NOTE.—The above observations, taken at 7 a. m., Washington time, were received too late for publication in the DAILY BULLETIN, and are given here in full from date of last published report (August 27, 1882). For continuation of this station, see United States series, DAILY BULLETIN.

REVIEW.

INTERNATIONAL METEOROLOGY.

[*Pressure expressed in inches and millimetres; temperature in degrees, Fahrenheit and Centigrade; wind force by scale of 0–10.*]

With this REVIEW is issued international chart iii. for the month of September, 1881. This chart continues the series of international charts begun in November, 1877, and shows the paths of the principal atmospheric depressions that have appeared in the northern hemisphere during the above-mentioned month.

The data are charted for each day of the month on the maps accompanying each issue of the "International Bulletin," and from these charts and additional data are traced the movements of the centres of barometric minima.

The paths of seventeen depressions which appeared during September, 1881, have thus been traced; in addition, are also shown the paths of five typhoons which occurred in the China sea during the month. The tracings of these are copied from Mr. Marc Dechevrens' "Typhoons of 1881."

The depressions traced on the chart are distributed as follows: Seven are charted in or near the United States; of these, five moved in an east-northeasterly path north of the forty-fifth parallel; one, number iv., pursued an abnormal track, having moved from southern Texas eastward to Mississippi, thence northward and westward to Dakota and finally disappeared in the northwest territories of British America. Number iii. was a tropical hurricane which originated south of N. 25° and moved first to the northwestward, touching the coast of the United States near Cape Hatteras, where it recurved to the northeastward and was soon afterwards dissipated. Two depressions are shown over the Atlantic ocean between N. 40° and 50°; one of these reached the British coasts, but the other apparently filled up on approaching the coast. Four disturbances appear to have developed in Greenland and over the ocean north of the fiftieth parallel; one of these passed southeastward over the British Isles and central Europe. Four depressions are traced in Europe; all of these have moved in a northeasterly direction from the southern districts. Two storm-tracks appear in western Siberia, but they are apparently the paths of depressions which developed in Europe. None of the disturbances charted have displayed unusual storm energy.

The following are brief descriptions of the storms that occurred in the United States and Canada:

I.—This disturbance appeared in Dakota on the 4th, the region of least pressure being enclosed by the isobar for 29.6 (751.8). During the day the depression moved eastward, and on the 5th the centre was over Lake Superior, giving showery weather and warm southerly winds at stations along the Saint Lawrence. By the 6th the disturbance was near the mouth of the Saint Lawrence; moving thence northeastward it passed over Labrador, and on the 7th it was apparently central near the entrance to Davis' Strait.

II.—This disturbance moved slowly from the northwest during the 8th and 9th, and by the 10th the centre was over Lake Superior, causing cloudy weather and rain at stations in the upper lake region. On the 11th the depression passed eastward over northern Canada and dissipated before reaching the ocean. Strong westerly breezes to moderate gales occurred at the lake stations after the passage of this disturbance.

III.—The earliest information relative to this hurricane was the report of the brig "Belle Prescott"; that vessel in N. 24° 38′, W. 68° 48′, on the 7th encountered a hurricane from ene. to sw. lasting twelve hours, and during which she scudded under bare poles and lost and split several sails. The storm-centre was then apparently moving towards the northwest. On the 8th and 9th it was near the coast of the Carolinas, but owing to the absence of detailed reports the position of the centre cannot be determined; the following reports, however, serve to indicate the severity of the disturbance at sea. On the 8th the schooner "Wm. Whitehead," two hundred miles from Cape Hatteras, reported a severe hurricane, and the bark "Saint Lawrence" was abandoned on the 9th in N. 33° 30′, W. 75° 23′, having encountered a terrific hurricane on the afternoon of the 8th, in which the vessel was totally dismantled by furious winds and seas. On the 9th the schooner "M. W. Drew" experienced a heavy gale, during which she stove stern, lost sails and spars, and was abandoned on the 10th in N. 33° 35′, W. 77° 20′. On the same date the schooner "Lizzie Florence," off the Frying Pan shoals (coast of North Carolina), had a heavy ese. gale, lasting two hours, then veering suddenly to sw., from which quarter it blew with great force for eighteen hours; vessel split sails and lost mainboom. The schooner "City of Chelsea," in N. 32° 54′, W. 77° 30′, reported a heavy gale, in which she lost all spars and sails; and the schooner "S. L. Russell," off Cape Lookout, lost deck-load during the gale. In the above reports no barometric observations were given; the depth of the atmospheric depression at sea cannot, therefore, be determined, but the disturbance was apparently of small diameter, since vessels on the seventy-second meridian on the 9th and 10th reported pressures above 30.0 (762.0), and the reports from stations on the North Carolina coast show that the violence of the storm was felt only at outlying coast stations between Wilmington and Hatteras. The storm-centre passed over Smithville and Wilmington, North Carolina, between 7 and 11 a. m. of the 9th. At 7 a. m. of that date the barometer at Charleston, South Carolina, read 29.98 (761.5), wind nw., 12 miles an hour. At coast stations in North Carolina it read as follows: Smithville, 29.85 (758.2), wind n., 18; Wilmington, 29.91 (759.7), wind ne., 13; Fort Macon, 29.98 (761.5), wind e., 24; Portsmouth, wind ne, 24; Hatteras, 30.05 (763.3), wind e., 22. At 11 a. m. the barometer at Charleston, South Carolina, read 30.01 (762.2), wind nw, 8 miles per hour, but at Smithville, North Carolina, it had fallen to 29.23 (742.4), wind e, 48 miles; and at Wilmington to 29.3 (744.2), wind e., 30 miles, while at Fort Macon it read 29.91 (759.7), wind se., 38. At Portsmouth and at Hatteras the wind blew from the southeast with a velocity of forty-four and thirty miles an hour, respectively. At 3 p. m. the pressure at Smithville was 29.83 (757.7), wind w., 24, and at Wilmington it was 29.69 (754.1), wind w., 26, the wind having, during the interval between 11 a. m. and 3 p. m., attained a velocity of sixty miles an hour from the northeast at the former, and sixty-four miles west at the latter, station. At Smithville trees, fences, etc., were blown down, telegraph lines prostrated, and the instrument-shelter and wind vane at the signal office were blown away; several wharves were destroyed; the pilot boats in the harbor were sunk, and loaded vessels were driven ashore. At Wilmington several houses were unroofed and vessels were capsized or driven ashore; about eight hundred trees, together with fences, walls, etc., were blown down, and all telegraph lines were prostrated; the damage was estimated at $100,000. At Fort Macon several bath-houses were washed away, and much damage was done to the telegraph line. On the 10th the disturbance moved northward, the pressure having increased to 29.9 (759.4) near the centre; the wind changed to s., 42 miles, at Fort Macon at 7 p. m. of the 9th, and to s., 40 miles, at Kitty Hawk at the midnight observation of the same date. On the 10th the wind reached a velocity of 36 miles, sw., at Portsmouth, and 42 miles, sw., at Hatteras, while it decreased to strong breezes at stations south of those points. On the 11th the disturbance passed off the coast into the Atlantic, causing moderate north and northeast gales at Barnegat and Sandy Hook. The depression appears to have filled up on reaching the ocean. An area of high-pressure occupied the Maritime Provinces, and during the 12th and 13th vessels between W. 65° and 50° reported pressures of 30.1 (764.5) and above.

IV.—This disturbance, which is noteworthy on account of the unusual path of the centre, developed in Texas on the 14th; it moved in an easterly direction towards Mississippi, and by the morning of the 15th the depression extended from the Gulf of Mexico to the lake region, the lowest barometric readings being in Mississippi. The eastward movement of the disturbance was checked by an area of high-pressure, 30.2 (767.1) to 30.4 (772.1), which occupied New England and the Maritime Provinces on the 15th. By the 16th the depression,

having moved to the westward, was central in Minnesota, where the pressure was 29.4 (746.7). Strong southeast to southwest gales occured on the lakes, and caused some damage to lake shipping. On the 17th the disturbance passed into Manitoba, attended by increasing pressure and diminishing energy, and on the 18th it disappeared in the northwest territories of British America.

V.—This was a slight depression which moved from the northwest into Dakota on the 23d. On the 24th the area of least pressure was shown over the Lake Superior region, the pressure having decreased to 29.35 (745.5). Rainy weather and higher temperature, with moderate s. and sw. gales, prevailed at stations in the upper lake region and in western Canada. On the 25th the depression passed to the north of Lake Superior, and, continuing its eastward movement over northern Canada, was central over the Gulf of Saint Lawrence on the 26th. On the 27th it moved northeastward over the ocean and became merged in an extensive depression which occupied Greenland and Iceland.

VI.—During the 25th there was a decrease of pressure in Nebraska and Dakota, and on the 26th the isobar for 29.8 (756.9) enclosed the region named, and also Iowa and Wisconsin. Cloudy weather and occasional rain occurred at stations to the eastward, but the winds remained moderate in force. On the 27th the disturbance was central in Michigan; the atmospheric pressure remained unchanged, but the cloud and rain-area had extended to Ontario. On the 28th the disturbance was near the Gulf of Saint Lawrence, attended by moderate winds and showery weather. By the 29th it had passed into the Atlantic and was probably central near N. 52°, W. 40°, the s. s. "Strassburg," in 50° 24′, W. 36° 21′, reporting barometer 29.73 (755.1), wind sse., force 7, rainy, while vessels to the westward had n. and nw. winds of force 5 to 7. On the 30th the disturbance was central as a storm of slight energy near N. 55°, W. 25°.

VII.—This depression appeared in Dakota and Minnesota on the 29th, the centre being enclosed by the isobar 29.5 (749.3). The disturbance moved northeastward, attended by moderate gales and rainy weather in the eastern quadrants; and on the 30th it was central over Lake Superior, with the pressure ranging from 29.5 (749.3) to 29.6 (751.8).

On the 29th a furious hurricane occurred at Mazatlan, western Mexico, causing great damage and loss of life. The following notes, referring to this hurricane, are taken from the report of Mr. F. Quijano, the co-operating observer at that station: 28th, at 8.10 a. m., light rain at intervals with variable winds from ese. to ssw.; at 7 p. m., wind nw., force 7, until 8.15 when a calm followed the rain. At 10 p. m. the wind came back in a fresh breeze, of force 5, from the same point, and continued throughout the night, accompanied by heavy rain until the early morning of the 29th. At 5 a. m. of the 29th wind and rain decreased, the wind becoming light and variable from the first quadrant, with a marked barometric fall, 29.38 (746.2); these conditions prevailed until 10 a. m., when the wind came from ese. and blew with a velocity of 15 miles an hour with increasing sea-swell from that quarter. At 11.30 a. m. the barometer read 29.39 (746.4), wind ese. 70 miles an hour, the heavy seas reaching the outskirts of the town. The wind increased to a hurricane of 80 miles an hour at 2 p. m., at which time the steamer "Sonora" weighed anchor and made for shelter at the island of Venados; at the same time the anchors of the German bark "Carolina" and the American schooner "Teresa" began to drag, and those vessels were driven ashore. At 2.30 p. m. the hurricane increased to 100 miles an hour; from 5 to 6 p. m. the wind was variable from ese. to s. continuing to blow a hurricane; many houses were destroyed, the anemoscope was blown down, and the windows of the observatory facing south were destroyed. At 6.30 p. m. the hurricane began to decrease in force, and continued to gradually diminish throughout the night; at 4 a. m. of the 30th it had moderated to a gale from n.; at 7.30 a. m. the rain ceased and the wind fell to light, the sea becoming less rough. Many lives were lost in the neighboring towns from freshets and three hundred houses were destroyed. Several vessels were driven ashore and wrecked.

The following concerns the storms traced over the Atlantic and in Europe:

VIII.—On the 1st the atmospheric pressure near Newfoundland was 29.5 (749.3), and by the 2d the area of least pressure was transferred to about N. 45°, W. 35°; the brig "Isabella," in N. 54° and about two hundred miles east of Saint John's, on the 1st had a heavy gale, in which she lost spars, sails, and boats; the s. s. "Rhynland," in N. 45° 09′, W. 39° 03′, reported barometer 29.53 (750.0), wind ne., 7, cloudy; the s. s. "Pennsylvania," in N. 43° 48′, W. 40° 01′, on the 2d, reported barometer 29.63 (752.6), wind ne., force 6, cloudy; and the s. s. "Illinois," in N. 44° 37′, W. 39° 16′, on the same date, reported barometer 29.64 (752.9), wind nne., force 7, fair; the s. s. "Nederland," to the eastward of the centre, had se. wind of force 3, barometer 29.8 (756.9). During the day the disturbance moved northeastward, and on the 3d it was central near N. 49°, W. 21°, where the pressure was 29.7 (754.4), with northerly winds to the westward of the twenty-second meridian and southerly and southeasterly winds eastward to the Irish coast. On the 4th the storm-centre was between W. 15° and 20° and near the fiftieth parallel; the bark "Commewyne," in N. 49° 21′, W. 18° 22′, reported barometer 29.67 (753.6), wind wnw., force 6, cloudy; and the s. s. "Celtic," in N. 51° 10′, W. 13° 20′, barometer 29.62 (752.8), wind se., force 6, cloudy. On the 5th the depression occupied the Bay of Biscay and the English channel, the barometric readings being 29.4 (746.7) over the last mentioned. Moderate north and northeast gales were reported by vessels west of 15°, west longitude, and strong easterly to southerly winds and showery weather occurred at stations on the coast of France and in the southern part of England. During the 5th the decrease of pressure spread over the whole of the British Isles, which on the 6th were enclosed by the isobar for 29.6 (751.8). Within the limits enclosed by that isobar were two districts where the pressure was below 29.5; one of these was over the North sea and to the eastward of northern Scotland, while the other was over the Channel. During the 6th the disturbance moved northward, and on the 7th the centre was near the Hebrides, causing rain and moderate southerly winds in Scotland. On the 8th the region of least pressure was near the Norwegian coast, but the depression appeared to be filling up, and by the 9th the pressure in that region had increased to 29.9 (759.4).

IX.—On the 1st a small area of low-pressures, enclosed by the isobar for 29.6 (751.8), was shown near the Gulf of Genoa; it was attended by strong northwesterly winds and cloudy weather at stations on the shores of the Gulf of Lyons. On the 2d the pressure was least in northern Italy and in southwestern Austria, the barometer readings ranging from 29.6 (751.8) to 29.65 (753.1). On the 3d the storm-centre was in Hungary, the decrease of pressure extending over central and northern Europe. During the 4th and 5th the disturbance moved slowly eastward with gradually increasing pressure, and disappeared in southern Russia on the last-mentioned date.

X.—After the passage of low area viii., a small disturbance appeared in western France, causing moderate to strong westerly gales at stations on the shores of the Bay of Biscay. On the 9th the disturbance, having moved northeastward, was central in northern Germany, accompanied by general rain along its track. The pressure increased somewhat rapidly in rear of the depression, and by the 10th it had apparently filled up.

XI.—During the 7th and 8th there was a gradual decrease of pressure in Greenland, and by the 9th it had fallen below 29.0 (736.5), the barometer at Godthaab reading 28.96 (735.6), wind ne., force 2. Steep gradients were formed between Greenland and Iceland, and on the 10th the wind attained the force of 8 (strong gale) from the southeast. On the 10th the disturbance disappeared, the pressure increasing to 29.9 (749.4) over the region above referred to.

XII.—This depression was probably a secondary development of low area x. On the 11th a small area of low-pressures, 29.65 (753.1) to 29.8 (756.9), was situated in northern Austria; during the day the disturbance moved northward and on the 12th it was central over the western part of the Baltic, where it was attended by moderate to strong winds and rainy weather. By the 13th the storm-centre was near Stockholm, the pressure having decreased to 29.55 (750.6); the winds increased somewhat in force in the southern quadrants of the depression, and cloudy or rainy weather continued at stations near the centre of disturbance. During the 14th the storm-centre remained nearly stationary over the Baltic, and on the 15th it moved slowly southward, causing a slight decrease of pressure over northern Germany. By the morning of the 16th the area of disturbance covered northern Scandinavia and the greater part of Russia, the pressure being least near Moscow, where the barometer read 29.63 (752.6), wind sw., force 2. On the 17th the area of low-pressures still occupied European Russia and had extended to western Siberia, while an increase of pressure had set in over Scandinavia. By the 18th the pressure had decreased to 29.4 (746.7), in the Ural region, and during the 19th and 20th the disturbance moved slowly eastward into Siberia, and disappeared on the last-mentioned date.

XIII.—During the 10th the pressure began to decrease over the Azores and on the morning of the 11th the barometer read 29.75 (755.6), being a fall of about .3 inch since the preceding twenty-four hours. By the morning of the 12th the disturbance had moved northeastward to about N. 46°, W. 22°, the winds shifting to northwest in the vicinity of the Azores, while southeasterly breezes prevailed over the region near N. 48°, and from W. 21° to W. 15°. During the 12th the disturbance moved slowly eastward with increasing pressure, causing on the 13th strong southeasterly winds over the Bay of Biscay. This depression dissipated before reaching the European continent.

XIV.—On the 17th an area of low-pressures, indicated by the isobar for 29.6 (751.8), lay over Iceland. Under the influence of this depression, a brisk decrease of pressure occured over the British Isles and western Scandinavia, and showery weather prevailed in those districts. On the 18th the disturbance was apparently central north of the Färöe islands, and during the day it probably became merged in an extensive depression which was moving southward from Greenland.

XV.—On the 18th an extensive depression occupied southern Greenland and Iceland, the isobar for 29.6 (751.8) extending southward to the fiftieth parallel. The region of least pressure was to the southwestward of Iceland, where the barometer read 29.39 (746.5), wind e., force 8, raining; moderate westerly and northwesterly gales were reported by vessels on the fiftieth parallel, while those to the northward of that latitude and east of 20° west longitude, had moderate southwesterly breezes. On the 19th the region of least pressure was transferred to about N. 53°, W. 20°, in which region the barometric readings were below 29.42 (741.7). The easterly gale continued at Stykkisholm, Iceland; southerly and southwesterly gales occurred from W. 20° eastward to the Irish coast and the English channel, while southeasterly and easterly winds prevailed over Scotland. On the 20th the storm-centre was in N. 52°, W. 18°; on that date the s. s. "Rhynland" in N. 49° 26′, W. 17° 44′, reported barometer 29.21 (741.8), wind sw., force 5, fair; the s. s. "Köln" in N. 49° 53′, W. 24° 06′, barometer 29.25 (742.9), wind nw., force 6, raining; stations on the Irish coast had southerly and southeasterly winds of moderate force and cloudy or rainy weather. On the 21st the disturbance was central in Ireland, where the barometric readings ranged from 29.23 (742.4) to 29.28 (743.7), easterly and southeasterly winds prevailed in Scotland, over the North sea, and at stations in Denmark, northwestern Germany and the Netherlands, while southwesterly breezes were reported at stations in western France. During the 22d and 23d the disturbance was forced to the southeastward by an area of high-pressures which occupied the Scandinavian peninsula, and which gradually spread over the British Isles and northern Europe. On the last-mentioned date the depression was in Austro-Hungary where the pressure ranged from 29.6 to 29.7, increasing to 30.0 (762.0) on the following day.

XVI.—This disturbance appeared over the Atlantic north of the fiftieth parallel and between the meridians of 40° and 30° west longitude on the 22d. On that date the s. s. "Köln," in N. 49° 07′, W. 32° 49′, reported barometer 29.32 (744.7), wind sw., force 5, cloudy, and the s. s. "Germanic," in N. 43° 56′, W. 38° 52′, barometer 29.50 (749.3), wind wnw., force 3; vessels to the westward of W. 40° had strong northerly and northwesterly winds. On the 23d the disturbance moved slowly north-northeastward, causing a decrease of pressure over the western portion of the British Isles and moderate to strong westerly and northwesterly gales over the ocean south of the fiftieth parallel. On the 24th the region of least pressure was between Iceland and Greenland; during the period from the 24th to the 30th the disturbance remained in the vicinity of Iceland, with irregular movements to the southward and eastward, which caused a decrease of pressure with showery weather and moderate to strong southwesterly winds over the northwestern districts of the British Isles.

XVII.—This disturbance appeared in southeastern Russia on the 21st and was enclosed by the isobar for 29.6 (751.8). It moved northeastward and on the 22d the centre was shown near Kasan, where the barometer read 29.26 (743.2) wind sw., cloudy. From the 23d to the 26th the disturbance occupied the Ural region, the pressure ranging from 29.45 (748.0) to 29.6 (751.8). On the latter date it moved southeastward and disappeared in southwestern Siberia.

The following notes, descriptive of the typhoons that occurred in the China sea during September, 1881, are taken from Mr. Marc Dechevrens' "Typhoons of the Chinese sea in the year 1881."

I.—This typhoon appears to have moved from the region south-southwest of Japan, by a north-northeasterly course to about the latitude of Tokei, when it turned to the northeastward and disappeared in the Pacific. At only one station on shore, that of Inu-bo-ye-saki in N. 35° 43′, E. 140° 53′, did the wind reach the force of a gale, but the typhoon appears to have been quite severe at sea. The barometric minimum occurred at Tokei on the 2d, the barometer reading 29.72 (754.9), wind nw., 6 miles. On the same date the pressure at Inu-bo-ye-saki lighthouse was 29.65 (753.1), wind nw. gale. The German bark "Carl," in N. 34° 34′, E. 138° 57′, had a heavy n. gale on the 1st, and during the 2d it blew a hurricane, with tremendous sea running; at 6 p. m. the weather moderated and fell calm, which continued for three days. The "Carl" passed several fishing boats that had been blown out to sea. The ship "North American" probably encountered the same typhoon on the 3d; that vessel, in N. 37° 30′, E. 143° 30′, had a typhoon from ne. backing to nw., blowing very hard for eight hours, during which she lost maintopsail.

II.—This typhoon appeared northeast of Luzon on the forenoon of the 6th and moved towards the northwest with a velocity of about twelve miles an hour. On reaching the island of Formosa the typhoon appears to have split into two segments, one of which passed over Formosa and moved westward to the Chinese coast, while the other passed south of the island and reached the Chinese coast by a northwesterly course. The barometric minimum, 29.06 (738.1), occurred at Tai-wan-foo, Formosa, on the afternoon of the 7th, the wind blowing a fresh gale from nnw., at 8 a. m., to se., at 4 p. m. At Tamsui, in northern Formosa, the lowest barometric reading was 29.41 (747.0) at 2 p. m. of the 7th, wind e. to ese., strong gale. The western segment of the typhoon, having no obstacle to impede its movement, traveled quickly northwestward, and by the 8th it had already entered the continent. It passed between Amoy and Swatow on the evening of the 7th, the barometric readings at the time of the passage of the centre being 29.30 (744.2), wind n. by e., force 7, and 29.35 (745.5), wind nnw., force 6, respectively. The second, or east-

ern depression, cleared Formosa during the afternoon of the 7th, and, moving rapidly by a w. by n. course, it reached the continent on the morning of the 8th, passing at about the same place as its predecessor. The barometric readings at Amoy and Swatow during the passage of the second centre of depression were 29.39 (746.5), wind e. by s., force 6, and 29.32 (744.7), wind nw., 6, respectively. The velocity of translation of the first storm-centre averaged fourteen miles an hour, that of the second centre was considerably diminished when in Formosa, but after reaching the straits it averaged 14.6 miles an hour. The eastern segment, on reaching the continent, moved westward and disappeared to the northward of Hong-Kong on the 9th. The western depression, however, continued its northwesterly movement towards Lake Toong-ting, where it recurved on the 10th and moved northwestward along the valley of the Yang-tsi-kiang, entering the Yellow sea on the 13th. The barometric minimum, 29.69 (754.1), occurred at Hankow, at 7.45 p. m. of the 11th, and at Wuhu, (N. 31° 20′, E. 118° 22′) where the lowest barometric reading was 29.82 (757.4) on the morning of the 15th. When last observed, at Shaweishan light-house (N. 31° 25′, E. 122° 14′), the atmospheric pressure was 29.62 (752.3), wind shifting from s. to nw., in a fresh to strong breeze. The typhoon did not cause much damage to property on shore during its passage, but it was probably severe at sea. On the 7th the ship "Hindostan," in N. 21°, E. 117°, encountered a severe gale in which the vessel was much damaged.

III.—This typhoon passing through the most populous part of Japan consequently caused great damage to property in that country, as well as numerous shipwrecks on the coasts. The typhoon appears to have originated to the northwestward of the Liu-kiu or Loo-choo islands on the 10th, and to have moved in a northeasterly direction on the 12th, touching the southern point of Kiu-siu island, about noon of the 13th. The ship "Highlander," in N. 27° 33′, E. 131° 06′, reported strong ne. to ene. gales with terrific squalls from the 10th to the 13th, on which date the vessel encountered a typhoon in which she lay for twelve hours on her beam-ends and lost several sails. The s. s. "Tientsin," in about N. 31° 00′, E. 126° 30′, from 6 p. m. of the 12th to 4 a. m. of the 13th, reported lowest barometric readings from 29.62 (752.3) to 29.64 (752.8), light wind shifting from e. by n., clear. to nw., fresh breeze; weather squally with rain. The French steamer "Volga," crossed the region of central calm, as shown by the following: "Left Yokohama on September 11th, wind ne. raining, barometer 30.08 (764.0); until the 13th had variable winds from ne. to se.; sea from e., and frequent squalls from se., barometer falling; 13th, 9 a. m., violent squall from se., heavy sea, wind freshening and barometer falling rapidly; 10 a. m. (about N. 32° 30′ E. 133° 0′), barometer 29.55 (750.6), strong se. wind, sea rising from the same quarter; 11 a. m., barometer 29.53 (750.0); noon, barometer 29.17 (740.9), wind blowing a hurricane from se.; 0.30 p. m., barometer 28.94 (735.1); 1 p. m., 28.74 (730.0); 1.30 p. m., 28.5 (723.9); 2 p. m., 28.31 (719.1), falling as low as 28.00 (711.2) during the squalls; sea frightfully high. At 2.30 p. m. barometer still at 28.31 (719.1), when a sudden calm occurred, lasting fifteen minutes, sun shining, patch of blue sky at the zenith, wind se., very light and veering to n. through e.; 2.45 p. m., wind again blowing furiously from n., sea very high, a boat carried away; 3 p. m., barometer 28.5 (723.9), wind n. blowing with hurricane force; 4 p. m., barometer 29.09 (738.9), wind abating; 5 p. m., 29.27 (743.4); 6 p. m., 29.61 (752.1); shipped an enormous sea on the starboard side, water in the cabins and in the engine-room; starboard gun torn from its fastenings and lost; 6.30 p. m., weather improving; land (Kiu-siu) seen on the starboard side." The position of the "Volga," when in the calm-centre of the typhoon, was about N. 31° 50′, E. 132° 01′; the centre moved directly northeastward and entered Niphon during the 13th. At Hiroshima the barometric minimum occurred at 5.30 p. m. of the 13th, the pressure being 29.40 (746.7), wind nne., 14 miles an hour, light rain. At Wakayama the barometer fell to 28.78 (731.0) at 10 p. m. of the 13th, wind nne., strong gale; the anemometer having broken at 9.30 p. m., when the wind had reached a velocity of 43 miles an hour; heavy rain continued during the passage of the disturbance. At Kobe observatory the wind varied from ne. to n. and nw.; lowest barometer 29.09 (738.9) at 11 p. m. of the 13th; from this time the wind, which had been blowing in violent squalls with heavy rain, decreased in violence. At Kioto the barometric minimum, 28.91 (734.3), was registered about midnight of the 13–14th, wind n., 19 miles, increasing at 1 a. m. of the 14th to nw. 35 miles. At Tokei the lowest barometric reading was 29.17 (740.9) at 6.15 a. m. on the 14th, wind s. 41 miles, with heavy rain and vivid lightning; at 1.40 a. m. the wind veered from n., 2 miles, to sse., 30 miles, and increased in force, hauling to ssw. at 6.30 a. m. and decreasing. The typhoon continued its northeasterly movement and passed between the stations Niigata and Nobira; at the former, on the western coast of Niphon, the lowest barometric reading was 29.15 (740.4) at 8 a. m. on the 14th, wind nne., 19 miles, raining; and at the latter station, on the eastern coast, it was 29.03 (737.3) at 11 a. m., wind se., heavy gale; at 0.30 p. m. the wind became nearly calm, after which it came out from wsw. to w. and nw. The typhoon passed into the Pacific during the 14th, after which date observations are missing.

This typhoon caused much damage to barges and merchandize at Yokohama, and twelve lives were lost; at Tokei thirty-six houses were blown down and fourteen were damaged, four fishing boats were wrecked off Shinagawa. Many fishing vessels and two barges were driven ashore on the coast of Niphon and were attended in some cases by loss of life. The velocity of translation of the typhoon varied considerably; on the 13th from midnight to noon, it was about 16 miles an hour; from noon to next midnight, 27 miles; on the 14th, from midnight to noon, 26 miles; and from noon to midnight of the 15th, about 22 or 23 miles.

IV.—This typhoon originated near the Pratas reef, in the northern part of the China sea, during the 12th and 13th, and moved northward to the Straits of Formosa, where it was central on the 14th, the least recorded pressure being 29.44 (747.8), wind ne., force 5, at Lamock light-house (N. 23.° 15′, E. 117° 17′), at 3 a. m. of the 14th. It made towards the Chinese coast, and then suddenly swerved to the northeastward and moved towards the Pescadores islands; and on the 15th it again moved northward and entered the continent. During its passage through the Straits of Formosa it was attended by northeasterly to southeasterly and south-southwesterly winds, of force 6 to 8, the lowest barometric reading being 29.4 (746.7). During the 15th the typhoon entered China between Amoy and Ocksen island, the barometer at the latter station reading 29.4 (746.7), wind e., force 8, to sw., force 7. On land the disturbance does not appear to have exhibited much storm-energy, but at sea near the coasts, it was very severe, the winds attaining a force of 10 (Beaufort scale). After moving northward until the 16th the course changed to the northeastward and the typhoon reached the sea on the 17th, having caused but light winds at land stations. It moved northeastward over the Sea of Japan, and disappeared in the Pacific on the 19th, without displaying any further violence and attended by gradually increasing pressure. Prior to the 15th the velocity of translation of the typhoon was variable on account of the uncertainty of its course. On entering China its mean velocity may be estimated at 8.75 miles an hour; during its passage over the Eastern sea the velocity was about 15.5 miles, and in the Sea of Japan it increased to about 27.5 miles an hour.

V.—This typhoon was first noticed on the 24th, on which date it lay to the eastward of Luzon, Philippine islands. It moved north-northeastward at a considerable distance from land, and caused much damage to shipping and loss of life. The atmospheric depression when in the China sea does not appear to have been very deep, but its central region was of great extent. The cause of its moving at so great a distance from the coast, while the other typhoons which originated in

the same latitude have mostly made for the continent, was due chiefly to the fact that the northeast monsoons had set in in China about the 19th, and also that the atmospheric pressure was high in central and eastern China. The typhoon moved northwestward to near the Bashee channel, and turning to the north-northeastward on the 25th, skirted the eastern coast of Formosa. On the 26th the centre was to the southwestward of the island of Kiu-siu, Japan; passing into the Japan sea, through the Straits of Corea, the typhoon moved along the coast of Tartary, and during the 27th it passed into the Pacific, between Yesso and Saghalien. During its passage northward near Formosa, the barometer at Tai-wan-foo ranged from 29.61 (752.1) to 29.76 (755.9), with strong north wind and fine weather throughout the 24th, 25th, and 26th. At Tamsiu, northern Formosa, the lowest barometer read 29.71 (754.6), from 7 a. m. to 1 p. m., of the 25th, wind nne., force 6–7. During its progress very violent winds occurred near the centre, as shown by the following vessel reports: ship "Faugh Ballaugh," between N. 27° 28′, E. 123° 19′, and N. 26° 35′, E. 122° 42′, from noon of the 24th to noon of the 25th, reported barometer ranging from 29.73 (755.1) to 29.44 (747.8), wind nne., force 10, to nnw., force 12 (Beaufort scale), with terrific squalls. S. S. "Tientsin" anchored in Barren bay for shelter (N. 28° 44′, E. 121° 49′), reported, 25th, from noon to 8 p. m., barometer remained at 29.6 (751.8), wind nw., force 10, clear weather; the the bark "Lydia," at noon on the 25th, reported barometer 29.72 (754.9), wind nne., furious typhoon, heavy rain; 4.30 p. m., barometer 29.66 (753.4), wind n., typhoon increasing, a furious squall blew away the fore lower topsail; 10 p. m., barometer 29.58 (751.3), wind nw., typhoon raging furiously, rain and high sea, main lower topsail blown to pieces. Midnight to 3 a. m. of the 26th (N. 29° 35′, E. 124° 50′), barometer 29.54 (750.3), typhoon raging, with heavy rain; noon, barometer rising, wind moderating. Previous to the passage of the typhoon the barometer at Zi-Ka-Wei had been sinking slowly but steadily; it stood at its maximum, 30.12 (765.0), on the 21st and fell gradually to 29.76 (755.9) at 3 a. m. on the 26th; the ne. monsoon continued to blow steadily until the 25th, when the wind changed to nw. and w. and blew at the rate of about sixteen miles an hour at the time of the passage of the centre. On reaching Japan the typhoon maintained its violence and caused much damage, as indicated by the following: the brig "Minatitlan," in N. 31° 17′, E. 126° 40′ on the 25th, lost boats, had decks torn up, and vessel thrown on her beam ends, and was obliged to cut away both masts. The bark "Presto," off Cape Gotto, entrance to the channel of Corea, at 8 a. m. of the 25th reported barometer gradually falling, wind e., heavy ne. sea running; 6 p. m., heavy gale and sea; on the 26th, 10 a. m., typhoon raging, torrents of rain, barometer 28.9 (734.0), vessel thrown on her beam ends, sails blown away, and vessel otherwise damaged. The wind increased from e. to wnw.; when off Quelpaert island, the barometer began to rise and the weather moderated. At noon of the 26th the barometer read 29.42 (747.3) on board the bark "Kanagawa-maru," near the Kosiki islands (N. 32° 12′, E. 120° 35′); several sails were blown away and the ship sustained other damage; at noon it was blowing a typhoon with wind hauling to sw. At Nagasaki the typhoon was very heavy; six coal-laden junks sank at their anchors; a large number of sampans were sunk or stove in; many lives were lost, and several steamers and sailing vessels dragged anchor in the harbor; buildings were blown down, and trees, roofs, etc., were scattered in all directions. At Nagasakj the barometric minimum occurred about noon of the 26th, when the barometer read 29.38 (746.2), wind ssw., about 40 miles an hour, heavy rain. At this time the centre of the typhoon was passing north-northeastward, in the Straits of Corea, at a distance of about one hundred miles. The s. s. "Chitose-Maru," in the Straits of Corea, reported at noon of the 26th, barometer 28.8 (731.5), wind se.; 2 p. m., barometer 28.59 (726.2), wind s. The s. s. "Annei Maru," at Fusan, Corea, reported at noon 26th, barometer 29.66 (753.4), wind nne., force 7, heavy rain; 4 p. m., barometer 28.92 (734.6), wind e., force 11; 5 p. m., barometer 28.6 (726.4), wind nw., force 12, heavy rain; 6 p. m., barometer 28.6 (726.4), wind w., force 12; after this the barometer began to rise and the weather cleared. After passing through the Strait of Corea the typhoon moved northeastward, keeping in the middle of the Sea of Japan. The bark "Siberien," from Vladivostok to Cheefoo, reported that on the morning of the 27th, in N. 39°, E. 130°, she passed through a typhoon of extraordinary violence, in which the barometer fell to 28.21? (716.5?) at 1 a. m. of the 27th. The storm began with the wind from ne. shifting from nnw. and wsw.; the vessel lost spars and had deck swept. The s. s. "Europe," in about N. 38° 48′, E. 130° 51′, reported lowest barometer 28.76 (730.5) at 3 a. m. of the 27th, the wind having shifted from e. in a terrific hurricane to n. and nw., and continued to blow with unabated fury until 7 a. m., when the barometer read 29.34 (745.2). The steamer "Ash" and the bark "Nouveau Mondelli" were lost with all hands during this typhoon. On the 28th the typhoon passed into the Pacific beyond the range of observation.

The following description relates to chart ii. for the month of December, 1882, (issued herewith) and presents a brief summary of the meteorological conditions which prevailed over the northern hemisphere during that month. Chart ii. continues the series of international charts begun in January, 1877, and exhibits the mean pressure, mean temperature, and the prevailing wind-direction over the northern hemisphere, as determined from one observation taken simultaneously each day at 7 h. a. m., Washington, or 0 h. 8 m. p. m., Greenwich, mean time.

For the month of December, 1882, two areas of barometric minima are exhibited on the chart. The first of these occupies the north Pacific ocean between the fiftieth and sixtieth parallels, and from Kamchatka eastward to Alaska; within this region the lowest reported mean pressure is 29.36 (745.7), at Saint Paul, Kadiak island, Alaska. North of the sixtieth parallel the pressure rapidly increases, the mean for the month at Ooglaamie, (N. 71° 17′, W. 156° 40′) being 30.11 (764.8). The second area of low-pressures is situated between the parallels of 50° and 62° north latitude, and from W. 50° eastward to about the meridian of 5° east longitude. This region is enclosed by the isobar for 29.7 (754.4), and embraces two small areas where the mean pressure is less than 29.6 (751.8). To the southward the barometric gradient gradually increases, the isobar for 30.0 (762.0) extending from the Canadian Maritime Provinces southward to N. 35°, W. 60°, thence northeastward to the forty-second parallel and over the Iberian peninsula. In that part of the continent of Europe lying between E. 5° and E. 25°, excepting the Iberian peninsula, the mean pressure ranges from 29.7 (754.4) to 30.0 (762.0). In the North American continent the mean pressure is least in Canada, the barometric means ranging from 29.9 (759.4) in the Maritime Provinces to 30.05 (763.3) in the western districts of the Dominion.

Four areas of barometric maxima appear on the chart; the most marked of these occupies that part of Siberia lying between N. 50° and 60°, and E. 90° and 107°. Within this region the mean pressures are 30.79 (782.1) and 30.72 (780.3), at Yeniseisk and Irkutsk, respectively. From the region of the greatest pressure above indicated, the barometric means decrease, the isobar for 30.0 (762.0) occupying western Russia to the westward, and northeastern Asia and Niphon to the eastward. The second area of high-pressures is situated west of the Maderia islands and south of the Azores, in about N. 25° to 35° and W. 20° to 35°; within this area the means range from 30.2 (767.1) to 30.24 (768.1.) The remaining areas are shown in the United States of North America and are both indicated by the isobar for 30.2 (767.1). One occupies the country between N. 30° and 50° and the meridians of 95° and 120° west longitude, except southern California and southwestern Arizona. The other area of high-pressures covers Tennessee, the east Gulf, and the south Atlantic States. In the country between these areas the mean pressure ranges from 30.15 (765.8) to 30.19 (766.8)

Compared with the chart for the preceding month (November, 1882), there has been a decrease of pressure in New England, in the lake region, and in Canada; elsewhere in the North American continent there has been no material change. There has been a general decrease of pressure over the north Atlantic ocean, except over the region south of N. 25°, where the pressure is slightly greater than that of November. In Europe there has been an increase of pressure in Germany, Austria, Russia, and in the Danish and Scandinavian peninsulas; in the three last-named districts the increase averages .15 inch. In all other parts of Europe there has been a decrease of pressure, the departures being least in the British Isles and greatest in the Iberian peninsula. In British India and in other parts of Asia the pressure is much above that of the preceding month. In Japan, however, the pressure has decreased, especially in the eastern part of Niphon.

Compared with the corresponding month of previous years, the mean pressure for December, 1882, over the United States, was normal, or slightly above, in all districts excepting New England and the lake region, where it was slightly below. In Canada the pressure was generally above the normal. In Europe the mean atmospheric pressure was below the normal in the central and southern districts, and above the normal in Russia and the Scandinavian peninsula. In British India the pressure was about normal; in Siberia it was above the normal.

The accompanying table shows the deviations in pressure and temperature at isolated stations during the month of December, 1882, as compared with the means for five years:

Stations.	Mean pressure.			Mean temperature.		
	Dec., 1877, 1878, 1879, 1880, 1881.	Dec., 1882.	Departure.	Dec., 1877, 1878, 1879, 1880, 1881.	Dec., 1882.	Departure.

* Mean for four years only.

In the United States the mean temperature of the air was below the normal in the country east of the ninety-fifth meridian; to the westward of that meridian the temperature was above the normal. In Canada it was below the normal in the western sections, but was above the normal in the eastern provinces of the Dominion. In Europe the mean temperature of the air was above the normal, except in the Scandinavian and Iberian peninsulas and in Russia, where it was about 4°.0 below the normal. At stations in Siberia the temperature was much below the normal; in British India it was 3°.6 above the five years' mean. The highest mean temperature reported was 82°.8 Fahr. (28°.2 Cent.), at Poona, and the lowest was 62°.4 Fahr. (16°.9 Cent.) at Lahore.

The following are some of the extreme mean temperatures reported at isolated stations:

Highest.	Fahr.	Cent.	Lowest.	Fahr.	Cent.
	°			°	
Zanzibar, Africa	84.2	29.0	Yeniseisk, Siberia	—23.4	—30.8
Freetown, Africa	84.1	28.9	Ooglaamie, Alaska	—20.6	—29.2
Bridgetown, Barbadoes	81.3	27.4	Irkutsk, Siberia	—17.9	—27.9
Mauritius, Indian Ocean	80.4	26.9	York Factory, B. A	—14.8	—26.0
			Tomsk, Siberia	—13.2	—25.1

The following table gives the mean pressure and the mean temperature, with corresponding departures, for the month of December, 1882, in the several countries of the eastern hemisphere, compared with the means as determined from observations taken during the years 1877, 1878, 1879, 1880, and 1881:

Countries.	Mean pressure.			Mean temperature.		
	Dec., 1877, 1878, 1879, 1880, 1881.	Dec., 1882.	Departure.	Dec., 1877, 1878, 1879, 1880, 1881.	Dec., 1882.	Departure.
				°	°	°
Algeria	30.14	30.05	— 0.09	57.3	57.4	+ 0.1
Austria	30.09	29.91	— 0.18	32.8	38.7	+ 5.9

Sweden	29.79	29.93	+ 0.14	25.9	20.8	— 5.1

* Mean for four years only.

In the United States the prevailing winds were northerly and northwesterly over the country lying south of the fortieth parallel and east of the Rocky mountains; north of the above-mentioned parallel, and from the Rocky mountains eastward, they were mostly westerly and northwesterly. In Canada they were northerly and westerly. Over the north Atlantic ocean the prevailing winds were northerly and northwesterly from the coast of the United States eastward to 50° west longitude and between 25° and 50° north latitude. From W. 50° to W. 25° the winds were mostly southwesterly; from W. 25° eastward to the European coasts they were westerly and northwesterly. South of 25° north latitude easterly and northeasterly winds prevailed. In Europe the winds were southeasterly, southerly and southwesterly. In eastern China and in Japan they were northerly and westerly.

The rainfall in the United States during the month of December, 1882, was much less than the average, except in the south Atlantic states, Florida, and in the lake region, where it was slightly above the average. In the north Pacific coast region it was considerably above the average, the excess in that region being 6.86 inches (174.2 millimeters). This excessive rainfall caused destructive floods in Oregon, Washington Territory, and Idaho. In Canada the rainfall was much below the average. In Europe it was about normal in the northern districts, but it was greatly in excess of the average in the southern sections, causing heavy floods in Germany and France.

GENERAL REMARKS.

All data which appear in the DAILY BULLETIN OF SIMULTANEOUS METEOROLOGICAL OBSERVATIONS are copied from the regular exchanges of this office. The barometer readings for land stations, in the first and second columns, are reduced to freezing and their respective standards; those in the third and fourth columns to sea-level. When necessary, corrections for instrumental error, temperature, and reduction to sea-level are always applied, while those for instrumental error, only when such corrections can be ascertained with close approximation, as by comparison when vessels are at or near land stations. Relative humidity generally requires computation from the hygrometrical observations. When rain has fallen, but neither the amount nor duration is recorded, the word "blank" is published in the rainfall column. The weather is generally published as given. The following symbols and abbreviations are common to all series, viz: †, aneroid; *,

instrumental error not known; c, cirrus; k, cumulus; s, stratus; n, nimbus; d, scud; f, fracto; p, pallio; hz, haze; fg, fog; sk, smoke; inap, inappreciable; d. clouds, detached clouds. The movement of the air is published as given on the originals, when indicated by velocity in miles per hour, in meters per second, or by force, all variations of the latter being reduced to the common scale of 0 to 10. Those stations reporting the movement in pounds pressure per square foot are reduced to force on the common scale, and those in kilometers per hour, to meters per second and miles per hour. The distinction between upper and lower clouds is carefully made in the United States and a portion of the Canadian series, and the various formations are indicated by the letters above given and their combinations. In the MONTHLY SUMMARY OF INTERNATIONAL SIMULTANEOUS METEOROLOGICAL OBSERVATIONS the position of stations (latitude and longitude) are obtained from Keith Johnson's "Index Geographicus," except where more exact information is furnished. The elevation of stations are obtained either from the annual, semi-annual, and monthly publications of the various meteorological bureaus here represented, or from the original forms, upon which are entered the daily observations. In the United States series the elevations are computed from the latest surveys, and are carefully revised each month, in order to note any change in the elevation of the barometer-cistern at any station. It is believed for the most part that, throughout the European and other series, the elevations as given represent the height of the barometer-cistern above sea-level; at least, this should be the case. The local time, where omitted or not given correctly in the original, is carefully computed at this office. A letter placed opposite the name of a station or some portion of the data credited thereto, indicates that a certain number of observations are missing, corresponding to the relative position in the alphabet of the letter so used.

INTERNATIONAL CHARTS ACCOMPANYING DAILY BULLETIN AND MONTHLY SUMMARY.

International chart i. shows isobars and isotherms charted from data as appearing in the INTERNATIONAL BULLETIN of same date, as reported by the several observers. Isobars, in continuous lines, exhibit atmospheric pressure at sea-level in English inches; isotherms, in dotted lines, exhibit temperature of the air in degrees, Fahrenheit, similarly charted.

International chart ii. (monthly mean chart), showing mean pressure at sea-level in English inches, mean temperature in degrees, Fahrenheit, mean force and prevailing direction of wind at 7 a. m., Washington mean time.

International chart iii. shows tracks of centres of low barometer. The Arabic numerals show location of the centres of low barometer at 7 a. m., Washington mean time, of that date.

In the above charts, broken lines indicate that the lines so drawn are doubtful.

Arrows show direction of, and fly with, the wind. Force is shown as follows:

SYMBOLS.	FORCE.	VELOCITY.	
		MILES PER HOUR.	METRES PER SECOND.
○	0	0	0
→	1, 2	0 to 9	0 to 4
→	3, 4	9.1 to 22.5	4.1 to 10.1
→	5, 6	22.6 to 40.5	10.1 to 18.1
→	7, 8	40.6 to 67.5	18.1 to 30.2
→	9, 10	67.6 up.	30.2 and over.

The following remarks relate to the individual peculiarities in the *methods* of recording and the *times* of taking the international simultaneous meteorological observations, under the auspices of the various meteorological bureaus:

ALGERIAN SERIES (furnished by co-operation of General Maritz, Commandant Supérieur du Génie in Algeria).—The originals give the barometer in millimetres reduced to sea-level; temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The rainfall is measured at 7 a. m., local time, and the amount indicated in millimetres.

AUSTRALIAN SERIES (furnished by co-operation of R. L. J. Ellery, Director of the Observatory at Melbourne, N. S. W.).—At Melbourne the conversions are published as given in the originals. The movement of the air is indicated by velocity in miles per hour.

AUSTRO-HUNGARIAN SERIES (furnished by co-operation of Prof. Dr. Julius Hann, Director of the Imperial and Royal Central Meteorological Institute at Vienna).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. At the following stations rainfall is measured at local time: Lemburg, 7 p. m.; Vienna, 2 p. m.; Trieste, 7 a. m. The weather is given by the Vienna symbols or in general terms.

BRITISH SERIES (furnished by co-operation of the Meteorological Council, *London, Robert H. Scott, Esq., F. R. S., Secretary, and respective observers*).—In general the originals do not give rainfall or distinction between upper and lower clouds. Relative humidity, except for Bradford and Silloth Rectory, is not given on the originals, but is computed from hygrometrical observations. At Cardington, Oxford, and Sandwick Manse the barometers are given as read off. At Greenwich the movement of the air is indicated by pounds pressure per square foot. At the following stations rainfall is measured at local time: Bradford, 9 a. m., and Aberdeen, 10 a. m. The wind direction is given to 32 points and weather by the Beaufort notation.

CANADIAN SERIES (furnished by co-operation of Charles Carpmael, A. M., F. R. A. S., Director of the Magnetic Observatory at Toronto and Superintendent of the Meteorological Office of the Dominion of Canada, and respective observers).—The originals give the barometer reduced to sea-level in English inches and the temperature in Fahrenheit. Meteorological reports from stations marked with a * are telegraphed daily to the office of the Chief Signal Officer of the Army.

CAPE COLONY SERIES (furnished by co-operation of the Meteorological Commission of Cape Colony, Cape Town, and respective observers).—At Cape Town the barometer is given on the original as corrected for temperature only. Upper and lower clouds are given on a scale of 0 to 10, and the kind occasionally indicated by abbreviating Poëy's classification.

CHINESE SERIES (furnished by co-operation of Marc Dechevrens, S. J., Director of the Meteorological Observatory at Zi-Ka-Wei).—At Zi-Ka-Wei the originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is given in metres per second and the direction to 16 points. The kind of clouds is occasionally given, and the degree of cloudiness on the scale of 0 to 10; distinction between upper and lower clouds is sometimes made. The weather is given in general (French) terms. The rainfall is given in millimetres and measured at the moment of simultaneous observation. Tchang-kia-tchouang, the original gives barometer in millimetres reduced to sea-level, temperature in Centigrade, velocity in kilometres for past 3 hours 53 minutes, clouds on scale of 0–10, no distinction between upper and lower.

DANISH SERIES (furnished by co-operation of Captain N. Hoffmeyer, Director of the Royal Danish Meteorological Institute at Copenhagen).—The originals give the barometer in millimeters reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6. The weather is occasionally given by the Vienna symbols, but it is not certain that they always refer to the moment of simultaneous observations, except at Copenhagen. No distinction is made between upper and lower clouds, and the direction of movement, together with the rainfall, is entirely omitted. At Jacobshavn and Upernavik, the observations are taken at 8 a. m., instead of 8.44 and 8.24 a. m., respectively.

FRENCH SERIES (furnished by co-operation of the Central Meteorological Office of France, Professor E. Mascart, Director, and respective observers).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in metres per second for Mont Louis and Perpignan. In general the rainfall is measured at 9 a. m., local time. The direction of upper and lower clouds is given, but no distinction is made as to kind. The degree of cloudiness is given on a scale of 0 to 4 at Clermont-Ferrand and Puy de Dome, while at other stations the scale of 0 to 10 is employed, or general weather terms, from which the amount of cloudiness is inferred. The weather is given in general terms, except occasionally by the Vienna symbols at Mont Louis and Perpignan. At Besançon the observations are taken at at midday instead instead of 0.32 p. m.

GERMAN SERIES (furnished by co-operation of Prof. Dr. G. Neumeyer, Director of the German Marine Observatory at Hamburg).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The kind of clouds is occasionally given, but no distinction is made between upper and lower; the amount is given on a scale of 0 to 10, but the kind is rarely given. The weather is given in Vienna symbols or in general terms. At Berlin observations are taken at 2 p. m., instead of 1.02 p. m.

GREEK SERIES (furnished by co-operation of Prof. Dr. J. F. Julius Schmidt, Director of the Royal Observatory at Athens).—The originals give the barometer corrected for temperature only and the thermometer in Centigrade. Hygrometrical observations are not given. The kind of clouds is occasionally given, and the amount is inferred from the general weather terms. The movement of the air is indicated by force on a scale of 0 to 10.

INDIAN SERIES (furnished by co-operation of H. F. Blanford, Meteorological Reporter to the Government of India at Calcutta).—The barometric observations refer to the Calcutta standard, which requires a correction of —0.011 inch, or 0.28 mm., as compared with the Kew standard. The wind-velocity given is the average rate of wind since the observation of the preceding day. All conversions are published as given in the originals where the data are recorded to an additional decimal. The weather is given by the Beaufort notation, Vienna symbols, or special symbols.

ITALIAN SERIES (by authority of the Minister of Agriculture, Industry, and Commerce—furnished by co-operation of Professor P. Tacchini, Director of the Central Meteorological Office at Rome, and respective observers).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometres per hour, or by force on a scale of 0 to 4, as at Mondovi, Florence, and Cagliari. No distinction is made between upper and lower clouds, and the amount is given on a scale of 0 to 10.

JAPANESE SERIES (furnished by co-operation of I. Arai, Director of the Imperial Meteorological Observatory at Tokei).—The rainfall is measured at 9.30 a. m., local time, and the conversions are all published as given in the originals. Distinction is generally made between upper and lower clouds, and the amount is given on a scale of 0 to 10. The weather is given in general terms.

MAURITIUS SERIES (furnished by co-operation of C. Meldrum, Secretary of

the Meteorological Society of Mauritius).—All conversions are published as given in the originals. The direction of the wind is given to 64 points, and the rainfall is measured at 9.30 a. m., local time.

MEXICAN SERIES (by authority of the Secretary of Public Works—furnished by co-operation of Señor Mariano Barcena, Director of the Central Meteorological Observatory in the City of Mexico, and respective observers).—All conversions are published as given in the originals, but when an evident mistake has been made, the data is queried at this office. The kind of clouds is given, and also the direction and amount of both upper and lower. The degree of cloudiness is indicated on a scale of 0 to 10. Rainfall is generally measured at 6 a. m., local time.

NETHERLANDS SERIES (furnished by co-operation of Professor Buys Ballot, Director of the Royal Meteorological Institute of the Netherlands at Utrecht).—The originals give the barometer in millimetres reduced to sea-level and the temperatures in Centigrade. The movement of the air is indicated by pressure in kilograms per square metre, except at Hellevoetsluis, which gives force on a scale of 0 to 12. The humidity is not given on the originals, but for two stations it is computed from the hygrometrical observations. The weather is only given for Utrecht, from which the amount of cloudiness at that station is inferred.

NORWEGIAN SERIES (furnished by co-operation of Professor H. Mohn, Director of the Royal Norwegian Meteorological Institute at Christiana).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade The movement of the air is indicated by velocity in metres per second or by force on a scale of 0 to 6. The weather is occasionally given by Vienna symbols. At Bergen observations upon the weather and degree of cloudiness are made at 2 p. m., local time. At Brono the observations are taken at 2 p. m., instead of 12.57 p. m.

PORTUGUESE SERIES (furnished by co-operation of J. C. de Brito Capello, Director of the Meteorological Observatory of the Infante Dom Luiz at Lisbon).—In the originals the barometer is given in millimetres and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometres per hour. The weather is occasionally given by the Vienna symbols. The rainfall is measured at noon each day.

RUSSIAN SERIES (furnished by co-operation of Professor H. Wild, Director of the Imperial Central Physical Observatory of Russia at St. Petersburg).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. At Astrakhan the barometer-cistern is below sea-level. The movement of the air is indicated by velocity in meters per second. No distinction is made between upper and lower clouds; the amount is given on a scale of 0 to 10, and the kind occasionally. The weather is occasionally given by the Vienna symbols.

SCOTTISH SERIES (furnished by co-operation of Alexander Buchan, M. A., F. R. S. E., Secretary of the Scottish Meteorological Society at Edinburg, and respective observers).—The originals give the barometer as read off and the movement of the air is indicated by force on a scale of 0 to 6. Distinction is made between upper and lower clouds as to degree, and the amount of cloudiness is given on a scale of 0 to 10. The direction of upper clouds is given separately. The rainfall, temperature, and humidity are not given at North Unst. The wind direction is given to 32 points.

SPANISH SERIES (furnished by co-operation of the Royal Observatory at Madrid, and respective observers).—The movement of the air, except for sub-series, is given in kilometres per hour. The kind of clouds is occasionally given, and the degree of cloudiness on a scale of 0 to 10. The rainfall at San Juan is measured at 4 p. m., local time, and at San Fernando at midnight. The weather is given in general (Spanish) terms.

SWEDISH SERIES (furnished by co-operation of Professor R. Rubenson, Director of the Royal Swedish Meteorological Institute, and of Professor H. H. Hildebrandsson, Director of the Meteorological Observatory of the Upsala University).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in metres per second for Upsala. The kind of clouds is not given, but the degree of cloudiness is indicated on a scale of 0 to 10. The rainfall is measured at 8 a. m., local time, and the weather is occasionally given by the Vienna symbols.

SWISS SERIES (furnished by co-operation of Professor E. Plantamour, Director of the Observatory at Geneva).—The originals give the barometer in millimetres, corrected for temperature only, and the thermometer in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10.

TURKISH SERIES (furnished by co-operation of A. Coumbary, Effendi, Director of the Central Observatory at Constantinople, and of Professor C. V. A. van Dyck, Superintendent of the Lee Observatory at Beirut).—The originals give the barometer in millimetres reduced to sea-level. The temperature is given in Centigrade. The movement of the air is indicated by force on a scale of 0 to 7 for Valona, and on a scale of 0 to 12 for Beirut. At Constantinople the velocity is given in meters per second. The kind of clouds is not given, but the amount is indicated on a scale of 0 to 10, except at Valona, at which station it is inferred from the general weather terms.

UNITED STATES SERIES (by authority of the Secretary of War—furnished by co-operation of W. B. Hazen, Brigadier and Brevet Major General, Chief Signal Officer, U. S. Army).

UNITED STATES SUB-SERIES (furnished by co-operation of the respective observers).—The originals generally give the barometer reduced to sea-level and the temperature in Fahrenheit. At Bogota and Navassa the barometer is corrected for temperature only; at Puerto Berrio, is given as read off, and at Rivas is omitted. The movement of the air is generally indicated by velocity in miles per hour, except on a scale of 0 to 10 for Bogota, Paramaribo, and Rivas, and 0 to 12 for Puerto Berrio. The wind direction is generally given to 16 points, except 8 points for Bogota and 32 points for Rivas. At Rivas the humidity is obtained by readings from Saussure's hygrometer.

BRITISH NAVAL SERIES (furnished by co-operation of the Meteorological Council, London, Robert H. Scott, Esq., F. R. S., Secretary).—The originals give the barometer as read off. The wind direction is given to 32 points. The movement of the air is indicated by force on a scale of 0 to 12. The distinction between upper and lower clouds is made as to direction, but not as to amount. The height of the sea-disturbance is given on a scale of 0 to 9, and the weather by the Beaufort notation. The direction of movement of wind, clouds, and sea is compass direction, corrected only for deviation caused by the iron in the ship, while the correction for magnetic variation is applied at this office. The humidity is not given, but is computed from the hygrometrical observations.

PORTUGUESE NAVAL SERIES (furnished by co-operation of J. C. de Brito Capello, Director of the Meteorological Observatory of the Infante Dom Luiz at Lisbon).—The originals give the barometer in millimetres, corrected for temperature only, and the thermometer in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The humidity is not given, but is computed from the hygrometrical observations. The kind of clouds is not given, but the amount is indicated on a scale of 0 to 10; the direction of movement is given without distinction between the upper and lower. The height of sea disturbance is given on a scale of 0 to 9 and the weather by the Beaufort notation. The rainfall is not measured, but the duration is generally given inhours and minutes.

SWEDISH NAVAL SERIES (furnished by co-operation of E. Malmburg, Director of the Nautical Meteorological Bureau at Stockholm).—The originals give the barometer as read off. The movement of the air is indicated by force on a scale of 0 to 12, and the direction is corrected for magnetic variation at this office. The humidity is not given, but is computed from the hygrometrical observations. The rainfall is omitted. The height of the sea-swell is given on a scale of 0 to 9 and the weather by the Beaufort notation.

UNITED STATES NAVAL SERIES (by authority of the Secretary of the Navy—furnished by co-operation of the Navy Department, through Commodore John G. Walker, U. S. N., Chief of Bureau of Navigation).—The originals give the barometer as read off. The humidity is not given, but is computed from the hygrometrical observations. The sea-swell and weather are given in general terms. The direction of the wind is compass direction, corrected for variation.

MERCHANT-MARINE SERIES (furnished by co-operation of the owners, agents, &c., of the respective lines and vessels).—Same as U. S. Naval.

OCEAN SQUARES.—The table of ocean square data shows (1) the location of the centres of squares whose sides extend 5° each in latitude and longitude, (2) the monthly mean pressure and temperature of the air, and the mean force and total frequency of the wind at 7 a. m., Washington time, computed for the centre of each square from daily readings as obtained by interpolation between the isobars and isotherms of the daily international simultaneous weather maps.

ERRATA.

SUMMARY for July, 1882, International Meteorology, table of mean temperature for December, 1881, page 10, Portugal, mean temperature 30°.5, should read 50°.5.

DAILY BULLETIN, December 2d, 1882, page 5, Toledo, Ohio, reduced barometer 858.7 mm., should read 758.7; page 8, sch. "Minnie A. Bonsall," St. John's, Porto Rico, W. I., should read St. John's, Florida; same correction on 3d.

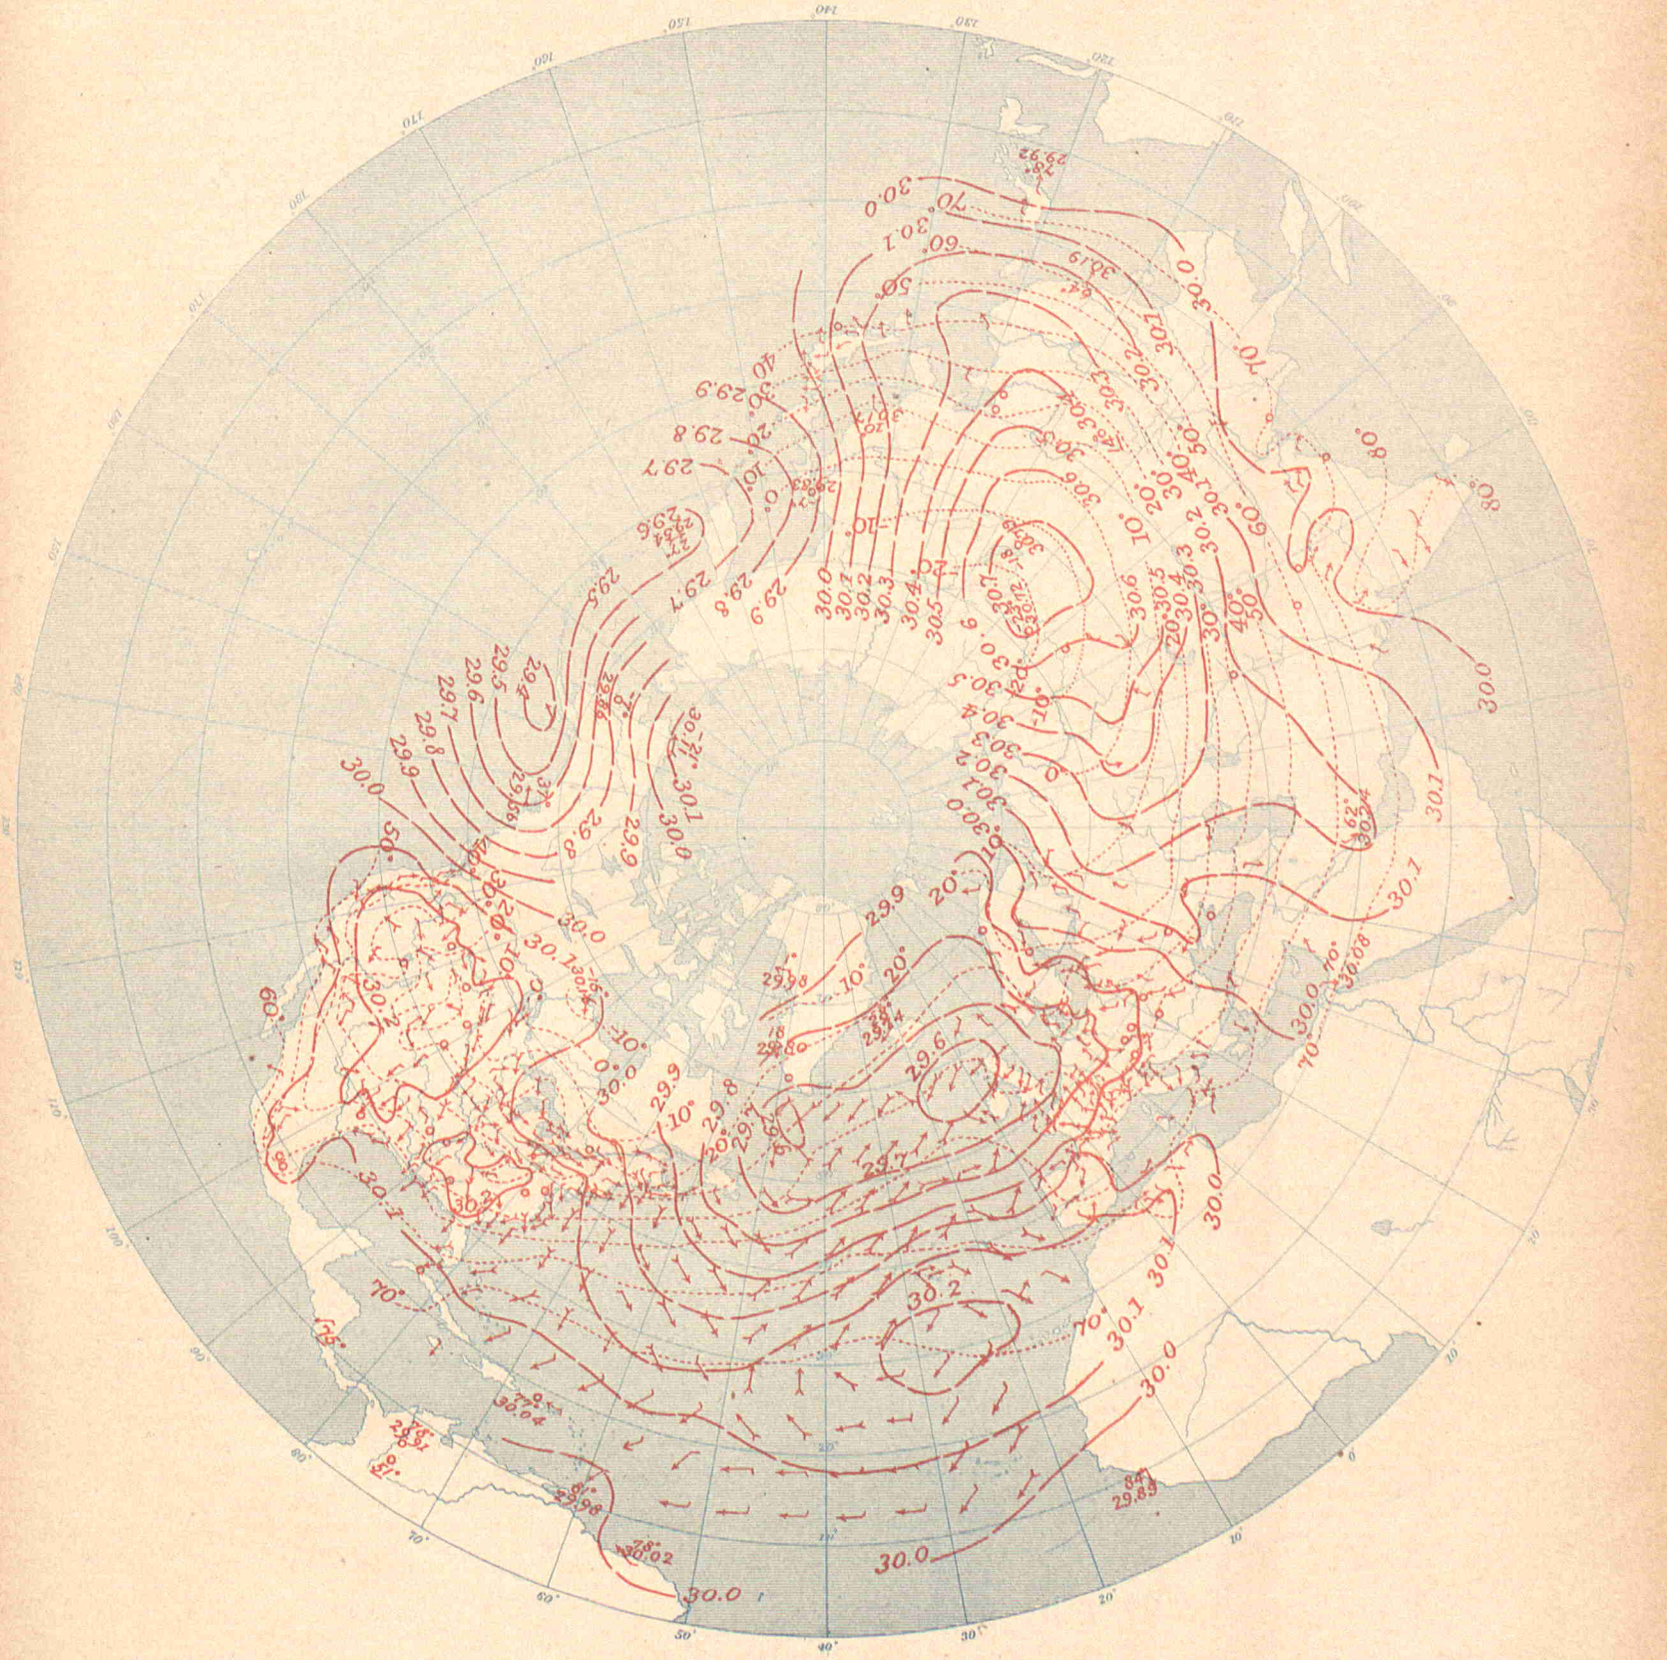
7th, page 8, s. s. "Malabar," barometer 29.24 inches, should read 29.22; sch. "Minnie A. Bonsall," barometer 30.22 inches, should read 30.24; bk. "Joseph A. Ropes," E. 52° 32′, should read E. 52° 34′.

26th, page 1, British, Cardington, humidity 81, should read 91; Canadian, Rockliffe, weather "heavy snow," should read "light snow;" page 3, Russian, Akmolinski, actual barometer 753.0 mm., should read 735.0.

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

W. B. HAZEN,
Brig. & Bvt. Maj. Gen'l,
Chief Signal Officer, U. S. A.

International Chart II. December, 1882. Isobars, Isotherms, and Winds.



UNITED STATES OF AMERICA.

By Order of the Secretary of War.
W.B. Hazen, Chief Signal Officer.
