REVIEW.

INTERNATIONAL METEOROLOGY FOR MARCH, 1884.

[*Pressure expressed in inches and millimetres; temperature in degrees, Fahrenheit and Centigrade; wind-force by scale of* 0–10.]

The following description refers to chart ii. for the month of March, 1884, issued with this SUMMARY. This chart continues the series of international charts begun in February, 1877, and exhibits the mean pressure, mean temperature, and prevailing wind-direction over the northern hemisphere, as determined from one observation taken simultaneously each day at 7 a. m., Washington, or 0 h. 8 m. p. m., Greenwich, mean time.

Two distinct areas of low mean pressure are shown on the chart; the first is indicated by the isobar for 29.5 (749.3) and occupies southern Greenland, Iceland, and the ocean between W. 20° and 45°, and southward to N. 55°; within this area the mean pressures range from 29.43 (747.5) to 29.5 (749.3). The second area of barometric minima is that which occupies British India; it is indicated by the isobar for 29.8 (756.9), and covers the country from the province of Madras northeastward to the Himalayas; within this region the pressure ranges from 29.77 (756.1) to 29.8 (756.9); in other parts of the country it ranges from 29.8 (756.9) to 29.9 (759.4).

Four areas of barometric maxima appear on the chart and occupy, respectively, Asia, eastern Europe, the Atlantic, and the Hudson Bay region and Labrador. The first, 30.3 (769.6), covers that part of Siberia lying between the meridians of 75° and 105° E. and the parallels of 45° and 55° N; in other parts of Asia north of the thirty-second parallel, the mean pressure is not less than 30.0 (762.0 . In southwest Niphon it is above 30.0 (762.0), but in the rest of Japan it varies between that amount and 29.9 (759.4). The second area of high barometer extends from about 35° east of Greenwich, southeastward and eastward to the Ural region and is inclosed by the isobar for 30.3 (769.6); in other parts of Russia except the Black Sea region, the mean pressure is above 30.1 (764.5); in western Europe it is below 30.0 (762.0). The third area, 30.2 (767.1), covers the Atlantic between the meridians of 30° and 50° W. and the parallels of 20° and 35° N.; from Florida and the West Indies eastward to 20° W. the pressure exceeds 30.1 (764.5). The fourth area occupies Hudson's Bay and northern Labrador, the mean pressure over those regions exceeding 30.1 (764.5). In the United States, except the Pacific districts, Arizona, and New Mexico, the mean pressure ranges from 30.0 (762.0) to 30.08 (764.0); in the above-mentioned districts it ranges from 29.9 (759.4) to 29.98 (761.5). In eastern Canada it varies from 29.95 (760.7) to 30.0 (762.0).

On comparison with the chart for the preceding month, (February, 1884), it will be seen that the low area which occupied Greenland and Iceland has moved in a southwesterly direction, and, while there has been an increase of pressure over the regions to the eastward of the low area, the pressure has decreased to the southwestward. Over the Atlantic ocean south of N. 40° there has been no material change, except near the northwestern coast of Africa, where the pressure is less than in the preceding month. In the United States the high area which occupied the northwest in February has apparently moved northeastward with decreasing pressure, while a general decrease of pressure has occurred in all districts. In Canada there has been a marked decrease. In Europe the pressure has increased in the British Isles, the northern peninsulas, and Russia, the increase being greatest in Russia and Scandinavia, where it averaged .15 inch. In all other parts of Europe there has been a decrease of pressure, greatest in Austria, Italy and Spain, and least in France and Germany. In eastern Asia there has been a slight decrease of pressure, while an increase has occurred in the western part of the continent. In British India the pressure is about .13 inch less than in the preceding month.

Compared with the corresponding month of previous years, the mean atmospheric pressure was below the normal in that part of the United States lying west of the Mississippi river; in the eastern sections of the country it was slightly above the normal; in Canada it was also above the normal. In Europe it was greatly above the normal in the northern and eastern divisions of the continent; in France, Spain and the British Isles it was slightly below the normal.

The following table gives the mean pressure and mean temperature, with corresponding departures for March, 1884, in the several countries of the northern hemisphere, compared with the means as determined from observations taken during the last seven years:

Countries.	Mean pressure.			Mean temperature.		
	March mean of 7 (1877-'83) years.	March 1884.	Departure.	March mean of 7 (1877-'83) years.	March 1884.	Departure.
				°	°	°
Algeria	30.07	29.96	− 0.11	62.3	60.9	− 1.4

* Means for six years only.

In the United States the mean temperature of the air was slightly above normal in the districts from the Rio Grande river northeastward to New England, not including the lake region. In the lake region and in all other districts of the United States the temperature was below the normal. In Canada it was about normal. In the European continent the mean temperature was everywhere above the normal except in Russia and the Iberian peninsula, where there was a deficiency of about 2°. In British India the highest mean temperature reported was, 94°.9 Fahr. (34°.9 C.), at Bellary, and the lowest was, 71°.2 Fahr. (21°.8 C.), at Sibsagar.

The following are some of the extreme mean temperatures reported at isolated stations:

Highest.	Fahr.	Cent.	Lowest.	Fahr.	Cent.
	°	°		°	°
Manila, Philippine Islands	79.6	26.4	York Factory, B. A.	−25.7	−32.1
Bridgetown, Barbadoes, W. I.	79.4	26.3	Fort Chimo, B. A	−12.7	−24.8
Bluefields, Nicaragua, C. A.	79.3	26.3	Upernavik, Greenland	− 9.8	−23.2
Puerto Berrio, U.S. Colombia, S. A	77.0	25.0	Akmolinski, Siberia	6.1	−14.2
Paramaribo, Dutch Guiana, S. A.	76.3	24.6	Nertschinsk, Siberia	6.6	−14.1

In the United States the prevailing winds were as follows: In the south Atlantic states and along the Gulf coasts they were from se. to sw.; in the other districts they were mostly from w. to n. In Canada they were mostly from w. to nw. Over the Atlantic ocean the prevailing winds were w. and nw. over the region north of 40° N., from the American coasts eastward to W. 15°; between that meridian and the European coasts they were sw. Between the parallels of 30° and 40° N., and from the American coast to W. 30° they were w. and sw.; east of W. 30° they were n. and ne., south of 30° N., they were e. and ne. In Europe the winds were mostly from e. to se. and s. In Japan they were mostly n.

The precipitation during March, 1884, was less than the average in the lake region, Florida, Ohio valley, the northwest and the north Pacific coast region; in all other districts of the United States it exceeded the average, the excess being greatest in the middle and south Pacific coast districts. In Canada it was greater than the average in the eastern and less than the average in the western parts of the Dominion. In Europe the rainfall was less than the average.

STORM-TRACKS FOR MARCH, 1884.

On chart iii. are shown the paths of the principal barometric depressions that have appeared in the northern hemisphere during the month of March, 1884. The data are charted for each day of the month on the maps accompanying each issue of the "INTERNATIONAL BULLETIN," and from these charts, together with abstracts of ship's logs and other miscellaneous data on file at this office, are traced the movements of the centres of barometric minima. This chart continues the series of international charts begun in November, 1877.

The paths of forty-three depressions are shown on the chart, and are distributed, geographically, as follows:

In the North American continent there appeared fourteen depressions; of these, six, viz.: numbers iii., v., vii., ix., x., and xiii., moved from the Pacific coast in an easterly or southeasterly direction to the central portions of the United States and thence northeastward over the region east of the Mississippi river, and over Canada, to the Atlantic. Two depressions appeared in the Gulf of Mexico, and moved northeastward over the south Atlantic states into the ocean; three developed in the United States east of the Rocky mountains, and passed eastward to the coast line; two appeared in the Northwest Territory of British America; one of these moved southeastward to the lake region, and thence eastward to the Gulf of Saint Lawrence, while the other passed eastward over Manitoba; one disturbance appeared in northern Labrador.

Fourteen depressions are traced over the north Atlantic ocean; of these, seven (numbers xvi., xix., xx., xxi., xxii., xxiii., and xxv.) are continuations of storms which entered the Atlantic from the American coasts. Number xv. was a depression which entered the Atlantic at the close of the preceding month; it moved north-northeastward and disappeared north of Iceland; the disturbances shown as xv*a*, and xv*b*. were subsidiary thereto and occupied the neighborhood of the British Isles. Numbers xvii. and xxiv. developed in Greenland and moved southeastward to the northwestern coasts of Europe; xviii. appeared near N. 55°, W. 40°, and moved to the British coasts; xx*a*. was subsidiary to low area xx. and moved northeastward over the British Isles, while the latter passed far to the northward.

Of the ten depressions that are traced in Europe, six are shown in the southern districts, south of 45° north latitude; one appeared over the North Sea and moved to Scandinavia, and three are shown in Russia.

Eight depressions are traced over Japan and the adjacent seas, the direction of movement of these depressions being northeasterly.

As noteworthy features of the storm-track chart for March, 1884, may be mentioned: 1st.—The unusual frequency of storms on the Pacific coast of North America and their southeasterly movement to the central valleys, where they curved to the northeastward.

2d.—The northerly tracks and slow erratic movements of the depressions that have traversed the North Atlantic, especially as regards those charted as numbers xvi., xix., xxi., and xxii.

3d.—The unusual number of disturbances that have appeared in the Mediterranean districts, with a corresponding decrease in the number of storms over the northern and central districts.

4th.—The frequency of depressions over Japan and the prevalence of low barometric readings in the Behring Sea.

The characteristics of the more important depressions were, briefly, as follows: low area xv. was shown on the 1st as a trough of low pressure extending from the Strait of Belle Isle northward to southern Greenland, with barometric readings below 28.8 (731.5) and attended by strong w. gales over the region south of Newfoundland and west of the forty-fifth meridian, with moderate ssw. and sw. gales to the eastward. On the 2d the low area became nearly circular in form and its centre occupied southern Greenland, the pressure remaining unchanged, while the w. gales moderated to strong variable breezes over the region to the westward of the fiftieth meridian, but increased to strong gales to the eastward of that meridian. The chart for the 3d showed number xv. near Iceland, where the pressure was 28.93 (734.8), and low area xvi., which had moved northeastward along the coast of the United States, now occupied the banks of Newfoundland, the combined systems forming a barometric trough which extended from Newfoundland northeastward to Iceland. During the 3d, subsidiary disturbances, xv*a*. and xv*b*. were formed to the southward of Iceland and caused unsettled, stormy weather in the British Isles. On the 4th, there was an increase of pressure over Iceland and the ocean between W. 15° and 40°, but, owing to the advance of low area xvi. the weather conditions remained unchanged over the region to the westward of the last-mentioned meridian. During the 5th and 6th, the region of least pressure, where the barometer read below 28.8 (731.5), occupied Greenland, while an area of high pressures, 30.4 (772.1) to 30.6 (777.2), occupied the ocean south of 45° N., this distribution of pressure causing a continuation of strong w. gales over the region to the northward. During the 7th and 8th, as low area xvi. remained in the vicinity of Iceland there was a slight increase of pressure, the barometer rising to 29.2 (741.7), but this increase was checked on the 9th when the pressure again fell to 28.7 (729.0), the decrease spreading to the northern and western districts of Europe, which had previously been occupied by an area of high barometer. On the 10th the pressure at the centre of the high area in northwestern Russia increased to 30.4 (772.1) and low area xvi. was apparently forced to the southward and westward, the high area of the Atlantic giving way before its advance.

From the 10th till the 17th, the pressure over the Atlantic ocean, in connection with the advance of low areas xix. and xx., remained below 29.0 (7 6.6) and during this period stormy and unsettled weather prevailed over the ocean; at the same time, an area of high barometer occupied eastern Europe, while small, subsidiary low areas traversed the western parts of the continent. On the 17th the high area referred to began to give way and was pushed southward in advance of low area xxxi., which had appeared in the district of Archangel, and the depressions which had occupied the Atlantic now moved towards the northern coasts of Europe. On the 20th an area

of relatively high pressures occupied the Bay of Biscay and during the succeeding days it spread northward, occupying Scandinavia on the 24th and 25th; from the latter date until the close of the month the high area occupied the northern districts of Europe, while the Mediterranean districts were traversed by moderate depressions, and the disturbances from the Atlantic were forced to the northward and westward. On the 31st, low area xxiv., which had moved from the Arctic regions by a course nearly due south, was off the western coast of Ireland, with pressure at the centre about 29.1 (739.1). The storms which passed over the United States are described under "Areas of low barometer," and special barometric observations in connection with those over the Atlantic ocean will be found under "North Atlantic storms" in the MONTHLY WEATHER REVIEW for March, 1884.

In the depressions which passed over Japan the barometer ranged from 29.3 (744.2) to 29.6 (751.8); strong winds to moderate gales with rain or snow accompanied these depressions, and as they moved northeastward the pressure generally decreased, frequently falling below 29.0 (736.6) over Behring Sea.

INTERNATIONAL POLAR OBSERVATIONS.

The following observations, August 9, 1883, to June 21, 1884, are furnished by the co-operation of 1st Lieut. A. W. Greely, 5th U. S. Cavalry, Acting Signal Officer and Assistant, commanding Lady Franklin Bay Expedition, through Brig. and Brevet Major General W. B. Hazen, Chief Signal Officer, U. S. Army, on behalf of the International Polar commission, being a series of observations taken after the abandonment of the station at Fort Conger, August 9, 1883, in the retreat of the party to Cape Sabine.

All barometer readings are corrected and reduced to sea-level; from August 9th to November 5th, 1883, an aneroid was used, at all other dates, a mercurial.

All time mentioned refers to Washington time.

During November and December, 1883, and January, 1884, the barometric readings were taken at 7 a. m., and balance of report at 11 a. m.

GENERAL REMARKS.

DAILY BULLETIN.

All data which appear in the DAILY BULLETIN OF SIMULTANEOUS METEOROLOGICAL OBSERVATIONS are copied from the regular exchanges of this office. The barometer readings for land stations, in the first and second columns, are reduced to freezing and their respective standards; those in the third and fourth columns to sea-level. When necessary, corrections for instrumental error, temperature, and reduction to sea-level are always applied, while those for instrumental error, only when such corrections can be ascertained with close approximation, as by comparison when vessels are at or near land stations. Relative humidity generally requires computation from the hygrometrical observations. When rain has fallen, but neither the amount nor duration is recorded, the word "blank" is published in the rainfall column. The weather is generally published as given. The following symbols and abbreviations are common to all series, viz: †, aneroid; *, instrumental error not known; c., cirrus; k., cumulus; s., stratus; n., nimbus; d., scud; f., fracto; p., pallio; hz., haze; fg., fog; sk., smoke; inap., inappreciable; d. clouds, detached clouds. The movement of the air is published as given on the originals, when indicated by

velocity in miles per hour, in metres per second, or by force, all variations of the latter being reduced to the common scale of 0 to 10. Those stations reporting the movement in pounds pressure per square foot are reduced to force on the common scale, and those in kilometres per hour, to meters per second and miles per hour. The distinction between upper and lower clouds is carefully made in the United States and a portion of the Canadian series, and the various formations are indicated by the letters above given and their combinations.

All marine data are classified as to districts, which are designated as follows: District No. 1, North Atlantic; District No. 2, South Atlantic, &c., under which headings the respective reports are printed.

BOUNDARIES OF DISTRICTS.

District No. 1 comprises the Atlantic ocean, its arms and tributaries, from the equator northward to the pole, and in the Arctic from 100° E., westward to 100° W., of Greenwich.

District No. 2 comprises the Atlantic ocean, its arms and tributaries, from the equator southward to the pole, and in the Antarctic from 20° E., westward to 70° W., of Greenwich.

District No. 3 comprises the Pacific ocean, its arms and tributaries, from the equator northward to the pole, and in the Arctic from 100° W., westward to 100° E., of Greenwich.

District No. 4 comprises the Pacific ocean, its arms and tributaries, from the equator southward to the pole, and in the Antarctic from 70° W., westward to 145° E., of Greenwich.

District No. 5 comprises the Indian ocean, its arms and tributaries, from the Asiatic continent southward to the pole, and in the Antarctic from 20° E., eastward to 145° E., of Greenwich.

The following remarks relate to the individual peculiarities in the *methods* of recording, and the *times* of taking, the international simultaneous meteorological observations, under the auspices of the various meteorological bureaus.

ALGERIAN SERIES (furnished by co-operation of M. Thévenet, Director of the Meteorological Service at the College of Science of Algeria).—The originals give the barometer in millimetres reduced to sea-level; temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The rainfall is measured at 7 a. m., local time, and the amount indicated in millimetres.

AUSTRALIAN SERIES (furnished by co-operation of R. L. J. Ellery, Director of the Observatory at Melbourne, N. S. W.).—At Melbourne the conversions are published as given in the originals. The movement of the air is indicated by velocity in miles per hour. Adelaide, furnished by co-operation of Charles Todd, C. M. G., F. R. A. S. The observations are taken at 9 p. m., local time. Hobart Town, furnished by Commander J. Shortt, R. N. Observations are taken at 9 p. m., local time.

AUSTRO-HUNGARIAN SERIES (furnished by co-operation of Prof. Dr. Julius Hann, Director of the Imperial and Royal Central Meteorological Institute at Vienna).—The originals give the barometer in millimeters reduced to sea-level and the temperature in Centigrade. At the following stations rainfall is measured at local time: Lemberg, 7 p. m.; Vienna, 2 p. m.; Trieste, 7 a. m. The weather is given by the Vienna symbols or in general terms.

BELGIAN SERIES (furnished by the co-operation of J. C. Houzeau, Director of the Royal Observatory at Brussels).—The originals give the barometer in millimetres reduced to sea-level; temperature in Centigrade; weather by the Vienna symbols, and occasionally in general terms. At Arlon the observations are taken at 1 p. m., local time.

BRITISH SERIES (furnished by co-operation of the Meteorological Council, London, Robert H. Scott, Esq., F. R. S., Secretary, and respective observers).—In general the originals do not give rainfall or distinction between upper and lower clouds. Relative humidity, except for Bradford and Silloth Rectory, is not given on the originals, but is computed from hygrometrical observations. At Cardington, Oxford, and Sandwick Manse the barometers are given as read off. At Greenwich the movement of the air is indicated by pounds pressure per square foot. At the following stations rainfall is measured at local time: Bradford, 9 a. m., and Aberdeen, 10 a. m. The wind-direction is given to 32 points, and weather by the Beaufort notation. At Bradford no observations are taken on Sunday, except rainfall. Hong Kong, furnished by W. Doberck, Government Astronomer, rainfall is measured at midnight.

CANADIAN SERIES (furnished by co-operation of Charles Carpmael, A. M., F. R. A. S., Director of the Magnetic Observatory at Toronto, and Superintendent of the Meteorological Office of the Dominion of Canada, and respective observers).—The originals give the barometer reduced to sea-level in English inches and the temperature in Fahrenheit. Meteorological reports from stations marked with a * are telegraphed daily to the office of the Chief Signal Officer of the Army.

CAPE COLONY SERIES (furnished by co-operation of the Meteorological Commission of Cape Colony, Cape Town, and respective observers).—At Cape Saint Francis Lighthouse, the original gives barometer reduced to freezing, but not to sea-level. The kind of clouds is given, but no distinction is made between upper and lower. Weather in general terms.

CHILIAN SERIES (by authority of the Secretary of Public Instruction, furnished by co-operation of Francisco Vidal Gormáz, President of the Central Meteorological Office at Santiago).—Observations are taken mostly at lighthouses on the coast; the originals give barometer as read off; temperature in Centigrade; humidity is not given, but is computed at this office from the hygrometrical observations.

CHINESE SERIES (furnished by co-operation of Marc Dechevrens, S. J., Director of the Meteorological Observatory at Zi-Ka-Wei).—At Zi-Ka-Wei the original gives the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is given in metres per second and the direction to 16 points. The kind of clouds is occasionally given, and the degree of cloudiness on the scale of 0 to 10; distinction between upper and lower clouds is sometimes made. The weather is given in general (French) terms. The rainfall is given in millimetres, and measured at the moment of simultaneous observation.

DANISH SERIES (furnished by co-operation of the Director of the Royal Danish Meteorological Institute at Copenhagen).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6. The weather is occasionally given by the Vienna symbols, but it is not certain that they always refer to the moment of simultaneous observations, except at Copenhagen. No distinction is made between upper and lower clouds, and the direction of movement, together with the rainfall, is entirely omitted. At all Greenland stations the observations are taken at 8 a. m., local time.

EGYPTIAN SERIES (furnished by the co-operation of Albert Ismalun, Director of the Laboratoire Khédivial du Caire).—Original gives barometer reduced to zero, but not to sea-level, temperature in Centigrade. The velocity is the mean for past twenty-four hours. Rainfall in millimetres.

FRENCH SERIES (furnished by co-operation of the Central Meteorological Office of France, Professor E. Mascart, Director, and respective observers).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in metres per second for Montlouis and Perpignan. In general the rainfall is measured at 9 a. m., local time. The direction of upper and lower clouds is given, but no distinction is made as to kind. The degree of cloudiness is given on a scale of 0 to 4 at Clermont-Ferrand and Puy de Dôme, while at other stations the scale of 0 to 10 is employed, or general weather terms, from which the amount of cloudiness is inferred. The weather is given in general terms, except occasionally by the Vienna symbols at Montlouis and Perpignan.

GERMAN SERIES (furnished by co-operation of Prof. Dr. G. Neumeyer, Director of the German Marine Observatory at Hamburg).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The kind of clouds is occasionally given, but no distinction is made between upper and lower; the amount is given on a scale of 0 to 10, but the kind is rarely given. The weather is given in Vienna symbols or in general terms.

GREEK SERIES (furnished by co-operation of Prof. D. K. Kokkides, Director of the Royal Observatory at Athens).—The original gives the barometer corrected for temperature only, and the thermometer in Centigrade. Hygrometrical observations are not given. The kind of clouds is occasionally given, and the amount is inferred from the general weather terms. The movement of the air is indicated by force on a scale of 0 to 10.

INDIAN SERIES (furnished by co-operation of H. F. Blanford, Meteorological Reporter to the Government of India, at Calcutta).—The barometric observations refer to the Calcutta standard, which requires a correction of —0.011 inch, or 0.28 mm., as compared with the Kew standard. The wind-velocity given is the average rate of wind since the observation of the preceding day. All conversions are published as given in the originals, where the data are recorded to an additional decimal. The weather is given by the Beaufort notation, Vienna symbols, or special symbols.

ITALIAN SERIES (by authority of the Minister of Agriculture, Industry, and Commerce—furnished by co-operation of Professor P. Tacchini, Director of the Central Meteorological Office, at Rome, and respective observers).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometres per hour, or by force on a scale of 0 to 4, as at Mondovi, Florence, and Cagliari. No distinction is made between upper and lower clouds, and the amount is given on a scale of 0 to 10.

JAPANESE SERIES (furnished by the co-operation of the Geographical Bureau, Department of the Interior, through I. Arai, Director of the Imperial Meteorological Observatory, at Tokei).—The rainfall is measured at 9.30 a. m., local time, and the conversions are all published as given in the originals. Distinction is generally made between upper and lower clouds, and the amount is given on a scale of 0 to 10. The weather is given in general terms.

MAURITIUS SERIES (furnished by co-operation of C. Meldrum, Secretary of the Meteorological Society of Mauritius).—All conversions are published as given in the originals. The direction of the wind is given to 64 points, and the rainfall is measured at 9.30 a. m., local time.

MEXICAN SERIES (furnished by co-operation of the respective observers).—The kind of clouds is given, and also the direction and amount of both upper and lower. The degree of cloudiness is indicated on a scale of 0 to 10. Rainfall is generally measured at 6 a. m., local time.

NETHERLANDS SERIES (furnished by co-operation of Professor Buys-Ballot, Director of the Royal Meteorological Institute of the Netherlands, at Utrecht).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by pressure in kilograms per square metre, except at Hellevoetsluis, which gives force on a scale of 0 to 12. The humidity is not given on the originals, but for two stations it is computed from the hygrometrical observations. The weather is only given for Utrecht, from which the amount of cloudiness at that station is inferred. At Batavia the elevation is stated to be "a few metres."

NORWEGIAN SERIES (furnished by co-operation of Professor H. Mohn, Director of the Royal Norwegian Meteorological Institute, at Christiania).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by velocity in metres per second, or by force on a scale of 0 to 6. The weather is occasionally given by Vienna symbols. At Bergen observations upon the weather and degree of cloudiness are made at 2 p. m., local time. At Brono the observations are taken at 2 p. m., instead of 12.57 p. m.

PORTUGUESE SERIES (furnished by co-operation of J. C. de Brito Capello, Director of the Meteorological Observatory of the Infante Dom Luiz at Lisbon).—In the originals the barometer is given in millimetres and the temperature in Centigrade. The movement of the air is indicated by velocity in kilometres per hour. The weather is occasionally given by the Vienna symbols. The rainfall is measured at noon each day.

RUSSIAN SERIES (furnished by co-operation of Professor H. Wild, Director of the Imperial Central Physical Observatory of Russia at St. Petersburg).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by velocity in metres per second. No distinction is made between upper and lower clouds; the

amount is given on a scale of 0 to 10, and the kind occasionally. The weather is occasionally given by the Vienna symbols. At Astrakhan, Ashurada and Baku, the barometer-cistern is below sea-level.

SPANISH SERIES (furnished by co-operation of the Royal Observatory at Madrid, and respective observers).—The movement of the air, except for sub-series, is given in kilometres per hour. The kind of clouds is occasionally given, and the degree of cloudiness on a scale of 0 to 10. The rainfall at San Juan is measured at 10 a. m., local time, and at San Fernando at midnight. The weather is given in general (Spanish) terms.

SWEDISH SERIES (furnished by co-operation of Professor R. Rubenson, Director of the Royal Swedish Meteorological Institute, and of Professor H. H. Hildebrandsson, Director of the Meteorological Observatory of the Upsala University).—The originals give the barometer in millimetres reduced to sea-level and the temperature in Centigrade. The movement of the air is indicated by force on a scale of 0 to 6, except in metres per second for Upsala. The kind of clouds is not given, but the degree of cloudiness is indicated on a scale of 0 to 10. The rainfall is measured at 8 a. m , local time, and the weather is occasionally given by the Vienna symbols.

SWISS SERIES (furnished by co-operation of Prof. E. Gautier, Director of the Observatory at Geneva).—The originals give the barom ter in millimetres, corrected for temperature only, and the thermometer in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10.

TURKISH SERIES (furnished by co-operation of A. Coumbary, Effendi, Director of the Central Observatory at Constantinople, and of F. Nimr, B. A., Director of the Lee Observatory at Beirut).—The originals give the barometer in millimetres reduced to sea-level. The temperature is given in Centigrade. The movement of the air is indicated by force on a scale of 0 to 7 for Valona, and on a scale of 0 to 12 for Beirut. At Constantinople the velocity is given in metres per second. The kind of clouds is not given, but the amount is indicated on a scale of 0 to 10, except at Valona, at which station it is inferred from the general weather terms. At Samakov the barometer is reduced to freezing, but not to sea-level; temperature in Fahrenheit. The kind of clouds is given, also the distinction between upper and lower.

UNITED STATES SERIES (by authority of the Secretary of War—furnished by co-operation of W. B. Hazen, Brigadier and Brevet Major General, Chief Signal Officer, U. S. Army).

UNITED STATES SUB-SERIES (furnished by co-operation of the respective observers).—The originals generally give the barometer reduced to sea-level and the temperature in Fahrenheit. At Bogota the barometer is corrected for temperature only; at Puerto Berrio, is given as read off. The movement of the air is generally indicated by velocity in miles per hour, except on a scale of 0 to 10 for Bogota, Paramaribo, and Rivas, and 0 to 12 for Puerto Berrio. The wind-direction is generally given to 16 points, except 8 points for Bogota. At Rivas the humidity is obtained by readings from Saussure's hygrometer.

BRITISH NAVAL SERIES (furnished by co-op ration of the Meteorological Council, London, Robert H. Scott, Esq., F. R. S., Secretary).—The originals give the barometer as read off. The wind-direction is given to 32 points. The movement of the air is indicated by force on a scale of 0 to 12. The distinction between upper and lower clouds is made as to direction, but not as to amount. The height of the sea-disturbance is given on a scale of 0 to 9, and the weather by the Beaufort notation. The direction of movement of wind, clouds, and sea is compass direction, corrected only for deviation caused by the iron in the ship, while the correction for magnetic variation is applied at this office. The humidity is not given, but is computed from the hygrometrical observations.

PORTUGUESE NAVAL SERIES (furnished by co-operation of J. C. de Brito Capello, Director of the Meteorological Observatory of the Infante Dom Luiz at Lisbon).—The originals give the baro eter in millimetres, corrected for temperature only, and the thermometer in Centigrade. The movement of the air is indicated by force on a scale of 0 to 10. The humidity is not given, but is computed from the hygrometrical observations. The kind of clouds is not given, but the amount is indicated on a scale of 0 to 10; the direction of movement is given without distinction between the upper and lower. The height of sea disturbance is given on a scale of 0 to 9 and the weather by the Beaufort notation. The rainfall is not measured, but the duration is generally given in hours and minutes.

UNITED STATES NAVAL SERIES (by authority of the Secretary of the Navy—furnished by co-operations of the Navy Department, through Commodore John G. Walker, U. S. N., Chief of Bureau of Navigation).—The originals give the barometer as read off. The humidity is not given, but is computed from the hygrometrical observations. The sea-swell and weather are given in general terms. The direction of the wind is compass direction, corrected for variation.

MERCHANT-MARINE SERIES (furnished by co-operation of the owners, agents, &c., of the respective lines and vessels).—Same as U. S. Naval.

INTERNATIONAL CHARTS ACCOMPANYING DAILY BULLETIN AND MONTHLY SUMMARY.

International chart i. shows isobars and isotherms charted from data as appearing in the INTERNATIONAL BULLETIN of same date, as reported by the several observers. Isobars, in continuous lines, exhibit atmospheric pressure at sea-level in English inches; isotherms, in dotted lines, exhibit temperature of the air in degrees, Fahrenheit, similarly charted.

International chart ii. (monthly mean chart), showing mean pressure at sea-level in English inches, mean temperature in degrees, Fahrenheit, mean force and prevailing direction of wind at 7 a. m., Washington mean time.

International chart iii. shows tracks of centres of low barometer. The Arabic numerals show location of the centres of low barometer at 7 a. m., Washington mean time, of that date.

In the above charts broken lines indicate that the lines so drawn are doubtful. Arrows show direction of, and fly with, the wind. Force is shown as follows:

SYMBOLS.	FORCE.	VELOCITY.	
		MILES PER HOUR.	METRES PER SECOND.
○	0	0	0
→	1, 2	0 to 9	0 to 4
→	3, 4	9.1 to 22.5	4.1 to 10.1
→	5, 6	22.6 to 40.5	10.1 to 18.1
→	7, 8	40.6 to 67.5	18.1 to 30.2
→	9, 10	67.6 up.	30.2 and over.

MONTHLY SUMMARY OF INTERNATIONAL SIMULTANEOUS METEOROLOGICAL OBSERVATIONS.

The position of stations (latitude and longitude) are obtained from Keith Johnston's "Index Geographicus," except where more exact information is furnished. The elevation of stations is obtained either from the annual, semi-annual, and monthly publications of the various meteorological bureaus here represented, or from the orignal forms upon which are entered the daily observations. In the United States series the elevations are computed from the latest surveys, and are carefully revised each month, in order to note any change in the elevation of the barometer-cistern at any station. It is belived for the most part that, throughout the European and other series, the elevations as given represent the height of the barometer-cistern above sea-level; at least, this should be the case. The local time, where omitted or not given correctly in the original, is carefully computed at this office. A letter placed opposite the name of a station or some portion of the data credited thereto, indicates that a certain number of observations are missing, corresponding to the relative position in the alphabet of the letter so used.

BRITISH SERIES, Bradford: a letter placed opposite the name of station, refers to all the data except rainfall.

OCEAN SQUARES.—The table of ocean square data shows (1) the location of the centres of squares whose sides extend 5° each in latitude and longitude (2), the the monthly mean pressure and temperature of the air, and the mean force and total frequency of the wind at 7 a. m., Washington time, computed for the centre of each square from daily readings as obtained by interpolation between the isobars and isotherms of the daily international simultaneous weather maps.

ERRATA.

DAILY BULLETIN, March 11, 1884, page 5, Montgomery, Alabama, actual barometer, 752.2 mm., should read, 758.2 mm.
