NOTE.—The above observations, taken at 7 a. m., Washington time, were received too late for publication in the DAILY BULLETIN, and are given here in full from date of last published report (September 30, 1882). For continuation of this station, see United States series, DAILY BULLETIN.

REVIEW.

INTERNATIONAL METEOROLOGY.

[*Pressure expressed in inches and millimetres; temperature in degrees, Fahrenheit and Centigrade.*]

The following descriptions refer to chart ii. for the months of September and October, 1882, which chart was issued with the SUMMARY for those months. The chart for November, 1882, issued with the present SUMMARY, is also described herein. These charts continue the series of international charts begun in January, 1877, and exhibit the mean pressure, mean temperature, and prevailing direction of the wind over the northern hemisphere, as determined from one observation taken simultaneously each day at 7 a. m. Washington, or 0 h. 8 m. Greenwich, mean time.

For the description of these charts much valuable information has been obtained from the "Monatliche Uebersicht der Witterung," published by Professor Dr. G. Neumayer, director of the German Marine Observatory, at Hamburg, Germany.

For the month of September, 1882, the areas of barometric minima are found over the Atlantic ocean north of 60° north latitude, and in British India, respectively. In the former region, which comprises Iceland and southern Greenland, the mean atmospheric pressure ranges from 29.6 (751.8) at Stykkisholm, to 29.65 (753.1) at Godthaab and 29.69 (754.1) at Ivigtut. In the latter region (British India), the means range from 29.65 (753.1) in the Punjab to 29.69 (754.1) at stations on the western shore of the Bay of Bengal. In southern India, and at stations on the shores of the Arabian sea, the mean pressure ranges from 29.75 (755.6) to 29.8 (756.9). In the British Isles, Norway, and that part of Europe lying between 3° and 15° east longitude, the mean pressure ranges from 29.8 (756.9) to 29.9 (759.4). In the western part of France and in the southern peninsulas, it ranges from 29.92 (760.0) to 30.09 (764.3). From E. 15° to the Ural mountains the barometric means range from 29.95 (760.9) to 30.1 (764.9), the pressure being greatest in the vicinity of Moscow, Russia. In the United States, the area of barometric minima is situated in the southwestern part of the country between N. 30° and 40°, and W. 109° and 116°, and is indicated by the isobar for 29.9 (759.4).

The most marked area of high pressures is that which occupies the Atlantic ocean, its centre being over the Azores, where the mean pressure is 30.29 (769.4). The isobar for 30.2 (767.1) extends from W. 18° to W. 40°, and from N. 30° to N. 44°. Other areas of high pressures, indicated by the isobar for 30.1 (764.5), are situated as follows: one in Russia, with its centre near Moscow, where the mean pressure is 30.12 (765.0); two in the United States east of the ninety-fifth meridian; and one in western Canada and the northern part of the lake region.

Compared with the preceding month (August, 1882), there has been a slight but general increase of pressure throughout the United States, except in Florida, where there has been a decrease of about .04 inch. In western and central Europe there has been a slight decrease of pressure, but in the Scandinavian and Danish peninsulas and in Russia there has been a decided change, the increase of pressure averaging .2 inch. Throughout the continent of Asia there has been an increase of pressure. Over the Atlantic ocean the distribution of pressure differs but slightly from that of the preceding month.

Compared with the corresponding month of previous years, the mean atmospheric pressure over the United States was generally above the normal, except on the north Pacific coast and in Florida; in these districts there were slight deficiencies.

In Europe the mean pressure was normal, or below the normal, except in Russia and in the Scandinavian peninsula, where it was above normal.

The following table gives the mean pressure and the mean temperature, with corresponding departures, for the month of September, 1882, in the several countries of the eastern hemisphere, compared with the means as determined from observations taken during the years 1877, 1878, 1879, 1880, and 1881:

Countries.	Mean pressure.			Mean temperature.		
	Sept., 1877, 1878, 1879, 1880, 1881.	Sept., 1882.	Departure.	Sept., 1877, 1878, 1879, 1880, 1881.	Sept., 1882.	Departure.
				°	°	°
Algeria	30.02	30.02	normal	82.1	79.6	— 2.5
Austria	29.97	29.90	—0.07	65.9	66.4	+ 0.5

* Mean for four years only.

In the United States the mean temperature of the air was normal, or below the normal, over the country south of the thirty-eighth parallel; north of that parallel the means were slightly in excess of the normal. In that portion of Europe lying south of 50° north latitude, the mean temperature of the air was below the normal. North of the above latitude it was above the average. In British India the temperature was 0°.8 above the five years' mean. The highest mean temperature reported was 90°.6 Fahr. (32°.6 Cent.) at Agra, and the lowest was 70°.7 Fahr. (21°.5 Cent.) at Belgaum.

The following are some of the extreme mean temperatures reported at isolated stations during the month:

Highest.	Fahr.	Cent.	Lowest.	Fahr.	Cent.
	°	°		°	°
Beirut, Syria	85.2	29.9	Godthaab, Greenland	37.0	2.8
Athens, Greece	84.4	29.1	York Factory, B. A	39.2	4.0
Bridgetown, Barbadoes	84.0	28.9	Ivigtut, Greenland	40.5	4.7
Nassau, Bahamas	83.2	28.4	Stykkisholm, Iceland	44.1	6.7
Saint Thomas, W. I	82.0	27.8	Yeniseisk, Siberia	47.3	8.5

In the United States east of the hundredth meridian and south of N. 38°, the prevailing winds were northerly and north-

easterly. North of N. 38° they were westerly and southwesterly. West of the hundredth meridian they were southerly and westerly. In Canada the winds were mostly northerly and northeasterly. Over the Atlantic ocean the winds were as follows: from the coast of the United States eastward to W. 60°, northeasterly; from W. 60° to W. 25°, and between N. 20° and 45°, southerly and southeasterly; from W. 25° to the European coasts, northerly and northwesterly. North of 45° north latitude the winds were mostly westerly and northwesterly. In Europe the prevailing winds were southerly, southwesterly, and westerly, over the countries west of 10° east longitude, and easterly and southeasterly over the districts east of that meridian. In British India the winds were from southwest to northwest. In China they were easterly, and in Japan they were mostly northerly.

The rainfall during the month of September, 1882, was less than the average in that portion of the United States lying between N. 36° and 48° and W. 80° and 100°. It was also below the average in the south Atlantic and east Gulf states and in Florida. In New England, the middle Atlantic, and west Gulf states, it was in excess of the average. In southern Europe the rainfall was considerably in excess of the average, and caused disastrous floods in northern Italy and the Tyrol, the damage to property being estimated at two millions of florins. In northern Europe the rainfall was below the average.

For the month of October, 1882, the region of least pressure is indicated by the isobar for 29.5 (749.3), which encloses southern Greenland and the Atlantic ocean southward to N. 56° and eastward to W. 25°. The barometric gradient gradually increases to the southward and eastward until the isobar for 30.0 (762.0) is reached; that isobar extends from the Gulf of Saint Lawrence eastward along the forty-third parallel to the southern peninsulas of Europe and thence northward through Austro-Hungary, Germany, and Denmark. In the North American continent the pressure is least in the extreme northwestern part of the United States and in British America, the means ranging from 29.85 (758.2) to 29.9 (759.4). In British India the means range from 29.75 (755.6) in the northern districts to 29.8 (756.9) in the south. In China and Japan the mean pressure ranges from 29.9 (759.4) in the south to 30.1 (764.5) in the north.

The areas of barometric maxima appear in eastern Europe, Asia, and in the United States of North America, respectively. The first of these covers European Russia, and extends from the Gulf of Bothnia southeastward to the Caspian sea. In this region the mean pressure ranges from 30.23 (767.8) in the southern part of the area, to 30.27 (768.8) in the northwestern districts. In Asia the region of greatest pressures is in southwestern Siberia, the mean pressure at Semipalatinsk, being 30.23 (767.8). In other parts of Siberia the mean pressure is above 30.1 (764.5). The third area of high pressures, that of the United States, is indicated by the isobar for 30.1 (764.5), and extends from southwest to northeast over that part of the country lying between W. 88° and the Atlantic. The southwestern limit of this area is in Tennessee, and its northeastern limit is in Maine. The high area of the Atlantic ocean is indicated by the isobar for 30.1 (764.5), its northern limit being a little north of the Azores.

Compared with the preceding month (September, 1882), there has been no material change in the position of the areas of absolute minima, but the atmospheric pressure has decreased about .2 inch in the depression over Greenland, while it has increased in that situated in British India. The decrease of pressure above referred to has extended southward over the Atlantic to the Azores, where it is about .15 inch, and from W. 50° eastward to the European coast. In the United States there has been a slight decrease of pressure over the country west of the eighty-fifth meridian, except in California, Arizona, and New Mexico, where the pressure has slightly increased. In eastern Canada and in the Atlantic coast states there has been no material change in pressure. In Europe there has been an increase of pressure in all parts of the continent, except in France and in the British Isles, the increase being greatest in Russia and in the Scandinavian peninsula. In Asia there has been a general increase of pressure.

Compared with the corresponding month of previous years, the mean atmospheric pressure in the United States was everywhere below the normal, except in northern New England, the departures being greatest in the northwestern sections of the country. In Canada the mean pressure was above the normal. In Europe the mean atmospheric pressure was above the normal in the northern and eastern parts of the continent; it was normal in the southern districts, and below the normal in France and in the British Isles.

The following table gives the mean pressure and mean temperature, with corresponding departures, for the month of October, 1882, in the several countries of the eastern hemisphere, compared with the means as determined from observations taken during the years 1877, 1878, 1879, 1880, and 1881:

Countries.	Mean pressure.			Mean temperature.		
	Oct., 1877, 1878, 1879, 1880, 1881.	Oct., 1882.	Departure.	Oct., 1877, 1878, 1879, 1880, 1881.	Oct., 1882.	Departure.

*Means for four years only.

In the United States the mean temperature of the air averaged about 3° above the normal in the country east of the hundredth meridian. West of that meridian the temperature was about 2°.5 below the normal. In Canada it was above

the normal. In Europe the mean temperature of the air was above the normal in the northern parts of the continent, but was below the normal in the southwestern sections and in Russia. In Siberia the temperature was much below the normal. In British India it was 1°.4 above the five-year mean. The highest mean temperature reported was 93°.3 Fahr. (34°.1 Cent.) at Deesa, and the lowest was 74°.2 Fahr. (23°.4 Cent.) at Belgaum.

The following are some of the extreme mean temperatures reported at isolated stations during the month:

Highest.	Fahr.	Cent.	Lowest.	Fahr.	Cent.
	°	°		°	°
Bridgetown, Barbadoes	82.7	28.2	Yeniseisk, Siberia	21.9	−5.6
Freetown, Africa	81.9	27.7	Godthaab, Greenland	25.9	−3.4
Saint Thomas, W. I	81.2	27.3	Akmolinski, Siberia	26.8	−2.9
Nassau, Bahamas, W. I	89.5	26.9	Barnaul, Siberia	28.2	−2.1
			York Factory, B. A	29.7	−1.3

In the United States the prevailing winds were northerly and northeasterly in New England, and the country east of the Ohio and Mississippi rivers. West of this limit the winds were mostly southerly and westerly. In Canada they were southwesterly, westerly, and northwesterly. Over the north Atlantic ocean the winds were northeasterly, from the coast of the United States eastward to W. 70°; from W. 70° to W. 50° and between 20° and 40° north latitude, they were easterly and southeasterly; from W. 50° to W. 20°, and between N. 20° and 35°, they were northeasterly. North of 35° north latitude, and from W. 50° to the European coasts, the winds were mostly northwesterly, except off the British coasts, where they were southerly and southwesterly. South of N. 20°, northeasterly winds prevailed. In northern, eastern, and central Europe, the winds were easterly, southeasterly, and southerly; in western Europe they were southwesterly. In China and Japan the winds were from north to east.

The rainfall during the month of October, 1882, was below the average in New England, the middle Atlantic and east Gulf states. There were also deficiencies in Tennessee, the Ohio valley, and the lower lake region. Elsewhere the rainfall was in excess of the average, particularly so in California, where the excess amounted to 6.0 inches. In northeastern Europe the rainfall was below the average, but in all other sections it was above the average, especially in the southern districts, causing a continuation of the disastrous floods which began in September in upper Italy and the Tyrol. Severe floods also occurred in southern France and in England during the last decade of the month.

The following description refers to chart ii. for November, 1882, issued herewith:

The region of barometric minima, which is enclosed by the isobar for 29.5 (749.3), comprises eastern Iceland, northern Scotland, and the Färöe and Shetland islands, the lowest mean pressure reported being 29.39 (746.5) at North Unst, Shetlands. In the British Isles and that part of Europe lying north of 50° north latitude, and west of 30° east longitude, the mean pressure ranges from 29.6 (751.8) to 29.8 (756.9). In eastern Russia and the rest of Europe, excepting the Iberian peninsula, the means range from 29.8 (759.9) to 30.0 (762.0).

Three areas of barometric maxima are shown on the chart, situated, respectively, in the United States of North America, over the Atlantic ocean, and in Asia. The first occupies the Rocky mountain regions of the United States, and is inclosed by the isobar for 30.3 (769.6). From the extreme northwest southeastward to Texas and the country south of N. 40° and east of W. 90° the means range from 30.2 (767.1) to 30.28 (769.1). In the lake region and on the Pacific and Atlantic coasts the mean pressure ranges from 30.1 (764.5) to 30.18 (766.6). In New England and in Canada it ranges from 29.95 (760.7) to 30.05 (763.3). The second area of high pressures, above referred to, occupies the Azores, where the mean atmospheric pressure is 30.3 (769.6). The isobar for 30.2 (767.1) extends from W. 34° eastward to Portugal and western Spain, while that for 30.1 (764.5) stretches from W. 38° eastward along the forty-fifth parallel, covering the southern part of the Bay of Biscay, eastern Spain, and the southwestern part of the Mediterranean. The third area, that of Asia, is indicated by the isobar for 30.4 (772.1), and occupies that part of Siberia lying between N. 60° and 45° and E. 80° and 100°. In the eastern and northeastern parts of China the pressure ranges from 30.2 (767.1) to 30.35 (770.9). In British India it ranges from 29.85 (758.2) to 30.0 (762.0), and in Japan from 30.05 (763.3), at eastern stations, to 30.2 (767.1) in the west.

Compared with the preceding month, (October, 1882,) the area of least pressure has moved eastward, causing a decrease of pressure averaging .23 inch over the whole of Europe, except France and the Iberian peninsula, where there has been an increase of about .15 inch. In the United States there has been an increase of pressure throughout the entire country, except New England, where there was a slight decrease. There has also been a slight decrease in the Maritime Provinces of Canada, but the pressure has increased in the western provinces of the Dominion. Over the Atlantic ocean, south of N. 55°, the atmospheric pressure is greater than that of the preceding month; north of the above-mentioned parallel no material change has taken place. In all parts of Asia there has been a decided increase of pressure.

Compared with the corresponding month of previous years, the mean atmospheric pressure in November, 1882, was, in the United States, above the normal in the lake region and from the Mississippi river westward to the Rocky mountains. On the Pacific coast, and from New England southwestward to the Mississippi river, it was normal or slightly below the normal. In Europe the pressure was considerably below the normal in all districts except the Scandinavian and Iberian peninsulas.

The accompanying table shows the deviations in pressure and temperature at isolated stations during November, 1882, as compared with the means of five years:

Stations.	Mean pressure.			Mean temperature.		
	Nov., 1877, 1878, 1879, 1880, 1881.	Nov., 1882.	Departure.	Nov., 1877, 1878, 1879, 1880, 1881.	Nov., 1882.	Departure.

Spain[a]	30.07	30.15	+0.08	58.1	56.8	− 1.3
Sweden	29.72	29.78	+0.06	32.8	27.5	− 5.3

[a] Mean for four years only.

The mean temperature of the air in the United States was below the normal in the Atlantic coast states and in the states west of the Rocky mountains. In the country situated between these limits the temperature was from 1° to 5° above the normal. In Canada it was about normal. In Europe the mean temperature was below the normal in the northern districts, the greatest departure occurring in the Scandinavian peninsula. In the districts south of 48° north latitude, the temperature was normal or slightly above. In British India it was 0.7 above the five-year average. The highest mean temperature reported was 83°.4 Fahr. (28°.6 Cent.) at Deesa, and the lowest was 67°.0 Fahr. (19°.4 Cent.) at Hazaribagh.

The following are some of the extreme mean temperatures reported at isolated stations during the month:

Highest.	Fahr.	Cent.	Lowest.	Fahr.	Cent.
	°	°		°	°
Freetown, Africa	86.7	30.4	Yeniseisk, Siberia	3.7	−15.7
Zanzibar, Africa	82.8	28.2	Upernavik, Greenland	10.8	−11.8
Bridgetown, Barbadoes	81.2	27.3	York Factory, B. A	11.2	−11.6
Paramaribo, S. A	79.3	26.3	Archangel, Russia	11.3	−11.5
Manila, Philippine Islands	78.9	26.1	Jacobshavn, Greenland	12.4	−10.9
			Barnaul, Siberia	14.5	−9.7

The prevailing winds in the United States and Canada were southwesterly, westerly, northwesterly, and northerly. Over the north Atlantic the winds were northerly and northeasterly from the United States eastward to W. 50°; from W. 50° to W. 25° and between N. 20° and 50° they were southerly and southeasterly; from W. 25° to the coasts of Portugal and Africa they were northeasterly. In the Bay of Biscay and over the ocean north of N. 60° they were westerly and northwesterly. In Europe the winds were mostly westerly and southwesterly, except in the Scandinavian peninsula and in Russia, where they were from south to east.

In the United States the rainfall for November, 1882, was below the average in all districts east of the Rocky mountains, except in Florida and the west Gulf states; the districts of greatest deficiency were the New England and middle Atlantic states. West of the Rocky mountains the rainfall was in excess of the average, except in the north Pacific region, where there was a deficiency of 2.38 inches. In Canada the rainfall was below the average. In Europe the rainfall was largely in excess of the average, especially in the southern districts, where four times the average amount of rain fell. Heavy floods occurred in Germany, France, and Hungary, the most disastrous being the overflow of the Rhine. The floods were also severe in France; much property was destroyed, and many persons were rendered destitute.

GENERAL REMARKS.

All data which appear in the DAILY BULLETIN OF SIMULTANEOUS METEOROLOGICAL OBSERVATIONS are copied from the regular exchanges of this office. The barometer readings for land stations, in the first and second columns are reduced to freezing and their respective standards; those in the third and fourth columns to sea-level. When necessary, corrections for instrumental error, temperature, and reduction to sea-level are always applied, while those for instrumental error, only when such corrections can be ascertained with close approximation, as by comparison when vessels are at or near land stations. Relative humidity generally requires computation from the hygrometrical observations. When rain has fallen, but neither the amount nor duration is recorded, the word "blank" is published in the rainfall column. The weather is generally published as given. The following symbols and abbreviations are common to all series, viz: †, aneroid; *, instrumental error not known; c, cirrus; k, cumulus; s, stratus; n, nimbus; d, scud; f, fracto; p, pallio; hz, haze; fg, fog; sk, smoke; inap, inappreciable; d. clouds, detached clouds. The movement of the air is published as given on the originals, when indicated by velocity in miles per hour, in meters per second, or by force, all variations of the latter being reduced to the common scale of 0 to 10. Those stations reporting the movement in pounds pressure per square foot are reduced to force on the common scale, and those in kilometers per hour, to meters per second and miles per hour. The distinction between upper and lower clouds is carefully made in the United States and a portion of the Canadian series, and the various formations are indicated by the letters above given and their combinations. In the MONTHLY SUMMARY OF INTERNATIONAL SIMULTANEOUS METEOROLOGICAL OBSERVATIONS the position of stations (latitude and longitude) are obtained from Keith Johnson's "Index Geographicus," except where more exact information is furnished. The elevation of stations are obtained either from the annual, semi-annual, and monthly publications of the various meteorological bureaus here represented, or from the original forms, upon which are entered the daily observations. In the United States series the elevations are computed from the latest surveys, and are carefully revised each month, in order to note any change in the elevation of the barometer-cistern at any station. It is believed for the most part that, throughout the European and other series, the elevations as given represent the height of the barometer-cistern above sea-level; at least, this should be the case. The local time, where omitted or not given correctly in the originals, is carefully computed at this office. A letter placed opposite the name of a station or some portion of the data credited thereto, indicates that a certain number of observations are missing, corresponding to the relative position in the alphabet of the letter so used.

INTERNATIONAL CHARTS ACCOMPANYING DAILY BULLETIN AND MONTHLY SUMMARY.

International chart i. shows isobars and isotherms charted from data as appearing in the INTERNATIONAL BULLETIN of same date, as reported by the several observers. Isobars, in continuous lines, exhibit atmospheric pressure at sea-level in English inches; isotherms, in dotted lines, exhibit temperature of the air in degrees, Fahrenheit, similarly charted.

International chart ii. (monthly mean chart), showing mean pressure at sea-level in English inches, mean temperature in degrees, Fahrenheit, mean force and prevailing direction of wind at 7 a. m., Washington mean time.

International chart iii. shows tracks of centres of low barometer. The Arabic numerals show location of the centres of low barometer at 7 a. m., Washington mean time, of that date.

In the above charts, broken lines indicate that the lines so drawn are doubtful.

Arrows show direction of, and fly with, the wind. Force is shown as follows:

Symbols.	Force.	Velocity.	
		Miles per hour.	Metres per second.
○	0	0	0
→	1, 2	0 to 9	0 to 4
→	3, 4	9.1 to 22.5	4.1 to 10.1
→	5, 6	22.6 to 40.5	10.1 to 18.2
→	7, 8	40.6 to 67.5	18.1 to 30.2
→	9, 10	67.6 up.	30.2 and over.

The following remarks relate to the individual peculiarities in the *methods* of recording and the *times* of taking the international simultaneous meteorological observations, under the auspices of the various meteorological bureaus:

ALGERIAN SERIES (furnished by co-operation of General Maritz, Commandant Supérieur du Génie in Algeria).—The originals give the barometer in millimetres reduced to sea-level; temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The rainfall is measured at 7 a. m., local time, and the amount indicated in millimetres.

AUSTRALIAN SERIES (furnished by co-operation of R. L. J. Ellery, Director of the Observatory at Melbourne, N. S. W.).—At Melbourne the conversions are published as given in the originals. The movement of the air is indicated by velocity in miles per hour.

AUSTRO-HUNGARIAN SERIES (furnished by co-operation of Prof. Dr. Julius Hann, Director of the Imperial and Royal Central Meteorological Institute at Vienna).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. At the following stations rainfall is measured at local time: Lemburg, 7 p. m.; Vienna, 2 p. m.; Trieste, 7 a. m. The weather is given by the Vienna symbols or in general terms.

BRITISH SERIES (furnished by co-operation of the Meteorological Council, London, Robert H. Scott, Esq., F. R. S., Secretary, and respective observers).—In general the originals do not give rainfall or distinction between upper and lower clouds. Relative humidity, except for Bradford and Silloth

Rectory, is not given on the originals, but is computed from hygrometrical observations. At Cardington, Oxford, and Sandwick Manse the barometers are given as read off. At Greenwich the movement of the air is indicated by pounds pressure per square foot. At the following stations rainfall is measured at local time: Bradford, 9 a. m., and Aberdeen, 10 a. m. The wind direction is given to 32 points and weather by the Beaufort notation.

CANADIAN SERIES (furnished by co-operation of Charles Carpmael, A. M., F. R. A. S., Director of the Magnetic Observatory at Toronto and Superintendent of the Meteorological Office of the Dominion of Canada, and respective observers).—The originals give the barometer reduced to sea-level in English inches and the temperature in Fahrenheit. Meteorological reports from stations marked with a * are telegraphed daily to the office of the Chief Signal Officer of the Army.

CAPE COLONY SERIES (furnished by co-operation of the Meteorological Commission of Cape Colony, Cape Town, and respective observers).—At Cape Town the barometer is given on the original as corrected for temperature only. Upper and lower clouds are given on a scale of 0 to 10, and the kind occasionally indicated by abbreviating Poëy's classification.

CHINESE SERIES (furnished by co-operation of Marc Dechevrens, S. J., Director of the Meteorological Observatory at Zi-Ka-Wei).—At Zi-Ka-Wei the originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is given in metres per second and the direction to 16 points. The kind of clouds is occasionally given, and the degree of cloudiness on the scale of 0 to 10; distinction between upper and lower clouds is sometimes made. The weather is given in general (French) terms. The rainfall is given in millimetres and measured at the moment of simultaneous observation. Tchang-kia-tchouang, the original gives barometer in millimetres reduced to sea-level, temperature in Centigrade, velocity in kilometres for past 3 hours 53 minutes, clouds on scale of 0–10, no distinction between upper and lower.

DANISH SERIES (furnished by co-operation of Captain N. Hoffmeyer, Director of the Royal Danish Meteorological Institute at Copenhagen).—The originals give the barometer in millimeters reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6. The weather is occasionally given by the Vienna symbols, but it is not certain that they always refer to the moment of simultaneous observations, except at Copenhagen. No distinction is made between upper and lower clouds, and the direction of movement, together with the rainfall, is entirely omitted.

FRENCH SERIES (furnished by co-operation of the Central Meteorological Office of France, Professor E. Mascart, Director, and respective observers).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in metres per second for Mont Louis and Perpignan. In general the rainfall is measured at 9 a. m., local time. The direction of upper and lower clouds is given, but no distinction is made as to kind. The degree of cloudiness is given on a scale of 0 to 4 at Clermont-Ferrand and Puy de Dome, while at other stations the scale of 0 to 10 is employed, or general weather terms, from which the amount of cloudiness is inferred. The weather is given in general terms, except occasionally by the Vienna symbols at Mont Louis and Perpignan. At Besançon the observations are taken at at midday instead instead of 0.32 p. m.

GERMAN SERIES (furnished by co-operation of Prof. Dr. G. Neumeyer, Director of the German Marine Observatory at Hamburg).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The kind of clouds is occasionally given, but no distinction is made between upper and lower; the amount is given on a scale of 0 to 10, but the kind is rarely given. The weather is given in Vienna symbols or in general terms. At Berlin observations are taken at 2 p. m., instead of 1.02 p. m.

GREEK SERIES (furnished by co-operation of Prof. Dr. J. F. Julius Schmidt, Director of the Royal Observatory at Athens).—The originals give the barometer corrected for temperature only and the thermometer in Centigrade. Hygrometrical observations are not given. The kind of clouds is occasionally given, and the amount is inferred from the general weather terms. The movement of the air is indicated by force on a scale of 0 to 10.

INDIAN SERIES (furnished by co-operation of H. F. Blanford, Meteorological Reporter to the Government of India at Calcutta).—The barometric observations refer to the Calcutta standard, which requires a correction of —0.011 inch, or 0.28 mm., as compared with the Kew standard. The wind-velocity given is the average rate of wind since the observation of the preceding day. All conversions are published as given in the originals where the data are recorded to an additional decimal. The weather is given by the Beaufort notation, Vienna symbols, or special symbols.

ITALIAN SERIES (by authority of the Minister of Agriculture, Industry, and Commerce—furnished by co-operation of Professor P. Tacchini, Director of the Central Meteorological Office at Rome, and respective observers).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometres per hour, or by force on a scale of 0 to 4, as at Mondovi, Florence, and Cagliari. No distinction is made between upper and lower clouds, and the amount is given on a scale of 0 to 10.

JAPANESE SERIES (furnished by co-operation of I. Arai, Director of the Imperial Meteorological Observatory at Tokei).—The rainfall is measured at 9.30 a. m., local time, and the conversions are all published as given in the originals. Distinction is generally made between upper and lower clouds, and the amount is given on a scale of 0 to 10. The weather is given in general terms.

MAURITIUS SERIES (furnished by co-operation of C. Meldrum, Secretary of the Meteorological Society of Mauritius).—All conversions are published as given in the originals. The direction of the wind is given to 64 points, and the rainfall is measured at 9.30 a. m., local time.

MEXICAN SERIES (by authority of the Secretary of Public Works—furnished by co-operation of Señor Mariano Barcena, Director of the Central Meteorological Observatory in the City of Mexico, and respective observers).—All conversions are published as given in the originals, but when an evident mistake has been made, the data is queried at this office. The kind of clouds is given, and also the direction and amount of both upper and lower. The degree of cloudiness is indicated on a scale of 0 to 10. Rainfall is generally measured at 6 a. m., local time.

NETHERLANDS SERIES (furnished by co-operation of Professor Buys Ballot, Director of the Royal Meteorological Institute of the Netherlands at Utrecht).—The originals give the barometer in millimetres reduced to sea-level and the temperatures in Centigrade. The movement of the air is indicated by pressure in kilograms per square metre, except at Hellevoetsluis, which gives force on a scale of 0 to 12. The humidity is not given on the originals, but for two stations it is computed from the hygrometrical observations. The weather is only given for Utrecht, from which the amount of cloudiness at that station is inferred.

NORWEGIAN SERIES (furnished by co-operation of Professor H. Mohn, Director of the Royal Norwegian Meteorological Institute at Christiana).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade The movement of the air is indicated by velocity in metres per second or by force on a scale of 0 to 6. The weather is occasionally given by Vienna symbols. At Bergen observations upon the weather and degree of cloudiness are made at 2 p. m., local time. At Brono the observations are taken at 2 p. m., instead of 12.57 p. m.

PORTUGUESE SERIES (furnished by co-operation of J. C. de Brito Capello, Director of the Meteorological Observatory of the Infante Dom Luiz at Lisbon).—In the originals the barometer is given in millimetres and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometres per hour. The weather is occasionally given by the Vienna symbols. The rainfall is measured at noon each day.

RUSSIAN SERIES (furnished by co-operation of Professor H. Wild, Director of the Imperial Central Physical Observatory of Russia at St. Petersburg).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. At Astrakhan the barometer-cistern is below sea-level. The movement of the air is indicated by velocity in meters per second. No distinction is made between upper and lower clouds; the amount is given on a scale of 0 to 10, and the kind occasionally. The weather is occasionally given by the Vienna symbols.

SCOTTISH SERIES (furnished by co-operation of Alexander Buchan, M. A., F. R. S. E., Secretary of the Scottish Meteorological Society at Edinburg, and respective observers).—The originals give the barometer as read off and the movement of the air is indicated by force on a scale of 0 to 6. Distinction is made between upper and lower clouds as to degree, and the amount of cloudiness is given on a scale of 0 to 10. The direction of upper clouds is given separately. The rainfall, temperature, and humidity are not given at North Unst. The wind direction is given to 32 points.

SPANISH SERIES (furnished by co-operation of the Royal Observatory at Madrid, and respective observers).—The movement of the air, except for sub-series, is given in kilometres per hour. The kind of clouds is occasionally given, and the degree of cloudiness on a scale of 0 to 10. The rainfall at San Juan is measured at 4 p. m., local time, and at San Fernando at midnight. The weather is given in general (Spanish) terms.

SWEDISH SERIES (furnished by co-operation of Professor R. Rubenson, Director of the Royal Swedish Meteorological Institute, and of Professor H. H. Hildebrandsson, Director of the Meteorological Observatory of the Upsala University).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in metres per second for Upsala. The kind of clouds is not given, but the degree of cloudiness is indicated on a scale of 0 to 10. The rainfall is measured at 8 a. m., local time, and the weather is occasionally given by the Vienna symbols.

SWISS SERIES (furnished by co-operation of Professor E. Plantamour, Director of the Observatory at Geneva).—The originals give the barometer in millimetres, corrected for temperature only, and the thermometer in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10.

TURKISH SERIES (furnished by co-operation of A. Coumbary, Effendi, Director of the Central Observatory at Constantinople, and of Professor C. V. A. van Dyck, Superintendent of the Lee Observatory at Beirut).—The originals give the barometer in millimetres reduced to sea-level. The temperature is given in Centigrade. The movement of the air is indicated by force on a scale of 0 to 7 for Valona, and on a scale of 0 to 12 for Beirut. At Constantinople the velocity is given in meters per second. The kind of clouds is not given, but the amount is indicated on a scale of 0 to 10, except at Valona, at which station it is inferred from the general weather terms.

UNITED STATES SERIES (by authority of the Secretary of War—furnished by co-operation of W. B. Hazen, Brigadier and Brevet Major General, Chief Signal Officer, U. S. Army).

UNITED STATES SUB-SERIES (furnished by co-operation of the respective observers).—The originals generally give the barometer reduced to sea-level

and the temperature in Fahrenheit. At Bogota and Navassa the barometer is corrected for temperature only; at Puerto Berrio, is given as read off, and at Rivas is omitted. The movement of the air is generally indicated by velocity in miles per hour, except on a scale of 0 to 10 for Bogota, Paramaribo, and Rivas, and 0 to 12 for Puerto Berrio. The wind direction is generally given to 16 points, except 8 points for Bogota and 32 points for Rivas. At Rivas the humidity is obtained by readings from Saussure's hygrometer.

BRITISH NAVAL SERIES (furnished by co-operation of the Meteorological Council, London, Robert H. Scott, Esq., F. R. S., Secretary).—The originals give the barometer as read off. The wind direction is given to 32 points. The movement of the air is indicated by force on a scale of 0 to 12. The distinction between upper and lower clouds is made, as to direction, but not as to amount. The height of the sea-disturbance is given on a scale of 0 to 9, and the weather by the Beaufort notation. The direction of movement of wind, clouds, and sea is compass direction, corrected only for deviation caused by the iron in the ship, while the correction for magnetic variation is applied at this office. The humidity is not given, but is computed from the hygrometrical observations.

PORTUGUESE NAVAL SERIES (furnished by co-operation of J. C. de Brito Capello, Director of the Meteorological Observatory of the Infante Dom Luiz at Lisbon).—The originals give the barometer in millimetres, corrected for temperature only, and the thermometer in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The humidity is not given, but is computed from the hygrometrical observations. The kind of clouds is not given, but the amount is indicated on a scale of 0 to 10; the direction of movement is given without distinction between the upper and lower. The height of sea disturbance is given on a scale of 0 to 9 and the weather by the Beaufort notation. The rainfall is not measured, but the duration is generally given inhours and minutes.

SWEDISH NAVAL SERIES (furnished by co-operation of E. Malmburg, Director of the Nautical Meteorological Bureau at Stockholm).—The originals give the barometer as read off. The movement of the air is indicated by force on a scale of 0 to 12, and the direction is corrected for magnetic variation at this office. The humidity is not given, but is computed from the hygrometrical observations. The rainfall is omitted. The height of the sea-swell is given on a scale of 0 to 9 and the weather by the Beaufort notation.

UNITED STATES NAVAL SERIES (by authority of the Secretary of the Navy—furnished by co-operation of the Navy Department, through Commodore John G. Walker, U. S. N., Chief of Bureau of Navigation).—The originals give the barometer as read off. The humidity is not given, but is computed from the hygrometrical observations. The sea-swell and weather are given in general terms. The direction of the wind is compass direction, corrected for variation.

MERCHANT-MARINE SERIES (furnished by co-operation of the owners, agents, &c., of the respective lines and vessels).—Same as U. S. Naval.

OCEAN SQUARES.—The table of ocean square data shows (1) the location of the centres of squares whose sides extend 5° each in latitude and longitude, (2) the number of days for which observations are at hand within the respective squares, and the total number of simultaneous observations reported on those days, (3) the monthly mean pressure and temperature of the air, and the mean force and total frequency of the wind at 7 a. m., Washington time, computed for the centre of each square from daily readings as obtained by interpolation between the isobars and isotherms of the daily international simultaneous weather maps.

ERRATA.

MONTHLY SUMMARY, July, 1882, in the table showing the deviation in pressure and temperature at isolated stations during November, 1881, page 9, the following corrections should be made, viz.: Tashkend, mean temperature (1st column), for 13°.8 read 42°.8; Barnaul, for 42°.8 read 22°.0; Yeniseisk, for 22.0 read 13°.8.

MONTHLY SUMMARY, October, 1882, page 2, French, Lamballe, reduced barometer 29.77 inches, 756.2 mm., should read 29.84 inches, 758.0 mm.; page 13, 2d column, 27th line, for Norwegian, read Netherlands.

DAILY BULLETIN, November 7, 1882, page 1, British, Aberdeen, rainfall 0.270 inches, should read 0.200; page 2, French, Lorient, actual barometer 29.99 inches, should read 29.89.

10th, page 3, Italian sub-series, Naples, actual barometer 29.38 inches, should read 29.28; Japanese, Akita, actual barometer 30.28 inches, should read 30.38.

16th, page 3, Swedish, Haparanda and Umea, actual barometer 30.60 and 30.39 inches, should read 30.39 and 30.30 inches, respectively.

20th, page 5, Springfield, Mass., reduced barometer 765.2 mm., should read 762.0 mm.

22d, page 7, s.s. Nessmore, longitude W. 33° 58′, should read W. 34° 58′.

26th, page 2, French, Gréasque, reduced barometer 30.61 inches, 777.6 mm., should read 29.83 inches, 757. 6 mm.; page 5, Port Eads, reduced barometer 764.8 mm., should read 764.0 mm.

29th, page 8, bk. Joseph A. Ropes, latitude S., should read N.
