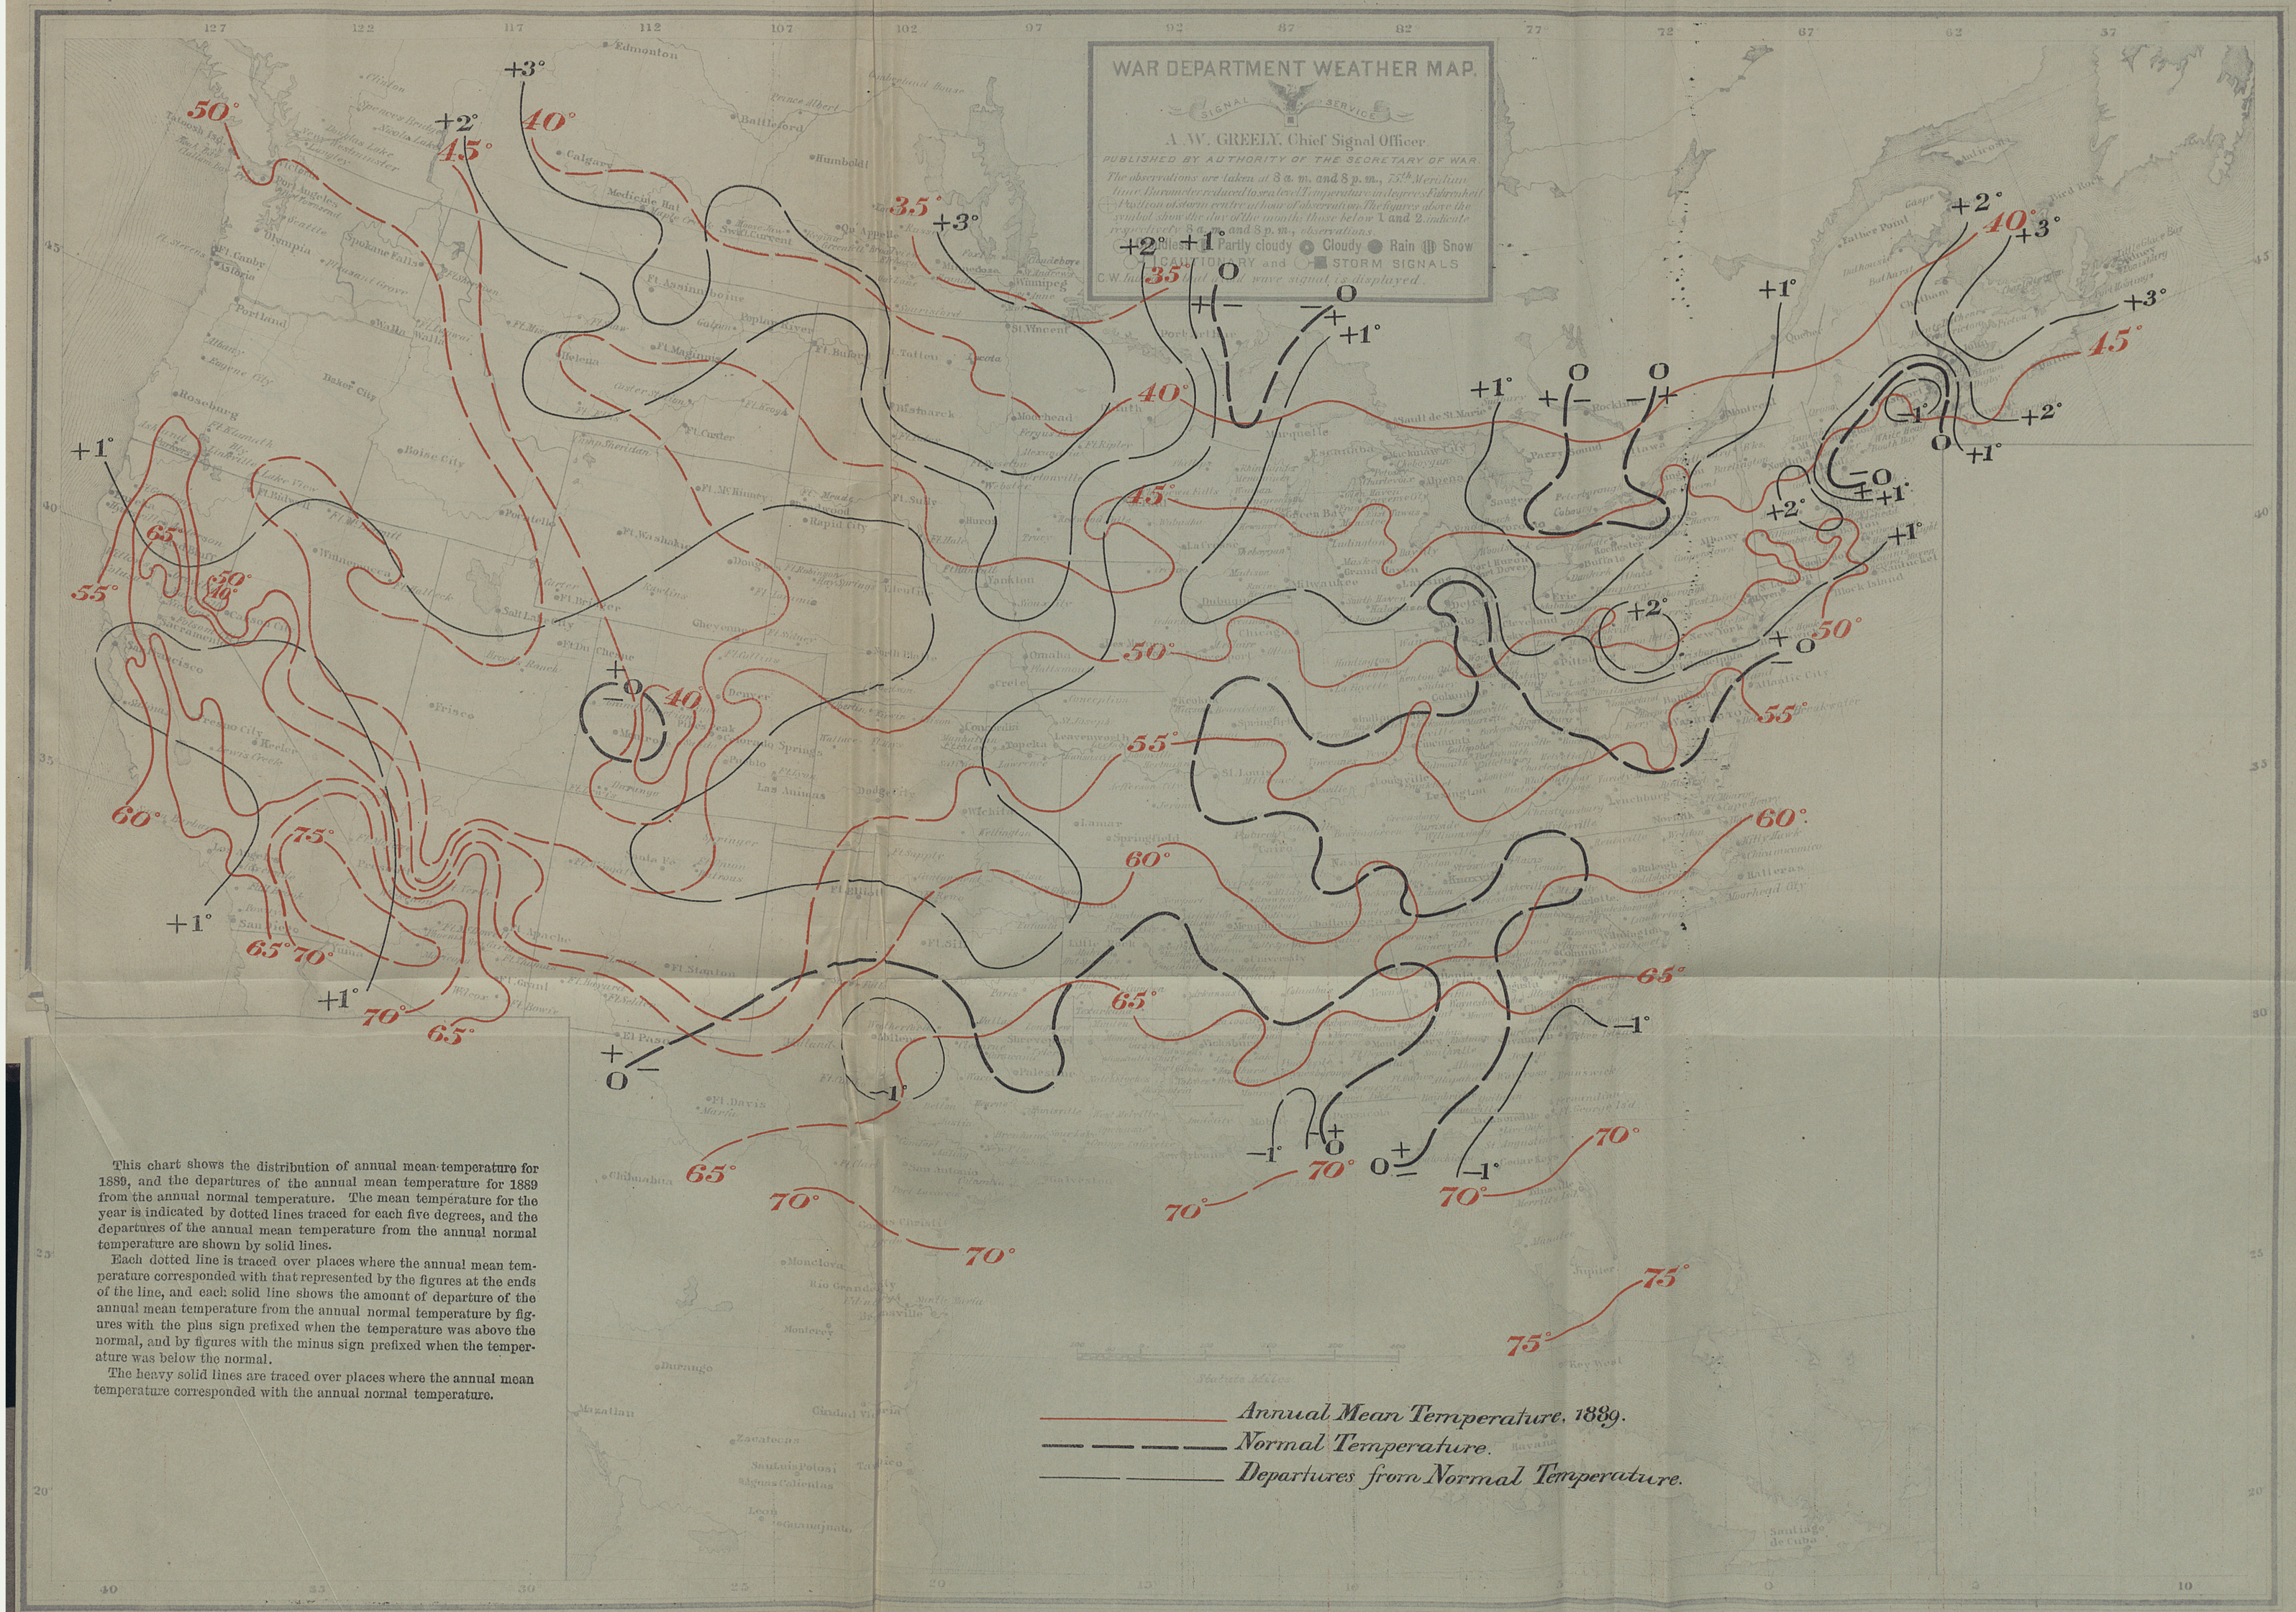
Form Map C-1890.

CHART I. ANNUAL MEAN TEMPERATURE, 1889, AND DEPARTURES FROM NORMAL.



This chart shows the distribution of annual mean temperature for 1889, and the departures of the annual mean temperature for 1889 from the annual normal temperature. The mean temperature for the year is indicated by dotted lines traced for each five degrees, and the departures of the annual mean temperature from the annual normal temperature are shown by solid lines.

Each dotted line is traced over places where the annual mean temperature corresponded with that represented by the figures at the ends of the line, and each solid line shows the amount of departure of the annual mean temperature from the annual normal temperature by figures with the plus sign prefixed when the temperature was above the normal, and by figures with the minus sign prefixed when the temperature was below the normal.

The heavy solid lines are traced over places where the annual mean temperature corresponded with the annual normal temperature.
