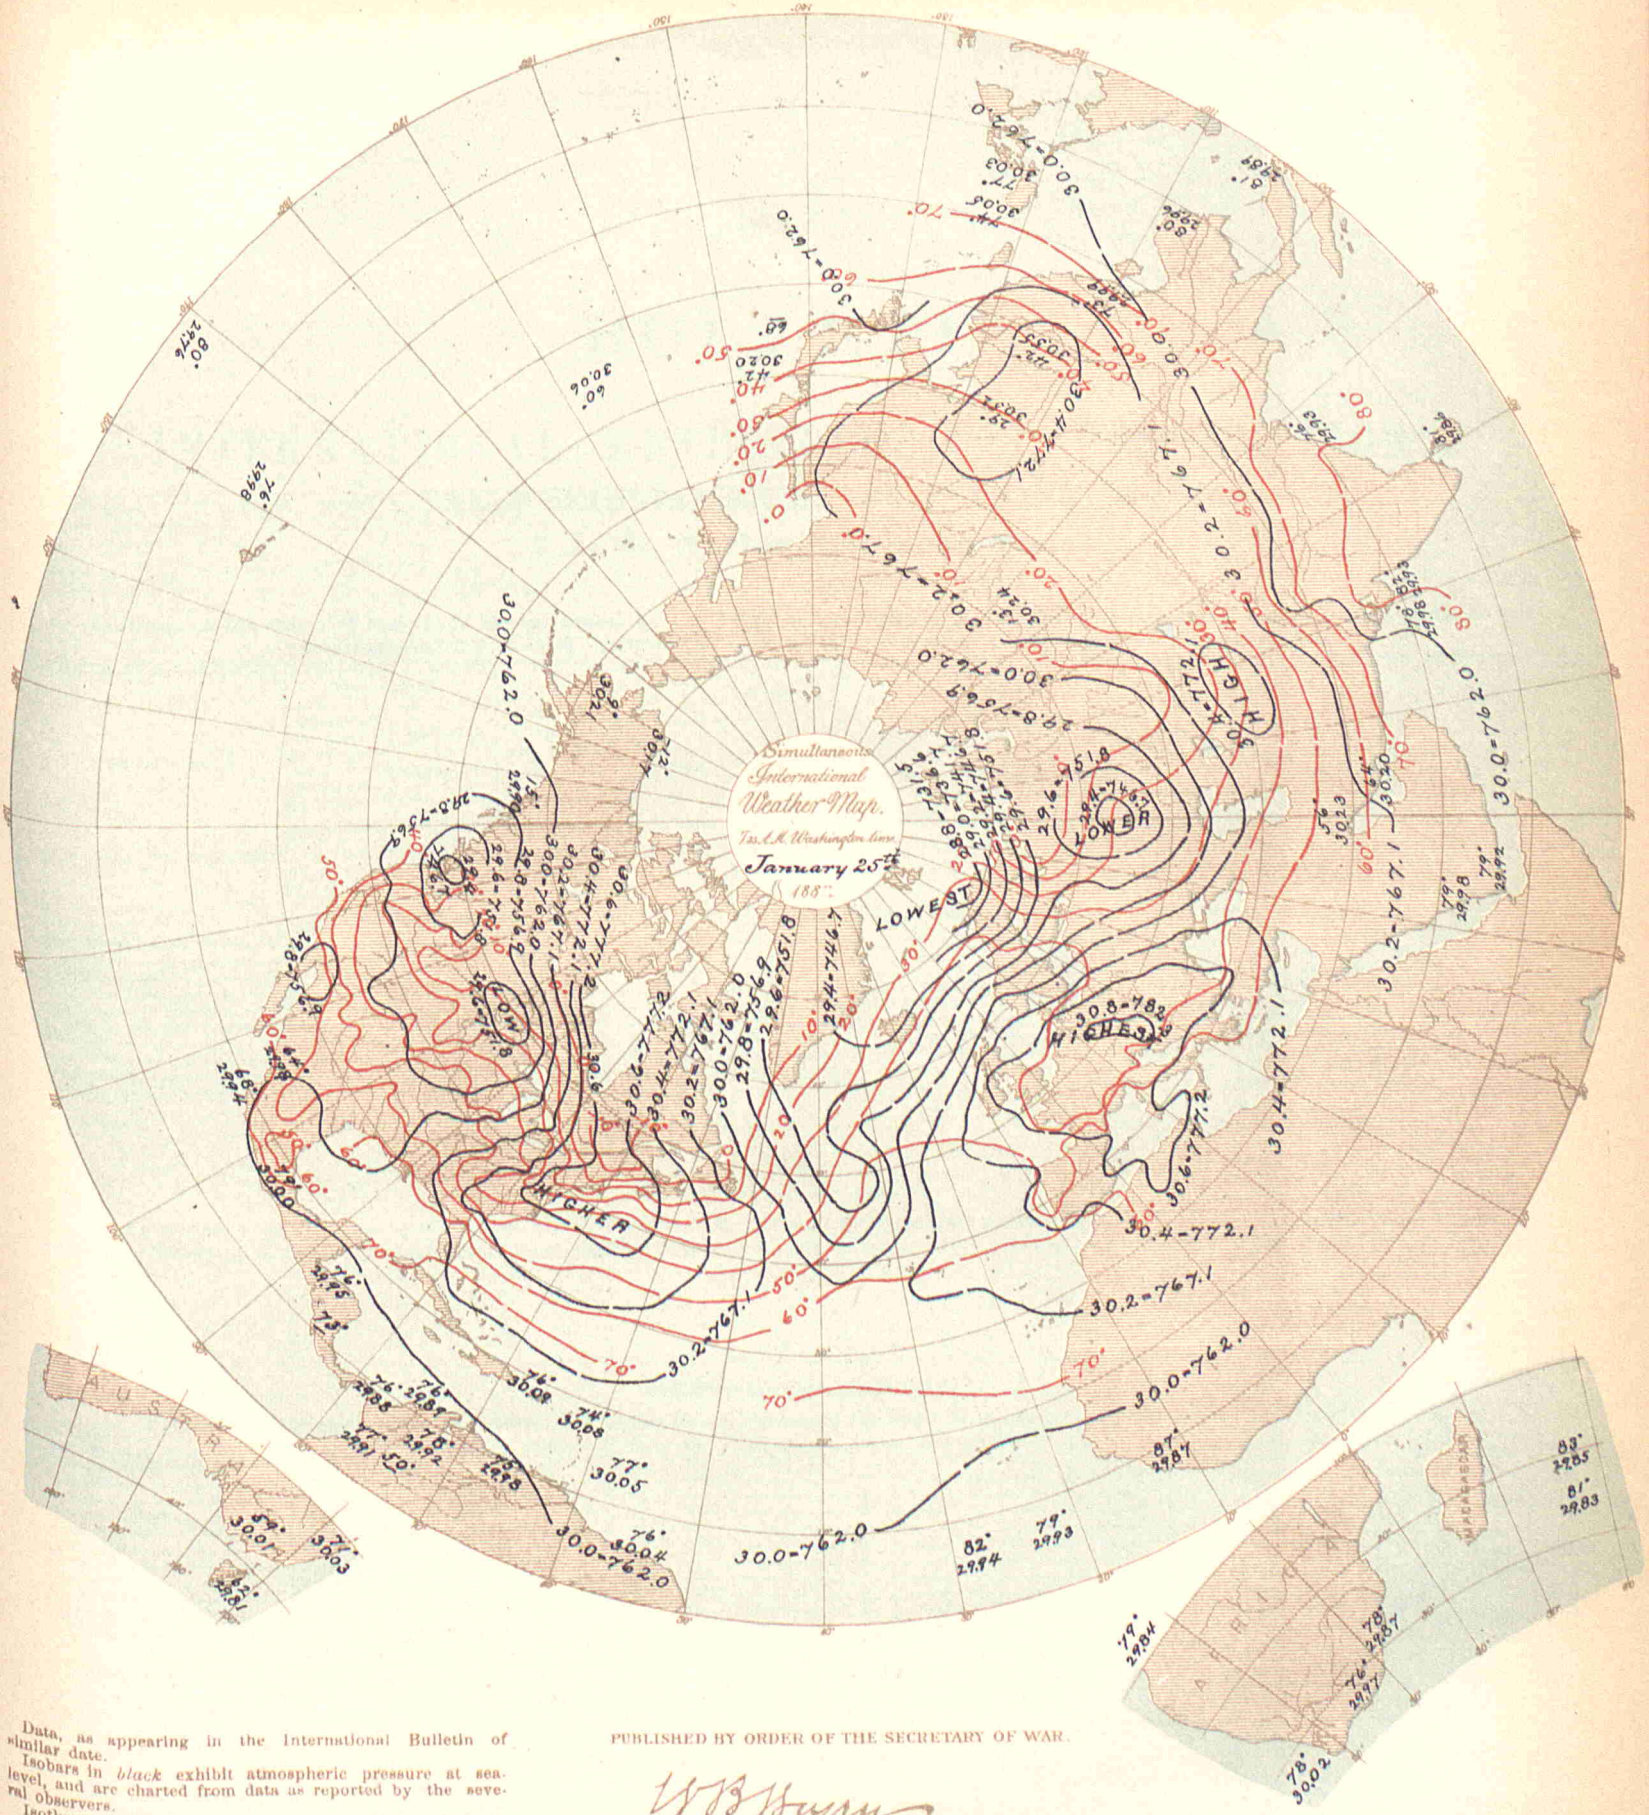
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. Hazen

Brig. & Bvt. Maj. Gen'l.
Chief Signal Officer. U. S. A.

Heliotype Printing Co. Boston.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON JANUARY 26, 1882.

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

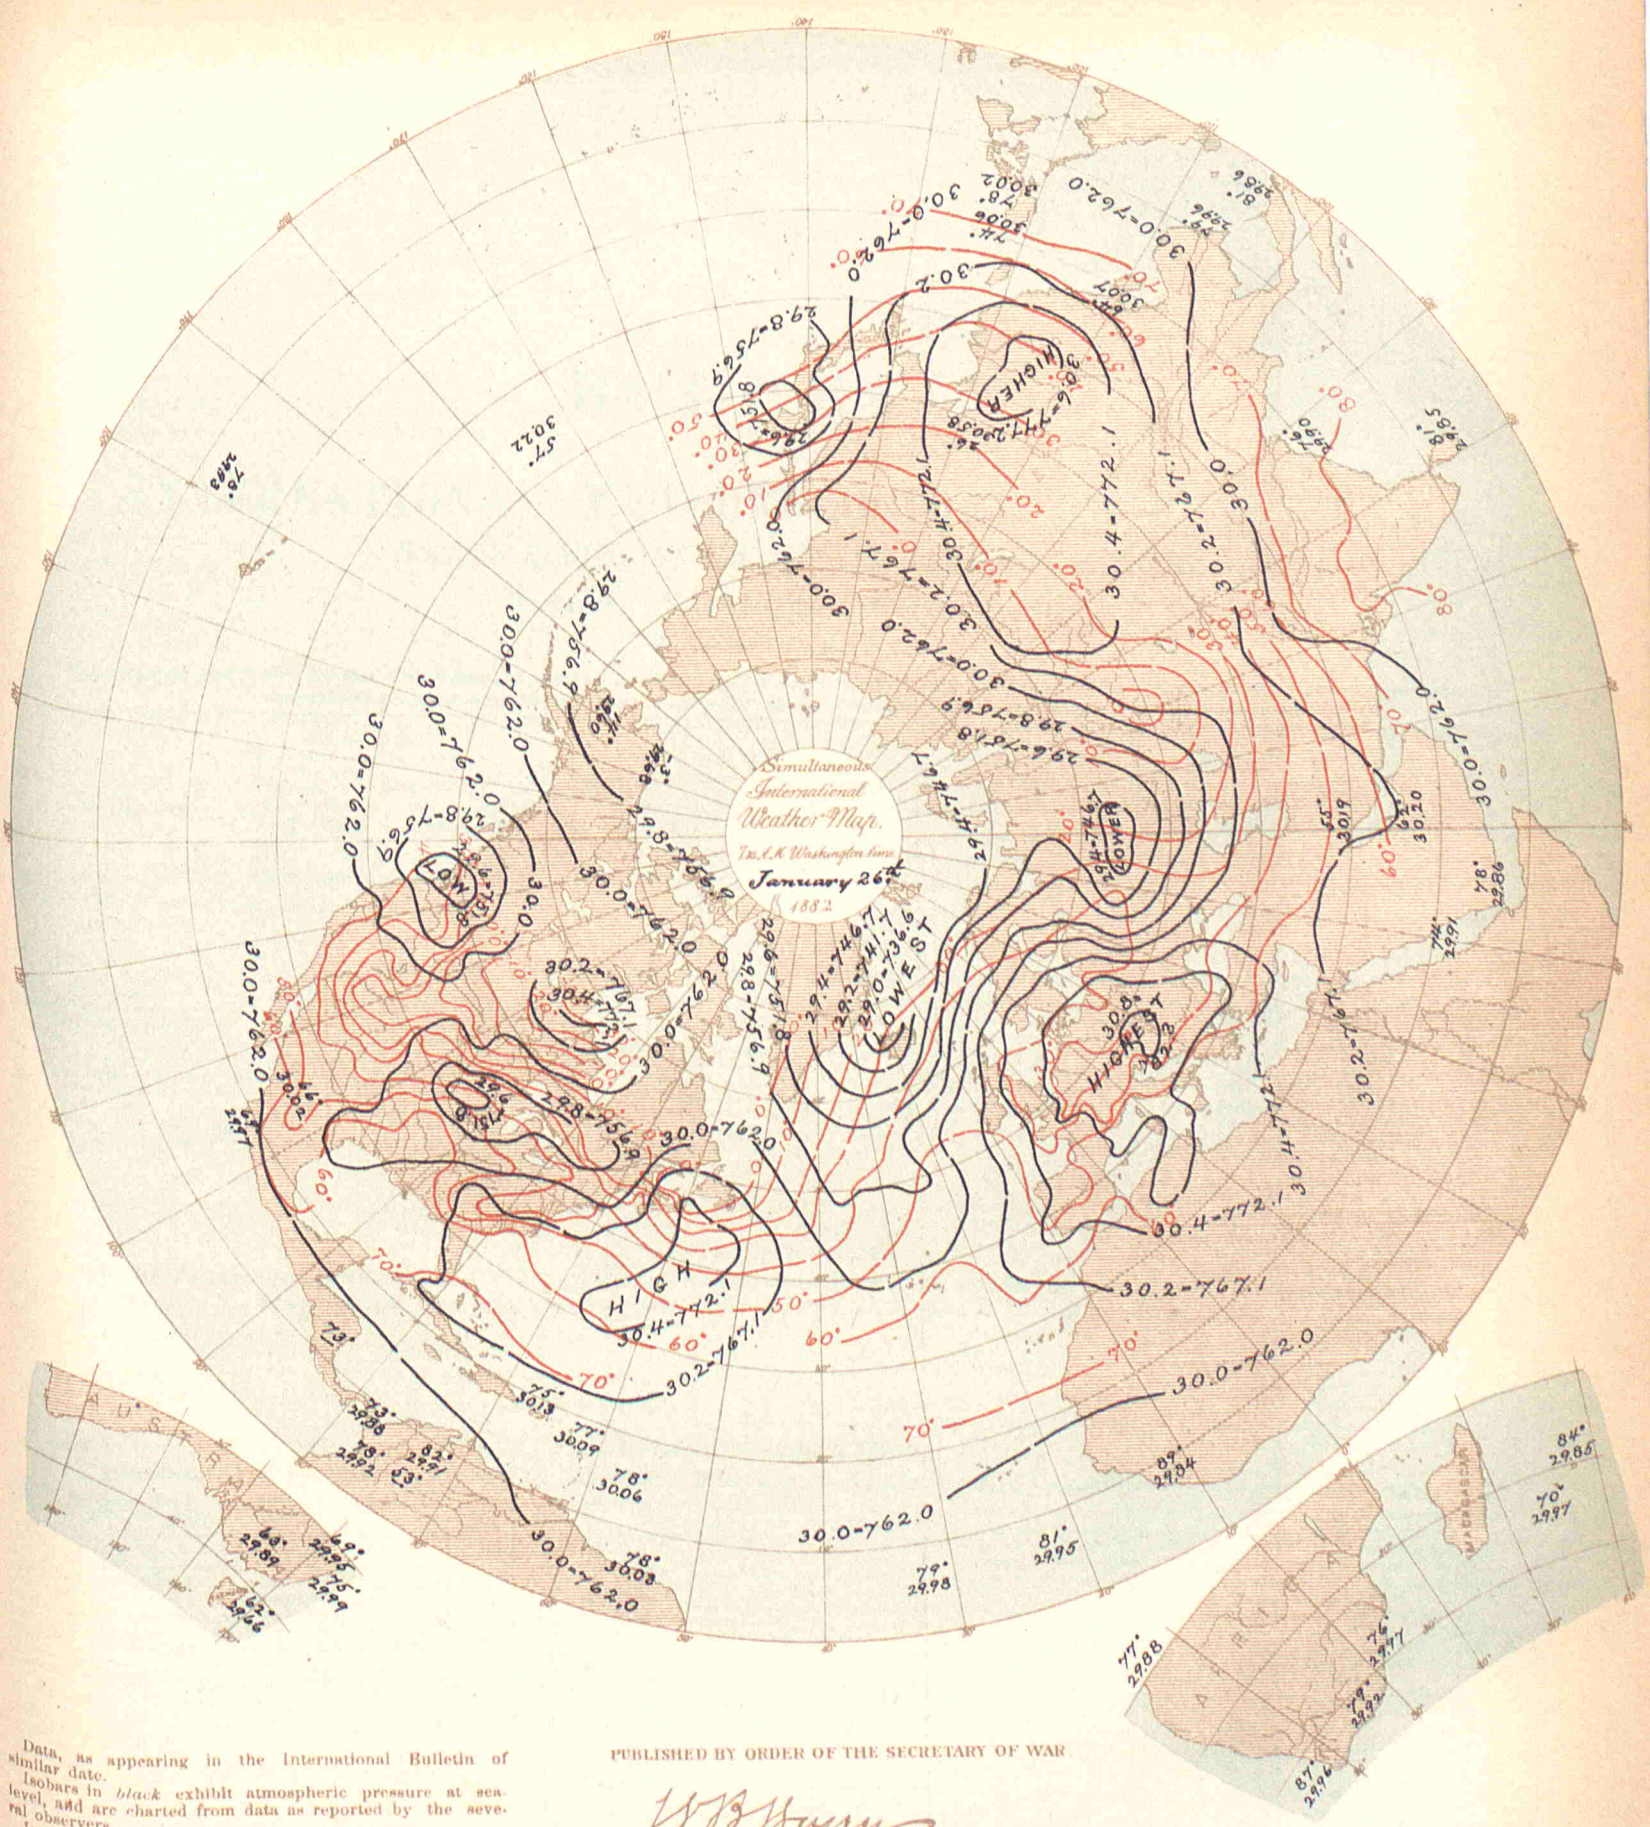
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,

Brig. & Bvt. Maj. Gen'l,

Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. Hazen

Brig. & Bvt. Maj. Gen'l.
Chief Signal Officer, U. S. A.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON JANUARY 27, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.

Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON JANUARY 28, 1882.

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

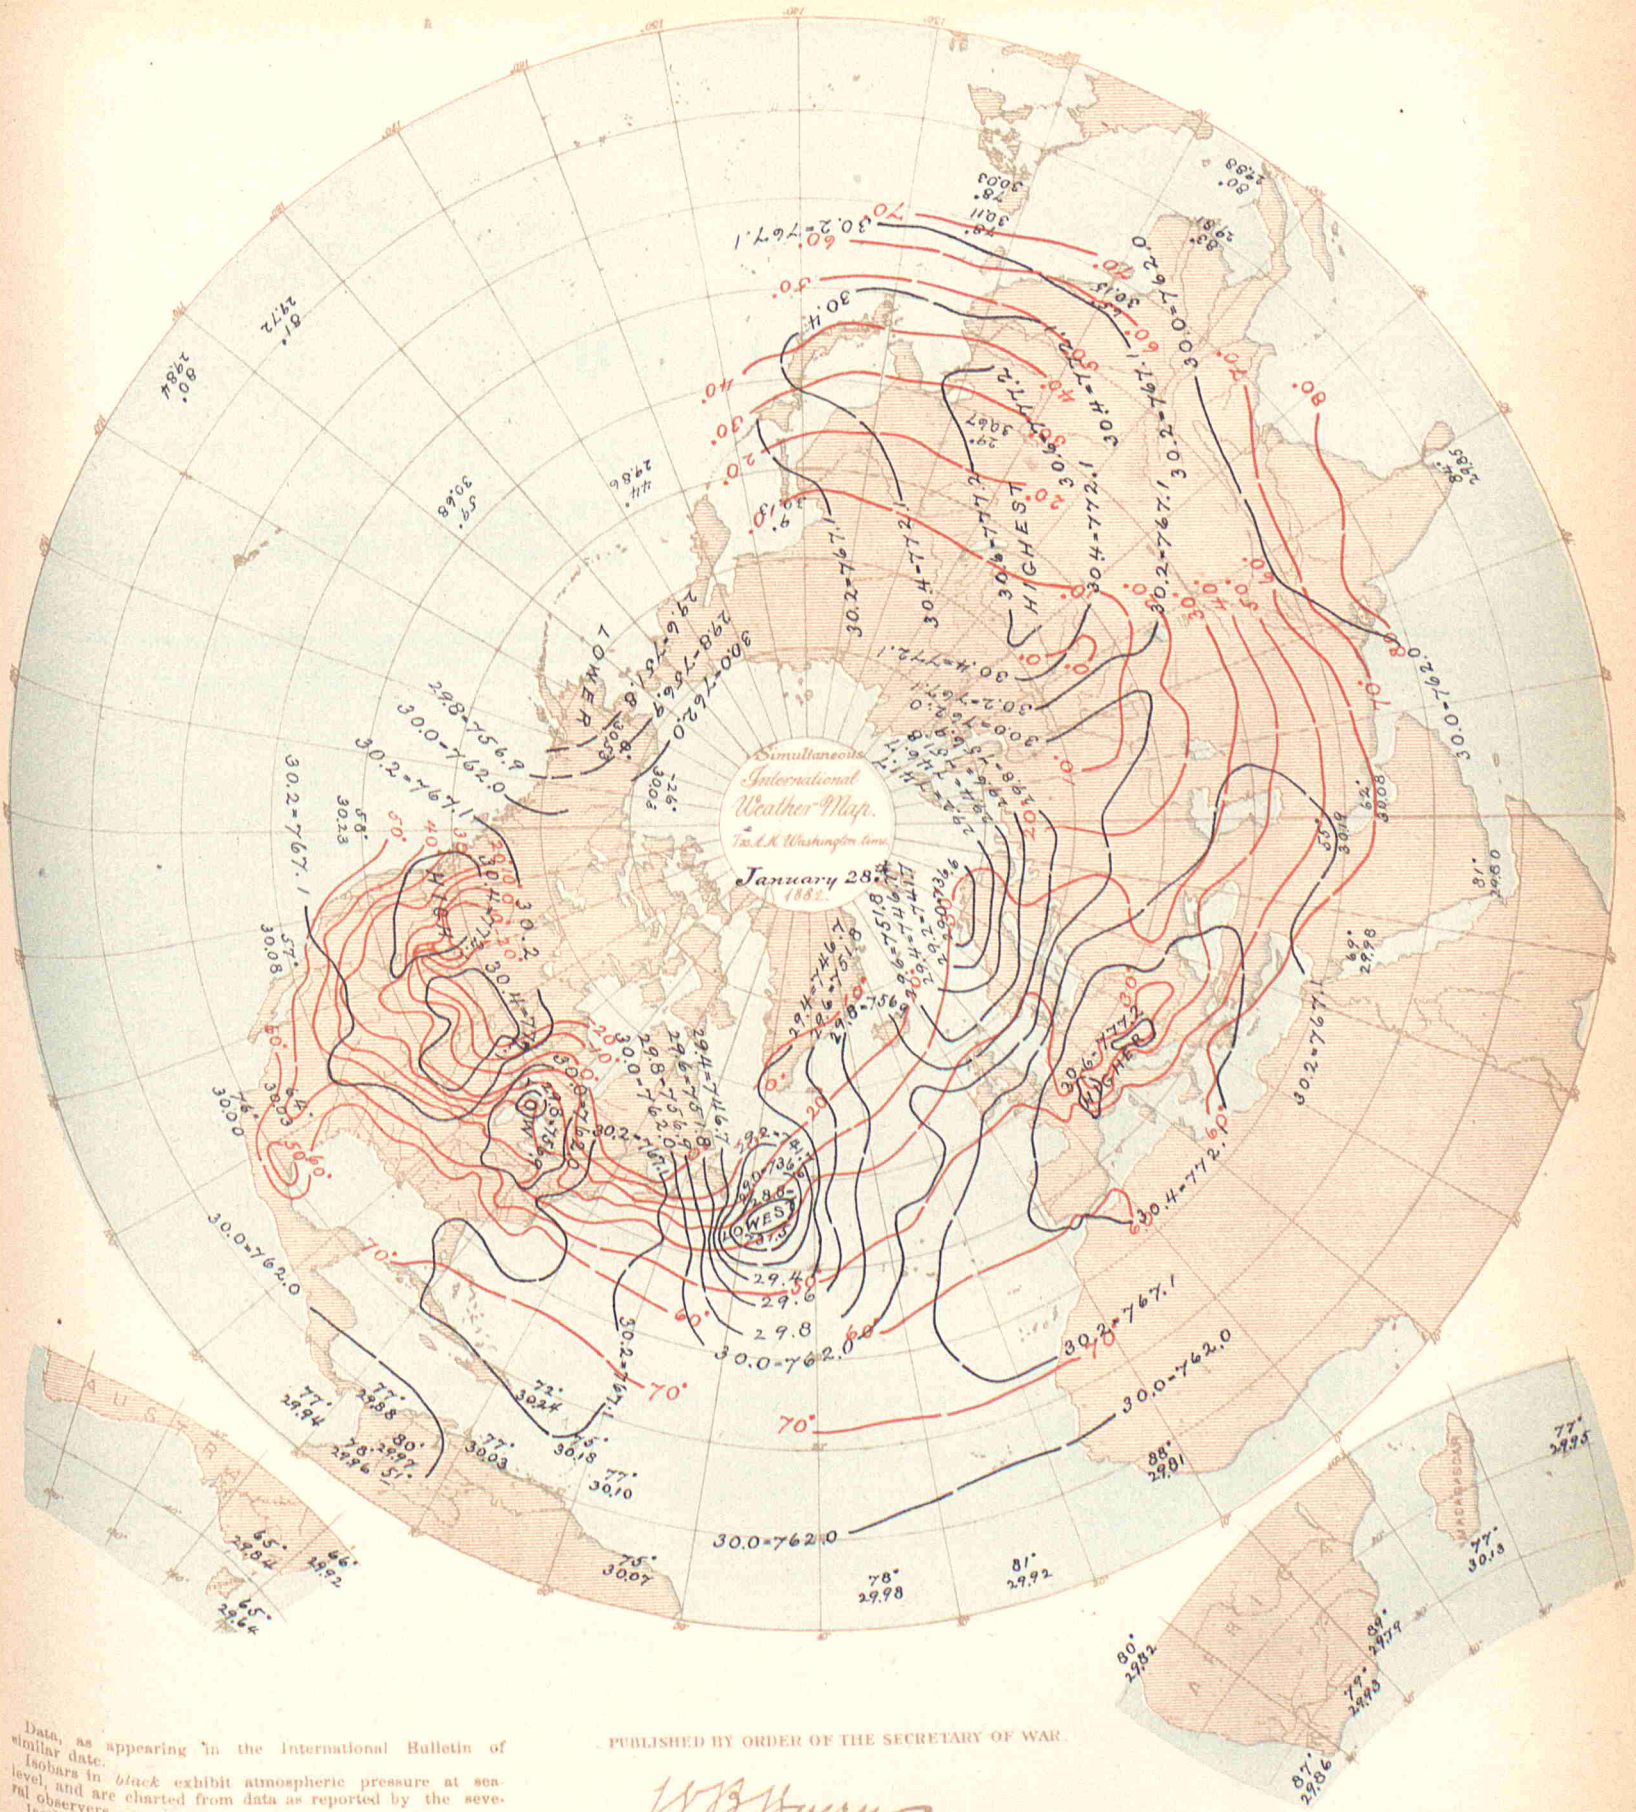
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,

Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. Hazen

Brig. & Bvt. Maj. Gen'l.
Chief Signal Officer, U. S. A.

Heliotype Printing Co Boston.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON JANUARY 29, 1882.

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

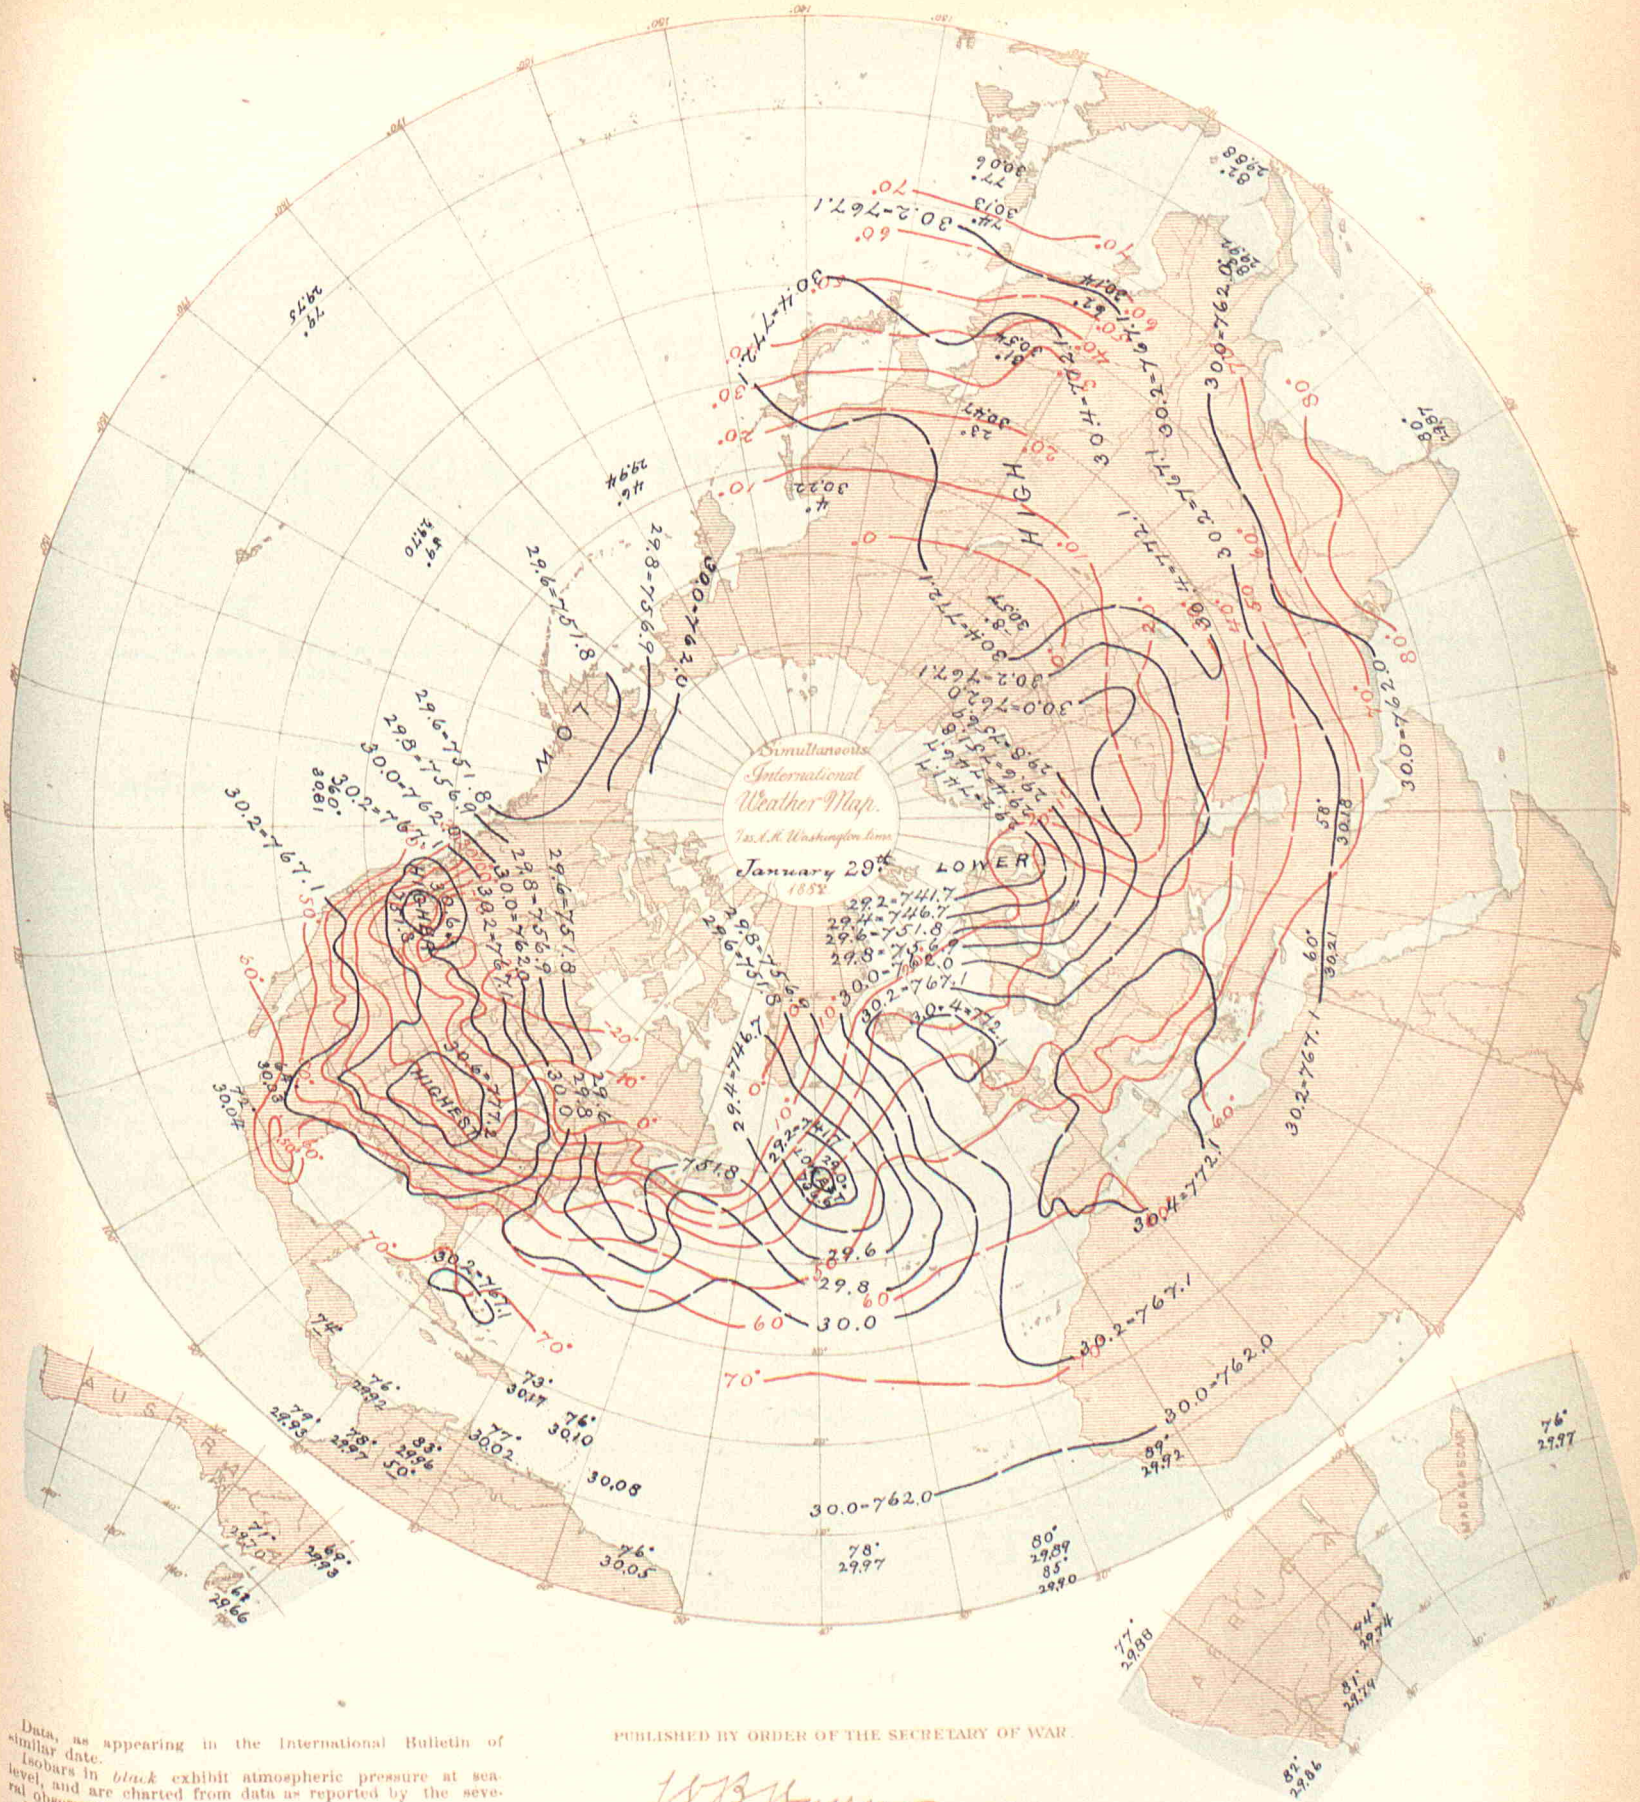
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. Hazen

Brig. & Bvt. Maj. Gen'l.
Chief Signal Officer, U. S. A.

Heliotype Printing Co Boston

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON JANUARY 30, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,

Brig. & Bvt. Maj. Gen'l,

Chief Signal Officer, U. S. A.

Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON JANUARY 31, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

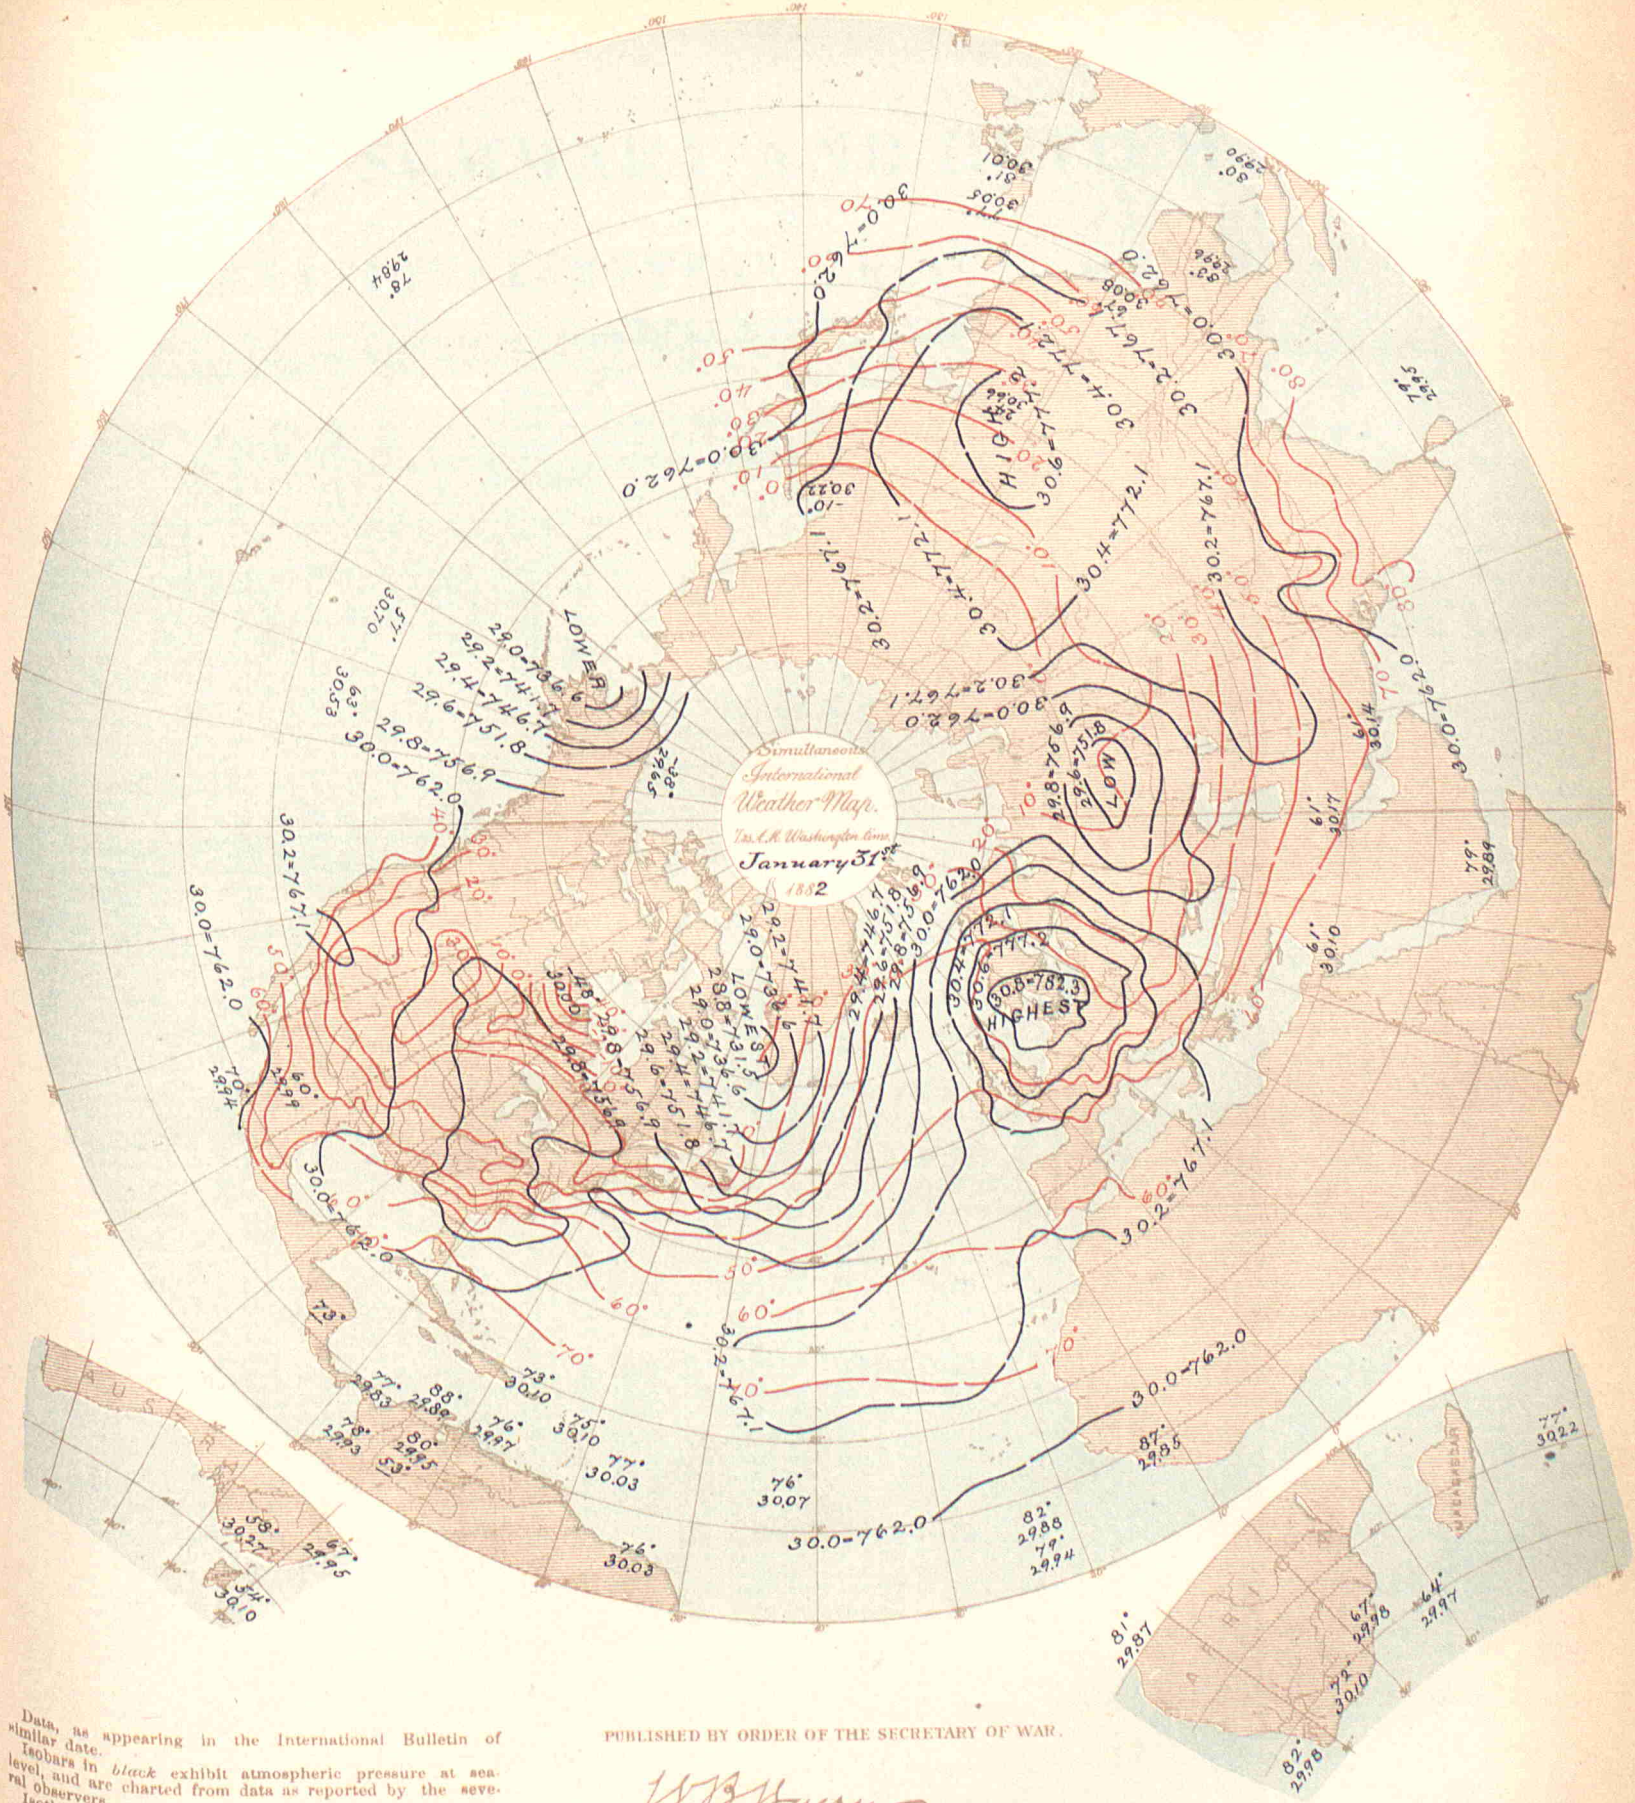
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

NOTE.—The above observations, taken at 7 a. m., Washington time, and commencing with the opening of station, were received too late for publication in the DAILY BULLETIN.

REVIEW.

The following review refers to three international charts which continue the series of chart iv. begun in January, 1877, and heretofore described in the MONTHLY WEATHER REVIEW.

They exhibit the mean pressure, mean temperature, and the prevailing direction of the wind over the northern hemisphere for the months of November and December, 1880, and for January, 1881, as determined from one observation taken simultaneously each day at 7.35 a. m. Washington, or 0.43 p. m. Greenwich mean time.

For the description of these charts, much valuable information has been obtained from the "Monatliche Uebersicht der Witterung," published by Professor Dr. G. Neumayer, Director of the German Marine Observatory at Hamburg; from the the reports of the Meteorological Society of Great Britain, and from the "Bulletin Mensuel," published by Mr. Marc Dechrevens, of Zi-Ka-Wei, China.

During November, 1880, the most marked area of low barometer, indicated by the isobar of 29.3 (744.2), occupied the Arctic ocean between Greenland and Nova Zembla, and included within its limits the extreme northern part of the Scandinavian peninsula, the lowest monthly mean, 29.29 (743.9) being reported from Tromsoe, Norway. The barometric gradient increases somewhat rapidly in a southerly and easterly direction, until the isobaric line of 30.1 (764.5) in southwestern Siberia and central Europe is reached.

Three areas of barometric maxima appear on the chart for November.

The most marked of these includes Toorkistan and the Caspian sea, the greatest mean pressure 30.55 (776.0) being reported at Nukuss.

The second area of high mean pressures is shown near the northwestern coast of Africa and extends westward to the Madeira islands and to Azores; within this area, the greatest mean pressure was 30.24 (768.1).

The third area of barometric maxima covers the United States from the Atlantic coast westward to the hundredth meridian and south of the forty-second parallel of latitude; within this area, the mean pressures range from 30.22 (767.6) to 30.29 (769.4).

For the Pacific coast, the mean atmospheric pressure ranges from 30.08 (764.0) in southern California to 30.33 (770.4) in Oregon.

Compared with the preceding month, (October, 1880,) the barometric pressure over the United States has increased in all parts of the country; in Canada it has increased .1 inch. In Europe, the atmospheric pressure has decreased in the Scandinavian peninsula and in northern Russia.

In all other parts of the continent, there has been an increase of pressure.

In Greenland, the pressure has decreased about .5 inch, the mean of the month at Godthaab being 29.57 (751.1); the decrease extends eastward to Iceland, where the mean pressure is .67 inch below that of October.

In the Azores, and over the Atlantic ocean south of N. 40°, the pressure has increased about .25 inch; north of the fortieth parallel, the increase is less marked.

In British India, the barometric pressure has increased .15 inch, and in China and Japan, the increase ranges from .05 to .15 inch.

Compared with the corresponding month of previous years, the mean atmospheric pressure is very decidedly above the normal in the United States, the excess ranging from .1 inch on the Atlantic to .2 inch on the Pacific coasts.

In Canada, the mean pressure is everywhere above the normal.

The following table shows the mean pressure and the mean temperature, with corresponding departures, for the month of November, 1880, in the several countries of Europe and Asia, compared with the means as determined from observations taken during the years 1877, 1878, and 1879:—

Countries.	Mean Pressure.			Mean Temperature.		
	Nov., 1877, 1878, and 1879	Nov., 1880.	Departure.	Nov., 1877, 1878, and 1879.	Nov., 1880.	Departure.

* Mean for two years only.

In the United States and Canada, the mean temperature of the air was below the normal, the most noteworthy deficiencies occurring in Texas and the Rocky mountain regions. In many sections, this was the coldest November recorded since the establishment of the Signal Service stations. In Europe, the mean temperature was generally above the normal, except in the Scandinavian peninsula and in Denmark. In British India, the temperature is below the mean of the last three years.

The following are some of the extreme monthly mean temperatures reported at isolated stations:—

Highest.	Degrees.	Lowest.	Degrees.
Freetown, Africa	82.9	York Factory, British America	−1.0
Puerto Berrio, South America	81.1	Nertchinsk, Siberia	+3.6
Paramaribo, South America	80.5	Jacobshavn, Greenland	12.4
Navassa, West Indies	79.6	Upernavik, Greenland	16.2

In the United States, the prevailing directions of the wind were: northerly in Texas, and northerly and northeasterly on the Atlantic coast and in the Gulf states; elsewhere, the winds were westerly and northwesterly. In Canada, the prevailing winds were westerly and southwesterly. In Europe, the winds were mostly southwesterly, except in the southern

peninsulas, where they were northerly and northeasterly. In Japan, northerly winds prevailed; at Zi-Ka-Wei, China, the prevailing direction was northwesterly. Over the Atlantic ocean, between the meridians of 40° and 60° west longitude and north of the fortieth parallel, strong northwesterly winds prevailed. From the fortieth meridian eastward, brisk to strong westerly and southwesterly winds were general. The rainfall during the month was below the average in the New England and middle Atlantic states and in the Pacific coast region; elsewhere in the United States it was in excess of the average. In Canada, the rainfall was above the average, except in the Maritime Provinces, where it was about 1.50 inches below the average. In Europe, the rainfall was normal, or slightly above the average.

During the month of December, 1880, the region of least mean pressure was in northern Norway, where the mean barometric reading was 29.39 (746.5). The barometric gradients were somewhat steep to the southeastward of the above region, but in the southern and western quadrants the gradients were of moderate inclination. A second area of low pressure, enclosed by the isobar of 29.7 (754.4), occupied the north Atlantic ocean between the meridians of 30° and 50° west longitude and between 50° and 60° north latitude.

The areas of barometric maxima are distributed as follows: The first, indicated by the isobaric line of 30.6 (777.2) occupies eastern Siberia; the pressure gradually diminished in a southerly direction, the isobars of 30.4 (772.1) and 30.3 (769.6) covering the Chinese Empire. The second area of high pressures covers the Iberian peninsula and northwestern Africa, and extends westward to the Madeira Islands. In the United States, the area of greatest pressures occupies the states of Missouri and Arkansas, northern Louisiana, northeastern Texas, and the eastern parts of Kansas and Nebraska. The isobar of 30.2 (767.1) also covers Montana and the northwest territories of British America.

Compared with the corresponding chart of the preceding month (November, 1880), no change has occurred in the position of the area of absolute low pressures. For December, the isobaric lines present a somewhat elongated form, the pressure having increased on the eastern and western sides of the depression, while it has decreased in the southern quadrants. In Greenland and in Iceland, the pressure has increased about .25 inch, while a corresponding decrease has occurred in southern Russia. The high area, which, in November occupied the Western Islands, has extended eastward, and now covers Algeria, Tunis, and the Iberian peninsula. In the North American continent, there has been a general decrease of pressure, except over the region near Hudson's bay and in Manitoba, where the pressure has increased. In the United States, the decrease of pressure averages about .12 inch over the country east of the Rocky mountains; in the Pacific coast regions, the decrease is more marked, where it averages from .05 inch in the south Pacific coast region to .45 inch in Washington Territory and Oregon. In Canada, the mean atmospheric pressure has decreased .1 inch. In Asia, the barometric pressure has increased throughout the continent, except in Toorkistan, where it has decreased about .15 inch. The highest mean reported was 30.7 (779.8) at Nertchinsk, Siberia.

Compared with the corresponding month of previous years, the mean atmospheric pressure is slightly below the normal in that part of the United States lying between the Atlantic and the ninetieth meridian. Between the Rocky mountains and the above-mentioned meridian, the pressure was slightly above the normal. In southern California, the pressure was normal, and in the central and northern districts, it was from .1 to .2 inch below the normal. In Canada, the mean atmospheric pressure was everywhere below the normal.

The following table shows the mean pressure and the mean temperature, with corresponding departures, for the month of December, 1880, in the several countries of Europe and Asia, compared with the means as determined from observations taken during the years 1877, 1878, and 1879:—

Countries.	Mean pressure.			Mean temperature.		
	Dec., 1877, 1878, 1879.	Dec., 1880.	Departure.	Dec., 1877, 1878, 1879.	Dec., 1880.	Departure.

* Means for two years only.

In the United States, the mean temperature of the air, in December, 1880, ranged from 1° to 6° below the normal in all parts of the country, except in the Pacific coast districts and in Arizona, where it was from 1° to 4° above the normal. At the close of the month, the minimum temperatures were the lowest ever recorded in the southern states, since the establishment of the Signal Service stations. In Canada, the mean temperature was below the normal, except in the Maritime Provinces, where it was above the normal. In Europe, the mean temperature of the air was above the normal, except in the Scandinavian peninsula, where it was about 4° below the normal. The greatest departures from the normal occurred in Germany, France, Austria, and the British Isles; elsewhere the departures were less marked. In British India, the temperature was about normal; the highest mean, 79°.2 F. (26°.2 C.), was reported at Bombay; and the lowest, 58°.2 F. (14°.6 C.), at Lahore.

The following are some of the extreme monthly mean temperatures reported at isolated stations:—

HIGHEST.	Degrees.	LOWEST.	Degrees.
Fort Napier, South Africa	84.7	York Factory, British America	—28.4
Cape Town, Cape of Good Hope	80.0	Nertchinsk, Siberia	—13.4
Bridgetown, Barbadoes	79.4	Yeniseisk, northwestern Siberia	— 0.8
Puerto Berrio, South America	79.4	Upernavik, Greenland	+ 0.7
Paramaribo, South America	78.4		

The prevailing directions of the wind, in the United States, were northerly and northwesterly, except in the lake region, where they were southwesterly. On the Pacific coast, the winds were mostly southeasterly. In central Europe, the prevailing winds were westerly and southwesterly; in European Russia they were generally southerly; in Italy and on the northern shores of the Mediterranean they were mostly northwesterly. In Japan, the winds were northerly, and at Zi-Ka-Wei, China, the prevailing direction during the month was north-northwesterly. Over the north Atlantic ocean, the prevailing winds were northwesterly, from the coast of the United States eastward to the fifty-fifth meridian; between 30° and 50° north latitude, and from 55° west longitude eastward to the European coasts, the winds were mostly southwesterly; north of the fifty-fifth parallel northeasterly winds prevailed.

The rainfall (including melted snow), during December, 1880, was below the average in the United States, except in the states adjoining the Atlantic ocean and in Minnesota, where it was slightly in excess of the average. On the Pacific coast, the rainfall was much above the average, the largest excess, 7.25 inches, occurring in the central Pacific coast region. In Canada, the rainfall was below the average, the greatest deficiency occurring in the province of Ontario. In Europe, the rainfall was in excess of the average.

During the month of January, 1881, the atmospheric pressure over the northern hemisphere was distributed as follows: A large area of low pressure occupied the north Atlantic ocean, the region of least pressure, enclosed by the isobar of 29.5 (749.3), being near W. 35° and 40°, and between N. 40° and 50°. A second area of low pressures occupied that part of northern Russia situated near the White sea; within which area, the lowest mean pressure reported was 29.49 (749.0), at Archangel. From this region southward, the pressure increased slowly, while, from the Ural mountains eastward to the Sea of Okhotsk, the increase of pressure was more rapid. In the United States, the mean pressure ranged from 30.15 (765.8) to 30.35 (770.9) from the Atlantic westward to the Pacific.

Compared with the corresponding chart for the preceding month (December, 1880), it will be observed that the area of low pressure which then covered northern Scandinavia, has moved to the eastward with slightly increased pressure. The barometric gradients have become somewhat steeper over the Scandinavian peninsula, but in the eastern part of Europe the changes have been slight and unimportant. The area of low-pressures, which, in December, was central near the fortieth meridian and to the north of N. 50°, has apparently moved southeastward with decreased pressure and is now shown near N. 45°, W. 35°. Under the influence of this depression the mean pressure has decreased slightly over western Europe, and the area of high pressures which covered the Azores, the Iberian peninsula, and the western part of the Mediterranean, has given way and is now shown near the eastern shores of that sea. In the United States, the mean atmospheric pressure has increased. The most noteworthy increase of pressure is shown in Oregon, Washington Territory and Idaho, where the increase averages .23 inch; elsewhere it averages .1 inch. In Canada, the mean pressure has increased about .12 inch. It has also increased in Greenland and in Iceland. In Asia, the pressure has remained unchanged, except over the eastern part of Japan, where a slight decrease has occurred.

Compared with the corresponding month of previous years, the mean atmospheric pressure over the United States is slightly above the normal, except in Georgia and the Carolinas, where it is about .05 inch below the normal. In the north Pacific coast region, the pressure is .15 inch above the mean for the month. In Canada, the pressure was above the normal, except in the Maritime Provinces, where it was .1 inch below.

In Europe, the mean pressure was everywhere below the normal, the deviation being most marked in the southern parts of the continent.

The following table shows the mean pressure and the mean temperature, with corresponding departures, for the month of January, 1881, in the several countries, compared with the means as determined from observations taken during the years 1877, 1878, 1879, and 1880:—

Countries.	Mean pressure.			Mean temperature.		
	Jan., 1877, 1878, 1879, 1880.	January, 1881.	Departure.	Jan., 1877, 1878, 1879, 1880.	January, 1881.	Departure.

* Mean for three years only.

In the United States, the mean temperature of the air was below the normal from the Rocky mountains eastward to the Atlantic; the departures ranging from normal in Florida to 10° below the normal in Dakota, Nebraska, Kansas, and Missouri. At Washington, District of Columbia, the mean temperature of the month, 26°.7, was the lowest recorded since the establishment of the Signal Service; the minimum temperature of the month, —14°, has been equaled only once during a period of forty-six years, namely: In January, 1835, when the temperature fell to —14°. In most districts, the

mean temperature was the lowest on record, excepting that of January, 1875. At stations west of the Rocky mountains, the mean temperature of the month was about 2° above the normal, except in southern California, where it was below the normal.

It is worthy of note that, while the mean temperature was unusually high in Greenland, being about 12° above the mean as determined from simultaneous observations taken during the last four years, the mean temperature in Iceland was correspondingly low, being about 13° below the mean as determined from the same series of observations. (See table of comparative temperatures at isolated stations.) The weather of January, 1881, in Iceland, is said to have been the most severe known for years; large numbers of sheep perished; ponies were killed to save hay, and much suffering was experienced by the people.

In Europe, the temperature of the air was everywhere below the normal; the departure being more marked in western Europe than in the eastern and southern sections. The following extracts referring to the frost of January, 1881, in the British Isles, are taken from "Symons' Monthly Meteorological Magazine," for February, 1881:—

From January 7th to 26th, an intensely severe frost prevailed over the whole of the United Kingdom, which for severity has not been equalled since the winter of 1814; but that was more remarkable for its long continuance, than for its extreme severity. On every day from the 7th to the 12th, the temperature fell below 10° at several places in the south of Scotland, the northwest of England, and the central part of Ireland, and the frost occurred all over the United Kingdom, except at a few of the extreme sea-coast stations. On the 13th, the lowest reading registered was, —2° at Cardigan. Temperatures below 20° prevailed over almost the whole of Scotland, the western half of England, and the greater part of Ireland. On the 14th, readings below zero occurred in several parts of the country, the lowest being, —4° at Corwen, —3° at Cardigan, and —1° at Alston. * * * On the 16th, the frost became more intense, temperatures below zero being registered in the south of Scotland, and in the north and northwest of England. The lowest readings were, —10° at Stobo, —8° at Kelso and Corwen, —7° at Scaleby and Alston, —1° at Blackpool, and 0° at Chester, * * * On the 17th, the temperature fell below zero over the south of Scotland and north of England, the lowest readings being, —16° at Kelso, —15° at Stobo, —11° at Lauder, and —10° at Melrose. On the 18th, the lowest readings registered were, —15° at Stobo, —12° at Blackadder and Kelso, —10° at Melrose, and —4° at Wick. The temperature fell below 10° over the greater part of Scotland, and the north, east, and west of England, while readings below 20° prevailed all over the United Kingdom. Temperatures ranging from zero to 20°, prevailed over the British Isles until the 27th, when the temperature began to rise, and ultimately a thaw set in.

In Holland, the lowest temperature of the month, —5°.8 F. (—21° C.), occurred on the 25th and 26th. In northern Germany, the minimum temperature, —0°.4 F. (—18° C.) to —16° F. (—27° C), occurred generally from the 25th to the 27th, while in central and southern Germany, the periods of greatest cold were the 15th and 16th, and 22d to 24th. In France, the coldest days were the 16th, and from the 21st to 26th. In European Russia, the temperature was below the normal; the Baltic ports were blocked with ice, and navigation was generally suspended.

In British India, the temperature was below the normal; the highest mean temperature, 82°.8 F., (28.2° C.,) was reported from Poona, and the lowest, 60°.6 F., (15°.9 C.,) at Sibsagar.

In Siberia, the temperature was above the normal; at Barnaul, the mean for January, 1881, was about 17° above the January normal. In Toorkistan, the temperature was considerably above the normal, and in China, it was slightly above. At Zi-Ka-Wei, China, the coldest day of the month was the 10th, when the temperature at 7 a. m., Washington mean time, was 22°.1 F., (—5°.5 C.,) and the warmest days were the 27th and 31st, when the thermometer registered 45°.1 F., (7°.3 C.,) and 48°.9 F., (9°.4 C.,) respectively.

In Algeria, the mean temperature was about 6° above the normal.

The following are some of the extreme monthly mean temperatures reported at isolated stations:—

Highest.	Degrees.	Lowest.	Degrees.
Freetown, South Africa	85.1	York Factory, British America	—32.9
Puerto Berrio, South America	82.0	Nertschinsk, Siberia	—20.4
Cape Town, Cape Good Hope	87.4	Nikolaivsk on the Amoor	—12.6
Manila, Philippine Islands	79.8	Archangel, Russia	+ 0.7

In the United States, the prevailing winds were northerly and northwesterly, from the Rocky mountains eastward to the Atlantic ocean, except in the lake region, where the winds were westerly and southwesterly. On the Pacific coast, the winds were generally from east to south. In Canada, the prevailing winds were westerly and southwesterly in the western part of the Dominion, and northwesterly in the Maritime Provinces. In the continent of Europe, the winds were generally variable; in the several countries they were as follows: Northerly and northeasterly in the British Isles; northerly in northern Scandinavia, and westerly at stations in the southern part of the peninsula; northeasterly and westerly in Denmark, and southerly and southwesterly in Germany; in France and Austria, the winds were mostly northeasterly; in Spain and Portugal, they were southwesterly, except on the coast, where the wind was northeasterly; in Russia, the prevailing wind was southwesterly; in Japan, the wind was northwesterly. Over the north Atlantic ocean, north of the forty-fifth parallel, the prevailing wind was northeasterly; from the coast of the United States eastward to the forty-fifth meridian, the wind was northwesterly; between N. 40° and 50° and W. 35° and 45°, it was northeasterly; from W. 30° to W. 10° and between the parallels of 40° and 45° N., it was southeasterly; between N. 25° and 40° and east of the fortieth meridian, the prevailing wind was southwesterly.

The rainfall, including melted snow, was in excess of the average in the Atlantic coast districts of the United States. In the districts lying between the Mississippi river and the Alleghany mountains, it was below the average. On the Pacific coast, the rainfall was above the average, except in the southern district, where there was a deficiency. In Europe, the precipitation, mostly in the form of snow, was generally below the average in all parts of the continent.

GENERAL REMARKS.

All data which appears in the DAILY BULLETIN OF SIMULTANEOUS METEOROLOGICAL OBSERVATIONS are copied from the regular exchanges of this office. The barometer readings for land stations, in the first and second columns, are reduced to freezing and their respective standards; those in the third and fourth columns to sea-level. When necessary, corrections for instrumental error, temperature and reduction to sea-level are applied at this office. In the Naval and Marine Series, corrections for temperature and reduction to sea-level are always applied, while those for instrumental error, only when such corrections can be ascertained with close approximation, as by comparison when vessels are at or near land stations. Relative humidity generally requires computation from the hygrometrical observations. When rain has fallen, but neither the amount nor duration is recorded, the word "blank" is published in the rainfall column. The weather is generally published as given. The following symbols and abbreviations are common to all series, viz.: †, aneroid; *, instrumental error not known; c, cirrus; k, cumulus; s, stratus; n, nimbus; d, scud; f, fracto; p, pallio; hz, haze; fg, fog; sk, smoke; inap, inappreciable; d, clouds, detached clouds. The movement of the air is published as given on the originals, when indicated by velocity in miles per hour, in meters per second, or by force, all variations of the latter being reduced to the common scale of 0 to 10. Those stations reporting the movement in pounds pressure per square foot are reduced to force on the common scale, and those in kilometers per hour, to meters per second and miles per hour. The distinction between upper and lower clouds is carefully made in the United States and a portion of the Canadian series, and the various formations are indicated by the letters

above given and their combinations. In the MONTHLY SUMMARY OF INTERNATIONAL SIMULTANEOUS METEOROLOGICAL OBSERVATIONS the position of stations (latitude and longitude) are obtained from Keith Johnson's Index Geographicus, except where more exact information is furnished. The elevations of stations are obtained either from the annual, semi-annual and monthly publications of the various meteorological bureaus here represented, or from the original forms, upon which are entered the daily observations. In the United States series the elevations are computed from the latest surveys, and are carefully revised each month, in order to note any change in the elevation of the barometer cistern at any station. It is believed for the most part, that throughout the European and other series, the elevations as given represent the height of the barometer cistern above sea-level; at least this should be the case. The local time, where omitted or not given correctly in the originals, is carefully computed at this office. Generally, all conversions are made at this office. A letter placed opposite the name of a station or some portion of the data credited thereto, indicates that a certain number of observations are missing, corresponding to the relative position in the alphabet of the letter so used. The following remarks relate to the individual peculiarities in the *methods* of recording and the *times* of taking the international simultaneous meteorological observations, under the auspices of the various Meteorological Bureaus:

ALGERIAN SERIES.—The originals give the barometer in millimeters reduced to sea-level; temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The rainfall is measured at 7 a. m., local time, and the amount indicated in millimeters.

AUSTRALIAN SERIES.—At Melbourne the conversions are published as given in the originals. The movement of the air is indicated by velocity in miles per hour. The kind of clouds is not given except by inference from general weather terms.

AUSTRO-HUNGARIAN SERIES.—The originals give the barometer in millimeters reduced to sea-level and the temperature in Centigrade. At the following stations rainfall is measured at local time: Lemburg, 7 p. m.; Vienna, 2 p. m.; Trieste, 7 a. m. The weather is given by the Vienna symbols or in general terms.

BELGIAN SERIES.—The originals give the barometer in millimeters reduced to sea-level and the temperature in Centigrade. The weather is occasionally given by the Vienna symbols. Except for Brussels, the distinction between upper and lower clouds is not made. At Furnes, observations are taken at 12.26 p. m., local time, and at Maeseyck at 1 p. m., local time.

BRITISH SERIES.—In general the originals do not give rainfall or distinction between upper and lower clouds. Relative humidity, except for Bradford and Silloth Rectory, is not given on the originals, but is computed from hygrometrical observations. At Cardington, Galway, Oxford and Sandwick Manse the barometers are given as read off. At Free Town the barometer is reduced to freezing on the originals, but not to sea-level. The movement of the air is indicated by force, on a scale of 0 to 12, except pounds pressure per square foot at Greenwich. At the following stations rainfall is measured at local time: Bradford, 9 a. m.; Nottingham, 6 p. m.; and Aberdeen, 10 a. m. The wind direction is given to 32 points and weather by the Beaufort notation.

CANADIAN SERIES.—The originals give the barometer reduced to sea-level in English inches and the temperature in Fahrenheit.

CAPE COLONY SERIES.—At Cape Town the barometer is given on the original as corrected for temperature only. Upper and lower clouds are given on a scale of 0 to 10 and the kind occasionally indicated by abbreviating Poëy's classification.

CHINESE SERIES.—The originals give the barometer in millimeters reduced to sea-level and the temperature in Centigrade. The movement of the air is given in meters per second and the directions to 16 points. The kind of clouds is occasionally given, and the degree of cloudiness on the scale of 0 to 10; distinction between upper and lower clouds is sometimes made. The weather is given in general (French) terms. The rainfall is given in millimeters and measured at the moment of simultaneous observation.

DANISH SERIES.—The originals give the barometer in millimeters reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force, on a scale of 0 to 6. The weather is occasionally given by the Vienna symbols, but it is not certain that they always refer to the moment of simultaneous observations, except at Copenhagen. No distinction is made between upper and lower clouds and the direction of movement, together with the rain-fall, is entirely omitted.

FRENCH SERIES.—The originals give the barometer in millimeters reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in meters per second, for Mont Louis and Perpignan. In general, the rain-fall is measured at 9. a. m., local time, but at Lyons at the moment of simultaneous observation. The direction of upper and lower clouds is given, but no distinction is made as to kind. The degree of cloudiness is given on a scale of 0 to 4 at Clermont-Ferrand, Commune de Greasque and Puy de Dome, while at other stations the scale of 0 to 10 is employed, or general weather terms, from which the amount of cloudiness is inferred. The weather is given in general terms, except occasionally by the Vienna symbols at Mont Louis and Perpignan. At Guéret the observations are taken at 12.00, instead of 12.16. At Gap the observations are taken at 12.03 p. m., instead of 12.32 p. m.

GERMAN SERIES.—The originals give the barometer in millimeters reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. No distinction is made between upper and lower clouds except at Magdeburg where distinction is also made as to direction and kind, but not as to amount. The amount is given on a scale of 0 to 10, but the kind is rarely given. The weather is given in Vienna symbols or in general terms. At Berlin, observations are taken at 2.00 p. m., instead of 1.02 p. m.

GREEK SERIES.—The originals give the barometer corrected for temperature only and the thermometer in Centigrade. Hygrometrical observations are not given. The kind of clouds is occasionally given, and the amount is inferred from the general weather terms. The movement of the air is indicated by force on the scale of 0 to 10.

INDIAN SERIES.—The barometric observations refer to the Calcutta standard, which requires a correction of —0.011 inch, or 0.28 m. m. as compared with the Kew standard. The wind-velocity given is the average rate of wind since the observation of the preceding day. All conversions are published as given in the originals, where the data are recorded to an additional decimal. The weather is given by the Beaufort notation, Vienna symbols, or special symbols.

ITALIAN SERIES.—The originals give the barometer in millimeters reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometers per hour or by force on a scale of 0 to 4 as at Mondovi, Florence and Cagliari. No distinction is made between upper and lower clouds and the amount is given on a scale of 0 to 10.

JAPANESE SERIES.—The rainfall is measured at 9.30 a. m., local time, and the conversions are all published as given in the originals. Distinction is generally made between upper and lower clouds and the amount is given on the scale of 0 to 10. The weather is given in general terms.

MAURITIUS SERIES.—All conversions are published as given in the originals. The direction of the wind is given to 64 points and the rainfall is measured at 9.30 a. m., local time.

MEXICAN SERIES.—All conversions (subject to correction at this office) are published as given in the originals. The kind of clouds is given, and also the direction and amount of both upper and lower. The degree of cloudiness is indicated on the scale of 0 to 10.

NETHERLANDS SERIES.—The originals give the barometer in millimeters reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by pressure in kilograms per square meter, except at Hellevoetsluis, which gives force on the scale of 0 to 12. The humidity is not given on the originals, but for two stations it is computed from the hygrometrical observations. The weather is only given for Utrecht, from which the amount of cloudiness at that station is inferred.

NORWEGIAN SERIES.—The originals give the barometer in millimeters, reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by velocity in meters per second or by force on a scale of 0 to 6. The weather is occasionally given by Vienna symbols. At Bergen, observations upon the weather and degree of cloudiness are made at 2 p. m., local time. At Brono the observations are taken at 2.00 p. m., instead of 12.57 p. m.

PORTUGUESE SERIES.—In the originals the barometer is given in millimeters and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometers per hour, except at Angra, which gives force on the scale of 0 to 9. The weather is occasionally given by the Vienna symbols. The rainfall is measured at noon of each day.

RUSSIAN SERIES.—The originals give the barometer in millimeters reduced to sea-level and the temperature in Centigrade. At Astrakhan, the barometer cistern is below sea-level. The movement of the air is indicated by velocity in meters per second. No distinction is made between upper and lower clouds; the amount is given on the scale of 0 to 10 and the kind occasionally. The weather is occasionally given by the Vienna symbols. At Barnaul, observations are taken at 6.18 p. m., local time.

SCOTTISH SERIES.—The originals give the barometer as read off and the movement of the air as indicated by force on a scale of 0 to 6. Distinction is made between upper and lower clouds as to degree, and the amount of cloudiness is given on a scale of 0 to 10. The direction of upper clouds is given separately. The rainfall, temperature and humidity are not given at North Unst. The wind direction is given to 32 points.

SPANISH SERIES.—The movement of the air, except for sub-series, is given in kilometers per hour. The kind of clouds is occasionally given, and the degree of cloudiness on a scale of 0 to 10. The rainfall at San Juan is measured at 4 p. m., local time, and at San Fernando at midnight. The weather is given in general (Spanish) terms.

SWEDISH SERIES.—The originals give the barometer in millimeters reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in meters per second for Upsala. The kind of clouds is not given, but the degree of cloudiness is indicated on a scale of 0 to 10. The rainfall is measured at 8 a. m., local time, and the weather is occasionally given by the Vienna symbols.

SWISS SERIES.—The originals give the barometer in millimeters, corrected for temperature only, and the thermometer in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10, and at Zurich on a scale of 0 to 4. The rainfall at Zurich is measured at 9 a. m., local time, and the remainder of the observation is taken at 1.13 p. m., local time.

TURKISH SERIES.—The originals give the barometer in millimeters reduced to sea-level. The temperature is given in Centigrade. The movement of the air is indicated by force on a scale of 0 to 7 for Valona, and on a scale of 0 to 12 for Beirut. At Constantinople the velocity is given in meters per second. The kind of clouds is not given, but the amount is indicated on a scale of 0 to 10, except at Valona, at which station it is inferred from the general weather terms.

UNITED STATES SERIES.—The originals generally give the barometer reduced to sea-level and the temperature in Fahrenheit. At Bogota the barometer is corrected for temperature only; at Navassa and Puerto Berrio is given as read off, and at Rivas is omitted. The movement of the air is generally indicated by velocity in miles per hour, except on a scale of 0 to 10 for Bogota, Paramaribo and Rivis, and 0 to 12 for Puerto Berrio. The wind direction is generally given to 16 points, except 8 points for Bogota and 32 points for Rivas. On January 1st, elevation of barometer cistern at Bogota changes to 8,655 feet or 2,638 meters.

BRITISH NAVAL SERIES.—The originals give the barometer as read off. The wind direction is given to 32 points. The movement of the air is indicated by force on a scale of 0 to 12. The distinction between upper and lower clouds is made as to direction, but not as to amount. The height of sea-disturbance is given on the scale of 0 to 9, and the weather by the Beaufort notation. The direction of movement of wind, clouds and sea is compass direction, corrected only for deviation caused by the iron in the ship, while the correction for magnetic variation is applied at this office. The humidity is not given, but is computed from the hygrometrical observations.

PORTUGUESE NAVAL SERIES.—The originals give the barometer in millimeters, corrected for temperature only and the thermometer in Centigrade. The movement of the air is indicated by force on the scale of 0 to 10. The humidity is not given, but is computed from the hygrometrical observations. The kind of clouds is not given, but the amount is indicated on the scale of 0 to 10; the direction of movement is given without distinction between upper and lower. The height of sea-disturbance is given on the scale of 0 to 9, and the weather by the Beaufort notation. The rainfall is not measured, but the duration is generally given in hours and minutes.

SWEDISH NAVAL SERIES.—The originals give the barometer as read off. The movement of the air is indicated by force on the scale of 0 to 12, and the direction is corrected for magnetic variation at this office. The humidity is not given, but is computed from the hygrometrical observations. The rainfall is omitted. The height of the sea-swell is given on the scale of 0 to 9, and the weather by the Beaufort notation.

UNITED STATES NAVAL SERIES.—The originals give the barometer as read off. The humidity is not given, but is computed from the hygrometrical observations. The sea-swell and weather are given in general terms. The direction of the wind is compass direction, corrected for variation.

MERCHANT-MARINE SERIES.—Same as U. S. Naval.

OCEAN SQUARES.—The table of ocean square data shows, (1) the location of the centres of squares whose sides extend 5° each in latitude and longitude, (2) the number of days for which observations are at hand within the respective squares, and the total number of simultaneous observations reported on those days, (3) the monthly mean pressure and temperature of the air, and the mean force and total frequency of the wind at 7 a. m., Washington time, computed for the centre of each square from daily readings as obtained by interpolation between the isobars and isotherms of the daily international simultaneous weather maps.

ERRATA.

DAILY BULLETIN, January 5th, 1882, page 2, Canadian series, Parry Sound, actual barometer 29.88 inches, should read 29.87 inches.

9th, page 10, British Meteorological Office, s. s. "Humboldt," N. 11° 05′, should read S. 11° 05′.

10th, page 2, Cape Colony series, Cape Saint Francis Lighthouse, actual barometer 761.5 mm., should read 762.5 mm.

11th, page 10, Allan Line, s. s. "Prussian," barometer 764.3 mm., should read 743.4 mm.

19th, page 5, Russian series, Archangel, velocity 43 miles, should read 4 miles.

Page 11, North German Lloyd, s. s. "Oder," temperature, Fahrenheit 74.6°, should read 44.6°.

The following corrections should be applied to all barometric readings from stations in the United States series, given

below, for the period stated: Atlanta, Georgia, from December 19, 1881, to February 1, 1882, +0.01 inches, or +0.3 mm.; Dayton, Washington, from December 18, 1881, to February 1, 1882, —0.02 inches, or —0.5 mm.; Olympia, Washington, from October 1, 1879, to February 1, 1882, +0.02 inches, or +0.5 mm.; Montgomery, Alabama, from December 16, 1881, to February 1, 1882, +0.01 inches, or +0.3 mm.; Portland, Oregon, from December 26, 1881, to February 1, 1882, —0.03 inches, or —0.8 mm.; Indianapolis, Indiana, from November 24, 1881, to February 1, 1882, +0.01 inches, or +0.3 mm.; Roseburg, Oregon, from December 29, 1881, to February 1, 1882, +0.01 inches, or +0.3 mm.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

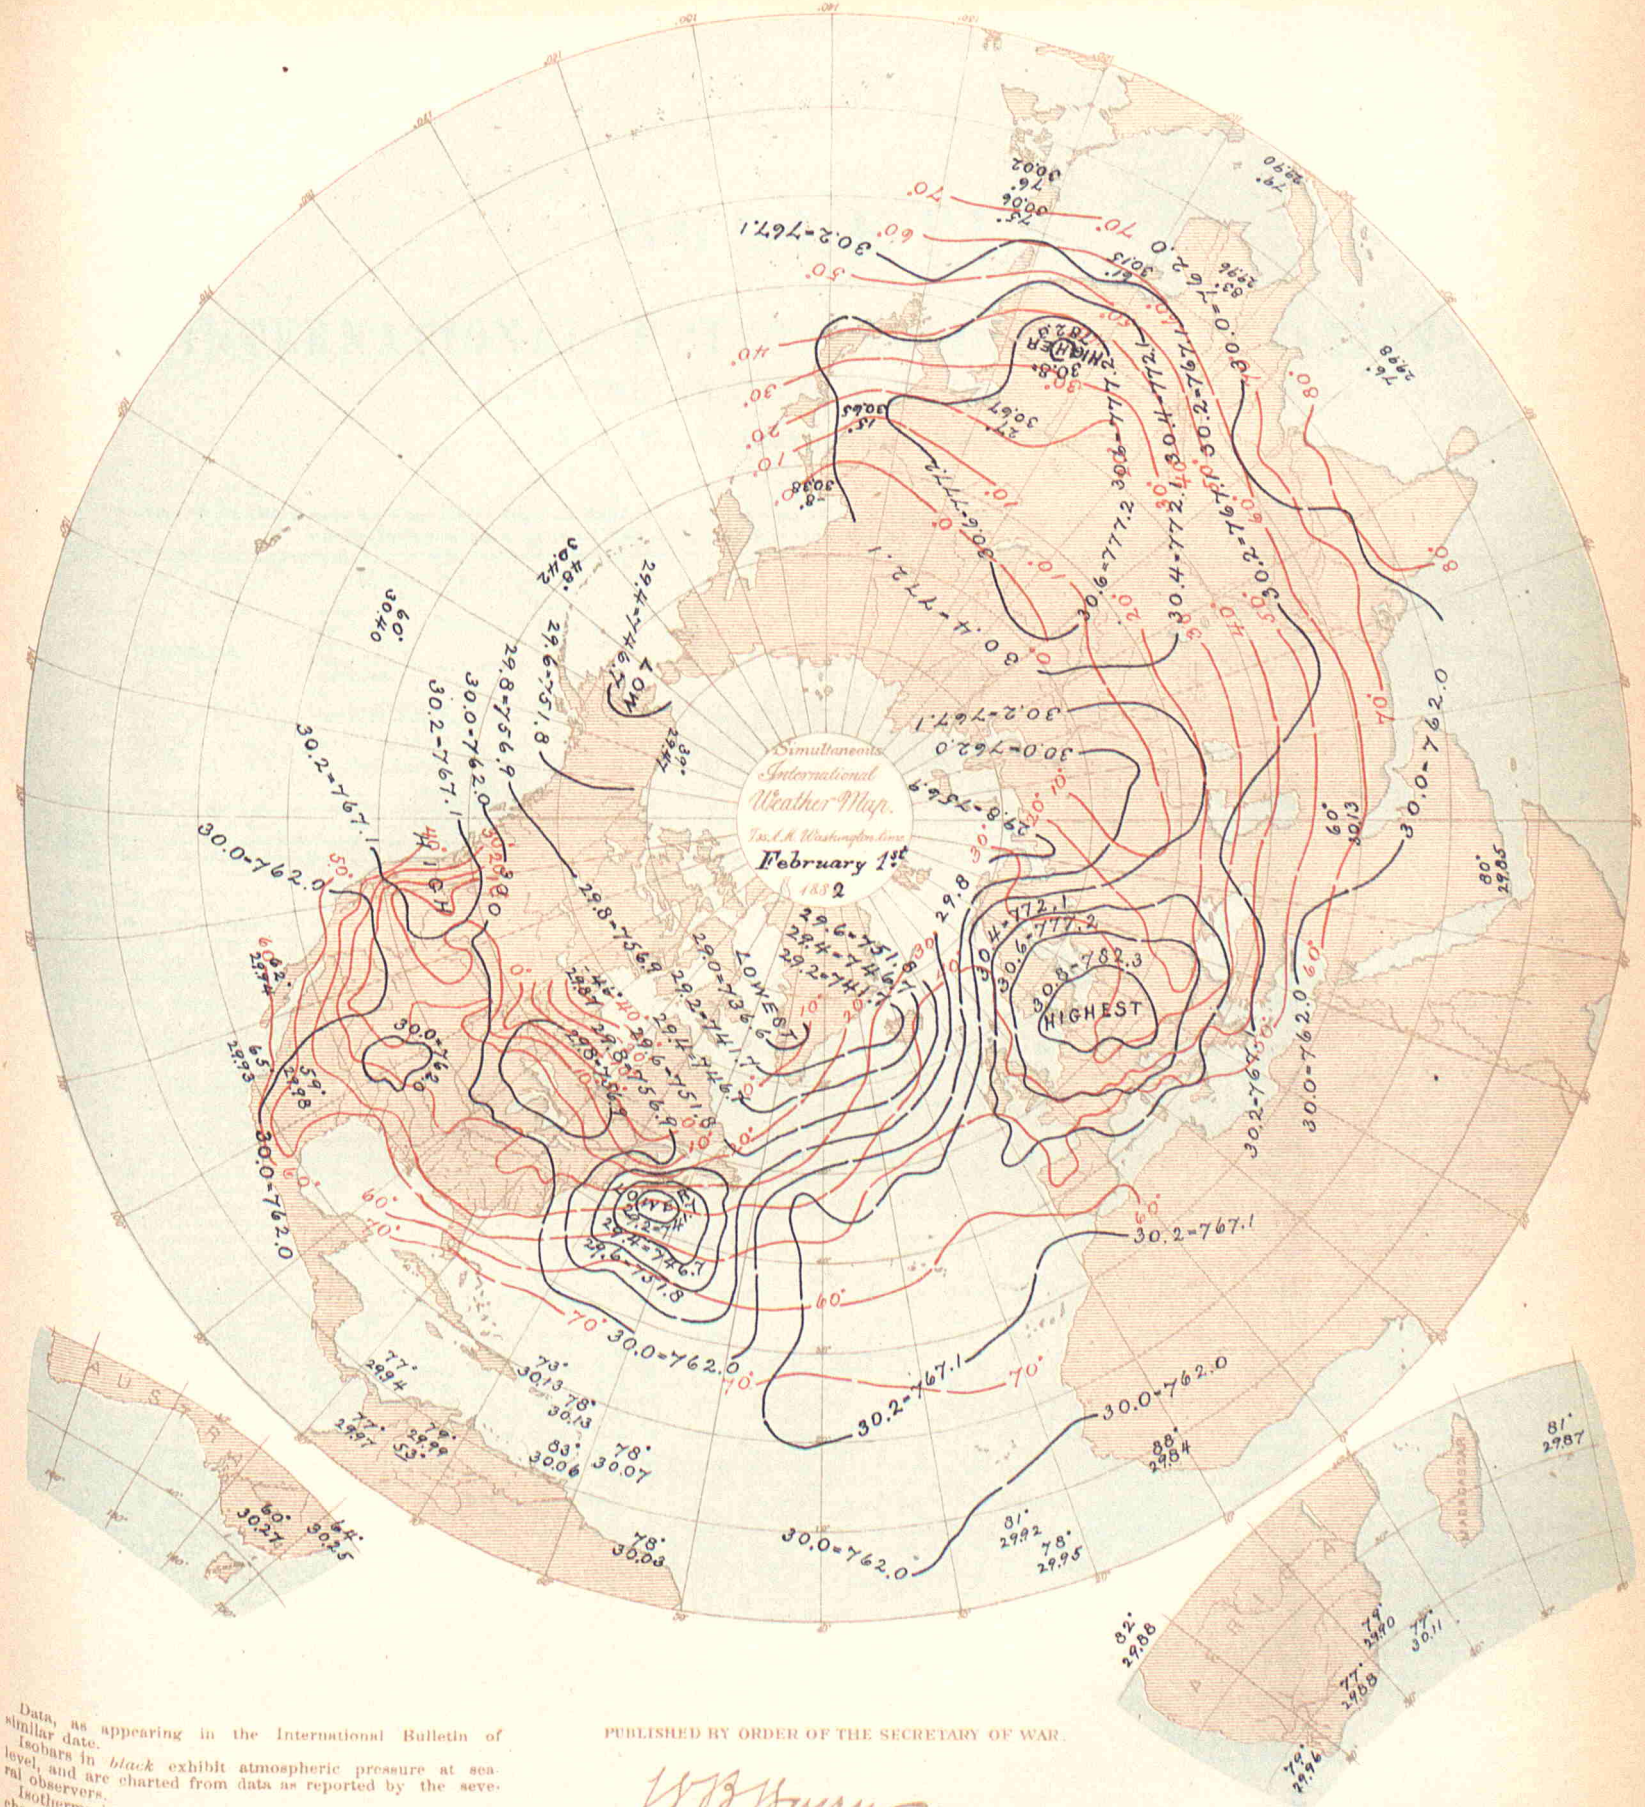
W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 2, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

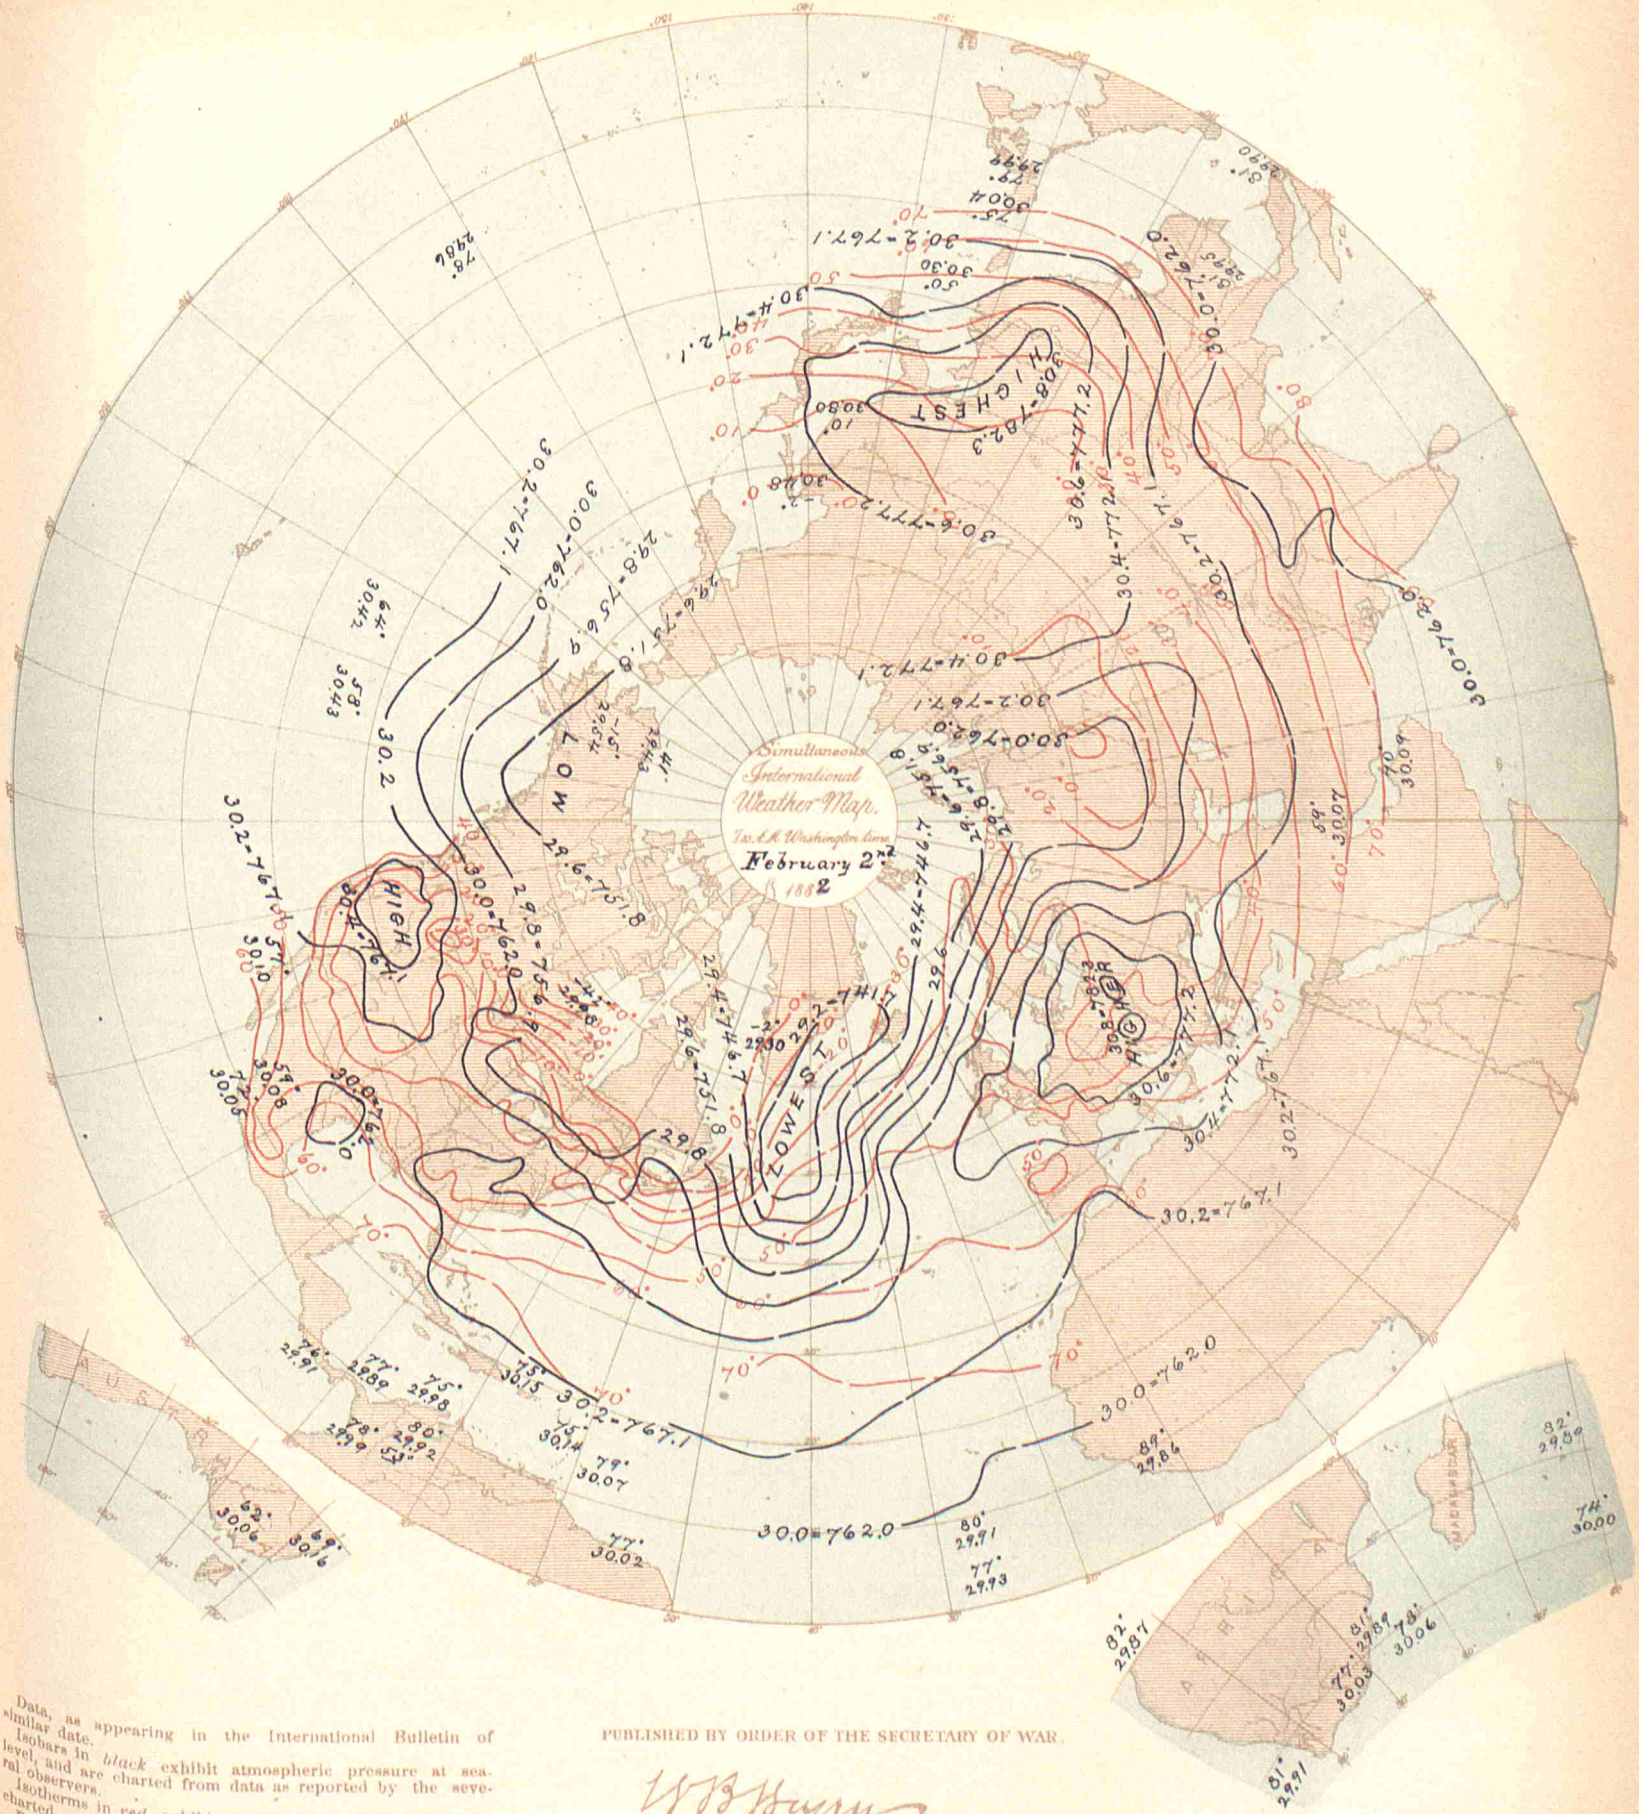
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. Hazen

Brig. & Bvt. Maj. Gen'l.
Chief Signal Officer. U. S. A.

Heliotype Printing Co Boston.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 3, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

STATIONS.	Barometer. Corrected for instrum'tal error and temperature. Inch.	Mill.	Reduced to sea-level. Inch.	Mill.	Temperature of the Air. Fah.	Cent.	Rel. Hum. Per Ct.	Wind. Direction. From. PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

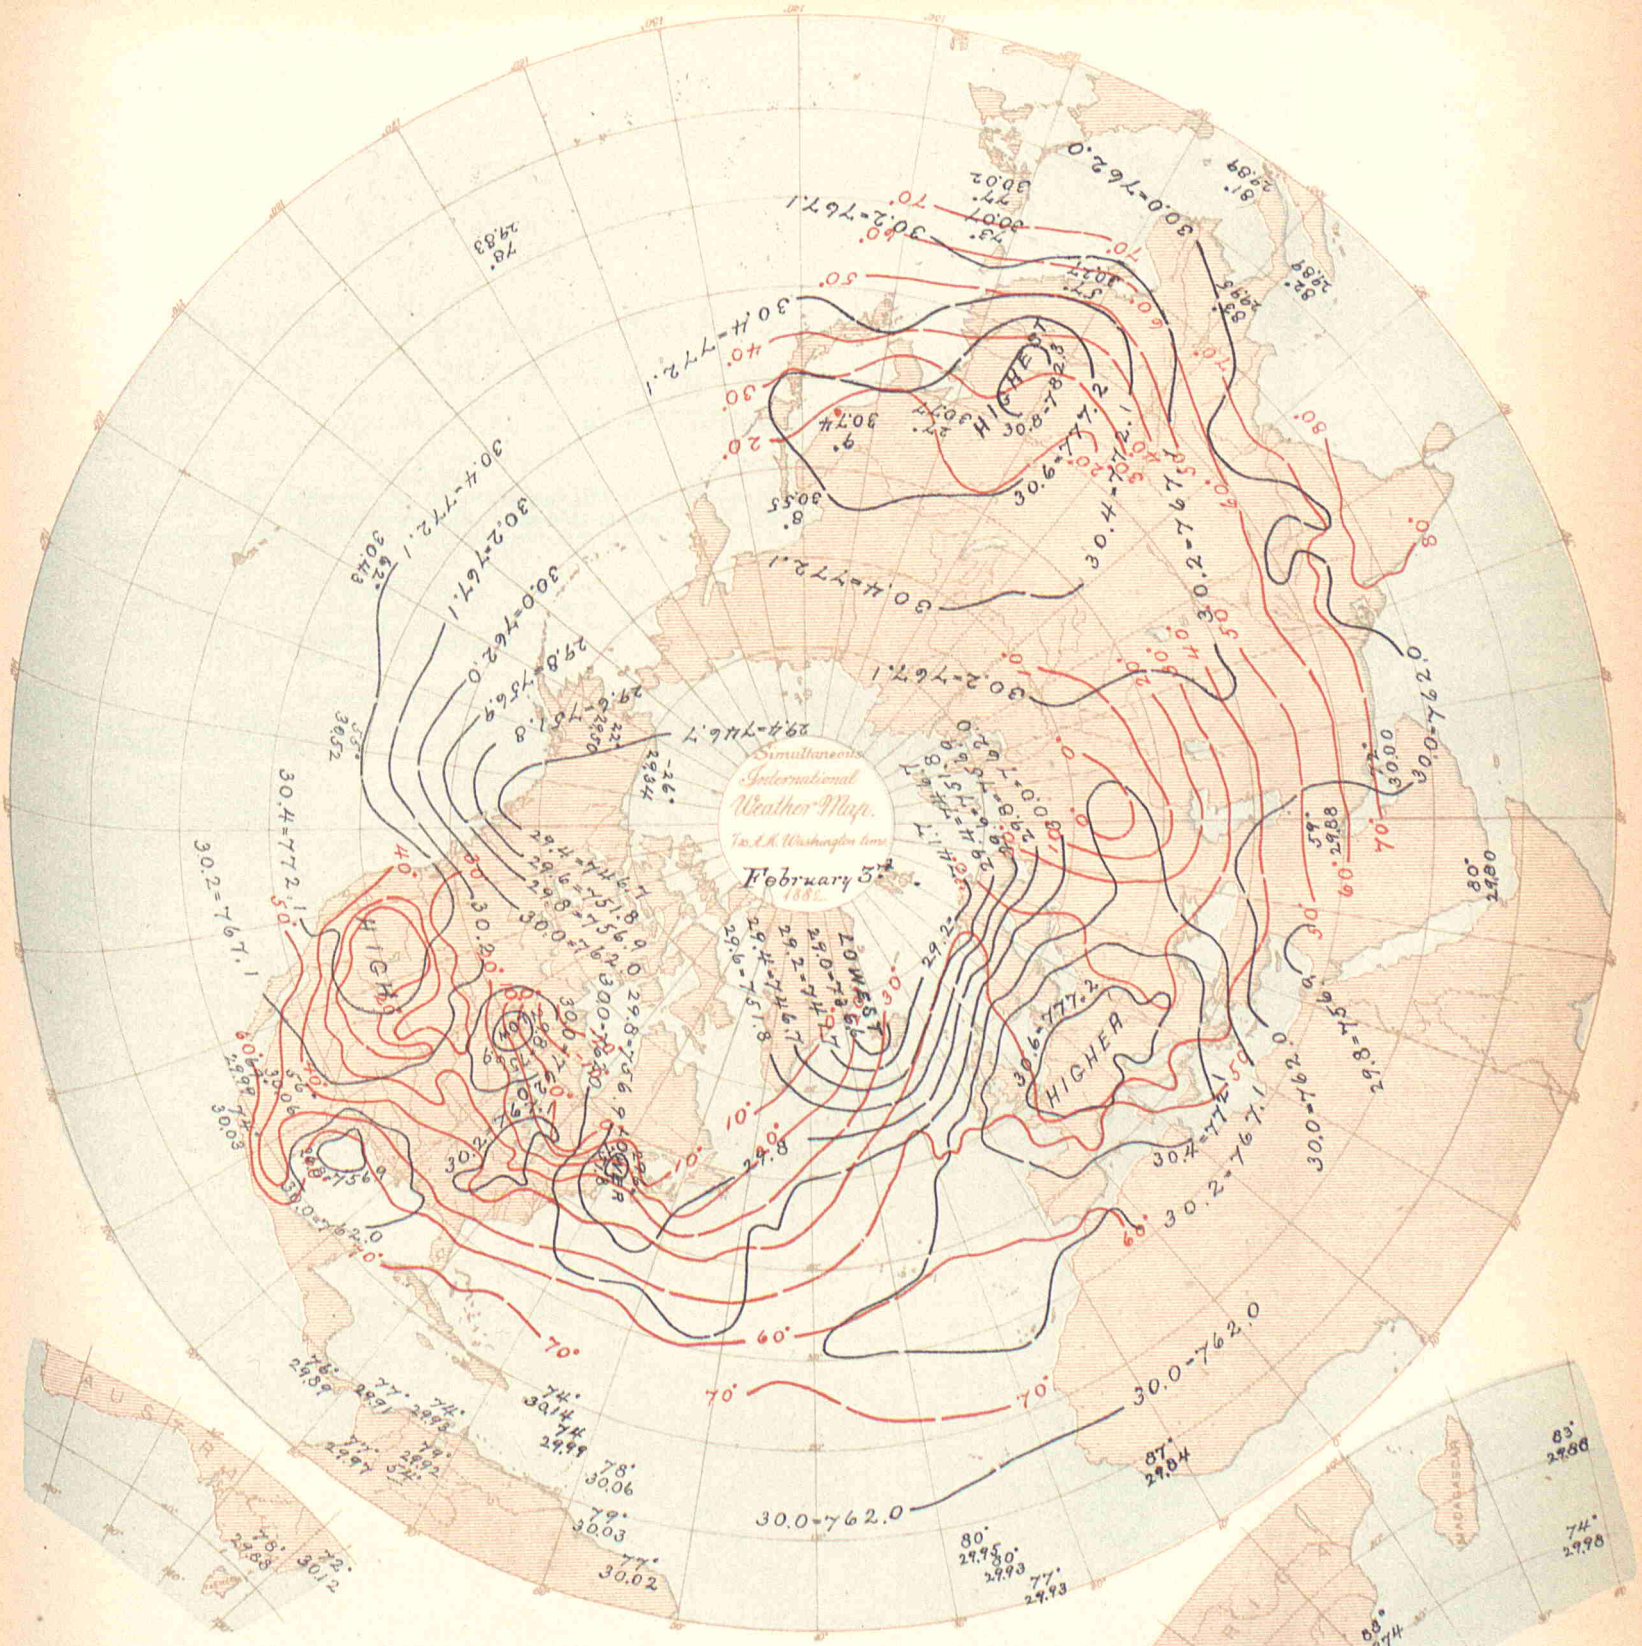
W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 4, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.

Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. Hazen

Brig. & Bvt. Maj. Gen'l.
Chief Signal Officer, U. S. A.

Heliotype Printing Co. Boston.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 5, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.

Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. Hazen

Brig. & Bvt. Maj. Gen'l.
Chief Signal Officer, U. S. A.

Heliotype Printing Co Boston.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 6, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

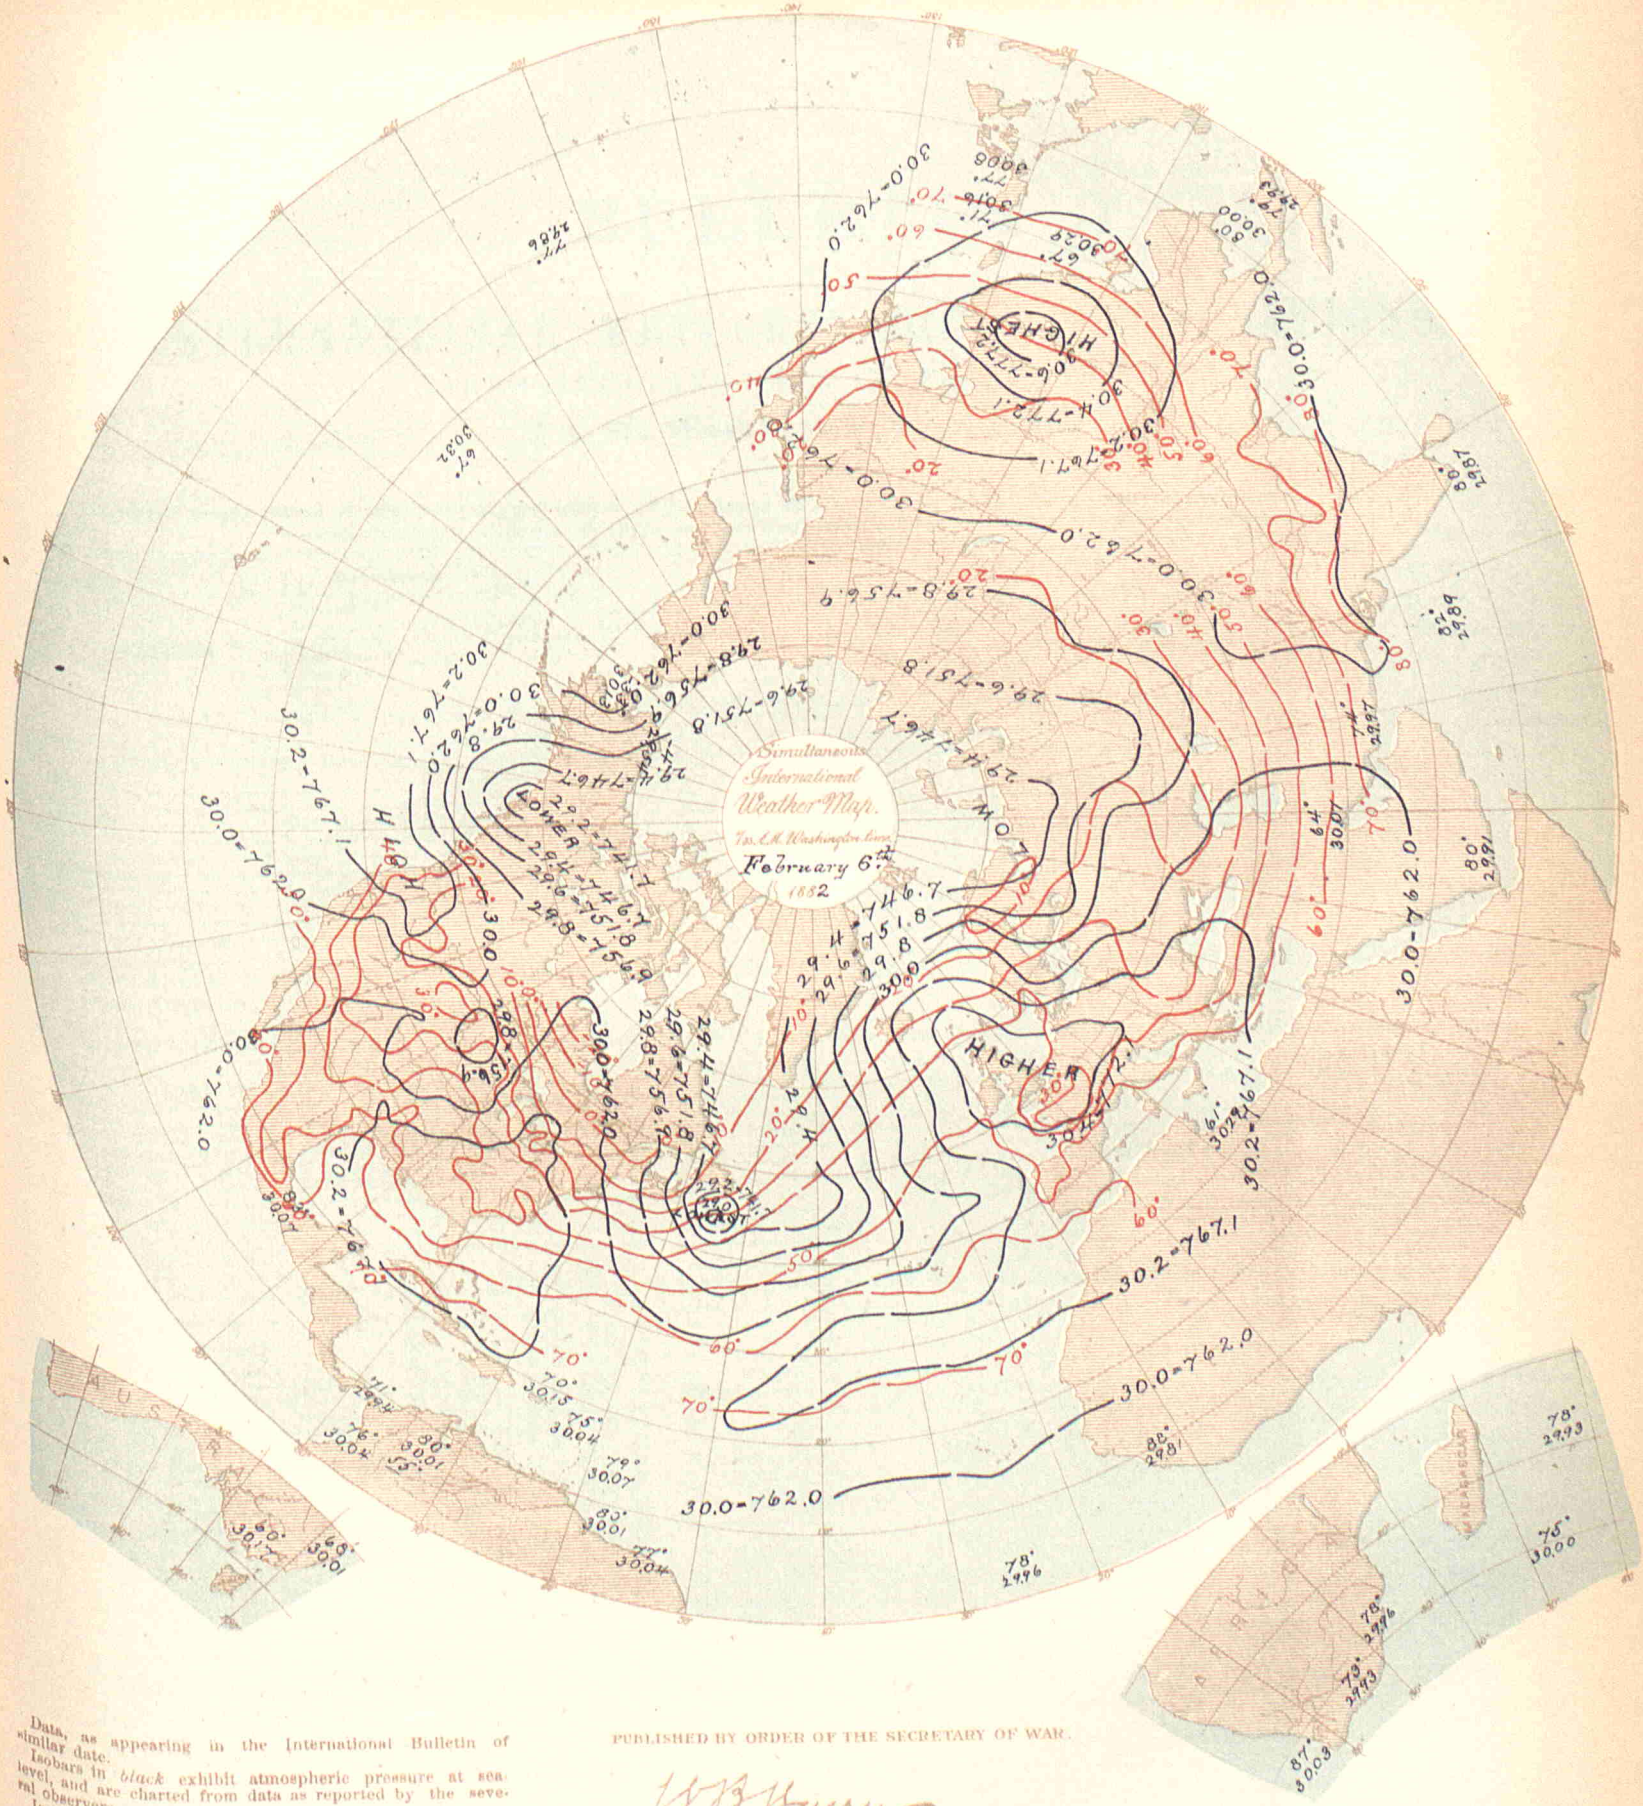
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. Hazen

Brig. & Bvt. Maj. Gen'l.
Chief Signal Officer. U. S. A.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 7, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

STATIONS.	Barometer. Corrected for instru-m'tal error and temperature. Inch.	Barometer. Corrected for instru-m'tal error and temperature. Mill.	Barometer. Reduced to sea-level. Inch.	Barometer. PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

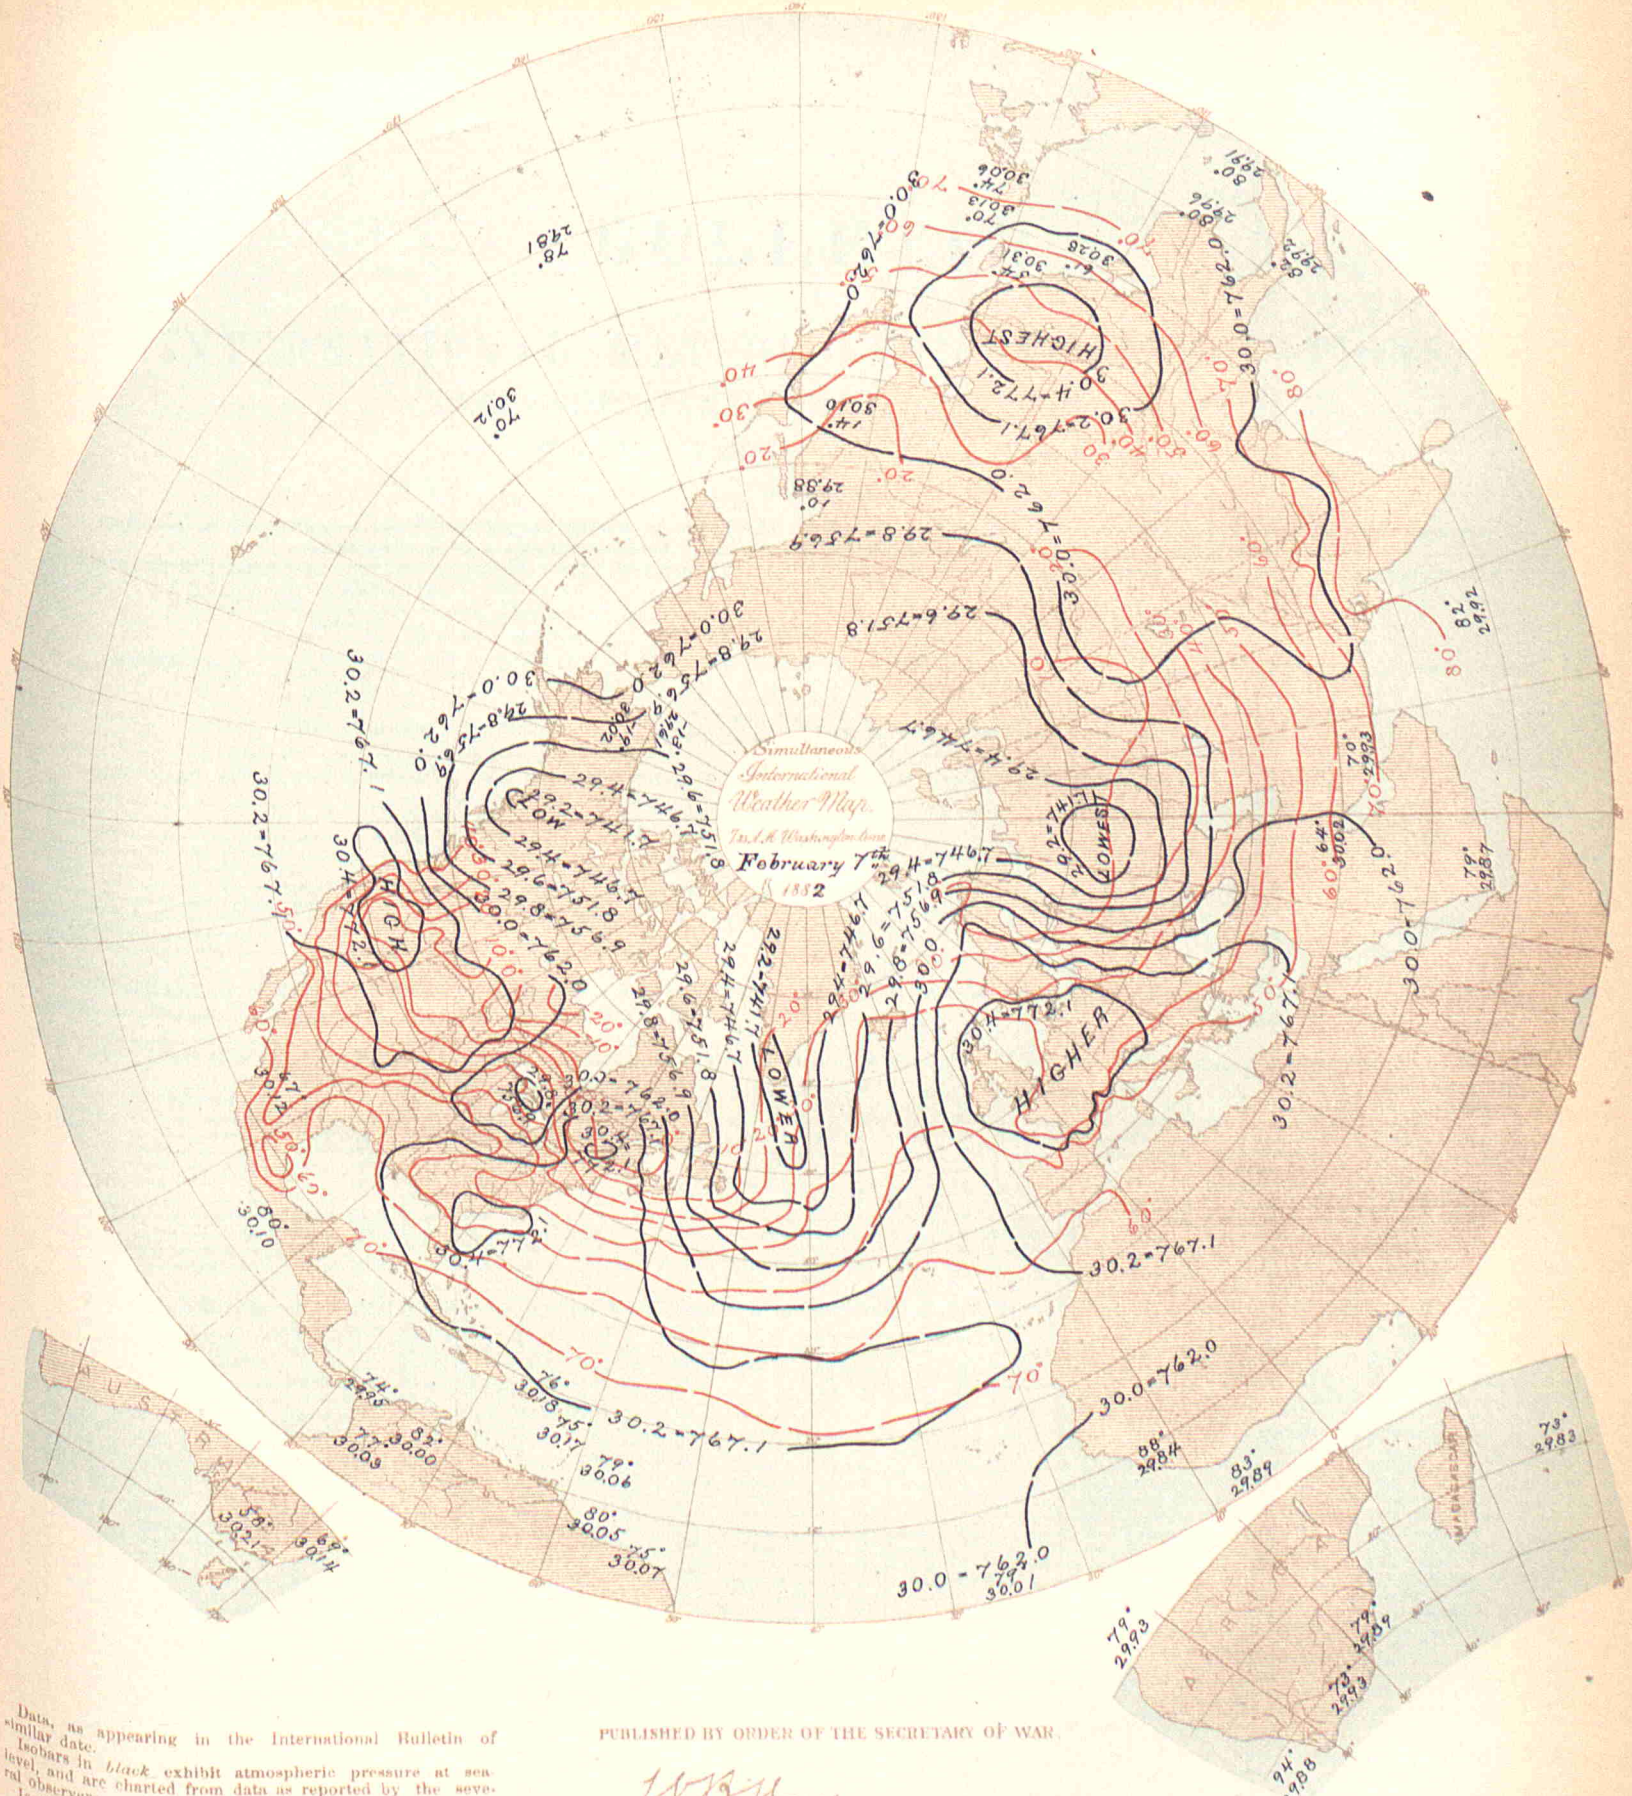
W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. Hazen

Brig. & Bvt. Maj. Gen'l.
Chief Signal Officer. U. S. A.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 8, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

STATIONS.	Barometer. Corrected for instrum'tal error and temperature. Inch.	Mill.	Barometer. Reduced to sea-level. Inch.	Mill.	Temperature of the Air. Fah.	Cent.	Rel. Hum. Per Ct.	Wind. Direction. PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.

Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. Hazen

Brig. & Bvt. Maj. Gen'l.
Chief Signal Officer, U. S. A.

Heliotype Printing Co. Boston.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 9, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

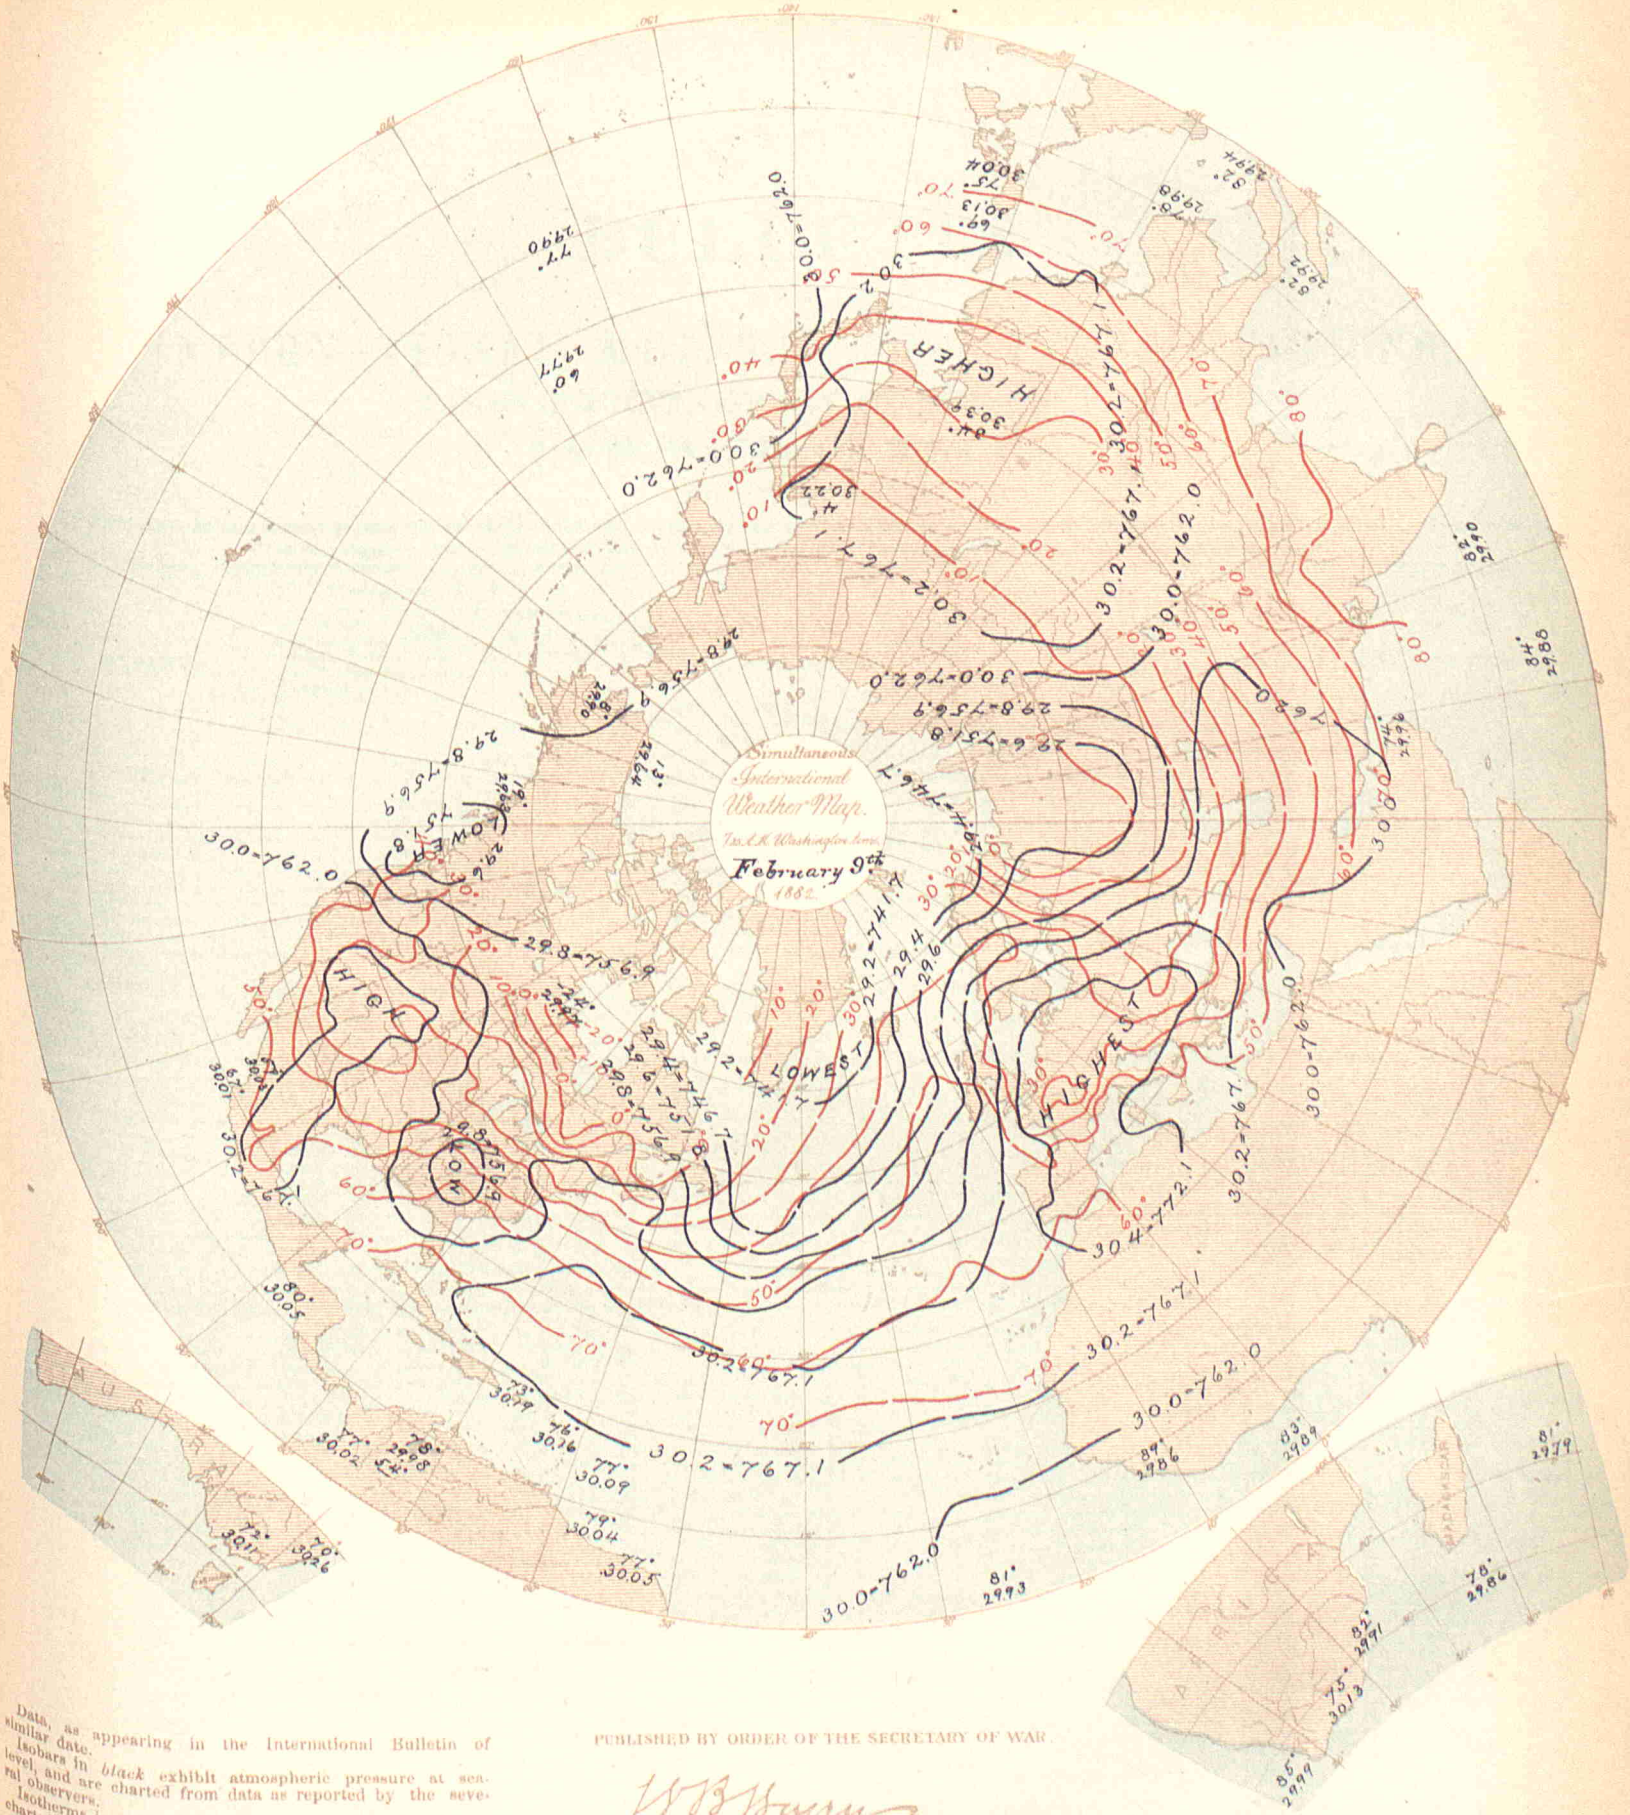
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

Heliotype Printing Co. Boston.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 10, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

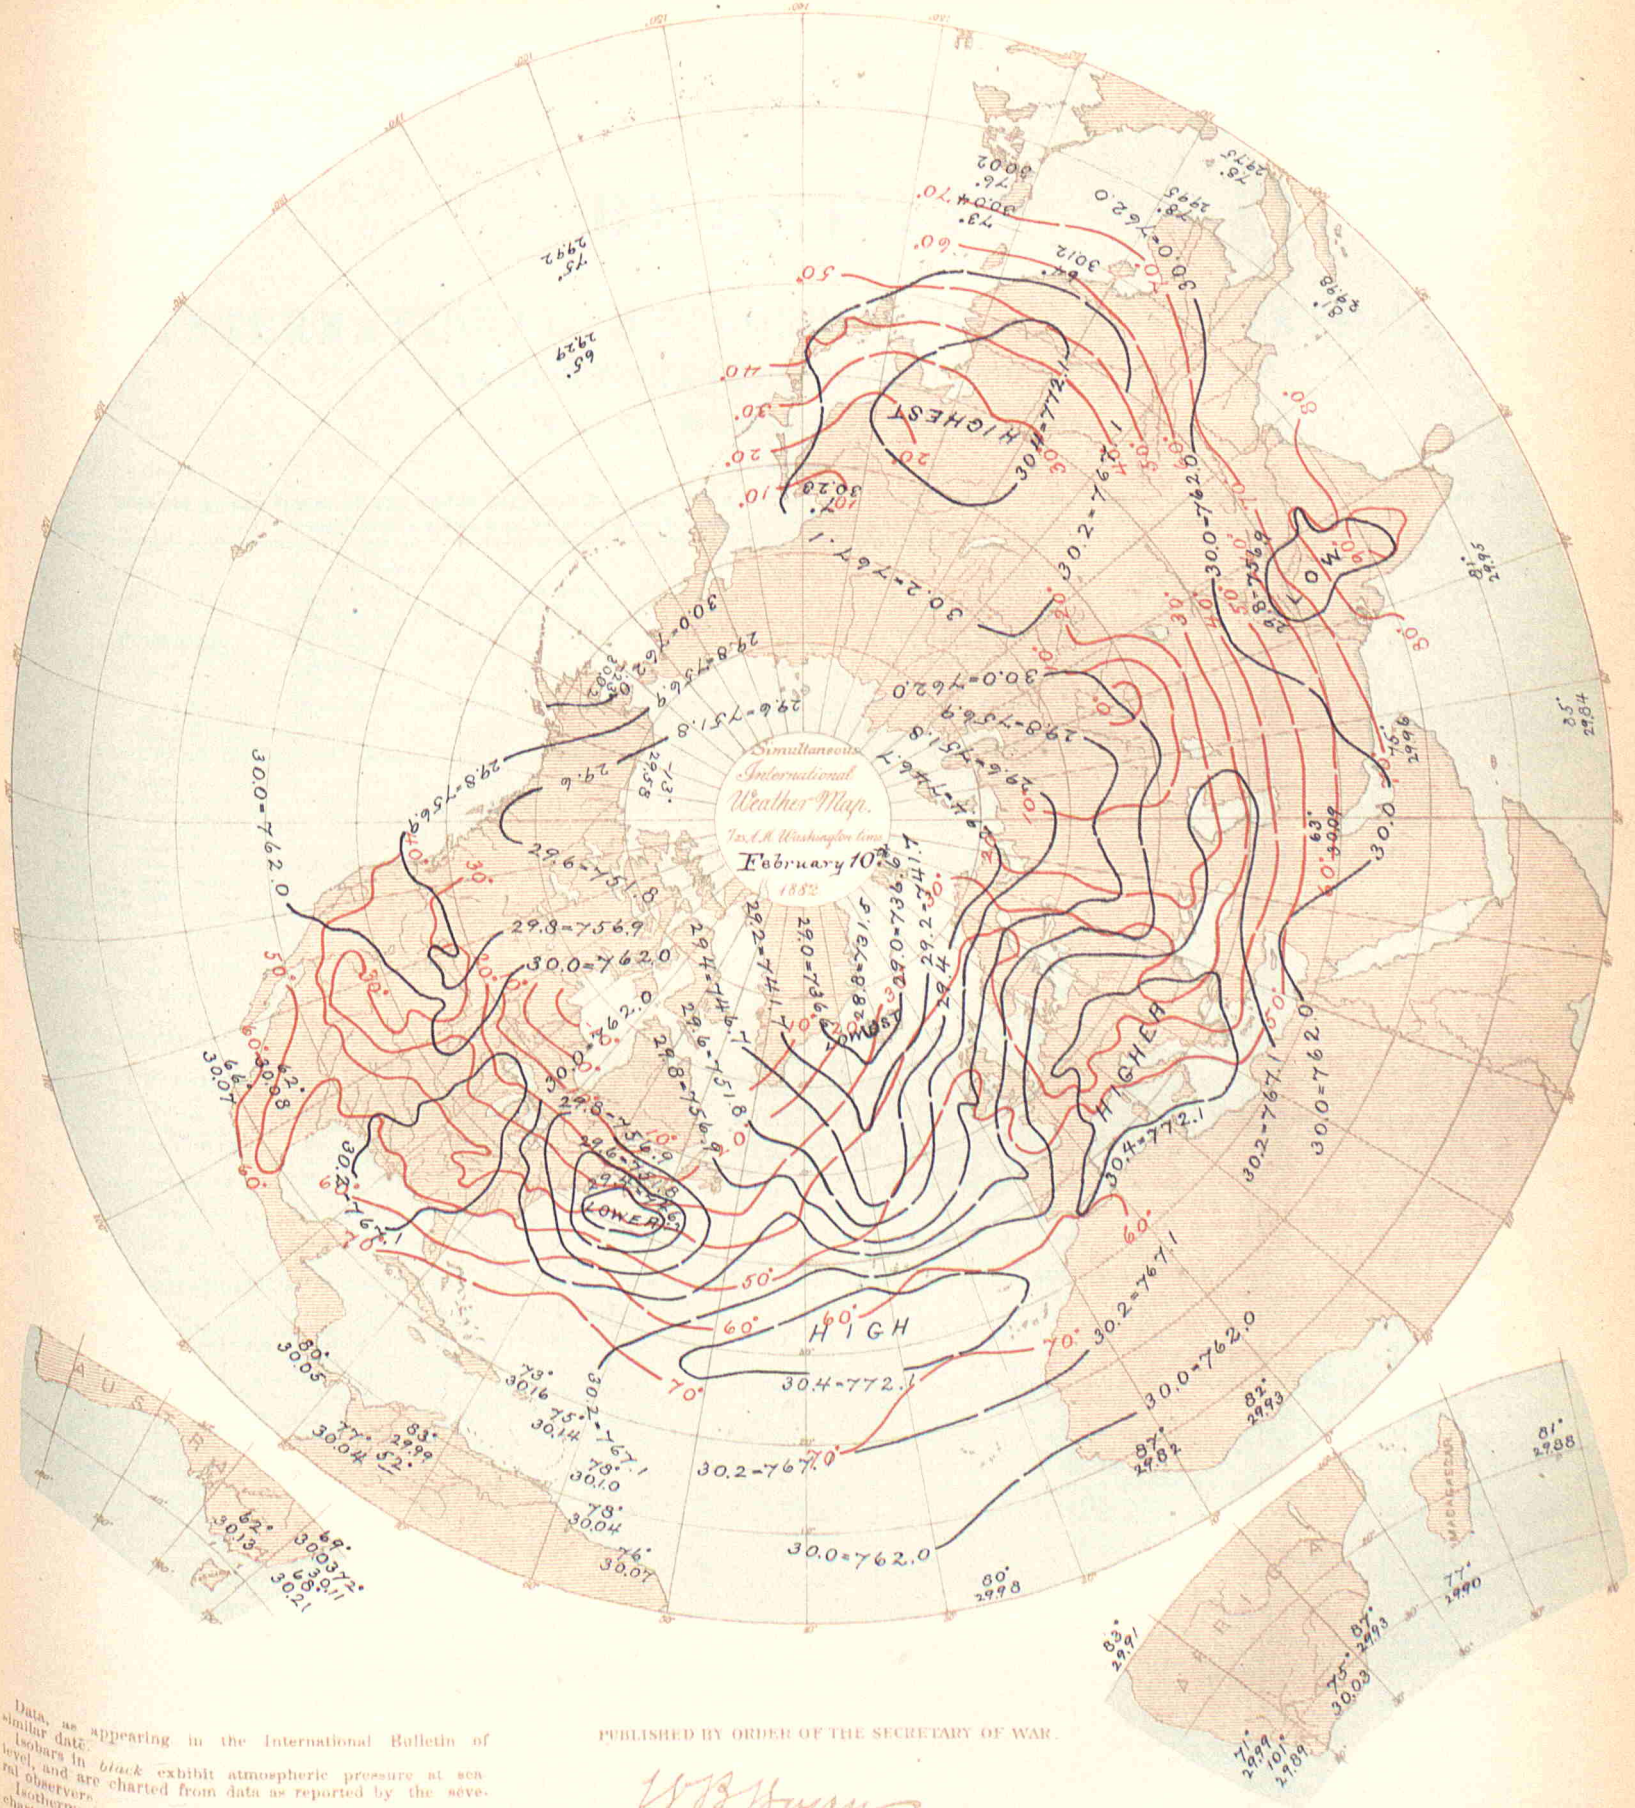
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. Hazen

Brig. & Bvt. Maj. Gen'l.
Chief Signal Officer. U. S. A.

Heliotype Printing Co. Boston.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 11, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.

Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

Chief Signal Officer, U. S. A.

Heliotype Printing Co Boston.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 12, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

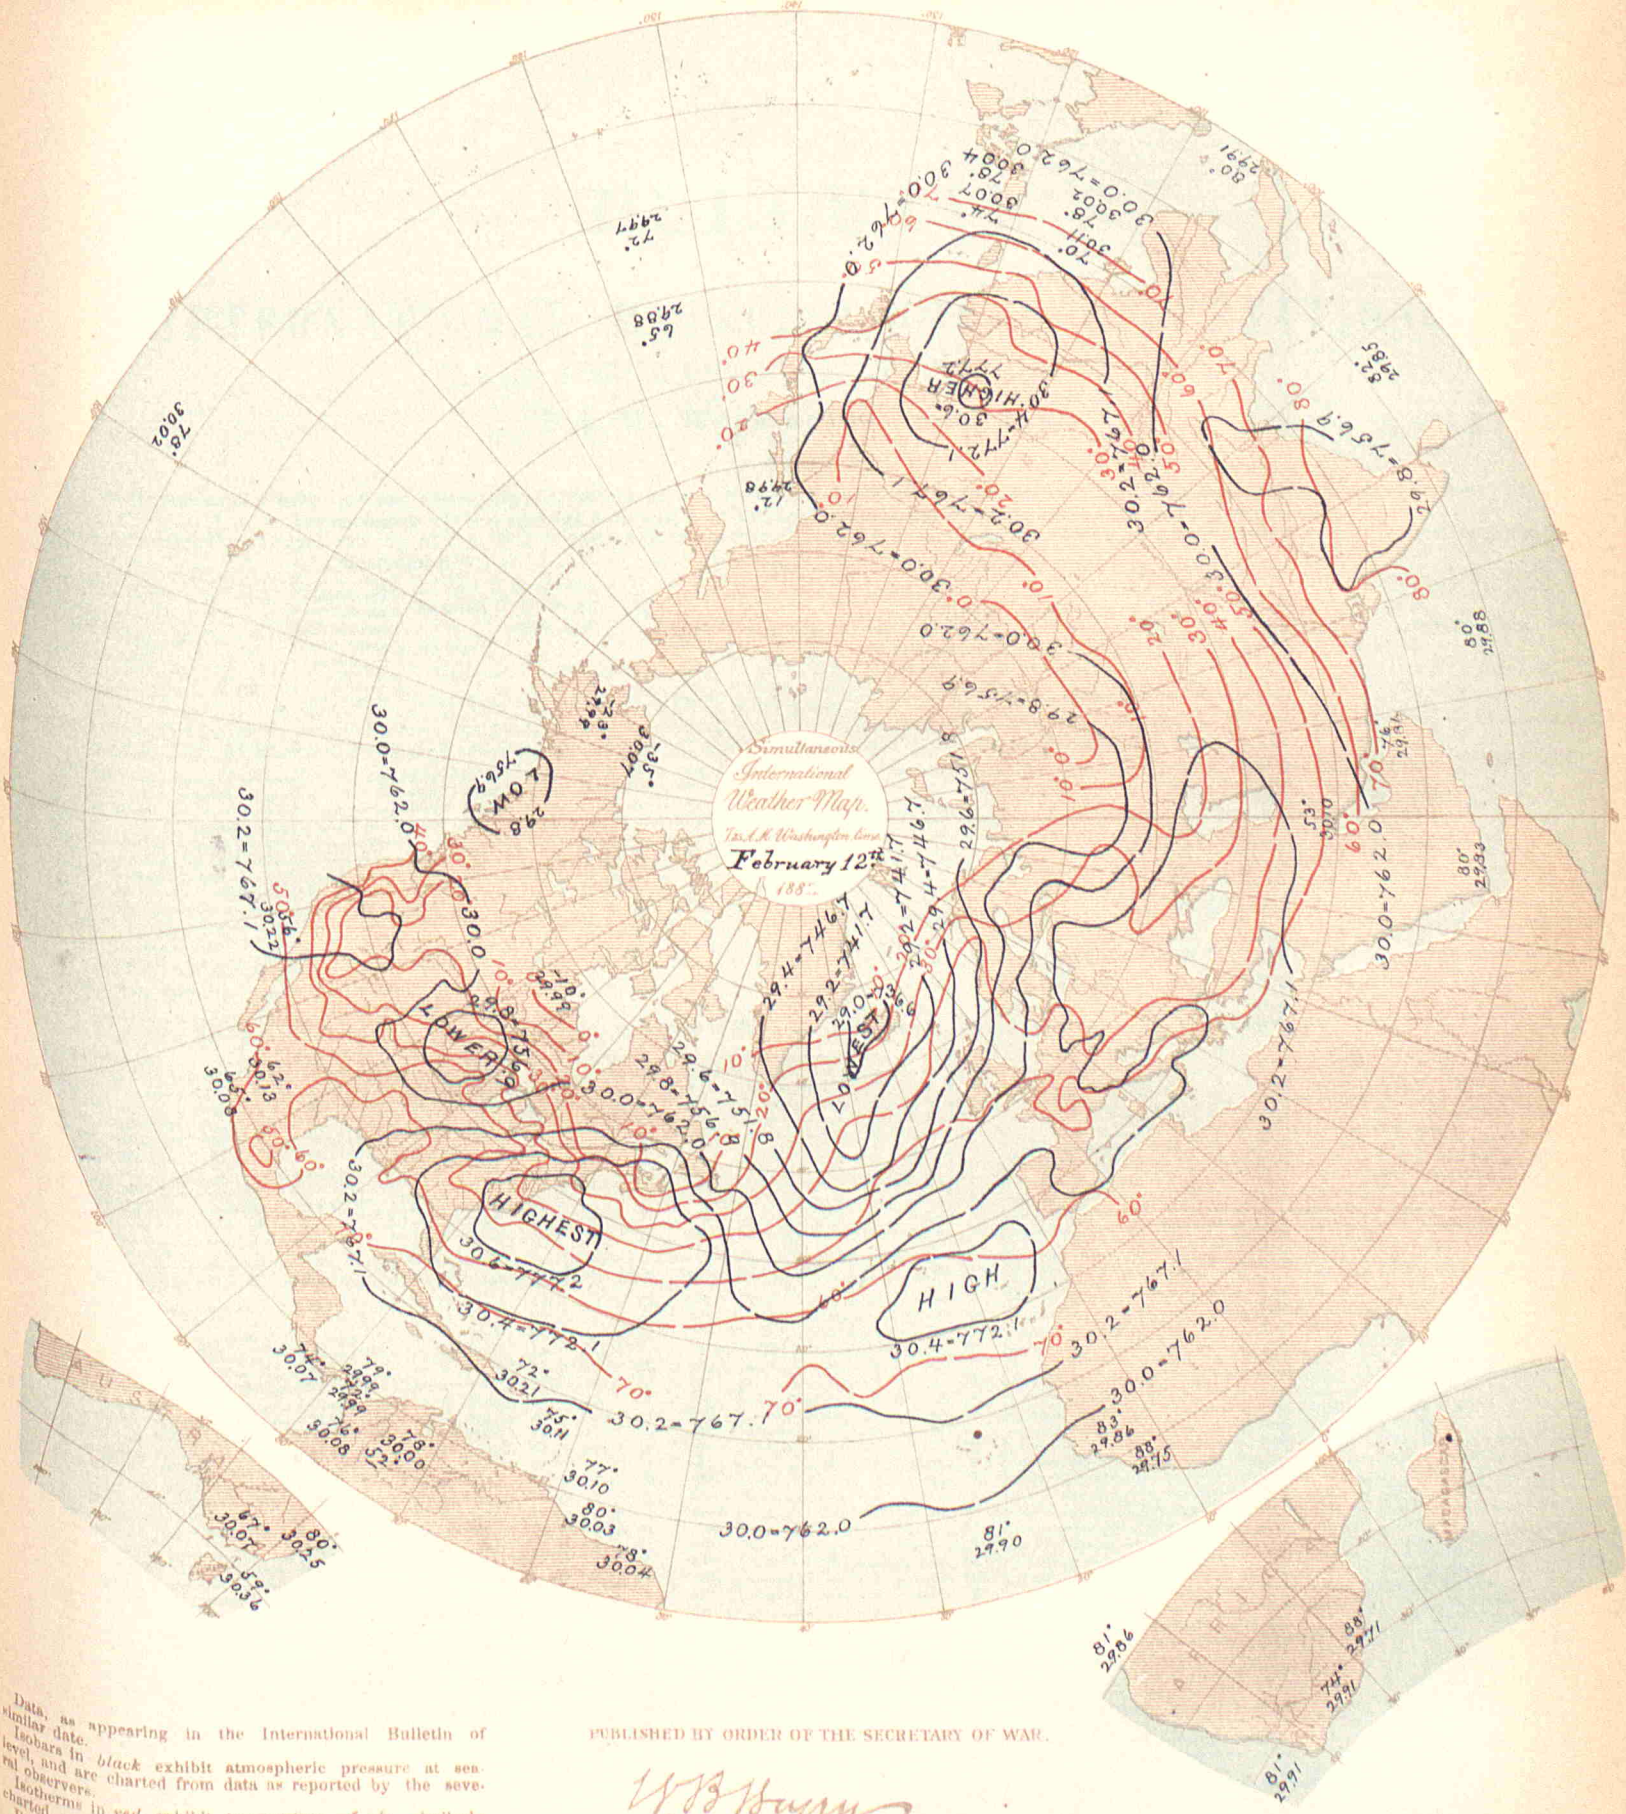
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 13, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

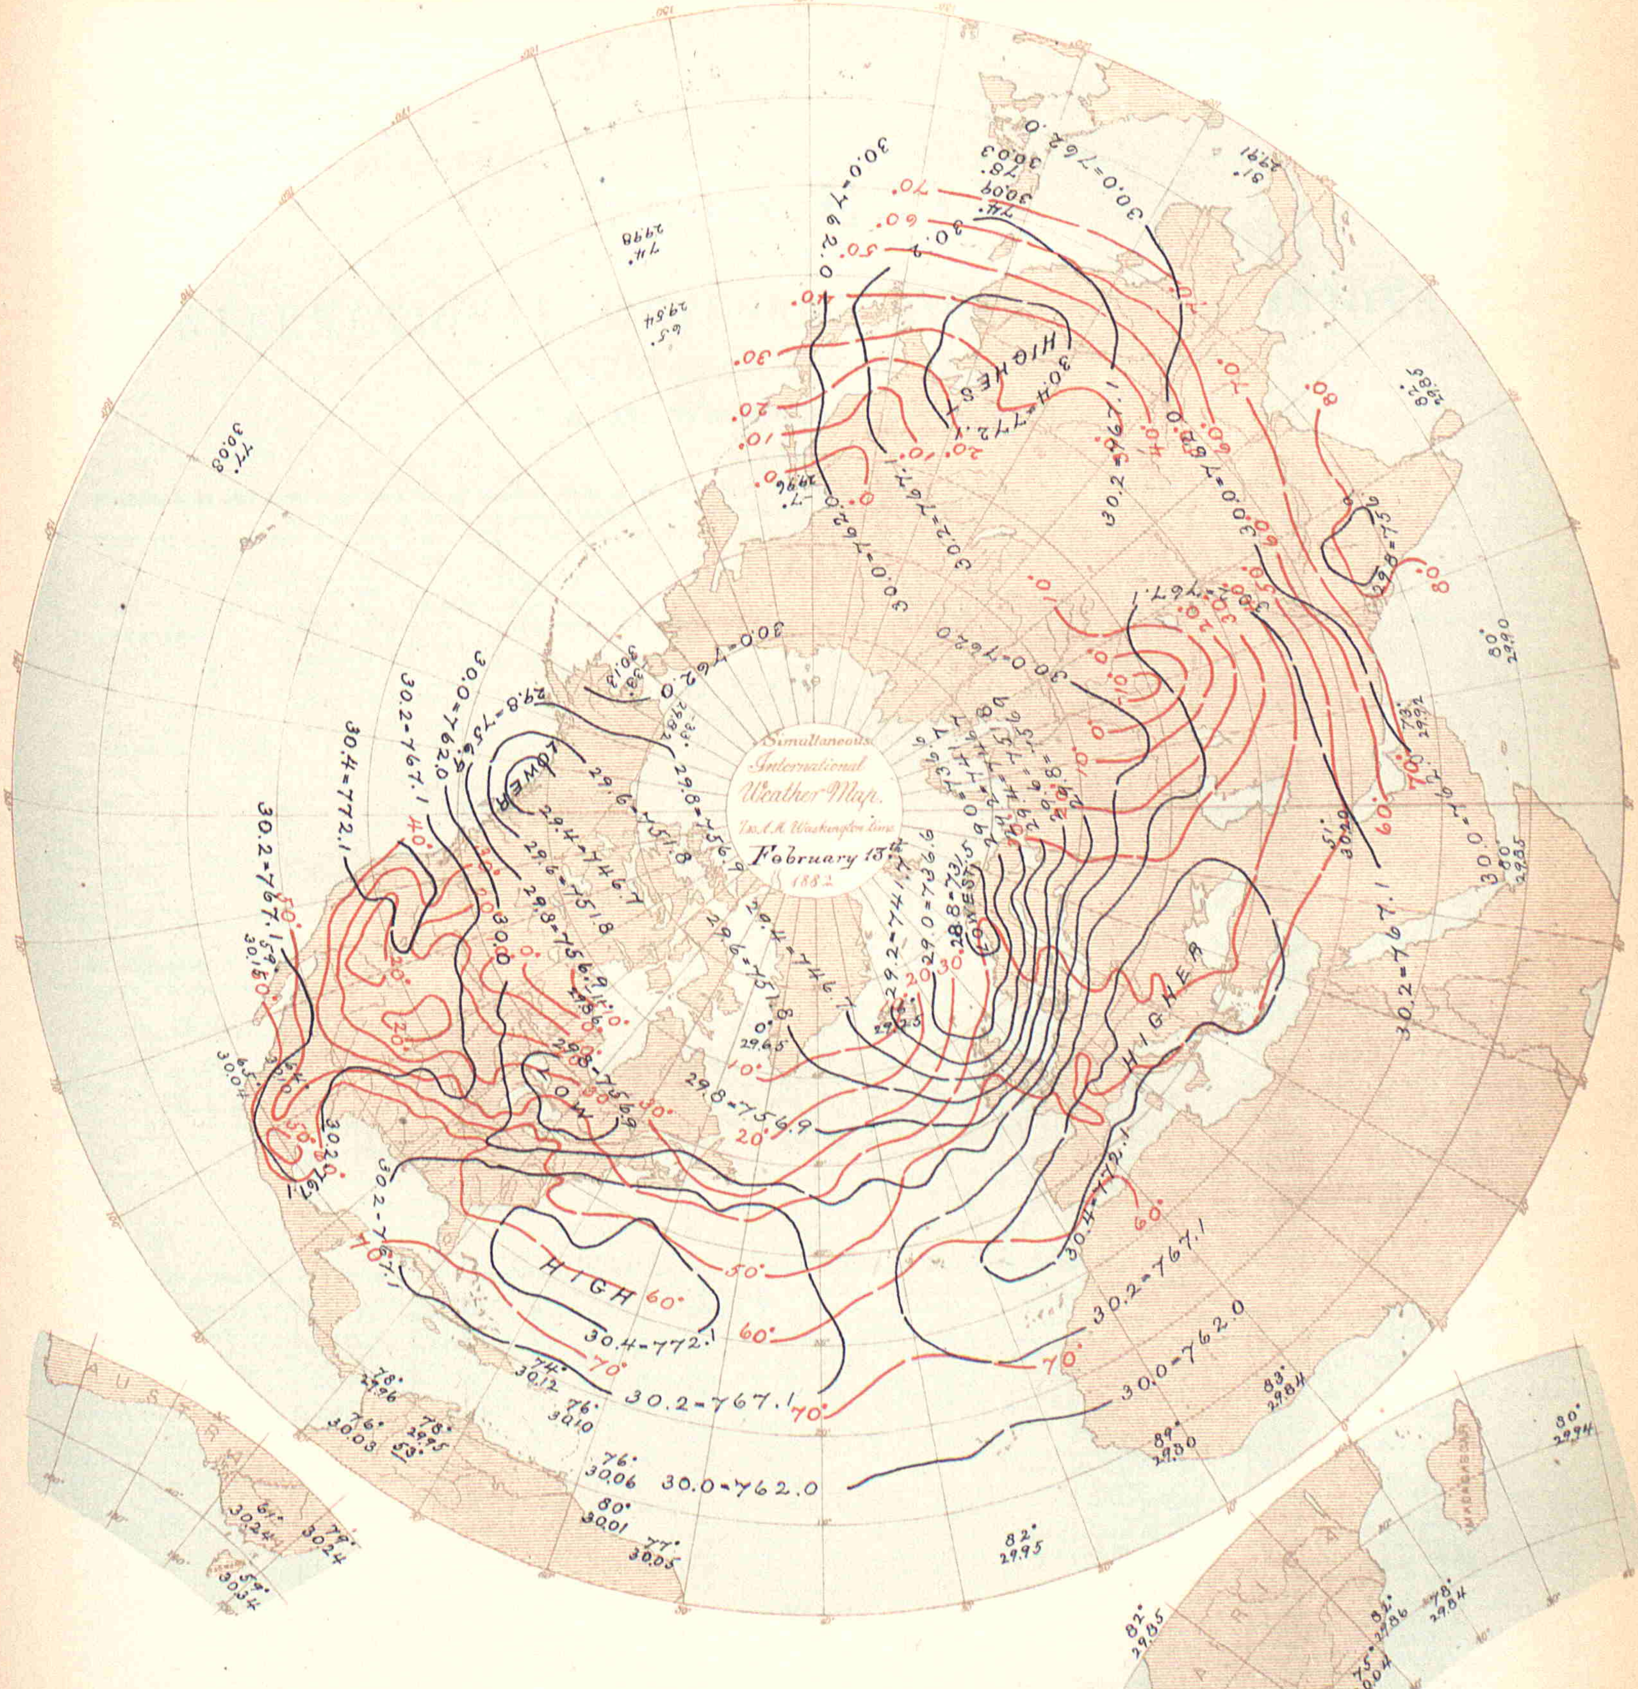
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

Heliotype Printing Co Boston.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 14, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

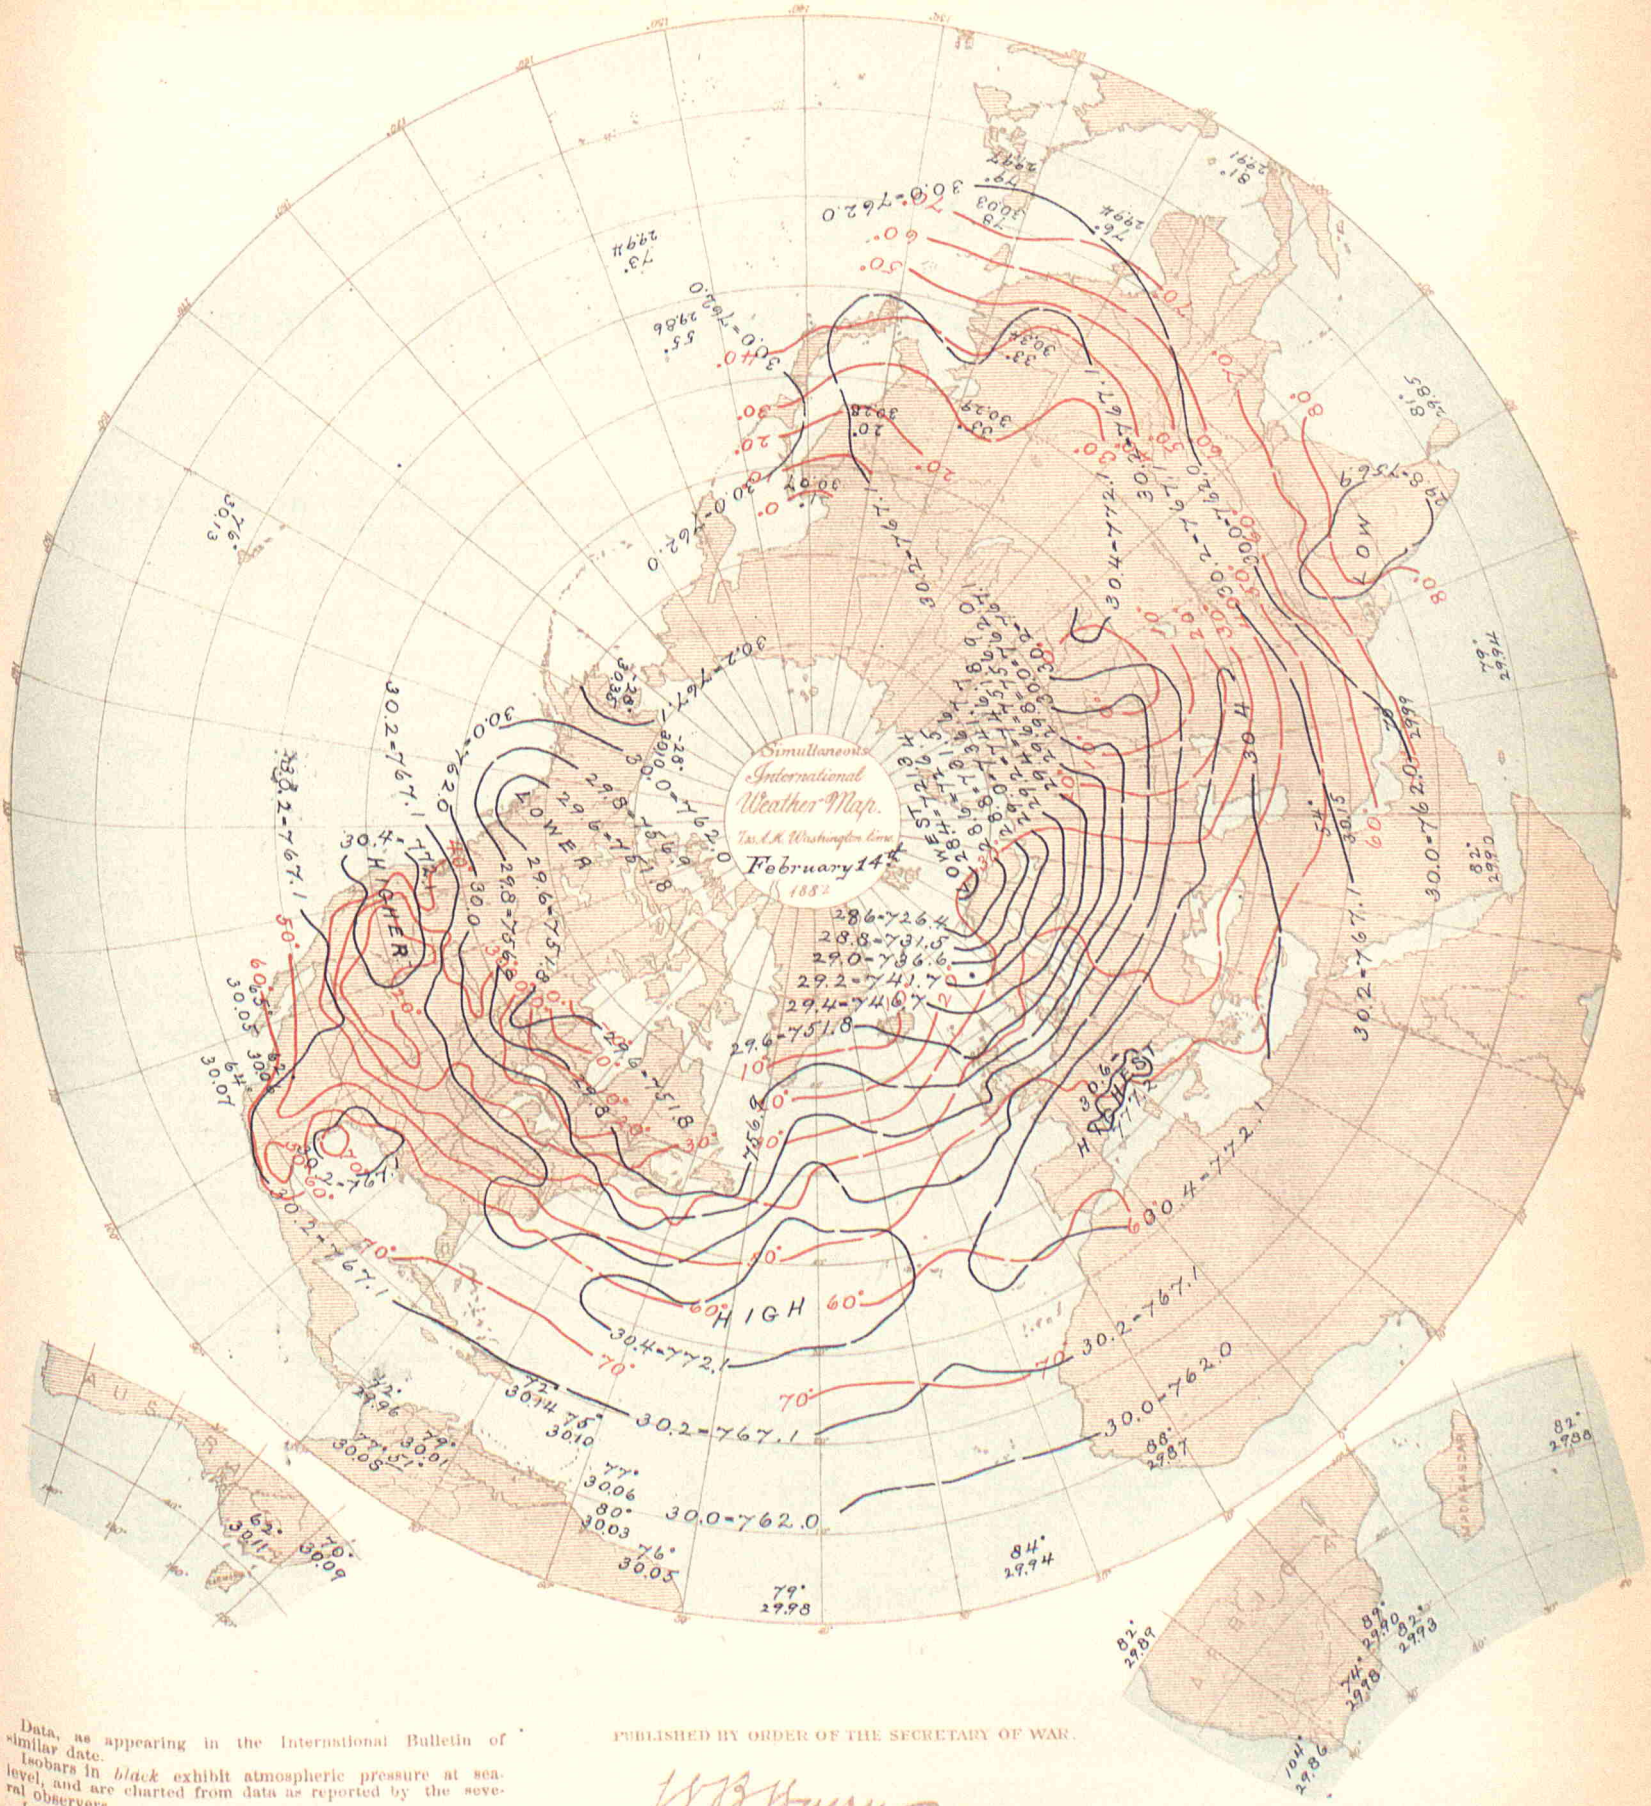
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.

Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.
