NOTE.—The above observations, taken at 7 a. m., Washington time, were received too late for publication in the DAILY BULLETIN, and are given here in full from date of last published report (July 31, 1882). For continuation of this station, see Russian series, DAILY BULLETIN.

REVIEW.

INTERNATIONAL METEOROLOGY.

[*Pressure expressed in inches and millimetres; temperature in degrees, Fahrenheit and Centigrade; wind-force by scale of 0-10.*]

The following description refers to chart ii. for the month of February, 1883, issued with this SUMMARY. This chart continues the series of international charts begun in January, 1877, and exhibits the mean pressure, mean temperature, and prevailing wind-direction over the northern hemisphere, as determined from one observation taken simultaneously each day at 7 a. m. Washington, or 0 h. 8 m. p. m., Greenwich, mean time:

For the month of February, 1883, two areas of barometric minima are shown on the chart. The first of these occupies the Arctic ocean between Greenland and Iceland, and is indicated by the isobar for 29.1 (739.1); the second area of low-pressures is in British India, and is enclosed by the isobar for 29.9 (759.4). To the southward and eastward of the region of absolute minima, the barometric gradient rapidly increases, until the isobar for 30.0 (762.0) is reached. That isobar extends from the Gulf of Saint Lawrence southeastward to the forty-second parallel and thence northeastward over the southern part of Great Britain to Scandinavia. The areas of barometric maxima are indicated by the isobaric lines for 30.4 (772.1) and 30.3 (769.6), respectively. The first of these occupies central Asia and extends as a ridge of high-pressures from the Gulf of Pe-Che-Li westward to the central part of European Russia; the highest mean reported is 30.46 (773.7) at Semipalatinsk. The second area of high-pressures is exhibited in the United States, and extends from the Northwest Territories of British America southeastward to Arkansas and thence eastward to the Atlantic ocean; over this region the pressure ranged from 30.3 (769.6) to 30.35 (770.9). In other parts of the United States and Canada it ranged from 30.1 (764.5) to 30.25 (768.3). A third area of high-pressures, 30.3 (769.6), occupies the central part of the Iberian peninsula. Over the Atlantic ocean, between N. 20° and 40°, the mean atmospheric pressure ranges from 30.0 (762.0) to 30.28 (769.1); in Europe it ranges from 30.0 (762.0) in the northern, to 30.25 (768.3) in the southern, and 30.35 (770.9) in the eastern, sections.

Compared with the chart for the preceding month, there has been no material change in the position of the area of absolute minima; the pressure at the centre has, however, decreased about .1 inch, the mean at Stykkisholm, Iceland, being now 29.02 (731.1). In the United States and Canada there has been a general increase of pressure, except on the Pacific coast, where it is slightly below that of the preceding month. Over the Atlantic ocean, north of the fifty-fifth parallel, the pressure has decreased slightly; to the southward of that latitude it has increased somewhat. Throughout the continent of Europe and over the British Isles there has been an increase of pressure, averaging .15 inch. In the northern and eastern parts of Asia the pressure has decreased, while in the central and western sections an increase is shown. In British India the mean pressure is .06 inch lower than in the preceding month.

Compared with the corresponding month of previous years, the mean atmospheric pressure for February, 1883, was above the normal over the United States and Canada, the departure being greatest in the Mississippi and Missouri valleys. In Europe the pressure was everywhere above the normal.

The following table gives the mean pressure and mean temperature, with corresponding departures, for February, 1883, in the several countries of the eastern hemisphere, compared with the means as determined from observations taken during the last six years:

Countries.	Mean pressure.			Mean temperature.		
	Feb. mean of 6 (1877-'82) years.	Feb., 1883.	Departure.	Feb. mean of 6 (1877-'82) years.	Feb., 1883.	Departure.
				°	°	°
Algeria	30.16	30.27	+ 0.11	58.5	59.4	+ 0.9

* Mean for five years only.

The following are some of the extreme mean temperatures reported at isolated stations:

Highest.	Fahr.	Cent.	Lowest.	Fahr.	Cent.
	°	°		°	°
Freetown, Africa	86.5	30.3	York Factory, B. A	—23.3	—30.7
Springbok, Fontein, S. Africa	83.9	28.8	Ooglaamie, Alaska	— 9.2	—22.9
Saint Paul de Loando, W. Africa	82.7	28.3	Upernavik, Greenland	— 7.6	—22.0
Mauritius, Indian Ocean	81.0	27.2	Nikolaevsk on the Amoor	— 7.1	—21.7
Bridgetown, Barbadoes	80.7	27.1	Yeniseisk, Siberia	— 5.8	—21.0

The mean temperature of the air in the United States was above the normal in the Atlantic and Gulf states; elsewhere it was below the normal, the greatest deficiency occurring in the middle slope and northern plateau regions, where it was 12° and 16°, respectively. In Canada the temperature was below the normal. In Europe the mean temperature of the air was normal, or slightly below, in the southern peninsulas; elsewhere it was above the normal, presenting the unusual

phenomenon of abnormally high temperatures in connection with abnormally high-pressures. In British India the temperature was 0°.1 above the five years' mean. The highest mean temperature reported was 88°.7 Fahr. (31°.5 Cent.) at Bellary, and the lowest was 63°.9 Fahr. (17°.7 Cent.) at Sibsagar.

In the United States the prevailing winds were generally northerly, northwesterly, and westerly; on the coast of the Carolinas they were northeasterly. In Canada they were mostly westerly. Over the north Atlantic ocean the winds were mostly northerly and northwesterly between N. 30° and 60°, and from W. 75° eastward to W. 30°; from W. 30° eastward to the European coasts they were southwesterly. In Europe the winds were mostly southwesterly in the western, and southerly to southeasterly in the eastern, parts of the continent. On the coast of China and in Japan they were mostly northerly.

The rainfall during February, 1883, was above the average in that part of the United States north of N. 35° and from the Rocky mountains eastward to the Atlantic. In the south Atlantic and Gulf states, and in the districts west of the Rocky mountains, the precipitation was less than the average, the deficiency on the Pacific coast being very marked. In Canada the rainfall was above the average, except in the maritime provinces, where it was slightly below. In Europe it was generally below the average, except in the British Isles, where it was in excess.

With this REVIEW is issued international chart iii. for the month of October, 1881. This chart continues the series of international charts begun in November, 1877, and exhibits the paths of the principal atmospheric depressions that have appeared in the northern hemisphere. The data are charted for each day of the month on the maps accompanying each issue of the "International Bulletin," and from these charts and additional data are traced the movements of the centres of barometric minima.

The paths of twenty-nine depressions which appeared during October, 1881, have thus been traced; in addition are also shown the paths of three typhoons which occurred in the China sea during the month. The tracks of these last are copied from Mr. Marc Dechevrens' "Typhoons of 1881."

The depressions charted are distributed as follows: Seven are traced in the United States and Canada; one in the Hudson bay region, and one in Alaska and the Northwest Territories of British America, the latter being a continuation of a disturbance which originated in eastern Asia. Seven depressions are traced over the Atlantic ocean; three of these are continuations of storms which developed in the United States; one, number xxv., was apparently of tropical origin, and the remaining three were first observed near the coasts of Newfoundland and Labrador. Two depressions are charted in Greenland, in which region the atmospheric pressure remained low during the first half of the month. In Europe fifteen depressions are traced, six of which entered the continent from the ocean. Three disturbances are shown in western Siberia, one of these, number xxii., is a continuation of the depression charted as number ii., and is traced from the western part of the United States. One depression appears over the Sea of Okhotsk, and is traced thence eastward over the Pacific ocean to Alaska and British North America.

In the United States and Canada the depressions pursued, in general, an east-northeasterly course; over the Atlantic the movement of the various storm-centres appears to have been sluggish and their paths somewhat erratic. In Europe a majority of the disturbances are traced in the southern districts, and have moved in a southeasterly direction; the few depressions traced in northern Europe have pursued a northeasterly course, with one exception, number xxviii., which moved from north to south. The most violent storms of the month were numbers xviii. and xxiii.; the former passed over the British Isles and northern Europe between the 13th and 15th, and, on account of the great loss of life and immense damage to shipping and other property which resulted from it, ranks as one of the most severe storms on record. Number xxiii. moved in a southeasterly direction from the 22d to 24th, and was scarcely less severe than its predecessor of the 13–15th. A noteworthy feature of the month was the unusual number of depressions which traversed southern Europe.

The following descriptions refer to the depressions traced in the United States and Canada:

I.—During the 9th there was a steady decrease of pressure at stations in California, and by the 10th the barometer had fallen to 29.8 (756.9), with cloudy weather, but no rain. During the 10th the disturbance moved rapidly eastward, and on the 11th it reached Dakota, its central region being enclosed by the isobar for 29.8 (756.9). Moving by an east-northeasterly course over Minnesota, Wisconsin, and Michigan, the disturbance, on the 12th, occupied Lakes Huron and Michigan, and was attended by abundant rains and high winds on the lakes and at stations to the eastward of the centre. During the 12th the depression moved down the Saint Lawrence valley, causing general rains during its passage. On reaching the Gulf a further decrease of pressure appears to have occurred, and as the disturbance moved to the northeastward of Newfoundland it caused moderate sw. to nw. gales and squally weather over the Gulf of Saint Lawrence. On the 14th the depression was shown to the northeastward of Newfoundland, attended by rainy weather and moderate gales in the southeast quadrant. This depression is hereafter described as number xix.

II.—Slowly decreasing pressure during the 13th and 14th in Utah, Colorado, and Kansas indicated the development of this depression, which, by the 15th, had moved in a northeasterly direction to the lake region. High winds to moderate gales and rain prevailed at stations on the lakes, and continued at stations in the Saint Lawrence valley during the passage of the disturbance towards the Gulf. This depression passed eastward over the ocean, and is hereafter described as low area xxii.

III.—This was a slight disturbance which developed in Kansas during the 16th; it moved northeastward and on the 17th was central near Davenport, Iowa, where the barometer read 29.96 (761.0); heavy rain. The rain and cloud-areas extended over the lake region, and as the disturbance moved eastward to New England it caused moderate easterly gales on Lake Ontario. Strong northwesterly gales occurred on the lakes as a result of the rapid increase of pressure which took place immediately after the passage of the depression. On the 18th the disturbance occupied New England and the lower Saint Lawrence valley; during the day it passed into the Atlantic, and on the 19th was central south of Nova Scotia, attended by rainy weather in the maritime provinces and snow to the eastward. H. M. S. "Fantome," which left Notre Dame bay, Newfoundland, on the 18th, with a schooner in tow, encountered on the 19th a heavy ene. gale and furious snow storm, during which the hawser parted and she lost the schooner. The "Fantome" was then put to sea and occupied three days in steaming one hundred and seventy-five miles through a heavy snow storm. By the 20th the disturbance had filled up or become merged in low area xxii.

IV.—This was a slight depression which appeared in the Lake Superior region on the 19th; it moved eastward, causing light rains in the upper lake region and Ontario, and dissipated on the 20th, in the province of Quebec.

V.—On the 20th the barometer at York Factory, British America, read 29.31 (744.5), being a fall of .43 inch since the observation of the 19th. On the 21st the shifting of the wind, followed by rising barometer at York Factory, indicated that the centre had passed to the eastward over Hudson Bay and beyond the field of observation.

VI.—During the 22d there was a decrease of pressure in Texas and Indian Territory, and by the 23d the decrease had extended eastward and northward to Mississippi and Missouri, causing rainy weather during the 22d and 23d in the districts named. During the latter date the depression moved northeastward and was central in Illinois on the 24th, the region of

least pressure being enclosed by the isobar for 29.8 (756.9). Rainy weather prevailed in the lower lake region, but the winds remained moderate in force. Continuing its northeasterly movement the disturbance appeared on the 25th in Ontario, where it was joined by low area vii., which had advanced from the northwest. During the day the combined system moved east-northeastward, and on the 26th it was central as a storm of considerable energy over the Gulf of Saint Lawrence, with the pressure below 29.0 (736.6) at the centre. Steep gradients were formed over the ocean between W. 40° and 50°, and fresh to strong southerly gales were reported by vessels in that region, while equally strong northwesterly gales occurred in rear of the depression and along the coasts of the United States. During the 26th the disturbance moved over Newfoundland, and on the 27th it was central, with undiminished energy, northeast of that island. This storm is hereafter described as low area xxvii.

VII.—This depression appeared in Manitoba on the 24th, when the preceding depression (vi.) was in Illinois. It moved east-southeastward over the lake region and united with low area vi. in Ontario on the 25th.

VIII.—On the 27th a barometric trough extended from Manitoba to Texas, the pressure being least in Kansas, where the barometer read 29.66 (753.4). During the day the disturbance moved slowly northeastward, and on the 28th it was central in Nebraska, the barometer at Omaha reading 29.53 (750.0). Cloudy and rainy weather prevailed at stations to the northeastward and eastward of the centre, but no high winds were reported on the 28th. By the following day the storm-centre had reached the Lake Superior region, the central pressure being now about 29.4 (746.7). Rainy weather continued over the lake region, and, owing to the increase of the barometric gradient in the northeast quadrant, the wind attained the force of a strong breeze (25 to 30 miles) over the lakes. On the 30th the disturbance was north of Lake Superior; it moved thence eastward over northern Canada to the mouth of the Saint Lawrence, where it was central on the 31st, attended by general rains in the maritime provinces and the lower Saint Lawrence valley.

The following refer to the depressions traced over the Atlantic ocean and in Europe:

IX.—This depression occupied the Italian peninsula on the 1st, the lowest reported barometric reading being 29.83 (757.7) at Rome. Cloudy and rainy weather prevailed over the peninsula and at stations on the shores of the Gulf of Venice. On the 2d the depression occupied the Adriatic, and on the 3d it entered Austro-Hungary, where it apparently dissipated.

X.—This was probably identical with a disturbance which at the close of September was near the northern coast of Norway. By October 1st it had reached the Baltic Provinces of Russia—pressure at Saint Petersburg, 29.93 (760.1). The disturbance moved southeastward, with decreasing pressure at the centre, and on the 2d it was shown near Kasan, where the barometer read 29.78 (756.5), wind sw., light rain. It continued its southeasterly movement and filled up during the 3d.

XI.—This depression occupied the basin of the Mediterranean on the 4th. On the 5th the pressure was least in Sardinia. During the 6th and 7th the disturbance moved slowly southeastward, with gradually increasing pressure, and finally disappeared on the last-mentioned date.

XII.—A secondary disturbance appeared near Newfoundland on the 4th; it remained stationary on the 5th, the pressure having decreased to 29.32 (744.7) near the Straits of Belle Isle. On the 6th the disturbance moved north-northeastward, and on the 7th it apparently merged with a large and deep depression which had occupied southern Greenland during the first week of the month. During the 5th and 6th an area of high-pressures occupied the eastern part of the United States and Canada; in consequence of this distribution of pressure strong northwesterly gales were experienced by vessels near the coasts of the United States, and equally strong westerly and southwesterly gales were reported on the Banks and to the eastward. The heavy north and northwest gales which occurred on the coast of Labrador on the 5th, and which caused great damage to shipping, were due to the existence of this depression.

XIII.—This depression appeared in western Siberia on the 5th, and on the 6th it was central near Akmolinski, where the barometer read 29.41 (747.1), wind sw., 56 miles an hour. During the day the storm-centre moved northeastward, and on the 7th it was shown near Yeniseisk, barometer 29.52 (749.9), wind sw., 9 miles. By the following day the disturbance had passed beyond the range of the observations.

XIV.—On the 7th there was a decrease of pressure in southern Spain and in Algeria; on the 8th the circulation of the winds at stations on the eastern coast of Spain and in Algeria indicated that the centre of disturbance was over the Mediterranean, and probably near the Balearic Isles. On the 9th and 10th the area of low barometer was in Sardinia and central Italy, with a secondary disturbance in Sicily. On the 11th the depressions united and moved over Greece and Turkey, the barometric readings within the area of disturbance ranging from 29.72 (754.9) to 29.8 (756.9). On the 12th the centre was over the Ægean sea; thence it moved northeastward over the Black sea, and finally dissipated in southern Russia during the 14th.

XV.—From the 1st to 7th the barometric readings at Godthaab, Greenland, ranged from 29.04 (737.6) to 29.35 (745.5), and during that time south and southeast gales of force 7–8, with rainy weather, prevailed in Iceland, and strong west and southwest gales were reported over the ocean north of the fiftieth parallel. During the period mentioned (1st to 7th) an area of high-pressures, 30.4 (772.1) to 30.6 (777.2), occupied northern and western Europe, while another high area—30.4 (772.1)—prevailed over the Azores. During the 7th and 8th the high area of northern Europe began to give way, and a rapid decrease of pressure occurred over northern Scandinavia in advance of the deep depression near Iceland, which had now begun to move eastward. On the 9th the disturbance was between Iceland and the Färöe islands; on the 10th it was central in Scandinavia, the pressure having decreased to 28.95 (735.3) near the centre. Strong westerly gales prevailed over Denmark and at stations on the shores of the Baltic, while southerly and southwesterly winds prevailed over the Gulf of Bothnia. On the 11th the disturbance passed northward into the Arctic, and when last observed the pressure was 28.6 (726.4) at Gjæsver, Finmark. Cloudy and rainy weather prevailed over the British Isles and northern Europe during the passage of the depression.

XVI.—This depression appeared over southern England and northern France on the 8th, the pressure at the centre being about 30.05 (763.3). It moved northeastward, with rapidly decreasing pressure, and on the 9th its centre was off the western coast of Denmark, where the pressure was 29.52 (749.8). During the day it moved northward and merged in low area xv, which then occupied Scandinavia.

XVII.—During the 8th the atmospheric pressure decreased rapidly over Newfoundland and the Gulf of Saint Lawrence, and on the 9th a depression appeared near Labrador. It moved rapidly northeastward at a high latitude, this movement being probably due to the area of high-pressures which occupied the ocean from 30° northward to 55°, north latitude. On the 10th the centre was south of Iceland; barometer at Stykkisholm, 29.1 (739.1), wind se. and e., force 4, raining. On the 11th the disturbance appeared near the Färöe islands, the pressure having decreased to 28.38 (720.8) at Thorshavn. Steep gradients were formed over the British Isles and the North sea; strong westerly gales prevailed over the former, and were especially heavy in the northern part of the kingdom, while moderate to strong se. gales occurred over the latter region. On the 12th the centre of disturbance was off the Norwegian coast; the wind at Thorshavn shifted to nw., and the moderate to strong westerly and northwesterly gales continued in the British Isles, with rainy weather and falling

temperature. To the eastward of the centre southerly winds and rising temperature prevailed. The depression moved slowly north-northeastward on the 13th and 14th, and passed into the Arctic on the latter date.

XVIII. and XVIII *a*.—These depressions united during the 12th, and from them was developed the disastrous storm which swept over the British Isles and northern Europe a few days later. On the 10th a barometric trough existed over the Gulf of Saint Lawrence and the maritime provinces, the pressure being least near Prince Edward island. By the following day the pressure over the maritime provinces and the Gulf had increased to 30.2 (767.1), while the region of low-pressures (xviii. *a*) was transferred to about N. 50°, W. 45°, where the barometer read 29.96 (761.0). At the same time the circulation of the winds, as shown by vessel-reports near N. 42°, W. 55°, indicated the development of another disturbance in that region. An area of high-pressures, 30.2 (767.1), occupied the eastern part of the United States and Canada, and stretched eastward to the sixtieth meridian. Another high area existed over the Azores, and extended westward to the fiftieth meridian. Over the region situated between the above-mentioned high areas the pressure ranged from 30.0 (762.0) to 30.1 (764.5). By the 12th the area of low-pressures had moved slowly northeastward, and was now shown near N. 49°, W. 45°, where the pressure was from 29.92 (760.0) to 30.05 (763.3). The high area of the Azores had become contracted and now extended only to the fortieth meridian, while that of the United States had advanced to about W. 55°. During the 12th the disturbance appears to have moved quickly northeastward, causing a decrease of about .2 inch in the pressure over the Azores. Meanwhile, the pressure was rapidly decreasing at the centre of disturbance, and on the 13th the isobar for 29.4 (746.7) indicated the centre, in about N. 55°, W. 20°. Prior to the 13th the pressure at the centre varied between 30.0 (762.0) and 29.9 (759.4), and the winds remained moderate in force, but as the pressure decreased they attained, on the 13th, the force of a moderate to strong gale in all quadrants of the depression. On the 13th westerly and northwesterly winds prevailed in the northern and eastern parts of Great Britain, which were under the influence of low area xvii., then central off the Norwegian coast, while in Ireland and at western and southwestern stations in England, the winds changed to southerly and southwesterly. On the 14th the storm-centre was over the North sea; it was there that the storm exhibited its maximum violence, and caused such immense loss of life and property. On that day the atmospheric pressure at the centre of disturbance decreased to 28.5 (723.9), and very heavy rain fell in the British Isles and western Europe. In France and along the eastern shores of the North sea the pressure ranged from 29.3 (744.2) to 29.8 (756.9), so that between those districts and the centre of disturbance exceedingly steep gradients were formed. In Ireland and southwestern England the winds changed to northwesterly; in the southeastern counties of England they were southwesterly, and in Scotland, northerly, blowing with the force of a heavy gale in all districts. Over the eastern part of the North sea and along the European coast from northern France northeastward to Denmark, furious ssw. to sw. gales prevailed, causing much damage. Vessels were capsized in the harbors; the rivers rose above their ordinary level and, in some instances, flooded the adjacent districts; telegraph lines were prostrated and all communication was interrupted. In a paper by Mr. Charles Harding, F. M. S., published in the "Quarterly Journal of the Meteorological Society," the losses and casualties (vessels abandoned, foundered, stranded, dismasted, etc.,) reported at Lloyd's as having occurred on the coasts of the British Isles during the prevalence of this gale, are given as no less than two hundred and five vessels, with a loss of sixty-six lives. The published "Weekly Wreck Returns" for the second week in October showed the number of vessels lost off the coasts of the United Kingdom to be eighty-five, the number of lives lost or missing being one hundred and thirty-eight. In addition, the storm caused great damage to property and loss of life among the fishing population between the Forth and the Tweed, from fifty to sixty fishing boats being reported missing. On land the storm was equally severe; forty-six persons were killed and about forty sustained severe injuries, and in all parts of the kingdom, chimney-stacks, roofs, and walls were blown down; telegraph lines prostrated, and thousands of the finest and strongest trees were leveled with the ground. The gale was very destructive in the Netherlands; in fact, very few places in Great Britain or along the eastern shores of the North sea escaped without suffering more or less damage. It is estimated that 43,000 tons of produce, including 20,464 tons of coal, were lost at sea during this gale, and the loss to shipping property represented a money value of from $20,000,000 to $25,000,000. By the morning of the 15th the centre of the disturbance was on the eastern coast of southern Sweden, where the pressure was 28.7 (729.0). The wind at stations in Denmark, Germany, and the Netherlands had now changed to the westward, and blew with the force of a heavy gale; at Neufahrwasser, Memel, and other German ports on the shores of the Baltic, southwesterly to south-southwesterly winds of force 8 to 9 prevailed, with easterly gales over the Gulf of Bothnia, and moderate to strong northerly winds in southern Norway. By the 16th the pressure had increased to 29.4 (746.7), but was still lowest over the Baltic and the Gulf of Finland. The winds over the Gulf of Bothnia had changed to northerly and continued to blow with undiminished force, but to the southward they had decreased in violence. On the morning of the 17th the pressure was least in Finland, where it was about 30.0 (762.0), and increasing. An area of high-pressures now occupied central and western Europe, and was spreading northward, and by the 18th the region of greatest pressure occupied Scandinavia and Finland, while another area of high-pressures was shown in northeastern Russia and Siberia.

XIX.—This was a continuation of the depression first traced as i., and described above. On the 14th the disturbance was shown to the northeastward of Newfoundland, attended by moderate to fresh gales; on the 15th the centre was near N. 52°, W. 35°; vessels between W. 32° and 25° had sse. to se. winds of force 5 to 7, with cloudy or rainy weather, and pressure ranging from 29.65 (753.1) to 29.95 (760.7), while those between W. 37° and W. 50°, had northwesterly breezes of force 2 to 7. During the day the storm-centre moved slightly south of east to about N. 50°, W. 25°, where it appeared on the morning of the 16th; the s. s. "Köln," T. Jüngst, commanding, reported, in N. 49° 23′, W. 25° 33′, barometer 29.35 (745.5), wind n., force 5, raining; while the s. s. "Rhynland," W. G. Randle, commanding, in N. 49° 22′, W. 22° 37′, had barometer 29.48 (748.8), wind sse., force 6, stormy weather. On the 17th the disturbance was apparently central between W. 25° and 20° and near the fiftieth parallel. Moderate to strong south-southwesterly to south-southeasterly gales were reported from W. 20° eastward, with moderate to strong northeast to northwest breezes and squally weather between N. 50° and 55°, and W. 28° and 35°. During the 18th and 19th the disturbance moved southeastward over the Bay of Biscay. On the 20th the depression was in southern France, followed by slight disturbances which appear to have been offshoots from low area xxii., then central as a very severe storm over mid-ocean. On the 21st the disturbance reached northern Italy, the pressure having decreased to 29.6 (751.8). Higher temperature and general rains accompanied the passage of the depression over France and Italy. During the 21st and 22d it moved eastward over Austro-Hungary, attended by increasing pressure, and on the 23d it disappeared in the Caucasus mountains.

XX.—Between the 14th and 17th the atmospheric pressure over southern Greenland ranged from 28.93 (734.8) to 29.19 (741.4). On the last-mentioned date the shifting of the wind and rapid fall in the barometer at Stykkisholm, Iceland, indicated that the disturbance was passing to the northward of

that island. At the same time a depression, which had moved from the Gulf of Saint Lawrence, developed great energy when south of Greenland, and caused stormy weather over mid-ocean.

XXI.—This disturbance appeared in northern Italy on the 15th; it moved slowly southeastward during the day, and on the 16th the centre was over the Adriatic, causing strong ne. winds at stations on the northern and western shores of that sea. The course of the disturbance appears to have changed to the northeastward during the day, and by the 17th the depression had filled up in Austro-Hungary.

XXII.—This was a continuation of the disturbance described as number ii. of this REVIEW, and was noteworthy on account of its violence over the ocean and on the coasts of the British Isles. During the 15th and 16th it passed over the Gulf of Saint Lawrence, attended by moderate to strong gales and heavy rain. During the 16th it began to exhibit increased energy, and by the 17th the barometric readings near the centre were below 29.0 (736.6). The following reports indicate the severity of the storm: on the 16th, the bark "Fawn" had a heavy nne. to ssw. gale; carried away yards and sails, stove bulwarks, forward house and cabin-doors, and shifted cargo. From the 16th to 21st the ship was under bare poles. The bark "Cherokee" appears to have encountered first the gales produced by low area xix., and then again those of low area xxii. on the 19th and 20th. This vessel reported on the 16th, in N. 48° 20′, W. 41°, heavy sw. gale, changing to wnw. hurricane, which lasted until afternoon of the 19th. On the morning of the 20th (position not given), the barometer suddenly fell from 29.6 (751.8) to 28.4 (721.3), (correction unknown); hurricane beginning again at sse. and backing to nne.; ship under bare poles, lost one boat and stove bulwarks. On the 17th, Captain P. J. Irving, commanding the s. s. "Republic," in N. 48° 07′, W. 42° 44′, reported barometer 28.97 (735.8), wind wnw., 9; vessels to the westward of the forty-second meridian reported violent nw. gales, while strong southerly gales prevailed near W. 35°. On the 18th the storm-centre was near N. 54°, W. 35°; Captain Luckhurst, commanding the s. s. "Thames," reported in N. 55° 05′, W. 33° 58′, barometer 28.8 (731.5), wind e., force 6. On this date vessels between N. 50° and 45°, and W. 35° and 50°, reported nw. gales of hurricane force. Steep gradients were formed to the westward of the depression, the pressure having increased to 30.2 (767.1) over Newfoundland and eastward to the fiftieth meridian. On the 18th the s. s. "Devonia," in N. 51° 13′, W. 36° 00′, had a strong s. breeze, increasing to hurricane, with terrific sea; s. s. "The Queen," in N. 48° 57′, W. 31° 56′, strong ssw. gale, cloudy; s. s. "Elbe," in N. 50° 27′, W. 25° 30′, heavy sse. gale and high sea. The s. s. "Suevia," in N. 46° 47′, W. 35° 40′, had terrific w. to nw. storm, with very high sea, and the s. s. "Nederland," in N. 48° 01′, W. 46° 48′, reported heavy nnw. gale, high sea, and violent hail squalls. The s. s. "Hibernian," which arrived at Halifax, Nova Scotia, on the 21st, reported having passed through one of the most furious gales ever experienced in the Atlantic. On the 18th (no position given), the barometer remained at 28.4 (721.3) for twenty-four hours; the steamer sustained much damage. On the 19th the storm-centre was near N. 58°, W. 32°, the winds near the immediate centre being light, but those in the southwest and northwest quadrants blowing with hurricane force. During the day the depression appears to have moved abruptly southeastward, this change in direction being probably due to the rapid extension westward of an area of high-pressure, 30.6 (777.2), whose centre was then in northern Scandinavia. On the 20th the region of least pressure was between N. 45° and 50° and W. 25° and 20°; strong southeast to east gales prevailed on, and to the northward of, the forty-ninth parallel, and between W. 20° and 10°, with heavy nne. to nw. gales to the southwestward, and westerly breezes in the Azores. The bark "Europa," in N. 46°, W. 31°, reported barometer 28.65 (727.7), nne. hurricane, lasting eight hours; lost and split sails, etc. Bark "Lewis Smith," in N. 44° 30′, W. 37°, had a nne. hurricane, lasting twelve hours, during which she lost foremast and jib-boom, broke stanchions, etc., and lay on her beam-ends for twenty-four hours. The barkentine "Bend Or" foundered in N. 49° 10′, W. 37° 30′, having withstood the gale for three days. The disturbance moved slowly eastward on the 21st, and its influence extended to the British Isles and western Europe, where rainy weather with rising temperature prevailed. On the 21st the ship "Knight Companion" had a heavy s. gale in N. 49° 40′, W. 10° 20′, shifted cargo, and sustained other damage. On the 22d and 23d the storm-centre lay to the southwestward of Ireland, at no great distance from the coast; very strong gales now prevailed in all quadrants of the disturbance, the centre of which was now enclosed by the isobar for 28.8 (731.5). Many vessels were driven ashore or foundered on the British coasts, and the loss of life was very great; the s. s. "Clan Macduff" was wrecked off the Welsh coast during this gale. The disturbance moved southeastward over France to Italy, where it appeared on the 24th, the pressure having increased to 29.55 (750.6); it was apparently forced in that direction by the area of high-pressures which still prevailed in northern Europe. After the disturbance passed to the eastward of the coast line, the slight increase of pressure which occurred was again checked by the approach of low area xxv., which had advanced to about N. 51°, W. 22°, by the 24th. The chart for the 25th showed low area xxii. to be central in Austro-Hungary, where the pressure ranged from 29.37 (746.0) to 29.5 (749.3). On the 25th the anticyclone over northern Europe began to move westward towards Iceland, and the depression in the south then took up a northeasterly direction and passed into Russia, where it was central, near Moscow, on the 26th, barometer at that station reading 29.37 (746.0), wind nw., light snow. On the same date there was a sw. gale of 45 miles an hour at Lugan, barometer 29.49 (749.1). On the 27th the storm-centre was in the Ural region, barometer at Ekaterinburg 29.03 (737.3), wind sw., 27 miles an hour. On the 28th the disturbance passed into central Asia and beyond the field of observation.

XXIII.—This was a slight disturbance which appeared in the Bay of Biscay on the 18th; on the 19th it was central in southern France, barometer at Lescar 29.69 (754.2), wind w., force 3; easterly and northeasterly winds prevailed at stations to the northward. On the 20th this depression was probably merged in low area xix.

XXIV.—This depression developed in the Black sea region on the 19th, and by the 20th the barometer had fallen to 29.59 (751.6) at Nikolaiev. During the 21st and 22d the disturbance moved north-northeastward and disappeared on the last-mentioned date.

XXV.—This disturbance was of tropical or sub-tropical origin, and was probably formed prior to the 20th. The earliest vessel-reports relative thereto are the following: on the 20th the bark "Hosea Rich," in N. 23° 45′, W. 62° 30′, took the southwest quarter of a cyclone; blowing with great violence for a few hours; vessel lost and split several sails. The bark "Neptun," in N. 25°, W. 60°, on the same date, reported a cyclone which began at e. and backed to nne., lasting but a short time, when it died to a calm for a few minutes, then sprang up again from w., veered to sw., and blew very hard for twenty-four hours; vessel lost trysails and split several others, barometer 28.18? (715.8?). On the 21st the bark "Pilgrim," in N. 27°, W. 62°, encountered a furious hurricane lasting eight hours, during which the vessel lay with her lee deadeyes in the water, filling her decks up to the weather side of the main hatch; every sail bent was blown out of the gaskets; main-topgallant yard was broken, and much running gear was carried away. In two hours the barometer fell from 30.0 (762.0) to 28.8 (731.5); the captain reported the wind as being the strongest he had experienced in twenty-seven years. Vessels on the fortieth parallel had strong northeasterly gales. On the 22d the storm-centre, having moved to the northeastward, was near N. 38°, W. 52°, and was enclosed by the isobar for 29.6 (751.8); the ship "St. John," in N. 38°,

W. 54°, had a se. to ne. hurricane, lasting twenty hours, during which she lost and split sails; and the whaling steamer "Lucretia," in N. 37° 30′, W. 46° 00′, lost topmasts and jib-boom in a heavy gale. Vessels near N. 35° and between W. 40° and 50° had hard s. and ssw. gales. On the 23d the storm-centre was apparently near N. 40°, W. 43°; the winds had now shifted to n. and nw. over the region west of W. 45°, and blew with the force of a strong gale. The ship "Ella," in N. 41°, W. 51°, had a violent n. gale, in which she lost part of rail and bulwarks, shifted cargo and had cabin flooded; the bark "Sunbeam," in N. 36° 06′, W. 45° 28′, reported barometer 29.52 (749.8), wind w., force 9; and the U. S. steamer "Lancaster," in N. 38° 55′, W. 49° 05′, barometer 29.58 (751.3), wind n., force 7. By the 24th the centre of disturbance, having moved rapidly northeastward, had reached N. 50°, W. 24°, where the lowest reported barometric reading was 29.37 (746.0). Fresh easterly winds now prevailed over Ireland, while moderate to strong westerly and northwesterly winds were reported to the westward of the twenty-fifth meridian. During the 24th a depression, 29.8 (756.9), developed over Newfoundland and the Banks, and by the 25th the two depressions had apparently united, forming an extended barometric trough, within which moderate, variable winds prevailed. By the 26th the trough had divided; the western half was now merged in an important depression which had moved over the United States, the atmospheric pressure at the centre having rapidly decreased as the disturbance neared Newfoundland. The eastern half occupied the southern part of the Bay of Biscay and the northern part of the Iberian peninsula, the centre being apparently off the coast of the latter. Between these centres of disturbance the pressure began to increase over the ocean, and the high area of the Azores showed a tendency to unite with that which existed over Iceland. On the 27th and 28th the disturbance moved slowly over the Iberian peninsula, and by the 29th it was shown as an extensive but shallow depression covering the Mediterranean and Algeria. Rain fell at stations in Italy and southern France, with cloudy weather in Spain and Algeria, accompanied by high winds in the latter. On the 30th the centre of disturbance appeared to be over the Gulf of Genoa, and by the 31st it had moved over Italy to the Adriatic, the pressure ranging from 29.55 (750.6) to 29.7 (754.4).

XXVI.—This depression appeared in western Siberia on the 23d, pressure at Akmolinski 29.64 (752.8), wind sw.; on the 24th there was no material change in the position of the disturbance, but by the 25th it had moved northeastward beyond the limits of observation.

XXVII.—This was a continuation of the disturbance described as low area vi. of this REVIEW. On the 27th it was central as a storm of considerable energy to the northeastward of Newfoundland, causing strong s. to sw. gales in the eastern quadrants. The depression moved slowly north-northeastward, and on the 28th it was to the southwestward of Greenland, the lowest reported pressure being 29.54 (750.3), wind ssw., force 6, observed on board the s. s. "Buenos Ayrean," in N. 54° 58′, W. 43° 55′. To the westward of the thirtieth meridian the pressure was above 30.0 (762.0). On the 29th the disturbance advanced slowly eastward, the high-pressure in front of it gradually giving way; during this time stormy weather prevailed to the eastward and southward of the depression. On the 30th the storm-centre was apparently near N. 55°, W. 25°, and at the close of the month it was shown in N. 56°, W. 20°; the barometer at the centre now read 29.39 (746.5), and strong southerly gales prevailed off the Irish coasts, while the area of high-pressures, which had occupied the British Isles, was being forced to the eastward.

XXVIII.—This depression appeared in Scandinavia on the 27th, and was chiefly remarkable for the abnormal track of the centre. On the 27th the pressure decreased to 29.95 (760.7) in Norway, accompanied by rainy weather at southern stations; the disturbance moved south-southeastward, and on the 28th it occupied the Baltic, causing snow or rain at stations in northern Europe. On the 29th the disturbance moved into northern Germany, where it was apparently dissipated.

XXIX.—On the 15th there was a decrease of pressure over the Sea of Okhotsk, the barometer at Nikolaevsk on the Amoor having fallen from 29.83 (757.6) to 29.54 (750.2). By the 16th the decrease had spread southeastward over the Pacific ocean; in the report of the s. s. "Belgic," H. Davidson, commanding, in N. 43° 48′, E. 167° 56′, on the 16th, the barometer read 29.62 (752.3), showing a decrease of about .4 inch since the observation of the 15th; wind ese., force 6, overcast, rainy. The s. s. "Belgic" appears to have moved eastward in the western quadrants of the depression for several days, or until the course of the disturbance changed to the northward. On the 17th, in N. 43° 34′, E. 174° 10′, the barometer read 29.11 (739.4), wind wnw., force 8, overcast, rainy; 18th (19th, ship's date), in N. 43° 11′, E. 180° 00′, barometer 29.56 (750.8), wind wnw., force 8, cloudy. The s. s. "Oceanic," W. H. Kidley commanding, in N. 35° 10′, W. 171° 46′, had w. wind of force 6, barometer falling from 30.08 (764.0) to 29.98 (761.5). On the 19th the s. s. "Belgic," in N. 43° 11′, W. 174° 04′, reported barometer 29.58 (751.3), wind wsw., force 4, raining. On the 20th the storm-centre appears to have been near the "Belgic;" that vessel, in N. 43° 05′, W. 167° 34′, reported barometer 29.16 (740.7), wind sw., force 6, cloudy. By the 21st the steamer had passed to the eastward of the storm-centre, which was now apparently moving northeastward; the "Belgic," in N. 42° 55′, W. 161° 00′, reported barometer 29.12 (739.6), wind sw. by s., force 6, fair. At the same time the pressure had decreased to the northward, the barometer at Fort Saint Michaels, Alaska, read 29.45 (748.0), a fall of .18 inch, wind shifting from se. to e. During the 22d the disturbance moved northward, the pressure continuing to decrease at Fort Saint Michaels, where the barometer on the 22d read 29.28 (743.7), wind e. On the 23d the wind at the above station shifted to ne., with barometer down to 29.22 (742.2); 24th, barometer 29.12 (739.6), wind ne. At Ooglaamie, Alaska, on the 23d, the pressure was about 29.74 (755.4) throughout the day, wind nne. to ne., 20 to 28 miles an hour, snowing; on the 24th, barometer at that station slowly falling to 29.52 (749.8), wind n. to ne., increasing from 13 miles to 44 miles an hour, snowing. On the 25th the pressure at Fort Saint Michaels was 29.14 (740.1), wind n., increasing to 20 miles an hour, light snow; at Ooglaamie the barometer ranged from 29.46 (748.3) to 29.51 (749.5), wind n., decreasing in force. On the 26th the wind remained at n., but increased to 40 miles an hour at Fort Saint Michaels, barometer slowly rising. On the 27th the decrease of pressure spread to the eastward, causing a fall in the barometer at Sitka. On the 28th the centre of disturbance was apparently to the eastward of Sitka, where the barometer read 29.23 (742.4), wind ne., light. On the 29th and 30th the disturbance occupied eastern Alaska and the Northwest Territories of British America. On the 31st a depression, which was probably identical with the present disturbance, appeared in Manitoba.

The following notes on the typhoons of October, 1881, are taken from Mr. Marc Dechevrens' "Typhoons of 1881."

I.—This typhoon was one of the most disastrous of the season; it was first observed to the eastward of Luzon on September 29th and 30th. Moving in a westerly direction south of Manila, it reached the China sea on October 1st; during its passage over Luzon it caused much damaged in the southern provinces of that island, and was attended by heavy rains, which added considerably to the damage resulting from the violent winds. The typhoon appears to have been much more violent in the southern semi-circle, with westerly winds, than in the northern, with easterly winds. Several vessels encountered the typhoon in the China sea, and all agree as to the violence of the disturbance, especially in the force of the westerly winds. The report of the s. s. "Fleurs Castle," which was within the calm-centre, is interesting; the typhoon first gave evidence of its approach on the 2d, in about N. 14°, E. 112°, by strong, increasing nw. breeze, with violent squalls and heavy rain; sky black and threatening, and barometer falling

rapidly. At 3.30 p. m. of the 2d the barometer had fallen to 28.8 (731.5), wind blowing from the nw. with terrific force; at 5 p. m. the barometer read 28.3 (718.8), which was its lowest reading; at 5.30 the weather suddenly brightened, the wind falling almost to a calm; 6 p. m., barometer 28.3 (718.8), a large number of birds alighted on the ship and remained until 7 p. m.; at 7.30 the wind suddenly burst out from the sw. with renewed fury; at 11 p. m. the barometer read 29.2 (741.7), rising, and wind moderating. The typhoon is here well-defined with its nw. wind, shifting to w., and then to sw. after the passage of the centre. The duration of the calm was about an hour and a quarter, and the velocity of translation of the typhoon was about ten and a half miles an hour; thus it may be inferred that the diameter of the calm-centre was about ten or twelve miles; within this region myriads of birds sought refuge, and a clear sky, with sunshine, prevailed. Notice should be taken of the depth of the central depression, as indicated by the reading of the barometer, 28.3 (718.8), on board the "Fleurs Castle," which was then in about N. 15°, E. 113°; at the same hour the barometer on board H. M. S. "Magpie," in the bay of Hoihow, Hainan, read 29.78 (756.4), thus giving a gradient of 1.48 inches for a distance of three hundred and forty-five miles. After crossing the meridian of 115° east longitude the typhoon appears to have divided into two parts; these segments moved west-northwestward on nearly parallel lines until the 5th, when they entered the Gulf of Tonquin. Vessel-reports indicate that both of these disturbances exhibited great energy during their passage over the China sea. The northernmost segment, after rounding the southern part of Hainan, passed northwestward over the Gulf of Tonquin and entered China. During the 5th, 6th, and 7th it passed northeastward over the provinces of Quang-Si, Kiang-Si, and Che-Kiang, and reached the Yellow sea to the southward of Cape Shan-Tung. Moving northeastward it crossed the peninsula of Corea and passed into the Sea of Japan, where it was central on the 9th; during that day it moved over the northern part of Niphon, and on the 10th it disappeared in the Pacific. At Zi-Ka-Wei, during the passage of the disturbance, the lowest barometric reading was 29.82 (757.4) at 4 a. m. of the 8th, with heavy rain from 2 to 3 a. m. At stations in Japan, during the passage, the lowest readings ranged from 29.55 (750.6) to 29.75 (755.6). The second, or southernmost, segment was the most disastrous in its effect on life and property. It appears to have passed over the southern part of the province of Tonquin, and to have moved over central China much farther to the westward than its companion; it also reached a higher latitude; it lost much of its violence during the 9th and 10th, on which date it reached the Gulf of Pe-Che-Li; it then moved southeastward over Corea to southern Japan, without exhibiting any storm-energy, and finally passed into the Pacific as a slight depression on the 13th. The velocity of translation of the first, or northern, segment of the typhoon, which retained its original energy longer and which moved with greater rapidity than the other, was about nine miles an hour from Luzon to Tonquin; in China it was about fifteen miles, and in the Yellow sea and Japan it increased to thirty miles an hour. The second, or southern, segment moved over China at the rate of about twelve miles an hour, and after again leaving the continent on the 11th, its velocity was about thirteen miles an hour. This typhoon is reported to have been one of the most disastrous ever experienced on the coast of Tonquin. But few buildings were able to withstand the fury of the wind, and were consequently leveled; the high tide, assisted by the heavy rain which fell, inundated the country and augmented the damage and suffering. Up to the 8th the number of junks known to have been lost was sixty-one, and the bodies of two hundred and twenty-seven persons had been recovered. At Tallee there were six feet of water in the houses three or four miles distant from the sea-shore, and the current was so strong that it swept away the greater part of the town; the estimated number of persons drowned was three thousand. The bishop of western Tonquin, in a telegram sent to Paris a few days after the storm, stated that two hundred churches and thirty-four parsonages and colleges were destroyed, and two thousand houses blown down.

II.—This typhoon was observed on the 12th, on which date it was to the eastward of Luzon and moving in a northwesterly direction. During the day it passed over the northern part of Luzon, causing furious gales in that island; at Manila the wind blew in gusts for a short time at the rate of seventy miles an hour, but the mean velocity of the wind during the heaviest period of the storm did not exceed fifty miles an hour; the wind blew from the sw., and the lowest reading of the barometer was 29.62 (752.3). At Tuguegarao, in northern Luzon, the barometer at 8.15 p. m. of the 12th read 29.3 (744.2), wind se., 40 miles an hour, stormy weather. It moved over the China sea during the 13th and 14th; its violence was felt by the ship "Geraldine Paget," which, after being roughly handled by the typhoon, was finally driven on the eastern side of Pratas shoal (about N. 20°, E. 115°). The typhoon passed south of Pratas reef, and moving in a northwesterly direction it entered China, in about the latitude of Hong-Kong, on the early part of the 15th. The barometric minimum observed on board H. M. S. "Magpie," anchored about forty miles south of Hong-Kong, was 29.14 (740.1), wind nw., force 10, with torrents of rain. On board the s. s. "Rosetta," to the eastward of Hong-Kong, in about N. 22° 29′, E. 116° 14′, the lowest reading was 29.41 (747.0), wind se. by e., force 10. The storm does not appear to have extended very far north, since it was scarcely felt beyond the Straits of Formosa. The centre of the typhoon passed very near Hong-Kong and caused great damage to native craft in, and near, the harbor. At Macao more than fifty junks of all sizes were completely wrecked, and as many more were damaged. At Canton the destruction to life and property was very great, caused chiefly by the heavy floods which occurred during the passage of the typhoon. After passing Hong-Kong the typhoon moved north, or northeastward, losing much of its violence, as it was scarcely felt at Zi-Ka-Wei, but on reaching the sea on the 17th it developed new energy. It moved northeastward over the Yellow sea and the peninsula of Corea on the 17th, accompanied by squally weather and southerly backing to northwesterly winds of force 6 to 8. After passing over the Sea of Japan it entered Niphon and crossed over that island towards the Pacific, where it disappeared on the 18th; it manifested no violence when in Japan, its presence being indicated only by light rains and a slight decrease of pressure. The velocity of translation of this typhoon was about ten and three-quarter miles an hour when over the China sea (13–15th); it afterwards increased to fifteen miles an hour in China, and when over the Yellow sea and the Sea of Japan it averaged thirty-six miles an hour.

III.—This typhoon apparently originated in the southeastern part of the Philippine archipelago prior to the 18th; it moved west-northwestward, and passed Mindoro island on that date, exhibiting much violence during its passage. On the 19th the wind reached a velocity of 50 miles nnw. at Tuguegarao, and of 34 miles w. at Manila, with heavy rain at the former station. From the 20th to 24th the typhoon moved slowly westward over the China sea, causing, during its progress, the wreck of the American ship "Humboldt" on the Paracel islands. Passing to the southward of Hainan the centre of the typhoon entered the Gulf of Tonquin on the 24th; the lowest observed pressure during its passage over the China sea was 29.42 (747.3), and the highest winds reported were of force 9; there were no reports of damage in the Gulf of Tonquin. During the 24th the disturbance passed over western Tonquin and into central China; it moved north-northeastward, causing fresh to strong winds at stations east of the centre, and on the 28th it was to the northward of the Gulf of Pe-Che-Li. It was attended by heavy weather over the Gulf and the northern part of the Yellow sea; it then passed over northern Corea and into the Sea of Japan, and thence southeastward over Niphon to the Pacific, where it disappeared on the 30th, its passage over Niphon being hardly perceptible. The velocity of translation

was as follows: in the China sea, from the 19th to 22d, 5.2 miles, and from the 22d to 25th, 9.7 miles; in central China, from the 25th to 28th, 18.3 miles; over northern China and the Sea of Japan, from the 28th to 30th, 21.7 miles an hour.

GENERAL REMARKS.

All data which appear in the DAILY BULLETIN OF SIMULTANEOUS METEOROLOGICAL OBSERVATIONS are copied from the regular exchanges of this office. The barometer readings for land stations, in the first and second columns, are reduced to freezing and their respective standards; those in the third and fourth columns to sea-level. When necessary, corrections for instrumental error, temperature, and reduction to sea-level are always applied, while those for instrumental error, only when such corrections can be ascertained with close approximation, as by comparison when vessels are at or near land stations. Relative humidity generally requires computation from the hygrometrical observations. When rain has fallen, but neither the amount nor duration is recorded, the word "blank" is published in the rainfall column. The weather is generally published as given. The following symbols and abbreviations are common to all series, viz: †, aneroid; *, instrumental error not known; c, cirrus; k, cumulus; s, stratus; n, nimbus; d, scud; f, fracto; p, pallio; hz, haze; fg, fog; sk, smoke; inap, inappreciable; d. clouds, detached clouds. The movement of the air is published as given on the originals, when indicated by velocity in miles per hour, in meters per second, or by force, all variations of the latter being reduced to the common scale of 0 to 10. Those stations reporting the movement in pounds pressure per square foot are reduced to force on the common scale, and those in kilometers per hour, to meters per second and miles per hour. The distinction between upper and lower clouds is carefully made in the United States and a portion of the Canadian series, and the various formations are indicated by the letters above given and their combinations. In the MONTHLY SUMMARY OF INTERNATIONAL SIMULTANEOUS METEOROLOGICAL OBSERVATIONS the position of stations (latitude and longitude) are obtained from Keith Johnson's "Index Geographicus," except where more exact information is furnished. The elevation of stations is obtained either from the annual, semi-annual, and monthly publications of the various meteorological bureaus here represented, or from the original forms upon which are entered the daily observations. In the United States series the elevations are computed from the latest surveys, and are carefully revised each month, in order to note any change in the elevation of the barometer-cistern at any station. It is believed for the most part that, throughout the European and other series, the elevations as given represent the height of the barometer-cistern above sea-level; at least, this should be the case. The local time, where omitted or not given correctly in the original, is carefully computed at this office. A letter placed opposite the name of a station or some portion of the data credited thereto, indicates that a certain number of observations are missing, corresponding to the relative position in the alphabet of the letter so used.

INTERNATIONAL CHARTS ACCOMPANYING DAILY BULLETIN AND MONTHLY SUMMARY.

International chart i. shows isobars and isotherms charted from data as appearing in the INTERNATIONAL BULLETIN of same date, as reported by the several observers. Isobars, in continuous lines, exhibit atmospheric pressure at sea-level in English inches; isotherms, in dotted lines, exhibit temperature of the air in degrees, Fahrenheit, similarly charted.

International chart ii. (monthly mean chart), showing mean pressure at sea-level in English inches, mean temperature in degrees, Fahrenheit, mean force and prevailing direction of wind at 7 a. m., Washington mean time.

International chart iii. shows tracks of centres of low barometer. The Arabic numerals show location of the centres of low barometer at 7 a. m., Washington mean time, of that date.

In the above charts, broken lines indicate that the lines so drawn are doubtful.

Arrows show direction of, and fly with, the wind. Force is shown as follows:

SYMBOLS.	FORCE.	VELOCITY.	
		MILES PER HOUR.	METRES PER SECOND.
○	0	0	0
→	1, 2	0 to 9	0 to 4
→	3, 4	9.1 to 22.5	4.1 to 10.1
→	5, 6	22.6 to 40.5	10.1 to 18.1
→	7, 8	40.6 to 67.5	18.1 to 30.2
→	9, 10	67.6 up.	30.2 and over.

On February 1, 1883, the following change was made in publishing marine data in the "Daily International Bulletin":

All marine reports are classified as to districts, which are designated as follows: District No. 1, North Atlantic; District No. 2, South Atlantic, &c., under which headings the respective reports are printed.

BOUNDARIES OF DISTRICTS.

District No. 1 comprises the Atlantic ocean, its arms and tributaries, from the equator northward to the pole, and in the arctic from 100° E., westward to 100° W., of Greenwich.

District No. 2 comprises the Atlantic ocean, its arms and tributaries, from the equator southward to the pole, and in the antarctic from 20° E., westward to 70° W., of Greenwich.

District No. 3 comprises the Pacific ocean, its arms and tributaries, from the equator northward to the pole, and in the arctic from 100° W., westward to 100° E., of Greenwich.

District No. 4 comprises the Pacific ocean, its arms and tributaries, from the equator southward to the pole, and in the antarctic from 70° W., westward to 145° E., of Greenwich.

District No. 5 comprises the Indian ocean, its arms and tributaries, from the Asiatic continent southward to the pole, and in the antarctic from 20° E., eastward to 145° E., of Greenwich.

The following remarks relate to the individual peculiarities in the *methods* of recording, and the *times* of taking, the international simultaneous meteorological observations, under the auspices of the various meteorological bureaus:

ALGERIAN SERIES (furnished by co-operation of General Maritz, Commandant Supérieur du Génie in Algeria).—The originals give the barometer in millimetres reduced to sea-level; temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The rainfall is measured at 7 a. m., local time, and the amount indicated in millimetres.

AUSTRALIAN SERIES (furnished by co-operation of R. L. J. Ellery, Director of the Observatory at Melbourne, N. S. W.).—At Melbourne the conversions are published as given in the originals. The movement of the air is indicated by velocity in miles per hour.

AUSTRO-HUNGARIAN SERIES (furnished by co-operation of Prof. Dr. Julius Hann, Director of the Imperial and Royal Central Meteorological Institute at Vienna).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. At the following stations rainfall is measured at local time: Lemburg, 7 p. m.; Vienna, 2 p. m.; Trieste, 7 a. m. The weather is given by the Vienna symbols or in general terms.

BRITISH SERIES (furnished by co-operation of the Meteorological Council, London, Robert H. Scott, Esq., F. R. S., Secretary, and respective observers).—In general the originals do not give rainfall or distinction between upper and lower clouds. Relative humidity, except for Bradford and Silloth Rectory, is not given on the originals, but is computed from hygrometrical observations. At Cardington, Oxford, and Sandwick Manse the barometers are given as read off. At Greenwich the movement of the air is indicated by pounds pressure per square foot. At the following stations rainfall is measured at local time: Bradford, 9 a. m., and Aberdeen, 10 a. m. The wind-direction is given to 32 points and weather by the Beaufort notation.

CANADIAN SERIES (furnished by co-operation of Charles Carpmael, A. M., F. R. A. S., Director of the Magnetic Observatory at Toronto and Superintendent of the Meteorological Office of the Dominion of Canada, and respective observers).—The originals give the barometer reduced to sea-level in English inches and the temperature in Fahrenheit. Meteorological reports from stations marked with a * are telegraphed daily to the office of the Chief Signal Officer of the Army.

CAPE COLONY SERIES (furnished by co-operation of the Meteorological Commission of Cape Colony, Cape Town, and respective observers).—At Cape Town the barometer is given on the original as corrected for temperature only. Upper and lower clouds are given on a scale of 0 to 10, and the kind occasionally indicated by abbreviating Poëy's classification.

CHINESE SERIES (furnished by co-operation of Marc Dechevrens, S. J., Director of the Meteorological Observatory at Zi-Ka-Wei).—At Zi-Ka-Wei the originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is given in metres per second and the direction to 16 points. The kind of clouds is occasionally given, and the degree of cloudiness on the scale of 0 to 10; distinction between upper and lower clouds is sometimes made. The weather is given in general (French) terms. The rainfall is given in millimetres and measured at the moment of simultaneous observation. Tchang-Kia-Tchouang, the original gives barometer in millimetres reduced to sea-level, temperature in Centigrade, velocity in kilometres for past 3 hours 53 minutes, clouds on scale of 0–10, no distinction between upper and lower.

DANISH SERIES (furnished by co-operation of Captain N. Hoffmeyer, Director of the Royal Danish Meteorological Institute at Copenhagen).—The originals give the barometer in millimeters reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6. The weather is occasionally given by the Vienna symbols, but it is not certain that they always refer to the moment of simultaneous observations, except at Copenhagen. No distinction is made between upper and lower clouds, and the direction of movement, together with the rainfall, is entirely omitted. At Jacobshavn and Upernavik, the observations are taken at 8 a. m., instead of 8.44 and 8.24 a. m., respectively.

FRENCH SERIES (furnished by co-operation of the Central Meteorological Office of France, Professor E. Mascart, Director, and respective observers).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in metres per second for Mont Louis and Perpignan. In general the rainfall is measured at 9 a. m., local time. The direction of upper and lower clouds is given, but no distinction is made as to kind. The degree of cloudiness is given on a scale of 0 to 4 at Clermont-Ferrand and Puy de Dome, while at other stations the scale of 0 to 10 is

employed, or general weather terms, from which the amount of cloudiness is inferred. The weather is given in general terms, except occasionally by the Vienna symbols at Mont Louis and Perpignan. At Besançon the observations are taken at at midday instead instead of 0.32 p. m.

GERMAN SERIES (furnished by co-operation of Prof. Dr. G. Neumeyer, Director of the German Marine Observatory at Hamburg).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The kind of clouds is occasionally given, but no distinction is made between upper and lower; the amount is given on a scale of 0 to 10, but the kind is rarely given. The weather is given in Vienna symbols or in general terms.

GREEK SERIES (furnished by co-operation of Prof. Dr. J. F. Julius Schmidt, Director of the Royal Observatory at Athens).—The originals give the barometer corrected for temperature only, and the thermometer in Centigrade. Hygrometrical observations are not given. The kind of clouds is occasionally given, and the amount is inferred from the general weather terms. The movement of the air is indicated by force on a scale of 0 to 10.

INDIAN SERIES (furnished by co-operation of H. F. Blanford, Meteorological Reporter to the Government of India at Calcutta).—The barometric observations refer to the Calcutta standard, which requires a correction of —0.011 inch, or 0.28 mm., as compared with the Kew standard. The wind-velocity given is the average rate of wind since the observation of the preceding day. All conversions are published as given in the originals, where the data are recorded to an additional decimal. The weather is given by the Beaufort notation, Vienna symbols, or special symbols.

ITALIAN SERIES (by authority of the Minister of Agriculture, Industry, and Commerce—furnished by co-operation of Professor P. Tacchini, Director of the Central Meteorological Office at Rome, and respective observers).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometres per hour, or by force on a scale of 0 to 4, as at Mondovi, Florence, and Cagliari. No distinction is made between upper and lower clouds, and the amount is given on a scale of 0 to 10.

JAPANESE SERIES (furnished by co-operation of I. Arai, Director of the Imperial Meteorological Observatory at Tokei).—The rainfall is measured at 9.30 a. m., local time, and the conversions are all published as given in the originals. Distinction is generally made between upper and lower clouds, and the amount is given on a scale of 0 to 10. The weather is given in general terms.

MAURITIUS SERIES (furnished by co-operation of C. Meldrum, Secretary of the Meteorological Society of Mauritius).—All conversions are published as given in the originals. The direction of the wind is given to 64 points, and the rainfall is measured at 9.30 a. m., local time.

MEXICAN SERIES (by authority of the Secretary of Public Works—furnished by co-operation of Señor Mariano Barcena, Director of the Central Meteorological Observatory in the City of Mexico, and respective observers).—All conversions are published as given in the originals, but when an evident mistake has been made the data is queried at this office. The kind of clouds is given, and also the direction and amount of both upper and lower. The degree of cloudiness is indicated on a scale of 0 to 10. Rainfall is generally measured at 6 a. m., local time.

NETHERLANDS SERIES (furnished by co-operation of Professor Buys Ballot, Director of the Royal Meteorological Institute of the Netherlands at Utrecht).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by pressure in kilograms per square metre, except at Hellevoetsluis, which gives force on a scale of 0 to 12. The humidity is not given on the originals, but for two stations it is computed from the hygrometrical observations. The weather is only given for Utrecht, from which the amount of cloudiness at that station is inferred.

NORWEGIAN SERIES (furnished by co-operation of Professor H. Mohn, Director of the Royal Norwegian Meteorological Institute at Christiania).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by velocity in metres per second or by force on a scale of 0 to 6. The weather is occasionally given by Vienna symbols. At Bergen observations upon the weather and degree of cloudiness are made at 2 p. m., local time. At Brono the observations are taken at 2 p. m., instead of 12.57 p. m.

PORTUGUESE SERIES (furnished by co-operation of J. C. de Brito Capello, Director of the Meteorological Observatory of the Infante Dom Luiz at Lisbon).—In the originals the barometer is given in millimetres and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometres per hour. The weather is occasionally given by the Vienna symbols. The rainfall is measured at noon each day.

RUSSIAN SERIES (furnished by co-operation of Professor H. Wild, Director of the Imperial Central Physical Observatory of Russia at St. Petersburg).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by velocity in meters per second. No distinction is made between upper and lower clouds; the amount is given on a scale of 0 to 10, and the kind occasionally. The weather is occasionally given by the Vienna symbols. At Astrakhan, Ashurada and Baku, the barometer-cistern is below sea-level. At Kasalinsk, the barometer appears to have a large error.

SCOTTISH SERIES (furnished by co-operation of Alexander Buchan, M. A., F. R. S. E., Secretary of the Scottish Meteorological Society at Edinburg, and respective observers).—The originals give the barometer as read off and the movement of the air is indicated by force on a scale of 0 to 6. Distinction is made between upper and lower clouds as to degree, and the amount of cloudiness is given on a scale of 0 to 10. The direction of upper clouds is given separately. The rainfall, temperature, and humidity are not given at North Unst. The wind-direction is given to 32 points.

SPANISH SERIES (furnished by co-operation of the Royal Observatory at Madrid, and respective observers).—The movement of the air, except for sub-series, is given in kilometres per hour. The kind of clouds is occasionally given, and the degree of cloudiness on a scale of 0 to 10. The rainfall at San Juan is measured at 4 p. m., local time, and at San Fernando at midnight. The weather is given in general (Spanish) terms.

SWEDISH SERIES (furnished by co-operation of Professor R. Rubenson, Director of the Royal Swedish Meteorological Institute, and of Professor H. H. Hildebrandsson, Director of the Meteorological Observatory of the Upsala University).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in metres per second for Upsala. The kind of clouds is not given, but the degree of cloudiness is indicated on a scale of 0 to 10. The rainfall is measured at 8 a. m., local time, and the weather is occasionally given by the Vienna symbols.

SWISS SERIES (furnished by co-operation of Professor E. Plantamour, Director of the Observatory at Geneva).—The originals give the barometer in millimetres, corrected for temperature only, and the thermometer in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10.

TURKISH SERIES (furnished by co-operation of A. Coumbary, Effendi, Director of the Central Observatory at Constantinople, and of Professor C. V. A. van Dyck, Superintendent of the Lee Observatory at Beirut).—The originals give the barometer in millimetres reduced to sea-level. The temperature is given in Centigrade. The movement of the air is indicated by force on a scale of 0 to 7 for Valona, and on a scale of 0 to 12 for Beirut. At Constantinople the velocity is given in meters per second. The kind of clouds is not given, but the amount is indicated on a scale of 0 to 10, except at Valona, at which station it is inferred from the general weather terms.

UNITED STATES SERIES (by authority of the Secretary of War—furnished by co-operation of W. B. Hazen, Brigadier and Brevet Major General, Chief Signal Officer, U. S. Army).

UNITED STATES SUB-SERIES (furnished by co-operation of the respective observers).—The originals generally give the barometer reduced to sea-level and the temperature in Fahrenheit. At Bogota and Navassa the barometer is corrected for temperature only; at Puerto Berrio, is given as read off, and at Rivas is omitted. The movement of the air is generally indicated by velocity in miles per hour, except on a scale of 0 to 10 for Bogota, Paramaribo, and Rivas, and 0 to 12 for Puerto Berrio. The wind-direction is generally given to 16 points, except 8 points for Bogota and 32 points for Rivas. At Rivas the humidity is obtained by readings from Saussure's hygrometer.

BRITISH NAVAL SERIES (furnished by co-operation of the Meteorological Council, London, Robert H. Scott, Esq., F. R. S., Secretary).—The originals give the barometer as read off. The wind-direction is given to 32 points. The movement of the air is indicated by force on a scale of 0 to 12. The distinction between upper and lower clouds is made as to direction, but not as to amount. The height of the sea-disturbance is given on a scale of 0 to 9, and the weather by the Beaufort notation. The direction of movement of wind, clouds, and sea is compass direction, corrected only for deviation caused by the iron in the ship, while the correction for magnetic variation is applied at this office. The humidity is not given, but is computed from the hygrometrical observations.

PORTUGUESE NAVAL SERIES (furnished by co-operation of J. C. de Brito Capello, Director of the Meteorological Observatory of the Infante Dom Luiz at Lisbon).—The originals give the barometer in millimetres, corrected for temperature only, and the thermometer in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The humidity is not given, but is computed from the hygrometrical observations. The kind of clouds is not given, but the amount is indicated on a scale of 0 to 10; the direction of movement is given without distinction between the upper and lower. The height of sea disturbance is given on a scale of 0 to 9 and the weather by the Beaufort notation. The rainfall is not measured, but the duration is generally given in hours and minutes.

SWEDISH NAVAL SERIES (furnished by co-operation of E. Malmberg, Director of the Nautical Meteorological Bureau at Stockholm).—The originals give the barometer as read off. The movement of the air is indicated by force on a scale of 0 to 12, and the direction is corrected for magnetic variation at this office. The humidity is not given, but is computed from the hygrometrical observations. The rainfall is omitted. The height of the sea-swell is given on a scale of 0 to 9 and the weather by the Beaufort notation.

UNITED STATES NAVAL SERIES (by authority of the Secretary of the Navy—furnished by co-operation of the Navy Department, through Commodore John G. Walker, U. S. N., Chief of Bureau of Navigation).—The originals give the barometer as read off. The humidity is not given, but is computed from the hygrometrical observations. The sea-swell and weather are given in general terms. The direction of the wind is compass direction, corrected for variation.

MERCHANT-MARINE SERIES (furnished by co-operation of the owners, agents, &c., of the respective lines and vessels).—Same as U. S. Naval.

OCEAN SQUARES.—The table of ocean square data shows (1) the location

of the centres of squares whose sides extend 5° each in latitude and longitude, (2) the monthly mean pressure and temperature of the air, and the mean force and total frequency of the wind at 7 a. m., Washington time, computed for the centre of each square from daily readings as obtained by interpolation between the isobars and isotherms of the daily international simultaneous weather maps.

ERRATA.

DAILY BULLETIN, February 3, 1883, page 7, district No. 1, bk. "Galena," Cardiff, Eng., should read Cardiff, Wales; same correction on 5, 6, 8, 9, 10, 11, 12, 17, 19, 20.

17th, page 3, Italian, Syracuse, actual barometer 29.98 inches, should read 29.89.

19th, page 1, British, Truro, temperature 8°.6 Cent., should read 8°.9.

25th, page 5, St. Paul, Minnesota, temperature 14°.2 Cent., should read —14°.2.

26th, page 1, British, Sheffield, reduced barometer 785.7 mm., should read 775.7.
