

CHART 8519

Stream No. 17 (2 notices) Head Fidalgo Bay.

This stream is split up at mouth, with water enough combined to make 40 feet wide and 6 inches deep.

Has good gravel and sand bottom.

In one place the stream runs directly away from the bay, and forms a lake 400 or 500 feet long.

I don't think this stream is very long for fish--from  $\frac{1}{4}$  to  $\frac{1}{2}$  mile.

1926 and 1927.....no visit. Allowance.

August 11, 1928.....1,500.

October 2, 1929.....1,200, 2% chums.

September 4, 1930.....1,800, 10% chums.
