AVVERTENZA — Le Stazioni contraddistinte con un * devono essere ancora fondate o ricostituite.

# AVVERTENZA

Il bollettino meteorologico della Cirenaica per il 1928 contiene una radicale innovazione di speciale importanza: le più importanti osservazioni giornaliere di ogni singola stazione sono riportate integralmente in un con le cifre più caratteristiche di ogni mese (valori assoluti) e le medie decadiche, mensili e, dove è stato possibile, annuali.

In tal modo si spera di portare a conoscenza più diretta e più tangibile degli studiosi, la cospicua massa di osservazioni che si vanno raccogliendo in Libia, massa che altrimenti, se condensata in medie anche di brevi periodi, rimarrebbe perpetuamente confinata negli archivi, di dove tanto più difficilmente potrebbe essere tratta per consultazioni dirette fra qualche anno quando la mole dei dati meteorologici della Cirenaica sarà diventata anche più imponente. Col bollettino del 1930 si spera di poter iniziare una nuova ripartizione degli elementi che si raccolgono durante l'anno e di renderli più agevolmente accessibili mediante più acconci prospetti nei quali si tenga conto sopratutto della necessità di poter comparare gli elementi di un periodo con quelli di altri precedenti. In pari tempo sarà dato maggior rilievo a diversi elementi di particolare importanza per la migliore conoscenza dell'ambiente fisico della Regione, elementi a cui finora per ovvie ragioni non si è potuto dar posto nella pubblicazione che in via assolutamente accessoria.
