This volume is a compilation of the (a) Daily Rainfall Tables and (b) Monthly & Annual Rainfall Tables for the Provinces and Indian States, for the calendar year 1949. For each Province or State, the set of twelve Daily Rainfall Tables is followed by the Monthly & Annual Rainfall Table. A smaller volume entitled "Monthly Rainfall of India" contains the Monthly & Annual Rainfall tables only. The volume does not contain the rainfall tables pertaining to Orissa. Those tables will be issued separately when available.

Rainfall was measured daily at all stations at 8 a.m. local mean time, except at the Meteorological Observatories for which the time of observation was 8 hrs. I.S.T.(0230 hrs. G.M.T.) and was changed to 0830 a.m. Indian Standard Time since the 1st March 1949. The measurement relates to the period of 24 hours preceding the time of observation of the day to which it is ascribed. A "rainy day" is conventionally taken to be that date for which rainfall of a tenth of an inch or more has been thus recorded.

In most of the cases, the (actual) district average is the unweighted arithmetic mean of the (actual) values for those stations in the district which possess normals and for which the actual values are recorded.
(normal)
(normal)

The normals, used in this volume, are based on the rainfall records available upto December 1940. These normals are contained in the "Memoirs of the India Meteorological Department", Vol. XXVII, Part V.

New Delhi,
Dated the 1st Dec.1954.

S. BASU,
Director General of Observatories.

DIRECTORATE OF AGRICULTURE, WEST BENGAL

Calcutta, the 27th August 1949.

First Forecast of the Cotton Crop of West Bengal and Tripura State for 1949-50.

There are two varieties of cotton grown in this part of the country, viz., the early and the late. The early variety is chiefly grown in the Tripura State and to a small extent in a few districts of West Bengal. The late variety is occasionally grown in small areas in Bankura and Midnapore.

The Season.—The weather condition at the sowing time has not been favourable in the Tripura State, but in the districts of West Bengal it may be regarded as fair. The sowing of early variety generally commenced in April and May.

Area sown.—The total area sown in West Bengal and Tripura State under early variety this year is estimated at 22,640 acres compared to 25,163 acres of previous year. Of these the Tripura State alone has 22,500 acres this year as against 25,000 acres last year. Only 29 acres of land have so far been reported to have been sown with late variety from Midnapore district only. There was no cultivation of late variety last year. The decrease in acreage in Tripura State compared to last year is due to unfavourable weather condition at the sowing time.

*Rainfall return not received.

†This sign is shown in the columns for 'normal number of rainy days' and normal rainfall' against those stations for which the normals have not been calculated. In the columns from 1st February to 31st May 1949 it means that owing to the records being large after the totals are not known.

*Rainfall return not received.

This sign is shown in the column after 'normal number of rainy days and normal rainfall' against those stations for which 'normals' have not been established. Since 1st October to 31st December 1949 it means that owing to the records being incomplete the normals are not known.
