PREFACE.

The registration of rainfall in India has always been carried out under the control of Provincial authorities; the Director-General of Observatories is only a consulting and advisory officer. Daily rainfall data for the various provinces and states are in general printed by the respective Governments in their gazettes as soon as the figures are collected, so that the printed statements are promptly available to the public. At the end of the year tables showing the monthly and annual figures are similarly printed. Subsequently the Meteorological Department collects all the statements throughout India and binds them in two volumes for permanent record—a large volume containing both the daily data and the monthly summaries and a smaller volume containing only the monthly summaries. The present volume contains the daily and monthly rainfall data for more than 3,000 stations in India.

The Symon's pattern of raingauge, 5″ in diameter, was in use at the great majority of stations, the only important exceptions being the Mysore and Travancore raingauge stations, which were provided with a different type of raingauge, Stanley Gauge of 4·7″ diameter. The rainfall is measured at all stations daily at 8 A. M., local mean time, except at Meteorological Observatories where it is measured at 8 hrs. I. S. T. (0230 hrs. G. M. T.)

The tables in this volume are arranged, generally, in the order of the provinces adopted in the Indian Daily Weather Report and the other publications of the Meteorological Department. For each province, the twelve tables of daily rainfall are grouped together, and are followed by the table of monthly and annual figures.

The tables are drawn up in a form which practically explains itself. It should be noted that, although the rainfall is measured to hundredths of an inch, a " rainy day " is assumed to be that on which a tenth of an inch or upwards has fallen, and the figures in the column " Total number of rainy days " and " Normal total number of rainy days " are calculated on this assumption.

It may be noted that the available rainfall data of India were originally collected and tabulated in the Meteorological Office, Calcutta, in the year 1888, and that the average monthly rainfall and number of rainy days in each month were calculated from this tabulated informatian for all stations for which at least five years' rainfall statistics were available. These averages were used in the tables of Volumes I to XI of this " Rainfall of India ". In 1901 the additional data for the period from 1889 to 1900 were utilized, and fresh normals based on the whole of the available data up to the year 1900 were prepared; for the great majority of stations the normals depended on the records of 30 to 40 years. The preparation of averages based on records as far as 1910 was begun in 1911, and from October 1911 inclusive these new normals were used in the returns of Assam and Eastern Bengal. The normals revised up to 1910 for the whole of India were published in 1913 in Volume XXII, Parts I and II, of the Memoirs of the India Meteorological Department and were brought into general use from Jauary 1914. A further revision of the rainfall normals from all the available records up to 1915 was effected in 1917, and the new normals were introduced from January 1918. In the returns of Bihar and Orissa revised normals of number of rainy days were used from August 1918 and in those of Bengal from December 1918 while in the other returns the normals of 1910 were employed throughout the year. From January 1919, however, these new normals were used for all the provinces and no change was effected till December 1922. Another fresh revision of the normals was in the meantime undertaken from data extending up to December 1920 and in the volume for 1923 these latest normals, both of rainfall and the number of rainy days, were employed in the tables of Kashmir, the North-West Frontier Province, Baluchistan, Rajputana and Central India. In the volume for 1924 the new normals were used in the tables of all the provinces except Hyderabad. In the Daily Rainfall Tables of this Division the old normals were used for the first eleven months and the new normals for December. Since then no change has occurred in the normals.

The district averages of actual and normal rainfall are published in the daily rainfall tables of Orissa, Bihar, Kashmir, the Central Provinces and Berar, Mysore (only actuals) and Madras, and in the monthly and annual rainfall tables of all provinces except Kashmir and the North-West Frontier Province. These averages were not strictly comparable with each other prior to 1928, as the normal averages were based only upon the number of stations for which normals had been determined, while the actual averages were based on the full number of stations in the district. To make the two comparable both the district averages have been based, from 1928 onwards, upon the stations for which normals are available

K. R. RAMANATHAN,

Offg. *Director-General of Observatories.*

*Rainfall return not received.

? This sign is shown in the columns for 'normal number of rainy days' and 'normal rainfall' against those stations for which normals have not been established; in the columns from 1st February to 29th February 1944 it means that owing to the records being incomplete the totals are not known.

*Rainfall return not received.

P This sign is shown in the columns for 'normal number of rainy days' and 'normal rainfall' against those stations for which normals have not been established; in the columns from 1st February to 31st March 1944 it means that owing to the records being incomplete the totals are not known.

*Rainfall return not received.

† This sign is shown in the columns for 'normal number of rainy days' and 'normal rainfall' against those stations for which normals have not been established. In the columns from 1st February to 30th April 1944 it means that owing to the records being incomplete the totals are not known.

*Rainfall return not received.

? This sign is borne in the columns for 'normal number of rainy days' and 'normal rainfall' against those stations for which normals have not been established; in the colum. for from 1st February to 31st May 1944 it means that owing to the records being incomplete the totals are not known.

*Rainfall return not received.

P This sign is shown in the columns for 'normal number of rainy days' and 'normal rainfall' against those stations for which normals have not been established; in the columns from 1st February to 31st May 1944 it means that owing to the records being incomplete the totals are not known.

*Rainfall return not received.

†This sign is shown in the columns for 'normal number of rainy days' and 'normal rainfall' against those stations for which 'normals' have not been established. In the column from 1st to 30th June 1944 it means that owing to the records being incomplete the totals are not known.

*Rainfall return not received.

? This sign is shown in the columns for 'normal number of rainy days' and 'normal rainfall' against those stations for which normals have not been established; in the columns from 1st to 30th June 1944 it means that owing to the records being incomplete the totals are not known.

*Rainfall return not received.

? This sign is shown in the columns for 'normal number of rainy days' and 'normal rainfall' against those stations for which normals have not been established; in the Columns from 1st June to 31st July 1944 it means that owing to the records being incomplete these are not known.
