INDEX.

	Page.
Abbe, Cleveland—	
Local contrast of weather at Long Branch	13
The ice crop from a meteorological point of view	13
A silent electrical and dust storm in Oklahoma	13
Observations at Honolulu, Hawaian Islands (*see* Curtis J. Lyons).	
Optical phenomena	14
Parhelion, January 27, 1895	14
Snow dust of January 11–12	15
Correspondences in European and American weather	56
Optical phenomenon at Washington, D. C	56
Dust storm	57
Descending warm winds	57
The noise made by a meteor	57
The twisting effect of a straight wind	93
Sensible temperatures	93
American Association of State Weather Services	94
The warm wave of March 27-29	94
The passage of low areas over the Rocky Mountains	129
The dust storms of April 14 and 15	130
Geological origin of the dust	130
Dust storm in Washington	130
The change from winter to summer	130
Thunder and air pressure	130
The wind and chimney draught	130
Efficiency of windmills and farmers' tools	131
The time of beginning of rain	131
Do thunderstorms advance against the wind?	131
Popular works on meteorology	132
Frosts in May at Mardela Springs, Md	172
Dry norther in Nevada	173
The green-colored sun of September 9–10, 1883	173
The tornadoes of May 3, 1895	173
Horizontal cloud roll	212
The weather and the birds	212
The dry northers of California	212
Forecasting monsoon rains	213
An item in the early history of weather telegraphy	215
Letter to voluntary observers	255
Replies to correspondents	255
(*a*), Thermometric scale used in meteorology	255
(*b*), The winds of Japan and Arizona	255
Cloud photography	255
Miscellaneous phenomena	256
Observations in Alaska	256
The value of Weather Bureau forecasts	293
The great drought of 1845 in northern Ohio	293
A region of heavy rainfall	294
The calculation of normal values	294
Protection from frost	295
How do rains spread epidemics?	295
Do thunderstorms advance against the wind?	296
The cause of the low temperatures for August	296
An aurora in South Carolina and Kentucky	297
Data of electrical storm as seen from Observatory Grove, Eustis, Fla., August 25, 1895	298
Optical phenomenon	298
The cold summer of 1816	299
A popular substitute for the barometer	299
Abbe, Cleveland—*Continued.*	
The carbonic acid gas in the atmosphere	300
Florida freezes for a century and a half	336
Droughts in the Mississippi Valley	337
The weather in distant regions	337
The local storm of September 8 in Kansas	338
The earthquake of September 1	339
How to observe an earthquake	340
Frosts in Southern California—their prediction and prevention	341
Rate of advance of river floods	341
Storm waves on the Great Lakes and the ocean	341
The causes of earthquakes	375
The great storm of October, 1895, in the Gulf of California	379
Time reckoning	380
Earthquake at sea	380
Gale at Buenos Ayres	381
Sand blizzard	381
Droughts and crops	381
The drought and the weather in distant regions	381
The extent of a local rain	382
Lightning flashes by pairs	383
The nor'westers of Canterbury	383
The movement of thunderstorms against the wind	383
Climate and crop services	384
The chemical stormglass	421
Evaporation	421
A wave of darkness	423
Long-range forecasts in Oregon	423
Do thunderstorms move against the wind?	423
Penetration of snow by bullets	424
Ancient climates near Chicago	424
Storm wave at Sausalito	424
Sunshine percentages at sunrise	426
Drought and agriculture	426
Chinook in Montana	426
Contributions to the WEATHER REVIEW	427
Additional notes on Thomas Jefferson	457
Meteorology in the public schools	458
General circulation of the atmosphere	458
Translation from Koeppen "On Climatology"	461
Fog in New Nork harbor	463
Snowfall in North Dakota	463
Meteorology and local State fairs	463
Possible advances in the Weather Service (*see* J. R. Sage).	463
Thunder and lightning in December	464
Blizzards and schools (*see* Oliver Gibbs, jr.)	465
Frosts in southern California	464
Snow rollers	465
Motion of thunderstorms against the wind	465
Relation of surface winds to isobars at sea level and high level	489, 490
The annual snowfall for each winter, 1884–1895	491, 500
Acworth, A. E., frosts in May at Mardela Springs, Md	172
Motions of thunderstorms	465
Alexander, E. E., snow rollers at Spokane	465
Andree and Palmquist, carbonic acid gas in the atmosphere	300
Barwick, James, dry northers in California	212
Berry, James, (*see* Climate and Crop Services, pages 127 *et seq*).
