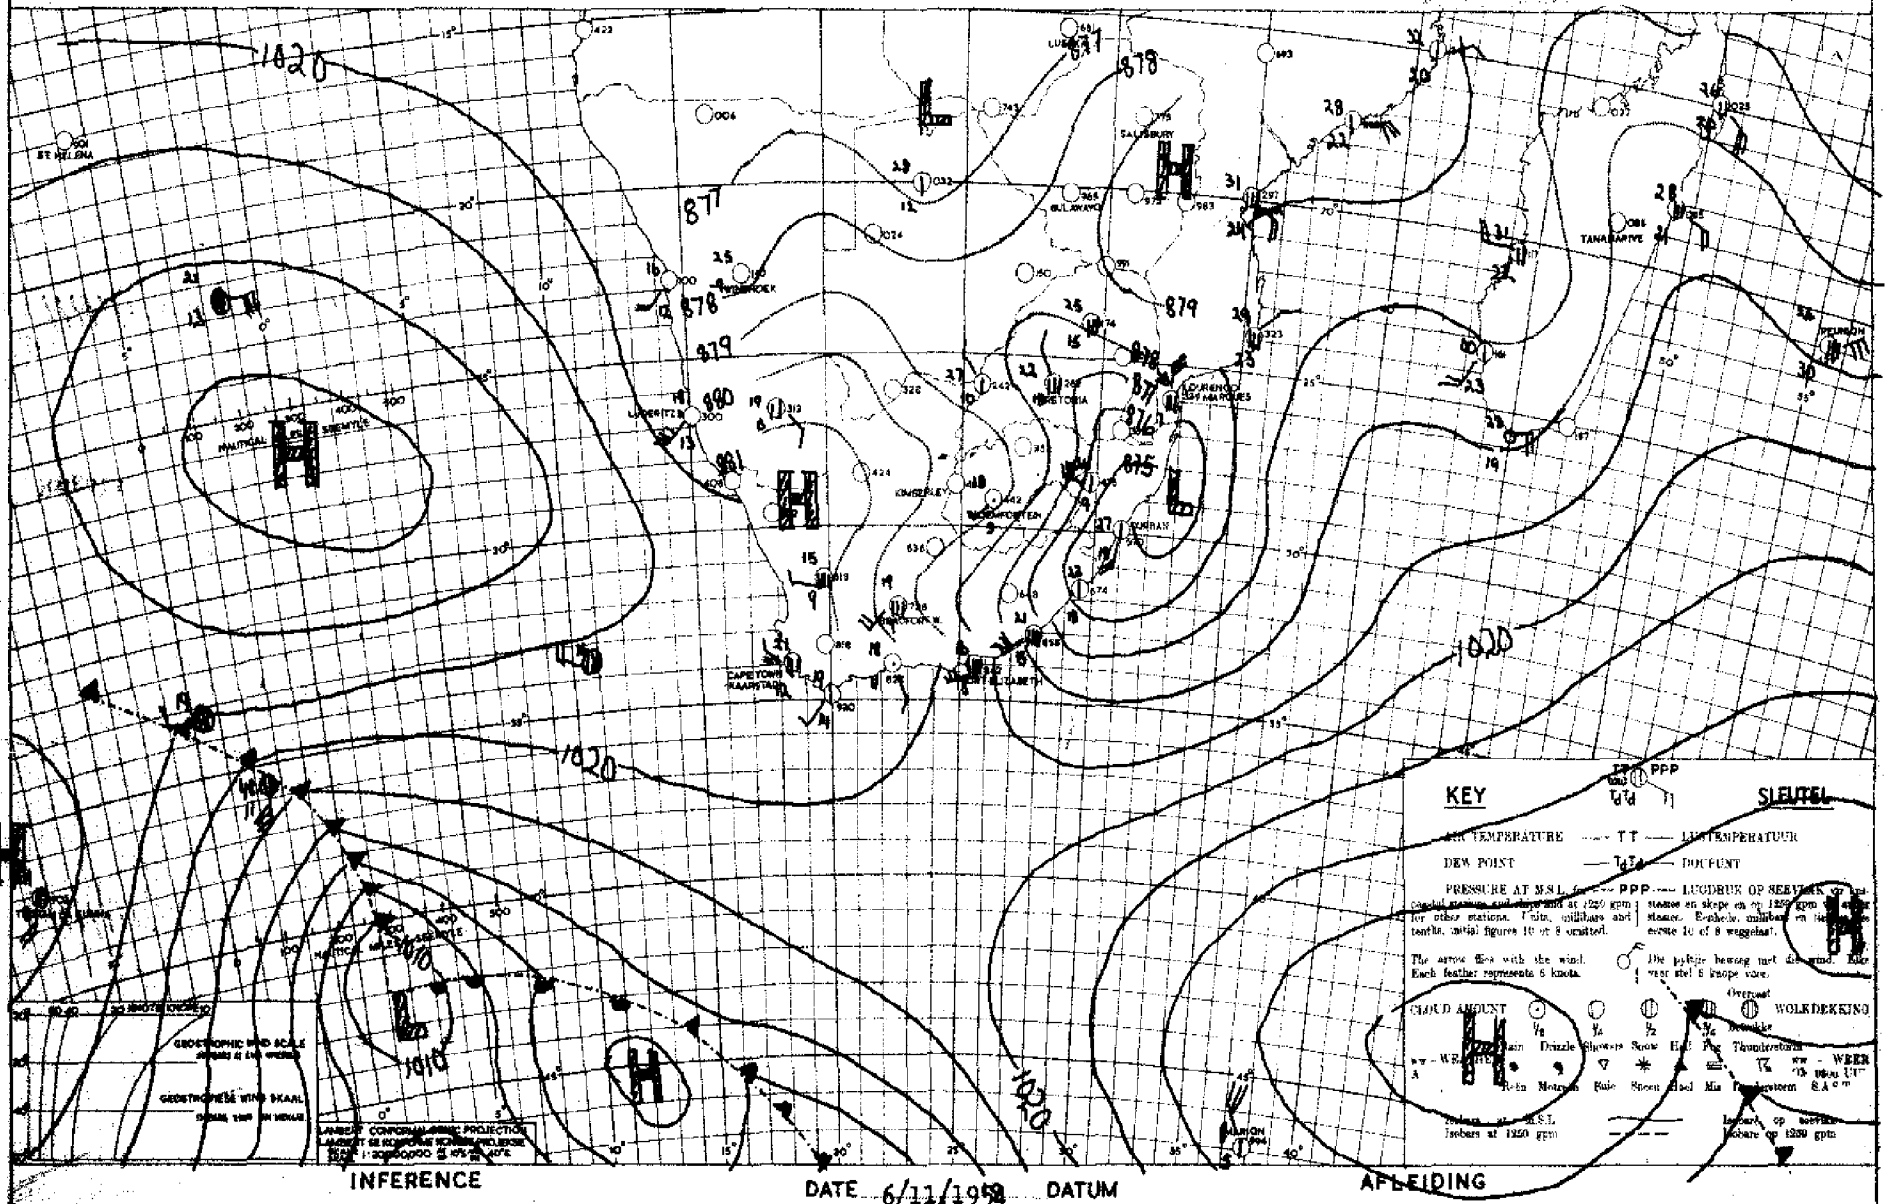
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 6/11/1958 DATUM AFLEIDING

The deep low which yesterday was over the centre of the Union has now moved to Natal, and weakened considerably. Its further effects will probably be confined to the coastal areas of Natal and Zululand. Meanwhile, fairly dry air is coming in behind it over the interior of the Union.

Die diep laag wat gister oor die middel Unie gelê het, het nou na Natal beweeg en aansienlik swakker geword. Die verdere uitwerking daarvan sal waarskynlik tot die kusstreke van Natal beperk word. Intussen stroom taamlik droë lug agter hom oor die Binneland in.

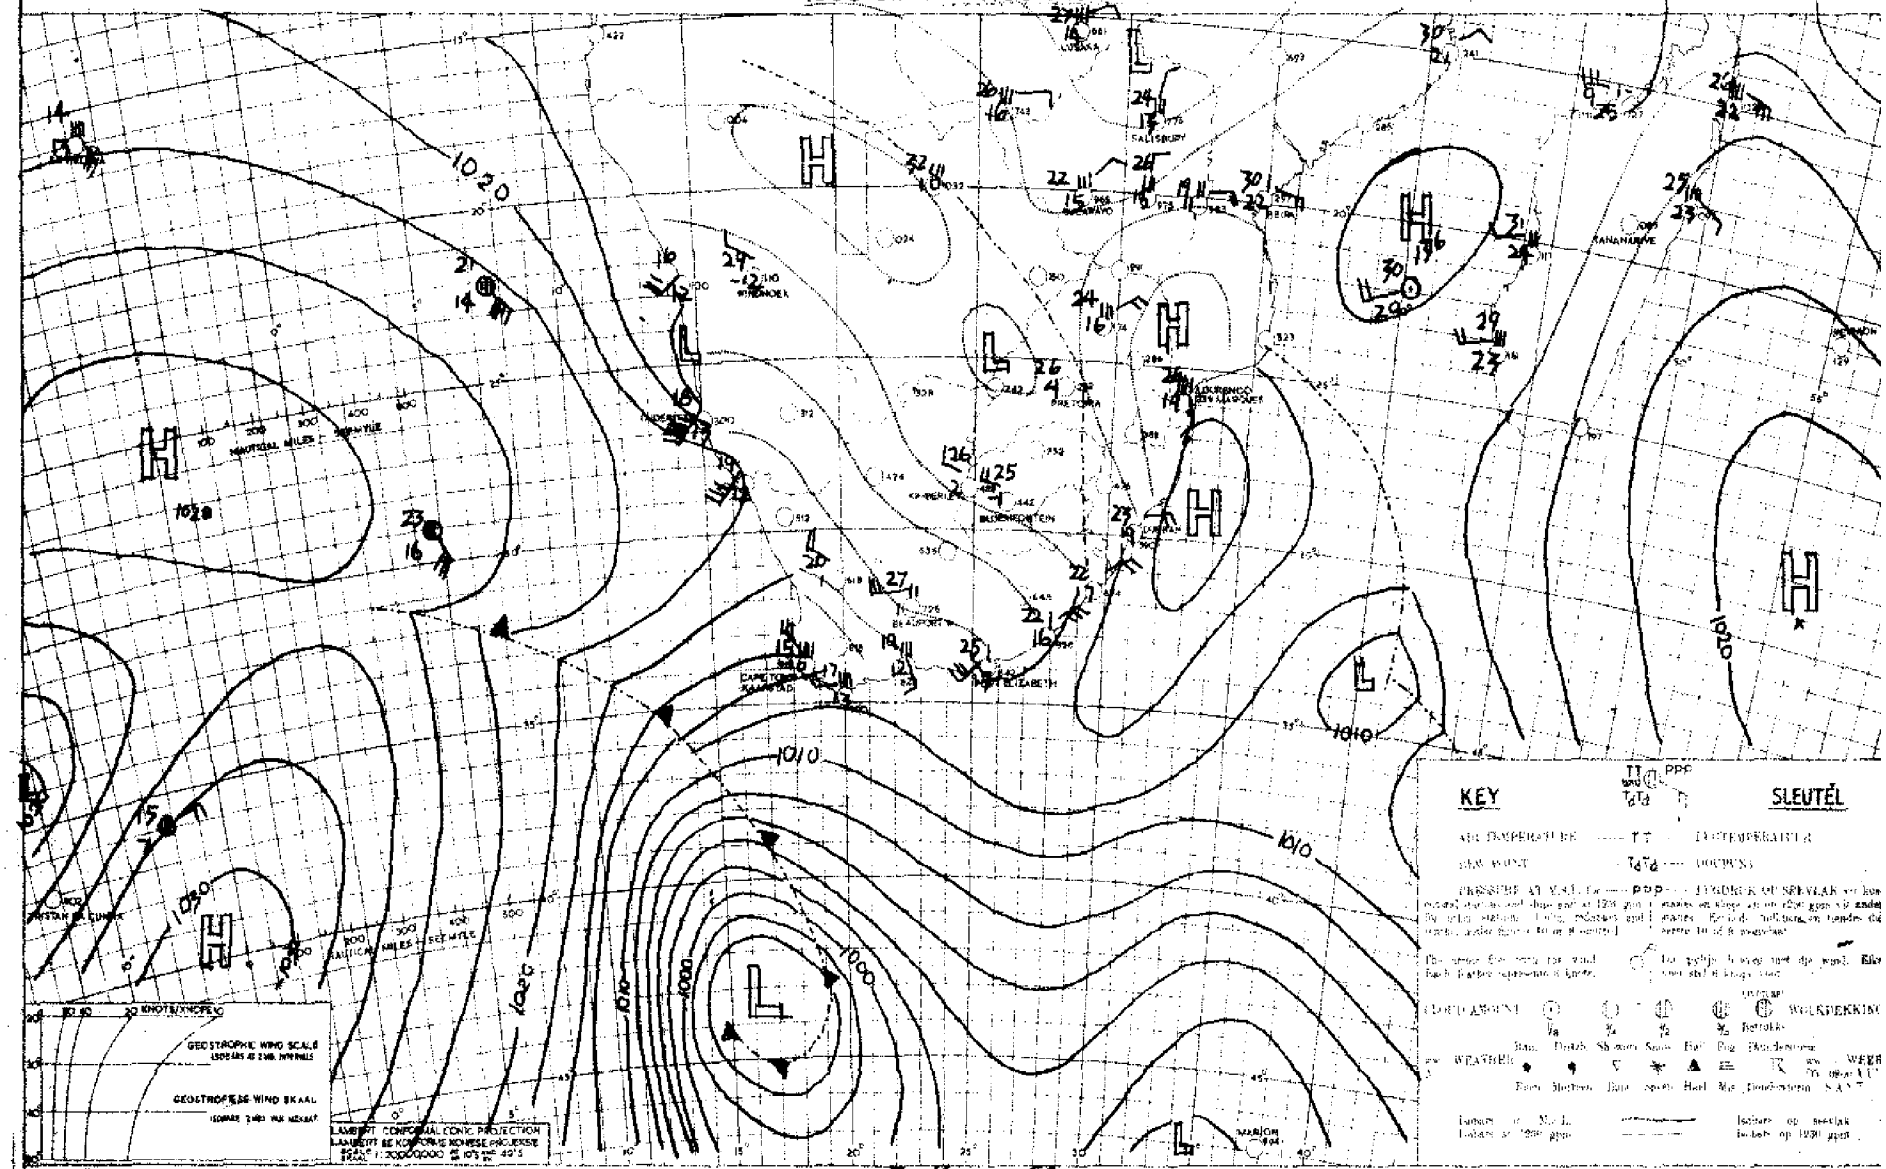
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

A cold front backed by an extensive high pressure system is approaching the Cape from the southwest. Prior to its arrival cloudy, rainy weather and northwesterly winds will prevail over the southwestern Cape, but on passing the southwest Cape, winds will back to west of southwest. The cloudy weather conditions will spread to the southeast Cape, and Natal coastal regions over night. Over the Eastern half of Transvaal it will be partly cloudy and isolated thunderstorms are possible over the southern part of Transvaal. Elsewhere over the Union it will be mainly

DATE 7 11 1954 DATUM

AFLEIDING

'n Koue front gesteun deur 'n uitgebreid hoogdruk sisteem nader die Kaap vanuit die suidweste. Voor sy aankoms sal bewolkte, reënagtige weerstoestande gepaard met noordweste winds oor die kusstreke van Suidwes Kaapland heers, maar nadat die koue front verby is, sal winde na wes of suidwes draai. Die bewolkte weerstoestande sal geleidelik na die suidoos en Natal kusstreke uitbrei. Oor die Oostelike helfte van Transvaal sal dit gedeeltelik bewolk wees en los donderbuie is moontlik oor Suidoos Transvaal. Oor die res van die Unie sal dit hoofsaaklik mooi weer wees.

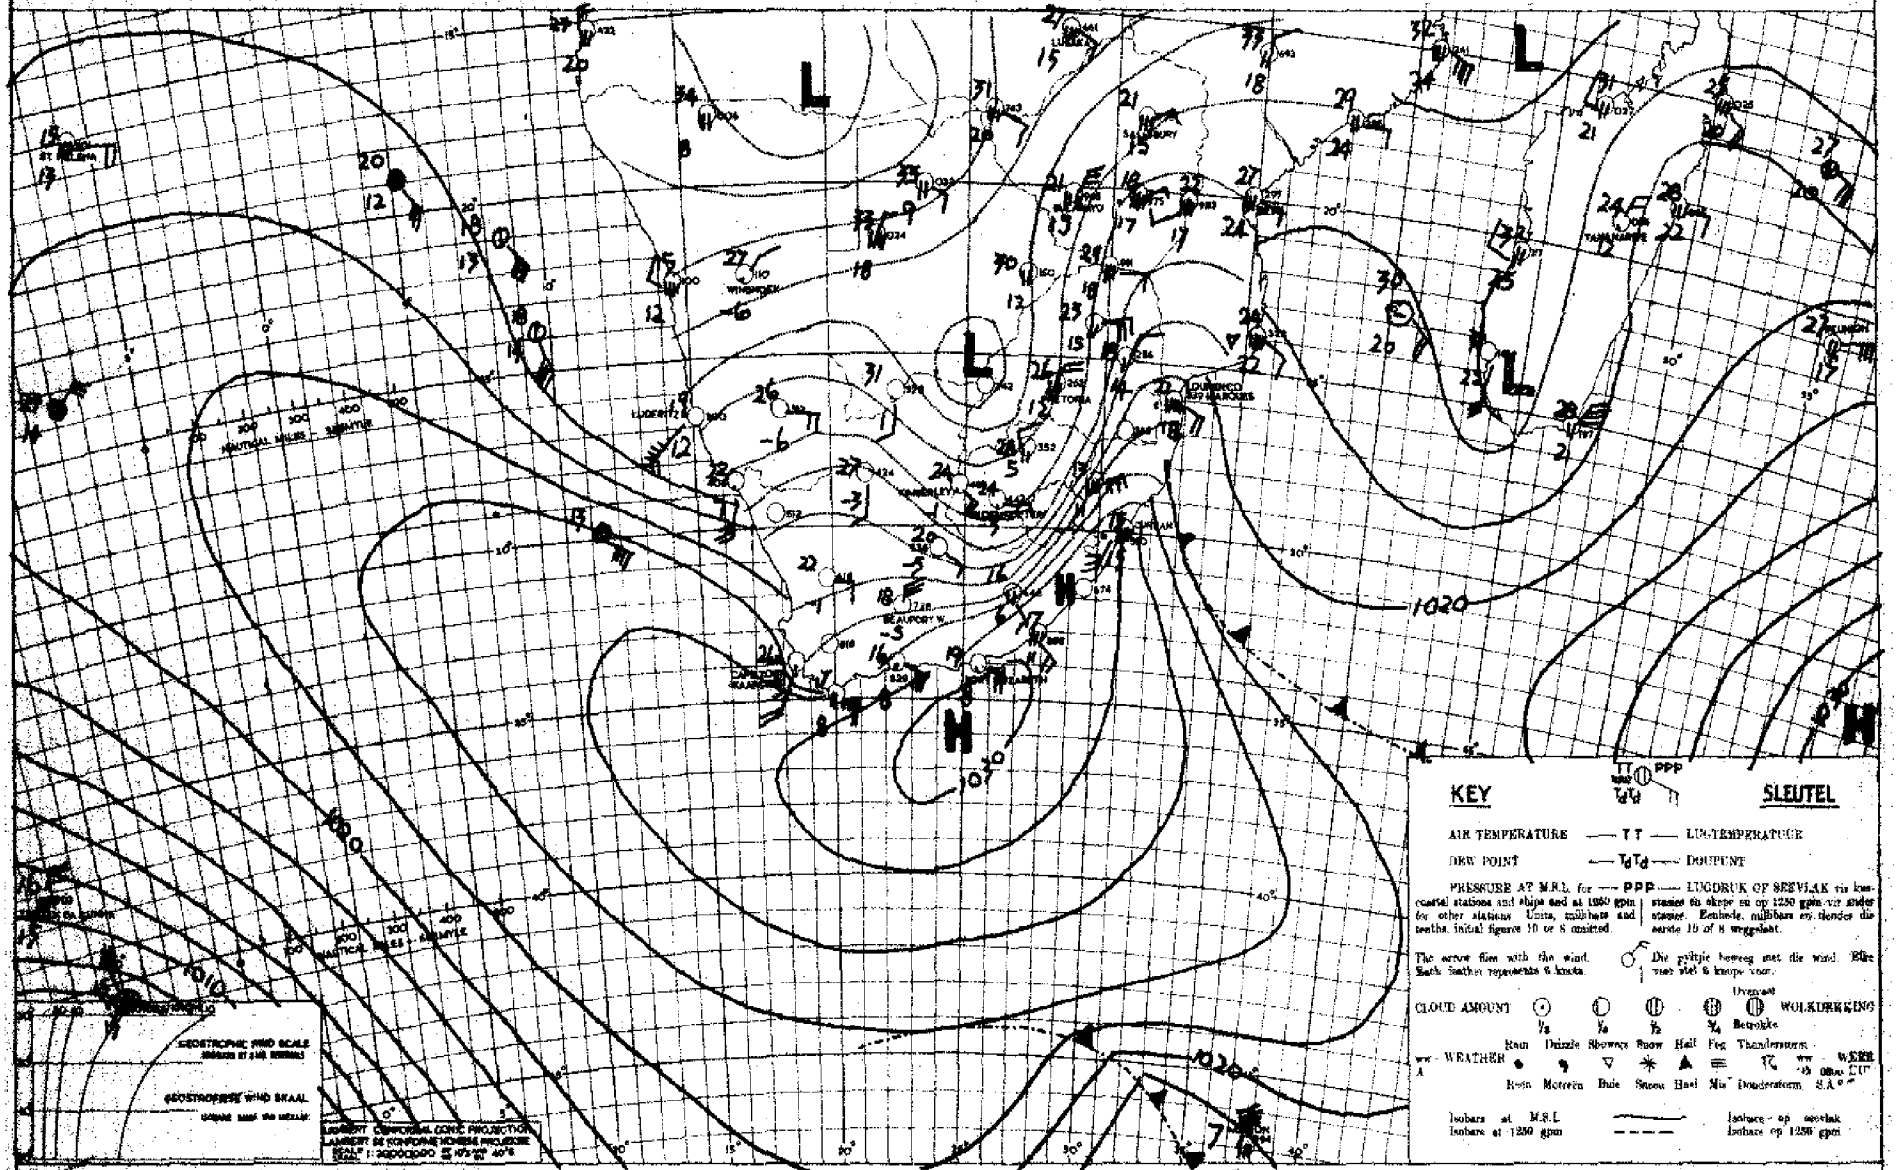
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 9 — 11 — 1954 DATUM 4 AFLEIDING

A strong current of cool moist air moves southwestward between the anticyclone, centred near Port Elizabeth and the depression situated on the Border between Bechuanaland and Transvaal. Due to the continued southward flow of warm, humid air from the north over Transvaal, scattered thunder or rainshowers will develop over the Eastern half of Transvaal and will move gradually westward to the western Transvaal. Over Natal and the Northeastern Free State it will be cloudy and cool. Elsewhere over the Union it will be mainly fine.

'n Sterk stroom koel vogtige lug beweeg suidweswaarts tussen die antisikloon met sy sentrum naby Port Elizabeth en die depressie wat op die grens van Betsjoeanaland en Transvaal gelê is. Weens die aanhoudende invloed van warm, vogtige lug vanaf die noorde oor Transvaal sal verspreide donder en reënbuie oor die oostelike helfte van Transvaal voorkom en sal ook geleidelik na wes Transvaal uitbrei. Oor Natal sal dit ook koud, bewolk en koel bly, asook oor die noordoostelike Vrystaat. Elders oor die Unie sal dit meestal mooiweer wees.

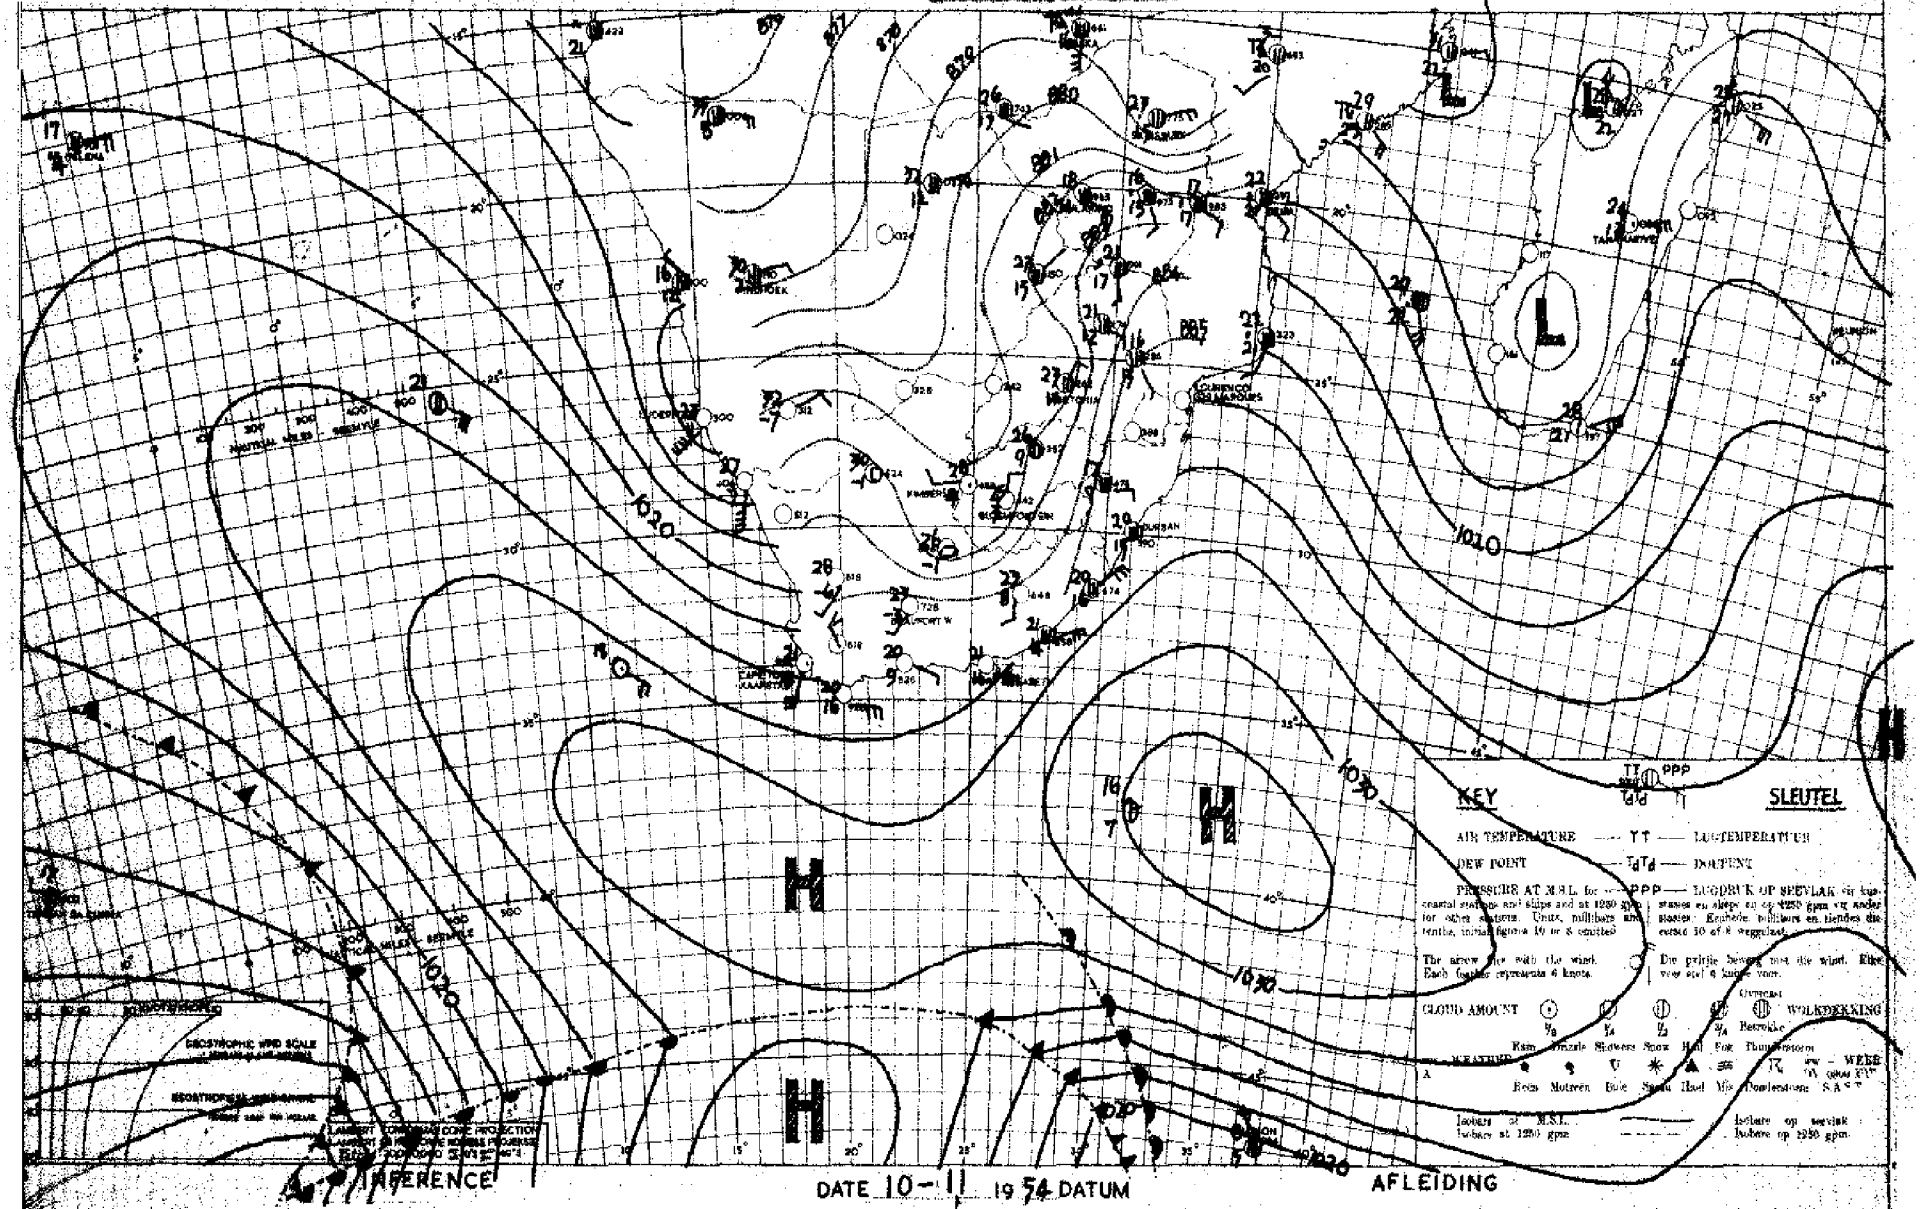
SYNOPTIC WEATHER MAP 1200 GMT — 1400 SAST SINOPTIESE WEERKAART



REFERENCE DATE 10-11 1954 DATUM AFLEIDING

The Anticyclonic area south of the Union is moving rather slowly eastwards. The weather over the E and SE coastal areas will gradually clear, but the moist air over the Transvaal will move gradually further southward over the eastern interior of the Union.

Die antisikloniese gebied suid van die Unie beweeg ietwat stadig oostwaarts. Die weer oor die O-like en SO-like kuasstreke sal geleidelik ooptrek, maar die vogtige lug oor Transvaal sal geleidelik verder suidwaarts oor die O-like binneland van die Unie beweeg.

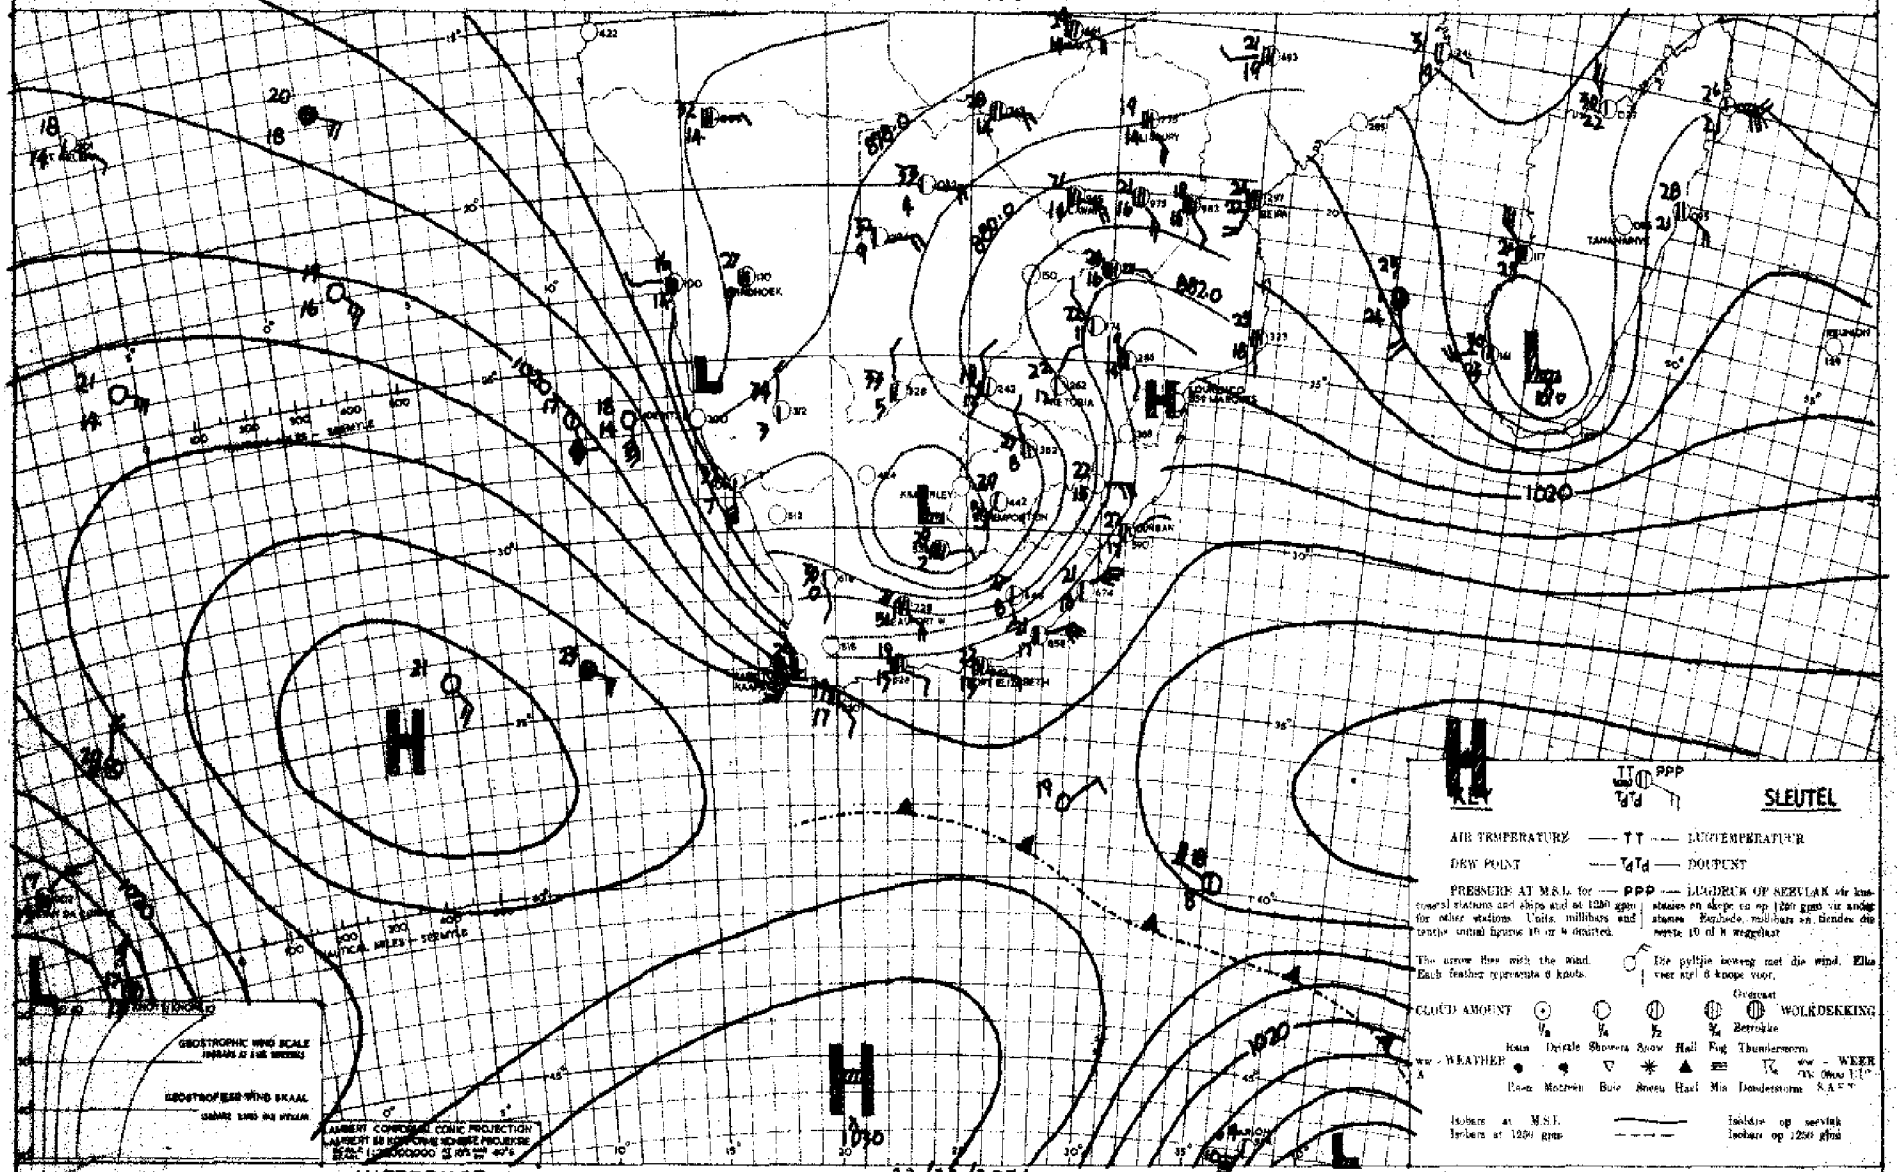
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 11/11/1954 DATUM AFLEIDING

A north easterly current of air is still being maintained between the high pressure belt over the Indian Ocean and a low pressure area over S.W.A. and the Union Interior. This current feeds air of oceanic origin over the eastern Union resulting in cloudy weather. Thunderstorm development will occur over the Southern Transvaal, the Northeastern Free State and the northwestern interior of Natal. Elsewhere over the Union it will be fair to fine.

'n Noordoostelike lugstroom word instand gehou deur die hoogdruk gordel oor die Indiese Oseaan en die laagdruk gebied oor S.W.A. en die Unie binneland. Hierdie stroom voer vogtige lug van oseaniese oorsprong oor die Oostelike Unie in met die gevolg dat bewolkte weerstoestande algemeen oor die dele voorkom. Donderweersontwikkeling sal oor Suid Transvaal, Noordoos Vrystaat en die Noordwestelike Natal binneland plaasvind. Elders oor die Unie sal dit effens bewolk of mooiweer wees.

INFERENCE

The eastward movement of the anticyclone SW of the Union will cause cloudy weather and light local rain over the south and SE coastal areas.

AFLEIDING

Die ooswaartse beweging van die antisikloon SW van die Unie sal bewolkte weer en plaaslike ligte reën oor die S-like kuststreke veroorsaak.

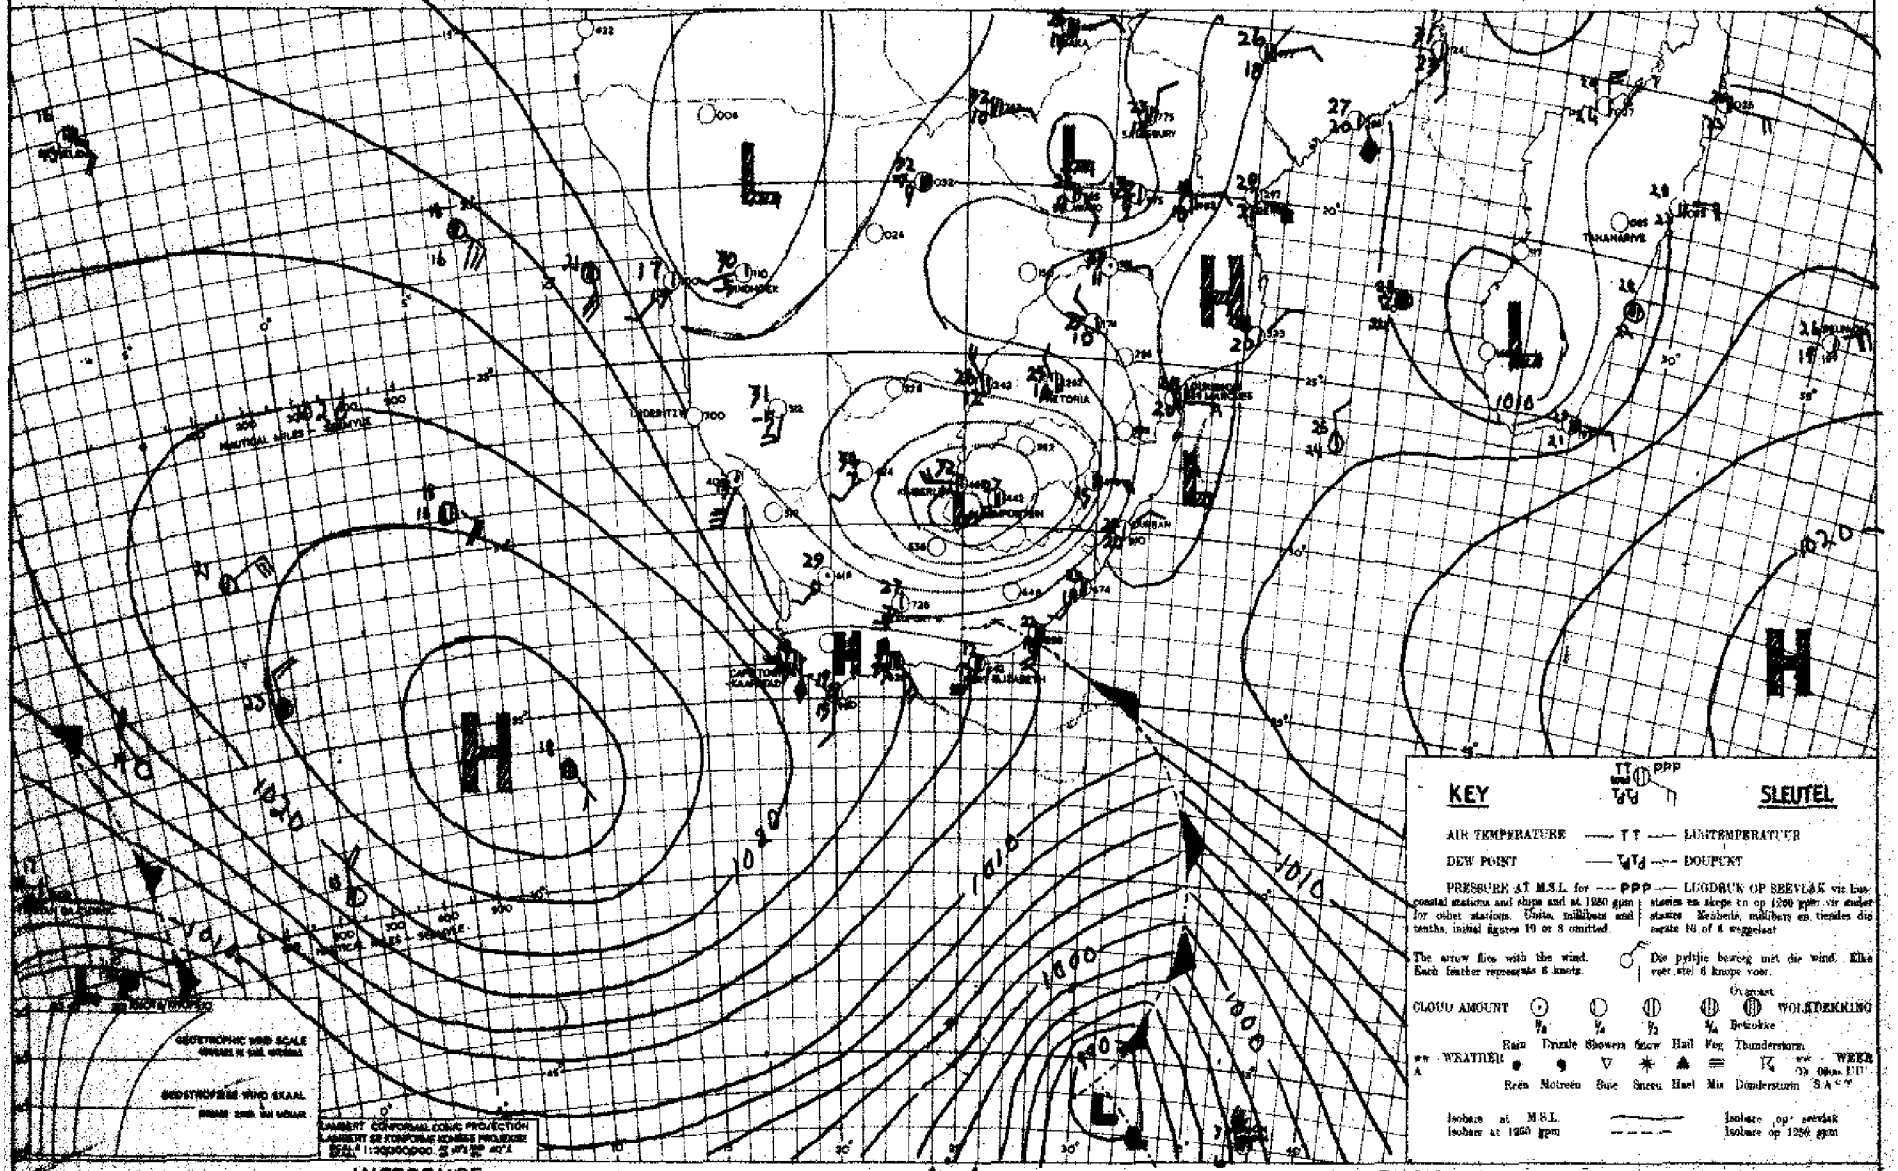
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 13/11/1954 DATUM AFLEIDING

The Atlantic anticyclone is extending a wedge to the south-east Cape coast. The wedge is expected to reach Natal and the southeastern Transvaal by tomorrow. Cool moist sea air will consequently flow along the coastal areas and adjacent inland territories of the above mentioned regions. And the weather will be cloudy with local showers occurring. The Transvaal and the northern Free State is still influenced by humid tropical air from the north and northeast and thunder activity will continue to prevail. Over the remainder of the Union the air is

'n Uitloper van die Atlantiese Hoog het die suidoos kus van Kaapland bereik en sal more ook Natal en suidoos Transvaal beïnvloed. Koel, vogtige lug sal langs die kuststreke en aangrensende binneland van bogenoemde streke invloei en bewolkte weer met plaaslike buie sal voorkom. Transvaal en Noordoos Vrystaat word nog steeds beïnvloed deur vogtige tropiese lug van die noorde en noordooste en donderweeratoestande sal dus bly voortduur. Oor die res van die Unie is die lug droog en dit sal dus mooiweer bly

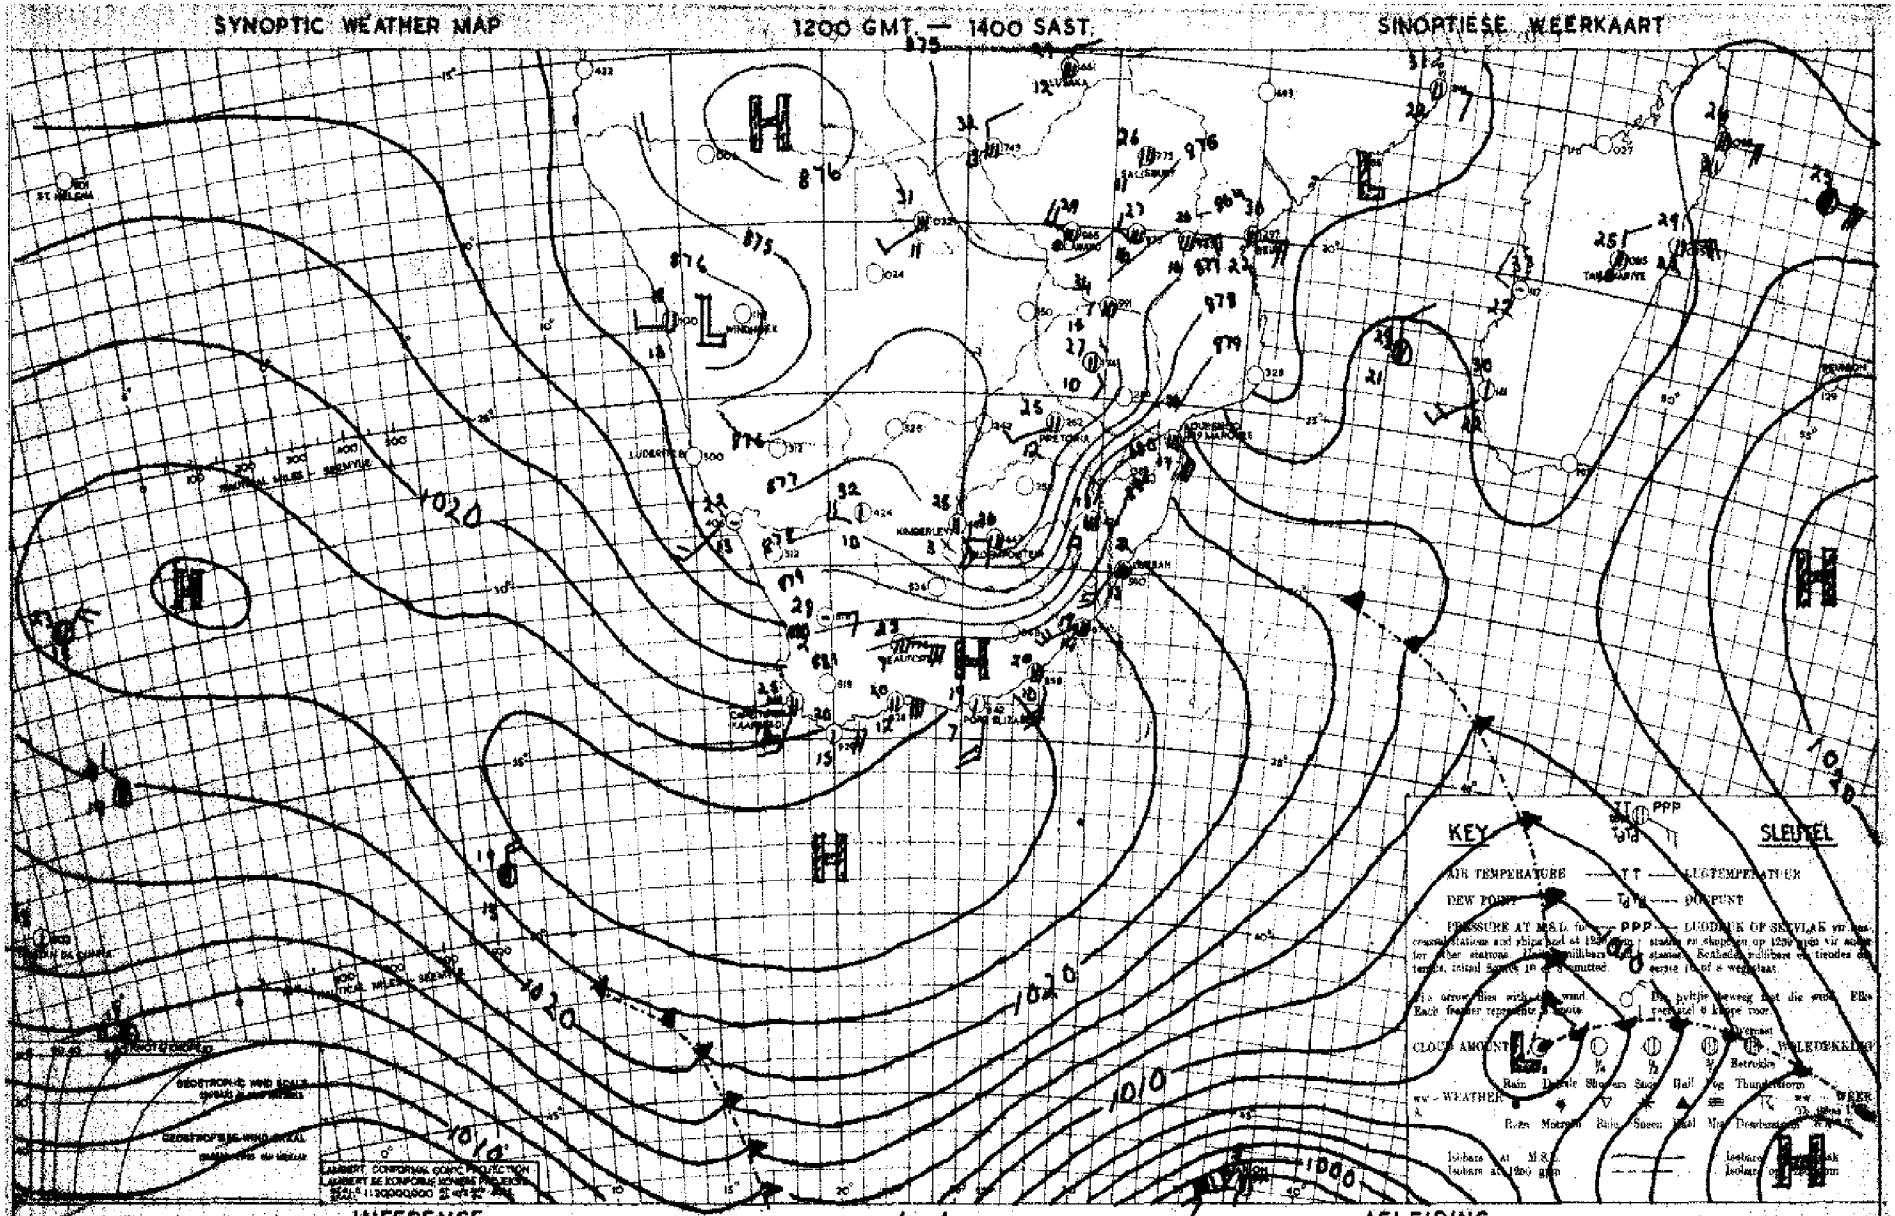
SYNOPTIC WEATHER MAP — 1200 GMT — 1400 SAST — SINOPTIESE WEERKAART



INFERENCE — DATE 14/11/1950 — DATUM — AFLEIDING

The anticyclone SSW of the Union is moving gradually eastwards. The weather over the SE coast will begin to clear, but cool moist air will invade the Transvaal from the east.

Die antisikloon SSW van die Unie beweeg geleidelik ooswaarts. Die weer oor die SO-like kuststreke sal begin opklaar, maar koel, vogtige lug vanuit die ooste sal oor Transvaal instroom.

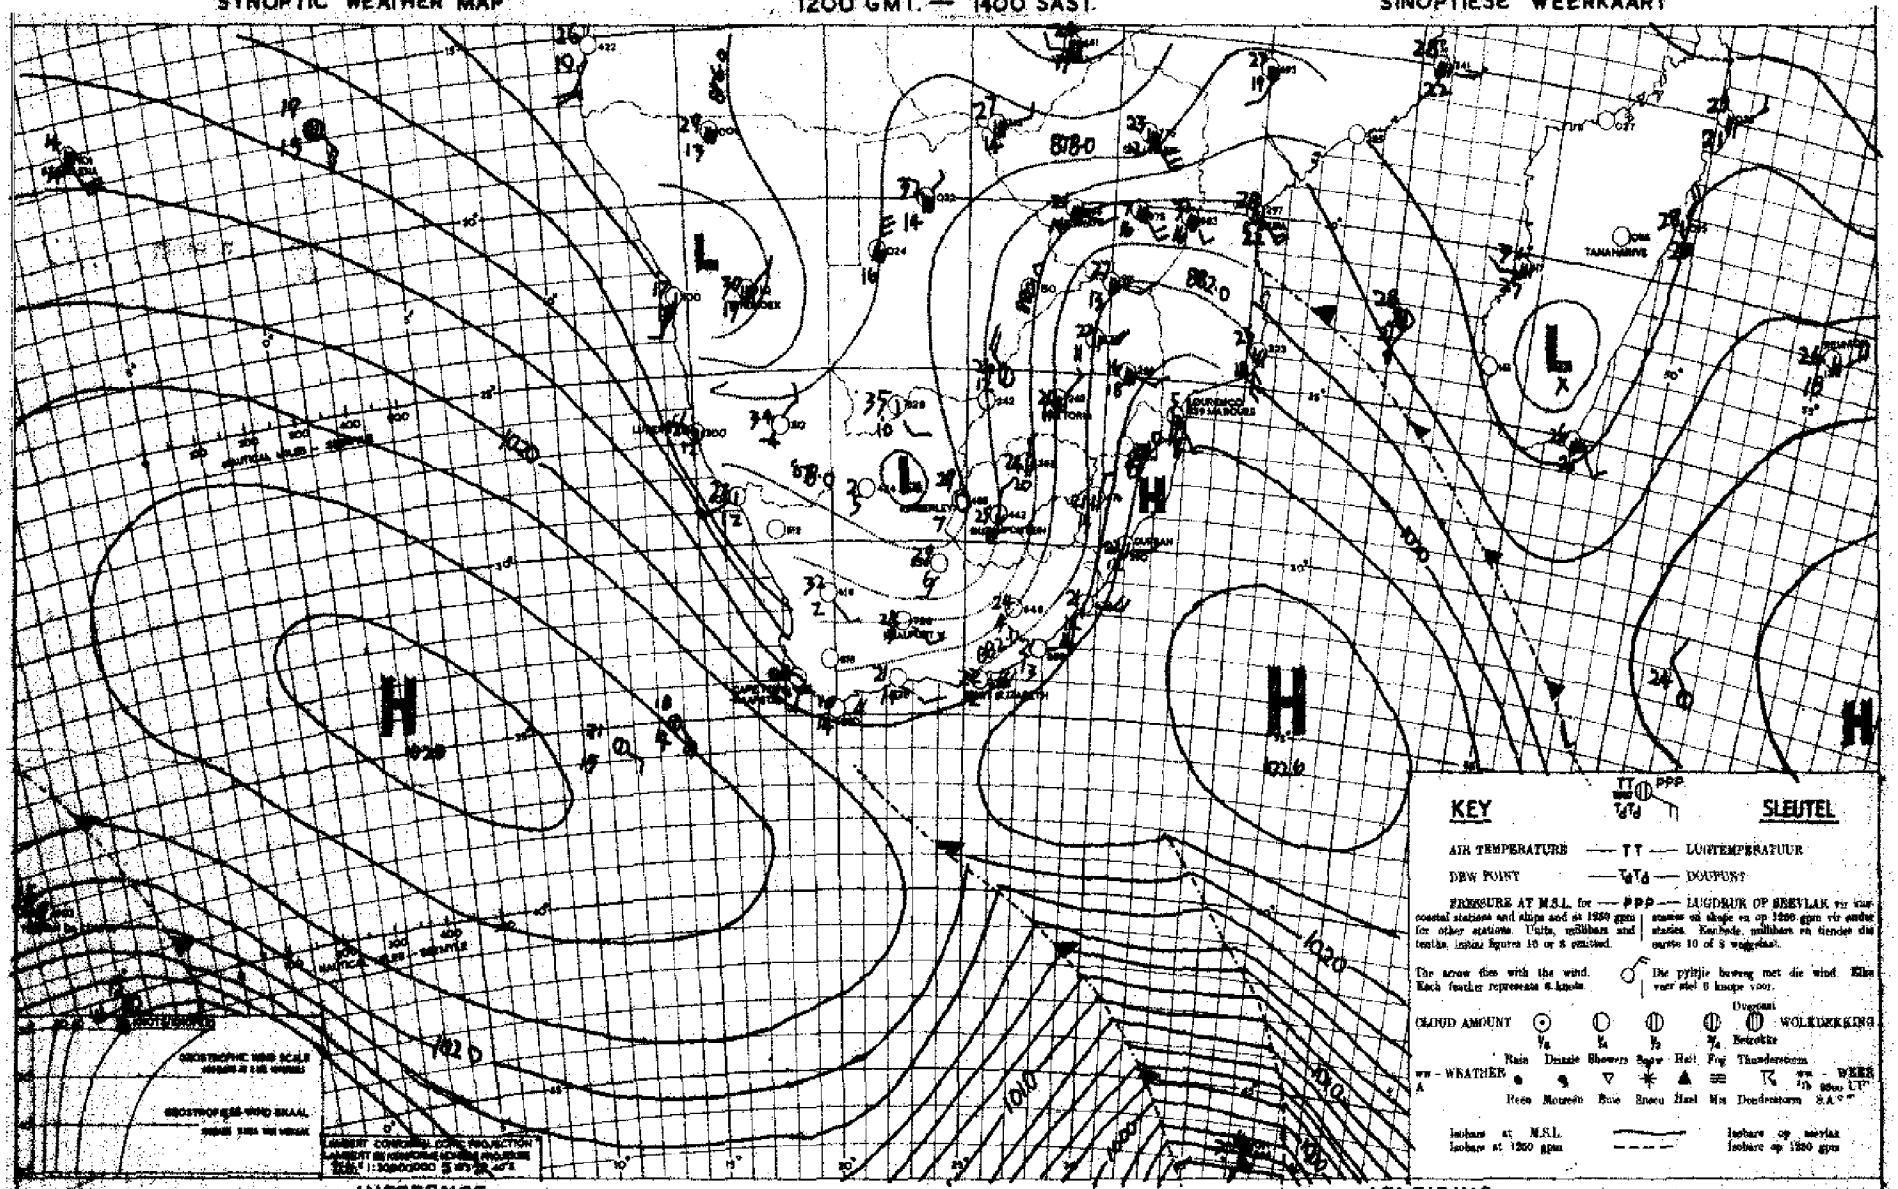
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE — DATE 15/11/1954 — DATUM — AFLEIDING

Partly cloudy weather will occur over the Transvaal, Free State and Eastern Cape interior. Isolated thunderstorms are likely over the Southwestern Transvaal and the Vryburg - Mafeking districts. Elsewhere over the Union it will be fine.

Gedeeltelik bewolkte toestande sal oor Transvaal, Vrystaat en die oostelike distrikte van Noord Kaapland voorkom. Los donderbuie is moontlik oor Suidwes Transvaal en die Vryburg - Mafeking distrikte. Elders oor die Unie sal dit mooiweer wees.

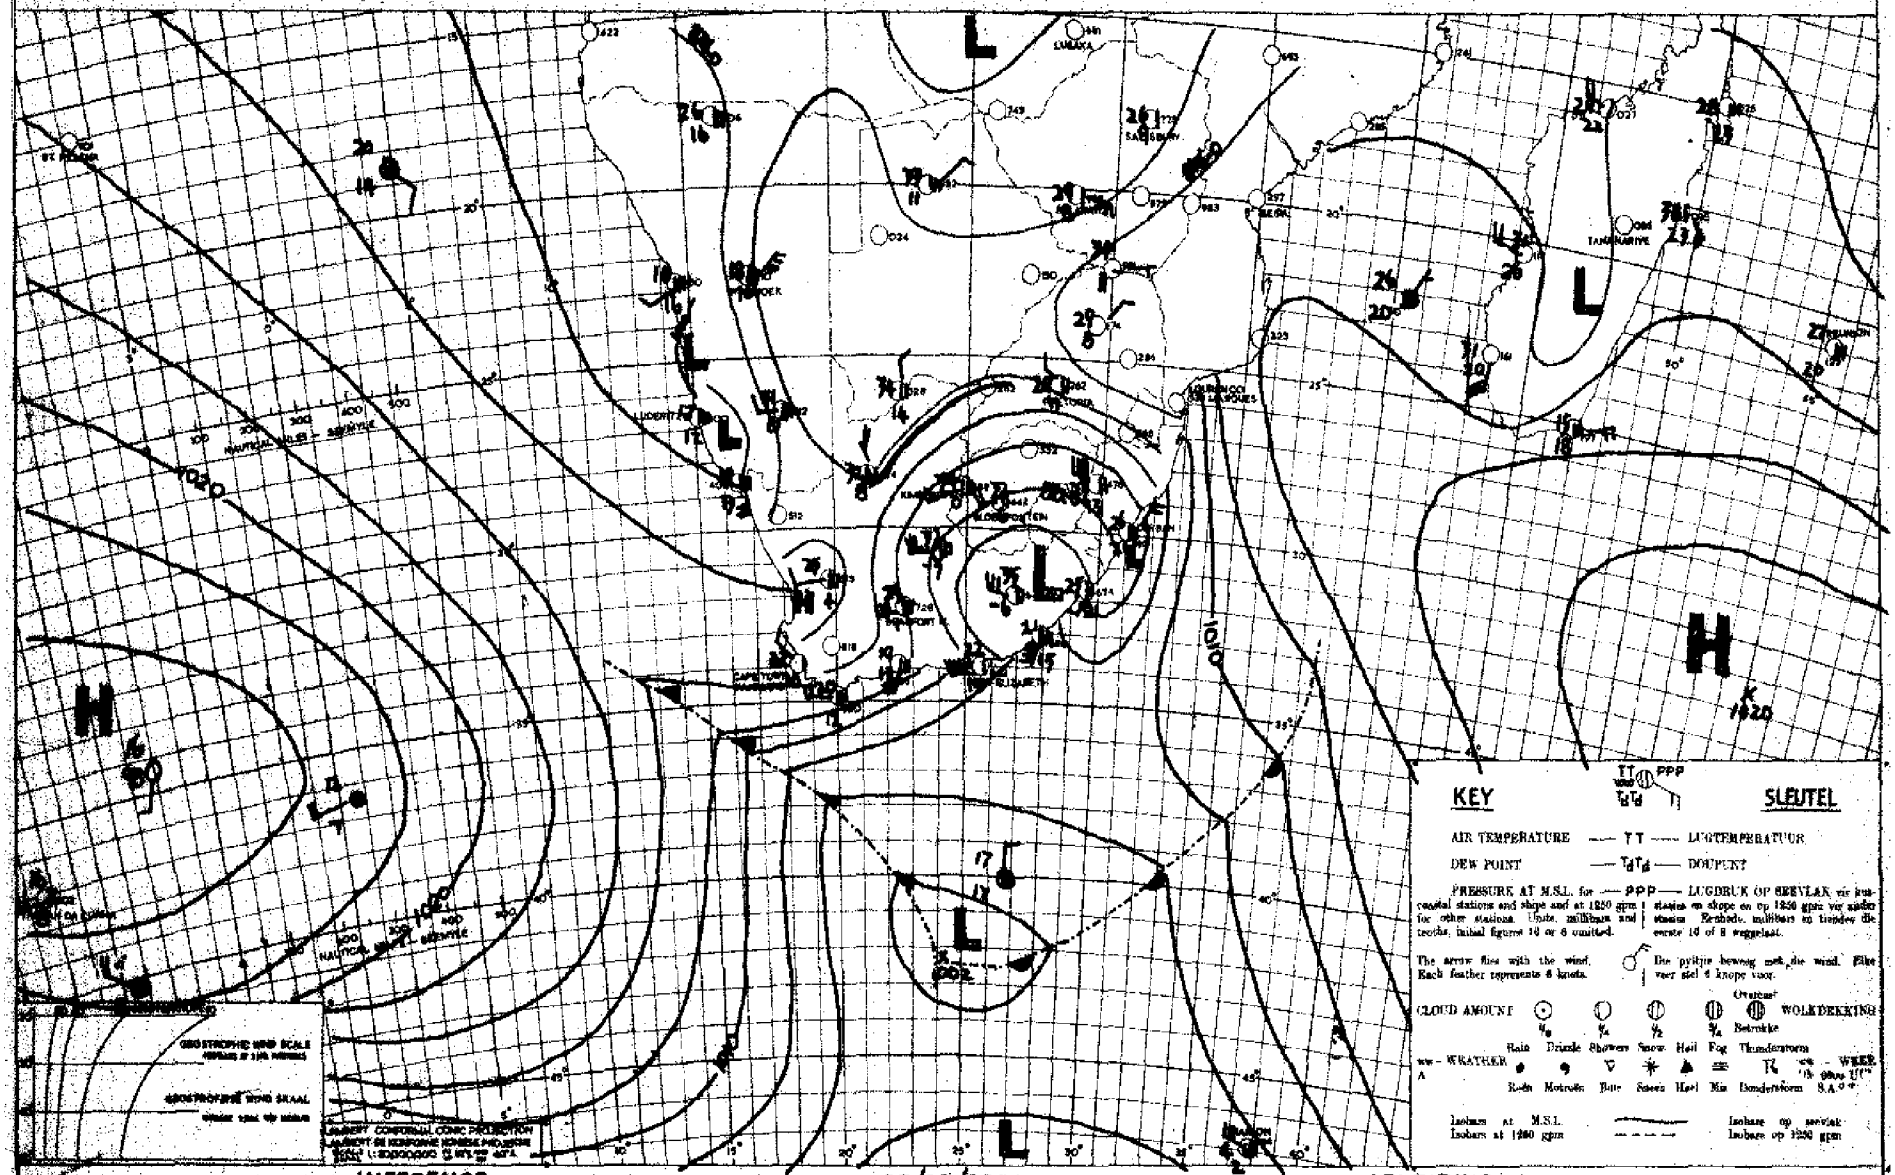
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



DATE 17/11/1954 DATUM

INFERENCE

Warm, humid air is presently flowing southwards over the western half of Bechuanaland and S.W - A. and will gradually spread to the Central Union. Increased cloudiness and local precipitation can therefore be expected over Gordonia and the Northwestern Karo. Elsewhere over the Union the weather will be partly cloudy to fair.

AFLEIDING

Warm, vogtige lug vloei op die oomblik suidwaarts oor die westelike helfte van Betsjoe aland en oof S.W.A. en sal geleidelik die sentrale dele v die Unie binnedring. Vermeerdering van bewolking en plaaslike reën kan dus oor Gordonia en die noordwest lik Karo verwag word. Elders oor die Unie sal dit gedeel k of effens bewolk wees.

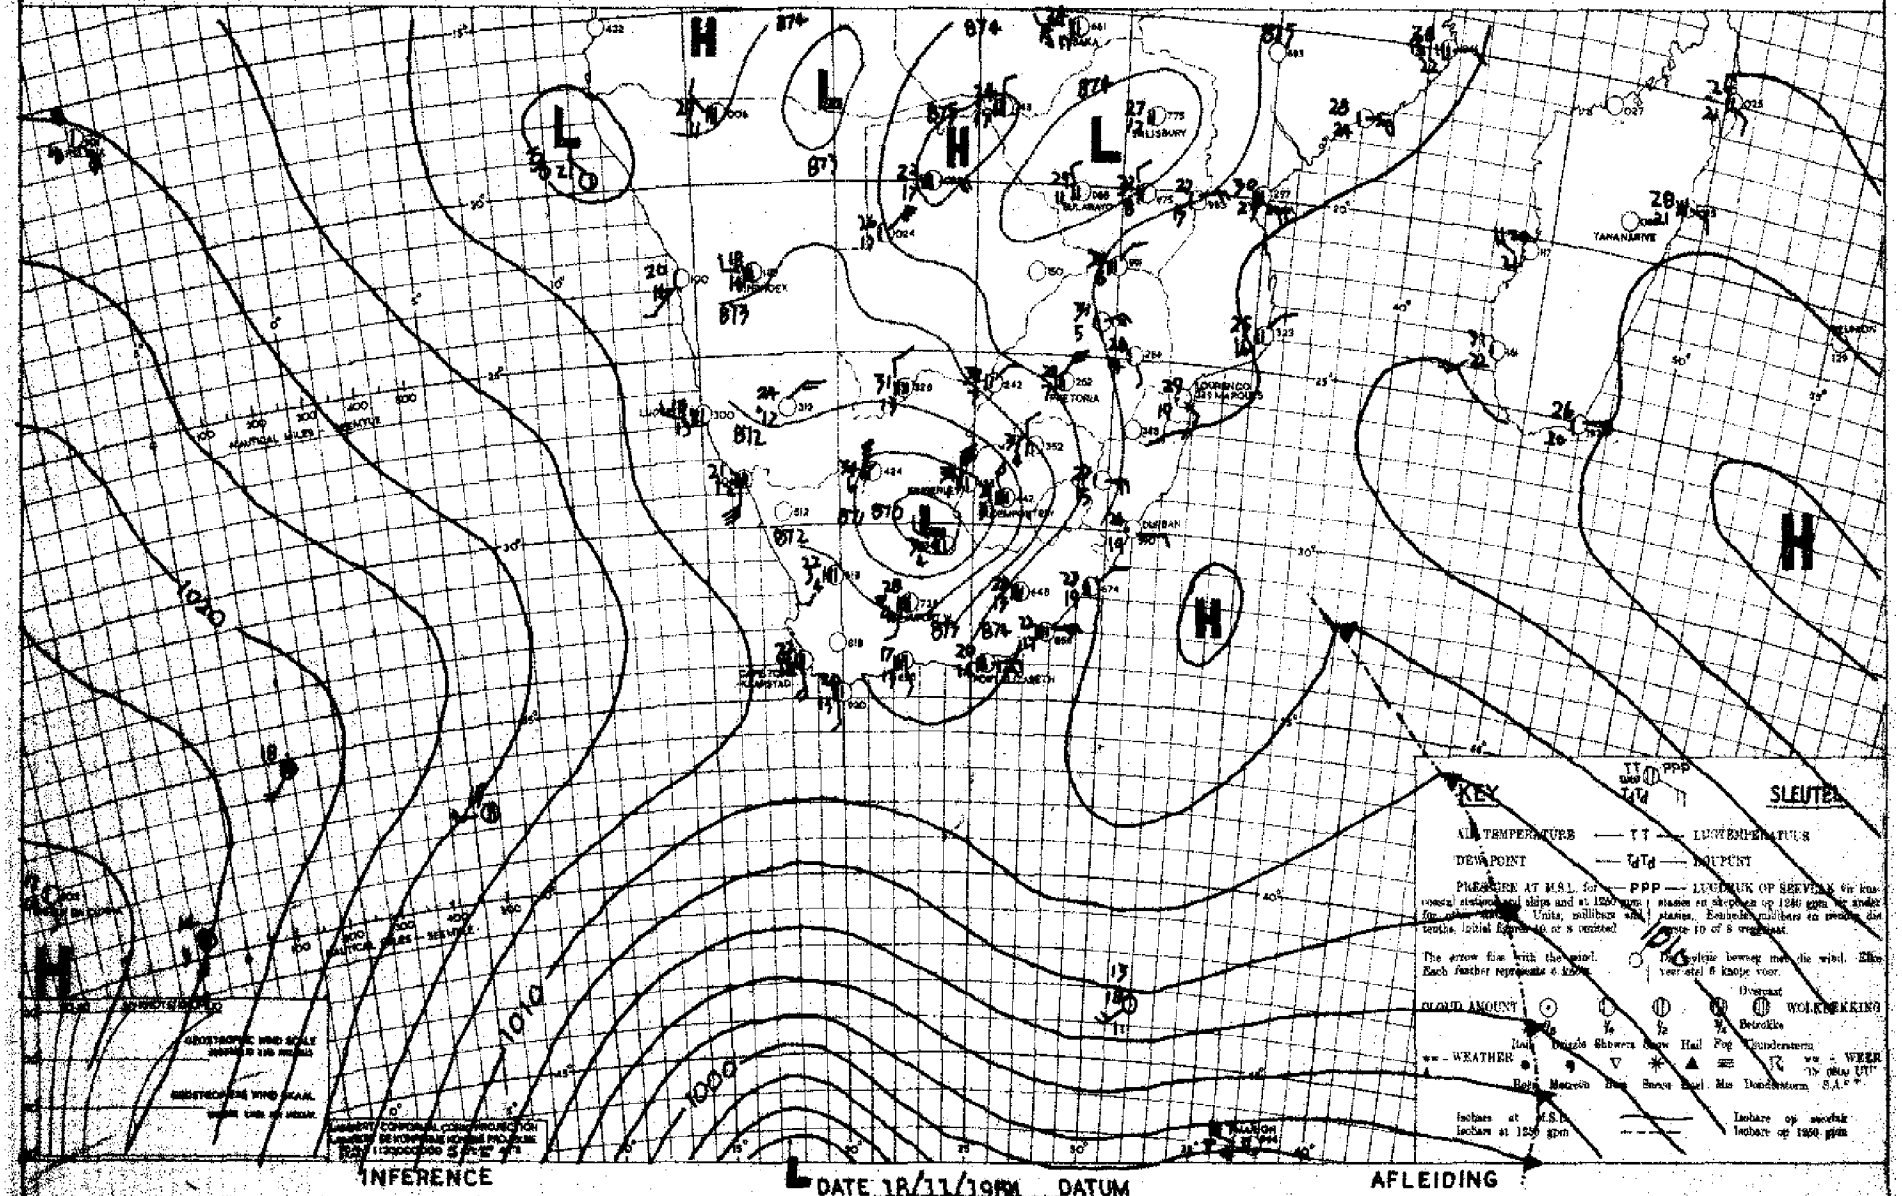
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 18/11/1954 DATUM AFLEIDING

The Interior of the Union is under the influence of a deep air-stream from the north, and it is unlikely that the low over the northern Karoo will change its position very quickly during the next 24 hours. The weather over the Union is consequently not expected to change very much, in spite of continued eastward movement of the Atlantic systems.

Die Unie se Binneland is onder die invloed van 'n diep lugstroom vanuit die noorde en dit lyk nie asof die laag oor N.-Karoo sy posisie gedurende die volgende 24 uur veel gaan verander nie. As gevolg hiervan word nie veel verandering in die huidige weerstoestande oor die Unie verwag nie, ten spyte van die aanhoudende ooswaartse beweging van die Atlantiese sisteme.

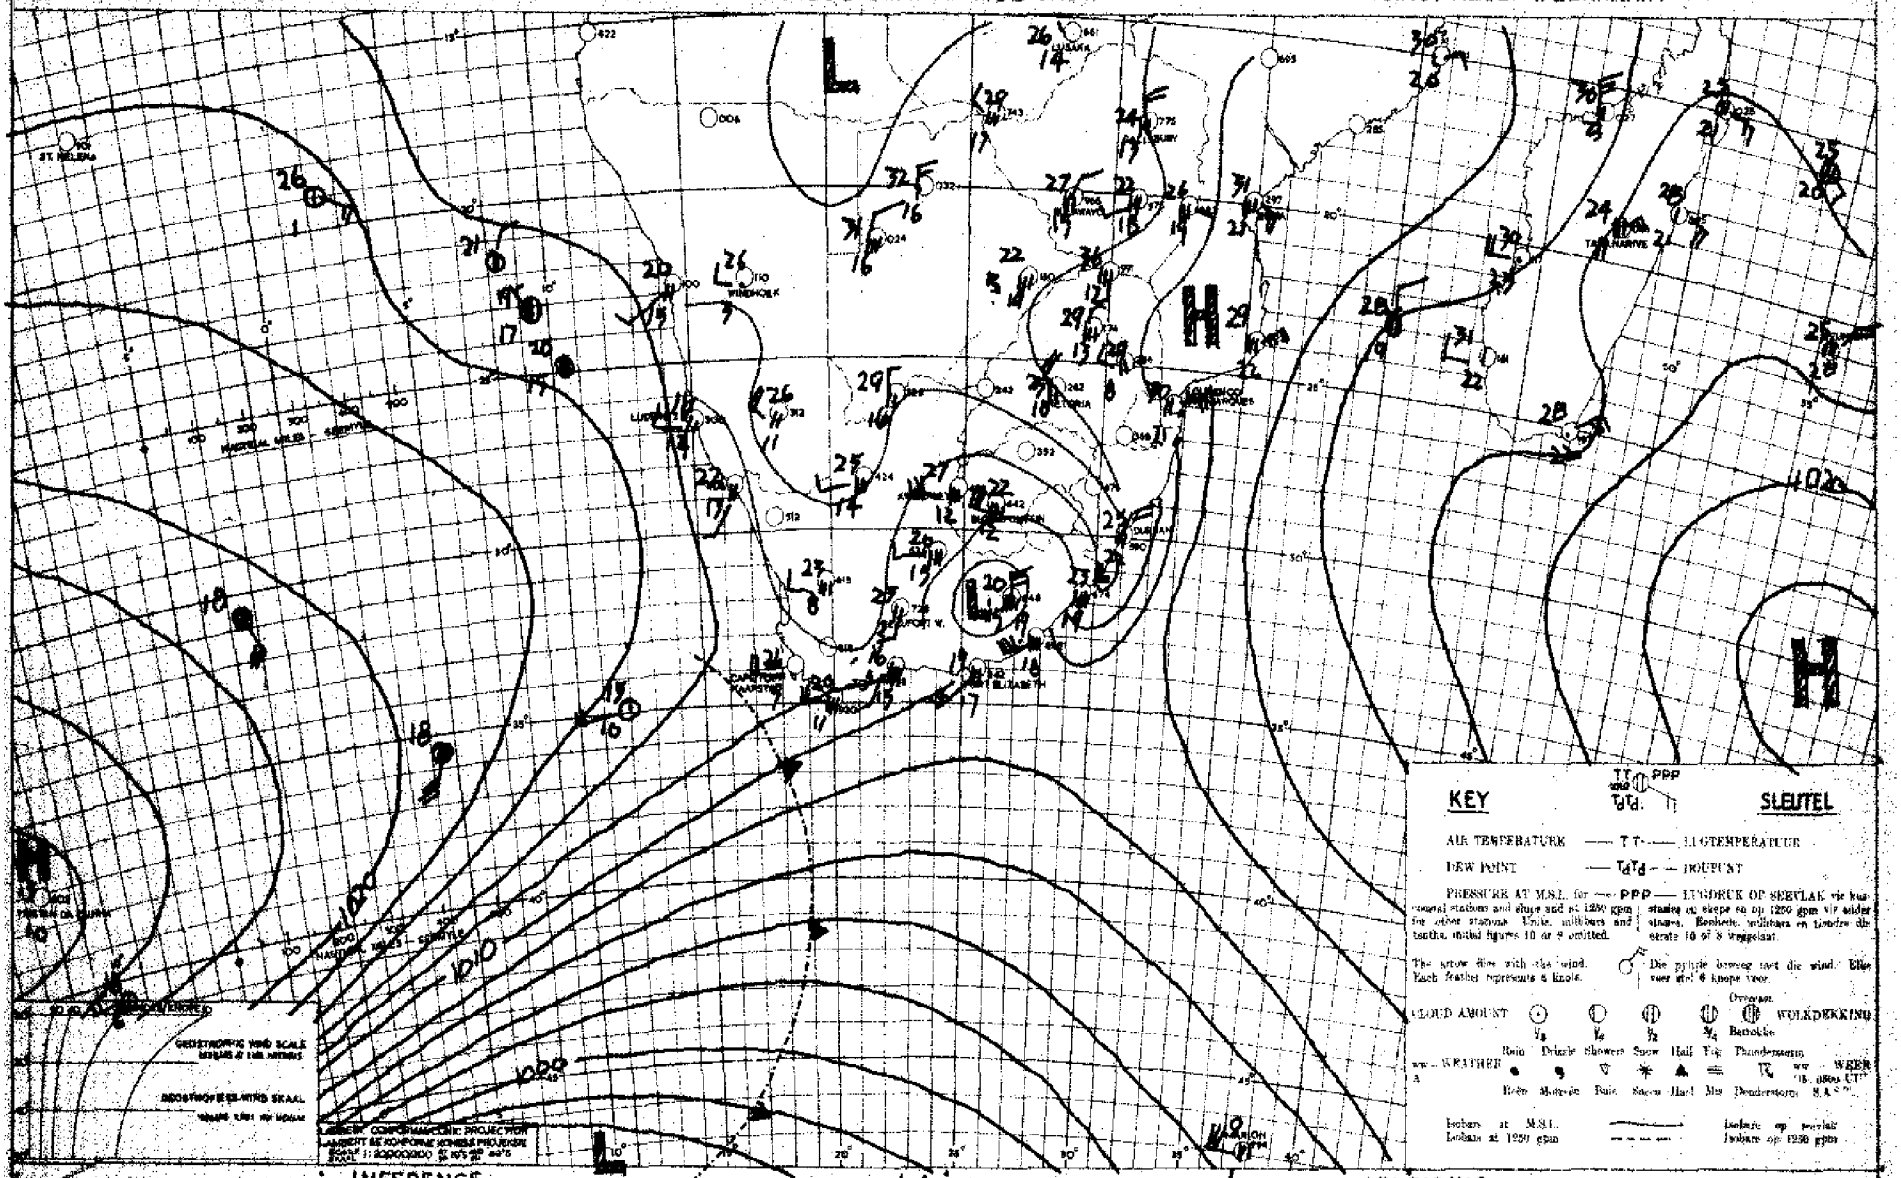
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

Warm humid air is still present over the major part of the Union, but drier air from the southwest and west will gradually replace it over the western half of the Union during the next 24 hours. Scattered rain and thundershowers will occur over most of the Cape Province and over the Free State and Natal.

AFLEIDING

Warm vogtige lug is nog oor die grootste gedeelte van die Unie teenswoordig, maar droër lug vanuit die Suidweste en weste dring die westelike Unie geleidelik binne. Verspreide reën of donderbuie sal oor die grootste gedeelte van Kaapland en oor die Vrystaat en Natal uitsak. Donderbuie sal ook oor die Suidwestelike helfte van Transvaal ontwikkel

It appears that the Atlantic High, which has been almost stationary, is now beginning to move N-wards, and E-wards. This will cause the low-pressure area over the centre of the Union to move east-wards. Weather will clear somewhat over the western half of the Interior, but over Transvaal conditions will become more favourable for rain.

Dit blyk dat die Atlantiese hoog, wat amper stasionêr gewees het, nou N-waarts en O-waarts begin beweeg. As gevolg hiervan sal die gebied van lae druk oor die Middel-Unie O-waarts begin beweeg. Die weer sal oor die W-like helfte van die binneland ietwat ooptrek, terwyl toestande oor Transvaal meer gunstig vir reën sal word.

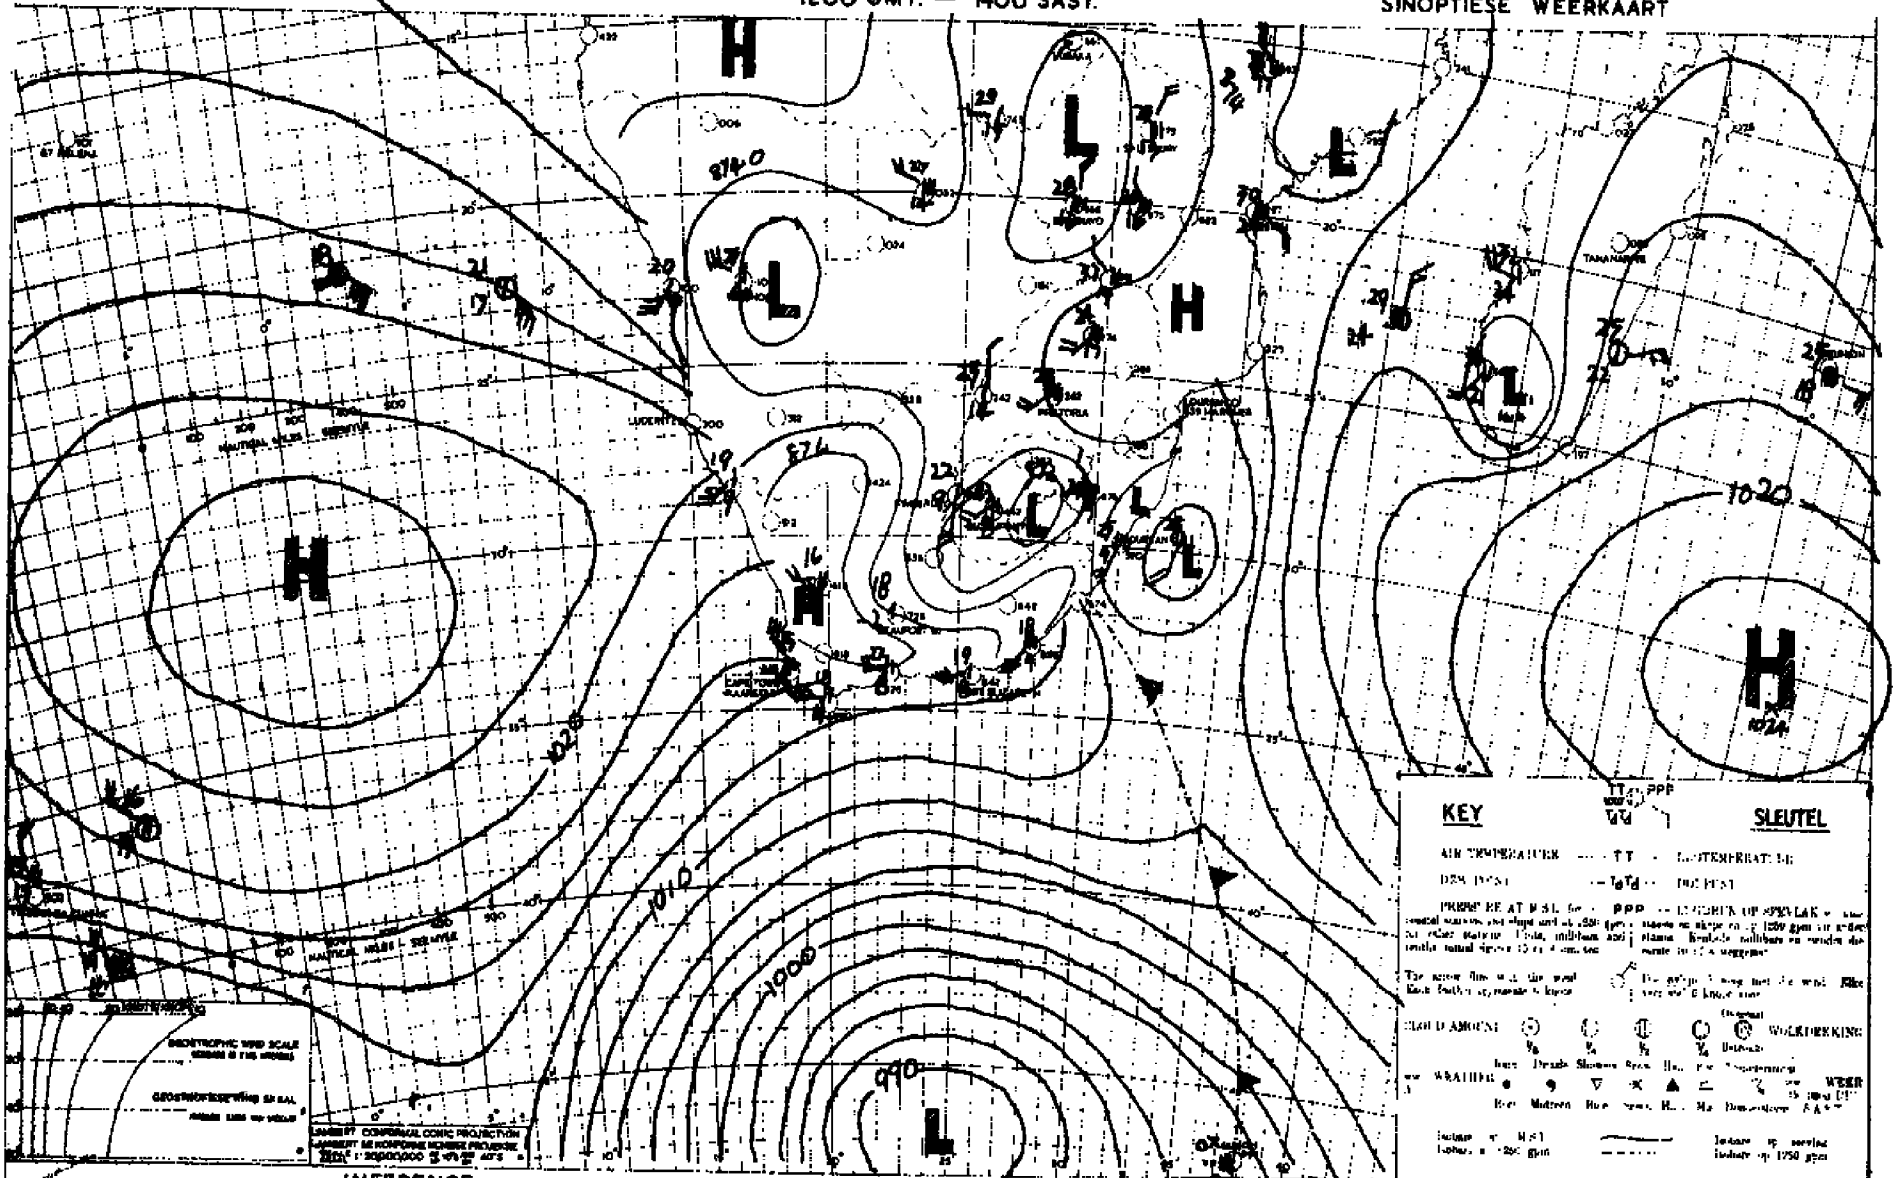
SYNOPTIC WEATHER MAP

1200 GMT. — 1400 SAST.

SINOPTIESE WEERKAART



DATE 21-11-[illegible] DATUM

INFERENCE

[illegible] trough of low pressures situated just west of the Cape and Marion Island separates the Indian and Atlantic high Pressure cells. This trough dominates the entire weather situation over the Union. Over Transvaal and Natal the air is still humid and warm, although this northerly influx is gradually being cutt-off by the inflow of dry air from the west. Rain or thunderstorms will, however, still occur over most of Transvaal, the Northern Free State and Natal. Local showers will still occur along the southwest Cape coast, but elsewhere over the Union it will be fine.

AFLEIDING

'n Trog van laagdrukke wat net wes van die Kaap en Marion Eiland gelee is, skei die Atlantiese en Indiese Oseaan Hoogdrukselle. Hierdie trog beheer die weerstoestande oor die hele Unie. Oor Transvaal en Natal bly die invloei van vogtige, warm noordelike lug nog voortduur alhoewel dit oor wes Transvaal geleidelik afgesny word deur die ooswaartse invloei van droë lug van die weste. Reën en donderbuie sal egter nog oor die meeste dele van Transvaal, Natal en noordoste Vrystaat voorkom. Plaaslike buie sal ook nog langs die suidwes kus [illegible] [illegible] weer.

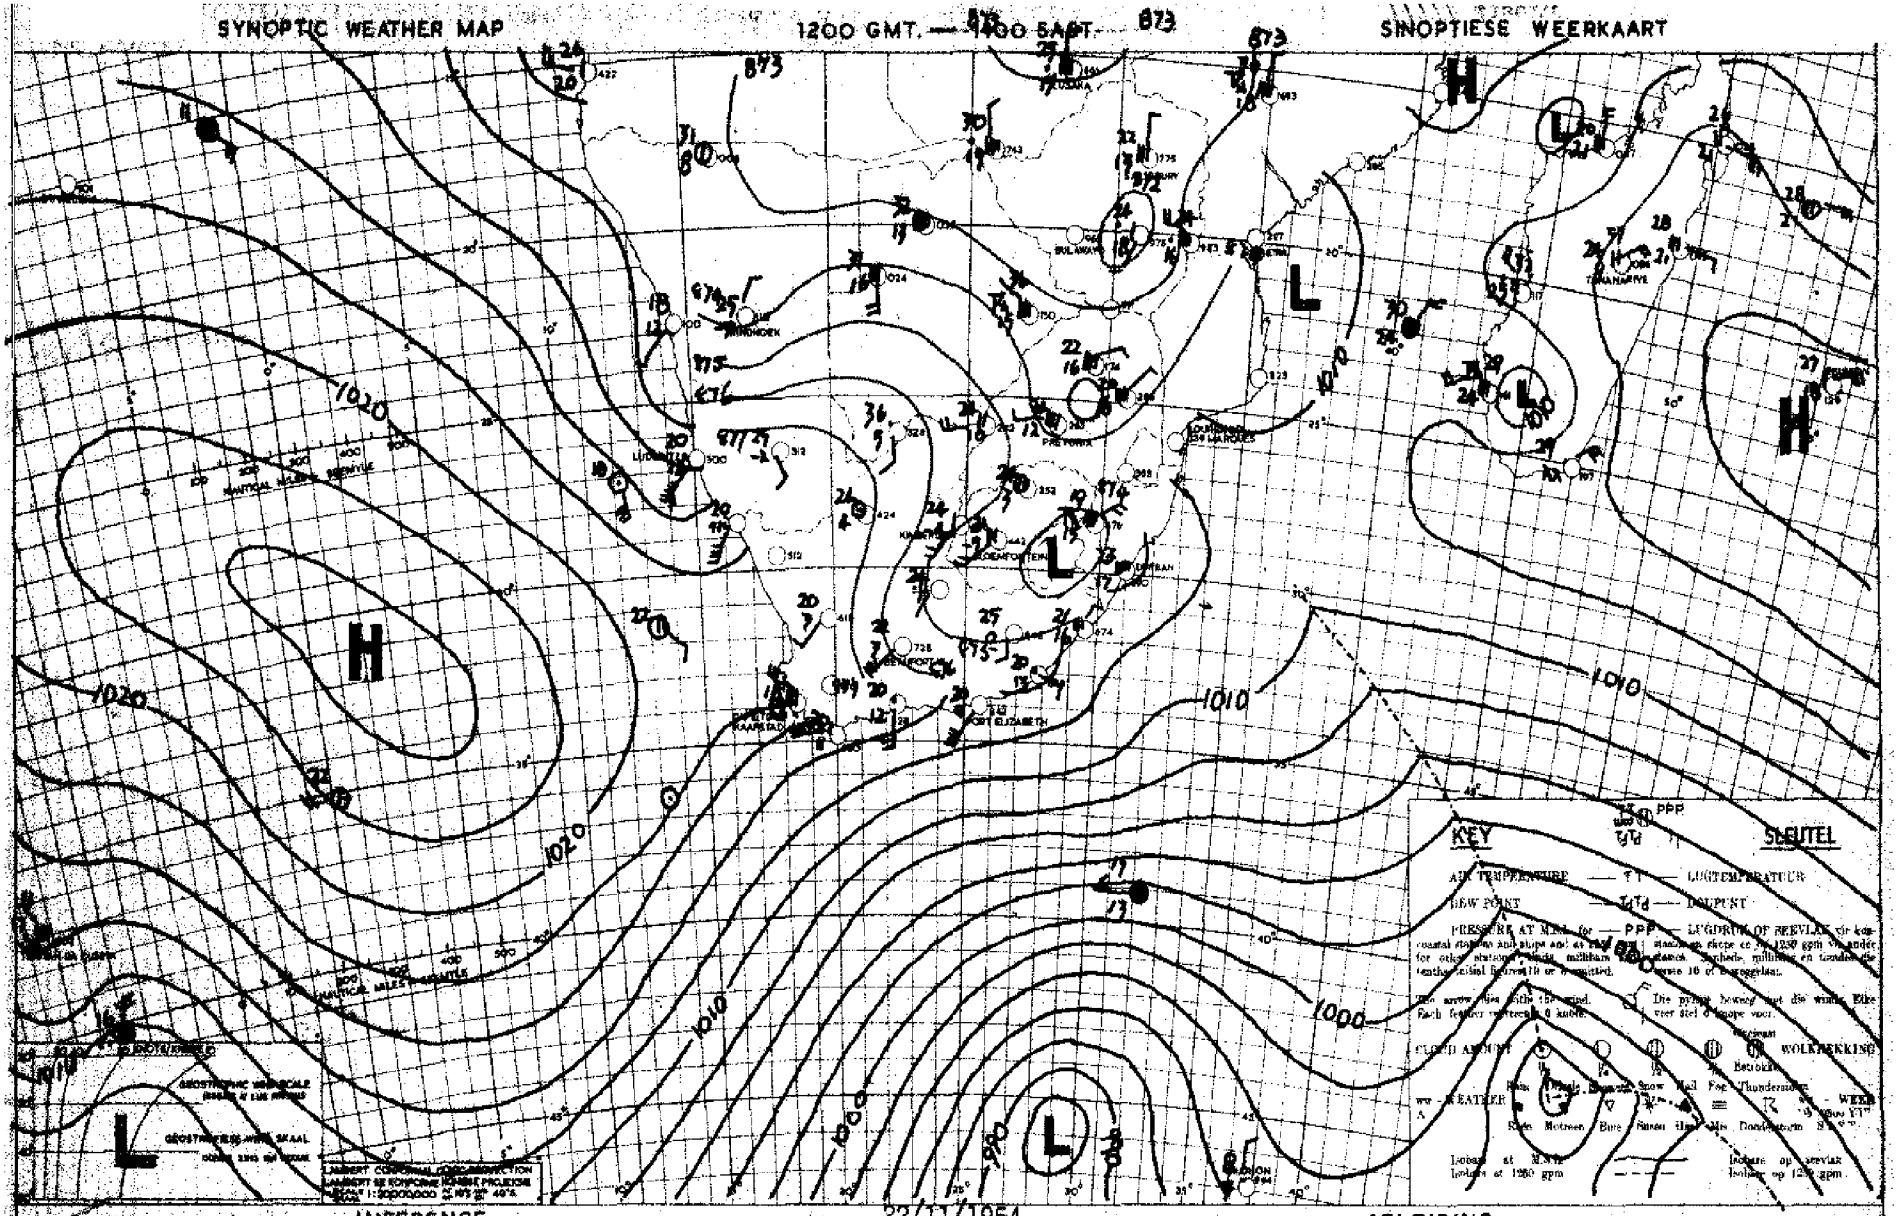
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

The deep stream of fairly dry air which is now moving from the SW over the Cape Province and most of O.F.S. will probably reach SW Transvaal by tomorrow, and weather over this area will clear. Otherwise not much change is expected during the next 24 hours.

DATE 22/11/1954

AFLEIDING

Die diep stroom taamlik droë lug wat nou oor die Kaap Provinsie en oor die meeste van O.V.S. vanuit die suidweste beweeg sal waarskynlik oornag SW Transvaal bereik en oor hierdie gebied sal die weer ooptrek. Andersins word nie veel verandering gedurende aanstaande 24 uur verwag nie.

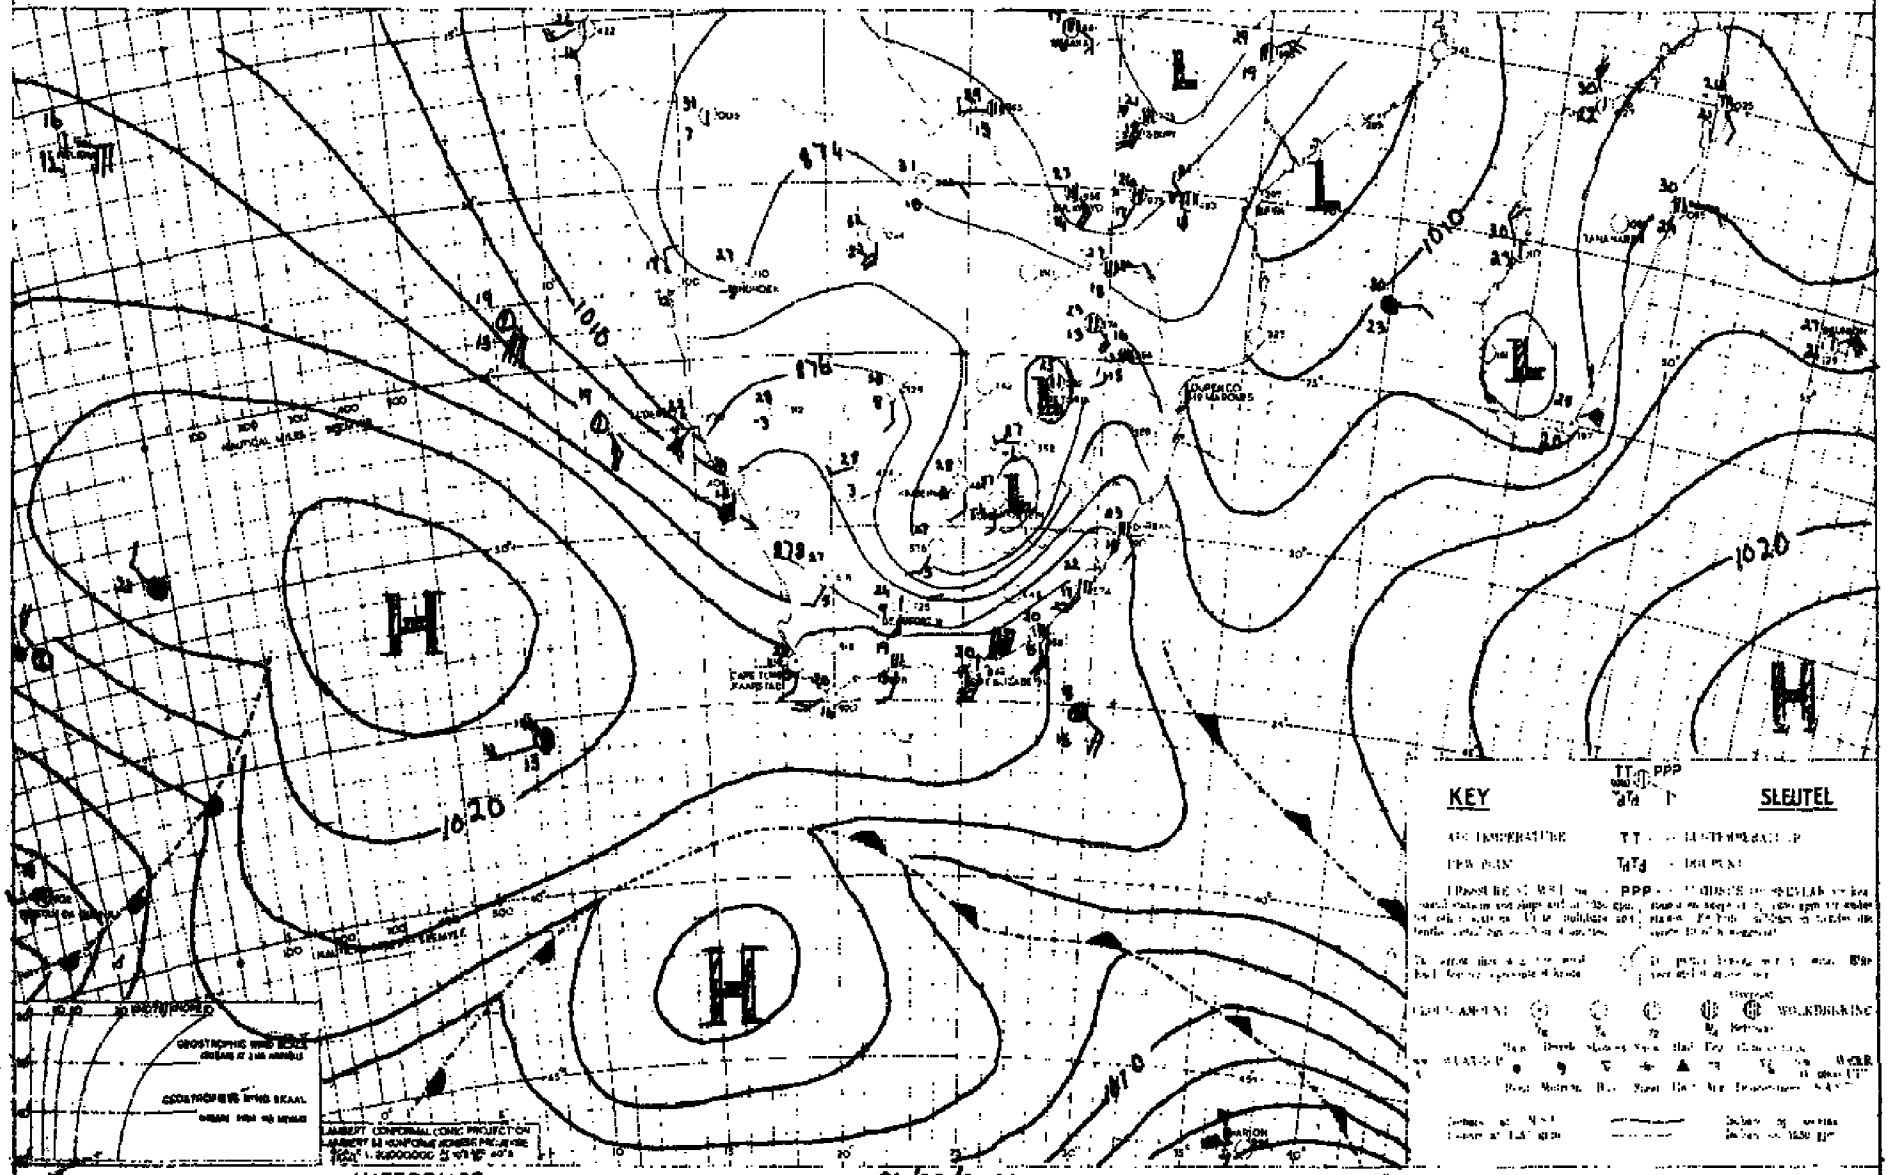
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

DATE: 23/11/1954

DATUM

AFLEIDING

Although warm, humid air is still present over the Eastern Transvaal, causing rainy weather over these areas, it will be replaced by cool moist air by tomorrow. As the upper air conditions are antycyclonic to great height, the weather will generally be fine over the entire Union, apart from some temporary clouds over the East Transvaal and Natal.

Alhoewel die lug oor Oos Transvaal nog warm en vogtig is en reënagtige weerstoestande oor die streke veroorsaak, sal koeler lug dit teen môre verder ooswaarts verplaas. Aangesien die bolugtoestande tot groot hoogte anticiklonies stroming aantoon, sal dit met uitsondering van tydelik bewolkte toestande oor Oos Transvaal en Natal mooi weer oor die hele Unie.

The seaward pressure-gradients in the vicinity of the Union are not strong, and no much change in the prevailing weather conditions over the Union is expected as the result of normal movement of the seaward systems.

Die seewaartse drukgradiente in die omgewing van die Unie is nie sterk nie en nie veel verandering in die heersende weerstoestande oor die Unie as gevolg van normale beweging van seewaartse stelsels word verwag nie.

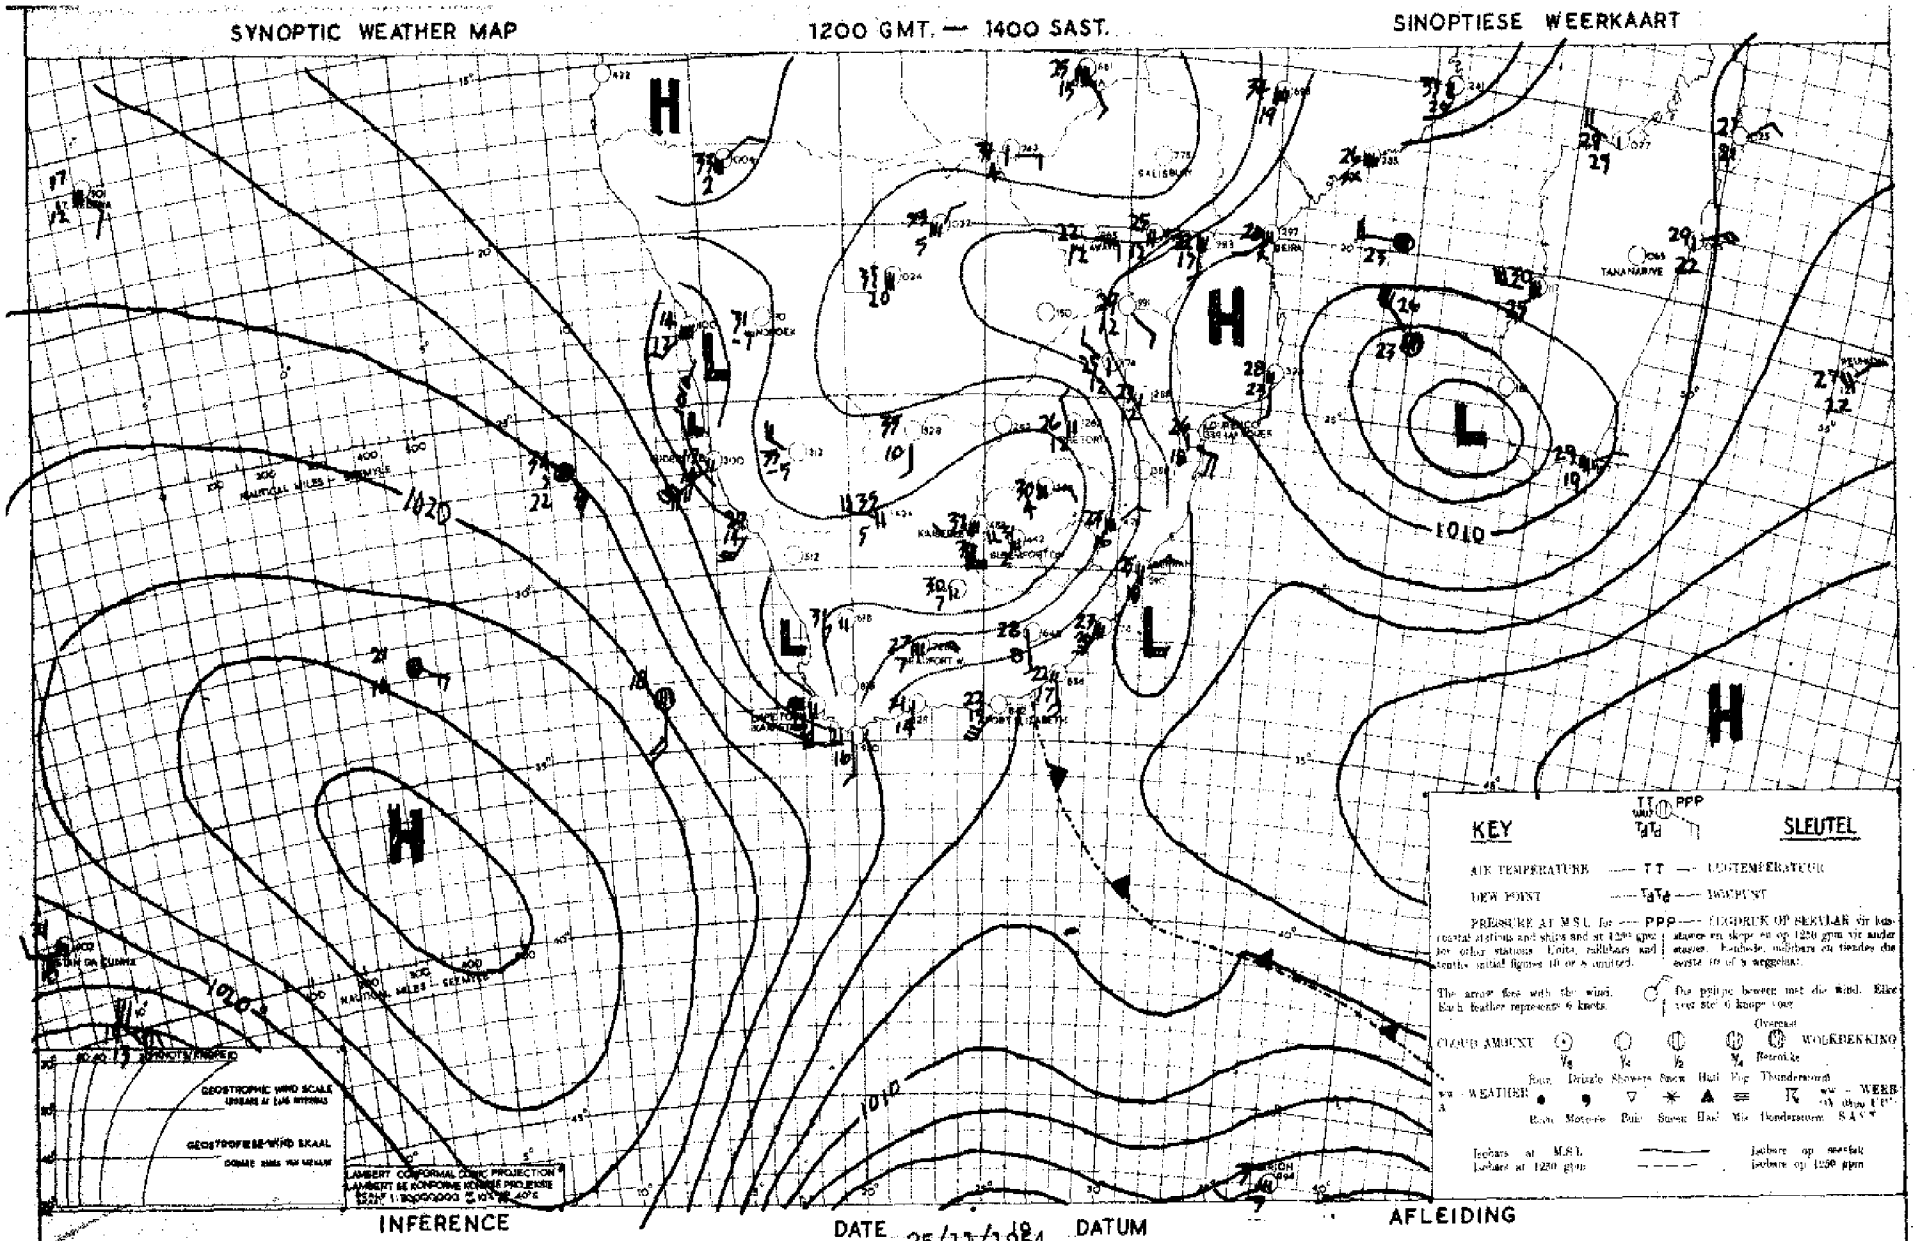
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 25/11/1954 DATUM AFLEIDING

The low pressure area over the Central Union dominates the circulation over the Union which is consequently cyclonic in character. Relatively moist air is still fed into the eastern half of the Union and is recurved to the west over the southern Cape where it is met by weak stream of Atlantic air from the southwest. Thunderstorms will occur over the southern half of the Transveal and over the Free State and Natal. Light occasional rain will occur along the coast between Cape Agulhas and Durban. Elsewhere it will be mainly fine.

Di laagdruk gebied oor die sentrale Unie beheer die lug sirkulasie oor die Unie wat as gevolg daarvan sikloniese neigings toon. Betreklike vogtige lug word nog steeds oor die oostelike helfte van die Unie ingevoer en beweeg weswaarts oor suid Kaapland waar dit ontmoet word deur 'n swak stroom Atlantiese Oseaan lug vanuit die suidweste. Donderbuie sal oor die suidelike helfte van Transvaal en oor die Vrystaat en Natal voorkom. Ligte reën sal nou en dan langs die kusstreke tussen Kaap Agulhas en Durban uitsak. Elders hoofsaaklik mooi weer.

The weather is at the moment mainly controlled by the low pressure system over the interior. This system will probably move NE-ward, and conditions will consequently become more favourable for thunderstorms over Transvaal, whilst over the O.F.S. weather will clear.

Die weer word op die oomblik hoofsaaklik deur die laedruk-stelsel oor die Binneland beheer. Hierdie stelsel sal waarskynlik NO-waarts beweeg en as gevolg daarvan sal toestande gunstiger vir donderstorms oor Transvaal word, terwyl die weer oor O.V.S. sal opklaar.

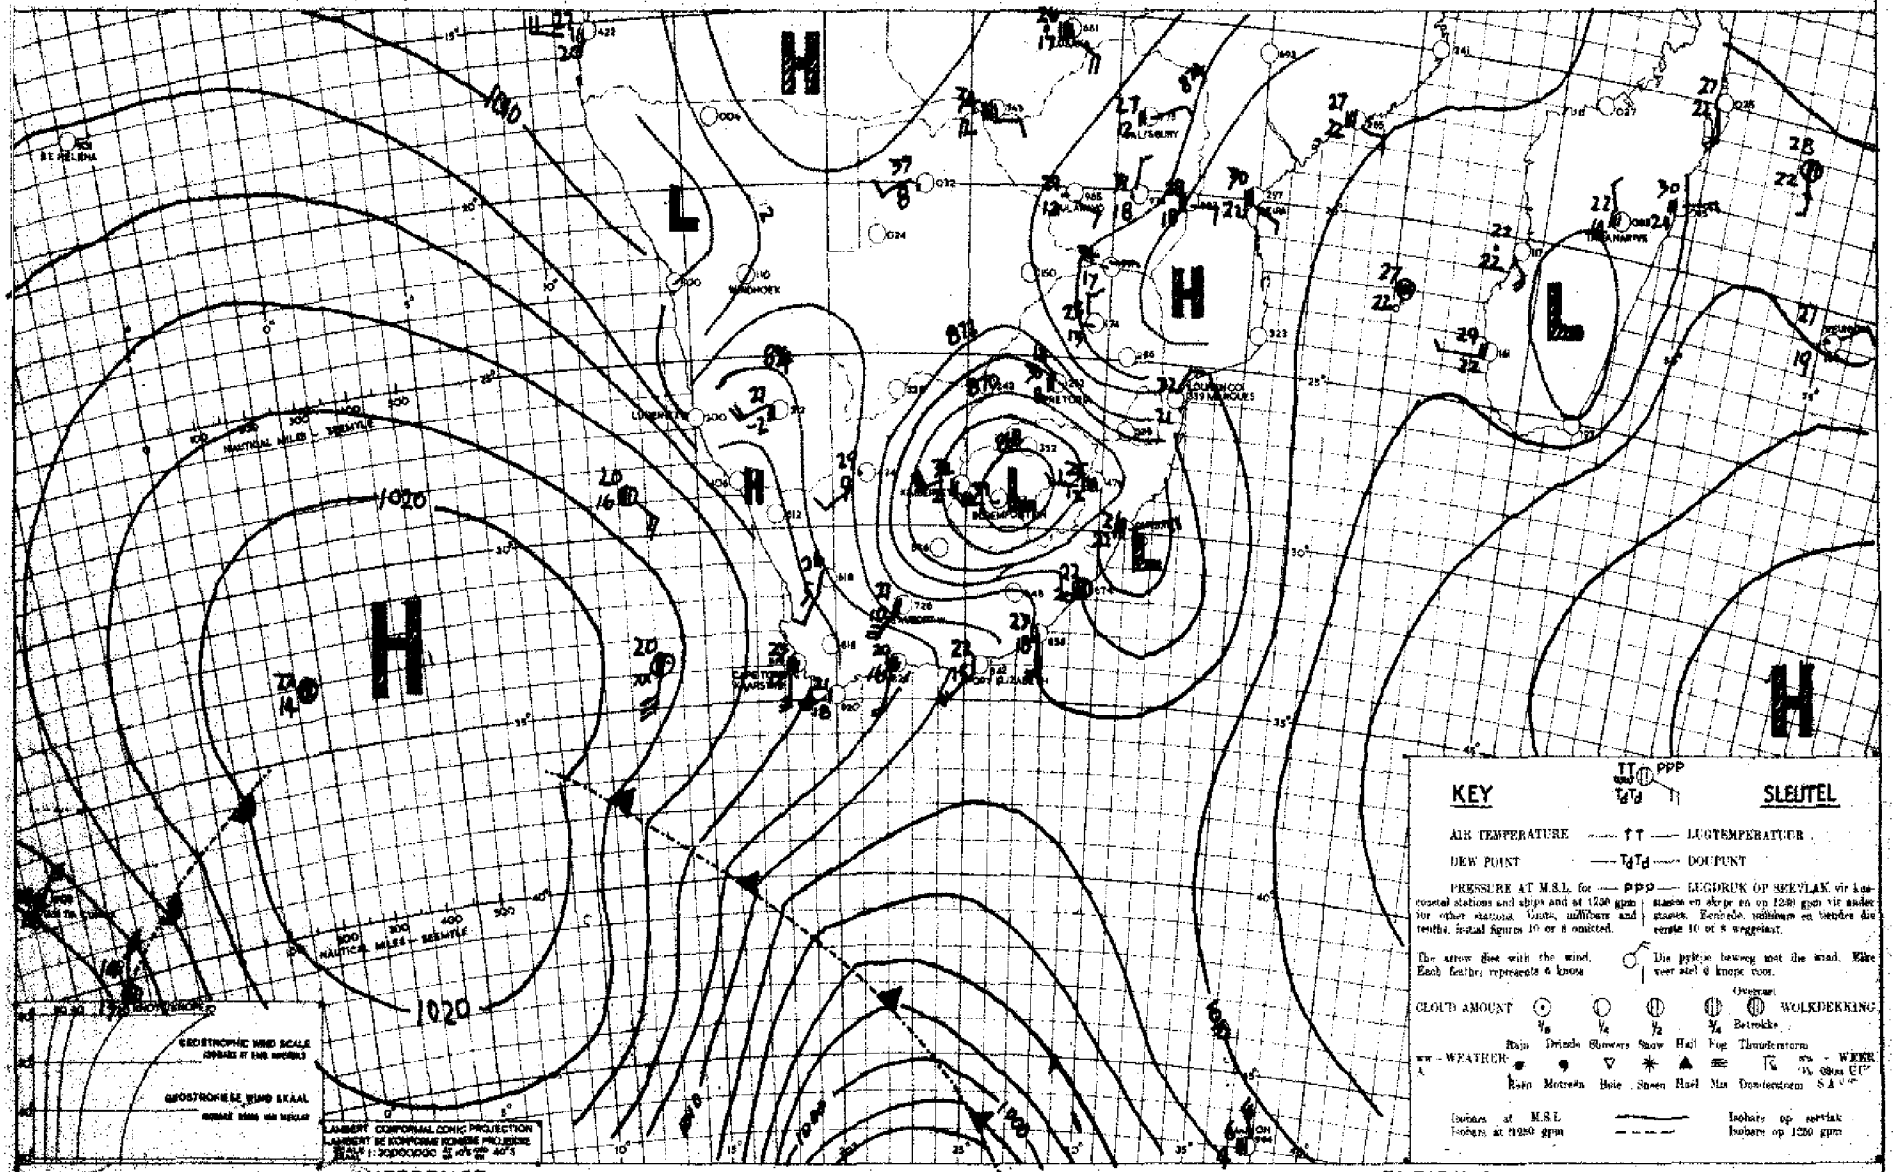
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 27/11/1954 DATUM AFLEIDING

The cyclonic circulation over the northeastern Free State is gradually moving northeastwards to Zululand, and drier air on its west-side is moving into the whole of the Free State and southwestern Transvaal. Cool moist air is, however, moving up the Natal coast, but this air will not reach the southeastern Transvaal till tomorrow night. Local thunderstorms will still occur over the Eastern half of Transvaal and the Natal interior. Local showers will occur along the southeast Cape and Natal coasts.

Die siklonieese sirkulasie oor Noordoos Vrystaat beweeg geleidelik in 'n noordoostelike rigting en droër lug aan sy westekant beweeg geleidelik oor die Vrystaat en suid-westelike Transvaal. Koel, vogtige lug onder egter vanuit die suidweste, maar na verwagting sal hierdie lug die suidoos Transvaal voor môreaand bereik nie. Plaaslike reënbuie sal ook langs die suidoos Kaap en Natal kusstreke uitsak.

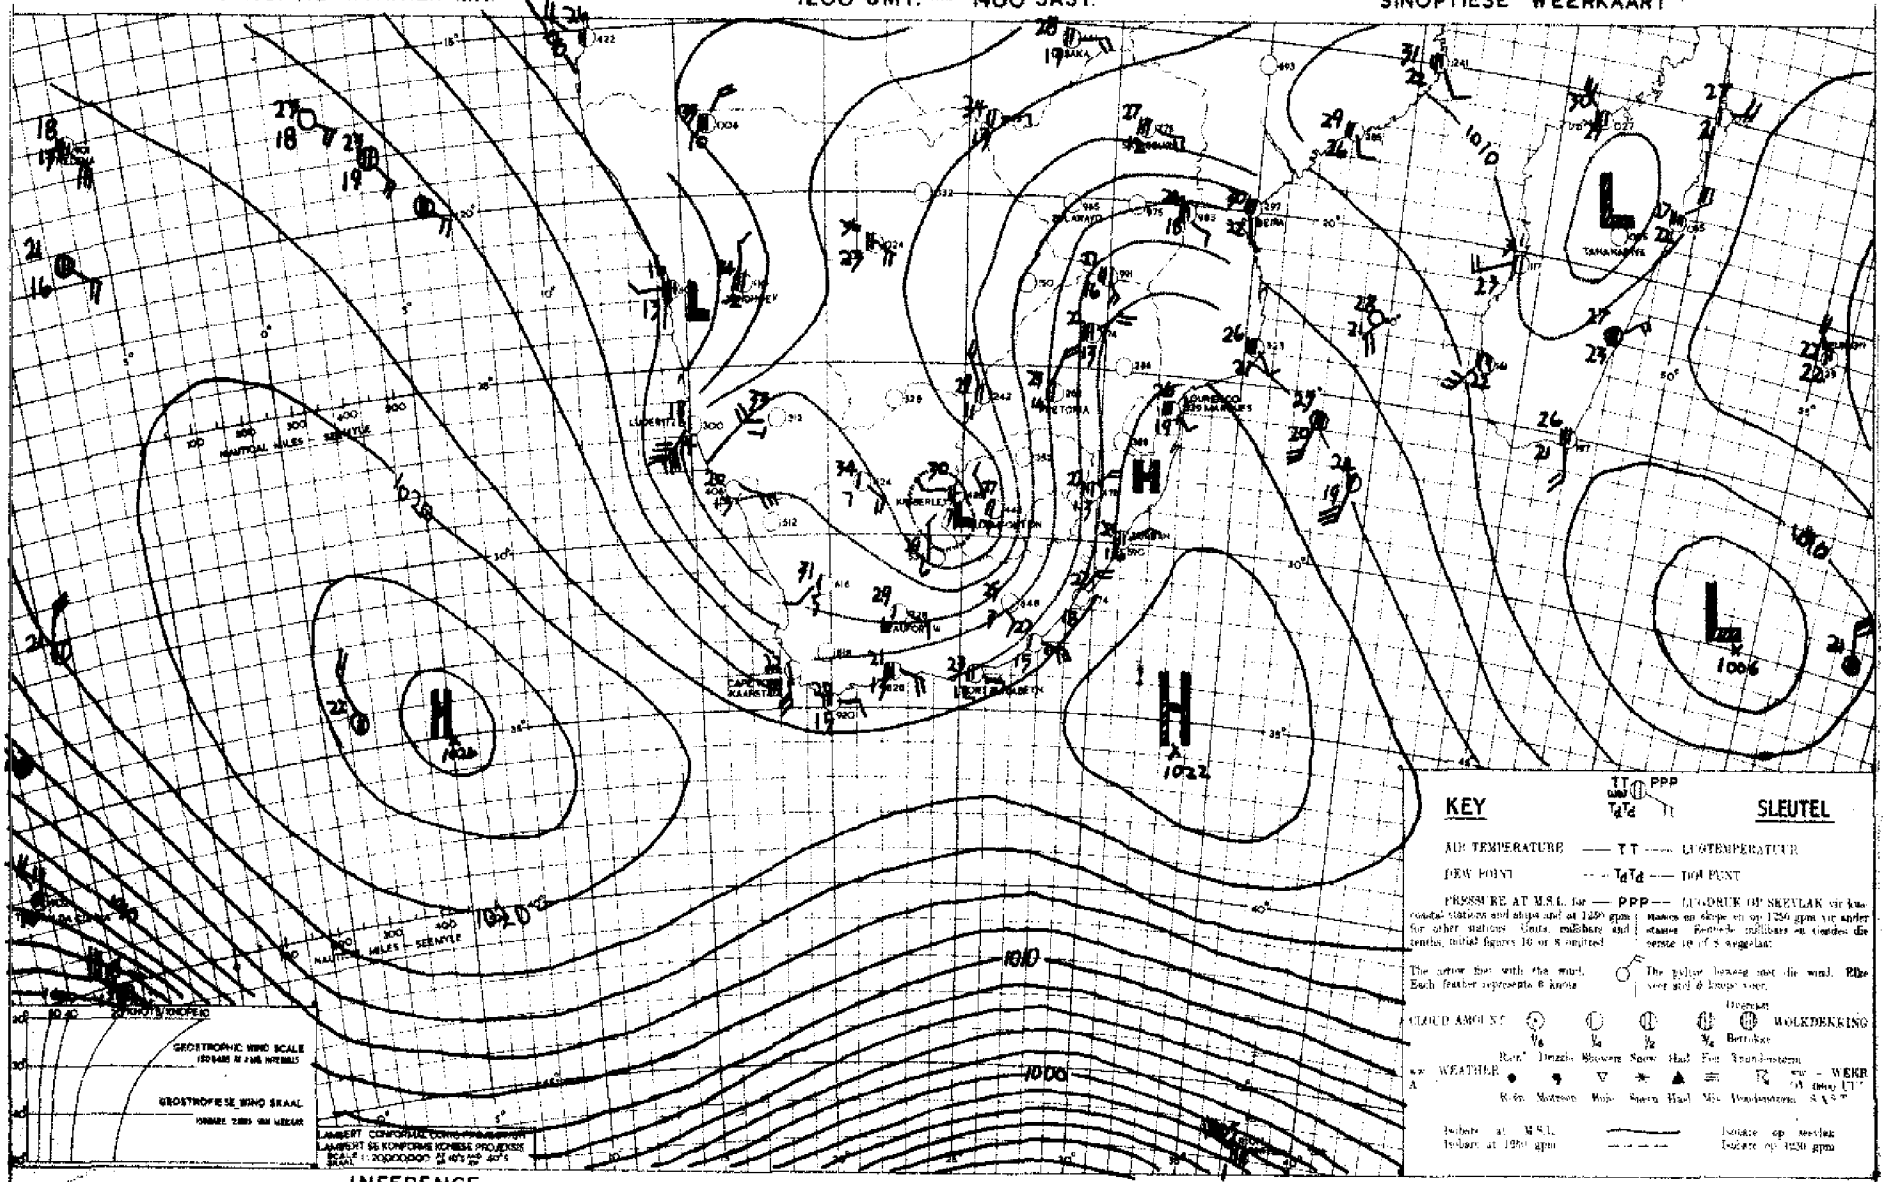
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

DATE: 27/11/1954

The high pressure over the Indian Ocean, just east of the Natal coast will reinforce the influx of moist air over Transvaal, Natal and the Free State. Thunder-development with local light rainshowers will therefore occur over these areas. Over the remainder of the Union it will be fair generally.

AFLEIDING

19.... DATUM

Die sel van hoë druk oor die Indiese Oseaan, net oos van die Natalkus sal die instroming van vogtige lug oor Transvaal, Natal en die Vrystaat versterk. Donderweersontwikkeling gepaard met plaaslike ligte buie sal dus oor hierdie streke voorkom. Oor die res van die Unie sal dit effens bewolk of mooiweer wees.

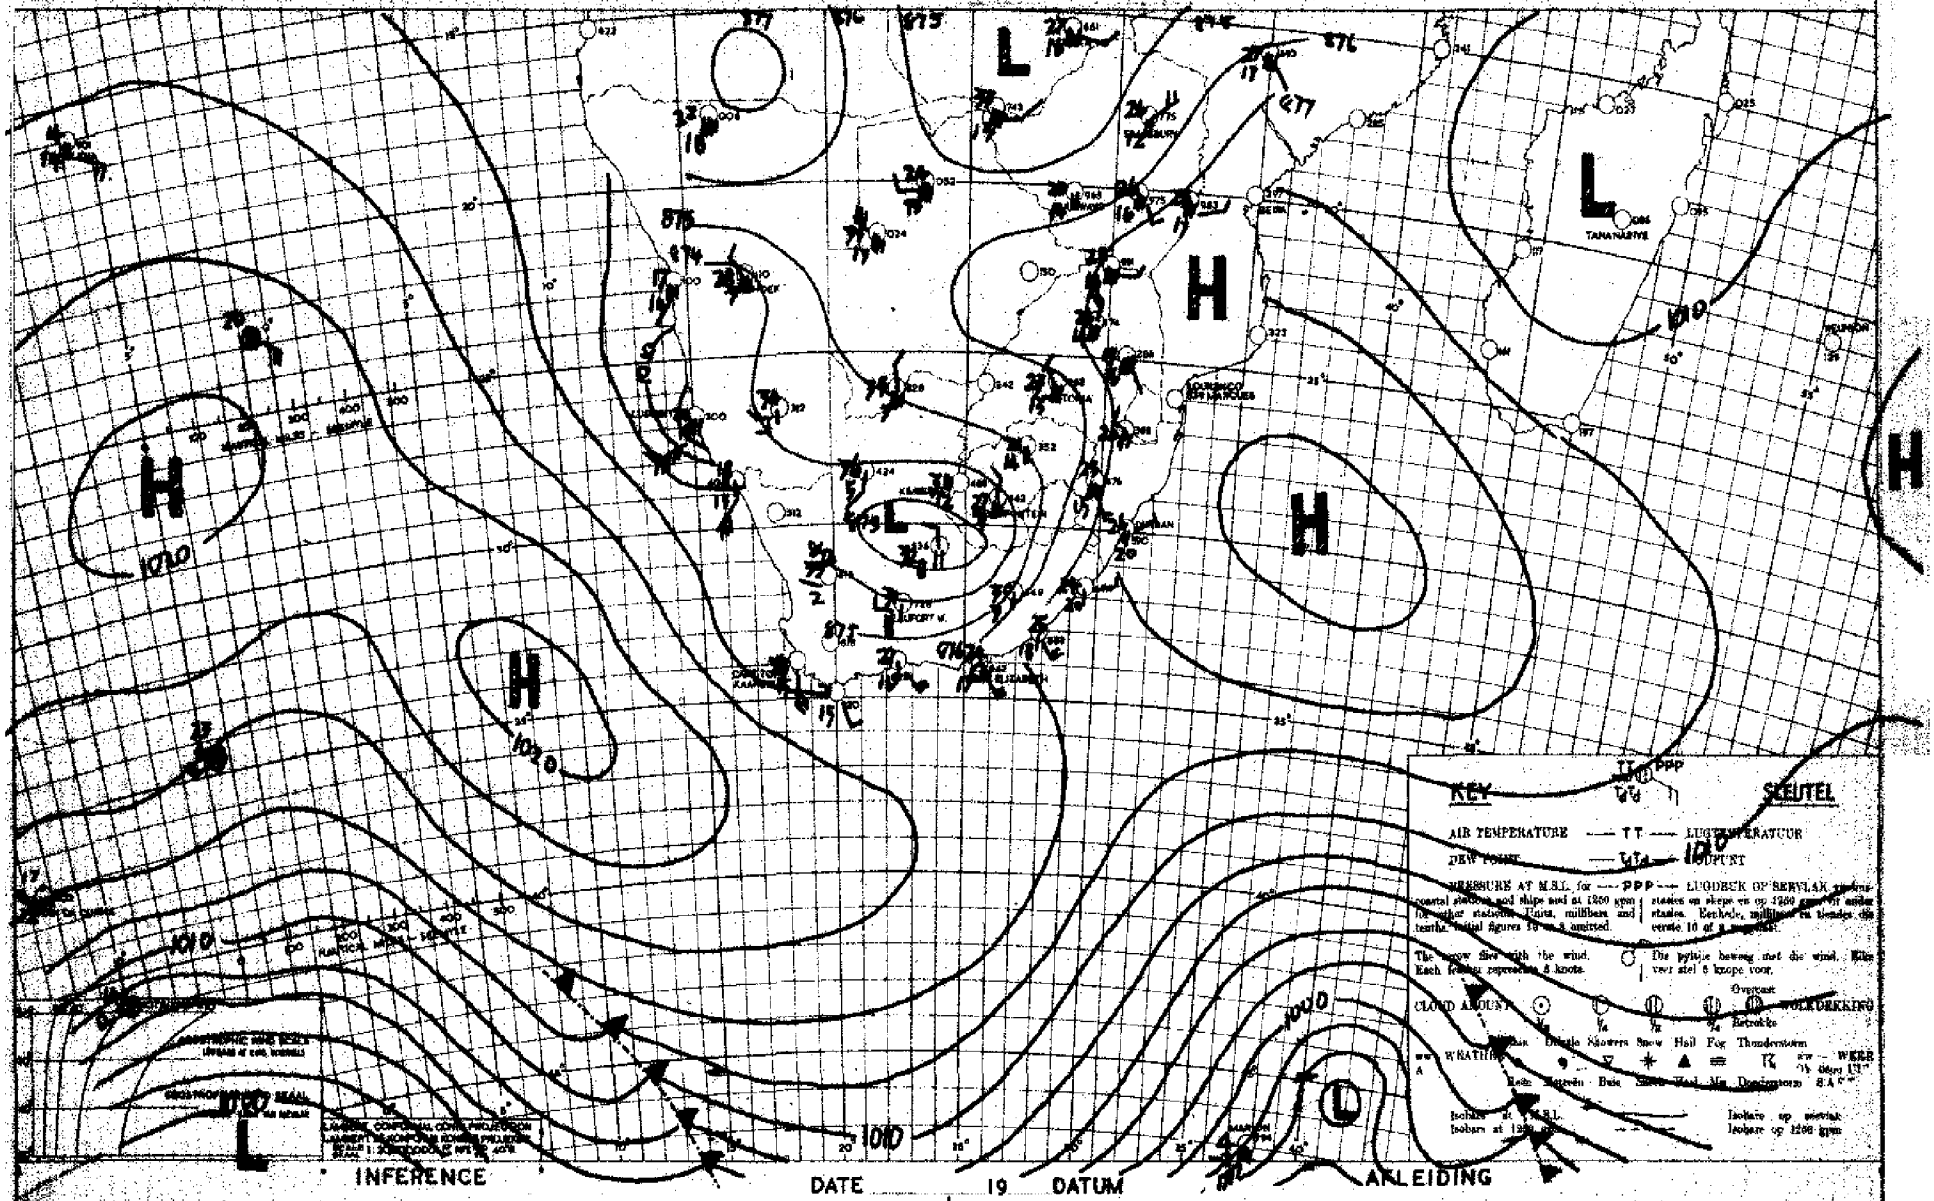
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



The seaward wind-streams in the neighbourhood of the Union remain light to moderate, and not much change in pressure distribution or weather conditions over the Union is expected.

Die seewaartse windstrome in die omgewing van die Unie bly lig tot matig en nie veel verandering in drukverspreiding of weerstoestande oor die Unie word verwag nie.

INFERENCE DATE 1/12/1954 DATUM AFLEIDING

Die sikloniese sirkulasie oor die binneland wat gewoonlik oor die Vrystaat geplaas is, het nou na die westelike binneland van Kaapland verskuiwe met die gevolg dat warm, vogtige lug nou oor Middel en Suid Kaapland vanuit die noorde ingevoer word. Los donderbuie sal dan ook oor hierdie streke ontwikkel. Alhoewel die lug oor die Vrystaat, Natal en Transvaal ook vogtig bly is die dinamiese toestande van die lugstrome nie gunstig vir groot-skaal donderweersontwikkeling nie en sal net los

The cyclonic circulation of the interior, which is usually situated over the Free State has now shifted to the western Cape interior. This will allow humid air from the north to penetrate deep into the Central and Southern Cape, providing moisture for thunderstorm development over these areas. Although the air over the Free State, Transvaal and Natal is still moist. The dynamic condition of the air-currents is unfavourable for large scale thunderstorm development, and only [illegible]

As a result of further eastward movement of the low pressure system SSE of the Union, the moist sea air which is at present over the south coast will extend over the coastal districts of Natal and Zululand, and cloudy conditions with local light rain are probable over these areas tomorrow.

As gevolg van verdere oostwaartse beweging van die laedruk-stelsel SSO van die Unie, sal die vogtige seelug wat tans-woordig oor die suidkus lê oor die kusstreke van Natal en Zoeloeland uitbrei en vir môre is bewolkte toestande met plaaslike ligte reën oor hierdie gebiede waarskynlik.

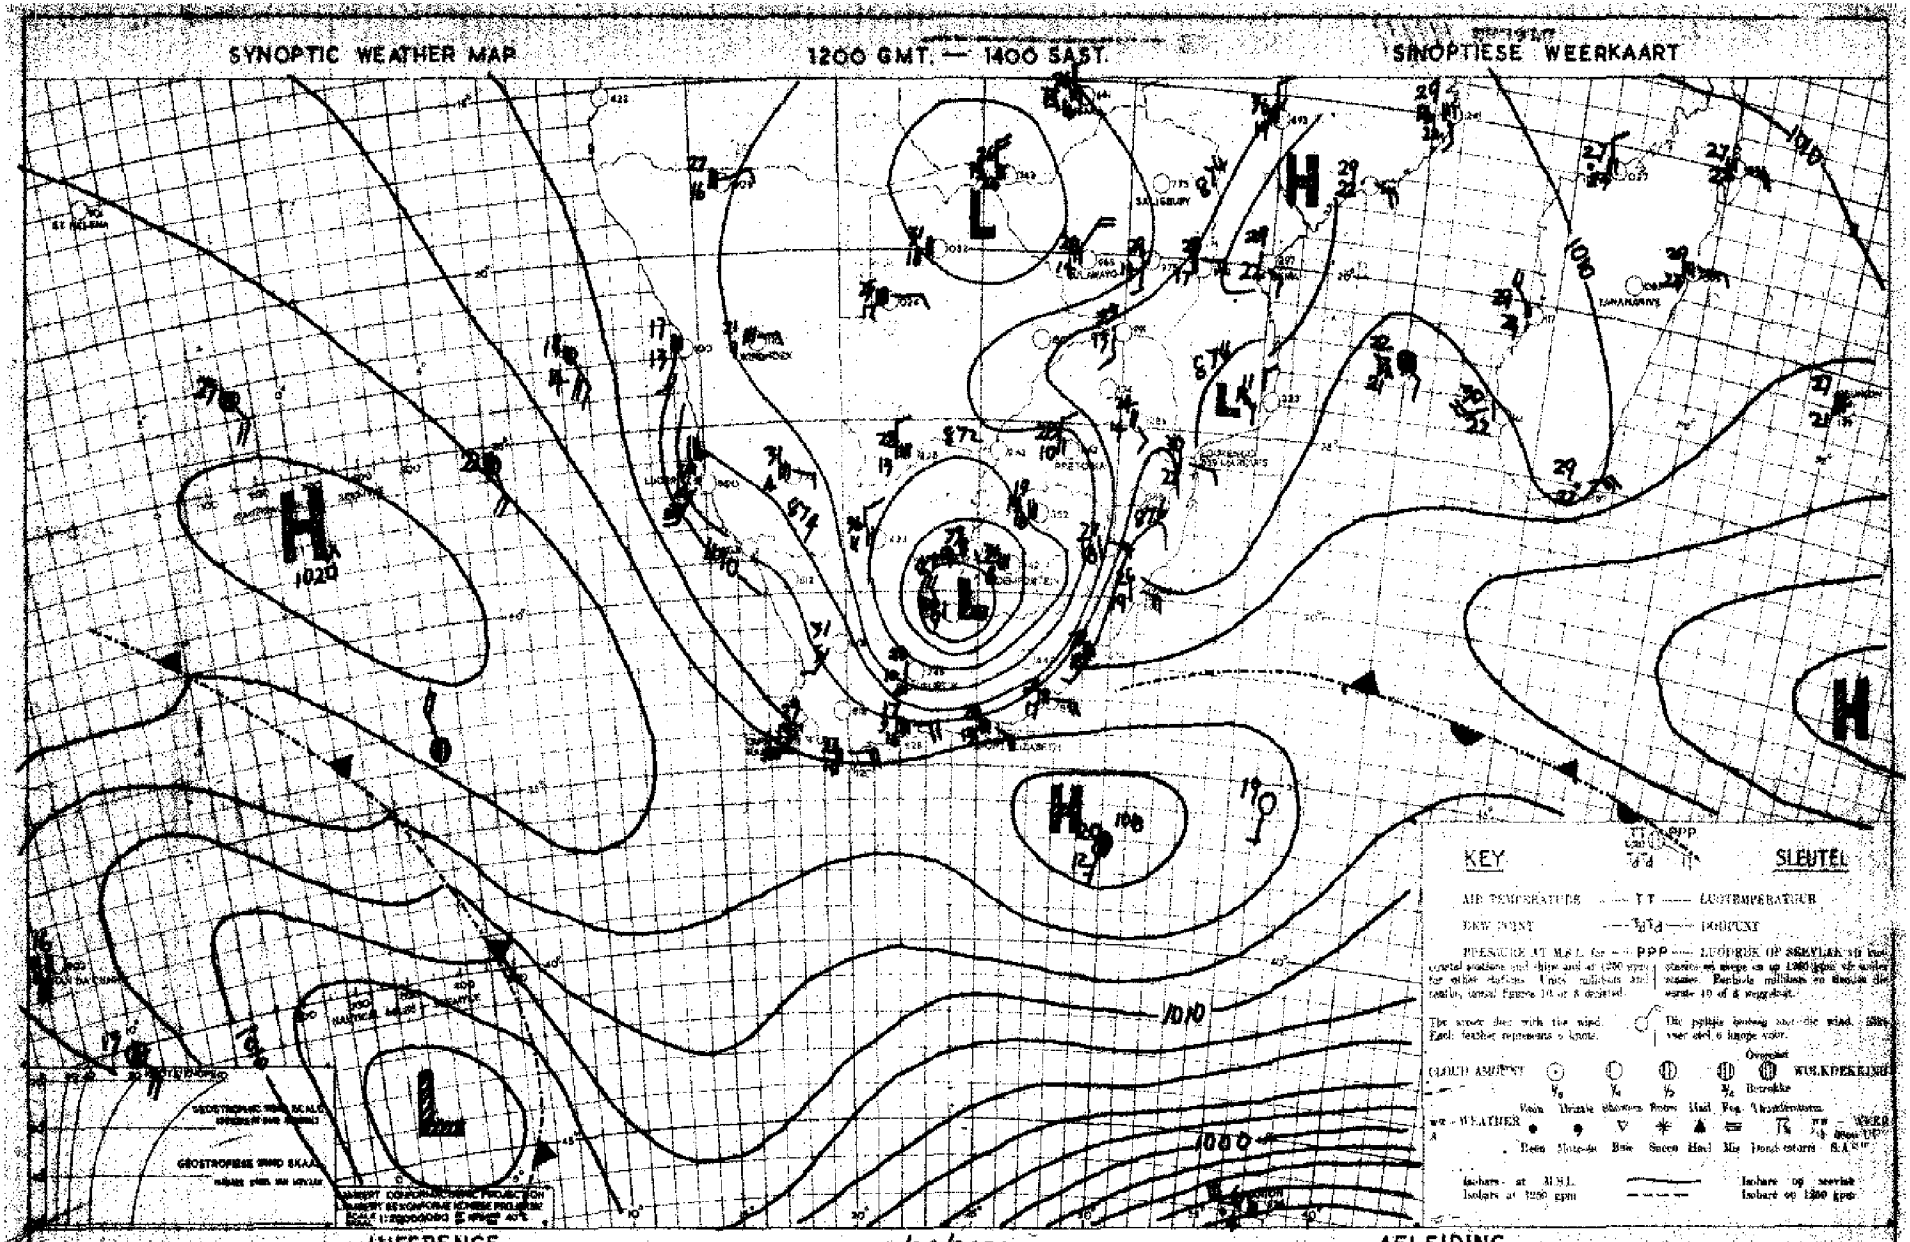
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 3/12/1954 DATUM AFLEIDING

A tongue of humid air is penetrating the western interior of the Union from the north, and local thundershowers can be expected to occur over the northern Cape and the Free State. The air over Transvaal and Natal is also moist and isolated thunderstorms will develop over the Southern Transvaal, and the Natal interior. Elsewhere it will be mainly fine.

'n Tong vogtige lug beweeg vanaf die noorde die westelike binneland van die Unie in en plaaslike donderbuie kan oor Noord Kaapland en die Vrystaat verwag word. Die lug oor Transvaal en Natal is ook vogtig en los, donderbuie sal oor Suid Transvaal en die Natal binneland ontwikkel. Elders sal dit hoofsaaklik mooiweer wees.

It appears that a new depression is developing SW of the Union. If this is the case, then coöl air will probably invade the SW part of the Union tomorrow, and conditions will become more favourable for thunder conditions over the NE of the Union.

Dit lyk asof 'n nuwe depressie besig is om te ontwikkel SW van die Unie. As dit die geval is, dan sal koel lug waarskynlik môre oor die SW-like deel van die Unie instroom, en sal toestande gunstiger word vir donderweer oor die Noordooste van die Unie.

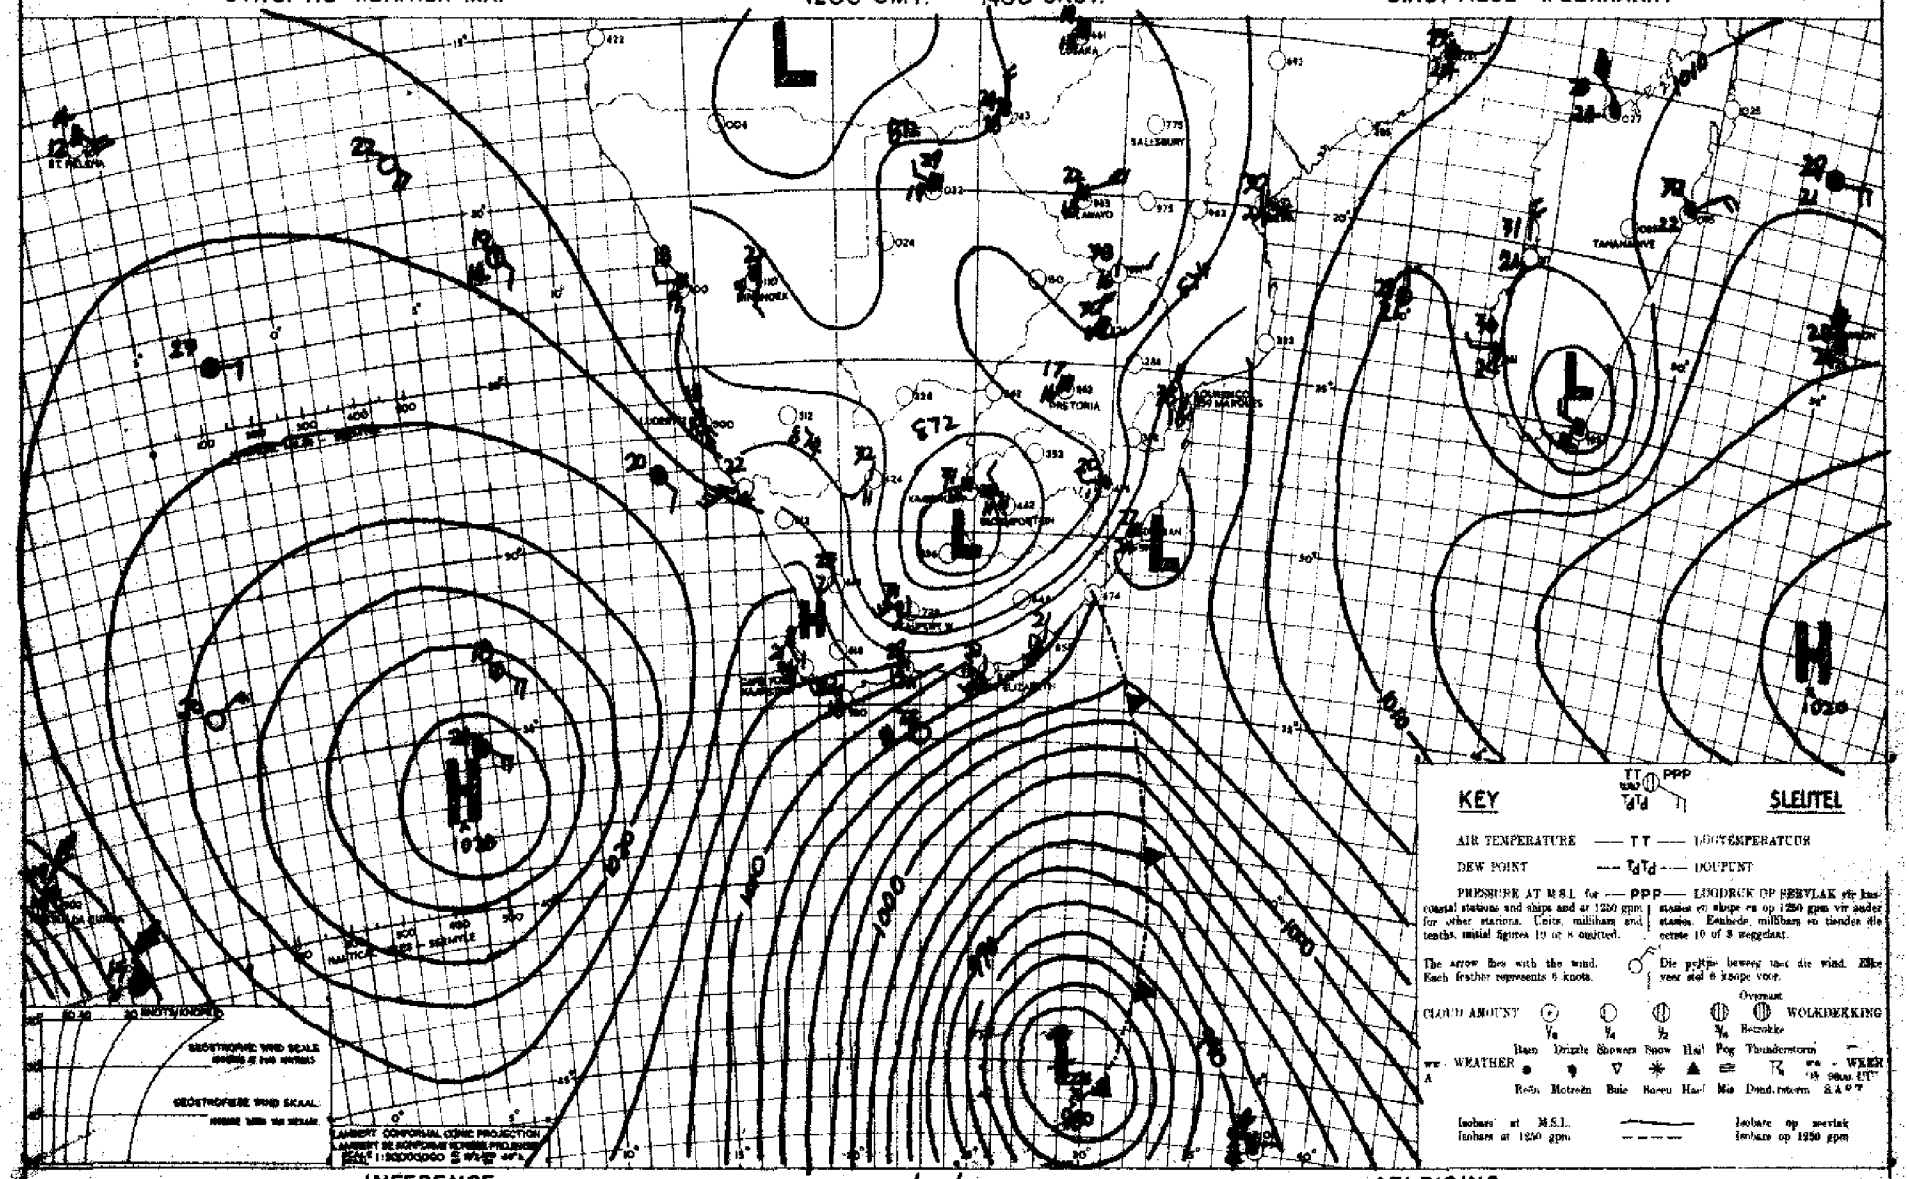
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



DATE 5/12/1954 — DATUM

INFERENCE

A trough of low pressures is separating the Atlantic and Indian Ocean Highs. It is expected that a wedge of high pressure will form from the Atlantic High along the East Cape and Natal coast. And there will be a regeneration of moist air influx over the Eastern Cape, Natal and Transvaal. Scattered rain and thundershowers will develop over these areas. Elsewhere it will be mainly fine.

AFLEIDING

'n Trog van laedrukke skei die Atlantiese en Indiese Oseaan Hoogdruk sisteme. Na verwagting sal 'n wig van hoë druk langs die Ooskus van Kaapland en die Natalkus ontwikkel. As gevolg hiervan sal 'n hernude inyloei van vogtige lug oor die Oostelike Unie plaasvind. Verspreide reën en donderbui's sal oor Oos Kaapland, Natal en Transvaal uitsak. Elders sal dit hoofsaaklik mooiweer wees.

DATE 6/12/1954 DATUM

With further ESE-ward movement of the anticyclone SSW of the Union, cool moist air will extend over the whole of the Transvaal and over most of O.F.S., although weather over the south and SE Cape coasts will clear to fair.

As gevolg van verdere OSO-waartse beweging van die antisikloon SSW van die Unie sal koel, vogtige lug oor die hele Transvaal en oor die meeste van die O.V.S. uitbrei, alhoewel die weer oor die S-like kusstreke van Kaapland tot effens bewolk sal opklaar.

Isobars at M.S.L. — Isobare op seevlak

Isobars at 1250 gpm — Isobare op 1250 gpm

DATE 7/12/1954 DATUM

INFERENCE

The wedge of high pressure along the east coast and the low pressure area over the western interior of the continent, maintains a strong surge of humid air southwards over the eastern and south-eastern Union. Cloudy to overcast skies will therefore prevail over most of the eastern half of the Union, and rain or thundershowers will occur over the Transvaal, the Free State, the North-eastern Cape and the Natal interior. Over the remainder of the [illegible] cloudy [illegible].

AFLEIDING

Die rug van hoë drukke langs die ooskus en die laagdruk gebied oor die westelike binneland handhaaf die suidwaartse stroming van vogtige lug oor die oostelike en suidoostelike Unie. Bewolkte tot betrokke weer gepaard met reën of donderbuie sal oor Transvaal, Vrystaat, Noordoos Kaapland en die Natal binneland voorkom. Oor die res van die Unie sal dit gedeeltelik bewolk of mooiweer wees.

The low pressure system over the SW of the Union will move eastwards overnight. As a result of this the SW coastal regions of the Cape will become cloudy, whilst the unsettled weather over the Union Interior will be confined mainly to the NE half of the Union.

Die laedrukstelsel oor die suidweste van die Unie sal oornag ooswaarts beweeg. As gevolg hiervan sal die SW-like kuststreke van Kaapland bewolk word, terwyl die ongestadige weer oor die Unie se binneland hoofsaaklik tot die N.O-like helfte van die Unie beperk sal word.

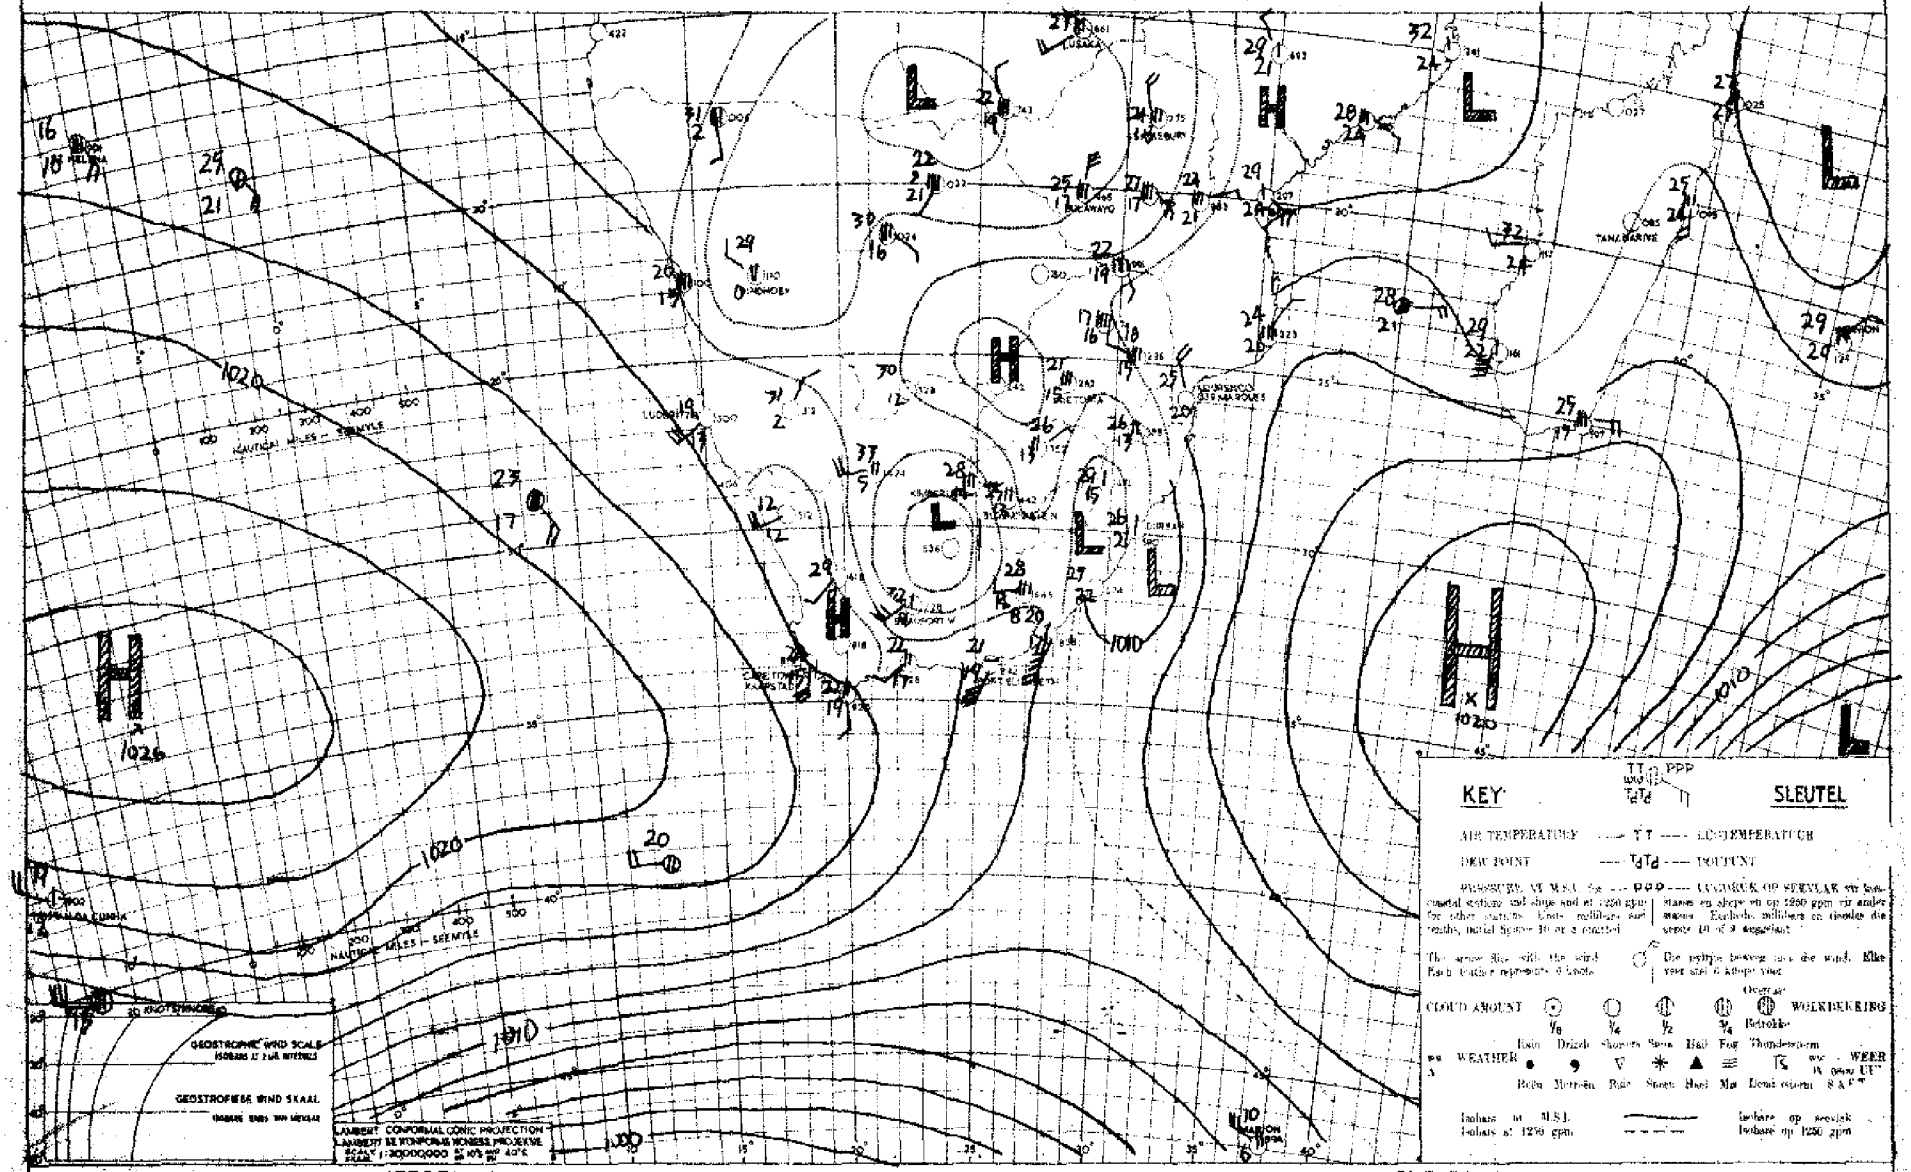
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 9/12/1949 DATUM AFLEIDING

The Atlantic High is extending a wedge along the south coast towards Natal and a region of high pressure will be established over the eastern Union. The surface air over the Free State and Natal and Transvaal is still very moist and local thunderstorms will develop over the Transvaal. Northeastern Free State and Natal interior. Over the remainder or the Union it will be mainly fine.

'n Uitloper van die Atlantiese Hoog het die Suidkus bereik en sal na Natal uitbrei. As gevolg hiervan sal 'n hoogdruk gebied oor die Oostelike Unie vorm. Die lug wat oor Transvaal, Vrystaat en Natal sirkuleer is nog baie vogtig en donderstorms sal plaaslik gedurende die middag oor Transvaal, Noordoos Vrystaat en Natal binneland ontwikkel. Oor die res van die Unie sal dit mooimeer bly.

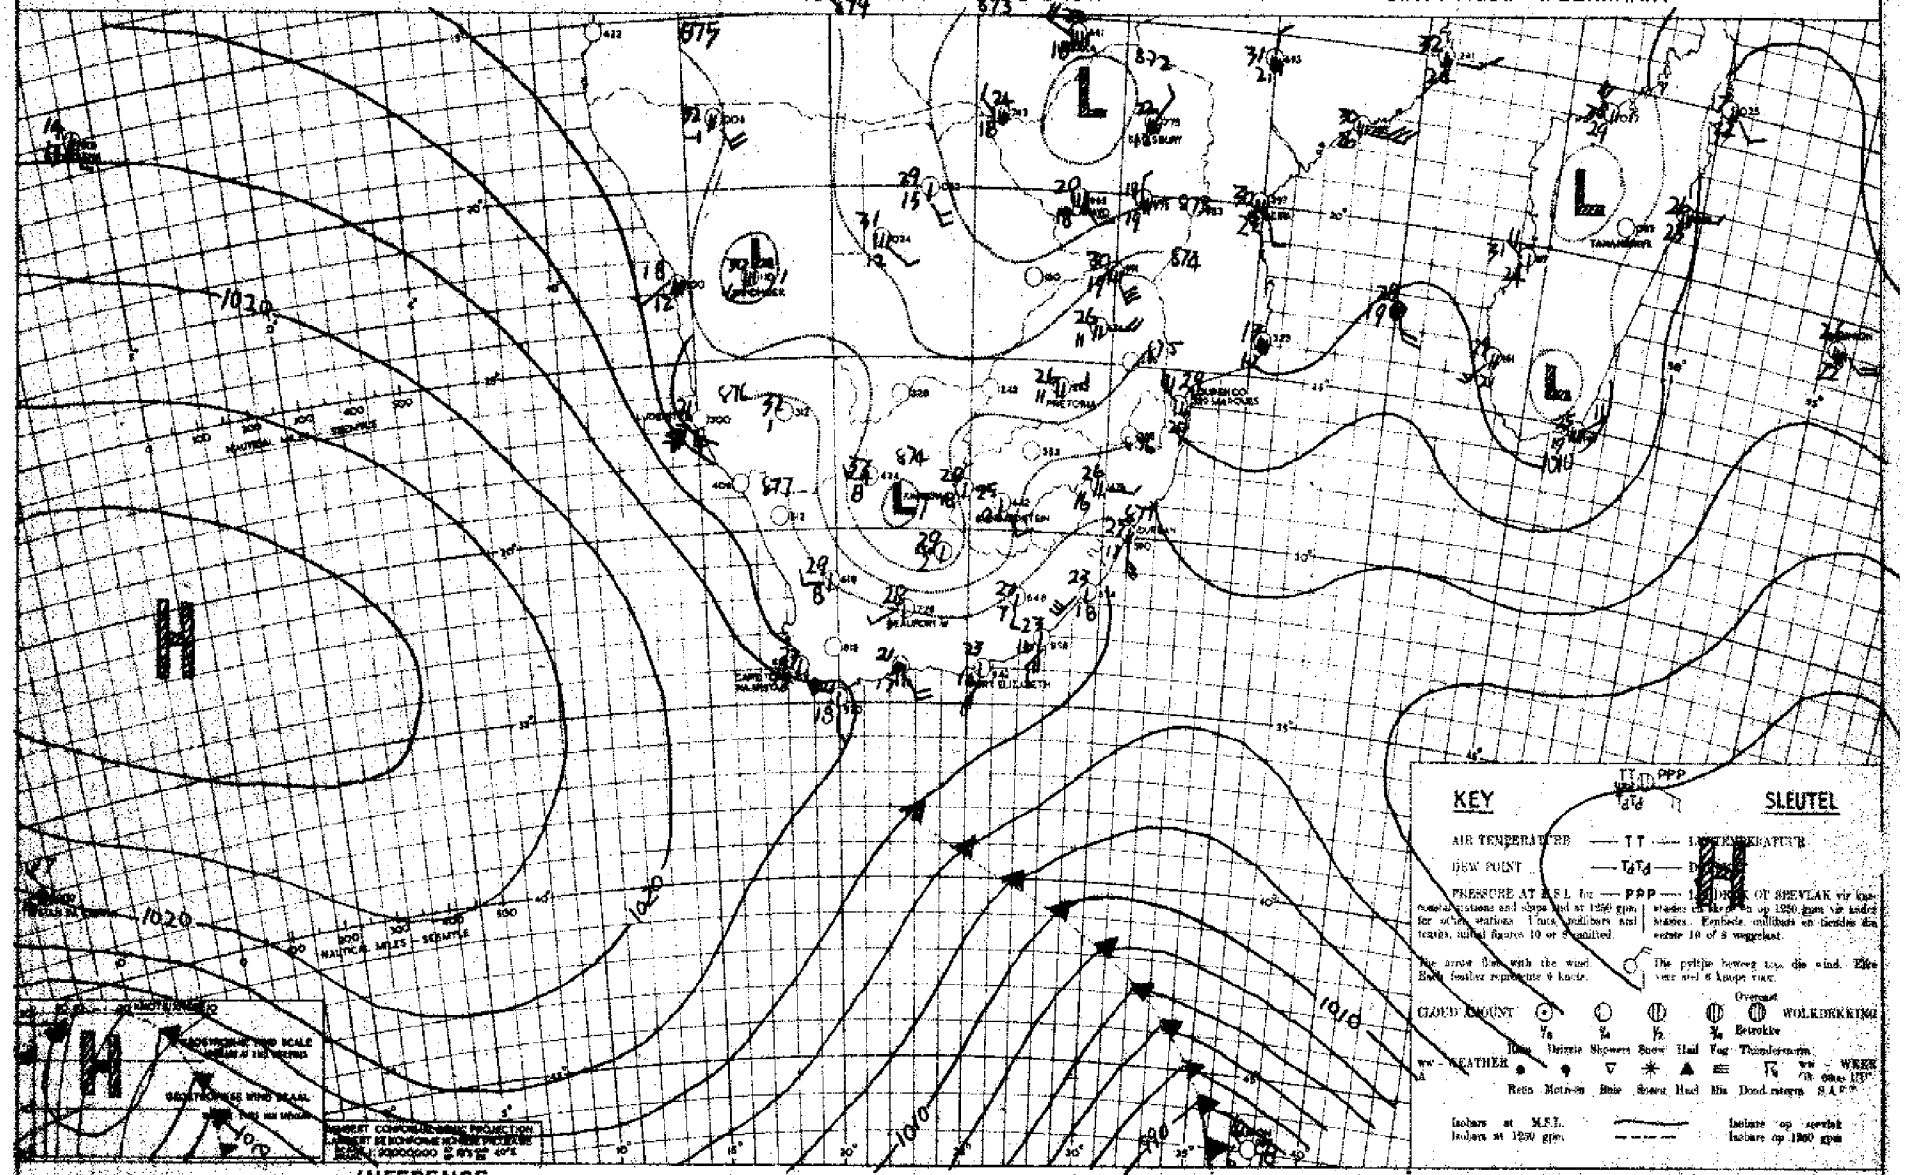
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 10/12/1954 DATUM AFLEIDING

The low pressure system which is now approaching Marion Island is causing a weak influx of moist air over the NE part of the Union. This moist air is now moving southwards over the Interior, and will cause local thunder conditions over the O.F.S. tomorrow.

Die laedrukstelsel wat nou Marion Eiland nader, veroorsaak 'n swak instroming van vogtige lug oor die NO-like dele van die Unie. Dié vogtige lug is nou besig om suidwaarts oor die binneland te beweeg en sal môre plaaslike donderweer oor die O.V.S. veroorsaak.

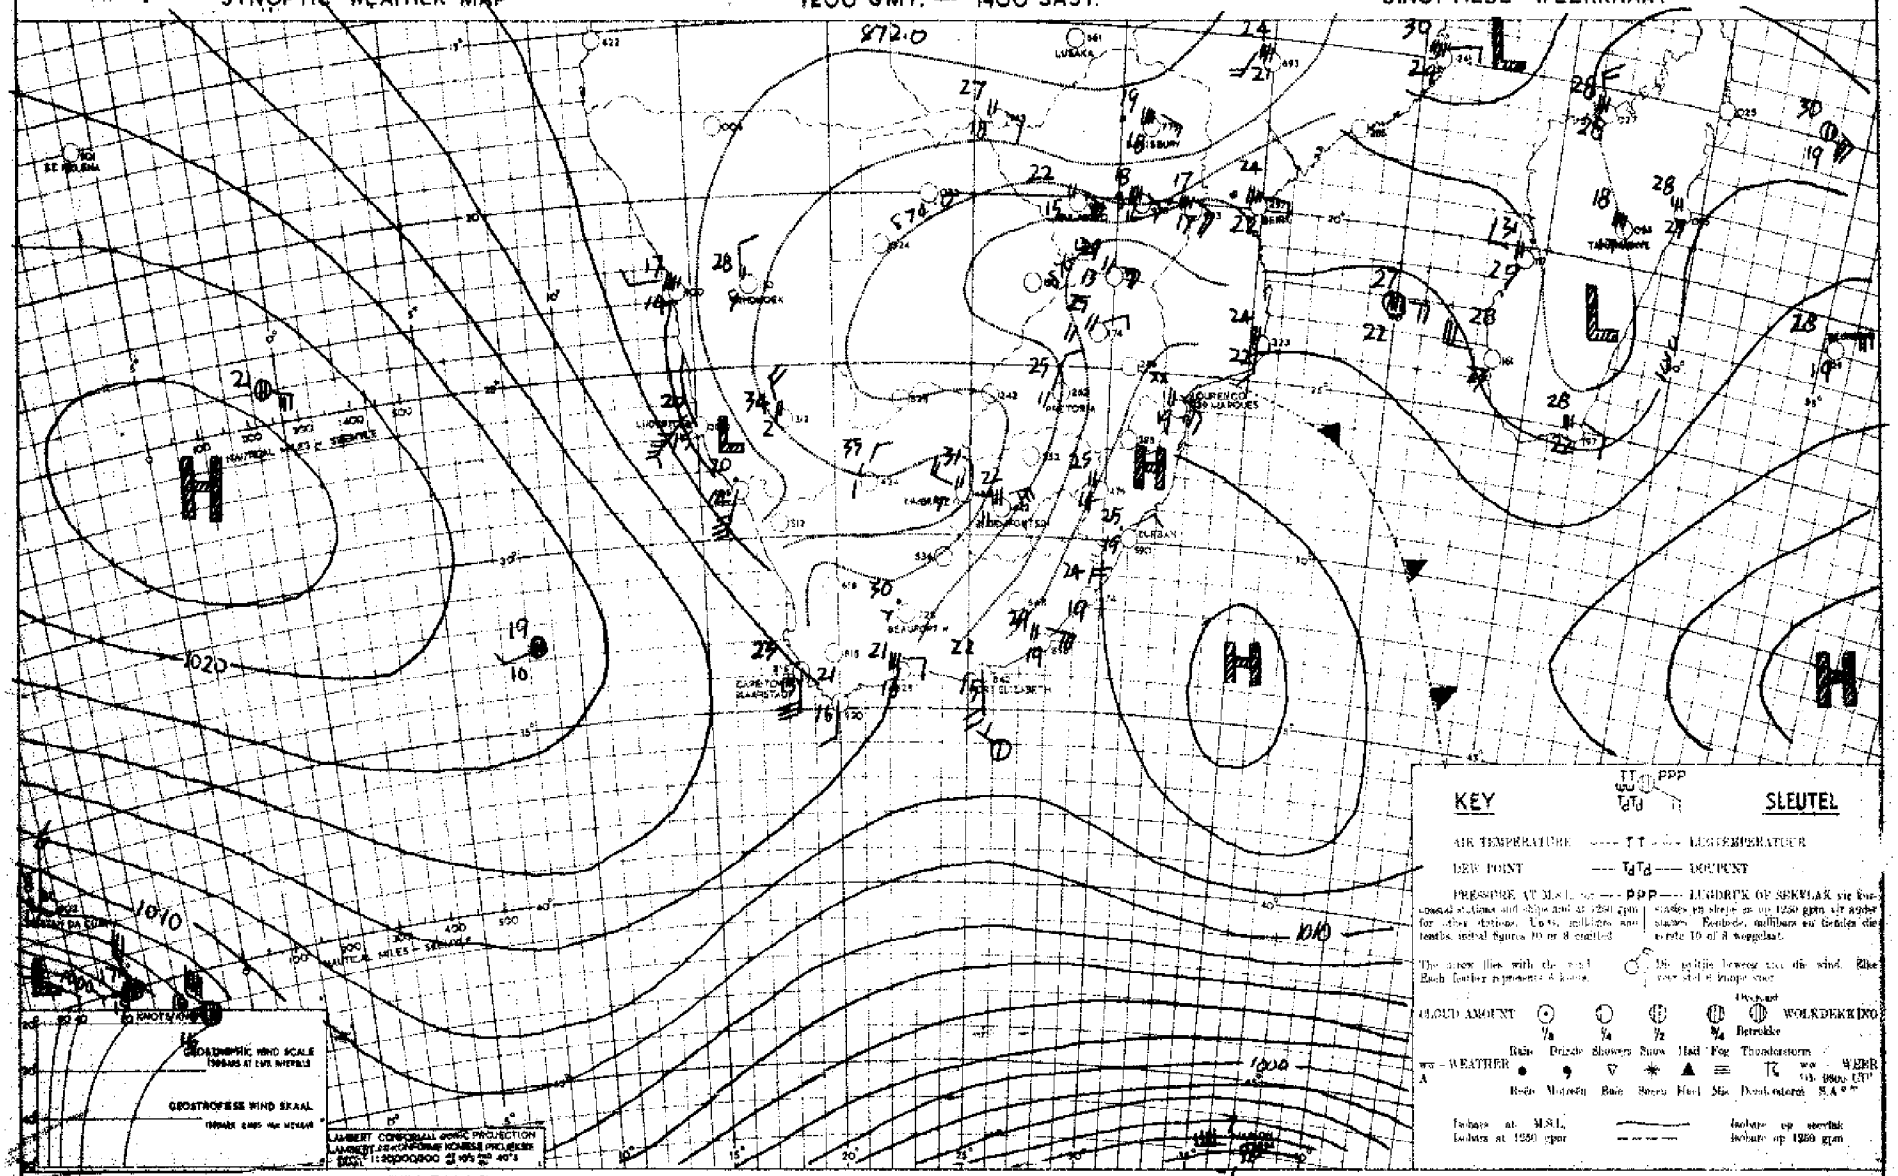
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE

DATE 11/12/1954 DATUM

AFLEIDING

The anticyclone east of Natal is gradually moving eastwards and moist air circulation will be confined to the eastern half of the Union and also over Northern Bechuanaland and northern S.W.A. apart from isolated thunderstorms, however, over the southern Tvl. and the southwestern Free State and adjoining Karo areas, the weather will be fine generally throughout the Union.

Die antisikloon ooa van die Natal kus beweeg geleidelik na die ooste en die sirkulasie van vogtige lug sal tot die oostelike helfte van die Unie en die noordelike distrikte van Betsjoanaland en S.W.A. beperk wees, met uitsondering van enkele donderstorms oor Suid Transvaal en Suidwes Vrystaat en aangrensende Karo distrikte, sal dit egter hoofsaaklik mooiweer wees oor die Unie.

INFERENCE DATE 13/12/1954 DATUM AFLEIDING

With the eastward movement of the cold front west of the Cape, cloudy to partly cloudy conditions will occur fairly generally. Isolated thundershowers will occur over Gordonia, Northern Cape, the Free State, the Transkei, Natal and over the southern districts of Transvaal. Cooler air behind the front will spread over the southwestern and southern Cape coasts.

Met die ooswaartse beweging van die koue front wes van die Kaap sal bewolkte tot gedeeltelik bewolkte toestande algemeen voorkom. Los donderbuie sal voorkom oor Gordonia, Noord-Kaapland, die Vrystaat, die Transkei, Natal en oor die suidelike distrikte van Transvaal. Koeler lug agter die front sal oor die suidwestelike en suidelike Kaapse kusstreke beweeg.

INFERENCE ..... DATE 14/12/1994 DATUM ..... AFLEIDING

As a result of further E-ward movement of the depression SSW of the Union, cooler, cloudy conditions will extend along the South Coast. The area of thunder conditions over the interior will move eastwards, and possibly also somewhat northwards.

As gevolg van oostwaartse beweging van die depressie SSW van die Unie sal koeler bewolkte toestande langs die suidkus uitbrei. Die gebied van donderweerstoestande oor die Binneland sal oostwaarts en miskien ook 'n bietjie noordwaarts beweeg.

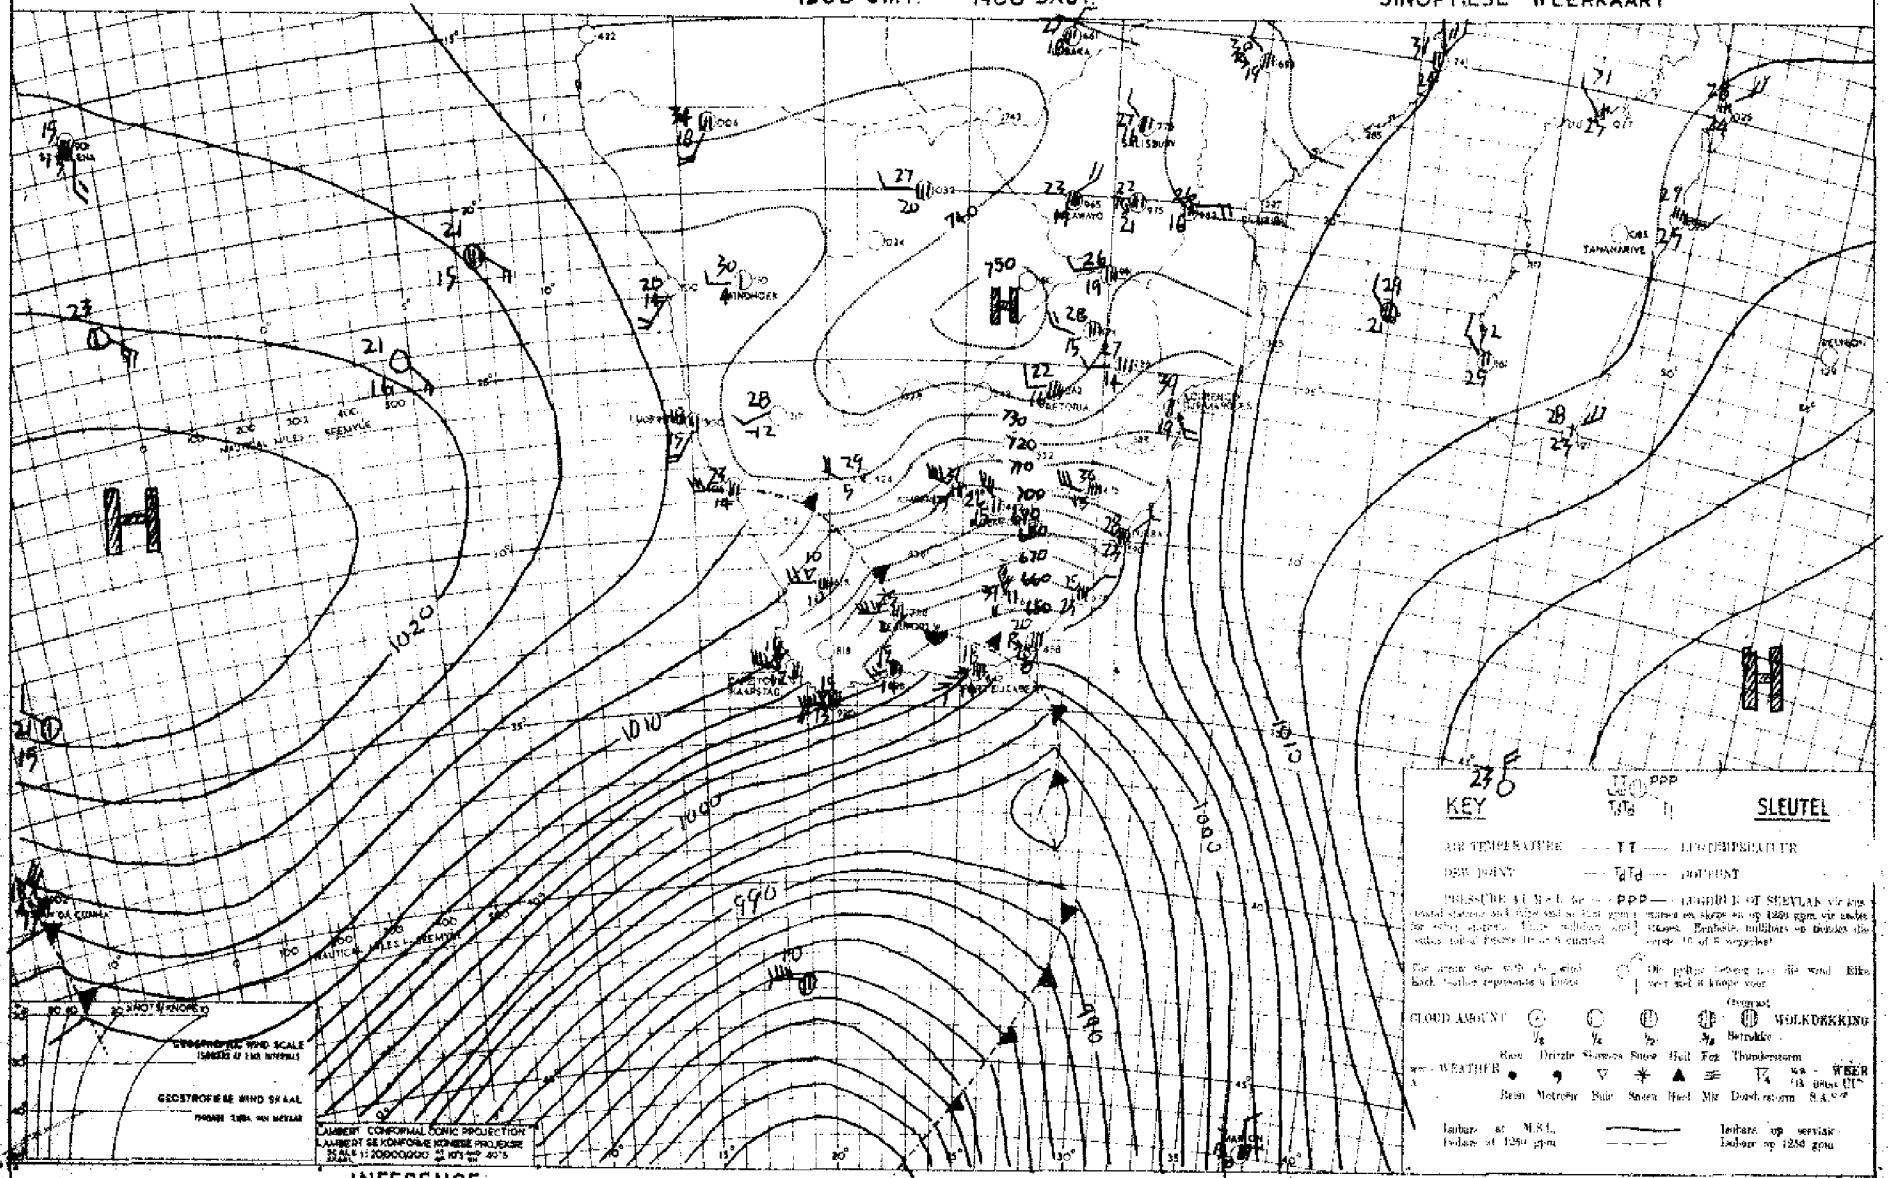
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 15/12/1954 DATUM AFLEIDING

The southern half of the Cape is under the influence of cool southern Atlantic air. Cloudy conditions and light rain occur. In spite of the presence of relative humid continental air over the remainder of the Union, upper air conditions are unfavourable for general precipitation. Cloudy to partly cloudy conditions are expected, and isolated thundershowers will occur.

Die suidelike helfte van Kaapland is onder die invloed van koel Suid-Atlantiese lug. Algemeen bewolkte toestande en ligte reën kom voor. Hoewel relatief vogtige kontinentale lug oor die res van die Unie aanwesig is, is bolug-toestande ongunstig vir algemene neerslag. Bewolkte tot gedeeltelik bewolkte toestande word verwag en los donderbuie sal voorkom.

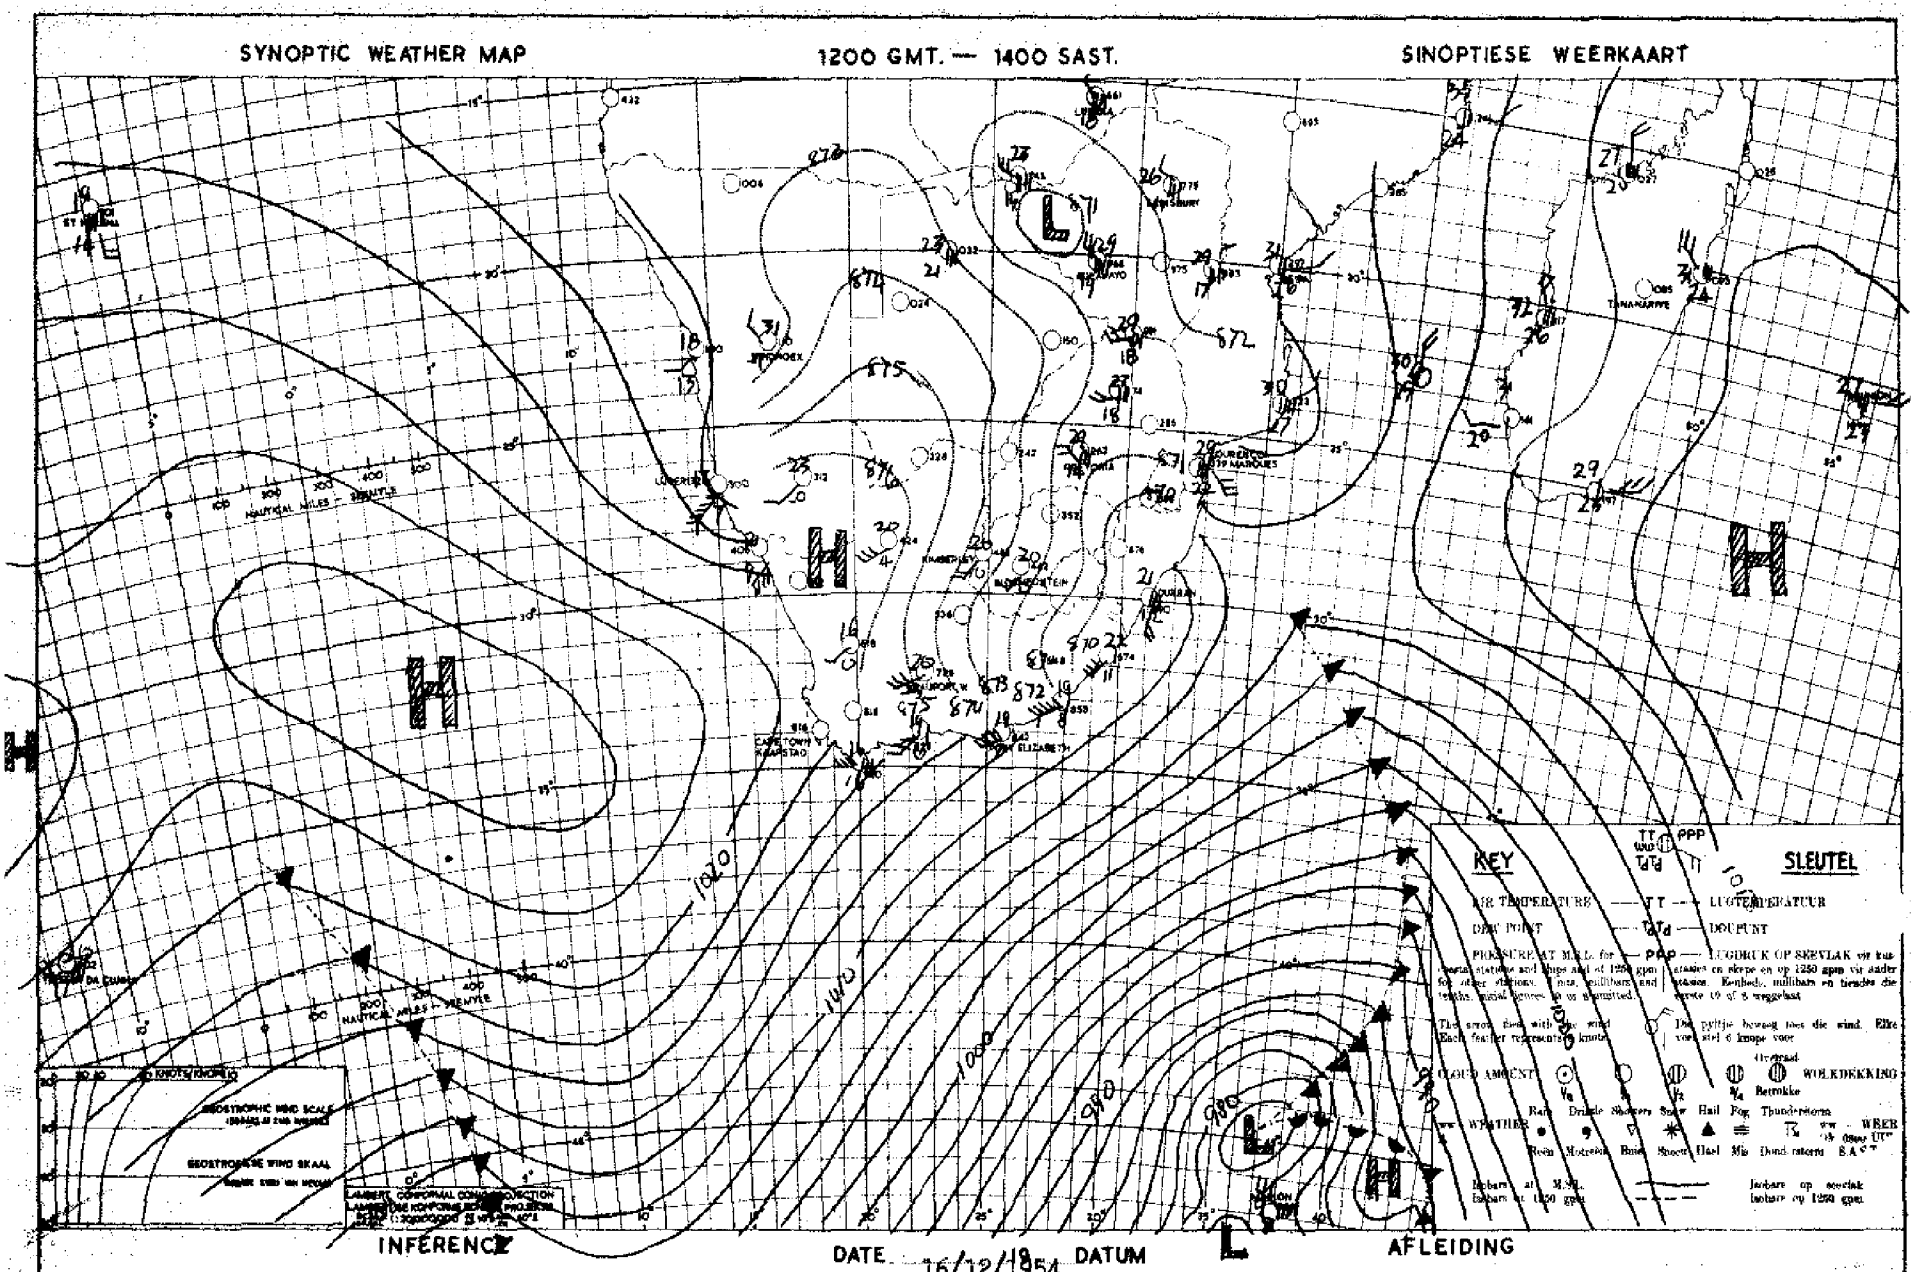
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 16/12/1954 DATUM AFLEIDING

With further eastward movement of the low pressure system SE of the Union, the winds along the south and SE coasts will weaken. and weather will be mainly fair. Cooler moist air will, however, invade the Transvaal from the NE.

Met verdere ooswaartse beweging van die laedrukstelsel SO van die Unie sal die wind langs die Suid- en suidoos kuste bedaar en die weer sal hoofsaaklik redelik mooi wees. Koeler, vogtige lug sal egter oor Transvaal vanuit die NO instroom.

INFERENCE — 17/12/1954 — 19 DATUM — AFLEIDING

With the eastward movement of the Atlantic high a pressure gradient is building up over the eastern half of the Union, and moist sea air associated with cloudy conditions will move over Natal, Transvaal and the northern Free State. Upper air conditions remain unfavourable, however for precipitation.

Met die ooswaartse beweging van die Atlantiese hoog bou daar 'n drukgradient op oos van die oostelike helfte van die Unie en gevolglik sal vogtiger seelug gepaard met bewolkte toestande oor Natal, Transvaal en oor die noordelike dele van die Vrystaat beweeg. Bolugtoestande bly egter nog ongunstig vir neerslag.

Seaward gradients in the neighbourhood of the Union are light to moderate only, and an area of high pressure lies on either side of the Union. Under these circumstances not much change in weather conditions is expected.

Seewaartse gradiente in die omgewing van die Unie is net lig tot matig en 'n gebied van hoë druk lê aan elke kant van die Unie. Onder hierdie omstandighede word [illegible] verandering in weerstoestande verwag nie.

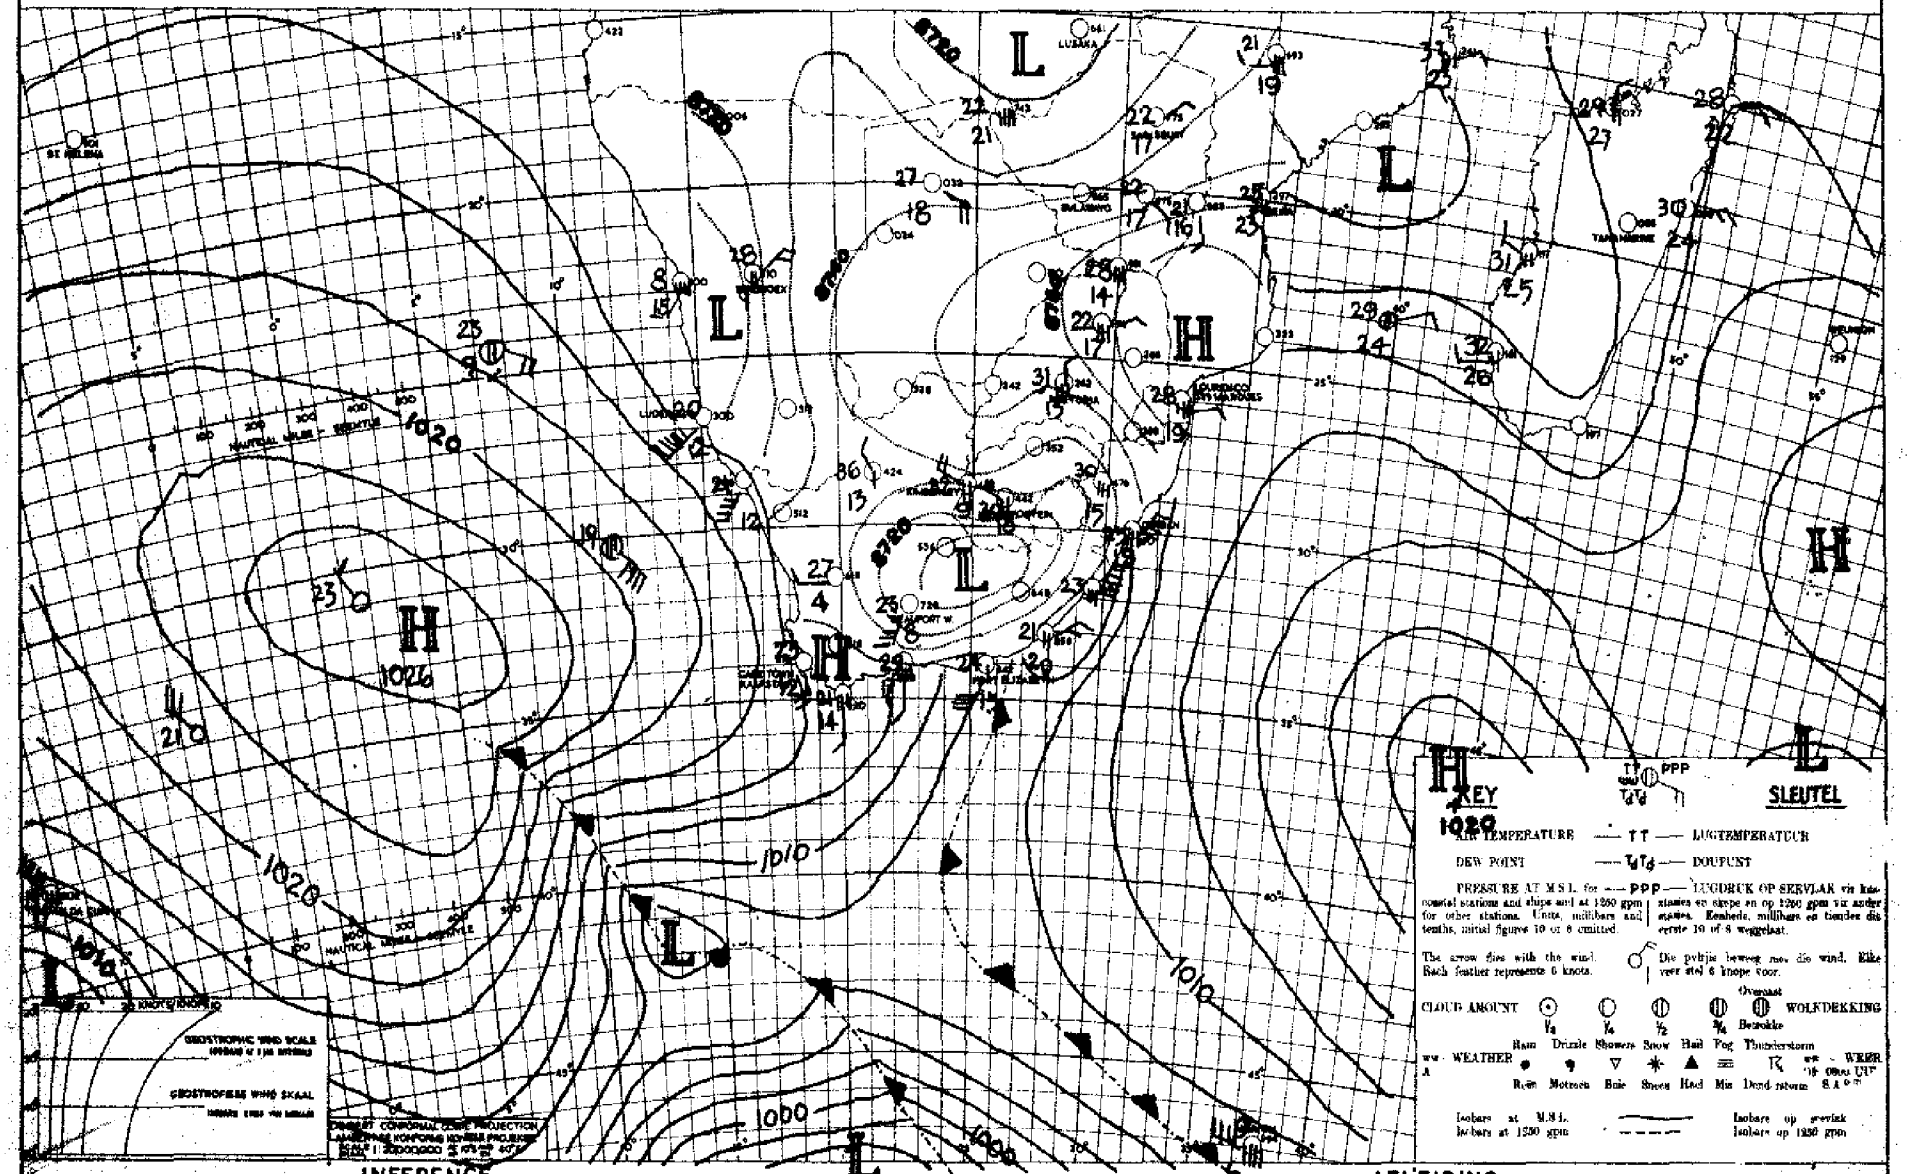
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE

There is a weak inflow of cooler Atlantic air over the South-western and Southern Cape districts. Apart from scattered clouds along the coastal areas, the weather will be fine over the western half of the Cape Province. The remainder of the Union is still under the influence of the Indian Ocean anti-cyclone and the Equatorial Low of Northern Rhodesia, resulting in continued influx of warm moist air from the east and no-

AFLEIDING

Daar is 'n swak invloei van koel Atlantiese lug oor die suidwes-telike en suidelike distrikte van Kaapland. Verspreide wolke sal langs die kuskstreke voorkom, maar andersins sal dit mooi-weer wees oor die westelike helfte van Kaapland. Die res van die Unie is nog onder die invloed van die Indiese Oseaan H g en die ekwatoriale Laag oor N.-Rhodesië, en die toevoer van warm vog-tige lug sal dus voortduur. Plaaslike donderbuie sal ...

INFERENCE

DATE 20/12/1954 19 DATUM

AFLEIDING

With the eastward movement of the front west of the Cape, temporarily unsettled weather will occur over the southwestern and southern coastal areas. With the trough over the interior thundershowers are possible over Northern Cape, the Free State and over the southwestern half of Transvaal.

Die ooswaartse beweging van die front wes van die Kaap. sal ongestadige weer tydelik oor die suidwestelike en suidelike kusstreke voorkom. Met die trog oor die binneland is donderbuie moontlik oor Noord-Kaapland, die Vrystaat en oor die Suidwestelike helfte van Transvaal.

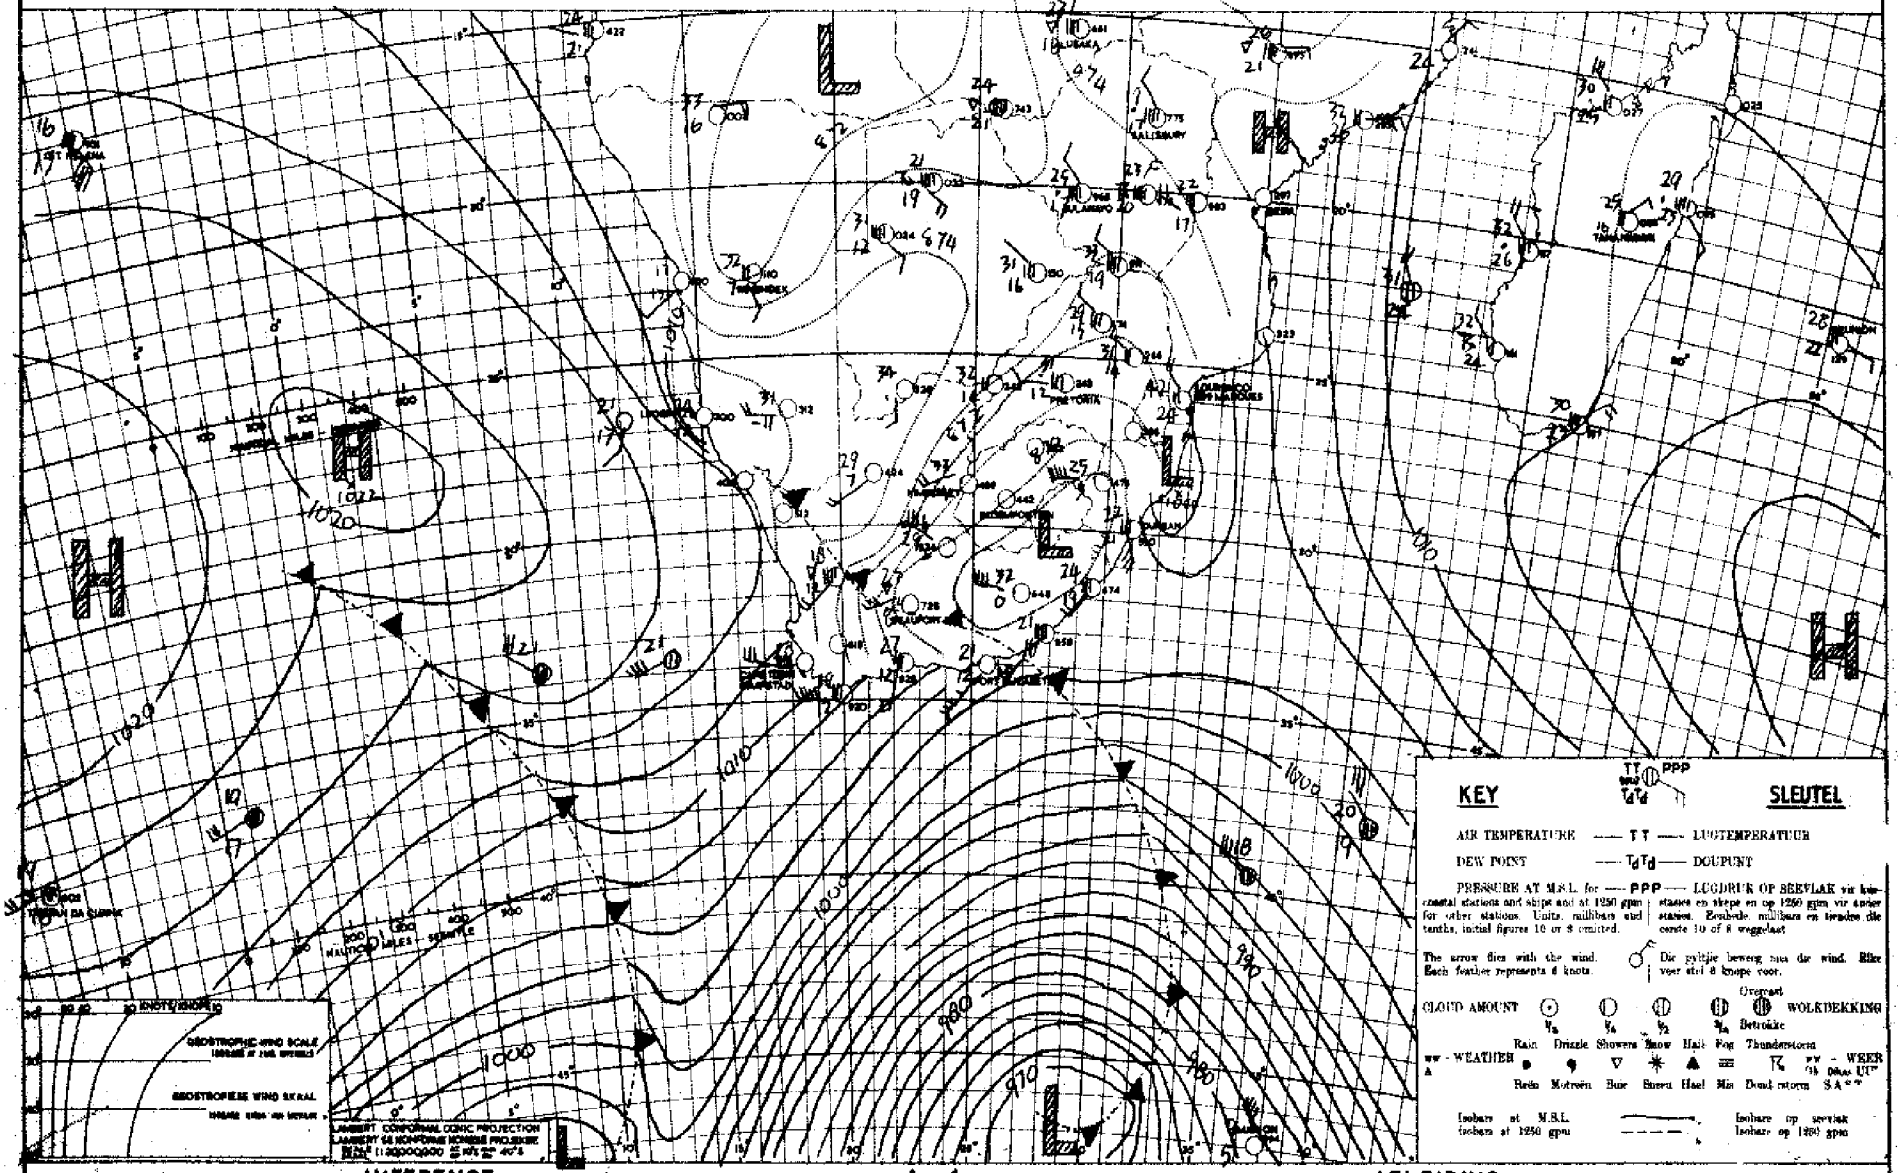
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 21/12/1954 DATUM AFLEIDING

The westerly circulation is dominating most of the Union and over the Cape Province, and the Free State the weather will be fine. The air over the Transvaal and Natal is still moist resulting in cloudy weather, and local thunder activity.

Die westelike lugstroom beheer die sirkulasie oor die grootste gedeelte van die Unie. Oor Kaapland en die Vrystaat sal dit hoofsaaklik mooiweer wees, maar oor Transvaal en Natal sal bewolkte weer met plaaslike donderbuie nog voorkom aangesien die lug nog taamlik vogtig is.

INFERENCE

DATE 22/12/1954

DATUM

AFLEIDING

The deep depression near Marion will move further to the south-east, and winds will decrease over the southern coastal belts. The moist air over Natal will also invade the Transvaal, and northeastern Free State.

Die diep laag naby Marion sal verder suidooswaarts beweeg en winde oor die suidelike kusstreke sal bedaar. Die vogtige lug oor Natal sal ook oor Transvaal en die noordoostelike Vrystaat beweeg.

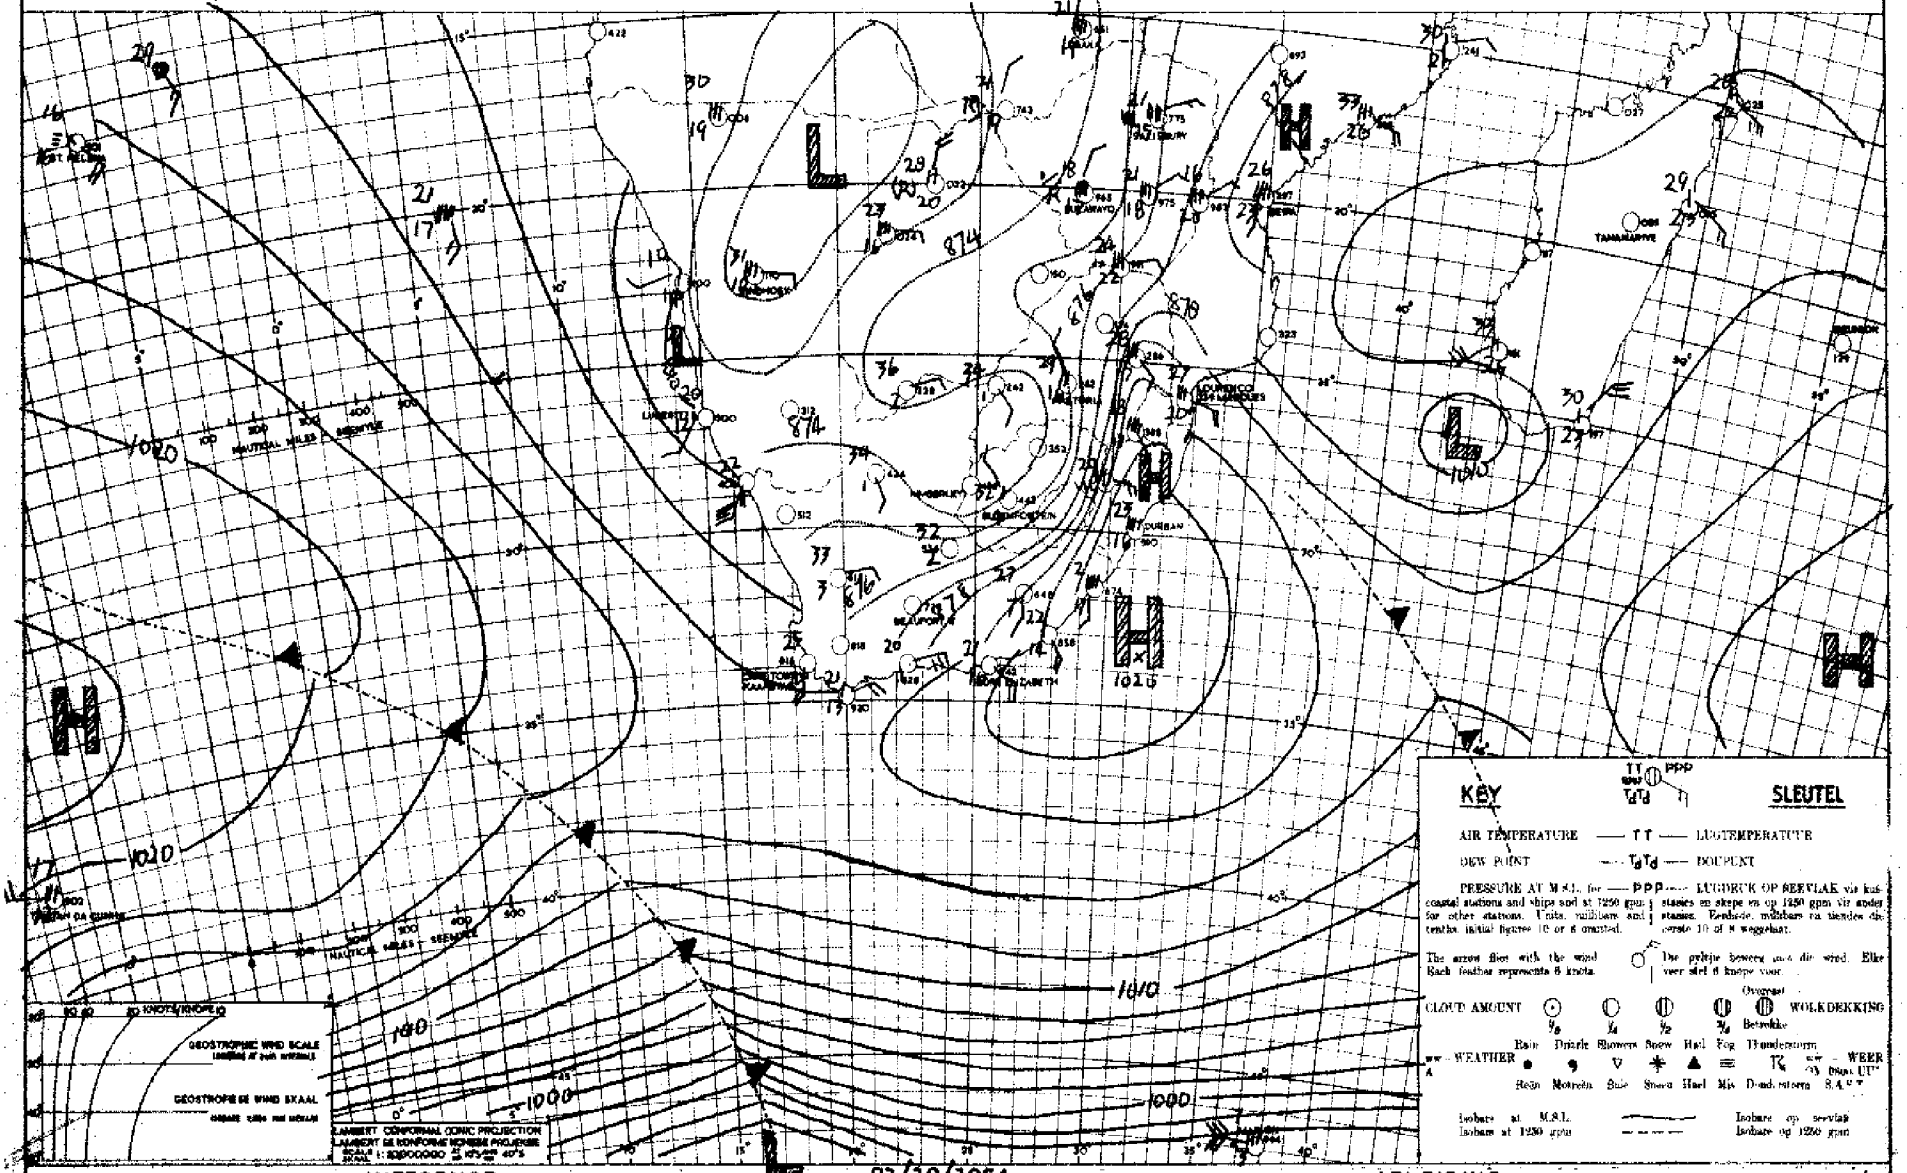
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST — SINOPTIESE WEERKAART



INFERENCE — DATE 23/12/1954 — DATUM — AFLEIDING

A more intensive high pressure system has built up along the Union's east coast with the results that cool moist air will flood the eastern half of the Union. It will therefore be cloudy and mild over the Transvaal, Natal and the Free State, and thunderstorms will develop over the western half of Transvaal, the Free State, and the Vryburg-Mafeking area. Elsewhere over the Union it will remain fine.

'n Intensiewer Hoogdruksisteem het langs die Unie Ooskus ontwikkel met die gevolg dat koel, vogtige lug oor die oostelike helfte van die Unie sal in beweeg. Dit sal dus bewolk wees oor Transvaal, Vrystaat en Natal en donderbuie sal oor die westelike helfte van Transvaal, die Vrystaat en die Vryburg-Mafeking distrikte ontwikkel. Elders oor die Unie sal dit mooiweer bly.

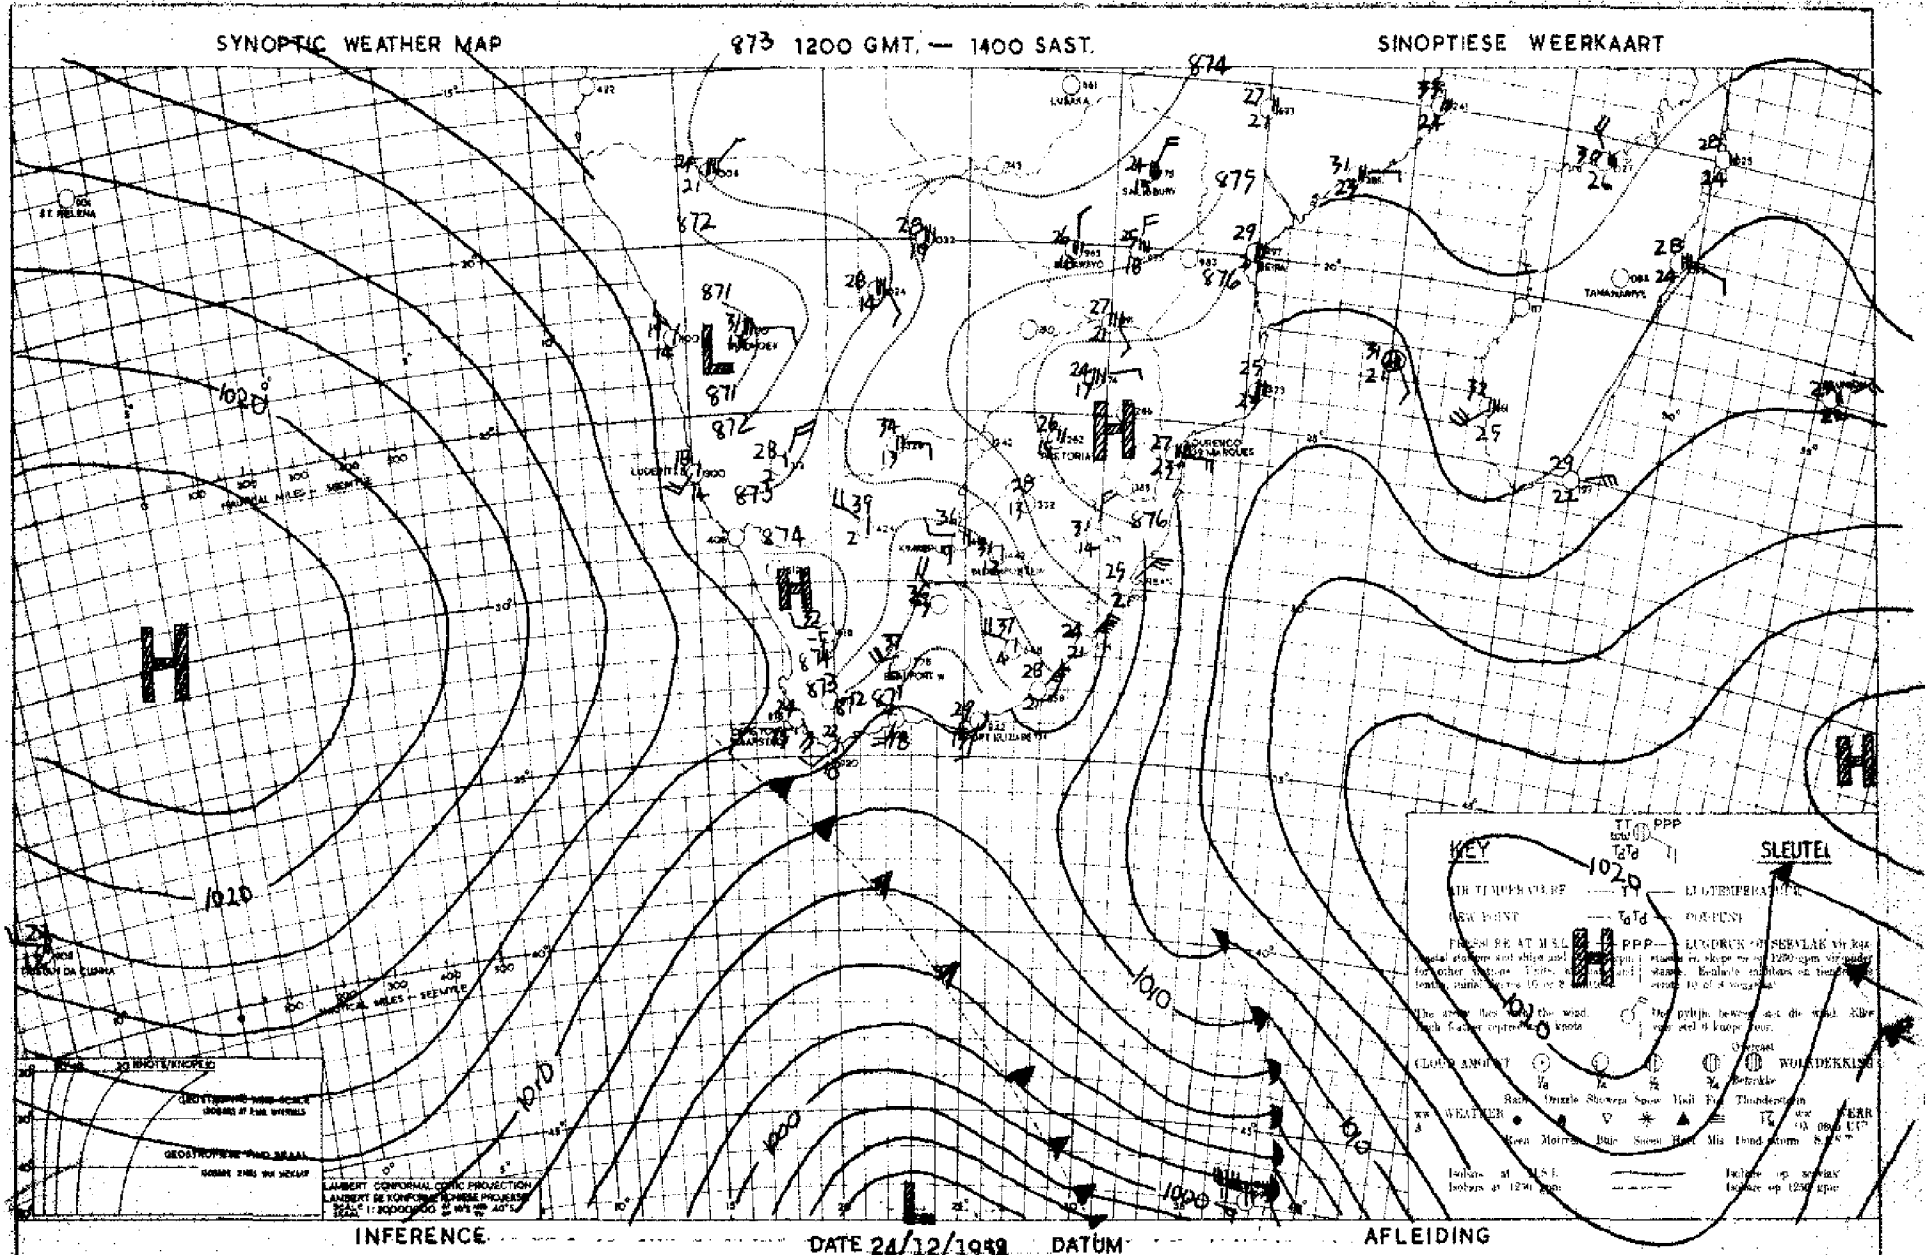
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 24/12/1952 DATUM AFLEIDING

As a result of further eastward movement of the seaward systems, the south and southeast coasts of the Unions will experience partly cloudy weather, with fresh SW-ly winds. Conditions over the NE part of the Interior will, however, become somewhat less favourable for rain.

As gevolg van verdere oostwaartse beweging van die seewaartse sisteme sal gedeeltelik bewolkte weer met taamlik stewe SW-like wind, langs die suid- en suidooskuste van die Unie voorkom. Oor die NO-like dele van die Binneland sal toestande egter ietwat ongunstiger vir reën word.

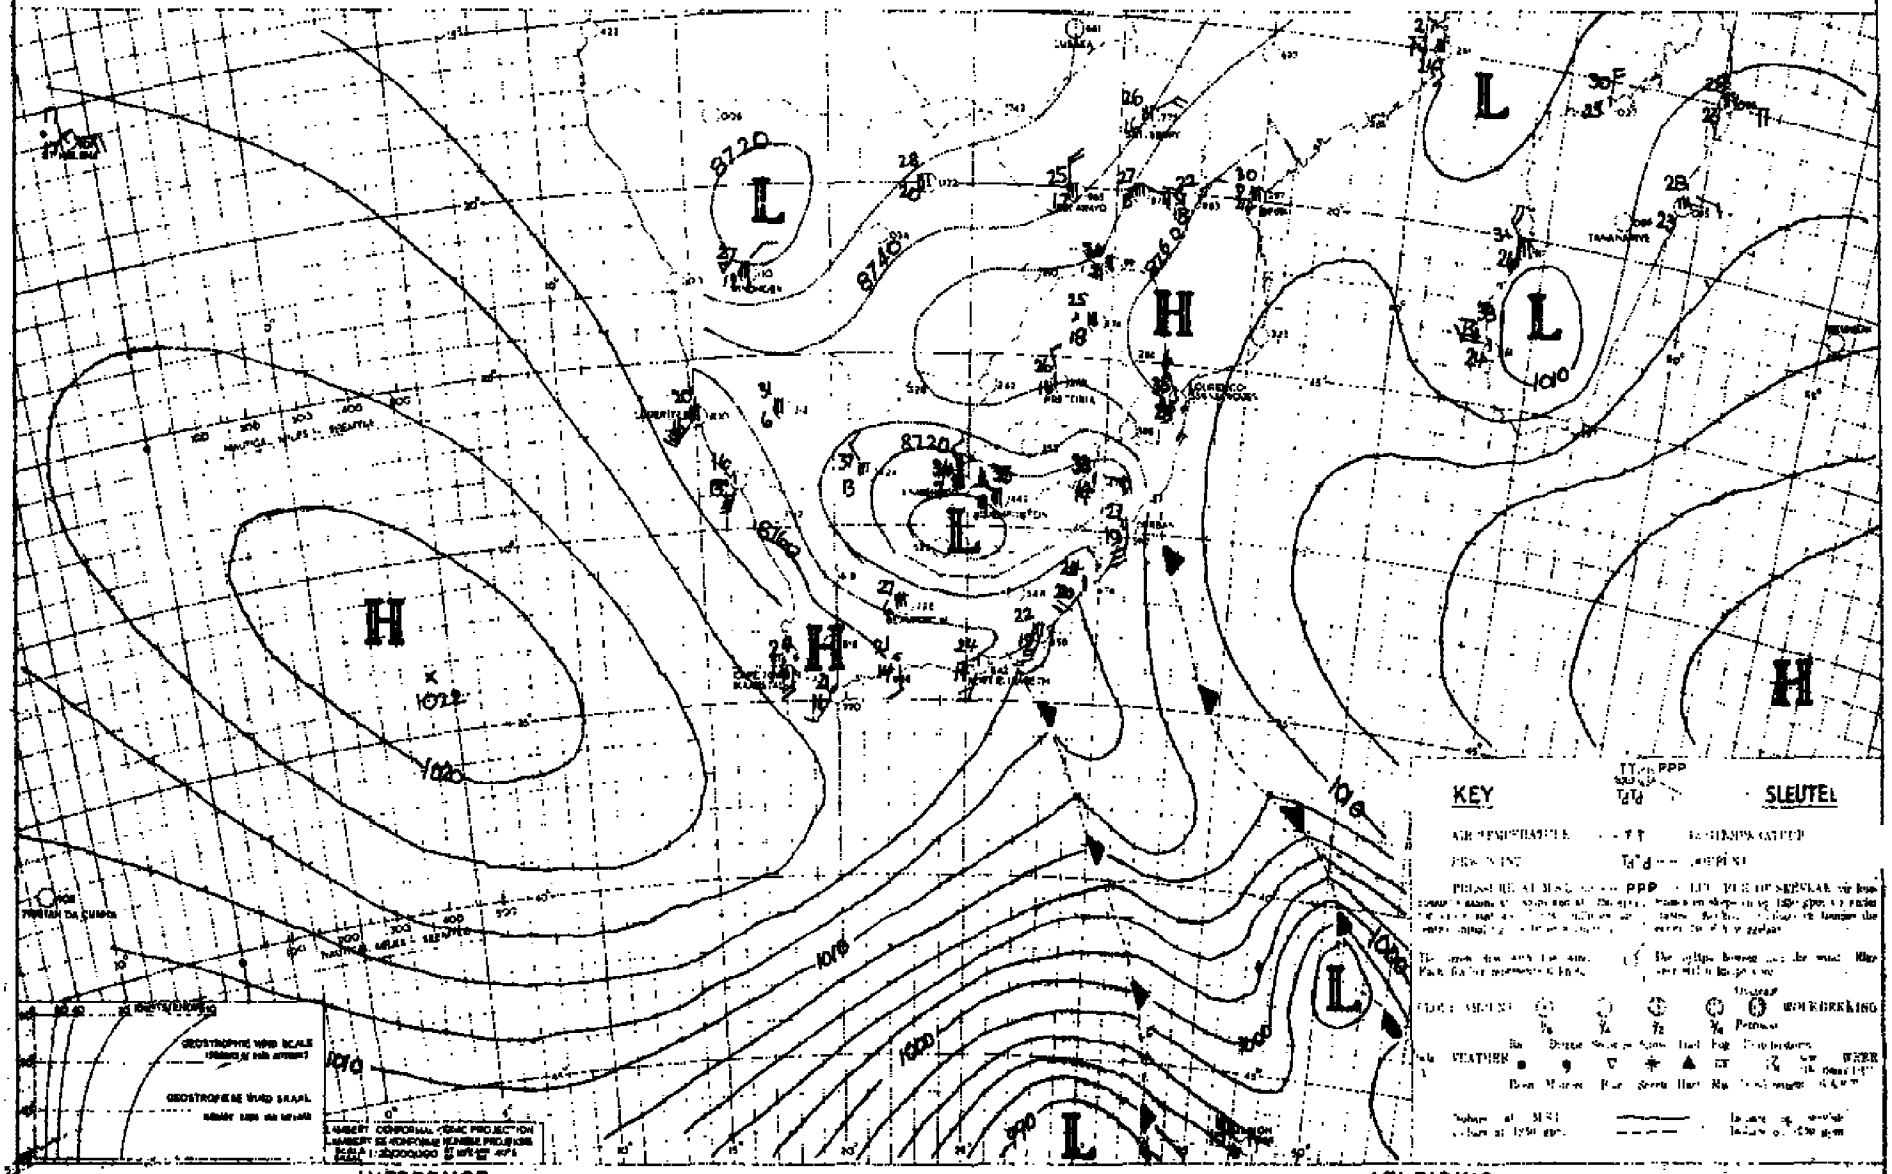
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 25/12/1958 DATUM AFLEIDING

The Atlantic High is extending a weak wedge along the Southeast Cape and Natal coasts. The air from the north circulating over Transvaal is warm and humid, but moderately moist over Natal. Over the rest of the Union the air is dry. Apart from local thunder activity over Transvaal and Natal, and cloud patches along the coastal regions, fair weather will be experienced over most of the Union.

Die Atlantiese Hoog steet 'n wig langs die suidoos en Natalkus uit. Die lug wat oor Transvaal vanuit die noorde sirkuleer is warm en vogtig, maar matig vogtig oor Natal. Oor die res van die Unie is die lug baie droog. Met uitsondering van plaaslike donderweer oor Transvaal en Natal en plaaslike bewolktheid langs die kuststreke sal min of meer mooiweerstoestande oor die Unie oorheers.

INFERENCE — DATE 26/12/1954 DATUM — AFLEIDING

The trough SSW of the Union will cause partly cloudy weather tomorrow over the south and southeast coastal districts of the Union. Meanwhile a secondary low has developed SE of the Union, and as a result of this the inflow of moist air over the NE parts of the Union will also be assisted.

Die trog SSW van die Unie sal gedeeltelik bewolkte weer oor die suid- en suidooskuststreke van die Unie, meebring. Intussen het 'n sekondêre laag SO van die Unie ontwikkel, en daardeur sal instroming van vogtige lug ook oor die NO-like dele van die Unie gehelp word.

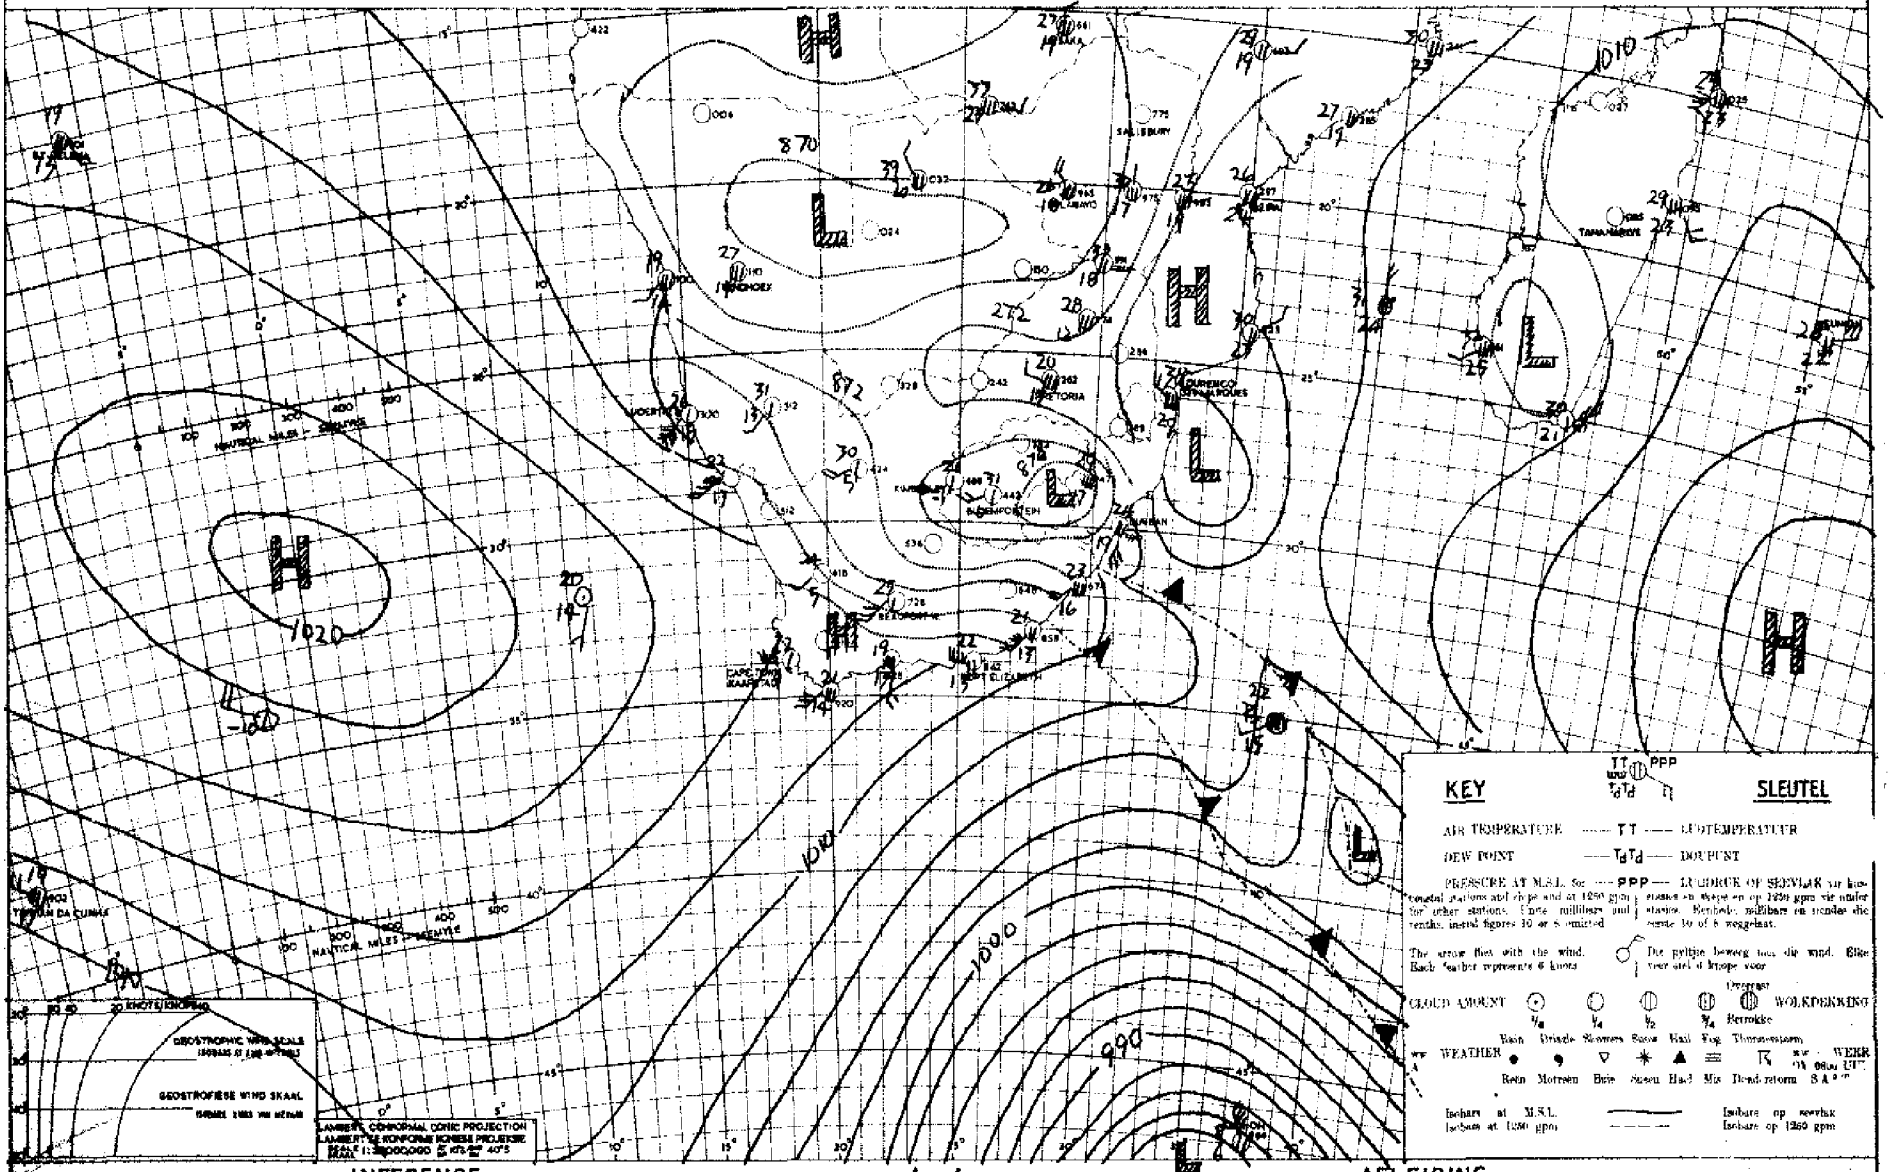
SYNOPTIC WEATHER MAP 1200 GMT. — 1400 SAST. SINOPTIESE WEERKAART



INFERENCE DATE 27/12/1954 DATUM AFLEIDING

The air circulating over Transvaal and Natal is warm and very moist with the arrival over Natal of cool air from the Atlantic Ocean favourable conditions for scattered rain and thundershowers will occur over Natal and the Transvaal. Over the rest of the the Union, however, the air is fairly dry, and apart from local afternoon thunderstorms over the Vryburg-Mafeking districts and the Northern Free State, the weather will be fine.

Die lug wat oor Transvaal en Natal sirkuleer is baie vogtig en warm en met die aankoms van koeler lug oor Natal vanuit die suidweste word gunstige toestande vir verspreide reën reën en donderbuie oor hierdie streke geskep. Oor die res van die Unie is die lug taamlik droog en met uitsondering van plaaslike namiddag donderbuie oor die Vryburg-Mafeking distrikte en oor Noord Vrystaat sal dit hoofsaaklik mooiweer wees.

The eastward movement of the cold front SSW of the Union will cause cloudy weather and local light rain over the south and southeast coastal districts. Over the Interior there is unlikely to be much change.

Die ooswaartse beweging van die koue front SSW van die Unie sal bewolkte weer en plaaslike ligte reën oor die suid- en suidooskusstreke veroorsaak. Oor die Binneland is nie veel verandering waarskynlik nie.

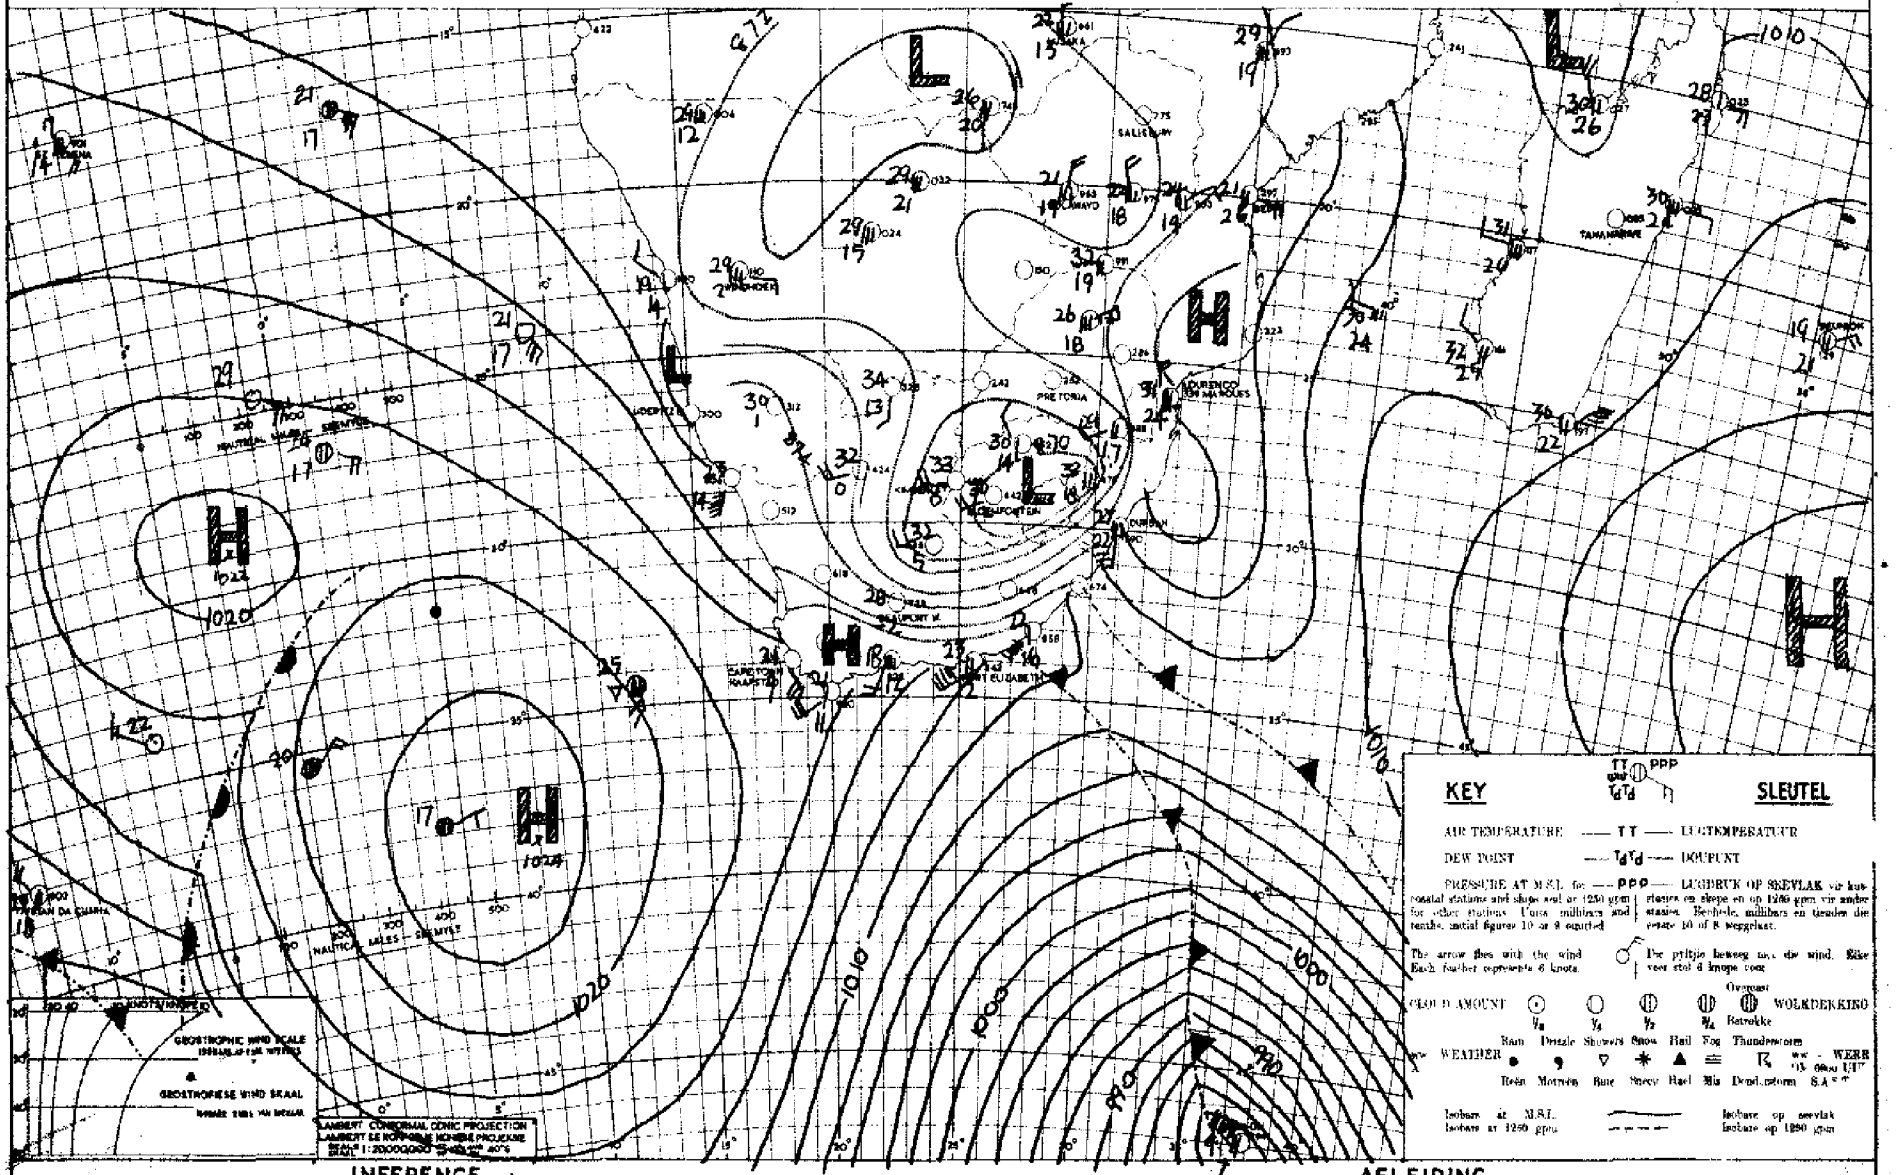
SYNOPTIC WEATHER MAP — 1200 GMT. — 1400 SAST. — SINOPTIESE WEERKAART



INFERENCE

DATE 29/12/1954 DATUM

AFLEIDING

An intensive anticyclone has developed over the southeast Atlantic and it expected that it will dominate the air circulation over the major part of the Union within a day or two. Equatorial air will still be present tomorrow over the eastern and northern Transvaal and scattered rain and thunderstorms will occur. Prior to the invasion of Atlantic air over the southern Transvaal districts, local thunderstorms will develop. The coastal regions will be

'n Intensiewe hoogdrukgebied het oor die suidoos Atlantiese Oseaan ontwikkel en dit word verwag dat hierdie sisteem die lug sirkulasie oor die grootste gedeelte van die Unie binne 'n dag of twee sal beheer. Ekwotoriale lug sal nog oor oos en noord Transvaal teenswoordig wees en verspreide reën of donderbuie sal oor hierdie streke uitsak. Plaaslike donderweer sal ook nog oor Suid Transvaal voorkom

With further eastward movement of the anticyclone south of Union, the cool moist air over Natal will invade the Transvaal and the NE parts of the O.F.S. Over the southern coastal districts of Natal it will begin to clear tomorrow.

As gevolg van verdere oeswaartse beweging van die antisikloon suid van die Unie sal die koel vogtige lug oor Natal, oor Transvaal en die NO-like dele van die O.V.S. instroom. Oor die S-like kuststreke van Natal sal die weer môre begin ooptrek.
