THE WEATHER OF 1933.

All Meteorological Stations have been under the control of the B.E.A. Meteorological Service throughout 1933.

In connection with the Service, 86 Rainfall Stations, including one First Order Station, fifteen Second Order Stations and one Third Order Station have reported. All records of Rainfall and Second Order Stations are now controlled at the Territorial Office at Kololo Hill. The First Order Station records are tabulated at the Central Office of the joint Service in Nairobi.

Rainfall and Temperature normals have been recomputed from all available records.

The times of observation are the international hours—0600 G.M.T. and 1200 G.M.T. (8-30 a.m. and 2-30 p.m. Local Standard Time).

Some of the Stations are new and were opened during the course of the year. The records are, in consequence, incomplete.

RAINFALL.

Using the normals derived from records to 1932, it would appear that the Rainfall was above normal over five zones: Kitgum recorded 46% above normal, Gulu and Lira were 11% above, Mubende 18% above, Masaka 11% above and Kigezi 8% above normal. The remaining zones were generally below normal: in the West Nile, Arua was 9% below normal; the Central Area, comprising Busoga, Mengo, Bunyoro and Toro, was 8% below, Entebbe 6% below, Ankole 11% below and Bugwere 9% below normal. The abnormalities are also shown in the following table:—

The highest fall for the year was 89·98 ins. at Kalangala and the lowest 21·40 ins. at Butiaba. The greatest fall recorded in 24 hours was 6·15 ins. on August 6th at the C.M.S. Station, Nabum ali.

TEMPERATURES.

Thirty-one Stations recorded temperatures during 1933. Of these, seventeen recorded readings of the Dry and Wet Bulb thermometers.

The highest temperature recorded was 100° F. at Budini in January and the lowest 41·8° F. at Kabale C.M.S. Station in July.

The departures from normals for various stations are shown below:—
