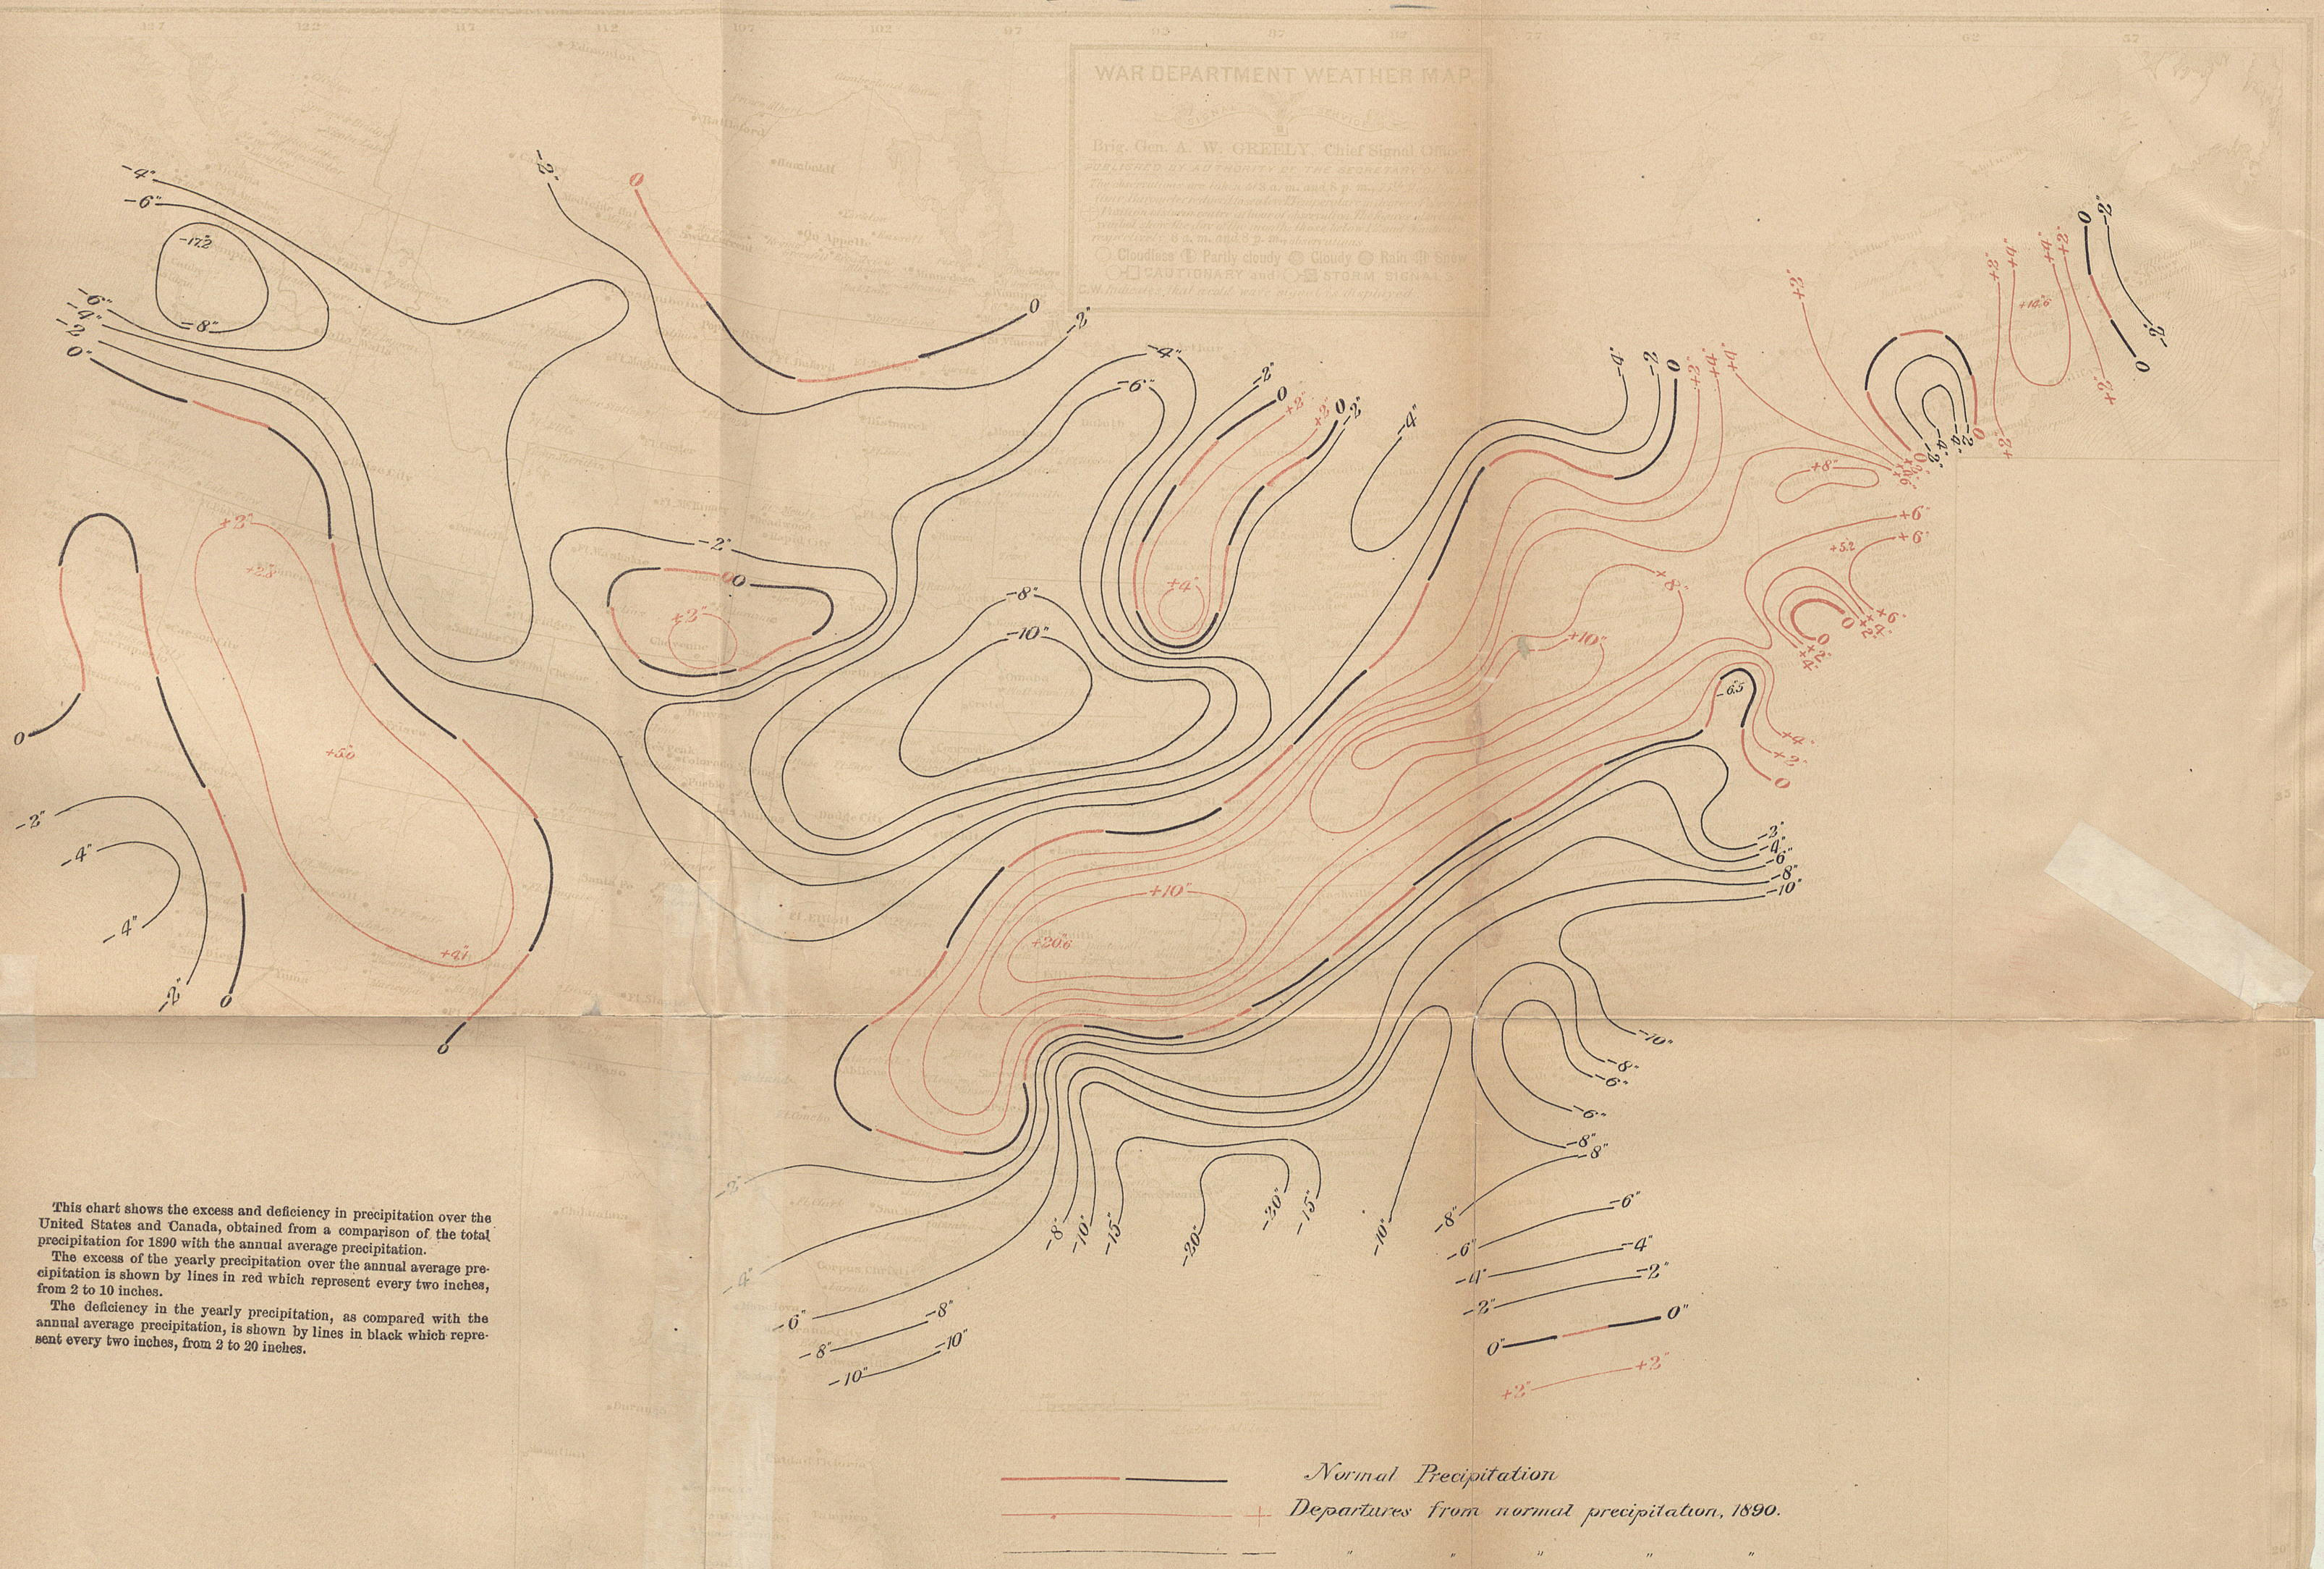
# CHART VII. DEPARTURES FROM NORMAL PRECIPITATION, 1890.



This chart shows the excess and deficiency in precipitation over the United States and Canada, obtained from a comparison of the total precipitation for 1890 with the annual average precipitation.

The excess of the yearly precipitation over the annual average precipitation is shown by lines in red which represent every two inches, from 2 to 10 inches.

The deficiency in the yearly precipitation, as compared with the annual average precipitation, is shown by lines in black which represent every two inches, from 2 to 20 inches.
