# INTRODUCCION

LA PRESENTE PUBLICACIÓN contiene los cuadros estadísticos, con los resúmenes mensuales y anuales de las observaciones meteorológicas efectuadas en los observatorios y estaciones del Servicio Meteorológico Argentino en el transcurso del año 1943.

Los datos consignados en los cuadros, son los observados y registrados en las estaciones de 1º, 2º, y 3º orden, las que se distinguen por las abreviaturas 1CSA, 2CS, 3CS, 1C, etc. conforme con la Resolución XL *sancionada en la 2.ª Reunión de la Comisión Regional III.ª* (Montevideo, febrero de 1939), y en la que, para su caracterización se adoptaron las letras siguientes:

| | | |
|---|---|---|
| A. .... | Estaciones | aerológicas |
| C. .... | » | climatológicas |
| E. .... | » | de evaporación |
| G. .... | » | agrometeorológicas |
| R. .... | » | con equipo de radio |
| S. .... | » | sinópticas |

Los observatorios principales de la red se distinguen por las abreviaturas O.P.

Los cuadros estadísticos de las estaciones meteorológicas de cada provincia o gobernación, han sido dispuestos por orden de latitud creciente correspondiente a cada una de ellas, conservando ese orden de latitud dentro de las mismas.

## COORDENADAS GEOGRAFICAS

Las coordenadas geográficas de casi todas las estaciones, tienen un carácter aproximado, pues han sido determinadas sobre el mapa de la República Argentina, que el Instituto Geográfico Militar editó en el año 1937, escala 1:1.500.000.

## HORAS DE OBSERVACION

Los cómputos climatológicos fueron realizados en base a las observaciones efectuadas a las 08.00, 14.00 y 20.00 horas. (Hora legal argentina del meridiano 60° huso XX).

## EXPLICACION DE LOS VALORES CONTENIDOS EN LOS CUADROS ESTADISTICOS

*Presión atmosférica:* (Pm). — Indica los valores de la Presión Media Mensual al nivel de la estación (0.0° C. y 45° de latitud).

($Po_1m$.). — Indica los valores Pm. reducidos al nivel del mar, para las estaciones que se hallan ubicadas hasta 500 m. de altura, y a 1000 metros dinámicos cuando las estaciones se hallan ubicadas entre 501 y 1532 metros.

*Temperatura del aire:* (Tm). — En la primera parte del cuadro se consignan los valores medios mensuales de la temperatura de 08.00, 14.00 y 20.00 hs. y su promedio mensual (Corregido a 24.00 horas).

*Temperaturas máximas y mínimas:* (Tm). - (Máx y Min). — Los valores consignados son los promedios mensuales, de las temperaturas máximas y mínimas diarias, que corresponden a la temperatura más alta y más baja, respectivamente, de los valores registrados en el período de 24.00 horas comprendido entre las observaciones sinópticas de las 19.00 hs.

(Tx y Tn). — Expresan las temperaturas máximas más altas y mínimas más bajas registradas en cada mes, indicándose también la fecha de ocurrencia o fechas, cuando en el mes se hayan registrado dos o más temperaturas de iguales magnitudes.

*Frecuencia y fuerza del viento por dirección:* (nD Fm). — Las observaciones relacionadas con el viento, han sido distribuídas en nueve columnas; ocho corresponden a las direciones norte (N); noreste (NE); este (E); sudeste (SE); sud (S); sudoeste (SW); oeste (W); y noroeste (NW); y una a las Calmas. Las primeras columnas se hallan subdivididas en otras dos: D, para consignar las frecuencias de direcciones (número de veces) y F. para indicar la fuerza media mensual del viento en cada dirección, expresada por las cifras de la escala Beaufort.

*Humedad relativa:* (Um). — En estas columnas se consignan los valores medios mensuales de la humedad relativa de 08.00, 14.00 y 20.00 horas, y su promedio mensual (Corregido a 24.00 horas).

*Tensión del vapor.* — Se indican los valores medios mensuales de 08.00, 14.00 y 20.00 horas, y su promedio mensual (Corregido a 24.00 horas).

*Nubosidad:* (Nm). — Las cifras relativas a este elemento indican los valores medios mensuales de las observaciones de 08.00, 14.00 y 20.00 horas.

*Precipitación:* (R)-Σ. — Indica el total de la lluvia caída durante un mes.

(Max). — La cantidad máxima de lluvia registrada en un período de 24.00 horas.

*Frecuencias:* (n). — En las respectivas casillas de este cuadro, se consignan las frecuencias de ocurrencias mensuales de las magnitudes indicadas, correspondientes a la temperatura, lluvia y fuerza del viento, como así mismo, las frecuencias mensuales de los hidrometeóros y estados del cielo.

## VALORES ANUALES

Indican los promedios de los valores medios mensuales; y los valores extremos del año contenidos en las columnas Tx, Tn y Max.

En el caso de la precipitación, como asimismo en el de la frecuencia de fenómenos, los valores anuales representan la suma de los parciales mensuales.

## UNIDADES PARA LA MEDICION Y APRECIACION DE LAS OBSERVACIONES METEOROLOGICAS

*Presión atmosférica.* — Los valores consignados, expresan la presión atmosférica en milibares y décimos.

*Tensión del vapor.* — Siendo el vapor de agua uno de los componentes de la atmósfera, los valores de su fuerza elástica (tensión), están indicados en milibares y décimos de milibares.

*Humedad relativa.* — Está expresada en tanto por ciento (%), el cual se deduce de la relación que existe entre la cantidad de vapor de agua que contiene el aire a una temperatura dada y el que podría contener a esa misma temperatura para llegar a la saturación. Como los cocientes de estas relaciones son una fracción de la unidad y a fin de consignarlos en números enteros, se multiplica por cien.

*Temperatura.* — La unidad que se utiliza, corresponde a los grados de la escala centigrada o Celsius. Los valores precedidos del signo — (menos) indican temperaturas bajo cero.

*Nubosidad.* — Los datos relativos a este elemento son el resultado de la observación estimada y considerando al cielo dividido en diez partes. De manera que, para un cielo completamente despejado de nubes, se considera nubosidad cero (0) y para un cielo completamente cubierto, nubosidad diez (10). Los valores intermedios están indicados por fracciones de cielo cubierto. Así por ejemplo: 3,5 indican algo más de la tercera parte de cielo cubierto.

*Lluvia.* — Los valores de lluvia están expresados en milímetros y décimos de milímetros.

*Viento.* — Los valores de las fuerzas medias por dirección (Fm), se han obtenido, dividiendo la suma de las fuerzas observadas en una dirección dada por la frecuencia o número de veces que el viento ha soplado en esa misma dirección.

Los valores que indican las fuerzas del viento son los que corresponden a la escala Beaufort (0-12) y cuyas cifras señalan su intensidad, conforme a los efectos que el mismo produce en la superficie, (tierra y mar) tal como lo indica el cuadro contenido en la pág. 7.

## SIMBOLOS ADOPTADOS

Las características de los presentes cuadros estadísticos así como las letras y símbolos que distinguen a los elementos meteorológicos, responden a lo sancionado en la conferencia de directores del mundo (Resolución XX, Varsovia, septiembre 1935), y a lo sancionado en la II.ª Reunión de la Comisión Regional III.ª, (Montevideo, febrero 1939), según Resolución XIII.

## SIMBOLOS Y LETRAS INTERNACIONALES

$\varphi$ = Latitud Geográfica.

$\lambda$ = Longitud Geográfica.

g = Aceleración de la pesantez (Corrección por gravedad).

ΔG = Diferencia entre la hora local y la hora Greenwich.

Hs = Altura de la estación sobre el nivel del mar en metros y décimos.

Hb = Altura de la cubeta del barómetro sobre el nivel del mar en metros y décimos.

ht = Altura del bulbo del termómetro sobre el nivel del suelo en metros y centímetros.

ha = Altura del anemómetro sobre el nivel del suelo en metros y centímetros.

hd = Altura de la veleta sobre el nivel del suelo en metros y centímetros.

hr = Altura de la boca del pluviómetro sobre el nivel del suelo en metros y centímetros.

NOTA. — Los valores de Temperaturas del Aire, Tensión del Vapor y Humedad Relativa son los indicados y calculados co los valores suministrados por los instrumentos instalados dentro del abrigo meteorológico, y cuyos órganos sensibles se encuentran a *1.50 metros sobre el nivel del suelo.*

## TABLA DE LA FUERZA DEL VIENTO EN ESCALA DE BEAUFORT

| Número Beaufort | TERMINO DESCRIPTIVO (2) | VELOCIDAD DEL VIENTO A 6 m. (1) m/seg. | Km/h. | Millas por hora | ESPECIFICACIONES TIERRA (3) | MAR (Provisorio) |
|---|---|---|---|---|---|---|
| 0 | **Calma** | 0 - 0.5 | 0 - 1 | 0 - 1 | Calma: el humo sube verticalmente. | El mar parece un espejo. |
| 1 | **Ventolina** | 0.6 - 1.7 | 2 - 6 | 2 - 3 | La dirección del viento es señalada por el movimiento del humo, pero no por las veletas. | Mar rizado. Los rizos son pequeños, sin crestas espumosas. |
| 2 | **Viento suave** | 1.8 - 3.3 | 7 - 12 | 4 - 7 | Se percibe el viento en la cara; susurran las hojas; las veletas comunes son movidas por el viento. | Olas muy pequeñas, todavía cortas pero más pronunciadas. Las crestas tienen una apariencia vidriosa, sin romper. |
| 3 | **Viento leve** | 3.4 - 5.2 | 13 - 18 | 8 - 11 | Las hojas y las ramitas de los árboles se hallan en movimiento constante; el viento extiende las banderas livianas. | Olas todavía pequeñas, pero más largas. Las crestas empiezan a romper; espuma de apariencia vidriosa. Pueden ocurrir rompientes aisladas. |
| 4 | **Viento moderado** | 5.3 - 7.4 | 19 - 26 | 12 - 16 | Se levanta polvo y papeles sueltos; se mueven las ramas pequeñas. | Olas pequeñas que se hacen más largas; rompientes bastante numerosas. |
| 5 | **Viento regular** | 7.5 - 9.8 | 27 - 35 | 17 - 21 | Los árboles pequeños, con hojas, comienzan a moverse; en lagunas y estanques se forman olas muy pequeñas con crestas. | Olas moderadas, más largas y pronunciadas; se forman muchas rompientes; (puede acaecer que la espuma sea arrastrada por el viento). |
| 6 | **Viento fuerte** | 9.9 - 12.4 | 36 - 44 | 22 - 27 | Se mueven las grandes ramas de los árboles; se oye el silbido de alambres telegráficos; los paraguas son usados con dificultad. | Empiezan a formarse grandes olas; las crestas de espuma blanca son más extensas y numerosas (es probable que la espuma sea arrastrada por el viento). |
| 7 | **Viento muy fuerte** | 12.5 - 15.2 | 45 - 54 | 28 - 33 | Se mecen los árboles por entero; es molesto caminar contra el viento. | El mar se levanta y la espuma blanca de las olas que rompen, empieza a ser arrastrada en hilera en la dirección del viento. |
| 8 | **Temporal** | 15.3 - 18.2 | 55 - 65 | 34 - 40 | El viento rompe las ramitas de los árboles; es difícil caminar contra el viento. | Olas, moderadamente altas y más largas; los bordes de las crestas, al romper, forman remolinos. La espuma es arrastrada en la dirección del viento en hileras bien marcadas. |
| 9 | **Temporal fuerte** | 18.3 - 21.5 | 66 - 77 | 41 - 48 | Ocasiona leves daños en las estructuras (se desprenden tejas y cabezas de las chimeneas). | Olas altas. Hileras densas de espuma en la dirección del viento. El mar empieza a bramar. La espuma puede afectar la visibilidad. |
| 10 | **Temporal muy fuerte** | 21.6 - 25.1 | 78 - 90 | 49 - 56 | Se experimenta rara vez tierra adentro; los árboles son arrancados de raíz, ocasiona considerables daños en las estructuras. | Olas muy altas, con largas crestas recorvadas. La espuma producida, en grandes manchas, es arrastrada en hileras blancas y densas en la dirección del viento. En su aspecto general, la superficie del mar es blanca. El bramido del mar es fuerte y, por momentos atronador. La visibilidad está afectada. |
| 11 | **Tempestad** | 25.2 - 29.0 | 91 - 104 | 57 - 65 | Se experimenta muy raras veces. Ocasiona daños generales. | Olas excepcionalmente altas (los buques pequeños y medianos, a veces, pueden perderse de vista detrás de las olas). El mar está completamente cubierto de espuma blanca a largos trechos en la dirección del viento. En todas partes los bordes de las crestas son pulverizados por el viento. La visibilidad está afectada. |
| 12 | **Huracán** | > 29.0 | > 104 | > 65 | ——— | El aire está cargado con espuma y agua de mar pulverizada. El mar está completamente blanco a causa del agua de mar pulverizada, arrastrada por el viento. La visibilidad está afectada muy seriamente. |

(1) Resolución XXII del Comité Meteorológico Internacional, de la O. M. I.: Viena. 1926.
(2) Los términos descriptivos, corresponden a la Resolución IX de la Comisión Regional III de la O. M. I.: Montevideo, 1939.
(3) Resolución 50 de la Conferencia de Directores de la O. M. I.: Varsovia, 1935.

NOTAS:
a) Debe tenerse en cuenta que será difícil estimar la fuerza del viento en el mar, durante la noche.
b) Se debe tener en cuenta que por efecto de "inercia", al aumentar el viento, el mar responde con retardo y no tiene todavía, el aspecto que le corresponde.
c) Al estimar el viento por el aspecto del mar, deben tenerse en cuenta los efectos debidos a: profundidad, oleaje, lluvia fuerte y marea.
