NOTE.—See General Remarks.

REVIEW.

INTERNATIONAL METEOROLOGY.

[*Pressure expressed in inches and millimetres; temperature in degrees, Fahrenheit and Centigrade.*]

The following descriptions refer to chart iv. for the months of September, October, November, and December, 1881, (which charts were issued with the SUMMARY for the respective months,) and present a brief summary of the meteorological conditions which prevailed over the northern hemisphere during these months. Chart iv. continues the series of international charts begun in January, 1877, and exhibits the mean pressure, mean temperature, and prevailing directions of the wind over the northern hemisphere, and at certain isolated stations in the southern hemisphere, as determined from one observation taken simultaneously each day at 7 a. m., Washington, or 0 h. 8 m. p. m., Greenwich mean time.

For the description of these charts, much valuable information has been obtained from the "Monatliche Uebersicht der Witterung," published by Professor Dr. G. Neumayer, Director of the German Marine Observatory at Hamburg, Germany; and from the "Bulletin Mensuel," published by Mr. Marc Dechevrens, of the Zi-Ka-Wei Observatory, Shanghai, China.

For the month of September, 1881, the area of least pressure is situated over the Panjab, in British India, where the barometric means range from 29.58 (751.3) to 29.6 (751.8). In other parts of British India the mean pressure ranges from 29.62 (752.3) in the central regions, to 29.83 (757.7) in the south. An area of low mean pressures, 29.7 (754.4), is shown in Greenland; from there the pressure gradually increases in a southerly and easterly direction until the isobar of 30.0 (762.0) is reached. The line of 30.0 (762.0) extends from Newfoundland southeastward to the northwestern part of the Iberian peninsula. An area of relatively low pressures, 29.9 (759.4), occupies Manitoba, Minnesota, and part of Dakota, where the pressures range from 29.87 (758.7) to 29.9 (759.4). In the middle and south Pacific coast regions the mean pressure is below 29.9 (759.4).

Three areas of barometric maxima appear on the chart, each being indicated by the isobarometric line of 30.1 (764.5). The first of these occupies the south Atlantic states, and stretches northeastward along the coast of the United States to the Maritime Provinces, and thence over the ocean to W. 58°. The second area is shown off the northwestern coast of Africa, and includes within its limits the Madeira Islands; the third area is situated in northern Europe, and covers the Gulf of Bothnia and Finland.

Compared with the preceding month, (August, 1881,) there has been a general increase of pressure in the United States, except in the country between the Mississippi and Missouri rivers, and in California, where there has been a decrease. In Europe, the pressure is everywhere higher than in the preceding month, the greatest change being in the northern part of the continent, where the increase is about .45 inch. The isobar of 29.6 (751.8), which, in August, occupied the Scandinavian peninsula, is now replaced by the isobar of 30.1 (764.5). There has been general increase of pressure throughout the continent of Asia, but there has been a slight decrease in northern Africa.

Compared with the corresponding month of previous years, the mean atmospheric pressure in the United States is generally below the normal, except along the immediate Atlantic coast, where there is a slight excess over the normal values. In Canada it is above the normal, except in Ontario. In Europe the mean pressure was considerably above the normal in the northern part of the continent, and normal or slightly below in the central and southern parts.

The following table gives the mean pressure and the mean temperature, with corresponding departures, for the month of September, 1881, in the several countries of the eastern hemisphere, compared with the means as determined from observations taken during the years 1877, 1878, 1879, and 1880:

Countries.	Mean pressure.			Mean temperature.		
	Sept., 1877, 1878, 1879, 1880.	Sept., 1881.	Departure.	Sept., 1877, 1878, 1879, 1880.	Sept., 1881.	Departure.

* Mean for three years only.

The mean temperature of the air in the United States was above the normal from Lake Michigan southwestward to New Mexico and eastward to the Atlantic. In Florida, it was normal. In the south Pacific coast region the temperature was above the normal, but elsewhere in the United States it was below the normal. In Europe the temperature was much below the normal in the central and southern parts of the continent; in Norway it was about 1° above the normal. In British India the temperature was about 1°.4 above the average for four years; the highest mean temperature reported, was 92°.9 Fahr. (33°.8 Cent.), at Lahore, and the lowest was 72°.2 Fahr. (22°.3 Cent.), at Belgaum.

The following are some of the extreme mean temperatures reported at isolated stations:

Highest.	Fahr.	Cent.	Lowest.	Fahr.	Cent.
	°	°		°	°
Beirut, Turkey in Asia	85.6	29.8	York Factory, B. A	36.2	2.3
Santiago de Cuba, W. I	84.4	29.1	Gjaesvaer, Finmark, Norway	43.5	6.4
Freetown, Africa	84.2	29.0	Yeniseisk, Siberia	44.2	6.8
Athens, Greece	84.0	28.9	Ekaterinburg, Russia	45.7	7.6

In the United States the prevailing directions of the wind were as follows: from the ninety-fifth meridian eastward to the Atlantic, generally southerly and southeasterly. West of the Rocky mountains the winds were westerly and northwesterly. Over the Atlantic from the coast of North America eastward to the twenty-fifth meridian, and between N. 55° and 30° the prevailing winds were northerly and northwesterly; east of the twenty-fifth meridan they were southerly and southwesterly. In western and southern Europe the winds were mostly southwesterly; elsewhere they were northeasterly to southerly. On the coast of China they were easterly and southeasterly, and in Japan they were mostly northerly.

The rainfall during the month of September was largely in excess of the average in the United States, except in the middle and south Atlantic states, New England, and the lake region, where there was a deficiency. In Europe, the rainfall was above the average in the central and southern parts, and was normal or slightly below the average in the northern districts.

For the month of October, 1881, the area of least pressure occupies southern Greenland, where the mean pressure at Godthaab was 29.55 (750.6). The pressure gradually increases to the south and eastward, the isobar of 29.9 (759.4) extending from Newfoundland eastward over the Atlantic to near the Irish coast, where it turns abruptly to the northward. In British India the mean pressure ranges from 29.77 (756.1) in the northern and northeastern provinces, to 29.82 (757.4) in southern Hindostan. In northeastern Siberia it is below 29.8 (756.9). In Europe an area of mean pressure, enclosed bythe isobar of 29.9 (759.4), occupies the Italian peninsula, the Adriatic, the Gulf of Genoa, Sardinia, and Sicily; elsewhere in Europe the barometric means range from 29.95 (760.7) to 30.1 (764.5).

Throughout the United States and Canada the mean pressure is above 30.0 (762.0); in the Hudson's Bay region it is below 30.0 (762.0).

The most marked area of barometric maxima is that indicated by the isobarometric line for 30.1 (764.5); it extends from the northwestern part of the United States southward to Mexico, thence northeastward to Indian territory, and then eastward over the ocean to the northwestern coast of Africa. This extensive area of high pressure includes nearly the whole of the United States, the western part of Canada, the Atlantic ocean between the parallels of thirty and forty north latitude, and the Azores and Madeira islands. Within this region of high barometer are two districts of barometric maxima; both are situated in the United States, the first, in Idaho, Montana, and western Dakota, where the barometric means range from 30.2 (767.1) to 30.26 (768.6): the second is in Tennessee, Virginia, and the Carolinas, where the means range from 30.2 (767.1) to 30.27 (768.8). In Europe the region of barometric maxima is situated in the Baltic provinces of Russia, the Gulf of Finland, and the southern part of the province of that name. In Asia the isobar for 30.1 (764.5) extends from eastern Russia and the Caspian sea eastward over the Chinese Empire to the Yellow sea.

Compared with the preceding month, (September, 1881,) the mean pressure over the United States is everywhere higher, the increase being greatest in the region between the Mississippi and Missouri rivers. In eastern Canada and the Maritime Provinces there has been a decrease of pressure. In Europe the pressure has increased over that part of the continent lying north of the fiftieth parallel, whilst it has decreased in the countries south of that parallel, except Russia, over the whole of which country there has been an increase. Throughout Asia a marked increase has occurred; there has also been an increase in Algeria.

Compared with the corresponding month of previous years, the mean atmospheric pressure ranges from .05 to .12 inch above the normal in that part of the United States lying east of the ninetieth meridian, and in the eastern Gulf states it is about normal. From the above-mentioned meridian westward to the Pacific coast the pressure is below the normal. In Canada it it is above the normal, the departure being least in the Maritime Provinces. In Europe, the mean pressure was above the normal in the northern part of the continent, notably so in the Scandinavian peninsula, where the excess averaged .3 inch; in the southern part of Europe, the pressure was slightly below the normal.

The following table gives the mean pressure and the mean temperature, with corresponding departures, for the month of October, 1881, in the several countries of the eastern hemisphere, compared with the means as determined from observations taken during the years 1877, 1878, 1879, and 1880:

Countries.	Mean pressure.			Mean temperature.		
	Oct., 1877, 1878, 1879, 1880.	Oct., 1881.	Departure.	Oct., 1877, 1878, 1879, 1880.	Oct., 1881.	Departure.

In the United States the mean temperature of the air was generally above the normal over the country east of the ninety-fifth meridian; it was also above the normal in Texas, Kansas, and in eastern Colorado. To the westward of the ninety-fifth meridian, excluding the districts just named, the temperature was from 1° to 6° below the normal. The region of greatest excess was in the Gulf states, where it was 6°.8. In Canada the temperature was above the normal in the western, but below the normal in the eastern provinces of the Dominion.

In Europe the mean temperature was everywhere considerably below the normal, the departures being greatest in the central and southern districts, and least in the Scandinavian peninsula. The month is said to have been, in Europe, one of the coldest Octobers on record.

In Hindostan the temperature was about 2° above the average for four years; the highest mean temperature reported was 89°.4 Fahr. (31°.9 Cent.) at Agra, and the lowest was 77°.4 Fahr. (25°.2 Cent.) at Hazaribagh.

The following are some of the extreme mean temperatures reported at isolated stations for the month:

Highest.	Fahr.	Cent.	Lowest.	Fahr.	Cent.
	°	°		°	°
Freetown, Africa	85.4	29.8	York Factory, B. A.	18.6	— 7.4
Manila, Philippine Islands	81.3	27.4	Godthaab, Greenland	28.4	— 2.0
Saint Thomas, W. I.	80.9	27.2	Yeniseisk, Siberia	30.0	— 1.1
Guadeloupe, W. I.	80.5	26.9	Nikolaievsk on the Amoor, Asia	34.5	+ 1.4

In the United States the prevailing directions of the wind were: northeasterly in the south Atlantic states and in Florida; along the middle Atlantic and New England coasts, southwesterly and westerly. In the lake region the winds were generally southwesterly in the eastern part; southerly in the western, and northwesterly and northerly in the northern parts. Over the country between 90° and 100° west longitude from Texas northward to Dakota, they were mostly southerly; in the northwestern part of the country they were northeasterly and northerly, and on the Pacific coast they were generally southerly. Over the north Atlantic, south of the thirty-fifth parallel, the winds were northeasterly; between N. 35° and 45°, from North America to the Azores, they were generally northwesterly. Off the west coast of the British Isles they were southwesterly. In Europe the prevailing winds were northerly, northeasterly, and easterly, except in southern Italy, where they were southwesterly. On the coast of China they were easterly, and in Japan they were northerly and northeasterly.

The rainfall during the month of October, 1881, was below the average in New England, the south Atlantic states, and in Florida; in all other districts of the United States it was in excess of the average. In Canada the rainfall was below the average in Quebec and the Maritime Provinces; elsewhere it was above the average. In Europe the rainfall differed but slightly from the average.

During November, 1881, the region of least mean pressure is situated to the north of the sixtieth parallel, and between the meridians of 10° and 40° west longitude. It is indicated by the isobar for 29.3 (744.2), and encloses within its limits the island of Iceland, where the mean pressure was 29.21 (741.9). South of N. 60°, the barometric pressure gradually increases, the increase being greater toward the east and southeast than in a southerly direction. Over the British Isles and western Europe the barometric gradients are somewhat steep. In British India the mean pressure ranges from 29.86 (758.4) to 29.96 (761.0).

Four areas of barometric maxima are shown on the chart; two of these occupy the United States, the others being in southern Europe and in Siberia, respectively. Concerning the two areas situated in the United States, the first is indicated by the isobar for 30.3 (769.6), and occupies the territories of Idaho, Montana, Wyoming, and the eastern boundary of Oregon. Over the rest of the country west of the hundredth meridian, excepting California, and from the northern boundary of the United States southward to southern Mexico, the mean pressure ranges from 30.2 (767.1) to 30.29 (769.4). In California, it ranges from 30.05 (763.3) in the southern, to 30.17 (766.3) in the northern sections of the state. The second area of high pressure in the United States occupies that part of the country lying between the thirtieth and fortieth parallels of latitude, and from the ninety-first meridian eastward to the Atlantic; within this region the mean pressure ranges from 30.2 (767.1) to 30.27 (768.8). In Europe the region of barometric maxima occupies the southern part of the Iberian peninsula, the western part of the Mediterranean, and northern Africa; it then stetches northeastward to southeastern France, northern and central Italy, southern Germany, and the whole of Austro-Hungary. Throughout the region just mentioned the mean pressure ranges from 30.2 (767.1) to 30.29 (769.4). In Asia the region of greatest pressure comprises the governments of Yeniseisk and Irkoutsk, Siberia, where the mean pressure is 30.3 (769.6); elsewhere in Asia, except in western Siberia and Hindostan, the mean pressure ranges from 30.05 (763.3) to 30.24 (768.1).

The following table gives the mean pressure and the mean temperature, with corresponding departures for the month of November, 1881, in the several countries of the eastern hemisphere, compared with the means as determined from observations taken during the years 1877, 1878, 1879, and 1880:

Countries.	Mean pressure.			Mean temperature.		
	Nov., 1877, 1878, 1879, 1880.	Nov., 1881.	Departure.	Nov., 1877, 1878, 1879, 1880.	Nov., 1881.	Departure.

* Mean for three years only.

Compared with the preceding month (October, 1881), the barometric pressure over the United States has slightly decreased in the lake region and New England; elsewhere there has been a decided increase of pressure. In Canada the pressure has decreased in the western part of the Dominion. In

Europe there has been a decrease of pressure, ranging from .1 to .3 inch over the British Isles, the Scandinavian and Danish peninsulas, and northern Russia; elsewhere there has been a considerable increase of pressure, the increase being most marked in the southern districts. In Asia there has been a general increase of pressure.

Compared with the corresponding month of previous years, the mean atmospheric pressure is above the normal in the United States, except in Florida, the upper lake region, and in Minnesota, Iowa, Illinois, and parts of Dakota and Nebraska, where it is slightly below the normal. In western Canada it is about normal, and in the Maritime Provinces it is from .05 to .1 inch above the normal. In Europe the pressure is generally above the normal.

In the United States the mean temperature of the air was above the normal over the country lying east of the ninety-seventh meridian, except in the west Gulf states, where it was normal, and in Minnesota, where there was a deficiency of about 1°. From W. 97° westward to the Pacific coast the temperature was below the normal, except in the northern Rocky mountain slope, where it was slightly above. In Canada the temperature was normal in the eastern, and slightly above in the western parts of the dominion. In Europe the temperature of the air was considerably above the normal, the greatest departures occurring in the British Isles, and in France and Germany. In the countries just named, the month was one of the warmest Novembers on record; in the British Isles the mean temperature of November exceeded that of October by 1°, and in France and Germany the mean was about the same for both months. In British India the temperature was slightly above the mean for the last four years. The highest mean temperature, 82°.0 Fahr., (28°.3 Cent.) was reported at Kurrachee, and the lowest, 68°.7 Fahr., (20°.4 Cent.) at Lahore.

The following are some of the extreme monthly mean temperatures reported at isolated stations:

Highest.	Fahr.	Cent.	Lowest.	Fahr.	Cent.
	°	°		°	°
Freetown, Africa	84.5	29.2	York Factory, B. A.	− 5.9	−21.1
Zanzibar, Eastern Africa	83.6	28.7	Yeniseisk, Siberia	+ 5.9	−14.5
Bridgetown, Barbadoes	80.9	27.2	Akmolinski, Siberia	13.5	−10.3
Paramaribo, S. A.	80.2	26.8	Barnaul, Siberia	15.3	− 9.3

In the United States the prevailing directions of wind were: southerly over the country between the eighty-second and ninety-first meridians, and the thirty-second and forty-second parallels; northwesterly in New England and the middle Atlantic states; northeasterly and northerly along the Atlantic coast south of N. 43°; southerly and westerly in the lake region, and generally westerly or northwesterly over the country west of the ninety-fifth meridian. In Canada the prevailing winds were westerly and southwesterly. In Europe the winds were mostly southerly and southwesterly, except in Italy, where they were mostly northerly. Over the Atlantic ocean, between N. 35° and 60°, and from the coast of the United States eastward to the twenty-fifth meridian, the prevailing wind was northwesterly. East of the twenty-fifth meridian strong west, southwest, and south winds prevailed. South of N. 35° the winds were northeasterly.

In the United States the rainfall was in excess of the average, except along the immediate Atlantic and Pacific coasts. In western Canada it was above the average, but in the Maritime Provinces it was below the average. In the southern districts of central Europe there was a deficiency, but in other parts of the continent the rainfall differed but slightly from the average.

For December, 1881, the region of barometric minima is indicated by the isobarometric line of 29.2 (741.7), and is situated in Iceland and in eastern Greenland. At Stykkisholm, Iceland, the mean atmospheric pressure was 29.12 (739.6). Southwestward, southward, and southeastward, the pressure increases very rapidly until the isobar for 30.1 (764.5) is reached. That isobar runs from the Canadian Maritime Provinces, eastward along the forty-fifth parallel to northwestern Europe. An area of relatively low pressure also occupies Amoor and the sea of Okhotsk.

The regions of barometric maxima are situated in the United States; over the Azores, the Iberian peninsula, and northern Africa; and in Siberia and China. The first of these is indicated by the isobarometric line of 30.3 (769.6) and occupies the United States west of the hundredth meridian, and from Montana to Mexico, extending southward through the central part of Mexico, to about the eighteenth parallel of latitude. East of the hundredth meridian the mean pressure ranges from 30.1 (764.5), in the lower lake region, to 30.28 (769.1) in the southern states. The second area of high pressure is indicated by the isobar for 30.2 (767.1), which extends over the Atlantic ocean from about W. 35° eastward to the Iberian peninsula and northwestern Africa; at the Azores the mean pressure was 30.3 (769.6). In Europe the mean pressure ranges from 30.0 (762.0) to 30.2 (767.1) except in the British Isles and the Scandinavian peninsula, where it is from 29.6 (751.8) to 29.9 (759.4). In Asia the regions of greatest pressure are in central Siberia, where the mean pressure at Yeniseisk is 30.61 (777.5), and in China, where the pressure at Hankow is also 30.61 (777.5.)

Compared with the preceding month, (November, 1881,) there has been no change in the positions of the areas of barometric maxima and minima, but some changes of pressure have occurred. There has been a decrease of about .09 inch in Iceland, and there has also been a slight decrease in the Canadian Maritime Provinces and along the Atlantic coast of the United States. In Algeria and in central and southern Europe there has been a decrease, but in the British Isles, Denmark, Scandinavia, and the whole of European Russia, there has been a marked increase of pressure. In the United States the pressure has increased generally over the country west of the ninety-fifth meridian. A noteworthy increase of pressure has occurred in Asia; the area of barometric maxima, which in November occupied central Siberia, has apparently extended southeastward to southeastern China, and an increase of pressure, averaging .2 inch, is shown throughout the continent, except in Hindostan, where the increase is less marked.

Compared with the corresponding month of previous years the mean atmospheric pressure over the United States is generally above the normal, except in the country between W. 87° and W. 100°; in that region the pressure is from .05 to .14 inch below the normal. In Canada the mean pressure was above the normal, except in northern Ontario, where there was a slight deficiency. In Europe the mean pressure was everywhere above the normal, the greatest departures of excess occurring in northern Europe and throughout Russia.

The following table gives the mean pressure and mean temperature with corresponding departures for the month of December, 1881, in the several countries of the eastern hemisphere, compared with the means as determined from observations taken during the years, 1877, 1878, 1879, and 1880:

Countries.	Mean pressure.			Mean temperature.		
	Dec., 1877, 1878, 1879, 1880.	Dec., 1881.	Departure.	Dec., 1877, 1878, 1879, 1880.	Dec., 1881.	Departure.
				°	°	°
Algeria	30.14	30.16	+0.02	57.6	56.3	− 1.3
Austria	30.00	30.19	+0.13	32.1	35.8	+ 3.7

Paromaribo, D. Guiana, S. A	29.98	30.01	+0.03	80.2	78.2	— 2.0
York Factory, B. A	29.00	30.10	+0.11	—15.3	—14.4	+ 0.9

* Mean for three years only.

In the United States the mean temperature of the air ranged from 9° to 13° above the normal in all parts of the country, except in California, where it was about 1° below the normal. In Canada it was also much above the normal. In Europe the mean temperature of the air was about normal in the southern part and above the normal in the northern part of the continent. In northern Russia (where the pressure was much above the normal) the temperature was above, whilst in southern Russia, it was below the normal. In Siberia the temperature was below, and in China and Japan it was slightly above the normal. In British India the highest mean temperature reported was 83°.2 Fahr. (28°.4 Cent.) at Poona, and the lowest was 63°.1 Fahr. (17°.3 Cent.) at Sibsagar.

The following are some of the extreme mean temperatures reported at isolated stations during the month:

Highest.	Fahr.	Cent.	Lowest.	Fahr.	Cent.
	°	°		°	°
Freetown, Africa	87.1	30.6	York Factory, British America	—14.4	—25.8
Zanzibar, east Africa	83.1	28.4	Nikolaievsk on the Amoor, Asia	—10.7	—23.7
Mauritius, Indian Ocean	80.0	26.7	Yeniseisk, Siberia	— 8.7	—22.6
Cape Town, Cape Good Hope	79.2	26.2	Fort Saint Michael, Alaska	— 6.0	—21.1

In the United States the prevailing winds were from south to west over the country north of the fortieth parallel, and from the Pacific eastward to the Atlantic. In Texas and the Gulf states winds were mostly northerly; in Florida and the south Atlantic states they were northeasterly. In California they were variable. In Canada they were westerly and southwesterly. In central Europe the prevailing winds were mostly southerly and southeasterly; in the British Isles they were westerly and southwesterly. In the southern peninsulas they were mostly northerly. In Algeria the winds were northwesterly. In China and Japan they were northerly and northwesterly. Over the north Atlantic ocean the winds were southwesterly and northwesterly from the coast of the United States eastward to W. 50°. Between W. 50° and 30°, and N. 35° and 60°, they were northwesterly. From W. 30° eastward to the European coasts they were mostly westerly and southwesterly. South of N. 35° they were northeasterly.

The rainfall for the month was below the average in the United States, from the Mississippi river westward to the Pacific; there was also a slight deficiency in Florida and the south Atlantic states; elsewhere the rainfall was above the average. In Canada it was above the average. In Europe the rainfall was, in general, below the average.

GENERAL REMARKS.

All data which appear in the DAILY BULLETIN OF SIMULTANEOUS METEOROLOGICAL OBSERVATIONS are copied from the regular exchanges of this office. The barometer readings for land stations, in the first and second columns, are reduced to freezing and their respective standards; those in the third and fourth columns to sea-level. When necessary, corrections for instrumental error, temperature, and reduction to sea-level are always applied, while those for instrumental error, only when such corrections can be ascertained with close approximation, as by comparison when vessels are at or near land stations. Relative humidity generally requires computation from the hygrometrical observations. When rain has fallen, but neither the amount nor duration is recorded, the word "blank" is published in the rainfall column. The weather is generally published as given. The following symbols and abbreviations are common to all series, viz: †, aneroid; *, instrumental error not known; c, cirrus; k, cumulus; s, stratus; n, nimbus; d, scud; f, fracto; p, pallio; hz, haze; fg, fog: sk, smoke; inap, inappreciable; d, clouds, detached clouds. The movement of the air is published as given on the originals, when indicated by velocity in miles per hour, in meters per second, or by force, all variations of the latter being reduced to the common scale of 0 to 10. Those stations reporting the movement in pounds pressure per square foot are reduced to force on the common scale, and those in kilometers per hour, to meters per second and miles per hour. The distinction between upper and lower clouds is carefully made in the United States and a portion of the Canadian series, and the various formations are indicated by the letters above given and their combinations. In the MONTHLY SUMMARY OF INTERNATIONAL SIMULTANEOUS METEOROLOGICAL OBSERVATIONS the position of stations (latitude and longitude) are obtained from Keith Johnson's "Index Geographicus," except where more exact information is furnished. The elevation of stations are obtained either from the annual, semi-annual, and monthly publications of the various meteorological bureaus here represented, or from the original forms, upon which are entered the daily observations. In the United States series the elevations are computed from the latest surveys, and are carefully revised each month, in order to note any change in the elevation of the barometer-cistern at any station. It is believed for the most part that, throughout the European and other series, the elevations as given represent the height of the barometer-cistern above sea-level; at least, this should be the case. The local time, where omitted or not given correctly in the originals, is carefully computed at this office. A letter placed opposite the name of a station or some portion of the data credited thereto, indicates that a certain number of observations are missing, corresponding to the relative position in the alphabet of the letter so used.

INTERNATIONAL CHARTS ACCOMPANYING THE DAILY BULLETIN AND MONTHLY SUMMARY.

International chart i. shows isobars and isotherms charted from data as appearing in the INTERNATIONAL BULLETIN of same date, as reported by the several observers. Isobars, in continuous lines, exhibit atmospheric pressure at sea-level in English inches; isotherms, in dotted lines, exhibit temperature of the air in degrees, Fahrenheit, similarly charted. Broken lines indicate that the lines so broken are doubtful.

International chart ii. (monthly mean chart), showing mean pressure at sea-level in English inches, mean temperature in degrees, Fahrenheit, mean force and prevailing direction of wind at 7 a. m., Washington mean time.

International chart iii. shows tracks of centres of low barometer. The Arabic numerals show location of the centres of low barometer at 7 a. m., Washington mean time, of that date. Broken or dotted lines are doubtful.

Arrows show the direction of, and fly with, the wind. Force is shown as follows:

Symbols.	Force.	Velocity.	
		Miles per hour.	Metres per second.
○	0	0	0
	1, 2	0 to 9	0 to 4
	3, 4	9.1 to 22.5	4.1 to 10.1
	5, 6	22.6 to 40.5	10.1 to 18.1
	7, 8	40.6 to 67.5	18.1 to 30.2
	9, 10	67.6 up.	30.2 and over.

The following remarks relate to the individual peculiarities in the *methods* of recording and the *times* of taking the international simultaneous meteorological observations, under the auspices of the various meteorological bureaus:

ALGERIAN SERIES (furnished by co-operation of General Maritz, Command-

ant Supérieur du Génie in Algeria).—The originals give the barometer in millimetres reduced to sea-level; temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The rainfall is measured at 7 a. m., local time, and the amount indicated in millimetres.

AUSTRALIAN SERIES (furnished by co-operation of R. L. J. Ellery, Director of the Observatory at Melbourne, N. S. W.).—At Melbourne the conversions are published as given in the originals. The movement of the air is indicated by velocity in miles per hour.

AUSTRO-HUNGARIAN SERIES (furnished by co-operation of Prof. Dr. Julius Hann, Director of the Imperial and Royal Central Meteorological Institute at Vienna).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. At the following stations rainfall is measured at local time: Lemburg, 7 p. m.; Vienna, 2 p. m.; Trieste, 7 a. m. The weather is given by the Vienna symbols or in general terms.

BRITISH SERIES (furnished by co-operation of the Meteorological Council, London, Robert H. Scott, Esq., F. R. S., Secretary, and respective observers).—In general the originals do not give rainfall or distinction between upper and lower clouds. Relative humidity, except for Bradford and Silloth Rectory, is not given on the originals, but is computed from hygrometrical observations. At Cardington, Oxford, and Sandwick Manse the barometers are given as read off. At Greenwich the movement of the air is indicated by pounds pressure per square foot. At the following stations rainfall is measured at local time: Bradford, 9 a. m., and Aberdeen, 10 a. m. The wind direction is given to 32 points and weather by the Beaufort notation.

CANADIAN SERIES (furnished by co-operation of Charles Carpmael, A. M., F. R. A. S., Director of the Magnetic Observatory at Toronto and Superintendent of the Meteorological Office of the Dominion of Canada, and respective observers).—The originals give the barometer reduced to sea-level in English inches and the temperature in Fahrenheit. Meteorological reports from stations marked with a * are telegraphed daily to the office of the Chief Signal Officer of the Army.

CAPE COLONY SERIES (furnished by co-operation of the Meteorological Commission of Cape Colony, Cape Town, and respective observers).—At Cape Town the barometer is given on the original as corrected for temperature only. Upper and lower clouds are given on a scale of 0 to 10, and the kind occasionally indicated by abbreviating Poëy's classification.

CHINESE SERIES (furnished by co-operation of Marc Dechevrens, S. J., Director of the Meteorological Observatory at Zi-Ka-Wei).—At Zi-Ka-Wei the originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is given in metres per second and the direction to 16 points. The kind of clouds is occasionally given, and the degree of cloudiness on the scale of 0 to 10; distinction between upper and lower clouds is sometimes made. The weather is given in general (French) terms. The rainfall is given in millimetres and measured at the moment of simultaneous observation.

DANISH SERIES (furnished by co-operation of Captain N. Hoffmeyer, Director of the Royal Danish Meteorological Institute at Copenhagen).—The originals give the barometer in millimeters reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6. The weather is occasionally given by the Vienna symbols, but it is not certain that they always refer to the moment of simultaneous observations, except at Copenhagen. No distinction is made between upper and lower clouds, and the direction of movement, together with the rainfall, is entirely omitted.

FRENCH SERIES (furnished by co-operation of the Central Meteorological Office of France, Professor E. Mascart, Director, and respective observers).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in metres per second for Mont Louis and Perpignan. In general the rainfall is measured at 9 a. m., local time. The direction of upper and lower clouds is given, but no distinction is made as to kind. The degree of cloudiness is given on a scale of 0 to 4 at Clermont-Ferrand and Puy de Dome, while at other stations the scale of 0 to 10 is employed, or general weather terms, from which the amount of cloudiness is inferred. The weather is given in general terms, except occasionally by the Vienna symbols at Mont Louis and Perpignan. At Guéret the observations are taken at 12 m., instead of 12.16 p. m., and at Besançon at midday instead of 0.32 p. m.

GERMAN SERIES (furnished by co-operation of Prof. Dr. G. Neumeyer, Director of the German Marine Observatory at Hamburg).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The kind of clouds is occasionally given, but no distinction is made between upper and lower; the amount is given on a scale of 0 to 10, but the kind is rarely given. The weather is given in Vienna symbols or in general terms. At Berlin observations are taken at 2 p. m., instead of 1.02 p. m.

GREEK SERIES (furnished by co-operation of Prof. Dr. J. F. Julius Schmidt, Director of the Royal Observatory at Athens).—The originals give the barometer corrected for temperature only and the thermometer in Centigrade. Hygrometrical observations are not given. The kind of clouds is occasionally given, and the amount is inferred from the general weather terms. The movement of the air is indicated by force on a scale of 0 to 10.

INDIAN SERIES (furnished by co-operation of H. F. Blanford, Meteorological Reporter to the Government of India at Calcutta).—The barometric observations refer to the Calcutta standard, which requires a correction of —0.011 inch, or 0.28 mm., as compared with the Kew standard. The wind-velocity given is the average rate of wind since the observation of the preceding day. All conversions are published as given in the originals where the data are recorded to an additional decimal. The weather is given by the Beaufort notation, Vienna symbols, or special symbols.

ITALIAN SERIES (by authority of the Minister of Agriculture, Industry, and Commerce—furnished by co-operation of Professor P. Tacchini, Director of the Central Meteorological Office at Rome, and respective observers).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometres per hour, or by force on a scale of 0 to 4, as at Mondovi, Florence, and Cagliari. No distinction is made between upper and lower clouds, and the amount is given on a scale of 0 to 10.

JAPANESE SERIES (furnished by co-operation of I. Arai, Director of the Imperial Meteorological Observatory at Tokei).—The rainfall is measured at 9.30 a. m., local time, and the conversions are all published as given in the originals. Distinction is generally made between upper and lower clouds, and the amount is given on a scale of 0 to 10. The weather is given in general terms. During the months of July, August, and September, 1882, the rainfall at Nagasaki was measured at 9.36 p. m., and at Niigati during July and August, at 10.13 p. m., local time.

MAURITIUS SERIES (furnished by co-operation of C. Meldrum, Secretary of the Meteorological Society of Mauritius).—All conversions are published as given in the originals. The direction of the wind is given to 64 points, and the rainfall is measured at 9.30 a. m., local time.

MEXICAN SERIES (by authority of the Secretary of Public Works—furnished by co-operation of Señor Mariano Barcena, Director of the Central Meteorological Observatory in the City of Mexico, and respective observers).—All conversions are published as given in the originals, but when an evident mistake has been made, the data is queried at this office. The kind of clouds is given, and also the direction and amount of both upper and lower. The degree of cloudiness is indicated on a scale of 0 to 10. Rainfall is generally measured at 6 a. m., local time.

NETHERLANDS SERIES (furnished by co-operation of Professor Buys Ballot, Director of the Royal Meteorological Institute of the Netherlands at Utrecht).—The originals give the barometer in millimetres reduced to sea-level and the temperatures in Centigrade. The movement of the air is indicated by pressure in kilograms per square metre, except at Hellevoetsluis, which gives force on a scale of 0 to 12. The humidity is not given on the originals, but for two stations it is computed from the hygrometrical observations. The weather is only given for Utrecht, from which the amount of cloudiness at that station is inferred.

NORWEGIAN SERIES (furnished by co-operation of Professor H. Mohn, Director of the Royal Norwegian Meteorological Institute at Christiana.)—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade The movement of the air is indicated by velocity in metres per second or by force on a scale of 0 to 6. The weather is occasionally given by Vienna symbols. At Bergen observations upon the weather and degree of cloudiness are made at 2 p. m., local time. At Brone the observations are taken at 2 p. m., instead of 12.57 p. m.

PORTUGUESE SERIES (furnished by co-operation of J. C. de Brito Capello, Director of the Meteorological Observatory of the Infante Dom Luiz at Lisbon).—In the originals the barometer is given in millimetres and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometres per hour. The weather is occasionally given by the Vienna symbols. The rainfall is measured at noon each day.

RUSSIAN SERIES (furnished by co-operation of Professor H. Wild, Director of the Imperial Central Physical Observatory of Russia at St. Petersburg).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. At Astrakham the barometer-cistern is below sea-level. The movement of the air is indicated by velocity in meters per second. No distinction is made between upper and lower clouds; the amount is given on a scale of 0 to 10, and the kind occasionally. The weather is occasionally given by the Vienna symbols.

SCOTTISH SERIES (furnished by co-operation of Alexander Buchan, M. A., F. R. S. E., Secretary of the Scottish Meteorological Society at Edinburg, and respective observers).—The originals give the barometer as read off and the movement of the air is indicated by force on a scale of 0 to 6. Distinction is made between upper and lower clouds as to degree, and the amount of cloudiness is given on a scale of 0 to 10. The direction of upper clouds is given separately. The rainfall, temperature, and humidity are not given at North Unst. The wind direction is given to 32 points.

SPANISH SERIES (furnished by co-operation of the Royal Observatory at Madrid, and respective observers).—The movement of the air, except for sub-series, is given in kilometres per hour. The kind of clouds is occasionally given, and the degree of cloudiness on a scale of 0 to 10. The rainfall at San Juan is measured at 4 p. m., local time, and at San Fernando at midnight. The weather is given in general (Spanish) terms.

SWEDISH SERIES (furnished by co-operation of Professor R. Rubenson, Director of the Royal Swedish Meteorological Institute, and of Professor H. H. Hildebrandsson, Director of the Meteorological Observatory of the Upsala University).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in metres per second for Upsala. The kind of clouds is not given, but the degree of cloudiness is indicated on a scale of 0 to 10. The rainfall is measured at 8 a. m., local time, and the weather is occasionally given by the Vienna symbols.

SWISS SERIES (furnished by co-operation of Professor E. Plantamour, Director of the Observatory at Geneva).—The originals give the barometer in millimetres, corrected for temperature only, and the thermometer in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10.

TURKISH SERIES (furnished by co-operation of A. Coumbary, Effendi, Director of the Central Observatory at Constantinople, and of Professor C. V. A. van Dyck, Superintendent of the Lee Observatory at Beirut).—The originals give the barometer in millimetres reduced to sea-level. The temperature is given in Centigrade. The movement of the air is indicated by force on a scale of 0 to 7 for Valona, and on a scale of 0 to 12 for Beirut. At Constantinople the velocity is given in meters per second. The kind of clouds is not given, but the amount is indicated on a scale of 0 to 10, except at Valona, at which station it is inferred from the general weather terms.

UNITED STATES SERIES (by authority of the Secretary of War—furnished by co-operation of W. B. Hazen, Brigadier and Brevet Major General, Chief Signal Officer, U. S. Army).

UNITED STATES SUB-SERIES (furnished by co-operation of the respective observers).—The originals generally give the barometer reduced to sea-level and the temperature at Fahrenheit. At Bogota and Navassa the barometer is corrected for temperature only; at Puesto Berrio, is given as read off, and at Rivas is omitted. The movement of the air is generally indicated by velocity in miles per hour, except on a scale of 0 to 10 for Bogota, Paramaribo, and Rivas, and 0 to 12 for Puerto Berrio. The wind direction is generally given to 16 points, except 8 points for Bogota and 32 points for Rivas. At Rivas the humidity is obtained by readings from Saussure's hygrometer.

BRITISH NAVAL SERIES (furnished by co-operation of the Meteorological Council, London, Robert H. Scott, Esq., F. R. S., Secretary).—The originals give the barometer as read off. The wind direction is given to 32 points. The movement of the air is indicated by force on a scale of 0 to 12. The distinction between upper and lower clouds is made as to direction, but not as to amount. The height of the sea-disturbance is given on a scale of 0 to 9, and the weather by the Beaufort notation. The direction of movement of wind, clouds, and sea is compass direction, corrected only for deviation caused by the iron in the ship, while the correction for magnetic variation is applied at this office. The humidity is not given, but is computed from the hygrometrical observations.

PORTUGUESE NAVAL SERIES (furnished by co-operation of J. C. de Brito Capello, Director of the Meteorological Observatory of the Infante Dom Luiz at Lisbon).—The originals give the barometer in millimetres, corrected for temperature only, and the thermometer in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The humidity is not given, but is computed from the hygrometrical observations. The kind of clouds is not given, but the amount is indicated on a scale of 0 to 10; the direction of movement is given without distinction between the upper and lower. The height of sea disturbance is given on a scale of 0 to 9 and the weather by the Beaufort notation. The rainfall is not measured, but the duration is generally given in hours and minutes.

SWEDISH NAVAL SERIES (furnished by co-operation of E. Malmburg, Director of the Nautical Meteorological Bureau at Stockholm).—The originals give the barometer as read off. The movement of the air is indicated by force on a scale of 0 to 12, and the direction is corrected for magnetic variation at this office. The humidity is not given, but is computed from the hygrometrical observations. The rainfall is omitted. The height of the sea-swell is given on a scale of 0 to 9 and the weather by the Beaufort notation.

UNITED STATES NAVAL SERIES (by authority of the Secretary of the Navy—furnished by co-operation of the Navy Department, through Commodore John G. Walker, U. S. N., Chief of Bureau of Navigation).—The originals give the barometer as read off. The humidity is not given, but is computed from the hygrometrical observations. The sea-swell and weather are given in general terms. The direction of the wind is compass direction, corrected for variation.

MERCHANT-MARINE SERIES (furnished by co-operation of the owners, agents, &c., of the respective lines and vessels).—Same as U. S. Naval.

OCEAN SQUARES.—The table of ocean square data shows (1) the location of the centres of squares whose sides extend 5° each in latitude and longitude, (2) the number of days for which observations are at hand within the respective squares, and the total number of simultaneous observations reported on those days, (3) the monthly mean pressure and temperature of the air, and the mean force and total frequency of the wind at 7 a. m., Washington time, computed for the centre of each square from daily readings as obtained by interpolation between the isobars and isotherms of the daily international simultaneous weather maps.

ERRATA.

DAILY BULLETIN, July 2d, page 7, Occidental and Oriental Steamship Company, s. s. "Coptic," barometric reading doubtful.

5th, page 6, United States Naval, "Constellation," latitude S., should read N.

7th, page 1, Austro-Hungarian, Kremsmunster, upper clouds 3, should read C.

17th, page 3, Swedish, Umea, actual barometer 29.89 inches, should read 29.95 inches.

19th, page 5, United States, New London, reduced barometer 29.05 inches, should read 29.95 inches; page 7, British Meteorological Office, s. s. "Markland," longitude W. 102°, should read W. 103°.

22d, page 7, General Trans-Atlantic Company, s. s. "France," longitude E., should be W.

23d, page 3, Russian, Vladivostock, reduced barometer 29.62 inches, or 752.4 m.m., should read 29.66 inches, or 753.4 mm.

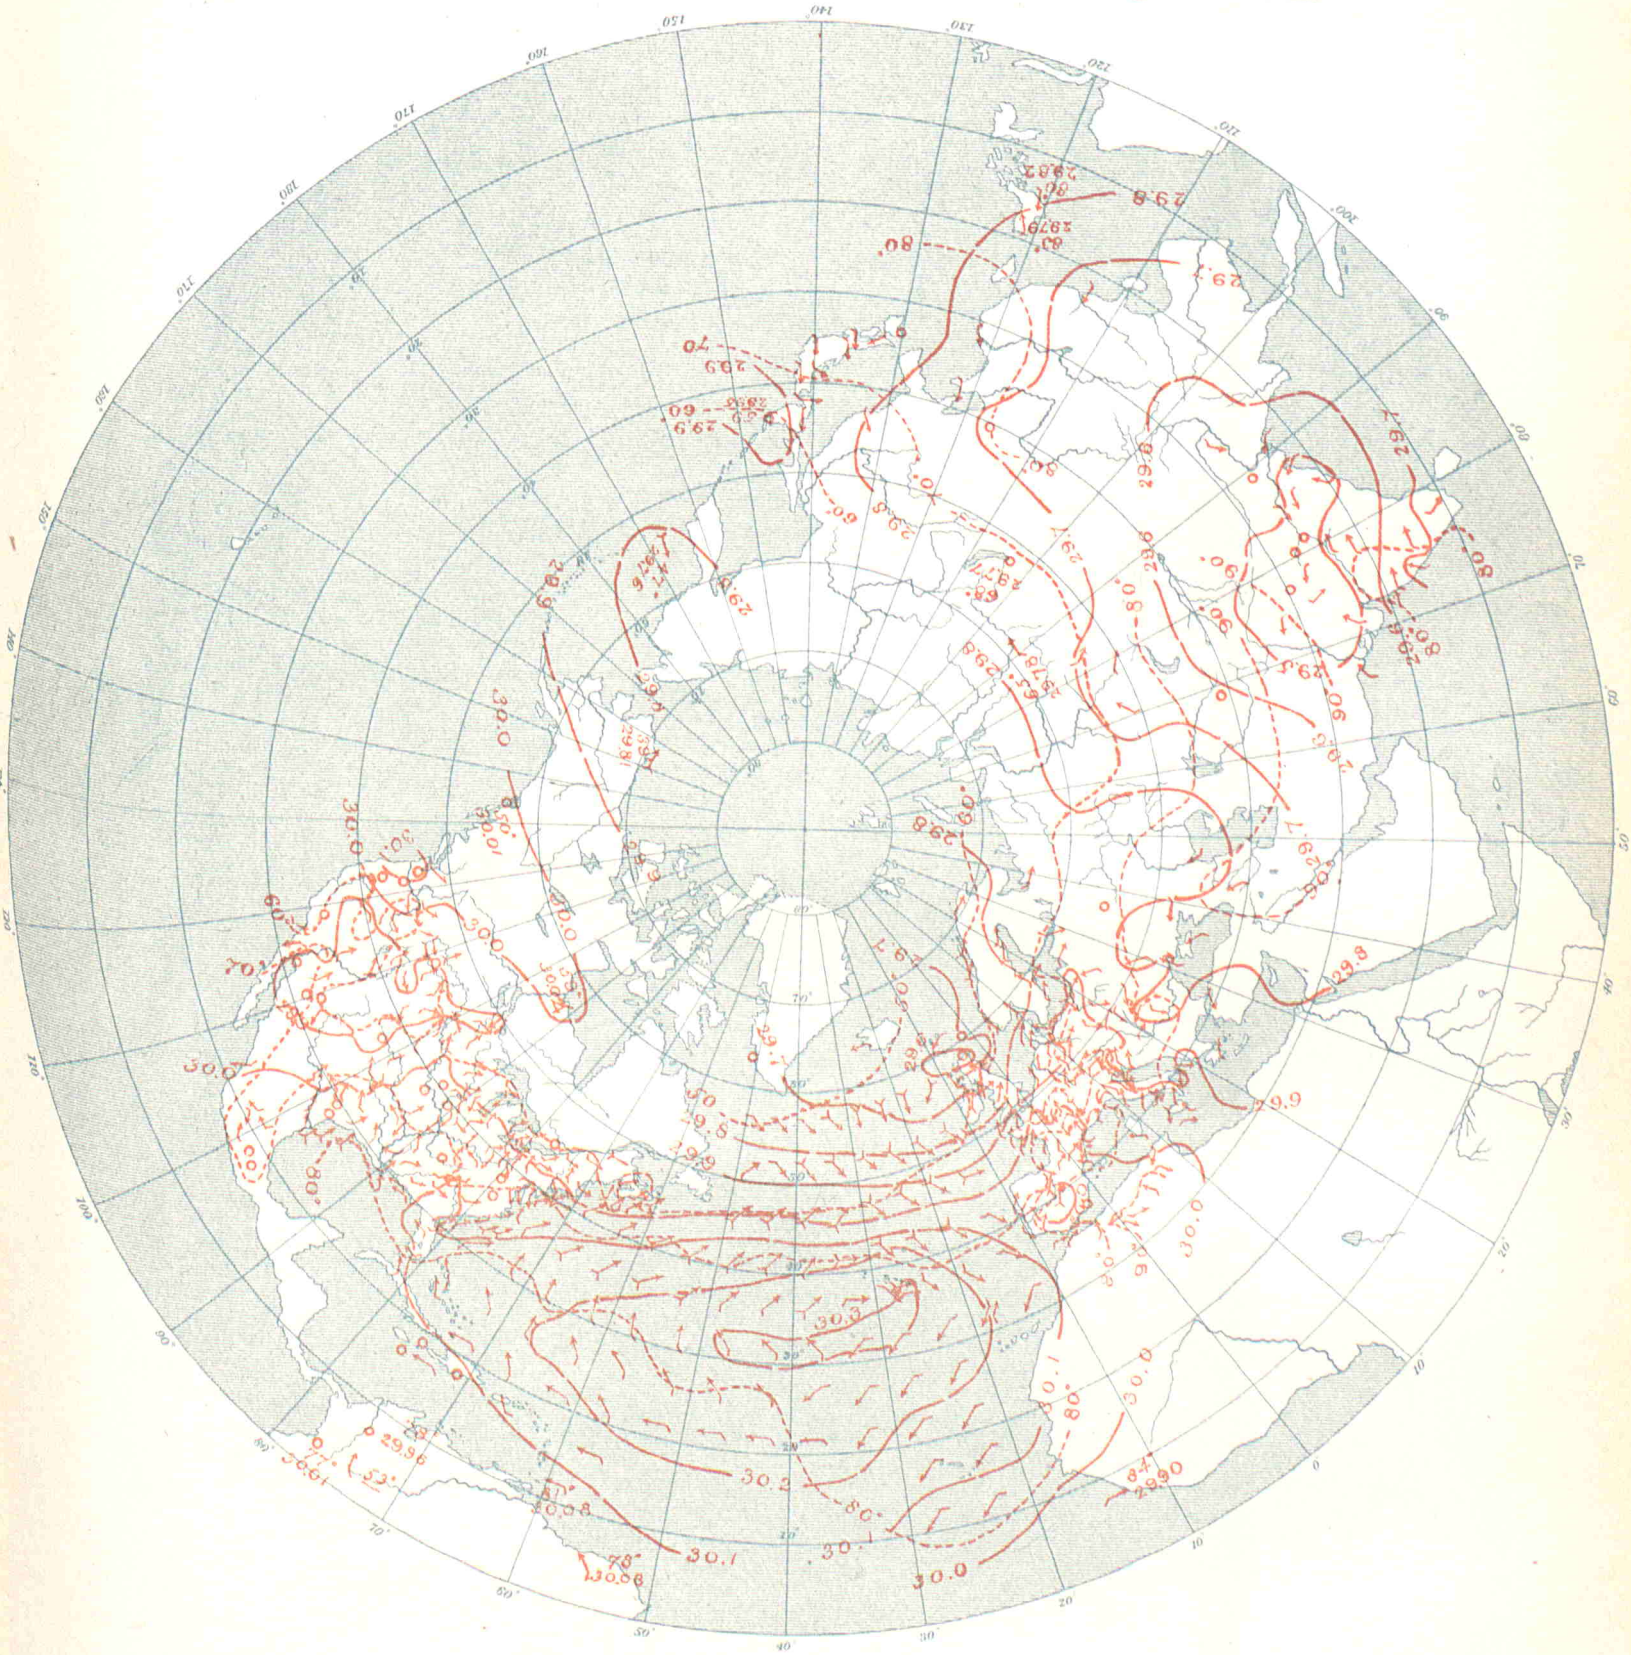
30th, page 7, Boston and Halifax, s. s. "Carroll," Seal island, Alaska, should read, Seal island, Nova Scotia.

United States, Bennett, Fort, all barometric readings for month of July, 1882, except monthly mean, are .06 inches, or 1.5 m.m. too low.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Brt. Maj Gen'l,
Chief Signal Officer, U. S. A.

International Chart II. July, 1882. Isobars, Isotherms, and Winds.



UNITED STATES OF AMERICA.

By Order of the Secretary of War.
W. B. Hazen, Chief Signal Officer.

WAR DEPARTMENT,
OFFICE OF THE CHIEF SIGNAL OFFICER OF THE ARMY OF THE UNITED STATES.

BULLETIN

OF

INTERNATIONAL METEOROLOGY

FOR THE MONTH OF AUGUST, 1882.

PRINTED FOR EXCHANGE WITH CO-OPERATING OBSERVERS.

WASHINGTON, D. C.:
SEPTEMBER, 1883.

INTERNATIONAL METEOROLOGICAL OBSERVATIONS

TAKEN SIMULTANEOUSLY ON AUGUST 1, 1882,

7 A. M., Washington Mean Time.

NOTE.—See General Remarks.

REVIEW.

INTERNATIONAL METEOROLOGY.

[*Pressure expressed in inches and millimetres; temperature in degrees, Fahrenheit and Centigrade.*]

With this REVIEW is issued international storm-track chart iii. for the month of August, 1881. This chart continues the series of international charts begun in November, 1877.

The data are charted for each day of the month, on the maps accompanying each issue of the "International Bulletin," and from these charts, and from additional data, are traced the movements of the centres of barometric minima.

The paths of twenty-five of the more important atmospheric depressions that have appeared in the northern hemisphere during the month of August, 1881, have thus been traced. In addition are also shown the paths of three typhoons which occurred in the China sea during the month. The tracings of these are copied from Mr. Marc Dechevrens' "Typhoons of 1881."

The following concerns the general distribution of the depressions above referred to: Six were first observed in North America; two of these first originated south of the twenty-fifth parallel, and were probably tropical hurricanes; number vi. being especially notable on account of the unusual direction of the centre, and its great violence. Two depressions are shown over the Atlantic, but in neither case have these been traced farther eastward than the twenty-fifth meridian. Thirteen areas of barometric minima are exhibited in Europe; three of these are traced in the basin of the Mediterranean, and have moved toward the northeast; five have moved from southwest to northeast over the British Isles, while the remaining five prevailed in the northern part of the continent. Three depressions are traced in Asia.

The following are brief descriptions of the storms that occurred in the United States and Canada:

I. This disturbance originated far north of the stations of observation, and its path is therefore only approximately determined. On August 1st the pressure began to decrease in the Hudson Bay region, and by the 2d the barometer at York Factory read 29.17 (740.9), wind sw. 24 miles, raining. During the 3d and 4th the disturbance moved eastward over Hudson Bay and northeastern Canada, to Davis' Strait, where it was apparently central on the last mentioned date; pressure at Godthaab, Greenland, 29.37 (746.0), wind s., force 7, raining. On the 5th the region of least pressure was near Iceland, where the barometer read 29.49 (749.0), while a brisk decrease of pressure had extended to the British Isles and western Europe. From the 5th to the 9th the storm-centre remained, with slow and irregular movements, in the vicinity of Iceland, causing strong southwesterly winds and rain over the western part of the British Isles. After the 9th, the pressure in Iceland rose gradually until the 12th, when the barometer at Stykkisholm read 30.06 (763.5).

II.—This depression appeared in Manitoba on the 8th, the barometer at Fort Garry reading 29.56 (750.8) wind s., weather cloudy. The disturbance moved eastward, or slightly south of east, to the lake region, and on the 9th it was central in Ontario, accompanied by showery weather in that province and at stations in the lower lake region. During the day the disturbance passed eastward, the rains becoming general along the Saint Lawrence valley, in New England, and the Maritime Provinces; on the 10th the centre of depression occupied the provinces of Quebec and New Brunswick, and the northern part of the state of Maine. Moderate southerly winds and cloudy weather prevailed at stations in Nova Scotia and Newfoundland, whilst variable winds, mostly westerly, prevailed to the west of the centre. On the 11th the disturbance was central over the Gulf of Saint Lawrence, and on the 12th it apparently ceased to exist as a depression, but the barometer rose slowly, owing to the advance eastward of low area iii.

III.—This depression advanced to the United States from the region north of Montana, on the 10th, the pressure at the centre being about 29.65 (753.1). During the day the disturbance moved eastward, with gradually decreasing pressure at the centre, which was now enclosed by the isobar for 29.6 (751.8); on the 11th it was in Dakota and Minnesota, causing showery weather and moderate winds at stations to the eastward. On the 12th the storm-centre was in Ontario, attended by rainy weather in the lower lake region, New England, and the Saint Lawrence valley; on the following day the depression was shown in Quebec and the Maritime Provinces, the pressures near the centre ranging from 29.45 (748.0) to 29.55 (750.6). On the 14th the disturbance passed into the Gulf of Saint Lawrence and disappeared on the 15th, closely followed by an area of high pressures, which brought cool northerly winds and clearing weather.

IV.—The pressure remained unsteady at stations on the northeastern slope of the Rocky mountains from the 13th to the 16th; on that date the depression spread to the Missouri valley, where the pressures were from .1 to .2 inch below the normal. The disturbance moved slowly southeastward during the 17th and 18th, and finally dissipated in the south Atlantic states on the 19th, without having exhibited any decided storm-energy.

V.—This storm developed in the Gulf of Mexico prior to the 17th, on which date it was central off the west coast of southern Florida, attended by strong breezes and heavy rain. On the 18th the storm-centre was off the eastern coast of Florida. On reaching the Atlantic the disturbance appears to have moved northeastward, and on the 20th, it was central about N. 35° and between W. 65° and 70°. The ship "Great Admiral," in N. 39° 44′, W. 67° 26′, reported heavy south-southeast gale, veering to east and then to north, with vivid lightning and heavy rain; lowest barometer 29.48 (748.8); the gale lasted ten hours, during which time the vessel lost maintopsail and shifted cargo; two vessels near the same position as the "Great Admiral" had a similar experience, losing sails and rigging. On the 21st and 22d the disturbance was central south of Nova Scotia, causing unsettled and rainy weather in Canada and in New England. By the 23d the depression had apparently filled up.

VI.—This was a West Indian hurricane, the centre of which was supposed to be to the northeast of the Windward Islands on the 22d or 23d. The earliest reliable information respecting the presence of this hurricane was the report of the schooner "Walter L. Plummer," Capt. W. P. Allen. On the 22d the vessel was in N. 25°, W. 67° 30′, and reported at 4.26 p. m., calm; aneroid barometer 30.0 (762.0), the only indication of the proximity of a hurricane being the long, heavy se. swell. During the 23d the barometer remained steady, with a light wind from ene.; at 6.26 p. m. the wind increased and the weather became threatening; 8.26 p. m., the wind blowing a strong gale, accompanied by torrents of rain, barometer steady at 30.0 (762.0). At 10.26 p. m. the ship was hove to, having made, on a sw. by w. ¼ w. course, 291 miles; Turk's Island then bore ssw., distant about 130 miles. The storm-centre appears to have moved very slowly during the 23d and 24th, vessels near N. 22°, W. 67° and 69° having reported continuous east to southeast winds, of hurricane force, with torrents of rain, and much thunder and lightning on these dates. The hurricane apparently raged with unabated violence in the vicinity of the Windward Islands until the 25th, the brig "L'Edouard," having been driven ashore at Humacoa, Porto Rico, during a hurricane which prevailed there on that date. The absence of reliable data as to pressure and wind-direction renders it difficult to definitely locate the centre, but the report of the "Walter L. Plummer" seems to indicate that the storm-centre was to the northeastward of Turk's Island, and moving towards the northwest on the 24th. On that date the vessel was hove to

about 130 miles northeast of Turk's Island, and reported as follows:

Date.	Time.	Barometer. (aneroid.)	Wind.	Remarks.
24th.....	0.26 m.....	29.7 (754.4)	ene.	
"	1.26.....	29.6 (751.8)	ne. by e.	
"	2.66.....	29.5 (749.3)	ne.	
"	3.26.....	29.5 (749.3)	ne. by n.	
"	4.26.....	29.3 (744.2)	nne.	
"	6.26.....	29.2 (741.7)	n.	
"	8.26.....	29.1 (739.1)	nnw.	
"	10.26.....	29.3 (744.2)	wnw.	wind blowing with destructive violence.
"	14.26	29.3 (744.2)	wnw.	
"	16.26.....	29.4 (746.7)	sw.	moderating.
"	18.26.....	29.6 (751.8)	s.	
"	20.26.....	29.7 (754.4)	se.	wind and sea moderating.

On the 25th the storm-centre was to the eastward of the Bahamas, but by the 26th it had passed to the northwestward of those islands, as indicated by the shift of the wind from north to southwest at Nassau and the falling barometer at that station. The bark "Mexico," in N. 30° 35′, W. 77° 26′, on the 26th had a ne. hurricane in which she lost foremast, jib-boom, and maintopmast, and had one seaman washed overboard. On the same day the ship "La Louisiane," after encountering the hurricane, was abandoned in N. 31°, W. 78°, in a waterlogged condition. On the 27th the hurricane was central off the coasts of Georgia and South Carolina; during its passage it displayed extreme violence and caused great damage to shipping and property. The captain of the s. s. "City of San Antonio," which put into Fernandina to repair damages, reported the gale as being one of the most terrific he ever experienced; several vessels were driven ashore on Frying Pan Shoals (off the coast of the Carolinas), whilst many others reached port with loss of sails, spars, and deck-fittings. During the 27th and 28th the hurricane did immense damage at Savannah, Charleston, and at adjacent places; twenty steamers and sailing vessels were blown from their moorings, many sank and others were seriously damaged by collision; several pilot-boats were also wrecked. At Charleston four schooners, three sloops, and three lighters were driven ashore during the hurricane; and vessels in the ports of Beaufort, South Carolina, and Wilmington, North Carolina, also sustained damages to a more or less extent. The loss was further augmented by the high tide and heavy swell which swept along the coast, submerging many rice fields and carrying away houses, &c. Instead of recurving to the northeastward, as is usual in the case of West Indian hurricanes, this storm appears to have continued its course toward the northwest, the region of least pressure on the 28th being in Georgia. During the day the pressure gradually increased and the storm diminished in violence, although, at sea, the wind still blew with the force of a strong gale. During the 29th and 30th the disturbance moved up the Mississippi valley with greatly diminished energy, and eventually dispersed on the last-mentioned date.

The damage done to the city of Savannah by this hurricane was estimated at $1,500,000; there was scarcely a building in the city but received more or less injury; over three hundred negroes and thirty-five white persons were killed or drowned. The damage to plantations could not be estimated. This storm was more destructive than the memorable one of 1854, being more violent and prolonged. It is of interest to note that an area of high pressures occupied the middle Atlantic states and the northern part of North Carolina, while the pressure remained relatively low in the northwest; to such a distribution of atmospheric pressure may possibly be due the abnormal path pursued by the centre of the hurricane.

The following are descriptions of the depressions that appeared over the Atlantic and in Europe:

VII.—On the 1st the atmospheric pressure was low over the ocean between Newfoundland and the fortieth meridian; vessels between N. 40° and 50° reporting moderate westerly and northwesterly gales. By the 2d an extensive depression, which to some extent affected the weather conditions in the British Isles, was shown between 55° and 20° west longitude, and from N. 45° northward to Greenland; within this region the pressure ranged from 29.64 (752.8) near the fortieth meridian, to 29.71 (754.6) near W. 25°. On the 3d the centre of disturbance was near N. 50° W. 32°, where the lowest reported pressures were 29.42 (747.3) and 29.44 (747.8). During the day the pressure increased both to the east and west, and on the 4th the depression either filled up or became merged in low area i.

VIII.—This was a continuation of the disturbance charted as low area xxiii. on the chart for July. At the close of that month the depression occupied Great Britain; passing northeastward during the 31st (July), the centre, enclosed by the isobar for 29.0 (736.7), reached the Norwegian coast on August 1st, and caused strong winds at stations on the eastern shores of the North sea. Continuing its north-northeasterly course along the Norwegian coast, the centre of disturbance was shown on the 2d, near Lodingen, at which station the barometer read 29.27 (743.4), calm, light rain, while moderate westerly gales prevailed in southern Scandinavia and in Denmark. During the day the disturbance apparently passed into the Arctic ocean.

IX.—On the 3d a depression appeared to the eastward of Iceland, the barometer at Thorshavn, Färoe Islands, reading 29.48 (748.8), a fall of .3 inch during the preceding twenty-four hours. On the 4th the region of least pressure was over the Gulf of Bothnia, attended by showery weather and high temperatures, with brisk to strong westerly winds at stations lying south of the centre. On the 5th the depression was central in northern Russia, in which region it caused rainy weather, with strong northwesterly winds over the Gulf of Finland. From the 7th to the 10th this depression moved slowly eastward over the Ural region to Siberia, where it disappeared on the last-mentioned date.

X. This disturbance, which was probably subsidiary to low area i., appeared between the Shetland and Färoe Islands on the 6th, and moved northeastward, causing moderate westerly and southwesterly gales, with rain over the northern part of the British Isles. On the 7th the depression occupied the Gulf of Bothnia and Finland; moving eastward it reached northeastern Russia, and probably combined with low area ix. in the Ural region.

XI.—This was a subsidiary disturbance which appeared off the western coasts of Iceland and Scotland on the 8th, causing general rains over those countries. During the day it moved eastward with decreasing pressure, and on the 9th it was central over northern Denmark, where the pressure was 29.39 (746.5). From the 9th to the 13th this depression remained persistently over southern Scandinavia, the barometer falling to 29.24 (742.7) at the centre of disturbance. During its prevalence, general rains, accompanied by strong westerly winds to moderate gales, occurred in the British Isles and western Europe, and heavy thunder-storms were also reported in central Europe. On the 14th the region of least pressure was transferred to the Baltic; stormy weather still prevailed throughout Europe, the southern part of the continent being now under the influence of a depression which had appeared in the Mediterranean. On the 15th the lowest barometric readings were over the Gulf of Finland, but the pressure had become more evenly distributed over northern and central Europe, and this disturbance ceased to exist as an important weather element.

XII.—This depression formed in the Gulf of Genoa and moved through northern Italy on the 10th, to the Adriatic, where it was central on the 11th. It dissipated in southern Italy on the 12th.

XIII.—This disturbance appeared in the Gulf of Finland and the Baltic provinces of Russia on the 12th; on the 13th the centre was west of Moscow, where the barometer read 29.27 (743.4), wind se., 27 miles, raining. The depression continued its easterly movement, and on the 14th it was central near Ekaterinburg, barometer 29.38 (746.2). By the 15th it had passed into Siberia, and on the 16th it was central north of Akmolinski, where it apparently dissipated.

XIV.—The area of low pressures which occupied Europe on the 14th extended southward to the Gulf of Genoa, over which a secondary disturbance appears to have developed. It moved over the Italian peninsula and the Adriatic, causing showery weather and strong winds over those districts. On the 15th the disturbance was shown in Austro-Hungary, where the pressure ranged from 29.50 (749.3) to 29.55 (750.6). During the day the depression passed toward the Black sea and disappeared on the 16th.

XV.—On the 16th a great depression occupied central and northern Europe, from the British Isles eastward to Russia and thence southward to the Black sea, and moderate winds and rainy weather generally prevailed at stations in the northern and central parts of the continent. The region of least pressure was situated in Scandinavia, where the barometric readings ranged from 29.43 (747.5) to 29.5 (749.3). On the 17th the depression was shown in Finland, the pressure at the centre having decreased to 29.1 (739.1); small secondary depressions also existed in Scandinavia and in Germany, so that unsettled weather continued in nearly all districts. On the 18th the storm-centre was over the northern part of the Gulf of Bothnia, where the lowest reading was 29.04 (737.6); the pressure had increased over western Europe, and the wind increased somewhat in force, while the weather became more settled. On the 19th the pressure increased in northern Scandinavia, but this was again checked by the advance of an important depression, xvi., which had appeared near the British Isles on that day.

XVI.—This was a rather deep depression which appeared over the Irish sea on the morning of the 19th, the region of least pressure being indicated by the isobar for 29.4 (746.7.) General rains, heaviest in the southern districts, occurred over the British Isles and the eastern shores of the North sea, and strong winds to moderate gales prevailed in the southern quadrants of the depression. By the 20th the centre of disturbance had moved by a northeasterly course over the North sea to southern Scandinavia, accompanied by rainy weather, rising temperature, and strong westerly and southwesterly gales. On the 21st the barometric depression was shown in Sweden, the pressure near the centre being about 29.37 (746.0); strong westerly and southwesterly winds prevailed over the Baltic, and light rains occurred at most stations. On the 22d the isobar for 29.40 (746.7), which indicated the region of least pressure, had assumed an elongated form, and now stretched from Sweden, over the Gulf of Bothnia and Finland, eastward to the White sea, and strong westerly winds to moderate gales continued over the Baltic. On the 23d the disturbance remained near the White sea, but the pressure had increased somewhat, and on the following day the disturbance disappeared in the Arctic ocean.

XVII.—This was a shallow depression which appeared near the Saint George's Channel on the 22d, causing rain in the southern counties of England. On the 23d the area of the disturbance increased and the isobar for 29.8 (756.9) now enclosed the greater part of the British Isles, France, and the Bay of Biscay. Rain continued over the British Isles and at scattering stations on the continent, but the winds remained light or moderate. By the 24th the centre of disturbance had moved over the North sea to Denmark, a slight decrease of pressure having occurred during its passage; the winds remained moderate in force, but rainy weather still continued at most stations. On the 25th the disturbance was over the Gulf of Bothnia, whence it moved northeastward into Russia and was central near Archangel on the 26th, disappearing to the northeastward on the 27th.

XVIII.—This deep depression appeared in the west of Ireland on the morning of the 25th, and was enclosed by the isobar of 29.2 (741.7). Rainy weather was general in the British Isles, except in the north and northeast, and strong southwesterly winds prevailed over the English Channel. The disturbance moved northeastward with diminishing pressure and increased energy, and on the 26th it was central over the North sea, barometer at the centre reading 29.0 (736.6). Heavy rains, with rising temperature, accompanied the depression, and strong winds prevailed, except at stations in France, where they had moderated to fresh breezes. On the 27th the centre of depression was shown off the Norwegian coast; the pressure was gradually increasing and the weather improved over the British Isles and northwestern Europe, but in southern Europe rainy weather continued, owing to the presence of low area xix. in southern France. On the 28th low area xviii. disappeared in the Arctic region north of Scandinavia.

XIX.—This disturbance appeared in the western part of the Mediterranean and near to the Spanish coast on the 27th; it moved east-northeastward, and on the 28th was central over the northern part of the Adriatic. Heavy rain fell over southern and southeastern Europe, and high winds were reported at stations south of the centre. During the day the course changed to the northeastward and the disturbance passed through Austro-Hungary and disappeared in Russia on the 29th.

Under the influence of the four depressions just described, (numbers xvi., xvii., xviii., and xix.,) numerous severe thunder storms occurred in Europe, and very heavy rains prevailed, which seriously affected the harvesting operations and caused some damage to growing crops.

XX.—The disturbance was first noted in the Atlantic near N. 52° W. 32°, on the 27th. On that date the s. s. "Adriatic," in N. 50° 10′, W. 30° 38′, reported barometer 29.65 (753.1), wind sw., force 4, while vessels near W. 37° had strong northwest gales. Moving eastward during the day, the centre of disturbance reached W. 21° on the 28th, and on the following day it was off the Irish coast, the lowest reported pressure being 29.64, (752.8) on board the s. s. "Illinois," in N. 50° 52′, W. 14° 36′, wind w., force 3. Rain occurred at stations in Ireland and England, but no high winds were reported. On the 30th the centre was over the North sea, and on the 31st it was shown over Denmark, having been accompanied by heavy rain during its passage northeastward. This area was followed by a brisk increase of pressure and by cool northerly winds.

XXI.—This was a slight depression that appeared near Newfoundland on the 29th; it moved eastward, causing strong southerly gales near the thirtieth meridian on the 30th and, at the close of the month, it was apparently central as a storm of slight energy in about N. 49°, W. 28°.

XXII.—The presence of this disturbance was indicated by a rapid fall of the barometer at Godthaab, Greenland, on the 31st, on which date the barometer at that station read 29.25 (742.9), a fall of .3 inch during the preceding twenty-four hours.

Of the depressions that appeared in Asia, the following are charted:

XXIII.—This was an area of low pressures which occupied the sea of Okhotsk and northeastern Siberia from the 5th to the 8th, after which date the pressure increased until the 14th, when there was another brisk decrease; the barometer at Nikolaievsk, on the Amoor, falling to 29.37 (745.0) on that date.

XXIV.—This disturbance apparently moved, on the 18th, from northern China northeastward to Amoor where it was shown on the 19th. By the following day it had passed beyond the stations of observation.

XXV.—This depression was probably near Pekin on the 20th; it moved northeastward over northern Corea and disappeared in the Sea of Okhotsk on the 21st.

The following notes on the typhoons of August, 1881, are taken from Mr. Marc Dechevrens' "Typhoons of the China sea, 1881:

1. This typhoon is remarkable, both on account of its having moved from east to west in a latitude where the usual course of storms is in the opposite direction; and for the frightful havoc it carried into densely populated regions of China. The present typhoon is, so far as known, unique in regard to direction; it moved from east to west at a comparative high latitude, and what is rather unusual, instead of abating in violence on reaching the continent, it appears to have gathered

new strength and become more furious. The approach of this typhoon was first noticed at Satanomisaki light house, on the southernmost headland of Japan, and at Nagasaki, Japan, as early as the 9th of August. At Zi-Ka-Wei, China, the barometer did not begin to fall until noon of the 10th. At Satanomisaki, and at Nagasaki the wind had blown steadily from the westward since the beginning of August, but on the 9th it suddenly shifted to the northeast at the former station; at the latter station the change to northeast occurred on the afternoon of the 10th. The wind then shifted to east and lastly to southeast after the typhoon had started on its course toward China.

At Satanomisaki the barometer fell .3 inch between the 9th and 11th, on which date it reached the minimum, 29.66 (753.4); it fell rapidly for twenty hours before the minimum reading was observed, and afterwards it rose very slowly. At Nagasaki the barometric minimum, 29.7 (754.4), occurred on the afternoon of the 11th. The wind was not very strong, except at Satanomisaki, where, on the 11th, there was a strong east to east-southeast gale.

At Zi-Ka-Wei, China, during the 11th, the sky was almost clear, but in the evening, between 8 and 9 o'clock, the eastern horizon became overspread, first, with cirri, then with cumuli, moving from the northeast; on the 12th low cumuli were observed moving swiftly from nne. to sse., while cirro-strati rose up in the ese. The barometer began to fall rapidly, indicating the approach of the typhoon toward the coast of China; the barometric minimum, 29.58 (751.3), occurred at 4 a. m. of the 13th, the wind changing from ne. to e. and se.; the highest wind-velocity recorded was twenty-three miles an hour. There is no notice of any vessel having encountered the typhoon in the open sea, the detailed reports being mostly furnished by ships that were sailing along the coasts. To the northward of the centre, the s. s. "Pecheli," in about N. 28° 50′, E. 122° 40′, reported barometer 28.9 (734.0), at 6.30 p. m. of the 12th; wind ene., force 12 (Beaufort scale). The s. s. "Swatow", took shelter under the lee of Poo-too island (N. 29° 58′, E. 122° 22′), where she remained until the 13th; the barometer minimum was observed on board the steamer, between 4 and 6 p. m. of the 12th, wind between nne. and ne., force 8–9 (Beaufort scale).

The steamer "Hwai-Yuen," to the southward of the centre, and anchored in Bullock harbor (N. 28° 05′, E. 121° 5′), reported lowest barometer 29.05 (737.9), wind wsw., force 12; furious squalls and very heavy rain. At Wanchow (N. 28° 0′, E. 120° 40′), the barometric minimum occurred at midnight on the 12th.

Other vessel reports indicating the violence of the typhoon are as follows: The bark "Omega," apparently passed near the centre of the typhoon about noon of the 12th (N. 28° 27′, E. 122° 41′); she reported wind of hurricane force from n. to wnw.; in the afternoon the wind veered from w. to sw., blowing hardest from the west; tremendous seas filled the vessel fore and aft; masts were broken, boats carried away, and one man was lost. At 4 p. m. the force of the wind was such as to lay the vessel over, dipping her topsail yards in the sea. The s. s. "Europe," from Shanghai to Foochow, reported: 9.45 a. m., 12th (N. 29° 9′, E. 122° 15′), very heavy squalls with torrents of rain, barometer 29.6 (751.8); at 10 a. m., blowing a hard gale with high sea from se. and ne.; ship burying herself in the sea and flooding the decks fore and aft; at noon, barometer 29.22 (742.2), hurricane from n. sea making a complete breach over the vessel; at 3 p. m., a heavy se. sea boarded the ship, carrying away boats, wheel, deck saloon, rails, and everything on deck, also filling the engine-room with water and putting out the fires; ship helpless. At 4.30 p. m., the barometer read 28.8 (731.5); the gale raged till 5 p. m., when it began to lull, wind ne.; at 9 p. m. gale and sea going down, barometer 28.83 (732.3). Captain Wynn of the s. s. Nügita Maru," in N. 28° 35′, E. 122° 58′, reported lowest barometer 28.4 (721.3), at 5 p. m. on the 12th; sea fearfully high and sweeping decks continually from every side. Captain Wynn is of opinion that this typhoon exceeded in violence any he had ever seen or heard of.

On reaching the continent the typhoon moved from ene. to wsw.; at towns along the Yang-tsi-Kiang river the typhoon caused strong east winds; at Kiukiang (N. 29° 43′, E. 116° 8′), on the 14th, the gale lasted three hours, accompanied by heavy rain. But it was in the province of Kiang-Si that the typhoon proved most destructive; in that province all water courses were swollen by the diluvial rain that accompanied the typhoon; crops, houses, and people were swept away; in many places even the soil of the rice fields was washed away. The loss of life amounted to several hundreds, many persons being swept away by the floods and others crushed in the ruins of houses. In towns of 1000 houses not more than five or six remained standing; the survivors were left destitute and starving.

From the observations in Japan it would appear that, on the 10th and 11th, the typhoon was of small extent and of moderate violence, but as it approached the Chinese coast it increased considerably in both respects. At Zi-Ka-Wei, during the night of August 13–14th, the anemograph of the observatory registered a velocity of twenty-six miles, ese.; the barometer fell to 29.57 (751.1), whilst at the centre of the typhoon, one hundred and fifty miles south, it read 28.4 (721.3). At Chinkiang, northwest of Shanghai, the wind blew steadily from the northeast, force 6, on the afternoon of the 13th; the centre was two hundred and fifty miles to the south-southeastward, the typhoon then raging in Kiang-Si. In the China sea, the south-southwest monsoon continued to blow with the greatest regularity, but it increased in force as the typhoon moved southward, and a heavy swell from the same direction arose. At Manila, during the night of the 12th, there was a very high swell in Manila harbor, with scarcely a breath of wind at the time. The bark "Star of India" left Manila on the 10th for Hong Kong, and reported having had a succession of westerly squalls of hurricane force. The typhoon appears to have been brought to a stand by a barrier of relatively high pressures along the southern coast of China; its dispersion probably took place somewhere in the region comprised within latitude 24° and 27° north, and longitude 106° and 109° east.

II.—This typhoon appears to have formed to the east-southeastward of Luzon, its approach being first noted at Manila on the 19th. On the afternoon of that day the wind began to blow strongly, and the storm lasted until 3 o'clock the next morning. The storm-vortex was probably about forty miles to the north of Manila. According to the estimate of the director of the observatory, the wind reached a velocity of one hundred miles an hour, though an exact account cannot be given, owing to the destruction of the two anemometers at the observatory. Immense damage was done to small craft, and several large vessels were also stranded. On shore the destruction was very great, especially to houses of light construction. The light-house of Saint Nicholas was completely destroyed and eleven lives were lost. A destructive tornado (or secondary whirlwind accompanying the typhoon,) was reported to have occurred in the village of Polo, near Bulacan (twenty miles north of Manila); nearly all the houses of light construction were razed to the ground, but no loss of life was reported. This phenomenon was also reported to have crossed the parish of Pineda, where it was accompanied by a great noise, and destroyed one house.

During its passage across the China sea, the centre of the typhoon passed about two hundred and forty miles northeast of H. M. S. "Magpie," then on survey duty on the Macclesfield Bank, to the east of the Paracels; that vessel reported wsw., wind of force 3-5, with heavy sea-swell from ne., and nne., lowest barometer 29.58 (751.3), weather squally, with bright flashes of lightning. The schooner "Wagren" was near the centre of the typhoon on the 21st, in N. 19° 42′, E. 116° 32′; the lowest reported reading of the barometer was 29.12 (739.6), wind nne., force 10; the vessel lost spars and sails.

On the 23d the typhoon was off the Chinese coast near

Hong Kong; at that station the barometric minimum, 29.07 (738.4), occurred at 3:30 p. m., wind e., force 11. Owing to the precaution taken before the storm began, very little damage was done either ashore or afloat. At Macao, the barometric minimum 29.16 (740.7), occurred at 4 p. m., wind nne., force 8-9. At this station the barometer remained low until 10 p. m., the rise being much slower than at Hong Kong. As far as can be ascertained, the typhoon, after passing Macao, China, moved westward and passed to the north of Pakhoi, Gulf of Tonquin, on the evening of the 23d.

This typhoon travelled from Luzon, Philippine Islands, to Macao, China, a distance of six hundred and twenty miles, in seventy-two hours (August 20th–23d), or at an average velocity of about 8.5 miles an hour; on the 18th and 19th, previous to its entry into the China sea, its velocity probably did not exceed seven miles an hour. It is interesting to note that, south of the track, with southwesterly and westerly winds, there was a great display of electric phenomena; whilst, to the north of the track, no thunder nor lightning were reported. The same pecularity was noted in regard to the rainfall, although at Hong Kong there were very heavy rains on the 22d, 23d, and 24th.

III.—This typhoon formed in the Pacific ocean to the northeast of the Philippine islands, on the 23d or 24th; it moved to the westward at a considerable distance from those islands, and on nearing the coast of China the course changed to the north and northeast; its trajectory thus presenting the form of a parabolic curve. This typhoon caused immense damage to property at sea and on shore, and is specially notable from the fact that, when near the island of Formosa, the principal typhoon split into two distinct typhoons, each pursuing a nearly parallel track. The easternmost segment appears to have moved with greater rapidity than that which passed through the Channel of Formosa; the former has been traced northward to the fortieth parallel, while the latter apparently dissipated to the north of Shanghai between N. 30° and 32°.

The first indications of the typhoon were noted by the ship "Bolton Abbey," on August 22d, when in N. 17° 35′, E. 127° 56′; at noon the barometer read 29.57 (751.1), with fresh nw. breeze; at 6 p. m. the weather became threatening, with heavy squalls, accompanied by thunder and lightning. By midnight of the 22–23d the barometer read 29.0 (736.6), heavy nw. gale and furious sea; at 1.30 a. m. blowing a hurricane, barometer 28.8 (731.5), ship laboring heavily, decks swept and bulwarks carried away; at 2.30 a. m., barometer 28.6 (726.4), wind wnw., blowing with unabated fury; at 4 a. m. the barometer read 28.45 (722.6) (the minimum), wind w., blowing furiously, the gale sounded as if voices were in the air all around the vessel. By this time the ship was almost a complete wreck, having lost all masts, boats, &c., and in a waterlogged condition. At daylight of the 23d the barometer began to rise slowly, but the wind continued to blow with hurricane force throughout the day. At noon of the 24th, barometer 29.5 (749.3), weather improving and gale moderating. August 25th, wind sw., moderate, weather cloudy.

The next report indicating the vicinity of the centre of disturbance is that of the British ship "Hindostan," about eighty miles north of Luzon. At noon of the 25th, in N. 20° 16′, E. 122° 17′, the barometer read 29.12 (739.6), wind w. by n., force 10–12; tremendous squalls with very high and confused sea; ship dismasted. The period from the 26th to 28th is worthy of special note; on the first mentioned date the typhoon, which had handled the "Bolton Abbey" and the "Hindostan" so roughly, apparently divided into two parts. This occurrence can be ascribed to no other cause than the action of the great mountain chain, ranging from 9,000 to 12,000 feet above sea-level, which runs through the island of Formosa from south to north; the effect was as that of a wedge driven into the body of the typhoon, and dividing it into two segments, which, moving aside to the right and left, formed two separate and distinct typhoons. The westernmost or "Pescadores" typhoon was encountered by the steamer "Abbay," which sailed from Tai-wan-foo Roads on the 25th for Pescadores; the gale began with heavy squalls from n. and nw., with falling barometer; at 5 p. m. of the 25th the ship was hove to, wind nnw., force 9, barometer 29.39 (746.5). By 4 a. m. of the 26th (near N. 21° 38′, E. 119° 44′), the barometer had fallen to 29.16 (740.7), the minimum reading, wind w. to wsw., force 10–11, terrific squalls; at 6 a. m. the barometer began to rise, wind ssw., but still blowing with hurricane force. By noon of the 27th the wind had settled into a hard gale from sw., barometer 29.44 (747.8). At about noon of the 26th the storm-centre passed north-northwestward, near Tai-wan-foo, at which station the lowest barometric reading was 28.83 (732.3), wind nw., shifting to w. and ssw. after the passage of the centre. At about 3 p. m. the centre passed between the coast of Formosa and the Pescadores Islands; the Chinese gunboat "Fei-Yuen," lying in Makung harbor (Pescadores), reported barometer 28.89 (733.8), wind nnw.; at about 4 p. m. the wind, which had previously blown with hurricane force, now lulled down to about force 5 for half an hour; Chinese fishermen also reported that a calm was experienced for a short interval near N. 23°, E. 120°.

The storm-centre appears to have remained over Formosa about twelve hours, during which time it travelled about seventy-two miles, or with a velocity of six miles an hour; the central region appears to have been about twenty to twenty-five miles in diameter, near Pescadores. Moving nearly due northward the centre was met at midnight of the 26–27th, by the s. s. "Glencoe," in N. 24° 50′, E. 119° 25′, lowest barometer 29.1 (739.1), wind moderating from ne., hurricane of force 12, to w. force 1–2, with heavy rain, wind unsteady. The easternmost, or "Chusan" typhoon had moved along the eastern coast of Formosa, and on the 25th its centre was to the north of Tamsui, northern Formosa. At that station the lowest barometer at 7 p. m. of the 26th was 28.9 (734.0), wind ese. to se., force 9–10, afterwards moderating to se. and sw., force 2–3, with continuous rain. Observations taken at light-houses on the coast of Formosa indicate that the two centres were near to each other on the 27th, but that the easternmost typhoon was slightly in advance of the "Pescadores" typhoon. On the afternoon of the 27th the direction of the "Pescadores" typhoon appears to have changed to the northeastward, thus crossing the track of the "Chusan" typhoon, which was moving north-northwestward. The centres passed about fifty miles east of Foochow, at which station the wind was the heaviest known for a number of years, and great destruction occurred to life and property. The eastern, or "Chusan" typhoon passed into the continent near Wanchow, on the 28th; moving through the province of Che-Kiang, it caused great damage to life and property at Ning-po, and in the islands of the Chusan archipelago, and passed into the Yellow sea on the 29th, its course changing to the northeastward.

On the 28th the s. s. "Takasaga Maru," in about N. 27° 52′, E. 123° 6′, passed within a few miles of the centre of the westernmost typhoon, which was now moving to the northeastward; the lowest barometric reading was 29.12 (739.6), at 7 a. m. of the 28th, wind ese., blowing with typhoon force, with very high sea and heavy rain squalls; at 10 a. m. the wind was sw., squally, and at 2 p. m. it suddenly shifted to nw., blowing strongly but decreasing gradually to a moderate breeze.

On the 29th the "Pescadores," or western typhoon passed to the eastward of Shanghai; the force of the wind at Zi-Ka-Wei observatory did not exceed thirty-nine miles an hour, but owing to its long duration it did as much damage as a stronger wind might have done in a shorter time. The village of Shetoe-sha, in the Kow-kan district near Shanghai, was submerged by the floods and totally destroyed, and many of the inhabitants were drowned. The village contained about three hundred families, only half of which managed to save themselves on hastily constructed rafts. At Woosing seventy junks were carried some distance inland from the river, and many were dismasted and broken. On the 30th this typhoon appears to have died out in the Yellow sea, near the thirty-third parallel,

but the eastern, or "Chusan," storm appears to have continued its course northward. On the 29th it was central in about N. 33° E. 124°, and observations at Cape Shan-Tung and New-chang indicate that the typhoon passed up the coast of Corea and finally disappeared.

The average velocity of translation of this typhoon, from the 22d to 25th, before dividing, was about six miles an hour; after dividing, the velocity of the "Pescadores" typhoon which travelled 1,344 miles, was about 7.7 miles, while that of the "Chusan" typhoon, which travelled 1,825 miles, was 8.4 miles an hour.

NOTE.—A very full and interesting account of this remarkable typhoon is given by Mr. Dechevrens in the work above referred to.

GENERAL REMARKS.

All data which appear in the DAILY BULLETIN OF SIMULTANEOUS METEOROLOGICAL OBSERVATIONS are copied from the regular exchanges of this office. The barometer readings for land stations, in the first and second columns, are reduced to freezing and their respective standards; those in the third and fourth columns to sea-level. When necessary, corrections for instrumental error, temperature, and reduction to sea-level are always applied, while those for instrumental error, only when such corrections can be ascertained with close approximation, as by comparison when vessels are at or near land stations. Relative humidity generally requires computation from the hygrometrical observations. When rain has fallen, but neither the amount nor duration is recorded, the word "blank" is published in the rainfall column. The weather is generally published as given. The following symbols and abbreviations are common to all series, viz: †, aneroid; *, instrumental error not known; c, cirrus; k, cumulus; s, stratus; n, nimbus; d, scud; f, fracto; p, pallio; hz, haze; fg, fog: sk, smoke; inap, inappreciable; d, clouds, detached clouds. The movement of the air is published as given on the originals, when indicated by velocity in miles per hour, in meters per second, or by force, all variations of the latter being reduced to the common scale of 0 to 10. Those stations reporting the movement in pounds pressure per square foot are reduced to force on the common scale, and those in kilometers per hour, to meters per second and miles per hour. The distinction between upper and lower clouds is carefully made in the United States and a portion of the Canadian series, and the various formations are indicated by the letters above given and their combinations. In the MONTHLY SUMMARY OF INTERNATIONAL SIMULTANEOUS METEOROLOGICAL OBSERVATIONS the position of stations (latitude and longitude) are obtained from Keith Johnson's "Index Geographicus," except where more exact information is furnished. The elevation of stations are obtained either from the annual, semi-annual, and monthly publications of the various meteorological bureaus here represented, or from the original forms, upon which are entered the daily observations. In the United States series the elevations are computed from the latest surveys, and are carefully revised each month, in order to note any change in the elevation of the barometer-cistern at any station. It is believed for the most part that, throughout the European and other series, the elevations as given represent the height of the barometer-cistern above sea-level; at least, this should be the case. The local time, where omitted or not given correctly in the originals, is carefully computed at this office. A letter placed opposite the name of a station or some portion of the data credited thereto, indicates that a certain number of observations are missing, corresponding to the relative position in the alphabet of the letter so used.

INTERNATIONAL CHARTS ACCOMPANYING DAILY BULLETIN AND MONTHLY SUMMARY.

International chart i. shows isobars and isotherms charted from data as appearing in the INTERNATIONAL BULLETIN of same date, as reported by the several observers. Isobars, in continuous lines, exhibit atmospheric pressure at sea-level in English inches; isotherms, in dotted lines, exhibit temperature of the air in degrees, Fahrenheit, similarly charted. Broken lines indicate that the lines so broken are doubtful.

International chart ii. (monthly mean chart), showing mean pressure at sea-level in English inches, mean temperature in degrees, Fahrenheit, mean force and prevailing direction of wind at 7 a. m., Washington mean time.

International chart iii. shows tracks of centres of low barometer. The Arabic numerals show location of the centres of low barometer at 7 a. m., Washington mean time, of that date. Broken or dotted lines are doubtful.

Arrows show direction of, and fly with, the wind. Force is shown as follows:

Symbols.	Force.	Velocity.	
		Miles per hour.	Metres per second.
○	0	0	0
→	1, 2	0 to 9	0 to 4
→	3, 4	9.1 to 22.5	4.1 to 10.1
→	5, 6	22.6 to 40.5	10.1 to 18.1
→	7, 8	40.6 to 67.5	18.1 to 30.2
→	9, 10	67.6 up.	30.2 and over.

The following remarks relate to the individual peculiarities in the *methods* of recording and the *times* of taking the international simultaneous meteorological observations, under the auspices of the various meteorological bureaus:

ALGERIAN SERIES (furnished by co-operation of General Maritz, Commandant Supérieur du Génie in Algeria).—The originals give the barometer in millimetres reduced to sea-level; temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The rainfall is measured at 7 a. m., local time, and the amount indicated in millimetres.

AUSTRALIAN SERIES (furnished by co-operation of R. L. J. Ellery, Director of the Observatory at Melbourne, N. S. W.).—At Melbourne the conversions are published as given in the originals. The movement of the air is indicated by velocity in miles per hour.

AUSTRO-HUNGARIAN SERIES (furnished by co-operation of Prof. Dr. Julius Hann, Director of the Imperial and Royal Central Meteorological Institute at Vienna).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. At the following stations rainfall is measured at local time: Lemburg, 7 p. m.; Vienna, 2 p. m.; Trieste, 7 a. m. The weather is given by the Vienna symbols or in general terms.

BRITISH SERIES (furnished by co-operation of the Meteorological Council, London, Robert H. Scott, Esq., F. R. S., Secretary, and respective observers).—In general the originals do not give rainfall or distinction between upper and lower clouds. Relative humidity, except for Bradford and Silloth Rectory, is not given on the originals, but is computed from hygrometrical observations. At Cardington, Oxford, and Sandwick Manse the barometers are given as read off. At Greenwich the movement of the air is indicated by pounds pressure per square foot. At the following stations rainfall is measured at local time: Bradford, 9 a. m., and Aberdeen, 10 a. m. The wind direction is given to 32 points and weather by the Beaufort notation.

CANADIAN SERIES (furnished by co-operation of Charles Carpmael, A. M., F. R. A. S., Director of the Magnetic Observatory at Toronto and Superintendent of the Meteorological Office of the Dominion of Canada, and respective observers).—The originals give the barometer reduced to sea-level in English inches and the temperature in Fahrenheit. Meteorological reports from stations marked with a * are telegraphed daily to the office of the Chief Signal Officer of the Army.

CAPE COLONY SERIES (furnished by co-operation of the Meteorological Commission of Cape Colony, Cape Town, and respective observers).—At Cape Town the barometer is given on the original as corrected for temperature only. Upper and lower clouds are given on a scale of 0 to 10, and the kind occasionally indicated by abbreviating Poëy's classification.

CHINESE SERIES (furnished by co-operation of Marc Dechevrens, S. J., Director of the Meteorological Observatory at Zi-Ka-Wei).—At Zi-Ka-Wei the originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is given in metres per second and the direction to 16 points. The kind of clouds is occasionally given, and the degree of cloudiness on the scale of 0 to 10; distinction between upper and lower clouds is sometimes made. The weather is given in general (French) terms. The rainfall is given in millimetres and measured at the moment of simultaneous observation.

DANISH SERIES (furnished by co-operation of Captain N. Hoffmeyer, Director of the Royal Danish Meteorological Institute at Copenhagen).—The originals give the barometer in millimeters reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6. The weather is occasionally given by the Vienna symbols, but it is not certain that they always refer to the moment of simultaneous observations, except at Copenhagen. No distinction is made between upper and lower clouds, and the direction of movement, together with the rainfall, is entirely omitted.

FRENCH SERIES (furnished by co-operation of the Central Meteorological Office of France, Professor E. Mascart, Director, and respective observers).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in metres per second for Mont Louis and Perpignan. In general the rainfall is measured at 9 a. m., local time. The direction of upper and lower clouds is given, but no distinction is made as to kind. The degree of cloudiness is given on a scale of 0 to 4 at Clermont-Ferrand and Puy de Dome, while at other stations the scale of 0 to 10 is employed, or general weather terms, from which the amount of cloudiness is inferred. The weather is given in general terms, except occasionally by the Vienna symbols at Mont Louis and Perpignan. At Guéret the observations are taken at 12 m., instead of 12.16 p. m., and at Besançon at midday instead of 0.32 p. m.

GERMAN SERIES (furnished by co-operation of Prof. Dr. G. Neumeyer, Director of the German Marine Observatory at Hamburg).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The kind of clouds is occasionally given, but no distinction is made between upper and lower; the amount is given on a scale of 0 to 10, but the kind is rarely given. The weather is given in Vienna symbols or in general terms. At Berlin observations are taken at 2 p. m., instead of 1.02 p. m.

GREEK SERIES (furnished by co-operation of Prof. Dr. J. F. Julius Schmidt, Director of the Royal Observatory at Athens).—The originals give the barometer corrected for temperature only and the thermometer in Centigrade. Hygrometrical observations are not given. The kind of clouds is occasionally given, and the amount is inferred from the general weather terms. The movement of the air is indicated by force on a scale of 0 to 10.

INDIAN SERIES (furnished by co-operation of H. F. Blanford, Meteorological Reporter to the Government of India at Calcutta).—The barometric observations refer to the Calcutta standard, which requires a correction of —0.011 inch, or 0.28 mm., as compared with the Kew standard. The wind-velocity given is the average rate of wind since the observation of the preceding day. All conversions are published as given in the originals where the data are recorded to an additional decimal. The weather is given by the Beaufort notation, Vienna symbols, or special symbols.

ITALIAN SERIES (by authority of the Minister of Agriculture, Industry, and Commerce—furnished by co-operation of Professor P. Tacchini, Director of the Central Meteorological Office at Rome, and respective observers).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometres per hour, or by force on a scale of 0 to 4, as at Mondovi, Florence, and Cagliari. No distinction is made between upper and lower clouds, and the amount is given on a scale of 0 to 10.

JAPANESE SERIES (furnished by co-operation of I. Arai, Director of the Imperial Meteorological Observatory at Tokei).—The rainfall is measured at 9.30 a. m., local time, and the conversions are all published as given in the originals. Distinction is generally made between upper and lower clouds, and the amount is given on a scale of 0 to 10. The weather is given in general terms. During the months of July, August, and September, 1882, the rainfall at Nagasaki was measured at 9.36 p. m., and at Niigati during July and August, at 10.13 p. m., local time.

MAURITIUS SERIES (furnished by co-operation of C. Meldrum, Secretary of the Meteorological Society of Mauritius).—All conversions are published as given in the originals. The direction of the wind is given to 64 points, and the rainfall is measured at 9.30 a. m., local time.

MEXICAN SERIES (by authority of the Secretary of Public Works—furnished by co-operation of Señor Mariano Barcena, Director of the Central Meteorological Observatory in the City of Mexico, and respective observers).—All conversions are published as given in the originals, but when an evident mistake has been made, the data is queried at this office. The kind of clouds is given, and also the direction and amount of both upper and lower. The degree of cloudiness is indicated on a scale of 0 to 10. Rainfall is generally measured at 6 a. m., local time.

NETHERLANDS SERIES (furnished by co-operation of Professor Buys Ballot, Director of the Royal Meteorological Institute of the Netherlands at Utrecht). —The originals give the barometer in millimetres reduced to sea-level and the temperatures in Centigrade. The movement of the air is indicated by pressure in kilograms per square metre, except at Hellevoetsluis, which gives force on a scale of 0 to 12. The humidity is not given on the originals, but for two stations it is computed from the hygrometrical observations. The weather is only given for Utrecht, from which the amount of cloudiness at that station is inferred.

NORWEGIAN SERIES (furnished by co-operation of Professor H. Mohn, Director of the Royal Norwegian Meteorological Institute at Christiana.)—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade The movement of the air is indicated by velocity in metres per second or by force on a scale of 0 to 6. The weather is occasionally given by Vienna symbols. At Bergen observations upon the weather and degree of cloudiness are made at 2 p. m., local time. At Brone the observations are taken at 2 p. m., instead of 12.57 p. m.

PORTUGUESE SERIES (furnished by co-operation of J. C. de Brito Capello, Director of the Meteorological Observatory of the Infante Dom Luiz at Lisbon).—In the originals the barometer is given in millimetres and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometres per hour. The weather is occasionally given by the Vienna symbols. The rainfall is measured at noon each day.

RUSSIAN SERIES (furnished by co-operation of Professor H. Wild, Director of the Imperial Central Physical Observatory of Russia at St. Petersburg).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. At Astrakham the barometer-cistern is below sea-level. The movement of the air is indicated by velocity in meters per second. No distinction is made between upper and lower clouds; the amount is given on a scale of 0 to 10, and the kind occasionally. The weather is occasionally given by the Vienna symbols.

SCOTTISH SERIES (furnished by co-operation of Alexander Buchan, M. A., F. R. S. E., Secretary of the Scottish Meteorological Society at Edinburg, and respective observers).—The originals give the barometer as read off and the movement of the air is indicated by force on a scale of 0 to 6. Distinction is made between upper and lower clouds as to degree, and the amount of cloudiness is given on a scale of 0 to 10. The direction of upper clouds is given separately. The rainfall, temperature, and humidity are not given at North Unst. The wind direction is given to 32 points.

SPANISH SERIES (furnished by co-operation of the Royal Observatory at Madrid, and respective observers).—The movement of the air, except for sub-series, is given in kilometres per hour. The kind of clouds is occasionally given, and the degree of cloudiness on a scale of 0 to 10. The rainfall at San Juan is measured at 4 p. m., local time, and at San Fernando at midnight. The weather is given in general (Spanish) terms.

SWEDISH SERIES (furnished by co-operation of Professor R. Rubenson, Director of the Royal Swedish Meteorological Institute, and of Professor H. H. Hildebrandsson, Director of the Meteorological Observatory of the Upsala University).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in metres per second for Upsala. The kind of clouds is not given, but the degree of cloudiness is indicated on a scale of 0 to 10. The rainfall is measured at 8 a. m., local time, and the weather is occasionally given by the Vienna symbols.

SWISS SERIES (furnished by co-operation of Professor E. Plantamour, Director of the Observatory at Geneva).—The originals give the barometer in millimetres, corrected for temperature only, and the thermometer in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10.

TURKISH SERIES (furnished by co-operation of A. Coumbary, Effendi, Director of the Central Observatory at Constantinople, and of Professor C. V. A. van Dyck, Superintendent of the Lee Observatory at Beirut).—The originals give the barometer in millimetres reduced to sea-level. The temperature is given in Centigrade. The movement of the air is indicated by force on a scale of 0 to 7 for Valona, and on a scale of 0 to 12 for Beirut. At Constantinople the velocity is given in meters per second. The kind of clouds is not given, but the amount is indicated on a scale of 0 to 10, except at Valona, at which station it is inferred from the general weather terms.

UNITED STATES SERIES (by authority of the Secretary of War—furnished by co-operation of W. B. Hazen, Brigadier and Brevet Major General, Chief Signal Officer, U. S. Army).

UNITED STATES SUB-SERIES (furnished by co-operation of the respective observers).—The originals generally give the barometer reduced to sea-level and the temperature at Fahrenheit. At Bogota and Navassa the barometer is corrected for temperature only; at Puesto Berrio, is given as read off, and at Rivas is omitted. The movement of the air is generally indicated by velocity in miles per hour, except on a scale of 0 to 10 for Bogota, Paramaribo, and Rivas, and 0 to 12 for Puerto Berrio. The wind direction is generally given to 16 points, except 8 points for Bogota and 32 points for Rivas. At Rivas the humidity is obtained by readings from Saussure's hygrometer.

BRITISH NAVAL SERIES (furnished by co-operation of the Meteorological Council, London, Robert H. Scott, Esq., F. R. S., Secretary).—The originals give the barometer as read off. The wind direction is given to 32 points. The movement of the air is indicated by force on a scale of 0 to 12. The distinction between upper and lower clouds is made as to direction, but not as to amount. The height of the sea-disturbance is given on a scale of 0 to 9, and the weather by the Beaufort notation. The direction of movement of wind, clouds, and sea is compass direction, corrected only for deviation caused by the iron in the ship, while the correction for magnetic variation is applied at this office. The humidity is not given, but is computed from the hygrometrical observations.

PORTUGUESE NAVAL SERIES (furnished by co-operation of J. C. de Brito Capello, Director of the Meteorological Observatory of the Infante Dom Luiz at Lisbon).—The originals give the barometer in millimetres, corrected for temperature only, and the thermometer in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The humidity is not given, but is computed from the hygrometrical observations. The kind of clouds is not given, but the amount is indicated on a scale of 0 to 10; the direction of movement is given without distinction between the upper and lower. The height of sea disturbance is given on a scale of 0 to 9 and the weather by the Beaufort notation. The rainfall is not measured, but the duration is generally given in hours and minutes.

SWEDISH NAVAL SERIES (furnished by co-operation of E. Malmburg, Director of the Nautical Meteorological Bureau at Stockholm).—The originals give the barometer as read off. The movement of the air is indicated by force on a scale of 0 to 12, and the direction is corrected for magnetic variation at this office. The humidity is not given, but is computed from the hygrometrical observations. The rainfall is omitted. The height of the sea-swell is given on a scale of 0 to 9 and the weather by the Beaufort notation.

UNITED STATES NAVAL SERIES (by authority of the Secretary of the Navy—furnished by co-operation of the Navy Department, through Commodore John G. Walker, U. S. N., Chief of Bureau of Navigation).—The originals give the barometer as read off. The humidity is not given, but is computed from the hygrometrical observations. The sea-swell and weather are given in general terms. The direction of the wind is compass direction, corrected for variation.

MERCHANT-MARINE SERIES (furnished by co-operation of the owners, agents, &c., of the respective lines and vessels).—Same as U. S. Naval.

OCEAN SQUARES.—The table of ocean square data shows (1) the location of the centres of squares whose sides extend 5° each in latitude and longitude, (2) the number of days for which observations are at hand within the respective squares, and the total number of simultaneous observations reported on those days, (3) the monthly mean pressure and temperature of the air, and the mean force and total frequency of the wind at 7 a. m., Washington time, computed for the centre of each square from daily readings as obtained by interpolation between the isobars and isotherms of the daily international simultaneous weather maps.

ERRATA.

DAILY BULLETIN, August 6th, 1882, page 5, United States, Rochester, reduced barometer 765.3 mm., should read 764.4 mm.

9th, page 2, French, Besançon, actual barometer 29.02? inches, should read 29.08? inches; page 7, Hamburg American Packet Company, s. s. Cimbria, latitude N. 47° 53′, should read N. 49° 53′.

11th, page 8, Miscellaneous, Bk. Warden Law, latitude S., should read N.

12th, page 1, Canadian Sub-series, Mount Forest, actual barometer, 84.54 inches, should read 28.54 inches.

13th, page 4, United States, Memphis, actual barometer 755.6 mm., should read 755.1 mm.

15th, page 3, Japanese, Nobiru, rainfall 2.231 inches, should read 2.131 inches.

16th, page 7, National Line, s. s. Denmark, longitude W. 148° —′, should read W. 1° 48′.

17th, page 4, United States, Charlotte, temperature 24°2 c., should read 23°.2 c.

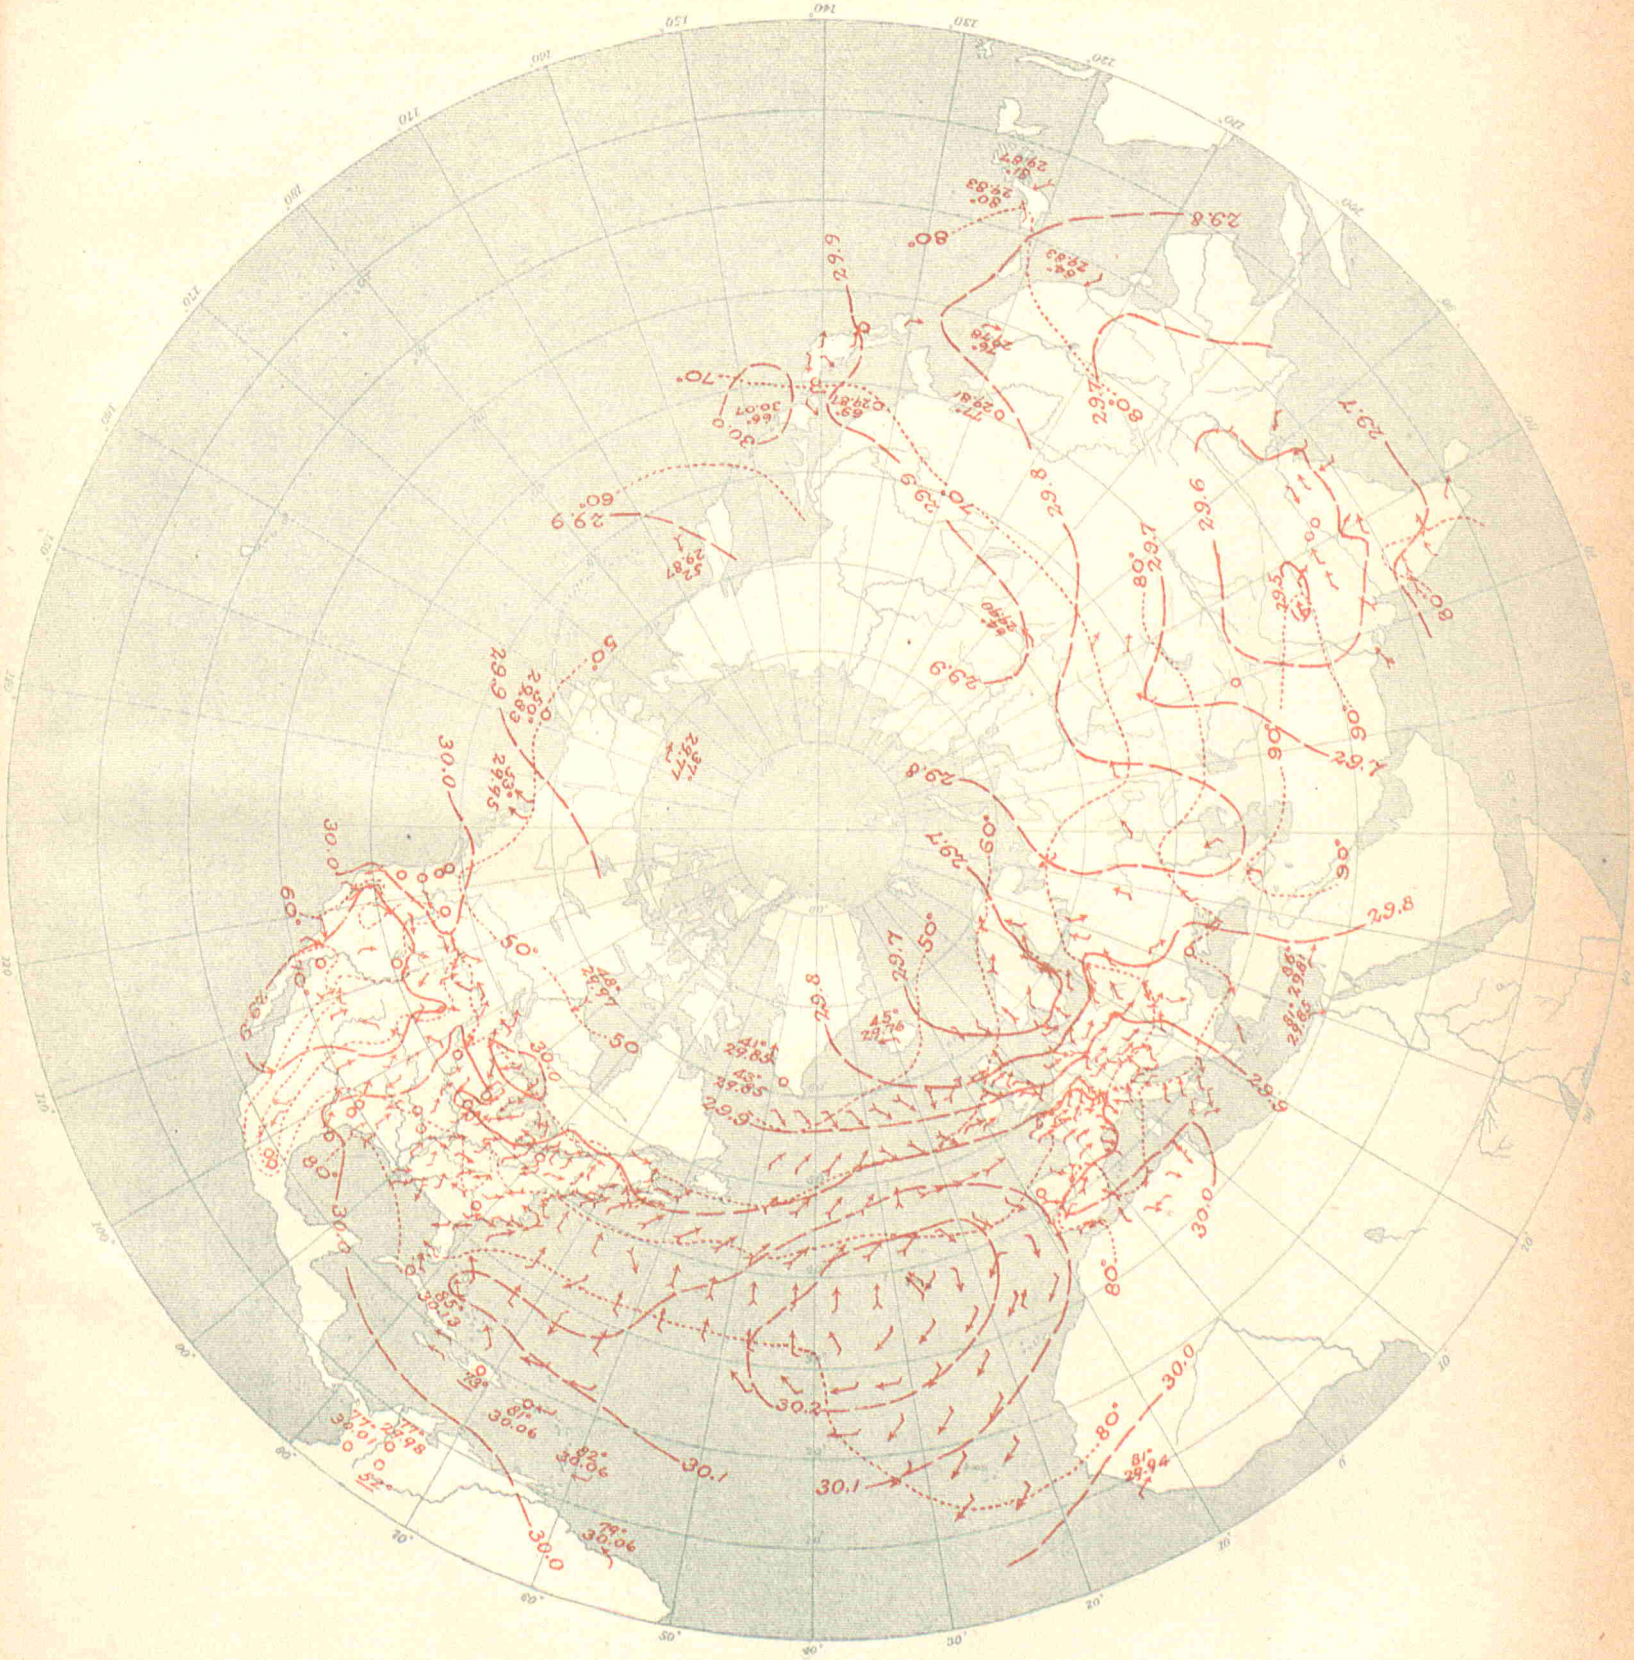
26th, page 6, Anchor Line, s. s. Utopia, latitude S., should read N.

International Meteorology. Summary for May, 1882, page 8, third par., sixth line: slightly lower, should read slightly higher.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.

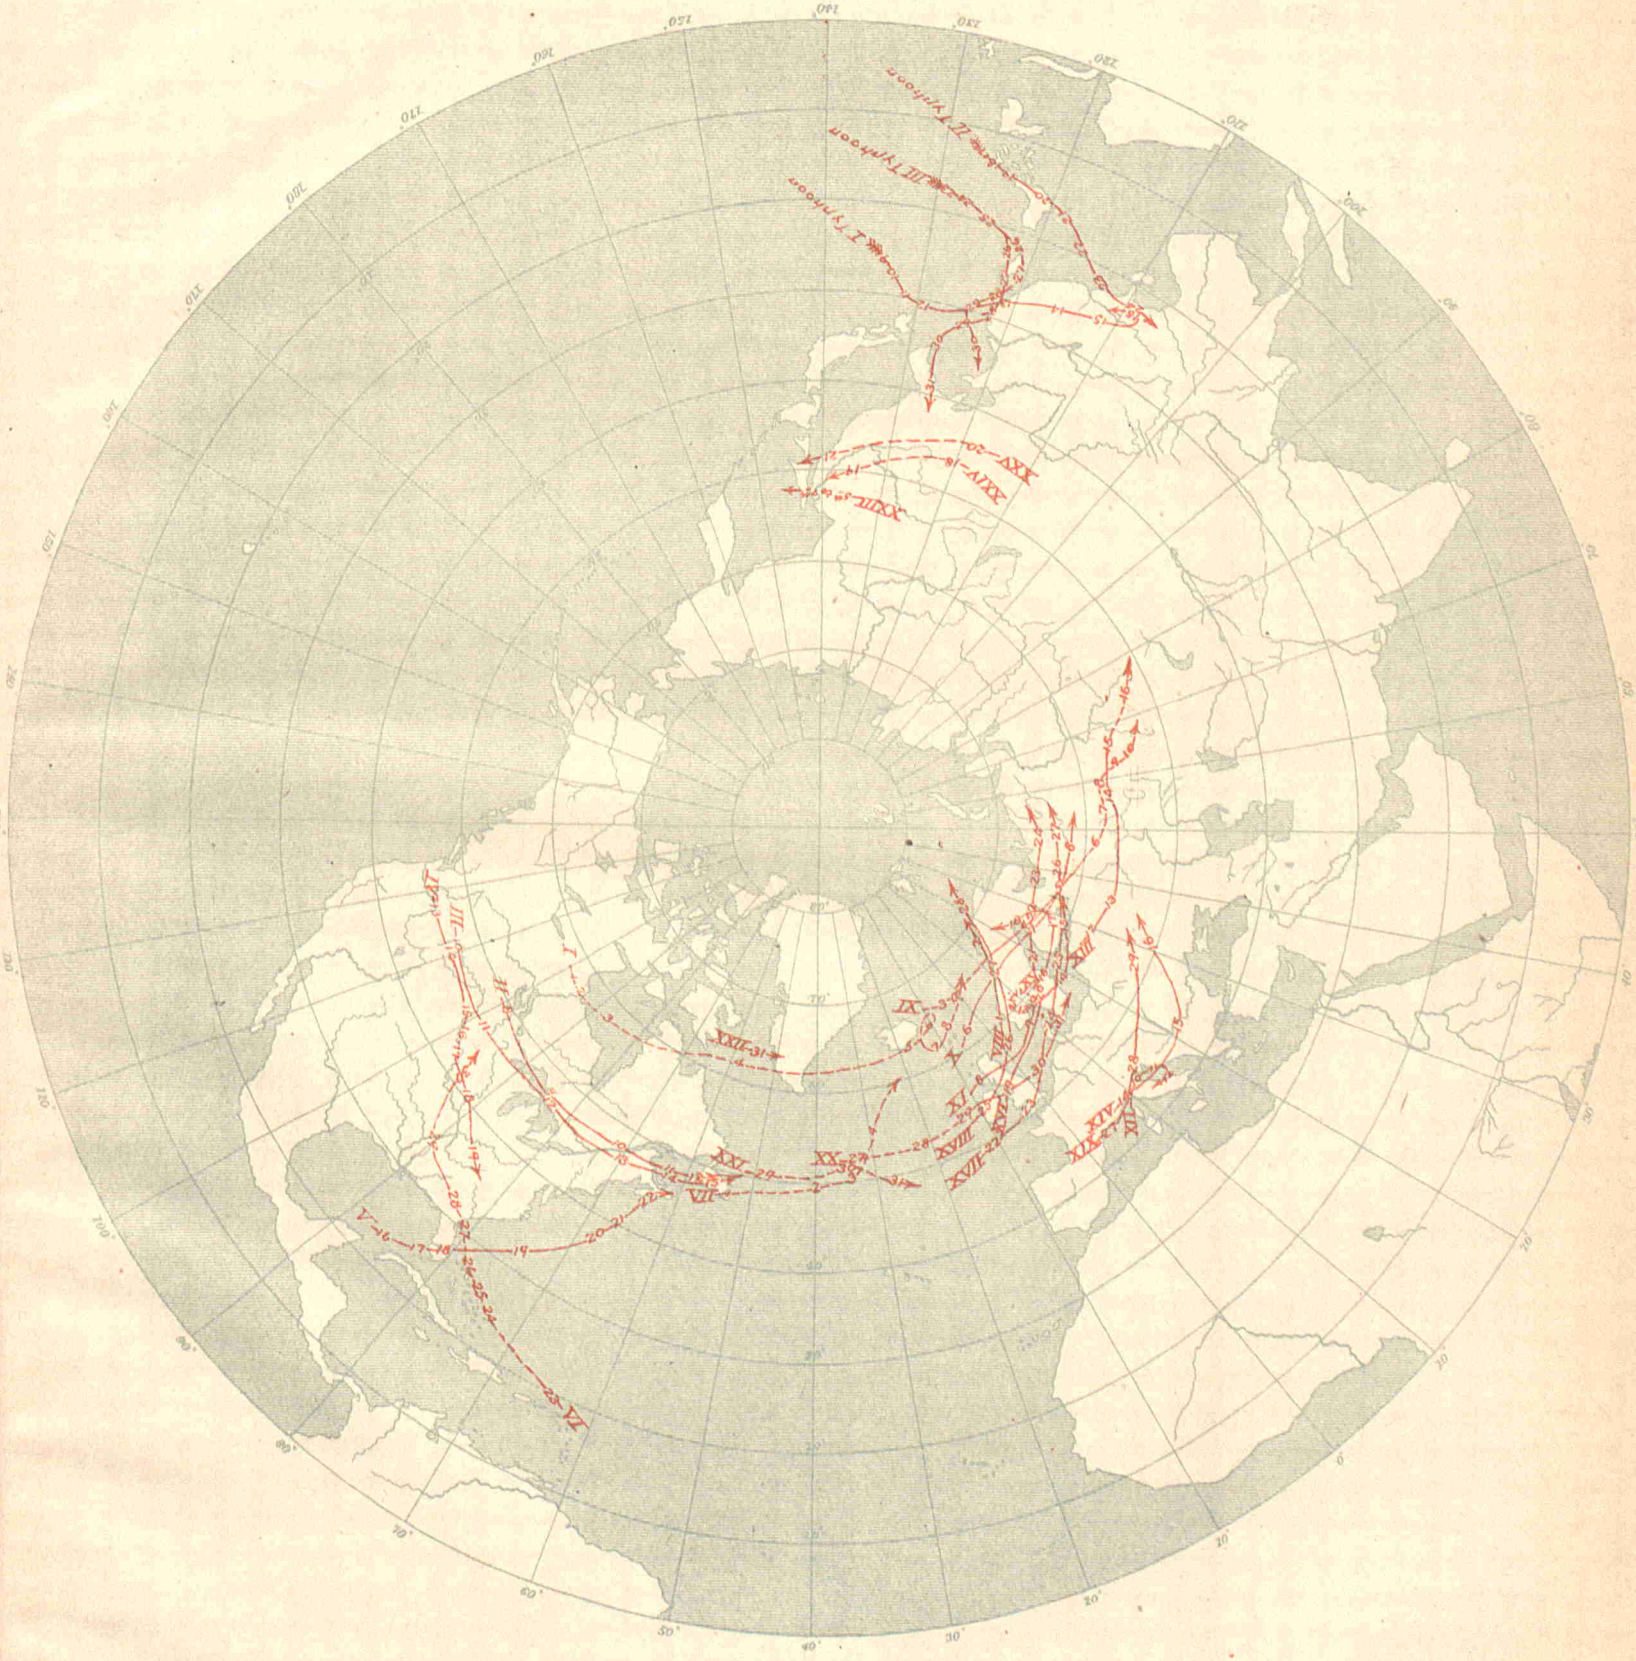
International Chart II. August, 1882. Isobars, Isotherms, and Winds.



UNITED STATES OF AMERICA.

By Order of the Secretary of War:
W. B. Hazen, Chief Signal Officer.

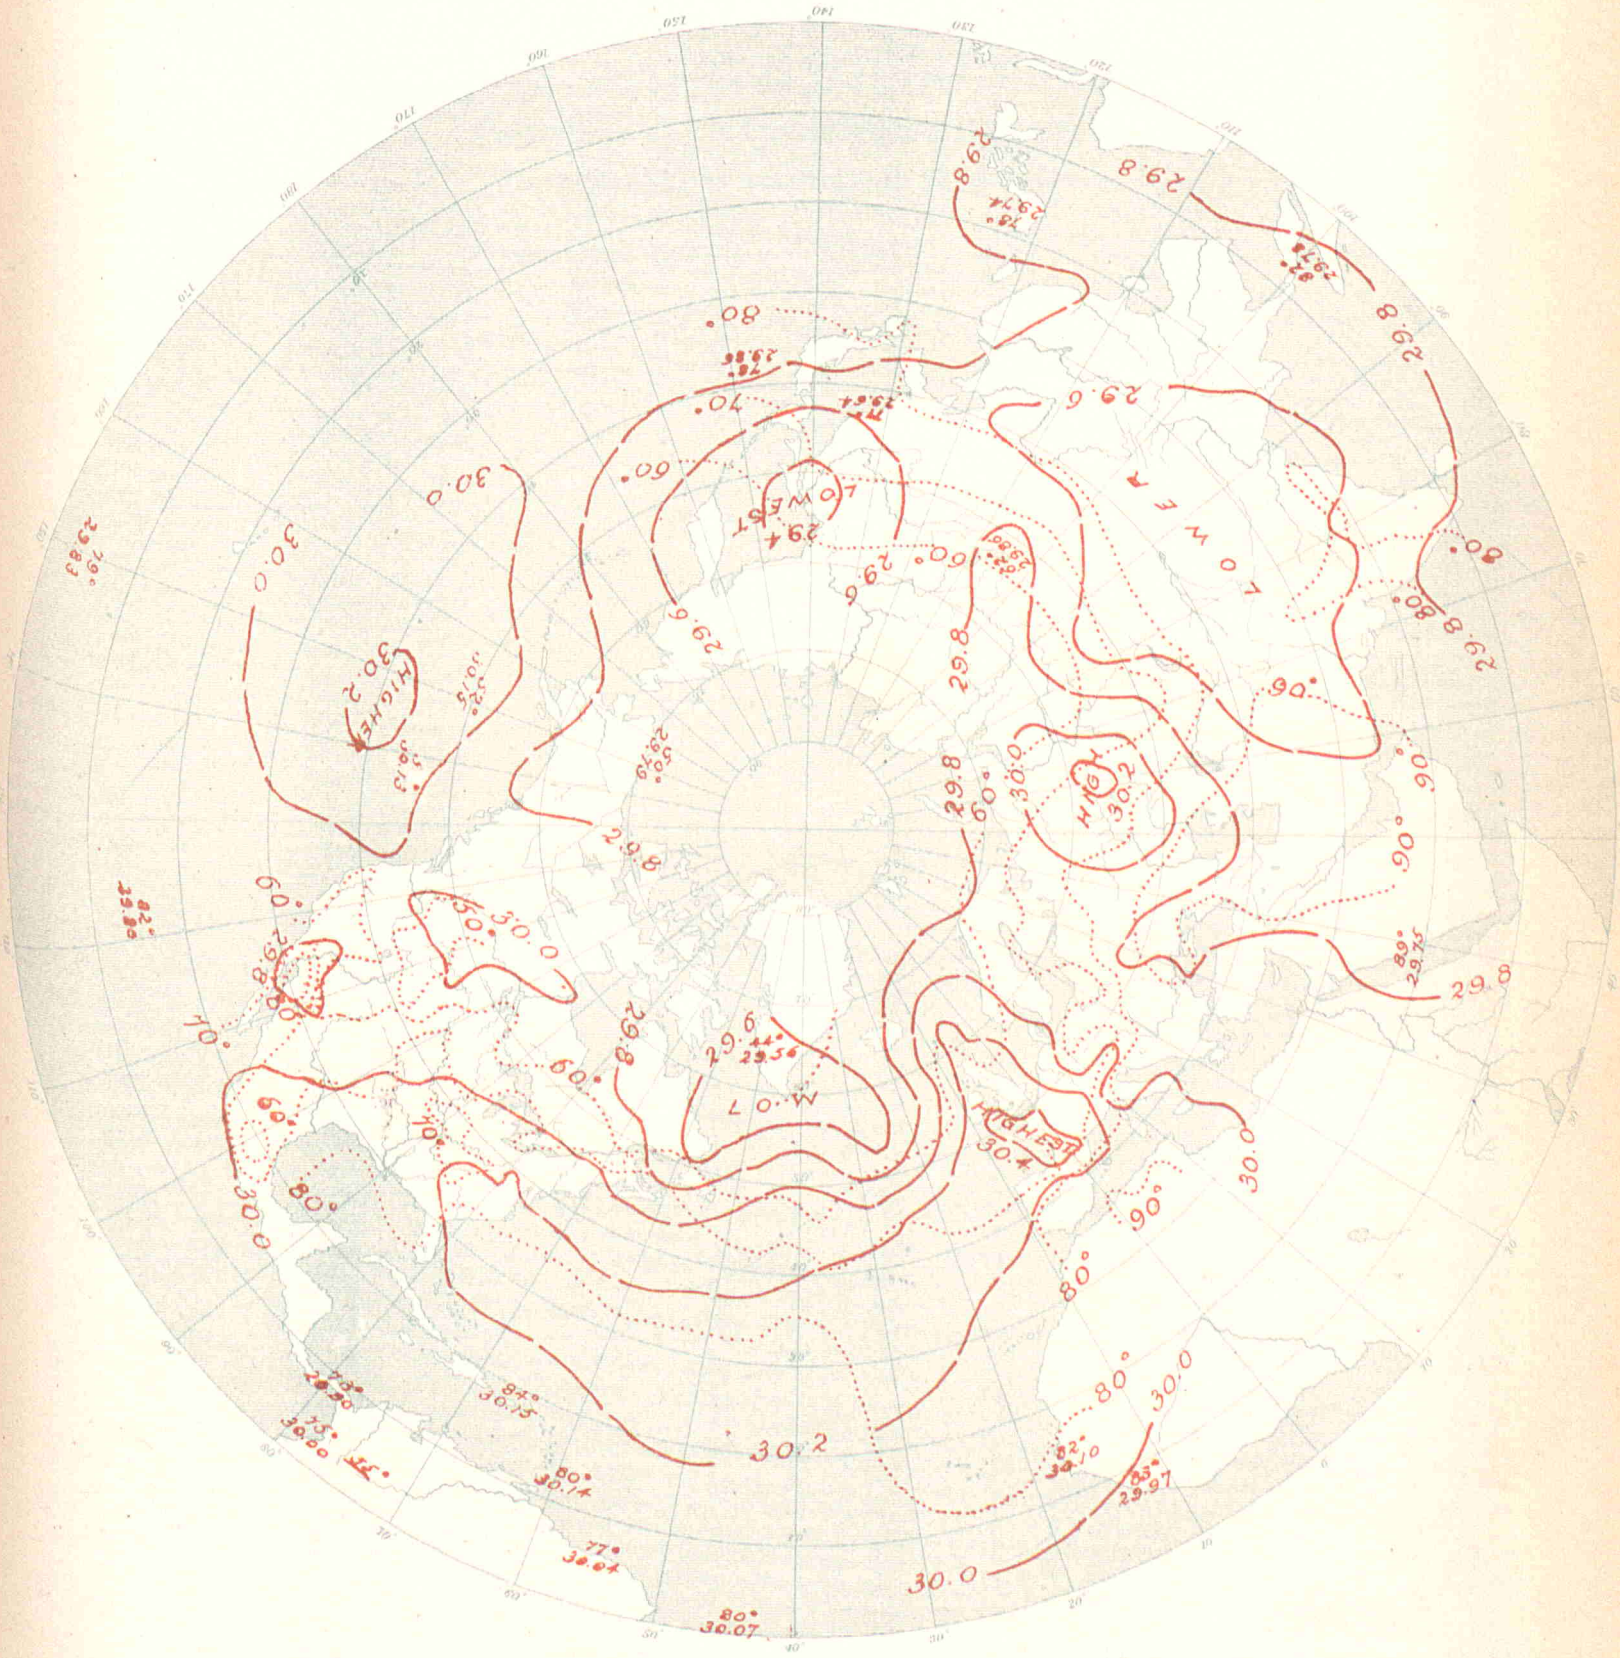
International Chart III. August, 1881. Storm-Tracks.



UNITED STATES OF AMERICA.

By Order of the Secretary of War.
W. B. Hazen, Chief Signal Officer.

International Chart I. July 26, 1882. Isobars and Isotherms.



UNITED STATES OF AMERICA.

By Order of the Secretary of War.
W.B.Hazen, Chief Signal Officer.
