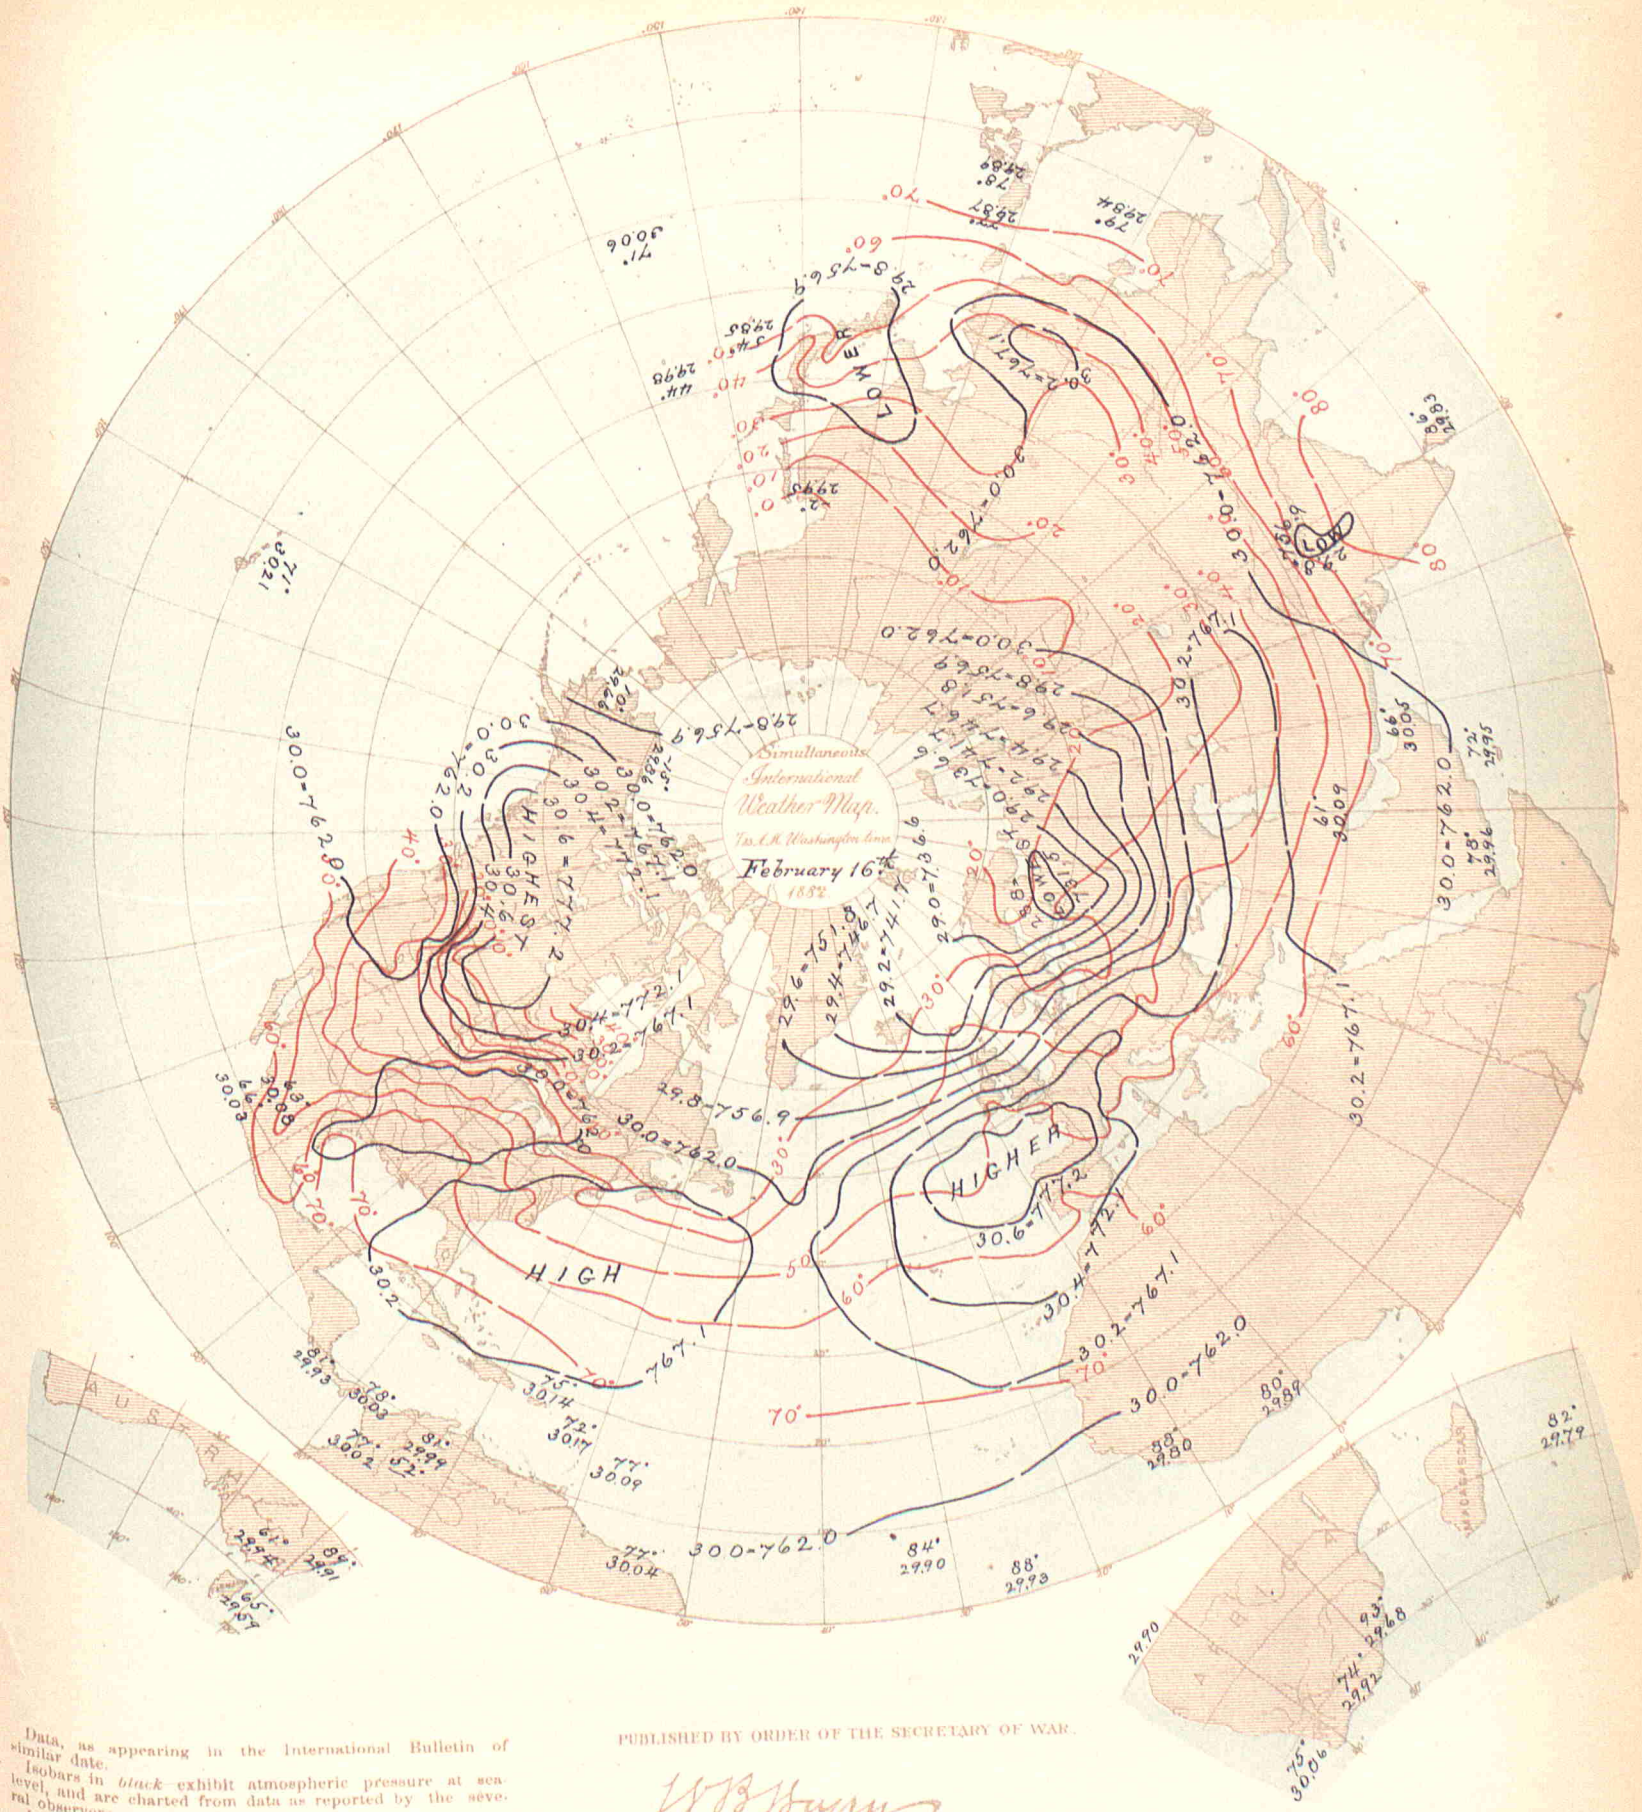
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 17, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

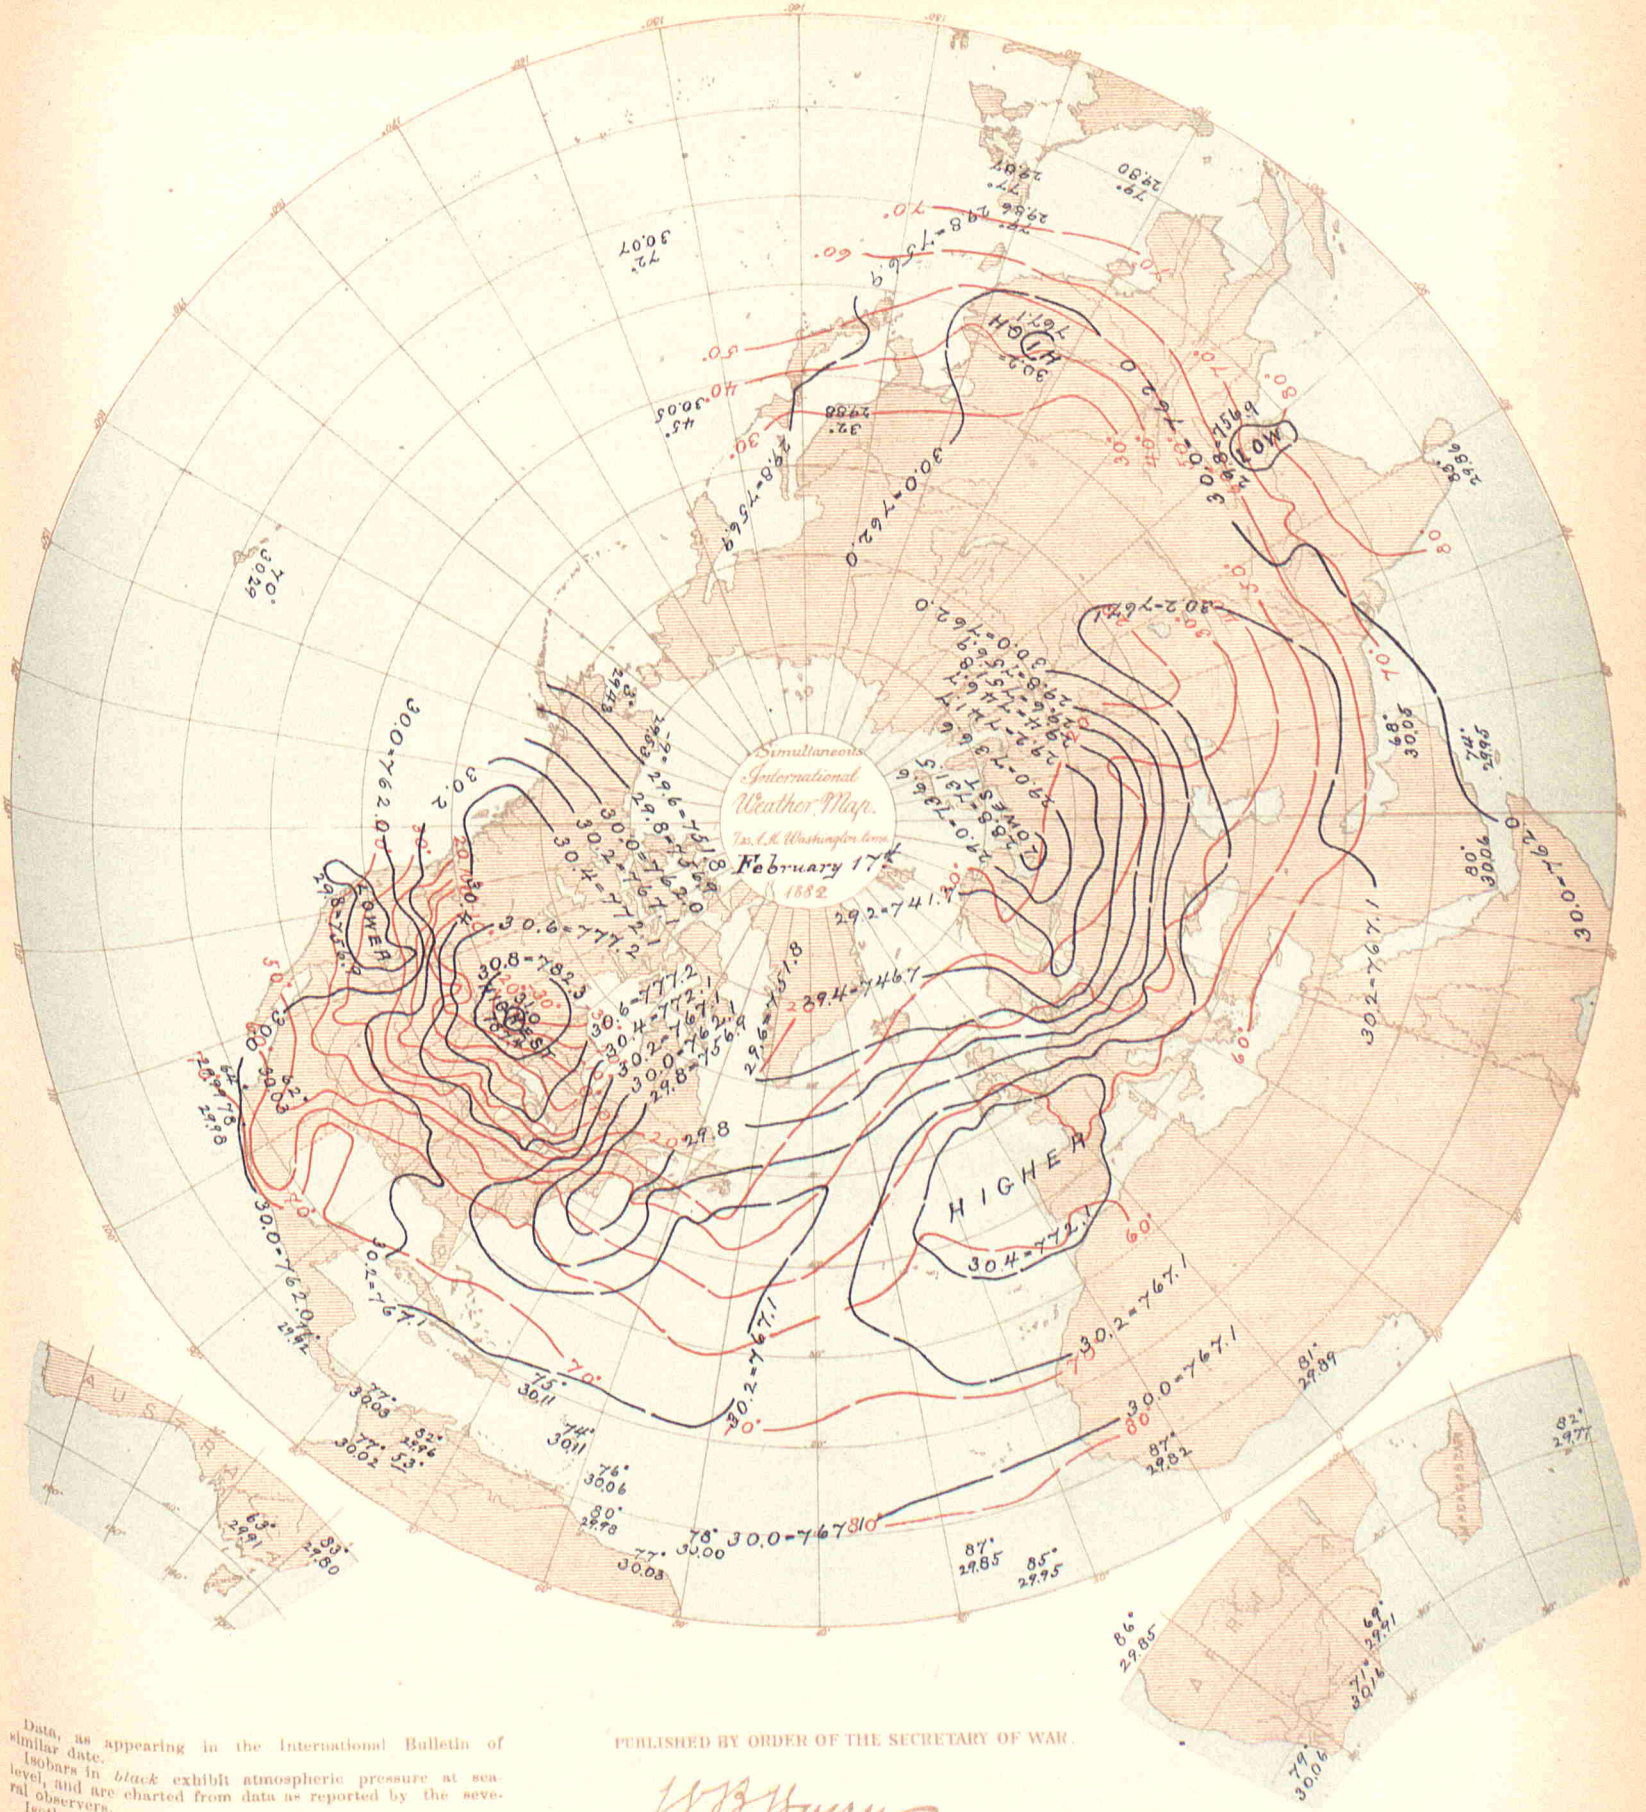
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. Hazen

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 18, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

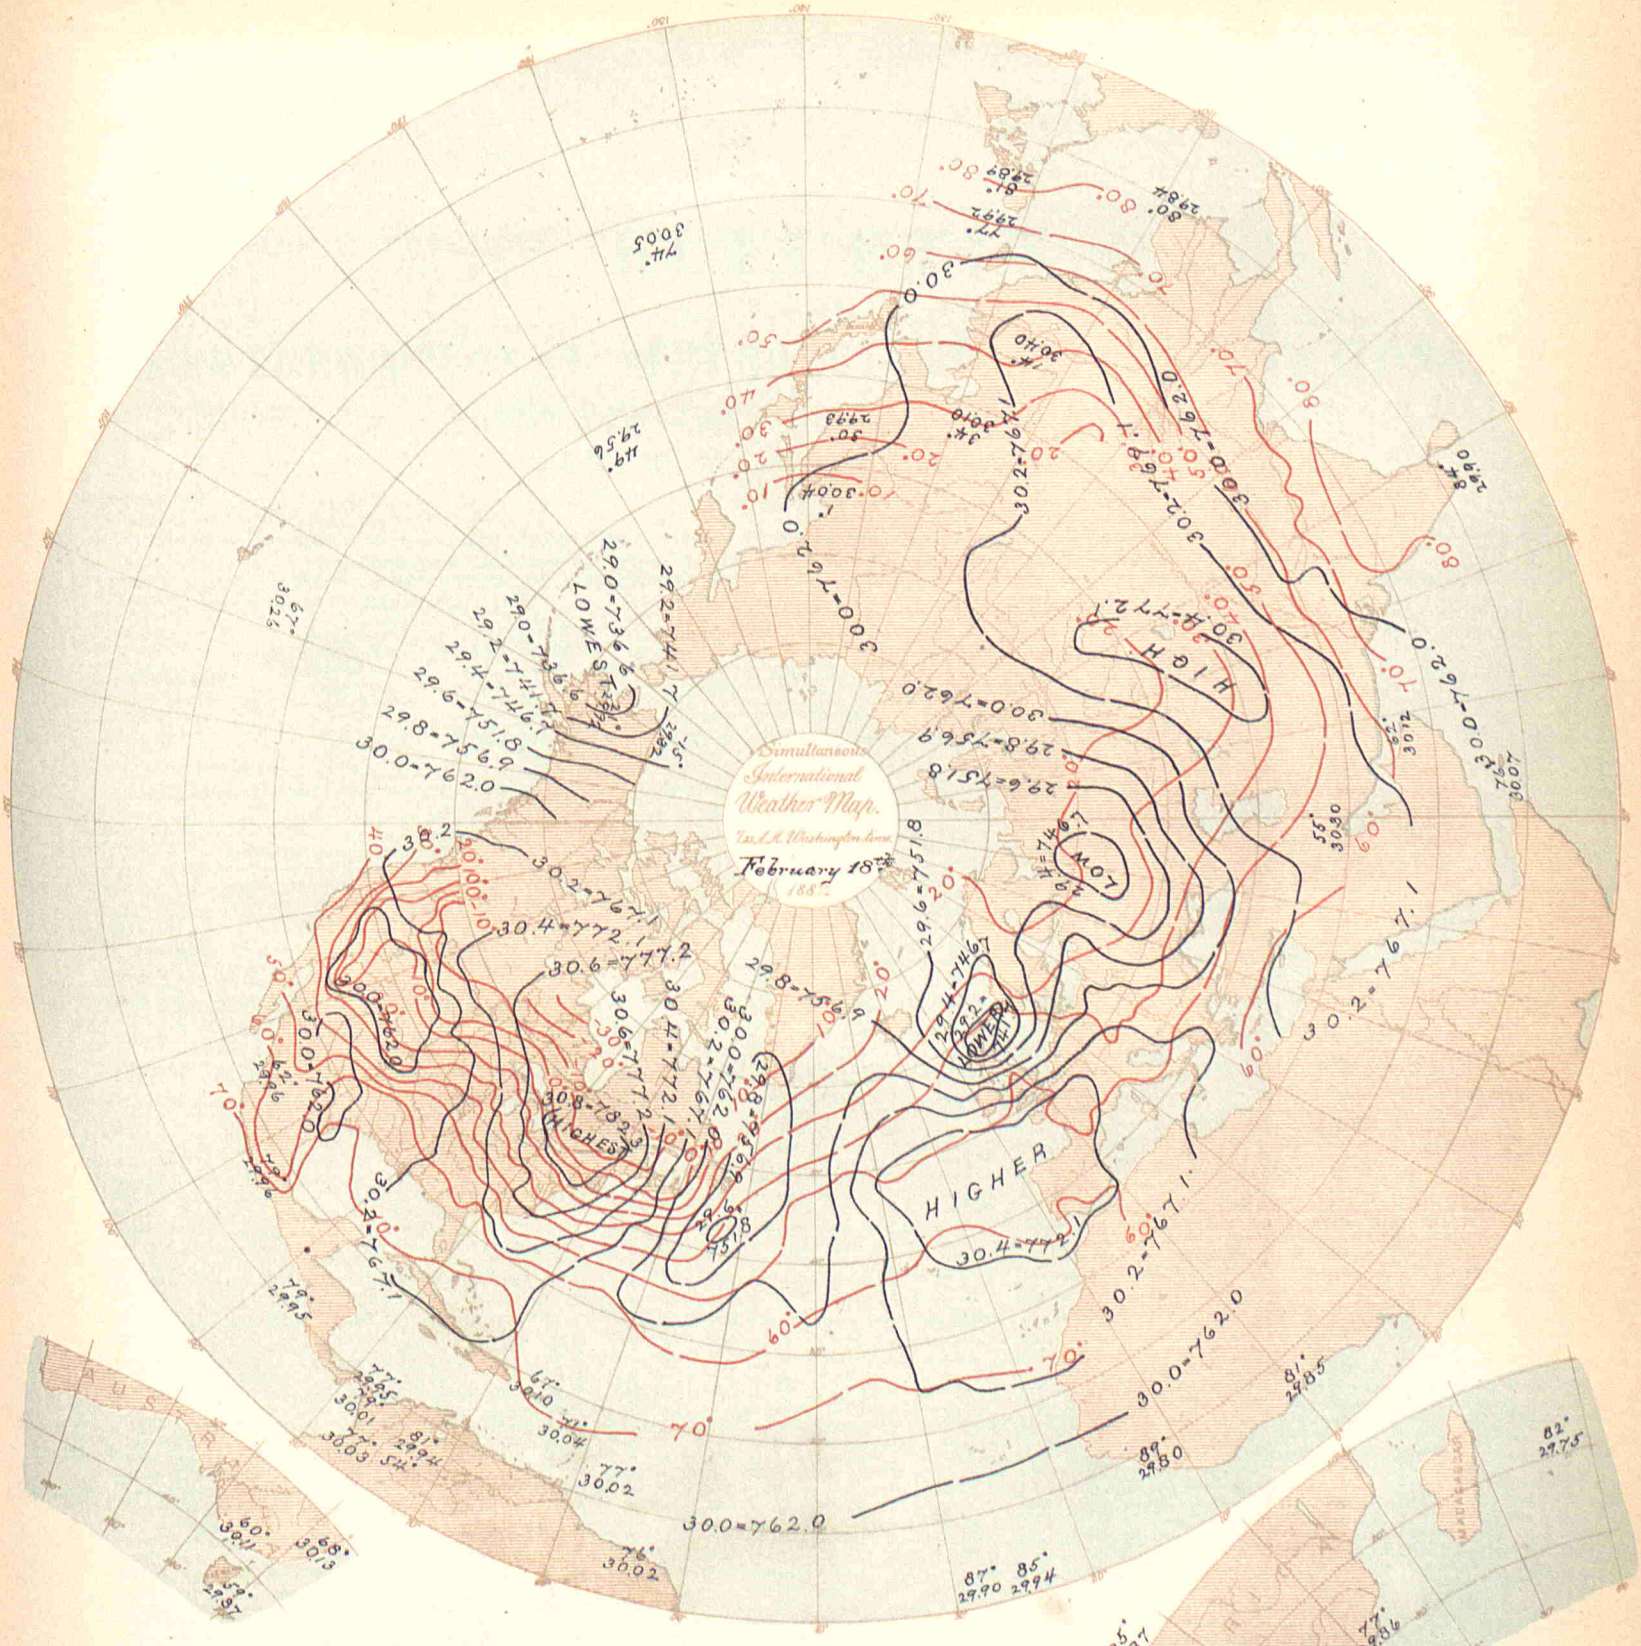
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. Hazen

Brig. & Bvt. Maj. Gen'l.
Chief Signal Officer, U. S. A.

Heliotype Printing Co. Boston.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 19, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

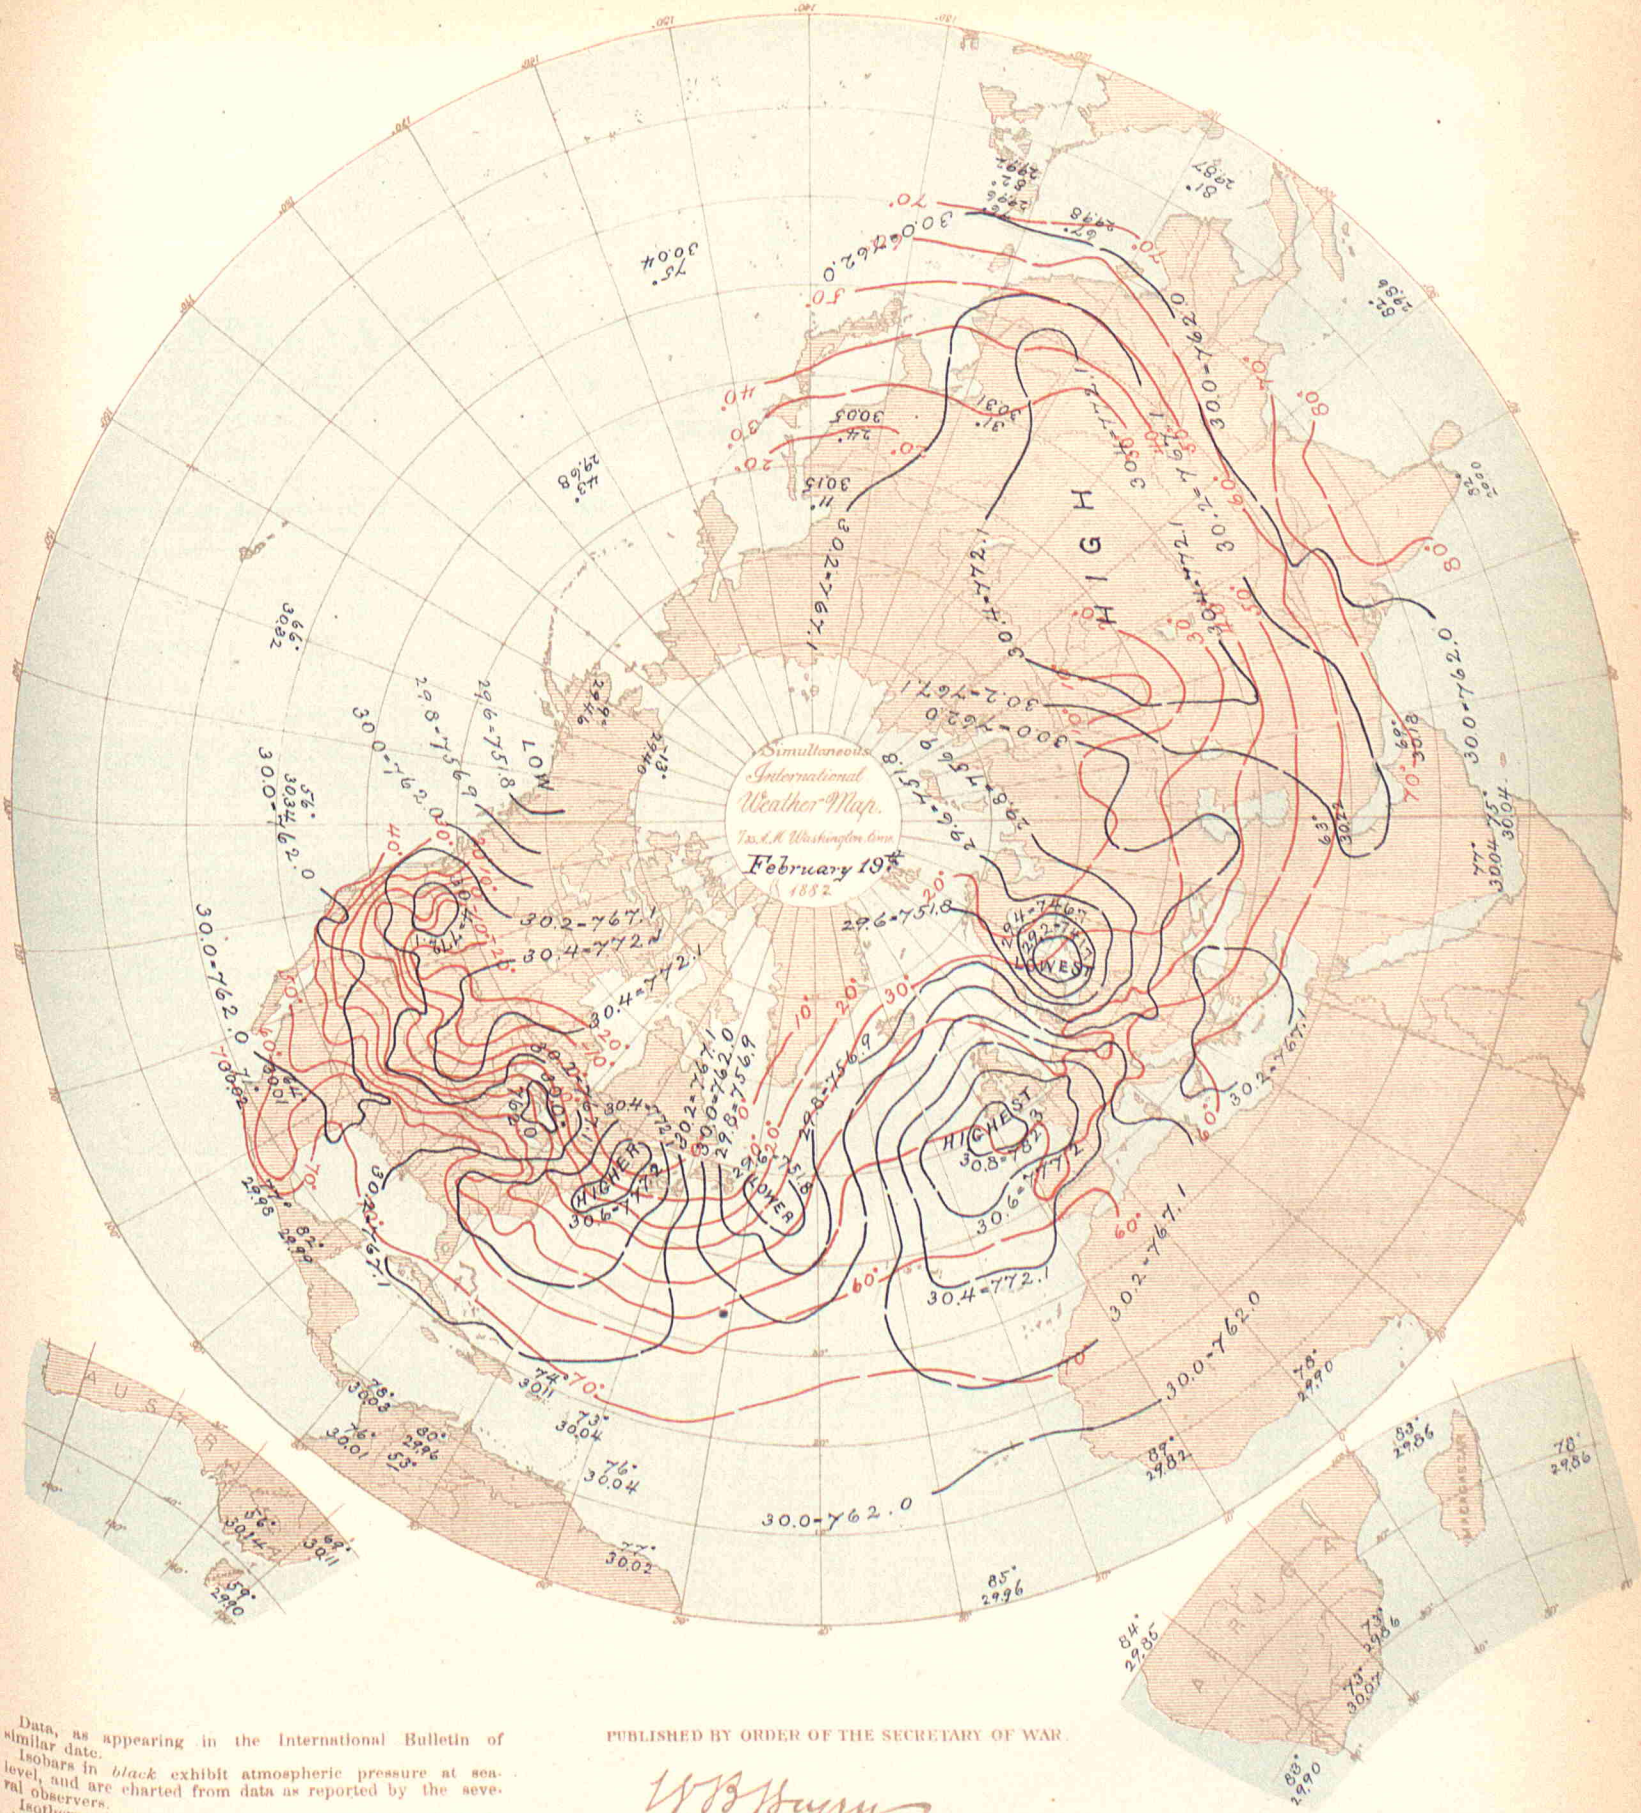
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

Heliotype Printing Co Boston.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 20, 1882.

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

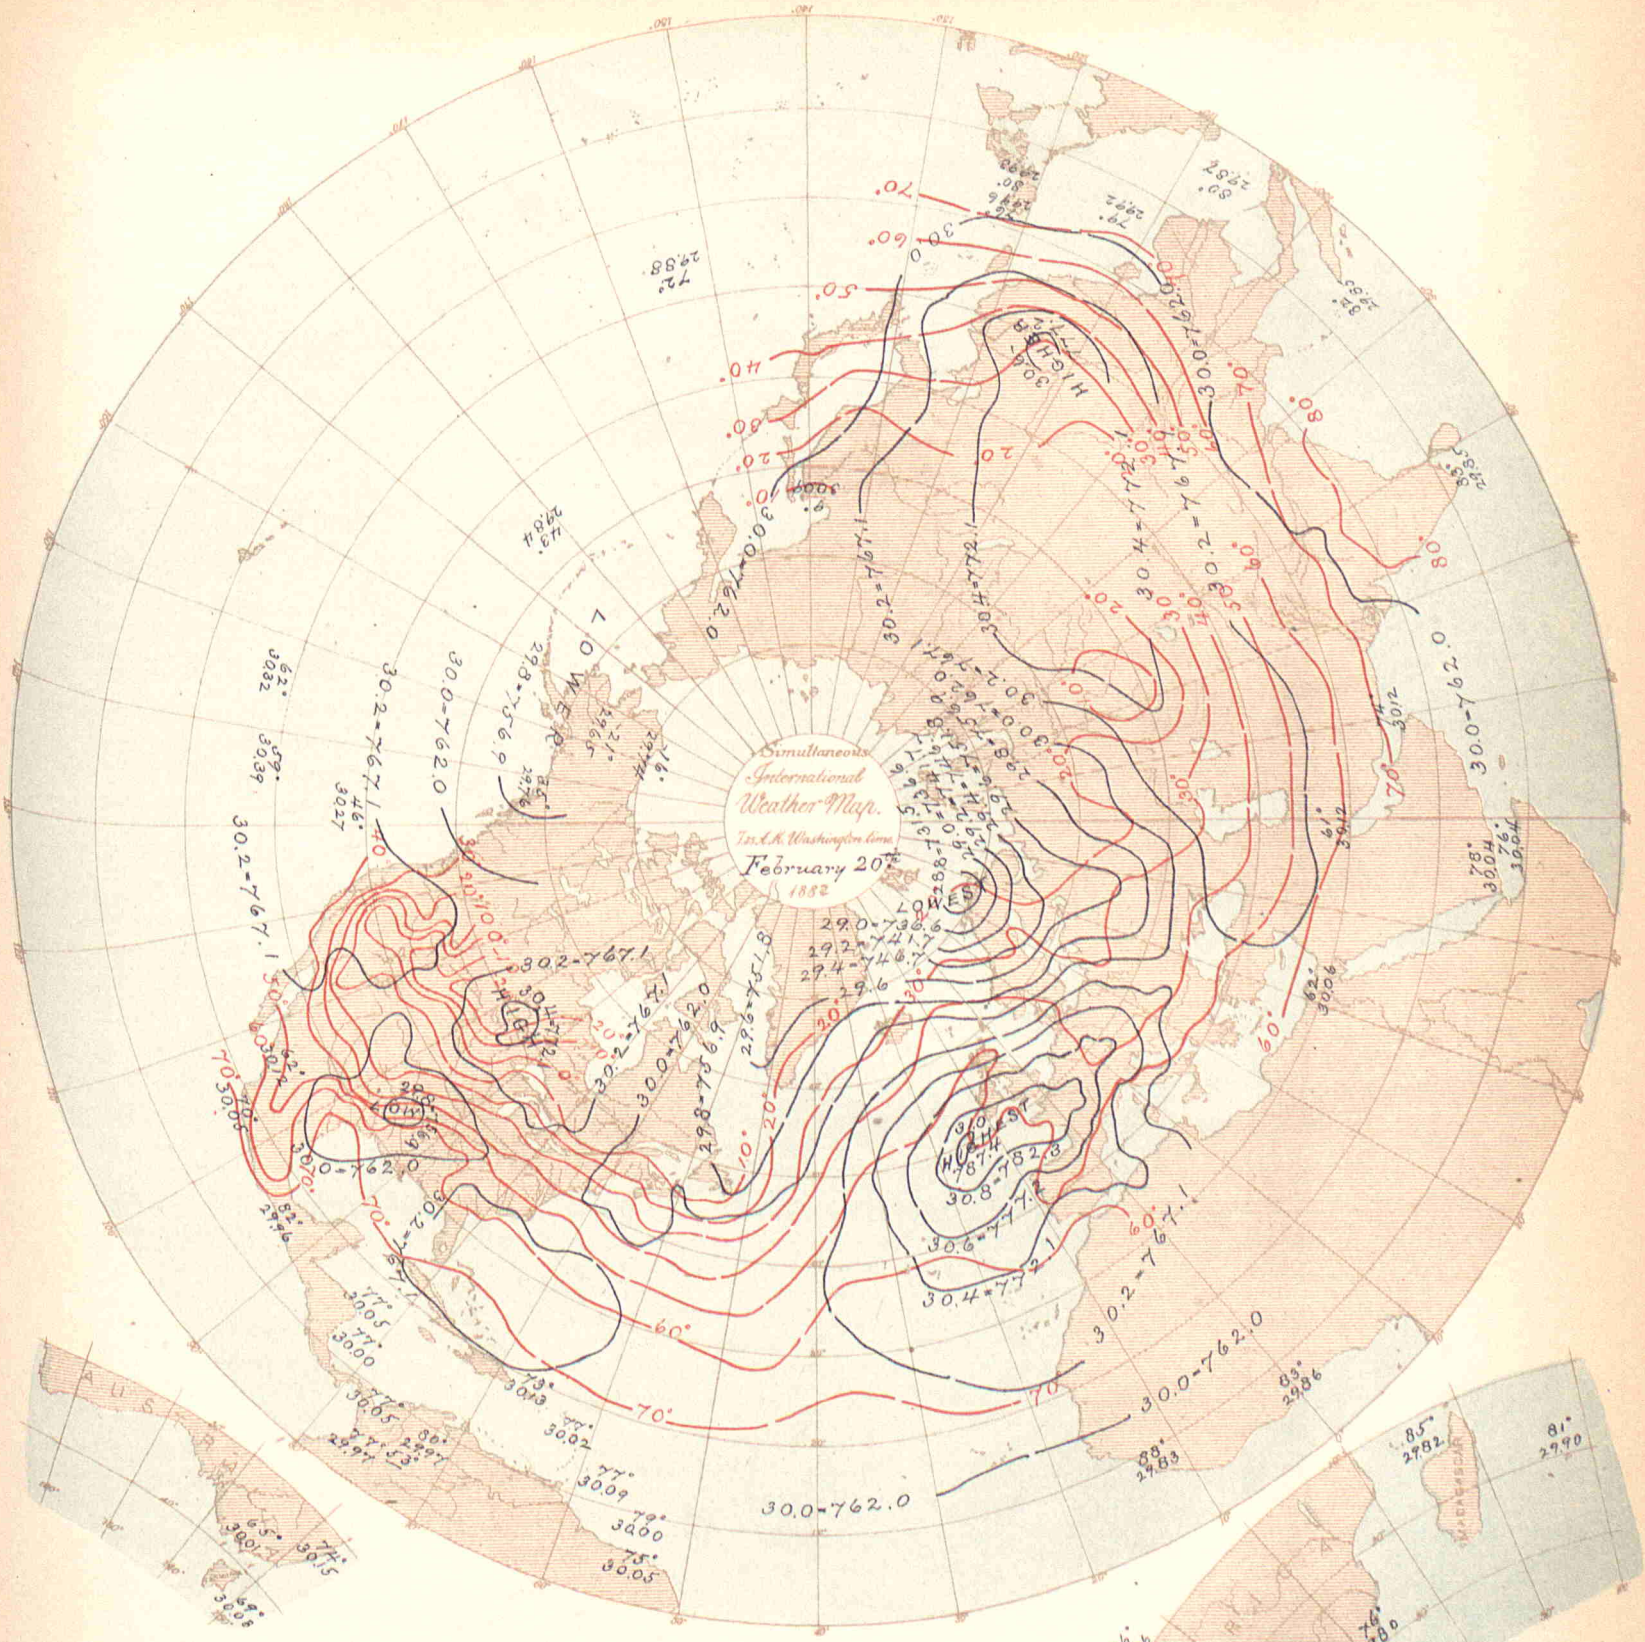
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 21, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

STATIONS.	Barometer. Corrected for instrum'tal error and temperature.		Barometer. Reduced to sea-level.		Temperature of the Air.		Rel. Hum.	Wind. Direction.	Wind. Velocity.		Wind. Force	Clouds. PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

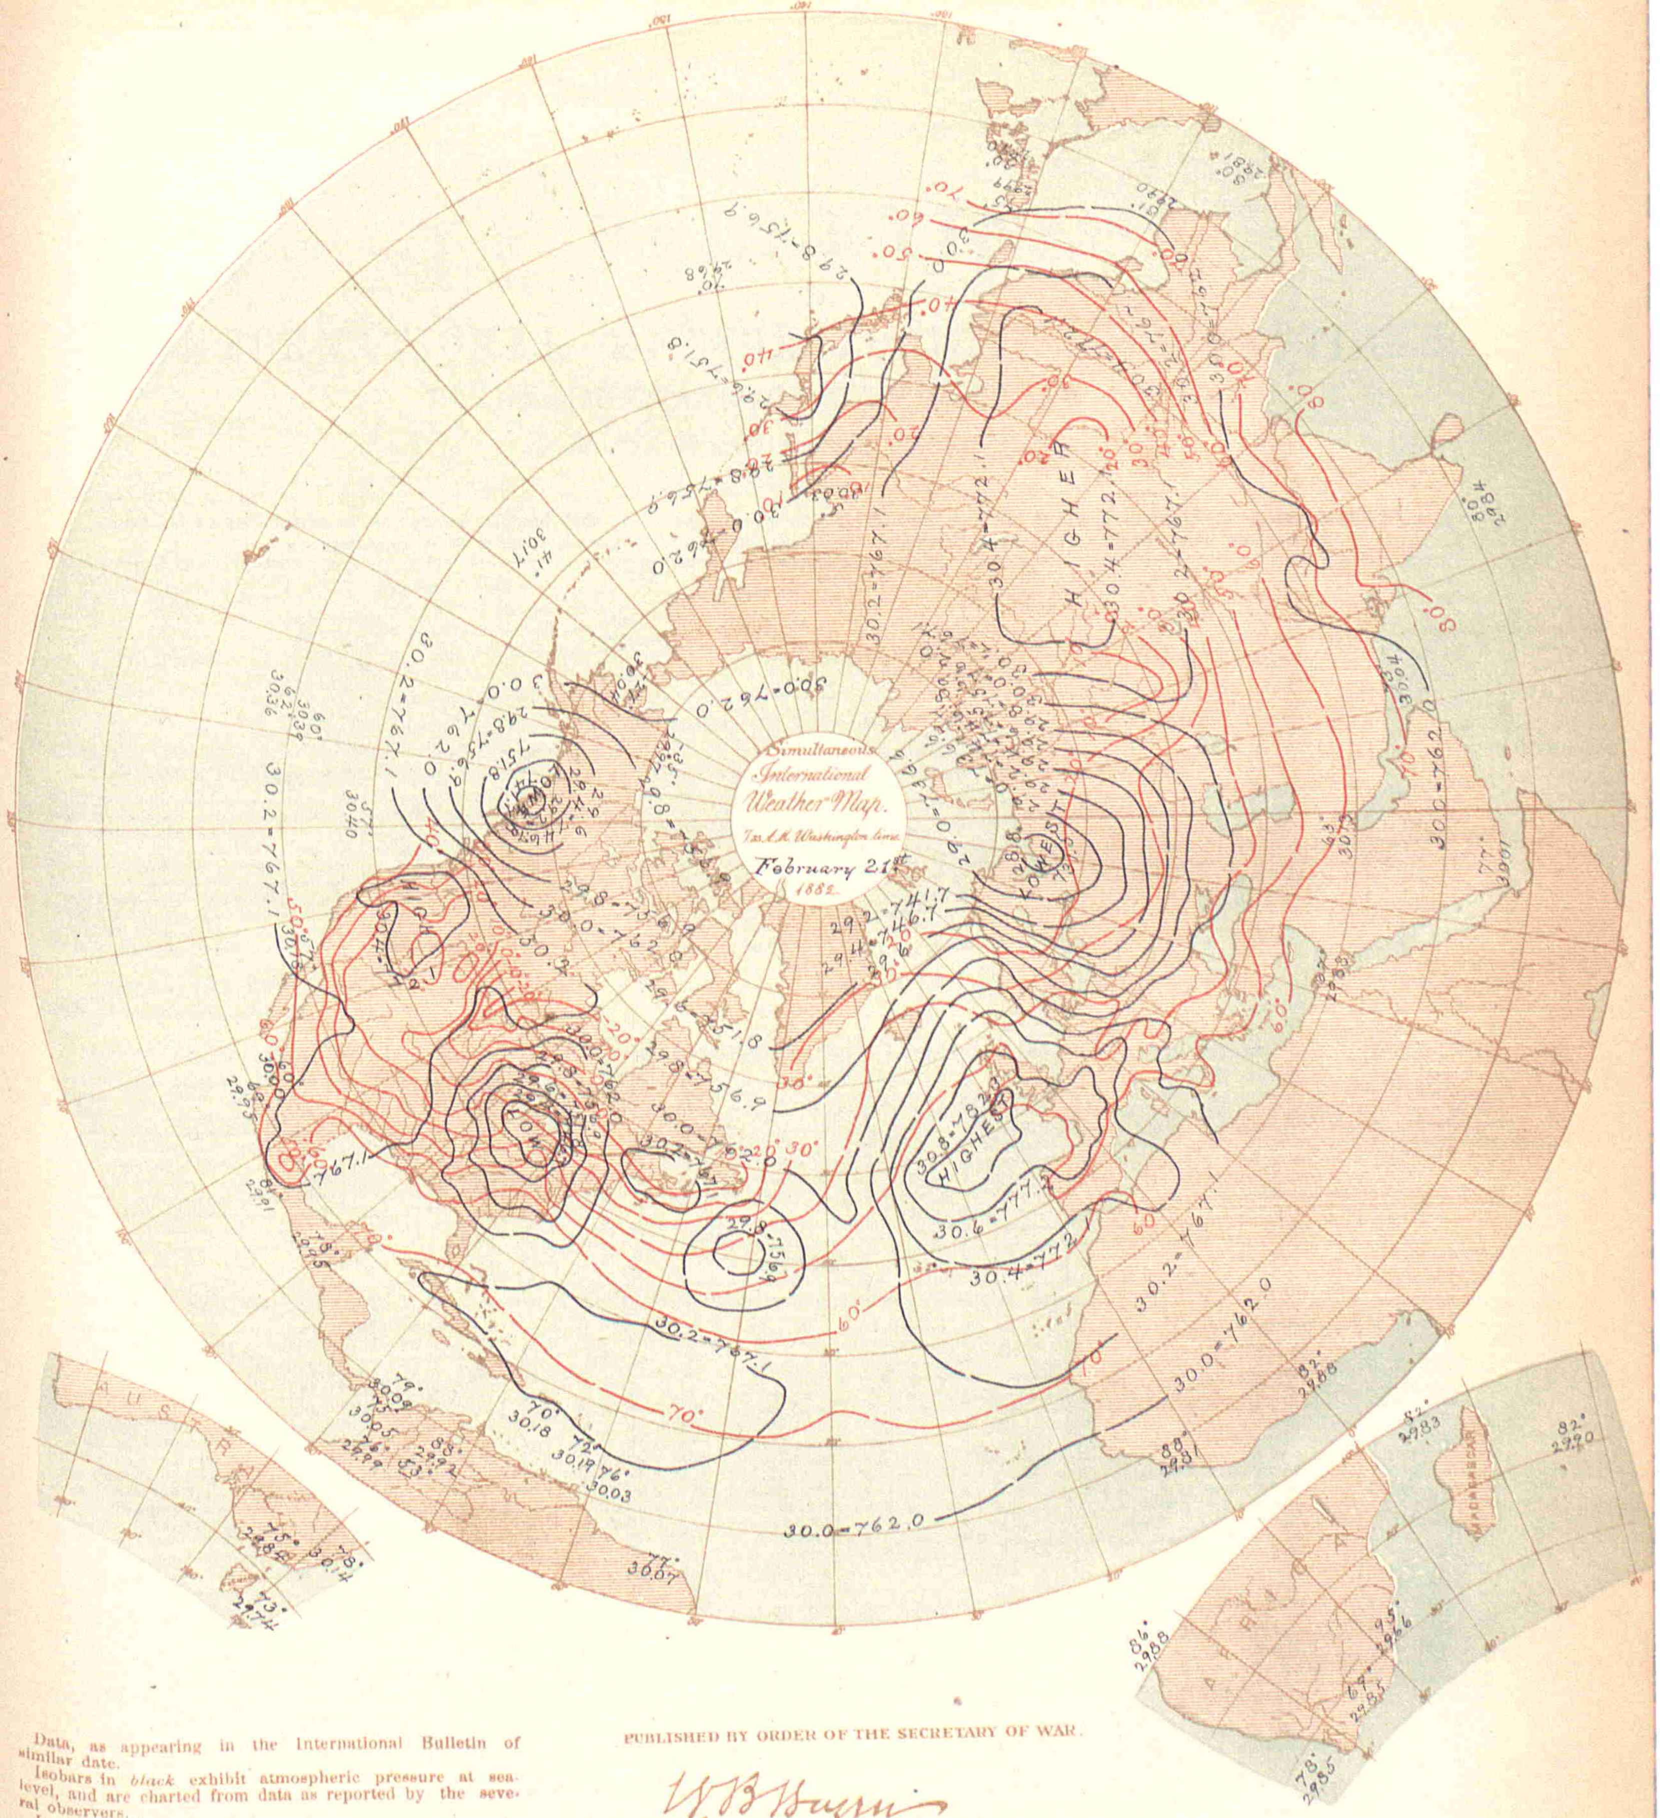
W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. Hazen

Brig. & Bvt. Maj. Gen'l.
Chief Signal Officer, U. S. A.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 22, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.

Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 23, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.

Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 24, 1882.

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

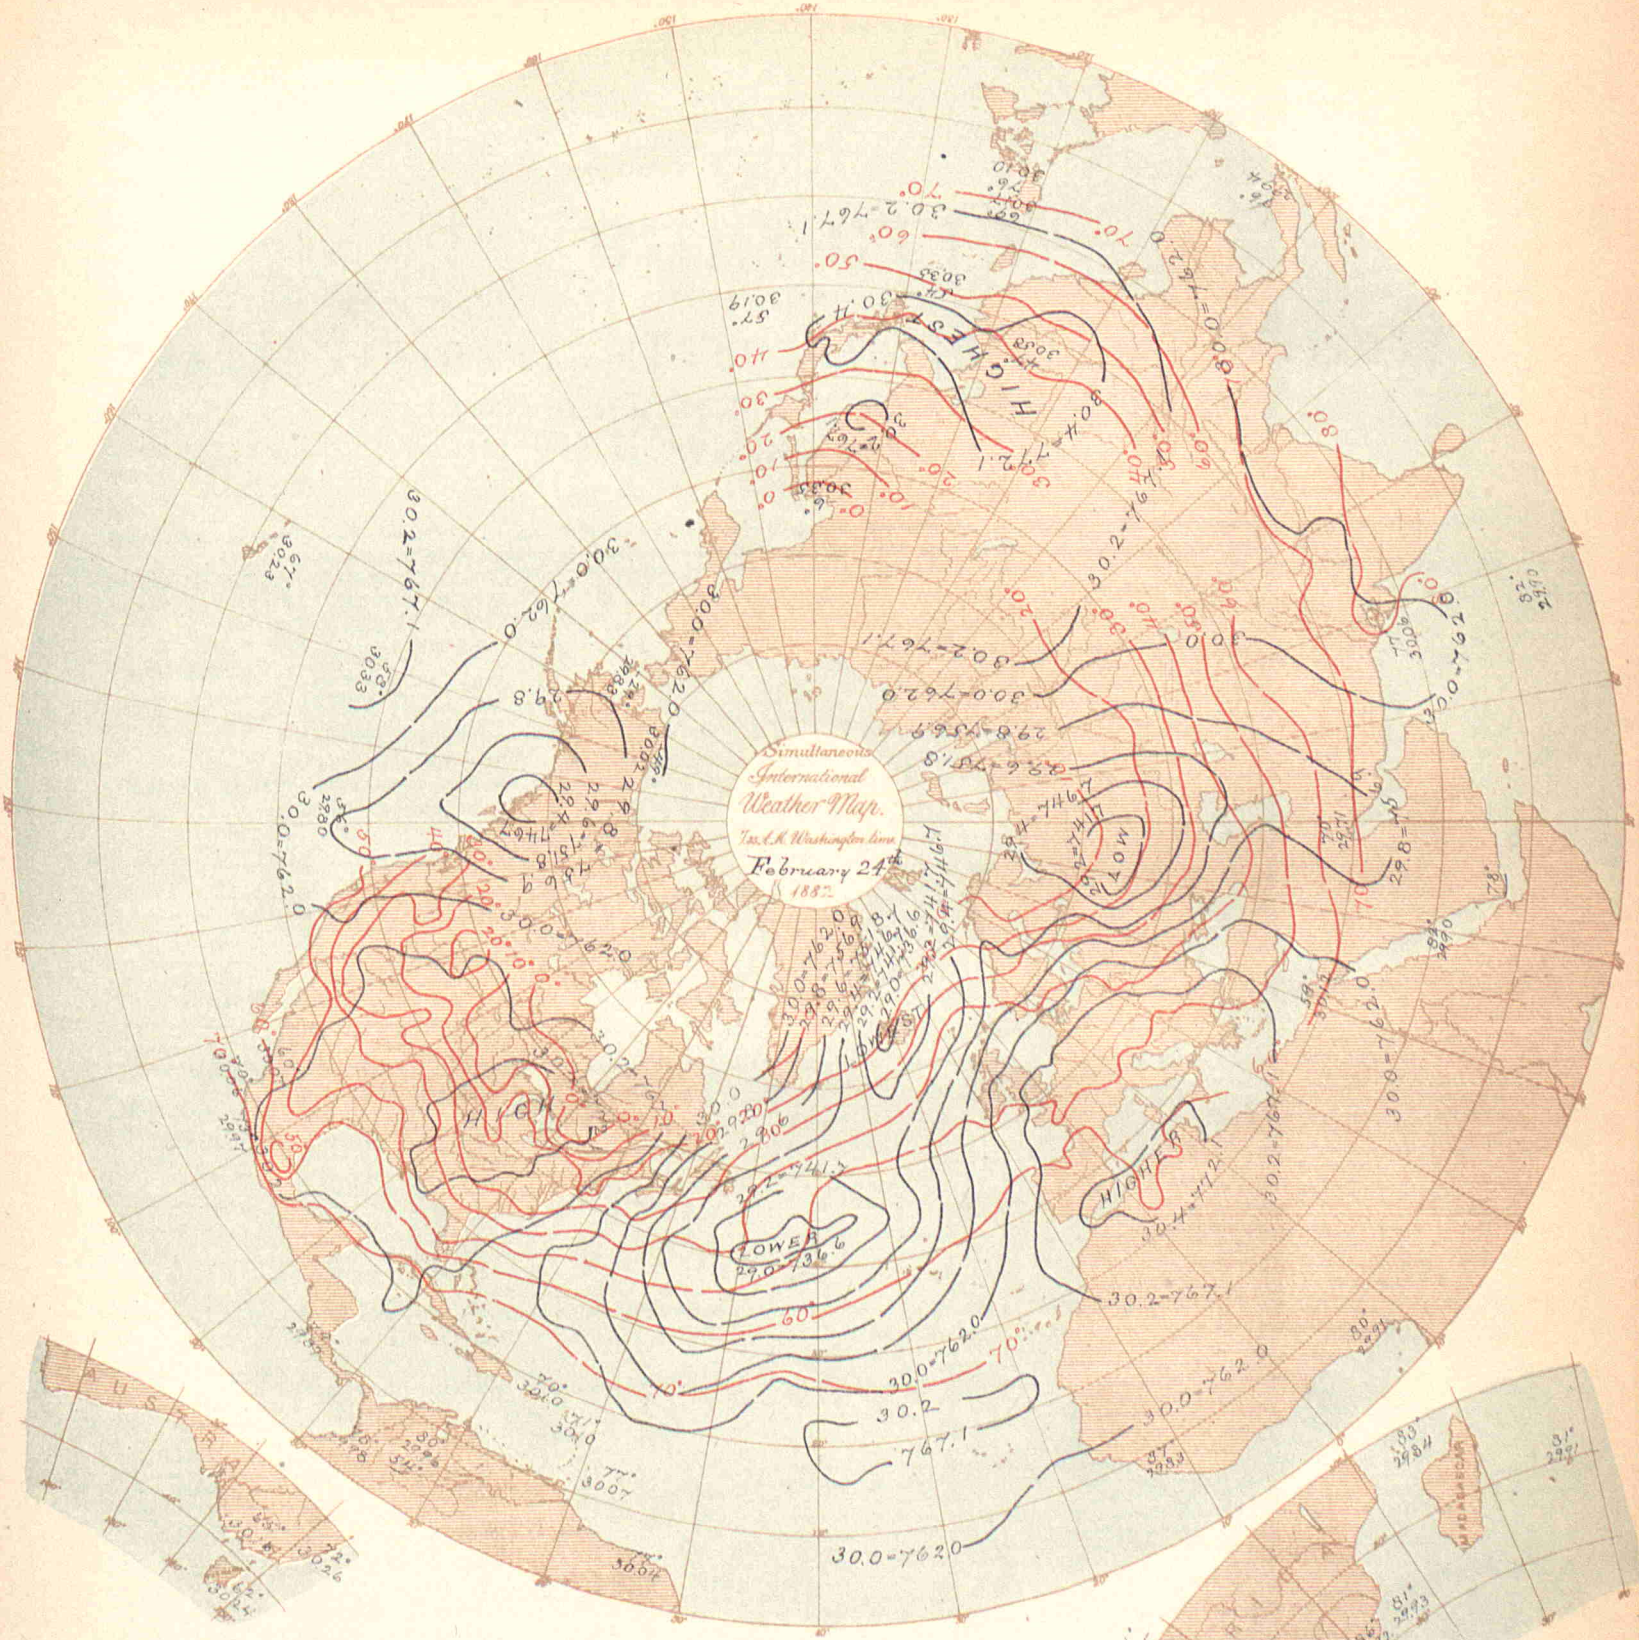
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. Hazen

Brig. & Bvt. Maj. Gen'l.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 25, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

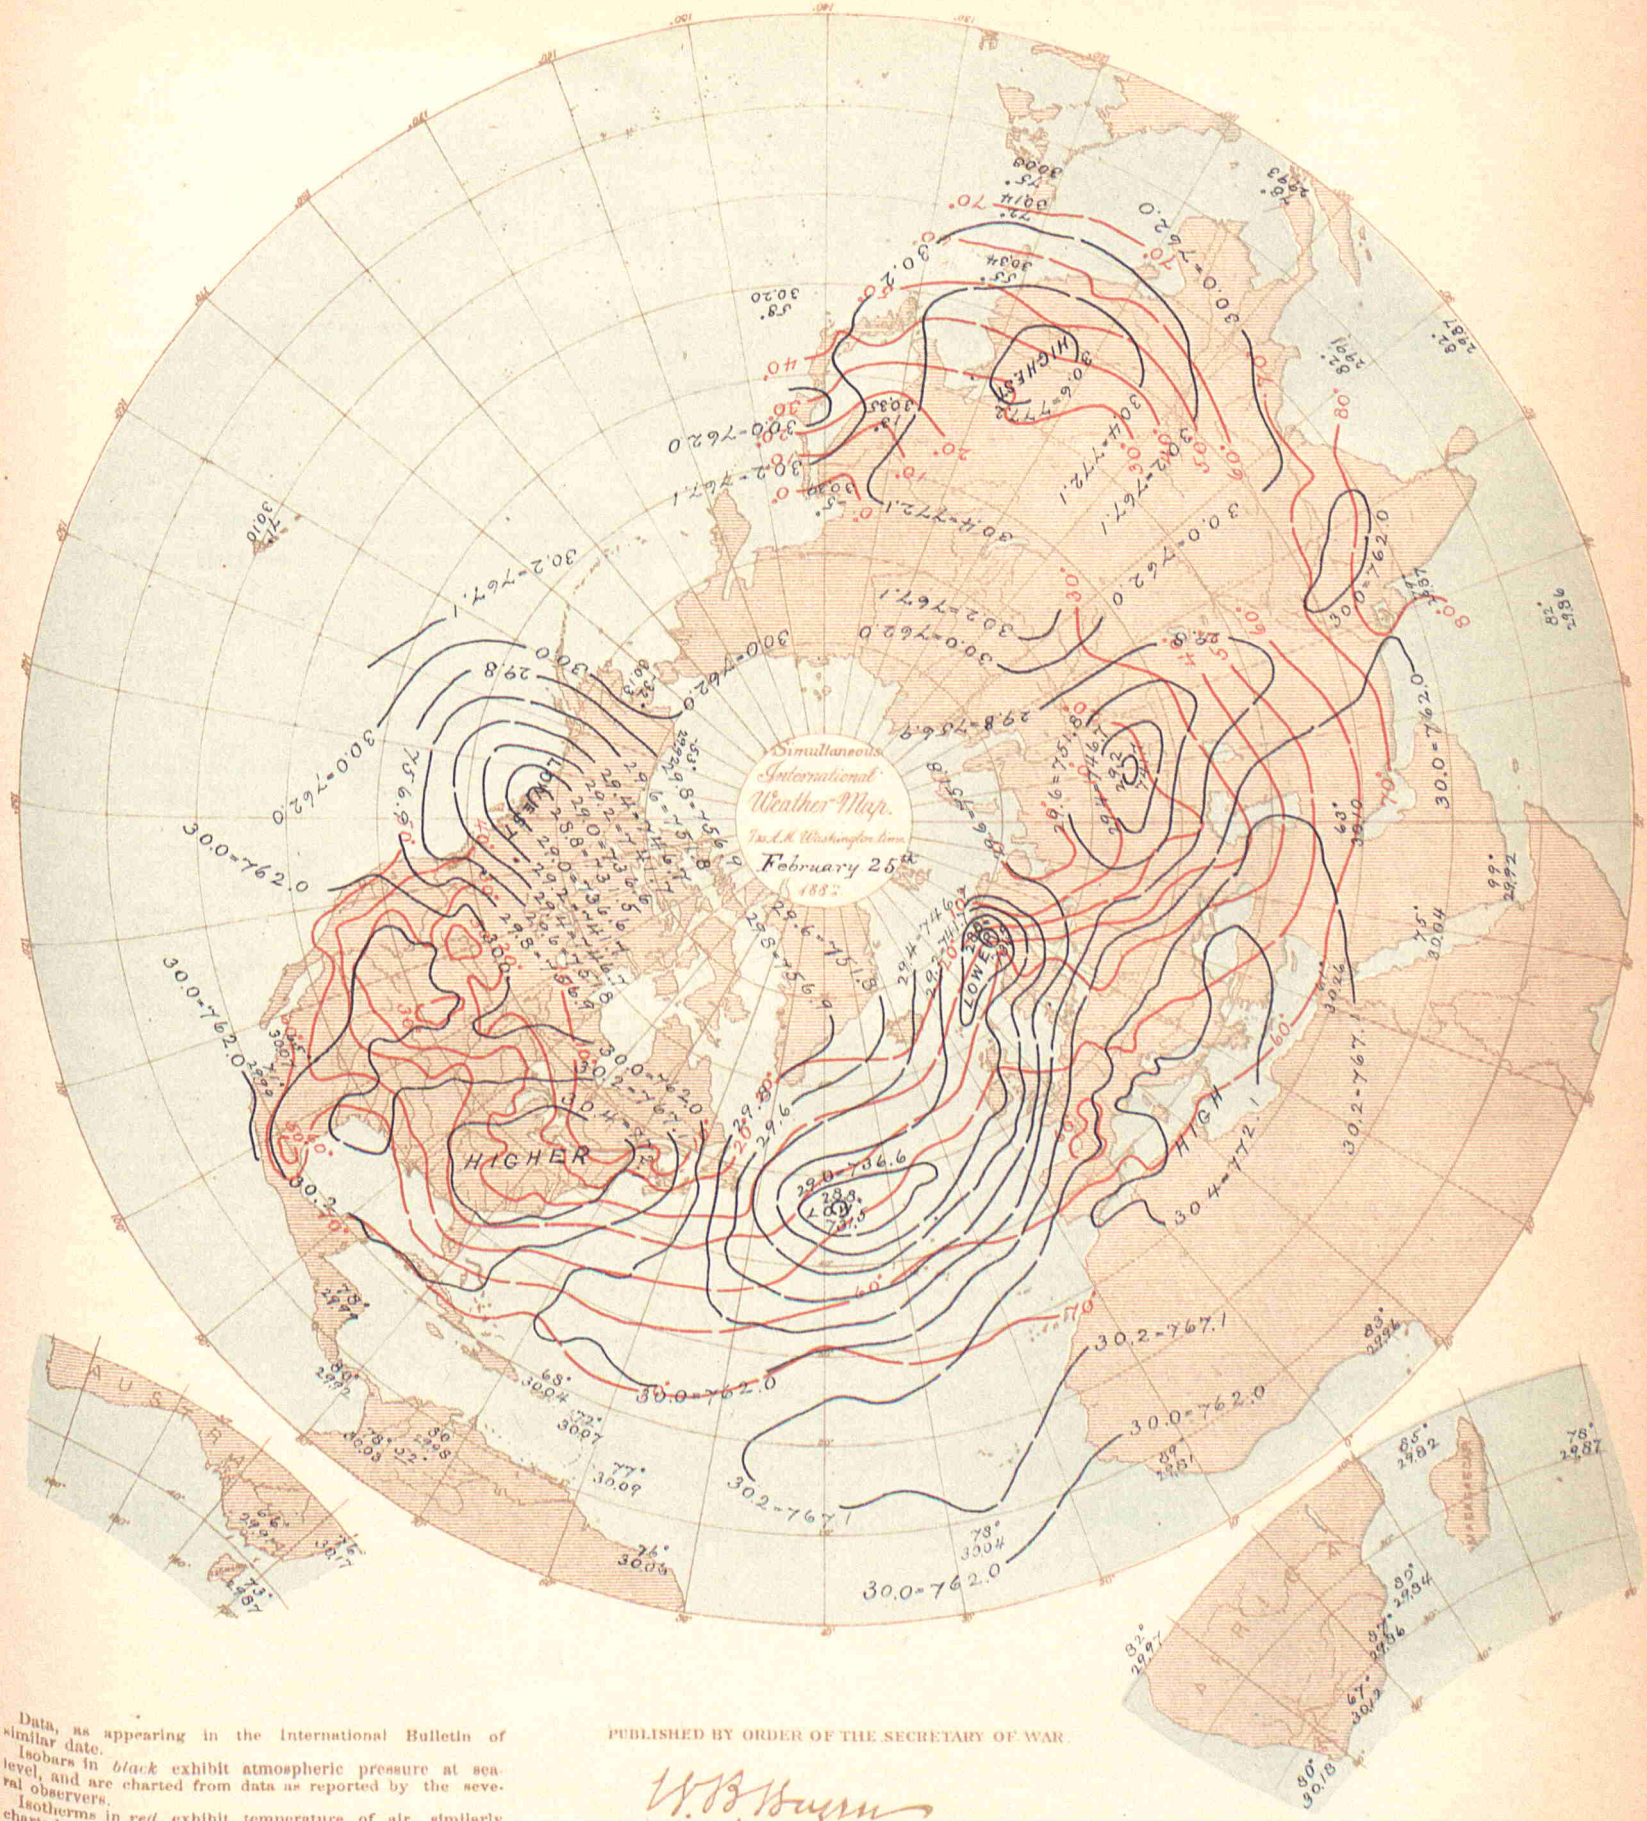
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. Hazen

Brig. & Bvt. Maj. Gen'l.
Chief Signal Officer, U. S. A.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 26, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

Chief Signal Officer, U. S. A.

Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. Hazen

Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.

Heliotype Printing Co. Boston.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 27, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

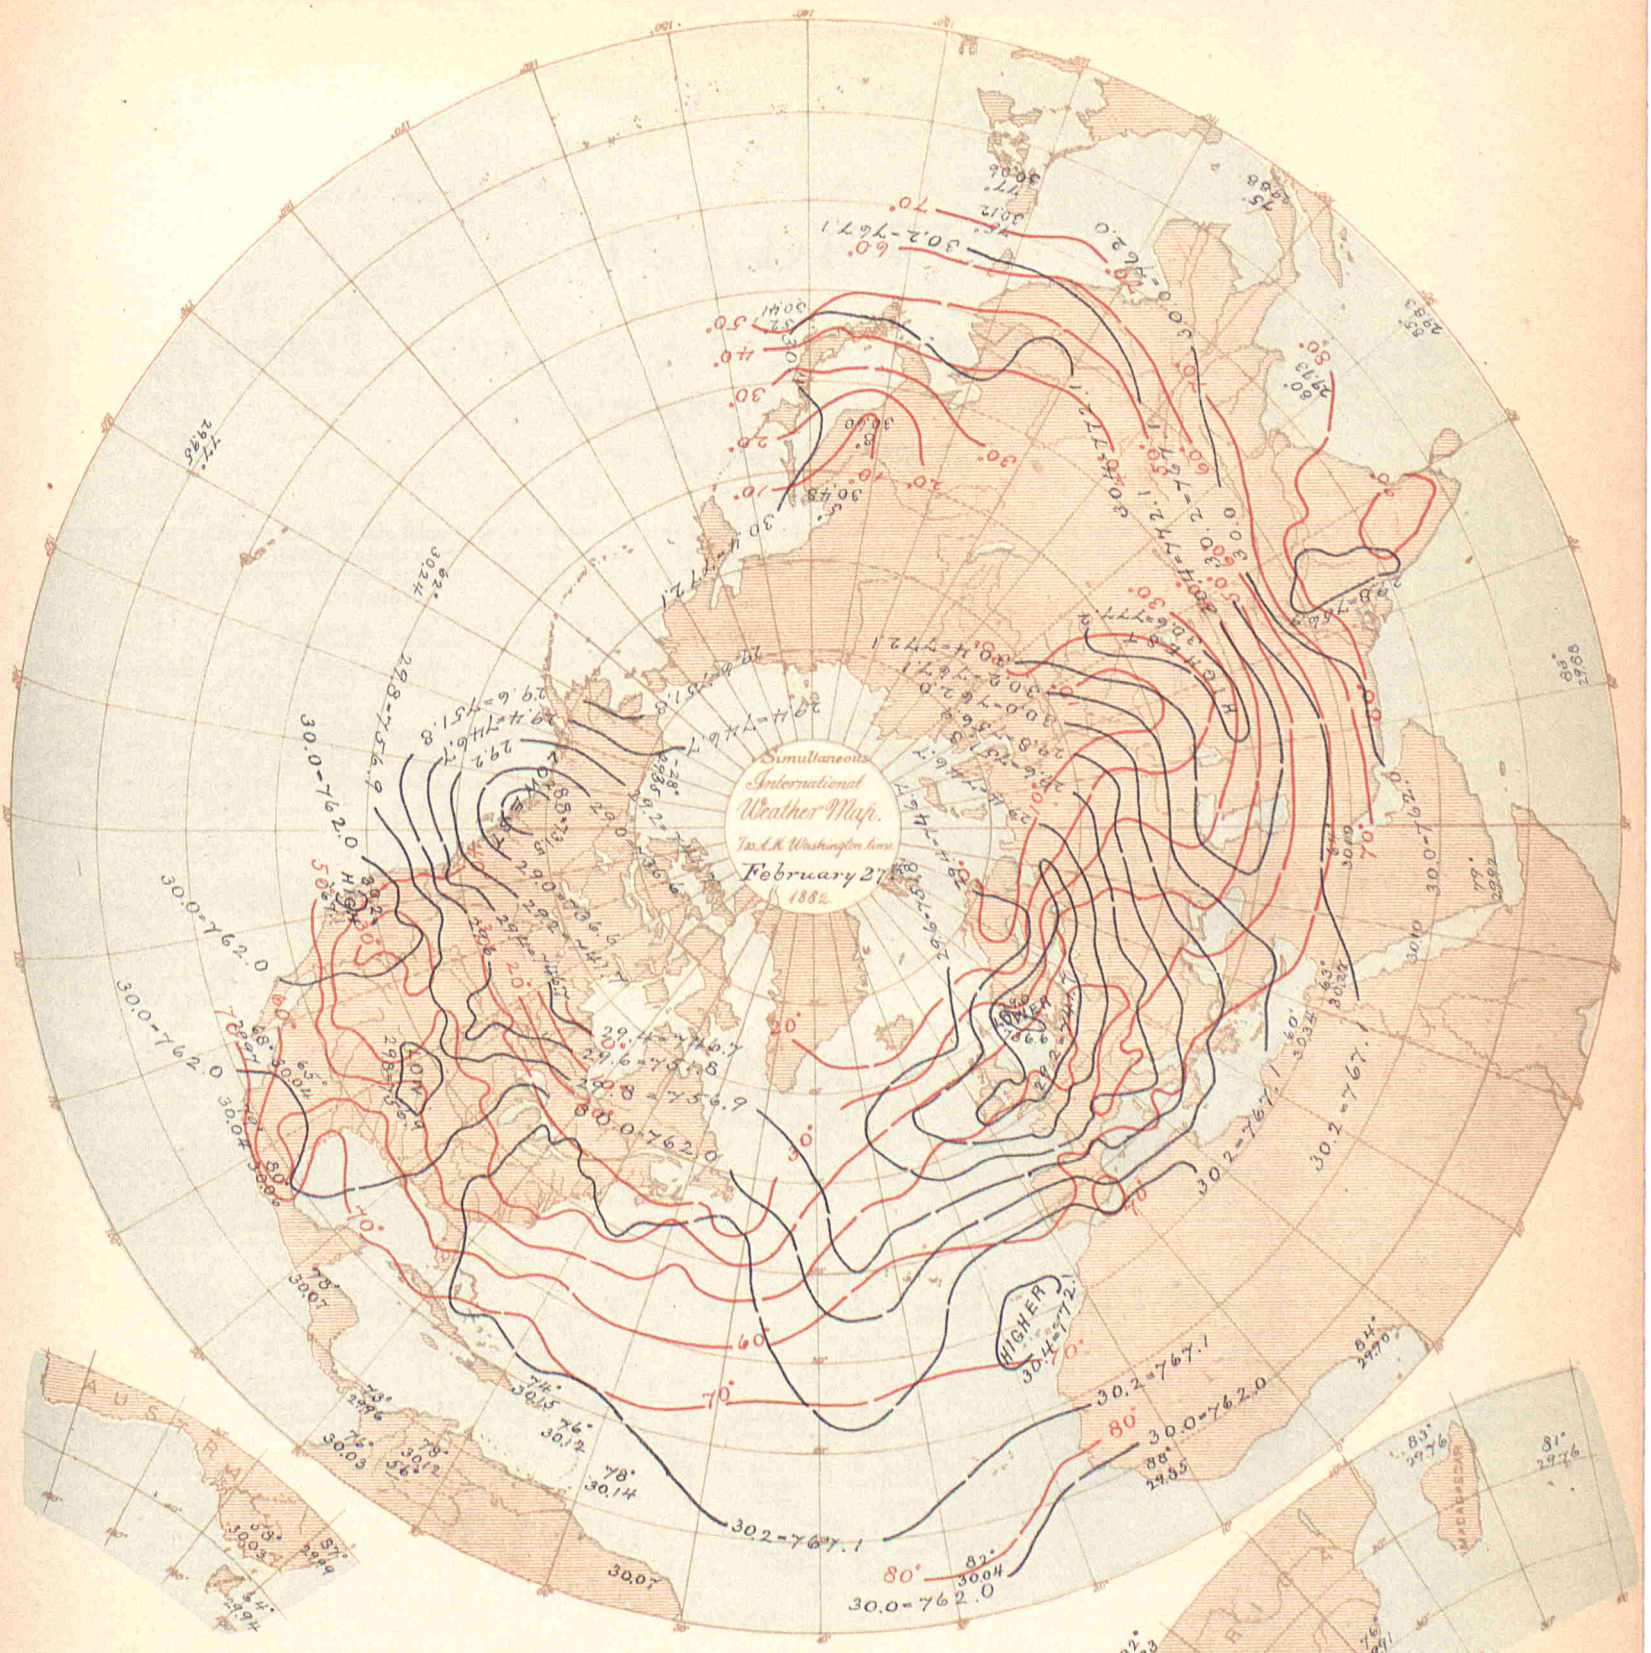
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

BULLETIN

OF

INTERNATIONAL METEOROLOGICAL OBSERVATIONS,

TAKEN SIMULTANEOUSLY ON FEBRUARY 28, 1882,

7 A. M., Washington Mean Time.

Collated at the Office of the Chief Signal Officer of the Army of the United States, from observations made in each instance in compliance with a special request, and printed for exchange with the co-operating observers.

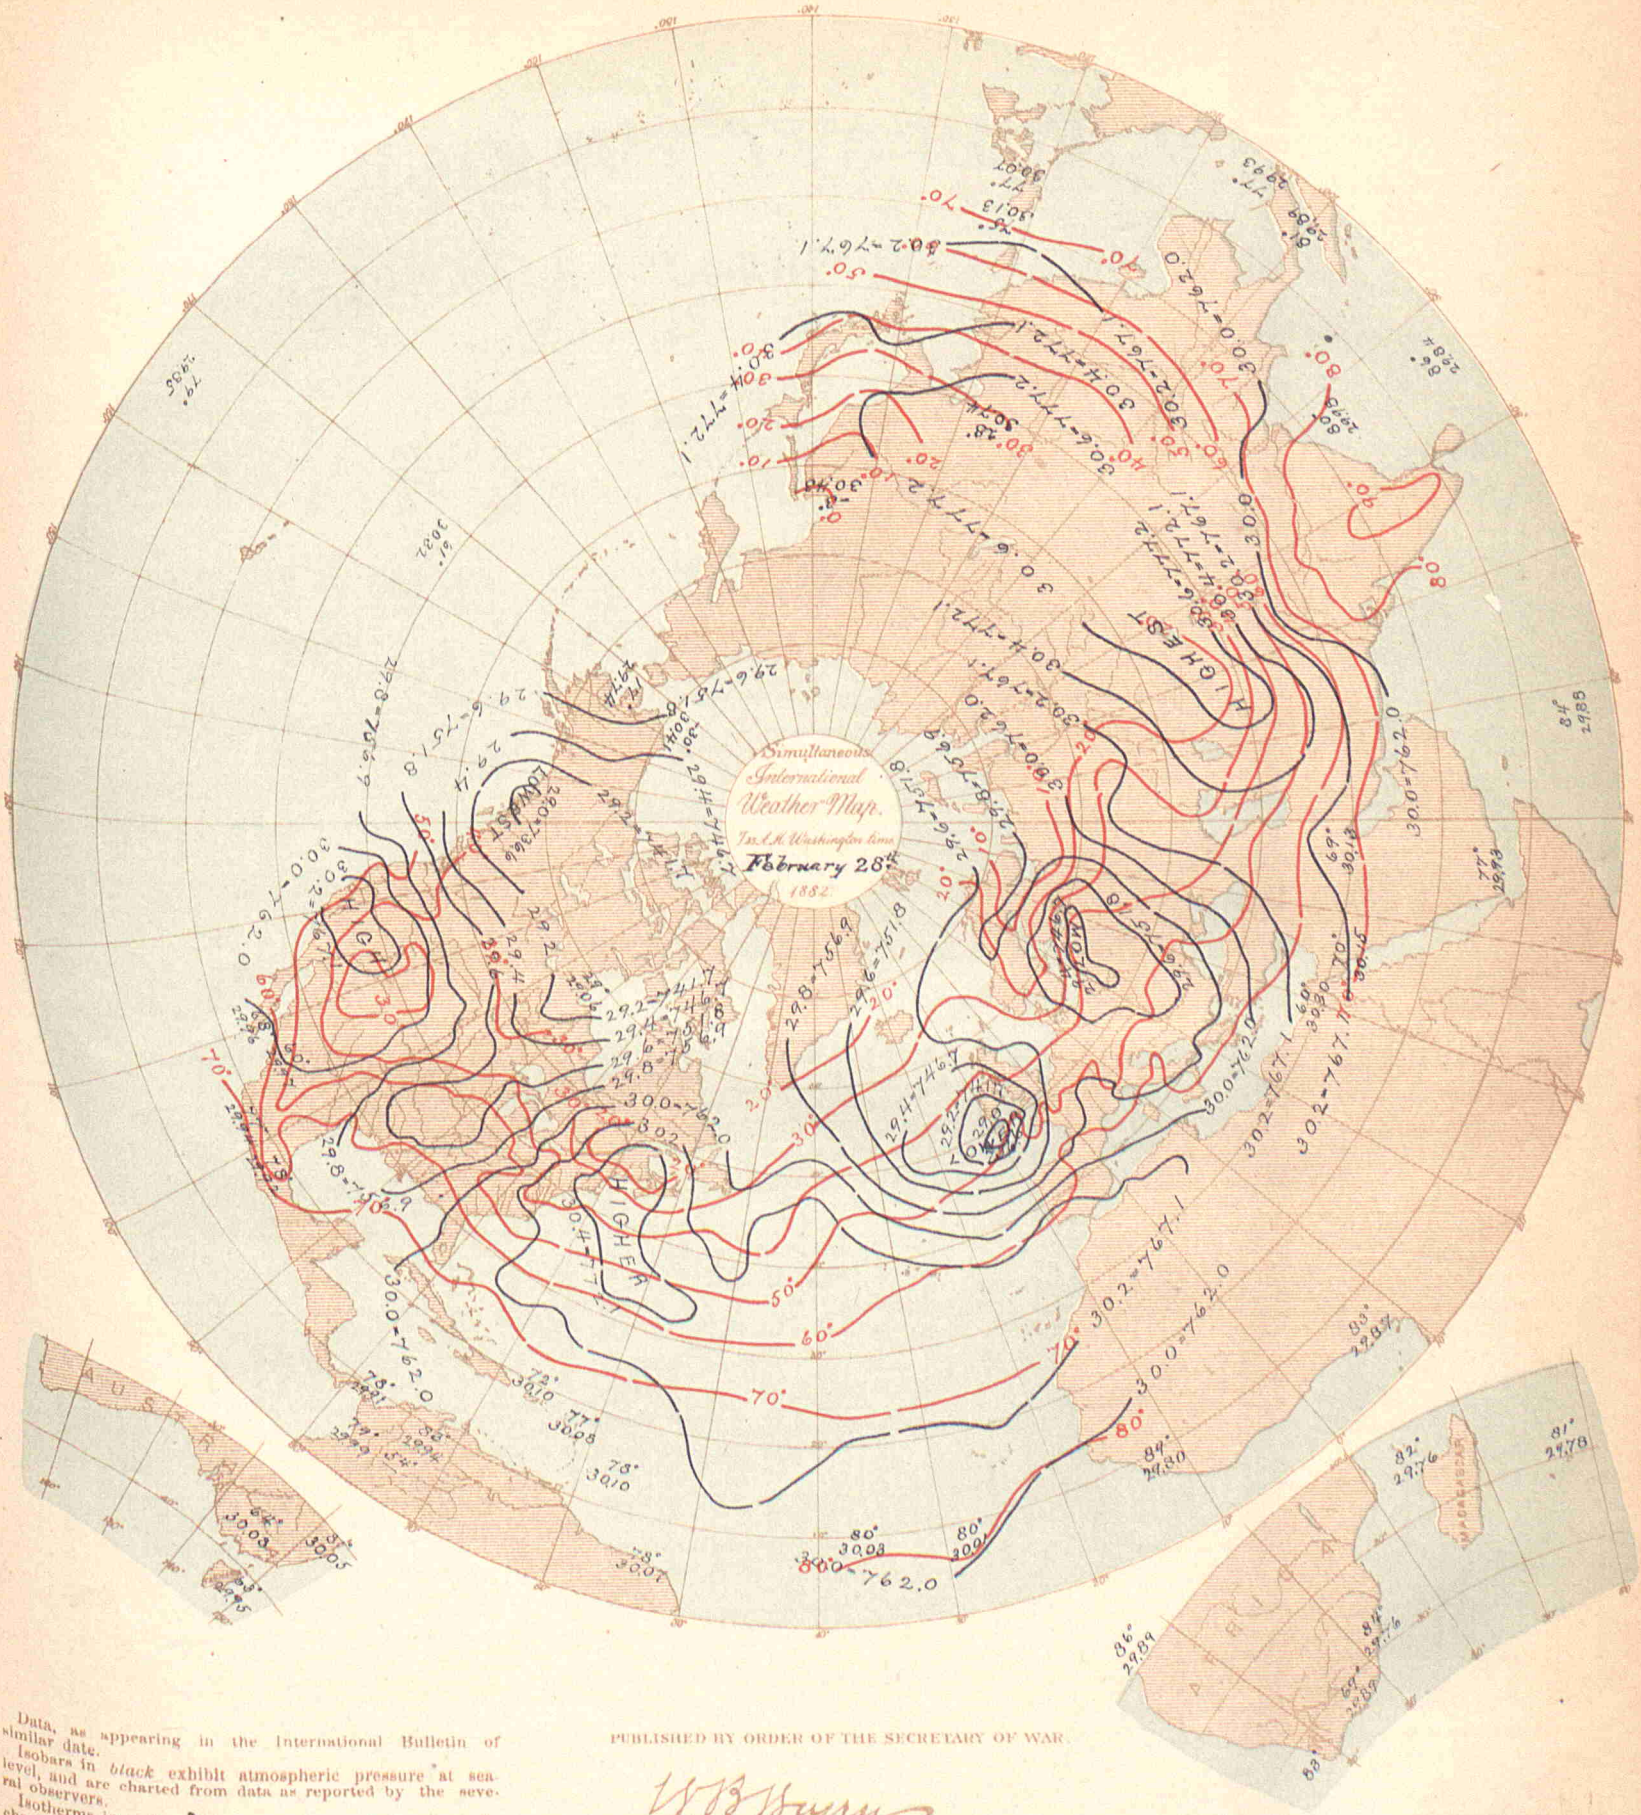
PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.



Data, as appearing in the International Bulletin of similar date.

Isobars in *black* exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.

Isotherms in *red* exhibit temperature of air, similarly charted.

Broken or dotted lines indicate that the lines so broken are doubtful.

Arrows, when charted, fly with the wind and exhibit wind-direction and force.

NOTE.—See General Remarks, page 9.

REVIEW.

INTERNATIONAL METEOROLOGY.

[*Pressure expressed in inches and millimetres; temperature in degrees Fahrenheit and Centigrade.*]

In addition to chart iv., for the month of February, 1882, the present SUMMARY contains the international storm-track chart v., for the month of February, 1881, being a continuation of the series begun in November, 1877, and heretofore described in the MONTHLY WEATHER REVIEW.

The following descriptions relate to chart iv., for the months of February and March, 1881, (which charts were issued with the SUMMARY for the respective months), and present a brief summary of the meteorological conditions which prevailed over the northern hemisphere during these months. Chart iv. continues the series of international charts begun in January, 1877, and exhibits the mean pressure, mean temperature, and prevailing directions of the wind over the northern hemisphere, and at certain isolated stations in the southern hemisphere, as determined from one observation taken simultaneously each day at 7 a. m., Washington, or 0.8 p. m., Greenwich mean time.

For the description of these charts much valuable information has been obtained from the "Monatliche Uebersicht der Witterung," published by Professor Dr. G. Neumayer, director of the German Marine Observatory, Hamburg, Germany, and from the "Bulletin Mensuel," published by M. Marc Dechrevens, of Zi-Ka-Wei, China.

For the month of February, 1881, no very marked areas of low mean pressure appear on the chart. The region of least pressure is indicated by the isobarometric line of 29.8 (756.9), and extends from the southern part of Greenland southward to the fifty-first parallel, and eastward to the western coast of Ireland. The isobar of 29.9 (759.4) extends from Newfoundland eastward over the Atlantic, and incloses within its limits the British Isles and northwestern Europe, while a small area of mean pressures, inclosed by the isobarometric line of 29.9 (759.4), covers the southern part of Italy and the Mediterranean.

The areas of barometric maxima are distributed as follows: The first area of high barometer, indicated by the isobar of 30.4 (772.1), occupies southeastern Siberia and the northern frontier of China. Eastward of that region, the atmospheric pressure decreases somewhat rapidly, until the isobar of 29.9 (759.4), which occupies the region near the Sea of Okhotsk, is reached. The pressure decreases very slowly in a southerly and southeasterly direction, the isobars of 30.1 (764.5) and 30.2 (767.1) covering Japan and the southern part of the Chinese Empire. In Europe, the pressure is highest in the northern part of the continent, and in Russia; it increases slowly to the eastward, and decreases in a southerly direction. Over the north Atlantic ocean, the region of barometric maxima covers the Azores and the Madeira islands, thence southward to the twentieth parallel and westward to the forty-third meridian. The isobar of 30.1 (764.5) also extends from the coast of the United States eastward as far as N. 22°, W. 62°. In the North American continent, the atmospheric pressure is generally high; the region of greatest pressure in the United States is shown over the New England and middle Atlantic states, where the mean barometric readings range from 30.2 (767.1) to 30.25 (768.3). In the interior of the United States, including the Florida peninsula and the Gulf states, the pressures range from 30.1 (764.5) to 30.2 (767.1). On the Pacific coast, the region of greatest mean pressure is inclosed by the isobar of 30.1 (764.5) and covers the states of California, Oregon, and western Idaho.

Compared with the preceding month, (January, 1881,) there has been a general increase of pressure over Europe, except in the British Isles, where the mean barometric readings were slightly lower than in January. The most marked increase of pressure occurred in the Scandinavian peninsula and in Russia, where it averages .25 inch above the means of the preceding month. In Asia, the mean pressure has experienced no marked change, except in southeastern Siberia and in British India, where the means are about .05 and .08 inch, respectively, below those of the preceding month. Over the Atlantic ocean, the atmospheric pressure has greatly increased; the area of low mean barometer, 29.5 (749.3), which, in January, 1881, occupied mid-ocean, being now entirely dissipated and replaced by pressures ranging from 29.8 (756.9) to 30.1 (764.5). In the United States, the pressure has decreased, the region of greatest pressures having diminished in size, while it has gradually drawn to the eastward. On the Pacific coast, the changes are very marked, especially in the northern portions, where the pressure has decreased about .15 inch. In Canada, there has been a general increase of pressure in all parts of the dominion; over the region near Hudson's bay, the increase averages .25 inch.

Compared with the corresponding month of previous years, the mean atmospheric pressure over the United States is above the normal over the country from South Carolina northwestward to Lake Superior, the greatest departures occurring in the New England states. In the Gulf states, the pressure was slightly below the normal. In Canada, it was everywhere above the normal.

The following table shows the mean pressure and the mean temperature, with corresponding departures, for the month of February, 1881, in the several countries of Europe and Asia, compared with the means as determined from observations taken during the years 1877, 1878, 1879, and 1880:—

Countries.	Mean pressure.			Mean temperature.		
	Feb., 1877, 1878, 1879, 1880.	February, 1881.	Departure.	Feb., 1877, 1878, 1879, 1880.	February, 1881.	Departure.

*Means for three years only.

In the United States, the mean temperature of the air was below the normal from the Rocky mountains eastward to the Atlantic, except in the New England states and in the Florida peninsula, where it was about normal. West of the Rocky mountains, the temperature was above the normal. In Canada, the mean temperature was above the normal in all parts of the Dominion, except in the province of Ontario, where it was less than the normal.

In Europe, the mean temperature of the air was below the normal in the northern part of the continent, while, in the southern sections, it was above the normal. In British India, the highest mean temperature was 86°.8 Fah. (30°.4 Cent.), at Nagpur, and the lowest was 66°.4 Fah. (19°.1 Cent.), at Sibsigar.

The following are some of the extreme monthly mean temperatures reported at isolated stations:—

Highest.	Fah.	Cent.	Lowest.	Fah.	Cent.
	°	°		°	°
Freetown, Africa	86.0	30.0	York Factory, B. A.	—22.4	—30.2
Bridgetown, Barbadoes	81.1	27.3	Nertchinsk, Siberia	—13.5	—25.3
Manila, Philippine Islands	80.2	26.8	Yeniseisk, Siberia	— 5.3	—20.7
Peurto Berrio, C. A.	79.0	26.1	Upernavik, Greenland	— 3.5	—19.7

In the United States, the prevailing winds were: northwesterly on the Atlantic coast from Maine to North Carolina, and northerly and easterly from North Carolina to Florida. In the interior of the country and in the lake region, the winds were northerly and easterly; on the Pacific coast, they were southeasterly and southwesterly. In Canada, the prevailing winds were northwesterly in the Maritime Provinces; elsewhere they were generally westerly. Over the north Atlantic ocean, the prevailing winds were as follows: from the coast of North America north of the thirty-fifth parallel, eastward to the fortieth meridian, northwesterly. East of the fortieth meridian the winds were mostly southwesterly, except near the coasts of the British Isles, where northeasterly winds prevailed. South of the thirtieth parallel, the winds were northeasterly. In Europe, the winds were easterly and northeasterly over the British Isles, the Scandinavian peninsula, and along the northwestern coasts of the continent; elsewhere they were southeasterly and southerly, except over the Italian peninsula, where they were northerly and northwesterly. In Japan and in eastern China, the prevailing direction of the wind was northerly.

The rainfall (including melted snow) of the month was above the average in the United States and Canada. In Europe, it was below the average in the northeastern part of central Europe, while in the southwestern section it was above the average. In the British Isles, the rainfall was greater than the average.

For the month of March, 1881, the mean atmospheric pressure over the northern hemisphere was distributed as follows: the most marked area of low pressure occupied the Arctic region to the north of Scandinavia, and included within its limits the extreme northern part of Norway. The barometric gradients increase very slowly to the south and southwestward, but to the eastward the pressure rapidly increases. An area of low mean pressure, inclosed by the isobar of 29.6 (751.8), occupies the Atlantic ocean from the Banks of Newfoundland eastward to the thirtieth meridian, the pressure increasing but slowly on all sides of the central depression. The regions of barometric maxima appear in Siberia and in the territory near Hudson's bay; in the former, the mean pressure is 30.5 (774.7), and in the latter it is 30.2 (767.1).

Compared with the chart for the preceding month, (February, 1881,) a very decided change has taken place in the distribution of pressure, the greatest changes occurring over northern Europe, the Atlantic ocean, and the North American continent. In central Europe, the pressure has increased very slightly; in Algeria and Tunis, it has increased .05, while over the Azores and the Madeira islands, the decrease of pressure averages .25 inch. In Asia, the changes in pressure are unimportant, except over British India, where there is a decrease of about .09 inch. In the United States, the decrease in pressure averages from .15 inch, in the interior of the country, to .45 inch, in the New England states. In Canada, the decrease was equally noteworthy. On the Pacific coast, the decrease averaged about .1 inch. In Greenland, the pressure has increased slightly, while in Iceland, it has decreased about .14 inch.

Compared with the corresponding month of previous years, the mean atmospheric pressure is below the normal in the United States from the one-hundredth meridian eastward to the Atlantic; the region of greatest departures being the middle Atlantic and the New England states. Between the one-hundredth meridian and the Sierra Nevada mountains, the pressure was normal in the southern, and slightly above the normal in the northern districts. In California, it was slightly below the normal. In Canada, the pressure was everywhere much below the normal, the departures ranging between .15 and .25 inch. In Europe, the pressure was slightly below the normal, no very large deviations being shown.

The following table shows the mean pressure and the mean temperature, with corresponding departures, for the month of March, 1881, in the several countries, compared with the means as determined from observations taken during the years 1877, 1878, 1879, and 1880:—

Countries.	Mean pressure.			Mean temperature.		
	Mar., 1877, 1878, 1879, 1880.	Mar., 1881.	Departure.	Mar., 1877, 1878, 1879, 1880.	Mar., 1881.	Departure.

* Means for three years only.

In the United States, the mean temperature of the air was below the normal in the southern and central sections of the country, while in the northern part of the country the temperature was normal, or above the normal. In Canada, the temperature was above the normal. In Europe, the mean temperature of the air was below the normal in the northern part of the continent, and above the normal in the southern districts. At the close of the month, frosts were reported in many parts of northern Europe, and abundant snowfalls occurred. Many of the harbors were filled with ice, and navigation was more or less interrupted until the middle of April. In British India, the highest mean temperature, 91° .3 Fahr., (32° .9 Cent.) was reported at Poona, and the lowest, 70° .4 Fahr., (21° .3 Cent.) at Sibsagar.

The following are some of the extreme monthly mean temperatures reported at isolated stations:—

Highest.	Fahr.	Cent.	Lowest.	Fahr.	Cent.
	°	°		°	°
Freetown, Africa	86.7	30.4	York Factory, B. A.	− 9.5	−23.1
Bridgetown, Barbadoes	83.0	28.3	Jacobshavn, Greenland	− 3.5	−19.7
Mauritius, Indian ocean	81.3	27.4	Nikolaievsk on the Amoor	+ 4.5	−15.3
Cape Town, South Africa	79.0	26.1	Stykkisholm, Iceland	+ 8.2	−13.2

In the United States, the prevailing wind-directions were westerly and northwesterly from the ninety-seventh meridian eastward to the Atlantic. In Texas, the winds were southerly and southeasterly. On the Pacific coast, they were generally southerly. Over the north Atlantic ocean, the prevailing winds were mostly westerly and northwesterly from the coast of the United States eastward to the fiftieth meridian; from that meridian eastward to the European coasts, and from N. 25° to N. 45°, the winds were southwesterly. North of the forty-fifth parallel, the winds were mostly northeasterly. In Europe, the winds were mostly westerly and southwesterly. In eastern China and in Japan, the prevailing wind was northerly.

The rainfall during the month of March, 1881, was generally below the average in the United States, except in the lake region and in the northeastern districts of the country, where there was a slight excess. In Canada, the rainfall was below the average, except in the Maritime Provinces, where the precipitation was in excess of the average. In Europe, the rainfall was much above the average.

The following extract, relating to the low temperatures of the winter of 1880—81, is taken from the "Monatliche Uebersicht der Witterung," for March, 1881, published by Professor Dr. G. Neumayer, of Hamburg, Germany:—

"Nature," a periodical published at Christiania, Norway, states: "The past winter has been characterized by long-continued frosts in Norway and the whole of northern Europe. From October, 1880 to March, 1881, a full half year, without interruption, the monthly mean temperatures remained below the normal over the whole of Norway, from Cape Lindesnaes (the Naze), to North Cape, and from the west coast to the frontiers of Sweden. At most of the Norwegian stations, the lowest temperatures ever recorded have been observed during the past winter. The absolute minimum temperature was observed at Karasjok (in Finmark, N. 69° 35′, E. 25° 6′), on February 4th, when the thermometer registered —50°.6 C. (—59° Fahr.). On the 15th of January, at the same place, —50°.5 C. (—58°.9 Fahr.) was also recorded, being only one-tenth of a degree less. So low a temperature as the above, has, so far as known, never before been recorded in this country, and it was only by the use of reliable spirit-thermometers, that such an intense degree of cold could be measured." * * *

Chart v. exhibits the paths of barometric minima for the month of February, 1881, which have been traced from the daily international charts.

The data are charted for each day of the month, on the maps accompanying each issue of the "International Bulletin," and from these charts and from additional reports, are traced the movements of the centres of barometric minima. Twenty-four of the more important atmospheric depressions that have appeared over the northern hemisphere have thus been traced. The following concerns the general distribution of these depressions:—

Eight appeared in the United States and Canada; of these, three developed in the southwestern part of the United States; one appeared on the Pacific coast; and three apparently developed in the North-West Territories of British America. Two depressions, numbers i. and vii., have been traced from the North American continent eastward over the Atlantic to the European coasts.

Eleven depressions appeared over Europe; one of these apparently originating in mid-ocean. One storm developed in Greenland and moved in a southeasterly direction over the British Isles, and four depressions are shown over the southern part of Europe.

Three areas of low pressure are exhibited over Asia; two of these occupied eastern Asia, and one appeared in the western part of the continent.

The following are brief descriptions of the storms that occurred in the United States and Canada:—

I.—This disturbance was in eastern Tennessee on the morning of the 1st, and was probably a continuation of low-area xi., of the January chart. During the day, it passed eastward into the Atlantic, attended by strong northeasterly gales along the coast of the United States; and on the 2d, it was central near N. 40°, W. 58°. On that date, the s. s. "Illinois," in N. 41° 06′, W. 58° 08′, reported barometer 29.31 (744.5), wind e., force 7; rough easterly sea and rainy weather; and the s. s. "Rhein," in N. 44°, W. 56°, had a strong se. gale and heavy snow-storm. During the 2d, the depression moved northeastward, with decreasing pressure at the centre, and on the 3d, was central near N. 48°, W. 47°; the s. s. "Pennsylvania," in N. 45° 32′, W. 49° 18′, reported barometer 28.83 (732.3), wind w., force 6, cloudy; while strong westerly gales of force 7 to 9 were reported by vessels in the southern quadrants. On the morning of the 4th, the disturbance occupied nearly the same position as on the preceding day, but the pressure appears to have increased at the centre, and the wind diminished in force; during the 4th, the disturbance apparently moved slowly northeastward, and on the 5th, the region of least pressure was transferred to about N. 51°, W. 32°. On that day, the s. s. "Adriatic," in N. 49° 13′, W. 26° 55′, reported barometer 29.59 (751.6), wind s., force 6; and the s. s. "Illinois," in N. 46° 45′, W. 37° 42′, reported barometer 29.67 (753.6), wind wnw., force 5, fair. During the 6th, the disturbance moved toward the coasts of the British Isles, and on the 7th, it appeared as a somewhat deep depression, central north of Ireland. This storm is hereafter described as low-area xiii. of this chart.

II.—This storm appeared off the north Pacific coast on the 1st, causing very heavy rains in Oregon and Washington Territory. The disturbance moved southeastward with increasing pressure, and finally disappeared in Missouri on the 2d.

III.—From the 4th to the 9th, the barometer remained low and fluctuating, over the country west of the one-hundredth meridian, but on the morning of the last-mentioned date, the storm-centre became well defined in the Gulf states, where the lowest barometer, 29.46 (748.3), was reported at Vicksburg, Mississippi. During the day, the depression moved nearly due northward, attended by very heavy rains, and, on the morning of the 10th, the storm-centre appeared in the lake region, the lowest barometer, 29.37 (746.0), being reported from Alpena, Michigan. A rapid increase of pressure then set in, and the depression moved with greatly diminished energy over the Canadian provinces, and disappeared probably in Labrador.

From the 5th to the 7th, a severe storm prevailed over the eastern part of the Gulf of Mexico, during which numerous shipping disasters occurred. The data in connection therewith are too indefinite to admit of a charting of the track of this storm.

IV.—This storm was a secondary development of low-area iii., and, on the morning of the 11th, it appeared as a large

depression over the Gulf states, with its centre probably near Memphis, Tennessee. It moved in a path nearly parallel to that of low-area iii., and on the 12th, was central in Michigan, the barometer within the region of least pressure ranging from 29.23 (742.4), to 29.40 (746.7), while rain prevailed in the southern and eastern, and light snow in the western quadrants of the depression. On the 12th, the course changed to the eastward, and the depression moved down the Saint Lawrence valley, attended by rain and snow. During the 13th, the storm moved in a northeasterly direction over the Gulf of Saint Lawrence and disappeared on the 14th, to the northward of Newfoundland.

V.—From the 15th to the 17th, the atmospheric pressure was very unsteady in the southwest, but, on the 17th, a marked decrease of pressure occurred in Texas, accompanied by light rains and a decided rise in temperature. During the 18th and 19th, the disturbance moved east-northeastward, and on the last-named day, it was shown as a trough of low pressure, occupying the Atlantic coast states from North Carolina northeastward to the Canadian Maritime Provinces, attended by heavy rains in the middle Atlantic and New England states. On the 19th, the storm moved northeastward along the coast, skirting the coast of Nova Scotia, and on the following day, it disappeared to the northeastward of Newfoundland.

VI.—This depression probably developed in the Saskatchewan valley during the 18th, and on the 19th, it appeared as a storm of slight energy in Montana, and moving eastward during the day, was central over Lake Superior on the 20th. On the morning of the 21st, the region of least pressure was transferred to the Atlantic; the disturbance then moved northeastward along the coast, causing heavy snow in the Canadian Maritime Provinces. On the 23d, the depression was central south of Newfoundland, the storm having developed increased energy after reaching the ocean, but it apparently dissipated on the following day.

VII.—This disturbance appeared in the northwest on the 21st; it moved eastward and appeared as a well-defined area of low barometer over the lake region on the 22d. On the 23d, the disturbance occupied the Saint Lawrence valley, the Maritime Provinces and the New England states, in the form of an elongated area of low barometer. On the 24th, the centre of disturbance was in Nova Scotia, the pressure decreasing as the depression moved eastward. After the passage of this disturbance the barometer rose rapidly and strong northwesterly gales occurred at stations on the lakes, and in Canada. On the 25th, the storm-centre was near N. 46°, W. 44°, the s. s. "Scythia," in N. 45° 22′, W. 44° 41′, reporting barometer 29.51 (749.5), wind se., force 3, cloudy; and the s. s. "Wisconsin," in N. 45°, W. 46°, had a strong e. to nw. gale with snow. From the 26th to the close of the month, the disturbance appears to have remained nearly stationary over mid-ocean, attended by moderate to strong gales and snow.

VIII.—This disturbance developed in the North-West Territories of British America, and on the 25th, it appeared as an extensive depression in Dakota and Montana. During the day, the disturbance moved in a southeasterly track and by the morning of the 26th, was central in Kansas; southerly and southeasterly winds prevailed at stations to the east of the centre, with rainy weather in the southeastern quadrant. On the 27th, the course changed to the eastward, and the disturbance was central in Illinois and Indiana; the region of least pressure extending from central Michigan to northern Kentucky, within which region, cloudy weather and light rains prevailed. During the 27th, the depression moved slowly eastward, and on the 28th, the region of least pressure was apparently in Ontario, causing heavy rain in the Maritime Provinces.

The following descriptions relate to the storms that occurred over the Atlantic and in Europe during the month:—

IX.—On the 1st, an elliptical area of low pressure, inclosed by the isobar of 29.4 (746.7) occupied the north Atlantic ocean between the parallels of forty and fifty, north latitude, and the meridians of thirty and fifty, west longitude. On the morning of the 2d; the isobaric line of 29.6 (751.8) extended from the British Isles westward to Newfoundland and the Canadian Maritime Provinces; within this area were apparently two storm-centres; one, (low area i.), to the southward of Newfoundland, and the other probably in the vicinity of N. 51°, W. 23°, as on that day the s. s. "Suevia," in N. 49°, W. 22°, reported strong sw. winds with very heavy rain squalls and high sea. By the morning of the 3d, the storm-centre became more marked and was then very near to the western coast of Ireland, causing a rise in temperature with rainy weather and strong southerly winds over England and Ireland. Moving northeastward along the Irish coast, the disturbance, on the 4th, was shown in northern Scotland; on the morning of the 5th, it was over the North sea, the area of decreasing pressure extending in a southeasterly direction, and causing a barometric fall over the northeastern part of England, southern Norway, and northern Germany. On the morning of the 6th, the disturbance appeared as an enlongated area of low pressure covering the whole of the Scandinavian peninsula, the lowest barometric readings being in southern Sweden; the wind changed to northerly over the British Isles, and the pressure rapidly increased, attended by lower temperature; but over Scandinavia there was a decided rise in temperature and light rains fell at stations in the southern quadrants of the depression. The track of the depression appears to have changed to the northeastward and the disturbance moved toward the White sea, where it was central on the 7th, accompanied by a rise in temperature and strong southerly winds. On the morning of the 8th, the depression maintained the same position as on the preceding day, but it gradually disappeared during the day.

X.—This is a continuation of the disturbance traced as low-area xxvi., on chart v., for January, 1881. On the morning of February 1st, the disturbance was central, with increasing pressure, off the coast of southern Norway, and on the following day, the depression filled up under the influence of an area of high pressure which was gradually extending over the Scandinavian peninsula.

XI.—This disturbance appeared over the Mediterranean on the 5th; by the 6th, the area of least pressure was situated over southern Italy and was accompanied by rain. On the 7th, the depression was probably central near the entrance to the Adriatic sea, the wind having changed to northwesterly over the Italian peninsula. On the 8th, a slight increase of pressure occurred, but this again gave way on the following day. During the 9th and 10th, the region of least pressure was over the Archipelago, attended by rain at Constantinople on the latter date. On the 11th, the disturbance disappeared near the Caspian sea.

XII.—This disturbance formed apparently to the southeastward of the Bermudas during the 6th and 7th. On the 7th, the bark "Commewyne," in N. 32° 02′, W. 55° 29′, reported barometer 29.79 (756.7), being a fall of .2 inch, wind shifting from nw. to ne., force 2; the schooner "Annie R. Lewis," in N. 22° 31′, W. 56° 08′, reported barometer 29.81 (757.2), wind sw., force 5, and strong northerly gales were reported by vessels to the westward. On the 8th, the pressure decreased, and the area of the disturbance apparently became more extensive, but the region of least pressure moved very slowly, while the winds increased in force in all quadrants of the depression. The bark "Commewyne," in N. 31° 45′, W. 55° 14′, reported barometer 29.58 (751.3), wind nne., force 9, drizzling; the schooner "Annie R. Lewis," in N. 20° 11′, W. 55° 34′, barometer 29.69 (754.1), wind nw., force 7, overcast. During the 9th and 10th, the barometer remained low over the region between 20° and 30° north latitude, and 50° and 60° west longitude; the ship "Yorkshire," off Bermuda (no latitude or longitude given), encountered a heavy gale lasting from the 7th to the 9th, during which she had bulwarks stove, decks swept, and sustained other damage. On the 10th, the barome-

ter began to rise, and generally fair weather set in over the region above named.

XIII.—This is a continuation of the storm described as low-area i. of the present chart. On the morning of the 7th, the depression appeared off the Irish coast, causing a rise in temperature and severe southerly and southeasterly gales, with rain and snow in all parts of the British Isles. On the 8th, the centre of disturbance was over the North sea and off the eastern coast of Scotland, the lowest barometric reading being 28.94 (735.1), at Aberdeen, wind wnw., while strong westerly and northwesterly gales prevailed at all stations west of the centre. During the 8th, the depression moved, in a course slightly south of east, over the Scandinavian peninsula, and, on the 19th, was central over the Baltic, causing rain and snow over nearly all parts of northwestern Europe. On the 10th, the disturbance passed into northwestern Russia, and gradually disappeared.

XIV.—This was a deep depression, 28.60 (726.4), which appeared off the north of Ireland on the 10th, and caused a rapid decrease of pressure over western Europe. Strong westerly and southwesterly gales occurred over England and Ireland, and equally strong southeasterly gales prevailed in Scotland, while rain fell in the British Isles and the northwestern coast of Europe, except in the northern part of Scotland, were the precipitation was in the form of snow. During the 10th, the disturbance moved quickly eastward, having assumed an elliptical form, and on the 11th, the region of least pressure was situated over the eastern part of the Baltic. A brisk increase of pressure followed immediately in rear of the depression, and the barometric gradients became steep over the British Isles, causing strong northerly and northwesterly gales over these islands.

XV.—This was probably a secondary development of the preceding storm, low-area xiv. It apparently moved in a southeasterly direction over England and the North sea, and on the 11th, was central in Germany. By the 12th, it appeared as a well-defined storm-centre in the southeastern part of Austro-Hungary. During the 13th, 14th, and 15th, the disturbance occupied southwestern Russia and the Black sea, causing higher temperature and cloudy weather, with moderate to strong breezes over that region. On the 16th, the disturbance disappeared in the Caucasus.

XVI.—On the 11th, the pressure decreased about .45 inch in southern Greenland, and on the 12th, a well-defined storm-centre appeared to the southwestward of Iceland, causing a strong easterly gale of force 8, at Stykkisholm, while strong westerly gales were experienced by vessels near the fifty-second parallel. During the 12th, the disturbance appears to have moved due southward, and on the 13th, was central near N. 55°, W. 30°; the s. s. "Celtic," in N. 49° 29′, W. 31° 27′, reported barometer 29.13 (739.9), wind nw., force 6, cloudy, and the s. s. "Belgenland," in N. 49° 13′, W. 25° 20′, barometer 29.03 (737.3), wind sw., force 9, showery. On the 14th, the disturbance was central off the southwest coast of Ireland, causing moderate southerly gales, with rain or snow at stations in northwestern France. On the 15th, the disturbance was over the southern part of the Bay of Biscay, where it appears to have dissipated during the day.

XVII.—This depression developed in Greenland during the 14th and 15th, and disappeared north of Iceland on the following day, without exhibiting any special energy. From the 16th to the 20th, the barometric readings remained low over Greenland and Iceland.

XVIII.—This was a slight depression which appeared off the northwestern coast of Spain on the 18th, and moved in a southeasterly direction over the peninsula during the 19th and 20th. The disturbance was attended by rising temperatures and rain at most stations in Spain, but no high winds were reported.

XIX.—On the 23d, there was a decrease of pressure over the Madeira islands, accompanied by southwesterly winds and rain, while vessels near the fortieth parallel experienced strong easterly and northeasterly winds, indicating the presence of an atmospheric disturbance near the Madeiras. By the 25th, the disturbance appeared as a well-defined storm-centre near the straits of Gibraltar, causing rain at stations in Spain, and high southerly winds in Algeria. On the 26th, an elongated area of low pressures occupied the western part of the Mediterranean, Algeria, the Iberian peninsula, and the Atlantic ocean westward as far as the fortieth meridian: within this area, the lowest barometric readings appeared to be over the Mediterranean, where generally stormy weather prevailed; these conditions being maintained until the close of the month.

XX.—This is a slight depression which appeared in northern Germany on the 25th; it moved northeastward, and on the morning of the 26th, was central over the Baltic; the isobaric line of 29.8 (756.9), which indicated the region of least pressure, having an elliptical form. Strong northerly gales, with snow, prevailed over the Baltic, and a slight rise in temperature occurred during the passage of the disturbance. During the 27th and 28th, the depression moved slowly northeastward, and, at the close of the month, it occupied northwestern Russia.

XXI.—This disturbance probably developed in the southern part of the Bay of Biscay during the 27th, and by the morning of the 28th, was central in France, causing moderate winds and rain at stations on the shores of the Bay of Biscay. A continuation of the track of this depression will probably appear on the chart for March, 1881.

The following descriptions are given of the storms that appeared in Asia during the month:—

XXII.—This depression appeared west of the Ural mountains on the 4th, attended by rising temperature and snow. On the 5th, the disturbance moved slowly eastward, causing a strong southwesterly gale at Akmolinski, Asiatic Russia, where the wind reached a velocity of forty miles an hour. On the 6th, the disturbance moved through Siberia, and on the 7th, it passed beyond the stations of observation.

XXIII.—From the 4th to the 7th, an area of low pressure occupied Tartary and the region near the Sea of Okhotsk. On the 5th, the barometer at Nikolaievsk on the Amoor, read 29.09 (738.9), and a strong westerly gale occurred at that station.

XXIV.—This disturbance probably developed in the interior of the Chinese Empire, and moved slowly northeastward. On the 22d, the depression passed northeastward, probably at some distance from Zi-Ka-Wei, China, causing a decrease of pressure at that station. On the 23d, the depression passed into the Yellow sea, the wind at Zi-Ka-Wei shifting to northerly and blowing a gale accompanied by thunder and lightning and heavy rain, and a decided fall in temperature. During the 24th and 25th, the disturbance passed over Japan, causing strong gales over the Yellow sea after the passage of the centre, and finally disappeared in the Pacific ocean on the last-mentioned date.

Mr. Marc Dechrevens, of Zi-Ka-Wei Observatory, in the "Bulletin Mensuel," for February, 1881, states that eight atmospheric depressions were registered during the month of February. These passed to the northward of Zi-Ka-Wei, causing southeasterly shifting to westerly and northwesterly winds at that station; the northwest winds generally exhibiting the greatest force.

GENERAL REMARKS.

All data which appear in the DAILY BULLETIN OF SIMULTANEOUS METEOROLOGICAL OBSERVATIONS are copied from the regular exchanges of this office. The barometer readings for land stations, in the first and second columns, are reduced to freezing and their respective standards; those in the third and fourth columns to sea-level. When necessary, corrections for instrumental error, temperature, and reduction to sea-level are applied at this office. In the naval and marine series, corrections for temperature and reduction to sea-level are always applied, while those for instrumental error, only when such corrections can be ascer-

tained with close approximation, as by comparison when vessels are at or near land stations. Relative humidity generally requires computation from the hygrometrical observations. When rain has fallen, but neither the amount nor duration is recorded, the word "blank" is published in the rainfall column. The weather is generally published as given. The following symbols and abbreviations are common to all series, viz.: †, aneroid; *, instrumental error not known; c, cirrus; k, cumulus; s, stratus; n, nimbus; d, scud; f, fracto; p, pallio; hz, haze; fg, fog; sk, smoke; inap, inappreciable; d. clouds, detached clouds. The movement of the air is published as given on the originals, when indicated by velocity in miles per hour, in metres per second, or by force, all variations of the latter being reduced to the common scale of 0 to 10. Those stations reporting the movement in pounds pressure per square foot are reduced to force on the common scale, and those in kilometres per hour, to metres per second and miles per hour. The distinction between upper and lower clouds is carefully made in the United States and a portion of the Canadian series, and the various formations are indicated by the letters above given and their combinations. In the MONTHLY SUMMARY OF INTERNATIONAL SIMULTANEOUS METEOROLOGICAL OBSERVATIONS the position of stations (latitude and longitude) are obtained from Keith Johnston's Index Geographicus, except where more exact information is furnished. The elevations of stations are obtained either from the annual, semi-annual, and monthly publications of the various meteorological bureaus here represented, or from the original forms, upon which are entered the daily observations. In the United States series the elevations are computed from the latest surveys, and are carefully revised each month, in order to note any change in the elevation of the barometer-cistern at any station. It is believed for the most part, that throughout the European and other series, the elevations as given represent the height of the barometer-cistern above sea-level; at least this should be the case. The local time, where omitted or not given correctly in the originals, is carefully computed at this office. Generally, all conversions are made at this office. A letter placed opposite the name of a station or some portion of the data credited thereto, indicates that a certain number of observations are missing, corresponding to the relative position in the alphabet of the letter so used. The following remarks relate to the individual peculiarities in the *methods* of recording and the *times* of taking the international simultaneous meteorological observations, under the auspices of the various meteorological bureaus:

ALGERIAN SERIES.—The originals give the barometer in millimetres reduced to sea-level; temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The rainfall is measured at 7 a. m., local time, and the amount indicated in millimetres.

AUSTRALIAN SERIES.—At Melbourne, the conversions are published as given in the originals. The movement of the air is indicated by velocity in miles per hour.

AUSTRO-HUNGARIAN SERIES.—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. At the following stations rainfall is measured at local time: Lemburg, 7 p. m.; Vienna, 2 p. m.; Trieste, 7 a. m. The weather is given by the Vienna symbols or in general terms.

BRITISH SERIES.—In general the originals do not give rainfall or distinction between upper and lower clouds. Relative humidity, except for Bradford and Silloth Rectory, is not given on the originals, but is computed from hygrometrical observations. At Cardington, Galway, Oxford, and Sandwick Manse the barometers are given as read off. The movement of the air is indicated by force, on a scale of 0 to 12, except pounds pressure per square foot at Greenwich. At the following stations rainfall is measured at local time: Bradford, 9 a. m., and Aberdeen, 10 a. m. The wind direction is given to 32 points and weather by the Beaufort notation.

CANADIAN SERIES.—The originals give the barometer reduced to sea-level in English inches and the temperature in Fahrenheit.

CAPE COLONY SERIES.—At Cape Town, the barometer is given on the original as corrected for temperature only. Upper and lower clouds are given on a scale of 0 to 10 and the kind occasionally indicated by abbreviating Poëy's classification.

CHINESE SERIES.—At Zi-Ka-Wei, the originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is given in metres per second and the directions to 16 points. The kind of clouds is occasionally given, and the degree of cloudiness on the scale of 0 to 10; distinction between upper and lower clouds is sometimes made. The weather is given in general (French) terms. The rainfall is given in millimetres and measured at the moment of simultaneous observation. At Hankow the originals give the barometer in inches, temperature in Fahrenheit and force on scale of 0 to 10.

DANISH SERIES.—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force, on a scale of 0 to 6. The weather is occasionally given by the Vienna symbols, but it is not certain that they always refer to the moment of simultaneous observations, except at Copenhagen. No distinction is made between upper and lower clouds and the direction of movement, together with the rainfall, is entirely omitted.

FRENCH SERIES.—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in metres per second, for Mont Louis and Perpignan. In general, the rainfall is measured at 9 a. m., local time, but at Lyons at the moment of simultaneous observation. The direction of upper and lower clouds is given, but no distinction is made as to kind. The degree of cloudiness is given on a scale of 0 to 4 at Clermont-Ferrand, Commune de Greasque and Puy de Dome, while at other stations the scale of 0 to 10 is employed, or general weather terms, from which the amount of cloudiness is inferred. The weather is given in general terms, except occasionally by the Vienna symbols at Mont Louis and Perpignan. At Guéret, the observations are taken at 12, instead of 12.16. At Gap, the observations are taken at 12.03 p. m., instead of 12.32 p. m.

GERMAN SERIES.—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The kind of clouds is occasionally given, but no distinction is made between upper and lower clouds. Distinction is also made as to direction and kind, but not as to amount. The amount is given on a scale of 0 to 10, but the kind is rarely given. The weather is given in Vienna symbols or in general terms. At Berlin, observations are taken at 2 p. m., instead of 1.02 p. m.

GREEK SERIES.—The originals give the barometer corrected for temperature only and the thermometer in Centigrade. Hygrometrical observations are not given. The kind of clouds is occasionally given, and the amount is inferred from the general weather terms. The movement of the air is indicated by force on the scale of 0 to 10.

INDIAN SERIES.—The barometric observations refer to the Calcutta standard, which requires a correction of —0.011 inch, or 0.28 mm. as compared with the Kew standard. The wind-velocity given is the average rate of wind since the observation of the preceding day. All conversions are published as given in the originals, where the data are recorded to an additional decimal. The weather is given by the Beaufort notation, Vienna symbols, or special symbols.

ITALIAN SERIES.—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometres per hour, or by force on a scale of 0 to 4 as at Mondovi, Florence, and Cagliari. No distinction is made between upper and lower clouds and the amount is given on a scale of 0 to 10.

JAPANESE SERIES.—The rainfall is measured at 9.30 a. m., local time, and the conversions are all published as given in the originals. Distinction is generally made between upper and lower clouds and the amount is given on the scale of 0 to 10. The weather is given in general terms.

MAURITIUS SERIES.—All conversions are published as given in the originals. The direction of the wind is given to 64 points and the rainfall is measured at 9.30 a. m., local time.

MEXICAN SERIES.—All conversions (subject to correction at this office) are published as given in the originals. The kind of clouds is given, and also the direction and amount of both upper and lower. The degree of cloudiness is indicated on the scale of 0 to 10.

NETHERLANDS SERIES.—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by pressure in kilograms per square metre, except at Hellevoetsluis, which gives force on the scale of 0 to 12. The humidity is not given on the originals, but for two stations it is computed from the hygrometrical observations. The weather is only given for Utrecht, from which the amount of cloudiness at that station is inferred.

NORWEGIAN SERIES.—The originals give the barometer in millimetres, reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by velocity in metres per second or by force on a scale of 0 to 6. The weather is occasionally given by Vienna symbols. At Bergen, observations upon the weather and degree of cloudiness are made at 2 p. m., local time. At Brono the observations are taken at 2 p. m., instead of 12.57 p. m.

PORTUGUESE SERIES.—In the originals the barometer is given in millimetres and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometres per hour. The weather is occasionally given by the Vienna symbols. The rainfall is measured at noon of each day.

RUSSIAN SERIES.—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. At Astrakhan, the barometer-cistern is below sea-level. The movement of the air is indicated by velocity in metres per second. No distinction is made between upper and lower clouds; the amount is given on the scale of 0 to 10 and the kind occasionally. The weather is occasionally given by the Vienna symbols. At Barnaul, observations are taken at 6.18 p. m., local time.

SCOTTISH SERIES.—The originals give the barometer as read off and the movement of the air as indicated by force on a scale of 0 to 6. Distinction is made between upper and lower clouds as to degree, and the amount of cloudiness is given on a scale of 0 to 10. The direction of upper clouds is given separately. The rainfall, temperature, and humidity are not given at North Unst. The wind direction is given to 32 points.

SPANISH SERIES.—The movement of the air, except for sub-series, is given in kilometres per hour. The kind of clouds is occasionally given, and the degree of cloudiness on a scale of 0 to 10. The rainfall at San Juan is measured at 4 p. m., local time, and at San Fernando at midnight. The weather is given in general (Spanish) terms.

SWEDISH SERIES.—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in metres per second for Upsala. The kind of clouds is not given, but the degree of cloudiness is indicated on a scale of 0 to 10. The rainfall is measured at 8 a. m., local time, and the weather is occasionally given by the Vienna symbols.

SWISS SERIES.—The originals give the barometer in millimetres, corrected for temperature only, and the thermometer in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10, and at Zurich on a scale of 0 to 4. The rainfall at Zurich is measured at 9 a. m., local time, and the remainder of the observation is taken at 1.13 p. m., local time.

TURKISH SERIES.—The originals give the barometer in millimetres reduced to sea-level. The temperature is given in Centigrade. The movement of the air is indicated by force on a scale of 0 to 7 for Valona, and on a scale of 0 to 12 for Beirut. At Constantinople the velocity is given in metres per second. The kind of clouds is not given, but the amount is indicated on a scale of 0 to 10, except at Valona, at which station it is inferred from the general weather terms.

UNITED STATES SERIES.—The originals generally give the barometer reduced to sea-level and the temperature in Fahrenheit. At Bogota and Navassa, the barometer is corrected for temperature only; at Puerto Berrio, is given as read off, and at Rivas, is omitted. The movement of the air is generally indicated by velocity in miles per hour, except on a scale of 0 to 10 for Bogota, Paramaribo, and Rivas, and 0 to 12 for Puerto Berrio. The wind direction is generally given to 16 points, except 8 points for Bogota and 32 points for Rivas.

BRITISH NAVAL SERIES.—The originals give the barometer as read off. The wind direction is given to 32 points. The movement of the air is indicated by force on a scale of 0 to 12. The distinction between upper and lower clouds is made as to direction, but not as to amount. The height of sea-disturbance is given on the scale of 0 to 9, and the weather by the Beaufort notation. The direction of movement of wind, clouds and sea is compass direction, corrected only for deviation caused by the iron in the ship, while the correction for magnetic variation is applied at this office. The humidity is not given, but is computed from the hygrometrical observations.

PORTUGUESE NAVAL SERIES.—The originals give the barometer in millimetres, corrected for temperature only and the thermometer in Centigrade. The movement of the air is indicated by force on the scale of 0 to 10. The humidity is not given, but is computed from the hygrometrical observations. The kind of clouds is not given, but the amount is indicated on the scale of 0 to 10; the direction of movement is given without distinction between upper and lower. The height of sea-disturbance is given on the scale of 0 to 9, and the weather by the Beaufort notation. The rainfall is not measured, but the duration is generally given in hours and minutes.

SWEDISH NAVAL SERIES.—The originals give the barometer as read off. The movement of the air is indicated by force on the scale of 0 to 12, and the direction is corrected for magnetic variation at this office. The humidity is not given, but is computed from the hygrometrical observations. The rainfall is omitted. The height of the sea-swell is given on the scale of 0 to 9, and the weather by the Beaufort notation.

UNITED STATES NAVAL SERIES.—The originals give the barometer as read off. The humidity is not given, but is computed from the hygrometrical observations. The sea-swell and weather are given in general terms. The direction of the wind is compass direction, corrected for variation.

MERCHANT-MARINE SERIES.—Same as U. S. Naval.

OCEAN SQUARES.—The table of ocean square data shows, (1) the location of the centres of squares whose sides extend 5° each in latitude and longitude, (2) the number of days for which observations are at hand within the respective squares, and the total number of simultaneous observations reported on those days, (3) the monthly mean pressure and temperature of the air, and the mean force and total frequency of the wind at 7 a. m., Washington time, computed for the centre of each square from daily readings as obtained by interpolation between the isobars and isotherms of the daily international simultaneous weather-maps.

ERRATA.

MONTHLY SUMMARY, February, 1881, page 2, Cape Colony series, Cape Town, temperature 45.5° F., 7.5° C., should read 81.2° F., 27.3° C.; page 4, Russian series, Ekaterinburg, temperature 34.3° F., 1.3° C., should read 12.0° F., or —11.1° C.

July, 1881, page 1, British series, Silloth Rectory, the letter

"a" opposite this station, representing one observation missing, should be omitted.

DAILY BULLETIN, February 9, 1882, page 1, Cape Colony series, Cape Town, reduced barometer 29.09 inches, should read 29.99 inches.

12th, page 7, Portuguese Naval, Quanza, barometer 762.1 mm., should read 761.9 mm.

14th, page 3, Italian series, Cosenza, velocity 1.0 metres, should read 1.9 metres; page 12, Miscellaneous, bk. "Pilgrim," W. 12° 39′, should read 29° 39′.

17th, page 6, Ooglaamie, Point Barrow, Alaska, temperature —18.6° F., should read —8.6° F; United States sub-series, York Factory, B. A., reduced barometer 30.88 inches, should read 30.78 inches.

19th, page 10, Ocean S. S. Co., s. s. "Seminole," S. 35° 05′, should read N. 35° 05′.

22d, page 6, New Shoreham, Rhode Island, reduced barometer 29.69 inches, should read 29.66 inches.

23d, page 5, Cape May, New Jersey, velocity 6.5 metres, should read 16.5 metres.

28th, page 2, Canadian series, Chatham, N. B., rainfall 0.03 inches, should read 0.01 inches.

INTERNATIONAL CHART.

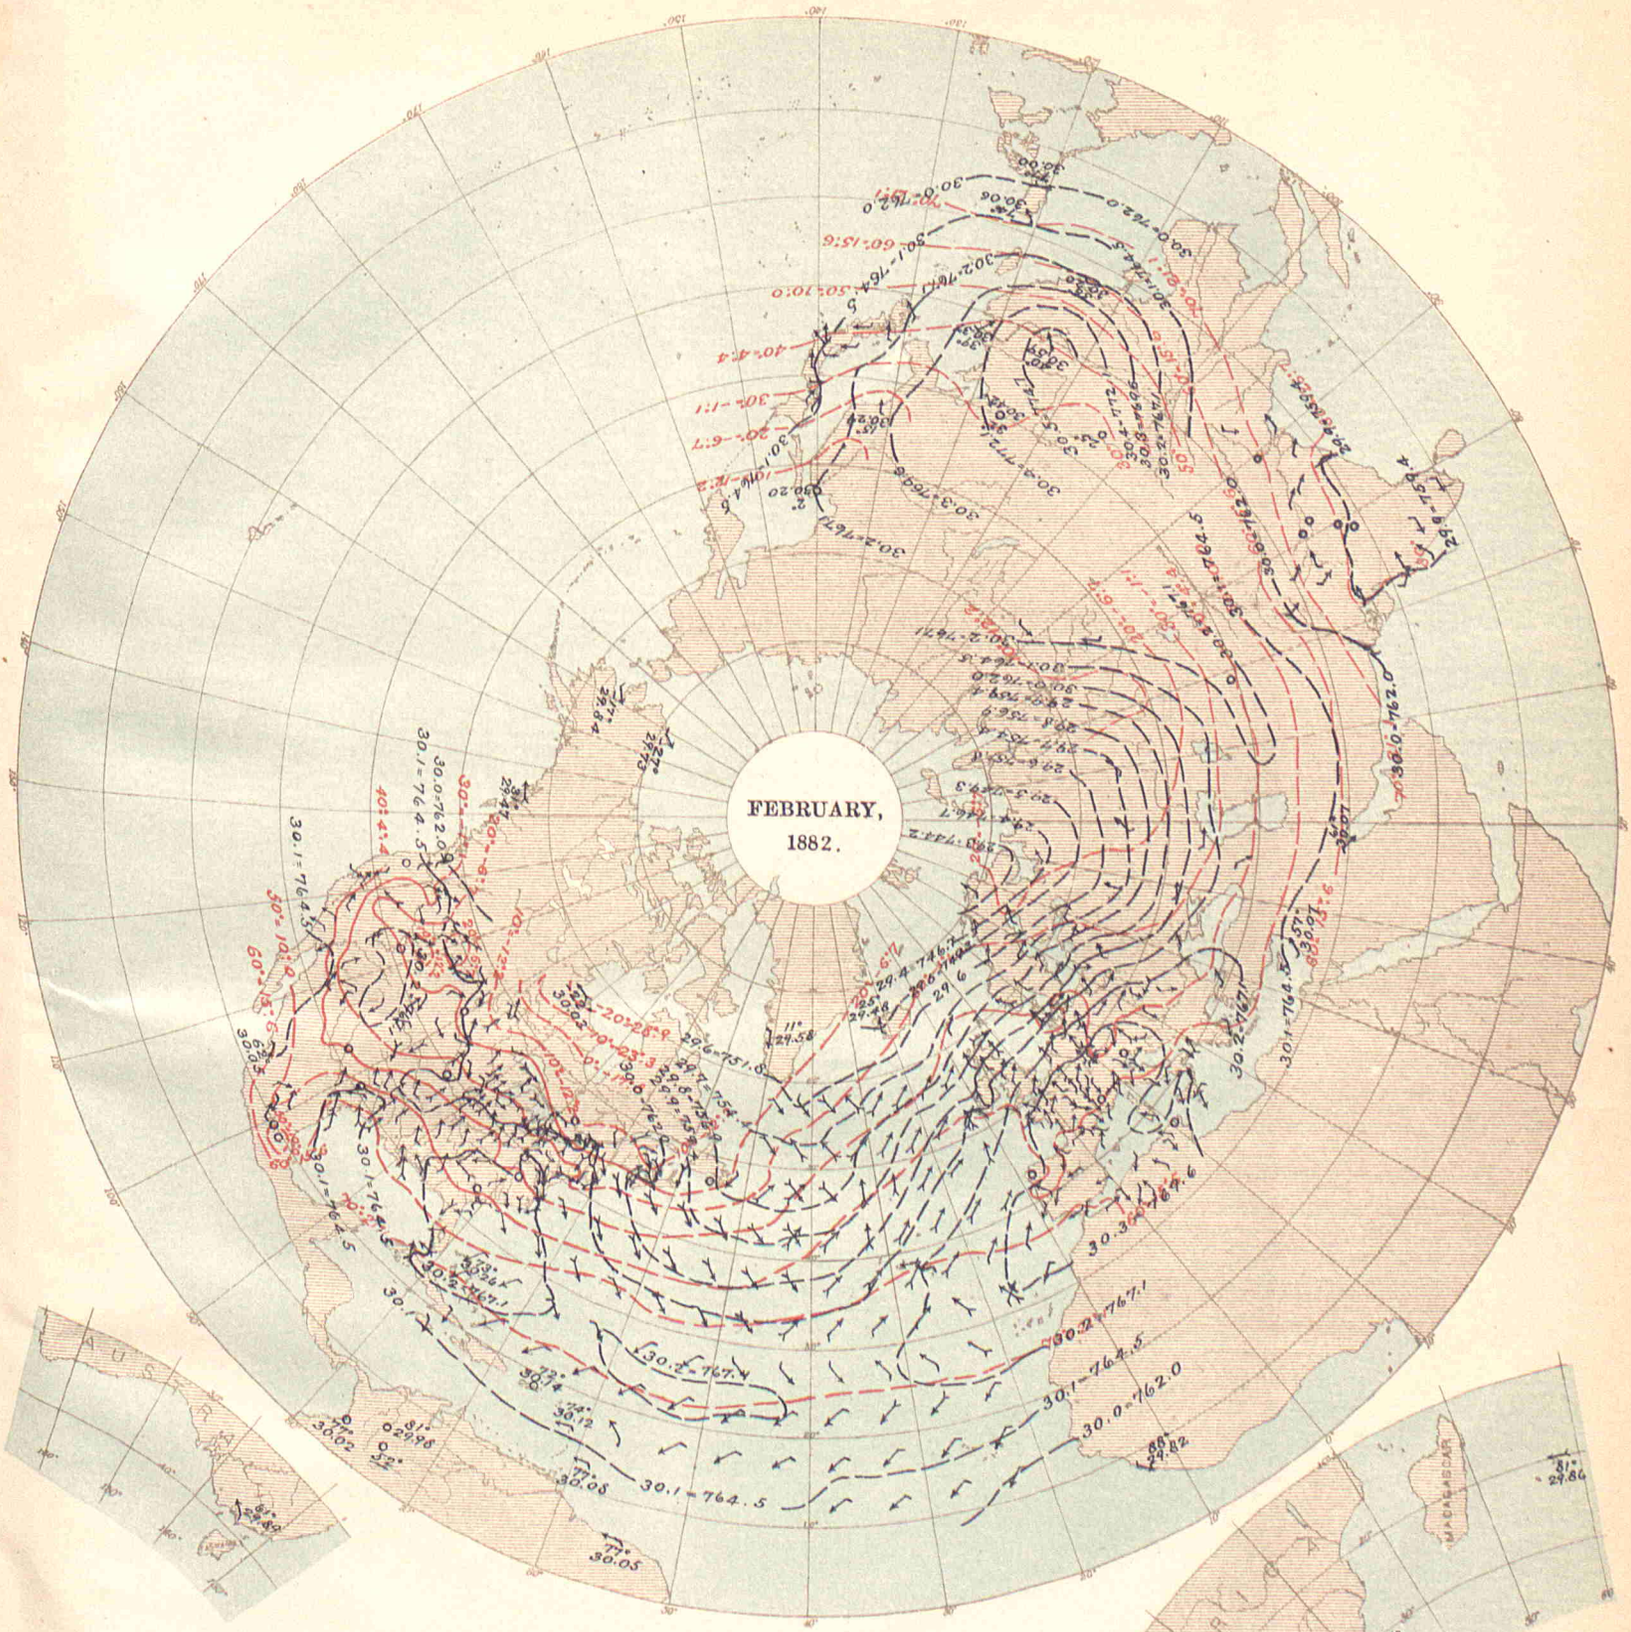
Showing Tracks of Centres of Low Barometer for February, 1881,

Heliotype Printing Co. Boston.

Office of the Chief Signal Officer,

UNITED STATES ARMY.

Charted from Actual Observations taken Simultaneously, Series commencing January, 1877.



PREVAILING WINDS.

Arrows show the direction of, and fly with, the wind.
Force is shown as follows:

Symbols.	Force.	Velocity.	
		Miles per hour.	Metres per second.
O	0	0	0
	1, 2	0 to 9	0 to 4.0
	3, 4	9.1 to 22.5	4.1 to 10.1
	5, 6	22.6 to 40.5	10.1 to 18.1
	7, 8	40.6 to 67.5	18.1 to 30.2
	9, 10	67.6 up.	30.2 & over.

ISOBARS AND ISOTHERMS.

Isobars in *black;* detached barometer means in English inches.

Isotherms in *red;* detached temperature means in degrees Fahrenheit.

Broken lines, are doubtful.

INTERNATIONAL MONTHLY CHART.

Showing mean pressure, mean temperature, mean force and prevailing direction of winds at 7:00 A. M., Washington mean time, for the month of February, 1882, based on the daily charts of the International Bulletin.
