METEOROLOGISKE STASJONER, INSTRUMENTER OG OBSERVASJONER

Bortsett fra nedbørstasjonene var det 275 meteorologiske stasjoner i drift i 1970, heri er også medregnet værskipet på stasjon M, de 7 radiosondestasjonene og de 6 arktiske stasjonene. Av stasjonene sendte 207 værtelegrammer til forskjellige tider, mens 68 bare sendte månedsrapporter. På de telegraferende stasjoner ble hovedobservasjonene tatt kl. 7, 13 og 19 M.E.T., på de ikke-telegraferende kl. 8 (7), 13 og 19 M.E.T. Den klimatologiske statistikken i årboken er basert på observasjonene tatt kl. 7, 13 og 19, henholdsvis kl. 8, 13 og 19 M.E.T.

Årboken for 1970 inneholder forskjellige klimatologiske data for 240 stasjoner. Dessuten inneholder den tilsvarende data fra de arktiske stasjonene Isfjord Radio, Longyearbyen, Ny-Ålesund, Hopen, Bjørnøya og Jan Mayen for 1969.

I årboken for 1970 er følgende 14 nye stasjoner tatt inn: Gjeilo i Skjåk, Øvre Tessa, Hindseter, Drammen — Marienlyst, Finse, til erstatning for Slirå, som ble nedlagt 8. oktober 1969, Nordre Eigerøy, Sandane, Fiskåbygd, Hildre, Meldal—Muan, Kvesmenes — Ryeng, til erstatning for Kvesmenes, som ble nedlagt 12. juli 1970, Nord-Lenangen, Kautokeino II, til erstatning for Kautokeino, som ble nedlagt 31. oktober 1970 og Ny-Ålesund.

Med hensyn til de enkelte stasjoner er følgende å bemerke:

Lesja — Norderhus: Stasjonen ble utstyrt med vindfløy M. I. 65 i juni 1970.

Gjeilo i Skjåk: Stasjonen ble opprettet 18. desember 1969, ble utstyrt med hygrometer 12. juni 1970 og med grasminimumstermometer og vindfløy M. I. 65 9. september 1970. Nedbørstolpen ble flyttet 40—50 m i sørlig retning 22. juni 1970.

Vågåmo: Instrumenthytten og vindfløyen ble flyttet henholdsvis 26 m og ca. 70 m østover 9. juli 1970.

Øvre Tessa: Stasjonen ble opprettet 17. desember 1969. Stasjonen ble utstyrt med hygrometer 11. juni 1970 og med grasminimumstermometer og vindfløy M. I. 65 7. september 1970.

Hindseter: Stasjonen ble opprettet 17. desember 1969, og ble utstyrt med hygrometer 12. juni 1970 og med grasminimumstermometer og vindfløy M. I. 65 6. september 1970.

METEOROLOGICAL STATIONS, INSTRUMENTS AND OBSERVATIONS

Not including rainfall stations, 275 meteorological stations were in operation during the year 1970, including also the ocean weather ship at station M, the 7 radiosonde stations and the 6 arctic stations. Telegraphic reports were received at various hours from 207 stations, the remaining stations furnishing monthly reports only. At the stations furnishing telegraphic reports, the hours of observations were 7, 13 and 19^h C.E.T., at the remaining stations 8 (7), 13 and 19^h C.E.T. The climatological statistics in the year book refer to the observations made at 7, 13 and 19^h and 8, 13 and 19^h C.E.T., respectively.

The year book for 1970 contains various climatological data from 240 stations. In addition it also contains similar data from the arctic stations Isfjord Radio, Longyearbyen, Ny-Ålesund, Hopen, Bjørnøya (Bear Island) and Jan Mayen for 1969.

In the year book for 1970 the following 14 new stations have been included: Gjeilo i Skjåk, Øvre Tessa, Hindseter, Drammen — Marienlyst, Finse, replacing Slirå, which was closed on October 8. 1969, Nordre Eigerøy, Sandane, Fiskåbygd, Hildre, Meldal — Muan, Kvesmenes — Ryeng, replacing Kvesmenes, which was closed on July 12. 1970, Nord-Lenangen, Kautokeino II, replacing Kautokeino, which was closed on October 31. 1970 and Ny-Ålesund.

With regard to the individual stations the following should be noted:

Lesja — Norderhus: The station was equipped with a wind vane pattern M. I. 65 in June 1970.

Gjeilo i Skjåk: The station was established on December 18. 1969, was equipped with a hygrometer on June 12. 1970 and with a grass minimum thermometer and a wind vane pattern M. I. 65 on September 9. 1970. The precipitation gauge was moved 40—50 m southward on June 22. 1970.

Vågåmo: The thermometer screen and the wind vane were moved 26 m and about 70 m eastwards, respectively, on July 9. 1970.

Øvre Tessa: The station was established on December 17. 1969. The station was equipped with a hygrometer on June 11. 1970 and with a grass minimum thermometer and a wind vane pattern M. I. 65 on September 7. 1970.

Hindseter: The station was established on December 17. 1969, and was equipped with a hygrometer on June 12. 1970 and with a grass minimum thermometer and a wind vane pattern M. I. 65 on September 6. 1970.

Elveseter: Stasjonen ble nedlagt 31. desember 1969.

Drammen — Marienlyst: Stasjonen ble opprettet 20. desember 1963, og ble utstyrt med «Plumatic» 31. mai 1968.

Geilo (Geilestøl): Stasjonen er omdøpt til Geilo — Geilostølen.

Finse: Stasjonen har vært i drift siden 20. oktober 1969, og ble utstyrt med anemometer 11. september 1970.

Slagentangen: Stasjonen ble nedlagt 31. desember 1970.

Rød i Råde: Stasjonen ble utstyrt med vindfløy M. I. 65 1. november 1969.

Byglandsfjord — Solbakken: Stasjonen ble utstyrt med vindfløy M. I. 65 13. desember 1969.

Oksøy: Stasjonen ble utstyrt med anemometer 5. oktober 1970.

Mandal II: Instrumenthytten og nedbørstolpen ble flyttet henholdsvis ca. 25 og ca. 35 m mot NW 3. september 1970.

Tonstad: Stasjonen ble nedlagt 1. november 1970.

Nordre Eigerøy: Stasjonen har vært i drift siden 1. september 1969 og er utstyrt med aneroidbarometer.

Nedre Vats: Stasjonen ble utstyrt med vindfløy M. I. 65 16. september 1970.

Omastrand: Nedbørstolpen ble flyttet 22 m mot ESE 9. juni 1970.

Midtlæger: Stasjonen ble midlertidig nedlagt 10. desember 1970.

Sandane: Stasjonen ble opprettet 7. mai 1957, men har stort sett bare vært i drift i april—september, og ble nedlagt 30. september 1968. Den nye stasjonen, ca. 175 m W for den gamle stasjonen, har vært i helårsdrift fra 31. juli 1969.

Tafjord: Instrumenthytte og nedbørstolpe ble flyttet ca. 20 m nordover 12. august 1970.

Fiskåbygd: Stasjonen har vært i drift siden 30. juni 1969, og ble utstyrt med jordtermometre 25. mai 1970.

Elveseter: The station was closed on December 31. 1969.

Drammen — Marienlyst: The station was established on December 20. 1963, and was equipped with «Plumatic» on May 31. 1968.

Geilo (Geilestøl): The station is renamed to Geilo — Geilostølen.

Finse: The station has been operated from October 20. 1969, and was equipped with an anemometer on September 11. 1970.

Slagentangen: The station was closed on December 31. 1970.

Rød i Råde: The station was equipped with a wind vane pattern M. I. 65 on November 1. 1969.

Byglandsfjord — Solbakken: The station was equipped with a wind vane pattern M. I. 65 on December 13. 1969.

Oksøy: The station was equipped with an anemometer on October 5. 1970.

Mandal II: The thermometer screen and the precipitation gauge were moved about 25 m and about 35 m towards NW, respectively, on September 3. 1970.

Tonstad: The station was closed on November 1. 1970.

Nordre Eigerøy: The station has been operated from September 1. 1969, and is equipped with an aneroid barometer.

Nedre Vats: The station was equipped with a wind vane pattern M. I. 65 on September 16. 1970.

Omastrand: The precipitation gauge was moved 22 m towards ESE on June 9. 1970.

Midtlæger: The station was temporarily closed on December 10. 1970.

Sandane: The station was established on May 7. 1957, but has mainly been operated in April—September, and was closed on September 30. 1968. The new station, which is situated about 175 m W of the old one, has been operated throughout the year from July 31. 1969.

Tafjord: The thermometer screen and the precipitation gauge were moved about 20 m northwards on August 12. 1970.

Fiskåbygd: The station has been operated from June 30. 1969, and was equipped with earth thermometers on May 25. 1970.

Hildre: Stasjonen har vært i drift siden 30. juni 1969, og ble utstyrt med jordtermometre 25. mai 1970.

Meldal — Muan: Stasjonen har vært i drift siden 1. desember 1969.

Stugusjø II: Stasjonen ble nedlagt 30. april 1970.

Majavatn III: Stasjonen ble utstyrt med barograf og barometer 28. oktober 1970. Den nye stasjonshøyden skyldes bedre nivellement.

Bolna: Stasjonen ble midlertidig nedlagt 12. juni 1970.

Bø i Vesterålen II: Stasjonen ble utstyrt med nedbørskjerm 10. september 1969. Nedbørstolpen ble flyttet ca. 10 m mot WNW 22. september 1970.

Tennevoll: Stasjonen ble telegraferende fra 1. januar 1970. med morgenobservasjon kl. 7 (tidligere kl. 8).

Øverbygd: Stasjonen ble utstyrt med termograf 19. oktober 1970.

Mestervik: Stasjonen ble telegraferende fra 1. desember 1970, med morgenobservasjon kl. 7 (tidligere kl. 8).

Kvesmenes: Stasjonen ble nedlagt 12. juli 1970. Den nye stasjonen Kvesmenes — Ryeng, ca. 1 km SE for den gamle stasjonen, har vært i drift siden 1. november 1970.

Nord-Lenangen: Stasjonen ble opprettet 16. oktober 1969.

Solovomi: Nedbørstolpen ble flyttet ca. 27 m mot SSW 10. oktober 1970.

Banak: Anemometeret ble flyttet 520 m mot N 14. oktober 1970, instrumenthytten og nedbørstolpen henholdsvis ca. 80 m og ca. 90 m mot NE 16. oktober 1970.

Kautokeino: Instrumenthytten og nedbørstolpen ble flyttet henholdsvis 80 m og 77 m mot E 4. juni 1970. Stasjonen ble flyttet ca. 3 km mot NNE 31. oktober 1970. Den nye stasjonen ble utstyrt med vindfløy M. I. 65, og skal hete Kautokeino II.

Ny-Ålesund: Stasjonen ble opprettet i juni 1961, men driften har vært uregelmessig. Observasjonene er bearbeidet på rutinebasis først fra januar 1969 av.

Hildre: The station has been operated from June 30. 1969, and was equipped with earth thermometers on May 25. 1970.

Meldal — Muan: The station has been operated from December 1. 1969.

Stugusjø II: The station was closed on April 30. 1970.

Majavatn III: The station was equipped with a barograph and a barometer on October 28. 1970. The new H_s is due to a better levelling.

Bolna: The station was temporarily closed on June 12. 1970.

Bø i Vesterålen II: The station was equipped with a Nipher wind shield on September 10. 1969. The precipitation gauge was moved about 10 m towards WNW on September 22. 1970.

Tennevoll: The station is sending telegraphic reports from January 1. 1970, in the morning at 7^h C.E.T. The morning observation was previously made at 8^h C.E.T.

Øverbygd: The station was equipped with a thermograph on October 19. 1970.

Mestervik: The station is sending telegraphic reports from December 1. 1970, in the morning at 7^h C.E.T. The morning observation was previously made at 8^h C.E.T.

Kvesmenes: The station was closed on July 12. 1970. The new station Kvesmenes — Ryeng, which is situated about 1 km SE of the old station, has been operated from November 1. 1970.

Nord-Lenangen: The station was established on October 16. 1969.

Solovomi: The precipitation gauge was moved about 27 m towards SSW on October 10. 1970.

Banak: The anemometer was moved 520 m towards N on October 14. 1970, the thermometer screen and the precipitation gauge about 80 m and about 90 m towards NE, respectively, on October 16. 1970.

Kautokeino: The thermometer screen and the precipitation gauge were moved 80 m and 77 m towards E, respectively, on June 4, 1970. The station was moved about 3 km towards NNE on October 31. 1970, and was equipped with a wind vane pattern M. I. 65. The new station is called Kautokeino II.

Ny-Ålesund: The station was established in June 1961, but has not been operated regularly. The routine climatological statistics have been calculated from January 1969 only.

Bjørnøya: Instrumenthytten og nedbørstolpen ble flyttet henholdsvis 77 m og 83 m i østlig retning 28. juni 1969.

Jan Mayen: Instrumenthytten ble flyttet ca. 24 m søraustover 25. august 1969.

Ved utgangen av 1970 var følgende stasjoner, som er med i årboken, utstyrt med termograf og hygrograf (eller termohygrograf): Hornset, Ottåsen, Fokstua II, Varden — Filefjell, Løsset, Kise på Hedmark, Gardermoen, Egnerfjell, Oslo — Blindern, Fornebu, Nesbyen II, Finse, Slagentangen, Torp, Båstad, Sæli II og III, Landvik, Kjevik, Fana Forsøksstasjon, Bergen — Fredriksberg, Bergen — Florida, Fortun, Hareid — Grimstad, Ørstavik — Velle, Stranda — Helsem, Valldal — Linge, Skodje Hagebruksskole, Ona — Husøy, Sunndal, Trondheim — Tyholt, Vennafjell, Værnes, Vardefjell, Mosjøen — Mosal, Kletkovfjell, Bolna, Bardufoss, Tromsø, Karasjok, Isfjord Radio, Hopen, Bjørnøya og Jan Mayen.

Følgende stasjoner hadde bare termograf: Gjeilo i Skjåk, Øvre Tessa, Hindseter, Gaustatoppen, Ås, Prestebakke, Lærdal — Tønjum, Fanaråken, Nordli — Brattvoll, Tennevoll, Øverbygd, Mestervik, Lyngseidet IV, Nordreisa, Pasvik, Kautokeino og KautokeinoII.

Ved utgangen av 1970 hadde følgende værstasjoner pluviograf av vanlig type: Oslo — Blindern, Lista, Bergen — Fredriksberg, Bergen — Florida, Mosjøen — Mosal og Tromsø. I tillegg var følgende værstasjoner utstyrt med pluviograf av typen «Plumatic»: Sæter i Kvikne, Bråtå, Varden — Filefjell, Trysil, Gardermoen, Oslo — Blindern, Drammen — Marienlyst, Nesbyen II, Stokke, Båstad, Gvarv, Tonstad, Modalen, Opstryn, Sunndal, Trondheim — Tyholt, Høylandet, Nordli — Brattvoll, Øvre Saltdal, Bardufoss, Kirkenes Lufthavn og Karasjok.

Hvilke stasjoner som er utstyrt med barometer, henholdsvis anemometer og vindfløy, ses av rubrikkene H_p, henholdsvis h_a og h_d i stasjonsfortegnelsen side XVI.

Lufttrykket ble i 1970 observert på 125 stasjoner, men lufttrykkobservasjonene er bearbeidet klimatologisk bare for 113 stasjoner. Stasjonsbarometrene er kvikksølvbarometre av Fuess- eller Kew konstruksjon. Av stasjonene er 111 utstyrt med barograf, de fleste av typen Fuess.

Lufttemperaturen ble observert på 247 stasjoner. Alle disse målte også minimumstemperaturen og maksimumstemperaturen. Mens lufttemperaturen blir observert kl. (8) 7, 13 og 19 M. E. T. på de fleste

Bjørnøya: The thermometer screen and the precipitation gauge were moved 77 m and 83 m eastwards, respectively, on June 28. 1969.

Jan Mayen: The thermometer screen was moved about 24 m southeastwards on August 25. 1969.

At the end of 1970 the following stations included in the year book were equipped with a thermograph and a hygrograph (or a thermohygrograph): Hornset, Ottåsen, Fokstua II, Varden — Filefjell, Løsset, Kise på Hedmark, Gardermoen, Egnerfjell, Oslo — Blindern, Fornebu, Nesbyen II, Finse, Slagentangen, Torp, Båstad, Sæli II and III, Landvik, Kjevik, Fana Forsøksstasjon, Bergen — Fredriksberg, Bergen — Florida, Fortun, Hareid — Grimstad, Ørstavik — Velle, Stranda — Helsem, Valldal — Linge, Skodje Hagebruksskole, Ona — Husøy, Sunndal, Trondheim — Tyholt, Vennafjell, Værnes, Vardefjell, Mosjøen — Mosal, Kletkovfjell, Bolna, Bardufoss, Tromsø, Karasjok, Isfjord Radio, Hopen, Bjørnøya and Jan Mayen.

The following stations had thermographs only: Gjeilo in Skjåk, Øvre Tessa, Hindseter, Gaustatoppen, Ås, Prestebakke, Lærdal — Tønjum, Fanaråken, Nordli — Brattvoll, Tennevoll, Øverbygd, Mestervik, Lyngseidet IV, Nordreisa, Pasvik, Kautokeino and Kautokeino II.

At the end of 1970 the following weather stations had a pluviograph of the usual type: Oslo — Blindern, Lista, Bergen — Fredriksberg, Bergen — Florida, Mosjøen — Mosal and Tromsø. In addition the following weather stations had a pluviograph pattern «Plumatic»: Sæter i Kvikne, Bråtå, Varden — Filefjell, Trysil, Gardermoen, Oslo — Blindern, Drammen — Marienlyst, Nesbyen II, Stokke, Båstad, Gvarv, Tonstad, Modalen, Opstryn, Sunndal, Trondheim — Tyholt, Høylandet, Nordli — Brattvoll, Øvre Saltdal, Bardufoss, Kirkenes Lufthavn and Karasjok.

The stations which are equipped with a barometer, respectively an anemometer and a wind vane, are shown in the columns H_p, respectively h_a and h_d in the list of stations, page XVI.

Atmospheric pressure was observed at 125 stations in 1970, but only the observations from 113 of these have been included in the climatological statistics. The station barometers are mercurial barometers of the Fuess or of the Kew pattern. 111 stations are supplied with barographs, most of them of the Fuess type.

The air temperature was observed at 247 stations. All of them recorded the minimum temperature and the maximum temperature. Whilst the air temperature is read at (8) 7, 13 and 19^h C. E. T. at most

stasjonene, blir ekstremtemperaturene avlest bare kl. (8) 7 og 19 M. E. T. Termometrene er hovedsakelig av tysk type, inndelt i $^1/_5$° C. De fleste maksimums- og minimumstermometre er inndelt i $^1/_2$° C. 53 stasjoner er utstyrt med termograf, de fleste av typen Fuess. 38 stasjoner er utstyrt med grasminimumstermometer. Jordtemperaturen kl. 7(8), 13 og 19 M.E.T. måles i 5, 10, 20, 50 og 100 cm's dyp på 14 stasjoner.

247 stasjoner er utstyrt med instrumenthytte av tre, og 1 stasjon har slyngetermometer. 8 stasjoner er utstyrt med aspirasjonspsykrometer. 9 stasjoner er ikke utstyrt med instrumenter, og utfører bare visuelle observasjoner for flygeværtjenesten.

Temperaturen i havoverflaten ble målt hver dag kl. 13 M. E. T. på 15 representative kyststasjoner.

Luftens fuktighet ble målt på 255 stasjoner; av disse har 247 stasjoner Russeltvedts torsjonshygrometer montert i instrumenthytten, 8 stasjoner brukte aspirasjonspsykrometer, 38 stasjoner har hygrograf og 11 stasjoner termohygrograf av typen Fuess.

Globalstrålingen ble registrert på 6 stasjoner og antall solskinnstimer på 23 stasjoner. 44 stasjoner er utstyrt med fordunstningsmåler.

Vindens retning og styrke observeres på alle stasjonene, og likeså noteres også den maksimale vindstyrke mellom observasjonsterminene. På 142 stasjoner bedømmes vindretningen etter vindfløy eller vaker, den registreres på 35 stasjoner (hvorav 25 også har indikator), 10 stasjoner har bare indikator. På de øvrige stasjonene bedømmes vindretningen etter skjønn. Vindstyrken registreres på 50 stasjoner (hvorav 25 også har indikator). 11 stasjoner har bare indikator. 7 stasjoner har håndanemometer. På de øvrige stasjonene bedømmes vindstyrken skjønnsmessig etter Beauforts skala.

Nedbørmengden (smeltevannet når det er snø eller hagl) blir målt på samtlige stasjoner kl. (8) 7 M.E.T., på de telegraferende stasjoner også kl. 19 M.E.T. Fra 1. april 1966 blir dessuten nedbøren målt kl. 1 og 13 M.E.T. på 22 stasjoner. I den årstid nedbøren vesentlig faller som snø, benyttes en snømåler. Både regn- og snømåleren har en samleflate på 225 cm². 203 stasjoner er utstyrt med Nipher vindskjerm, 27 stasjoner er også forsynt med pluviograf, derav 6 av vanlig type med grafisk registrering og 22 av

of the stations, the extreme temperatures are observed only at (8) 7 and 19h C. E. T. The thermometers are mostly of the German type, graduated in fifths of degrees Centigrade. Most of the maximum- and minimum thermometers are graduated in half degrees Centigrade. 53 stations are equipped with thermographs, most of them of the Fuess type. 38 stations are equipped with grass minimum thermometer. The soil temperature at the following depths: 5, 10, 20, 50 and 100 cm is measured at 7(8)h, 13h and 19h C.E.T. at 14 stations.

247 stations are equipped with louvre-boarded thermometer screens, and 1 station uses whirling thermometers. 9 stations are equipped with aspiration psychrometers. 8 stations are not equipped with instruments, and furnish only visual observations for aviation reports.

The temperature of the sea surface was observed daily at 13h C.E.T. at 15 representative coastal stations.

Humidity observations were made at 255 stations; 247 of the stations are equipped with a Russeltvedt torsion hygrometer, mounted in the thermometer screen, 8 stations used aspiration psychrometers, 38 stations are equipped with hygrographs and 11 stations with termohygrographs of the Fuess type.

The global radiation (sun+sky) was measured at 6 stations and hours of bright sunshine at 23 stations. 44 stations are equipped with an evaporimeter.

The direction and the force of the wind are observed at all stations, and so is also the maximum wind force occurring between the standard hours of observation. 142 stations are equipped with a wind vane or a "wind sleeve", 35 stations with dial recorders, (25 of the stations having also dial indicators), 10 stations with dial indicators only. At the remaining stations the wind direction is estimated. 50 stations are equipped with wind recorders (25 of the stations having also dial indicators), 11 stations with dial indicators only. 7 stations are equipped with a hand anemometer. At the remaining stations the wind force is estimated according to the Beaufort scale.

The amount of precipitation (melted when snow or hail) is measured at all stations at (8) 7h C.E.T., at the stations furnishing telegraphic reports also at 19h C.E.T. In addition the precipitation is measured at 1h and 13h C.E.T. at 22 stations from April 1. 1966. During the time of the year when the precipitation is mainly falling as snow, a snow-gauge is used. Both the rain-gauge and the snow-gauge have a collecting surface of 225 sq.cm. 203 stations are equipped with a Nipher wind shield, 27 stations

typen «Plumatic», som er konstruert for helautomatisk databehandling og registrerer på magnetbånd. «Plumatic» er foreløpig ikke brukbar når nedbøren kommer som snø, og er ute av drift om vinteren. På Oslo—Blindern og Trondheim—Tyholt er «Plumatic» forsøksvis i drift året rundt. Når det er snø på bakken, observeres snødybden og snødekket hver dag kl. (8) 7 M.E.T.

De daglige nedbørhøyder på 739 stasjoner, derav 236 værstasjoner, er trykt i årboken «Nedbøriakttagelser i Norge» 1970.

Været, skydekket, synsvidden og nedbørslags samt været mellom observasjonsterminene observeres på samtlige stasjoner.

Av registreringene er bare verdiene fra Oslo — Blindern tatt inn i årboken.

are also supplied with a pluviograph, 6 of which of the usual type with graphic recording, and 22 of the pattern "Plumatic", which is constructed for automatic rainfall recording and records on magnetic tape. "Plumatic" is for the present not fit for use for snow recording, and is out of operation in the winter time. However, «Plumatic» is being used experimentally throughout the year at Oslo—Blindern and Trondheim—Tyholt. When snow is present on the ground, the depth of the snow and the snow cover are observed daily at (8) 7^{h} C.E.T.

The daily depth of precipitation at 739 stations, thereof 236 weather stations, is published in the year book "Nedbøriakttagelser i Norge" 1970.

Observations of weather, cloudiness, visibility, type of precipitation and past weather are made at all stations.

Only data obtained from the recording instruments at Oslo — Blindern are included in the year book.

FORKLARINGER TIL TABELLENE

Tabellene er satt opp i overensstemmelse med de vedtak som ble gjort av den Internasjonale Meteorologiske Organisasjon på møtene i Warszawa 1935 og i Salzburg 1937. De symboler som er benyttet, er forklart på side *XIV*.

Fra og med årbok 1957 er alle summer og middelverdier beregnet maskinelt ved hjelp av hullkort. Alle tabeller skrives nå ferdig på en Bull-tabulator BZ og nedfotograferes for trykning i offset, slik som beskrevet i Technical Report Nr. 3: The Norwegian meteorological punch-card layouts for land surface weather stations.

Videre er ekstensotabellene omarbeidet og innholdet revidert og utvidet. Det er også tatt inn en ny tabell som viser nattens midlere minimumstemperatur i 10 cm's høyde over bakken i de enkelte måneder og året for noen stasjoner.

På vanlig tabulator er det umulig å skrive parenteser. I tabellene er det derfor skrevet f. eks. Oslo — Blindern (istedenfor som tidligere Oslo (Blindern)). Desimalpunktum er i de nye tabellene erstattet med en tynn strek.

Registreringene i Oslo — Blindern. — Verdiene i tabellene på side 1—18 er tatt ut for hver annen time av registreringene og påført de nødvendige korreksjoner. Vindhastigheten representerer den midlere hastighet i m/s i 10 minutter forut for det anførte klokkeslett. Nedbørregistreringene gir sum nedbør i

EXPLANATORY NOTES TO THE TABLES

The tables are arranged in accordance with the decisions made by the International Meteorological Organization at the meetings in Warsaw 1935 and Salzburg 1937. Symbols used are defined on page *XV*.

Including the year book 1957 all summaries are calculated by means of punch-cards. All tables now are listed on a Bull-tabulator BZ, ready for photographing to a smaller scale and for printing in offset, as described in Technical Report N° 3: The Norwegian meteorological punch-card layouts for land surface weather stations.

Further the Ekstenso tables have been rearranged, and the contents has been revised and extended. A new table, showing the mean monthly and annual grass minimum temperature during the night at some stations, has been included.

It is impossible to list brackets on an ordinary tabulator. In the tables now are written for instance Oslo — Blindern, while in earlier year books Oslo (Blindern). In the new tables the decimal point is replaced by a thin line.

Data obtained from recording instruments at Oslo — Blindern. — The values given in the tables on pp. 1—18 are obtained from the bi-hourly readings of the self recording instruments appropriately corrected. The values for wind speed represent the mean values in $^{m}/_{sec}$ through a period of 10 minutes prior

de to timene forut for det angitte klokkeslett. Verdiene for de øvrige elementer er momentanverdier. Følgende registrerinstrumenter har vært benyttet:

Fuess barograf.
Fuess termograf.
Fuess hygrograf.
Anemograf Fuess 90Z.
Fuess pluviograf.

Ekstensotabellene. — Tabellene på side 20—43 inneholder observasjonene kl. 7, 13 og 19 M. E. T. fra Oslo — Blindern, Bergen — Fredriksberg, Trondheim — Tyholt og Tromsø for 1970. Tabellene på side 132—161 inneholder observasjonene kl. 6,30, 12,30 og 18,30 M.E.T. fra Isfjord Radio, Longyearbyen og Jan Mayen, og kl. 6,45, 12,45 og 18,45 M.E.T. for Bjørnøya og Hopen for 1969.

Regnet fra venstre til høyre inneholder rubrikkene:

1. *Datum.*
2. *Lufttrykk* P, på stasjonen i mb.
3. *Lufttemperatur* T, i °C.
4. *Været* ved observasjonstiden angitt ved et eller flere av symbolene på side XIV.
5. *Været* (ww) ved observasjonstiden uttrykt ved synopkoden 00—99.
6. *Været* siden forrige observasjon angitt ved et eller flere av symbolene på side XIV.
7. *Relativ fuktighet* U, i %.
8. *Vindretningen* dd, i skalaen 01—36.
9. *Vindstyrken* F, i Beaufort.
10. *Det totale skydekket* N, i åttendedeler.
11. *Synsvidden* V, etter synopkoden.
12. *Snødekket* [*], i skalaen 0—4 og snødybden s, i hele cm.
13. *Døgnets minimumstemperatur* T_n, i °C mellom kl. 19 den angitte og kl. 19 den foregående dag.
14. *Døgnets maksimumstemperatur* T_x, i °C mellom kl. 19 den angitte og kl. 19 den foregående dag.
15. *Døgnets samlede nedbørhøyde* R, i mm mellom kl. 7 (eller 8) den angitte og kl. 7 (eller 8) den foregående dag.
16. *Den maksimale vindstyrken* F_x, i Beaufort mellom kl. 19 den angitte og kl. 19 den foregående dag.

Måneds- og årsoversikter. — Tabellene på side 44 — 123 og 162—163 inneholder måneds- og årsmidler

to the time indicated. The records of precipitation give the amount of precipitation in the 2 hours prior to the time indicated. The other elements represent instantaneous values. The following recording instruments have been used:

Fuess barograph.
Fuess thermograph.
Fuess hygrograph.
Anemograph Fuess 90Z.
Fuess pluviograph.

Tables of individual observations. — The tables on pp. 20—43 contain observations made at 7, 13 and 19^h C. E. T. at Oslo — Blindern, Bergen — Fredriksberg, Trondheim—Tyholt and Tromsø for 1970. The tables on pp. 132—161 contain observations made at 6,30, 12,30 and 18,30^h C.E.T. at the stations Isfjord Radio, Longyearbyen and Jan Mayen and at 6,45, 12,45 and 18,45^h C.E.T. at Bjørnøya and Hopen for 1969.

The contents of the columns from left to right are as follows:

1. *Date.*
2. *Atmospheric pressure* P, in mb at cistern level.
3. *Air temperature* T, in °C.
4. *Present weather* characterized by one or more of the symbols on page XV.
5. *Present weather* ww, expressed by the synop-code numbers 00—99.
6. *Past weather* since the foregoing observation characterized by one or more of the symbols on page XV.
7. *Relative humidity* U, in per cent.
8. *Wind direction* dd, on the scale 01—36.
9. *Wind force* F, on the Beaufort scale.
10. *Total cloud amount* N, in oktas.
11. *Horizontal visibility* V, according to the synopcode.
12. *Snow cover* [*], on the scale 0—4 and snowdepth s, in whole cm.
13. *Daily minimum temperature* T_n, in °C covering the 24-hour period ending at 19^h the date concerned.
14. *Daily maximum temperature* T_x, in °C covering the 24-hour period ending at 19^h the date concerned.
15. *Daily total height of precipitation* R, in mm covering the 24-hour period ending at (8) 7^h the date concerned.
16. *Maximal wind force* F_x, on the Beaufort scale during the 24-hour period ending at 19^h the date concerned.

Monthly and annual summaries. — The tables on pp. 44—123 and 162—163 contain monthly and

og summer av de forskjellige elementer. I «hodet» er bare angitt observasjonstid kl. 7. Stasjonsfortegnelsen viser at morgenobservasjonen tas kl. 8 ved 32 stasjoner og kl. 9 ved 1 stasjon. Regnet fra venstre til høyre inneholder rubrikkene:

1. *Måned.*

2. *Lufttrykket i stasjonens nivå* (P_m) og lufttrykket redusert til havets overflate ($P_{o,m}$) eller til nærmeste standard-geopotensial flate. Her er gjort en unntakelse for lufttrykket på Røros og Dombås II som er redusert til havet. Siden 1. januar 1944 har Eliassens[1]) reduksjonstabeller vært benyttet, og disse tabeller gir verdier som for enkelte stasjoner er litt forskjellige fra dem en fikk av de tabellene som ble brukt tidligere. Lufttrykket på kyststasjonene reduseres (som før 1. januar 1944) på grunnlag av en konstant temperaturavtagen med høyden på 0.6° C pr. 100 m. For innlandsstasjonene Røros, Dombås II, Nordli—Brattvoll og Karasjok benyttes den samme konstante temperaturgradient, og dessuten tilføyes en temperaturkorreksjon[2]) når lufttemperaturen er under 2°C.

Reduksjonen til havet av lufttrykket på Dalen i Telemark utføres i overensstemmelse med Eliassens 4. metode (loc. cit. p. X).

3. *Lufttemperaturen* (i Celsiusgrader). — Månedsmidlene (Dies) er beregnet av formelen[3])

$$M = n - k(n - \overline{Min})$$

hvor n er midlet av observasjonene kl. (8) 7, 13 og 19 M.E.T., k en faktor som varierer med årstiden og fra stasjon til stasjon[4]), og $\overline{Min}$ er den midlere minimumstemperatur. Temperaturekstremene gjelder for døgnet regnet fra kl. 19 til kl. 19.

4. *Vindfordelingen.* — Vindstyrken er gitt etter Beaufortskalaen. Vindretningen er gitt i skalaen 01—36 og henført til den nærmeste retning delelig med 3, nemlig:
N (36), N30°E (03), N60°E (06), E (09)
E 30°S (12), E60°S (15), S (18), S30°W (21)
S60°W (24), W (27), W30°N (30), W60°N (33).
Den første tallkolonnen under hver retning gir antall tilfeller med vind fra vedkommende retning, og den andre kolonnen gir den midlere vindstyrke.

annual means and sums of the different elements. The heading indicates morning observation at 7h C.E.T. only. The list of stations shows that the morning observation is made at 8h C.E.T. at 32 stations, at 9h C.E.T. at 1 station. The contents of the columns from left to right, are as follows:

1. *Month.*

2. *Atmospheric pressure at station level* (P_m) and atmospheric pressure reduced to mean sea level ($P_{o,m}$) or to the nearest standard geopotential surface, the latter with the exception that the pressures observed at Røros and Dombås II are reduced to mean sea level. Since January 1. 1944, Eliassen's[1]) reduction tables have been in use, and these tables render results that, for some stations, differ slightly from those obtained from the tables previously used. The pressure observed at coastal stations are reduced (as prior to January 1. 1944) on the assumption of a constant lapse rate of temperature equal to 0.6° C per 100 m elevation. For the inland stations Røros, Dombås II, Nordli—Brattvoll and Karasjok the same constant lapse rate is used, and, in addition, a temperature correction[2]) is applied when the air temperature is below 2° C.

The reduction to mean sea level of the pressure observations at Dalen in Telemark is performed according to Eliassen's fourth method (loc. cit. p. X).

3. *Air temperature* (in degrees Centigrade). — The monthly means are computed from the formula[3])

$$M = n - k(n - \overline{Min})$$

where n is the mean of the observations made at (8) 7, 13 and 19h C.E.T., k a factor appropriate for the station and season[4]), and $\overline{Min}$ is the mean minimum temperature. The extreme temperatures refer to the 24-hour period from 19 to 19 hours.

4. *Wind distribution.* — The wind force is given according to the Beaufort scale. The wind direction is given on the scale 01—36, reduced to the nearest direction divisible by 3, viz:
N (36), N30°E (03), N60°E (06), E (09)
E30°S (12), E60°S (15), S (18), S30°W (21)
S60°W (24), W (27), W30°N (30), W60°N (33).
The first column of figures under each direction gives the number of cases of winds from the direction indicated, and the second column of figures gives the mean wind force.

[3] B. J. Birkeland: Mittel und Extreme der Lufttemperatur. Geof. Publ. XIV. 1, Oslo 1936 S. 9—10.

[4] Jahrbuch des Norwegischen Meteorologischen Instituts für 1938, S. VIII und 35 og Norsk Meteorologisk Årbok 1949, S. 134 og 138.

5. *Relativ fuktighet* (i prosent). — På stasjoner hvor Russeltvedts torsjonshygrometer blir brukt, tas den relative fuktighet ut av tabeller som er beregnet for hvert instrument. Fuktighetene som observeres med psykrometer blir omregnet til relativ fuktighet ved hjelp av Jelineks tabeller når temperaturen er over frysepunktet, og ved hjelp av Birkelands[1]) tabeller når temperaturen er under frysepunktet. Den relative fuktighet refererer seg alltid til metningstrykket over vann.

Månedsmidlet er beregnet av Køppens formel

$$M = q + c(p-q)$$

hvor q er midlet av morgen- og aftenobservasjonene, p midlet av middagsobservasjonene og c er en faktor som varierer med stedet og tiden.[2])

6. *Skydekket* (i skalaen 0—8). — Månedsmidlene beregnes som det aritmetiske middel av morgen-, middags- og kveldsobservasjonene.

7. *Nedbøren* (i mm). — Nedbørhøyden blir målt kl. (8) 7 M. E. T., og gjelder for de foregående 24 timer. Månedssummene er gitt på nærmeste hele mm, mens de maksimale nedbørhøyder (R_d, max) er gitt på nærmeste 0,1 mm. Prosenten av normalen $\left(100 \cdot \frac{\Sigma R_d}{\overline{R}}\right)$ refererer seg til normalen for perioden 1931—60.

8. *Antall dager med visse fenomener.* — Når det gjelder nedbørmengden, regnes døgnet fra kl. (8) 7 til kl. (8) 7, i forbindelse med andre fenomener regnes det fra kl. 19 til kl. 19.

Som nedbørdager regnes alle dager når nedbørhøyden er 0.1 mm eller mer. Dager med sludd telles opp for seg og tas dessuten med i kolonnene under dager med regn og dager med snø. Likeledes telles også antall dager med yr opp som dager med regn når nedbørmengden er 0.1 mm eller mer. Til antall dager med yr, hagl og tordenvær regnes alle dager da slike fenomener har forekommet, uten hensyn til nedbørhøyden. Dessuten skjelnes mellom tåke og tåkedis ettersom den tilhørende synsvidden er mindre eller større enn 1 km. Fra og med 1956 er «antall dager med tåke» erstattet med en tabell som gir antall tilfeller med tåke ved observasjonstidene kl. (8) 7, 13 og 19 M.E.T., og antall dager med solskinn og tåkedis er sløyfet. Som klare dager regnes dager på hvilke summen av skydekketallene kl. (8) 7, 13 og

[1] B. J. Birkeland: Neue Feuchtigkeitstafeln für das Psychrometer unter dem Gefrierpunkt, Christiania, 1907, Vorwort.

5. *Relative humidity* (in per cent). — At stations where Russeltvedt's torsion hygrometers are used, the relative humidity is obtained from tables computed for each instrument. Humidities observed by psychrometers are converted to relative humidity by the aid of Jelinek's tables when the temperature is above freezing and by aid of Birkeland's[1]) tables when the temperature is below freezing. Throughout, the relative humidity refers to saturation over water. The monthly means are computed from Køppen's formula

$$M = q + c(p-q)$$

where q denotes the mean of the morning and the evening observations, p the mean of the midday observations and c is a factor appropriate for the station and the season.[2])

6. *Amount of cloud cover* (on the scale 0—8). — The monthly means are computed as the arithmetic means of morning, midday and evening observations.

7. *Amount of precipitation* (in mm). — The amount of precipitation is measured at (8) 7^h C. E. T. and refers to the preceding 24-hour period. The monthly sums are given to the nearest mm, while the maximum amounts (R_d, max) are given to the nearest tenths mm. The percentage of the normal amount of precipitation $\left(100 \cdot \frac{\Sigma R_d}{\overline{R}}\right)$ refers to the normal value for the period 1931—60.

8. *Number of days with specified phenomena.* — Insofar as the amount of precipitation is concerned, the «day» is reckoned from (8) 7 to (8) 7^h, in connection with other elements the «day» refers to the period from 19 to 19^h.

As a day with precipitation is counted any day on which the amount of precipitation is 0.1 mm or more. Days with sleet are counted separately and are also included in the columns referring to days with rain and snow. Likewise the number of days with drizzle is included in the number of days with rain when the amount of precipitation is 0.1 mm or more. As days with drizzle, hail and thunderstorm are reckoned any day on which such phenomena occurred, regardless of the amount of precipitation associated with them. Furthermore, differentiation is made between fog and mist according to whether the associated visibility is lower or higher than 1 km. From 1956 "the number of days with fog" are replaced by a table giving the frequency of days with fog at (8) 7, 13 and 19^h C. E. T.,

[2] Jahrbuch des Norwegischen Meteorologischen Instituts für 1920, S. XI og Norsk Meteorologisk Årbok 1949, S. 135 og 139.

19 M. E. T. er 4 ($^4/_8$) eller mindre. På samme vis regnes hver dag når summen av skydekketallene kl. (8) 7, 13 og 19 M. E. T. er 20 ($^{20}/_8$) eller mer, som en overskyet dag. Dager med snødekke er dager når $^3/_4$ eller mer av bakken er dekket med snø.

Avvikelser fra normalene. — Tabellene på side 19 gir avvikelsene i de midlere lufttrykk i stasjonens nivå (ΔP) og i middeltemperaturene (ΔT) i 1970 fra middelverdiene for perioden 1931—60.

Nattens midlere minimumstemperatur 10 cm over bakken T_g. I tabellen på side 19 er den midlere minimumstemperaturen i 10 cm's høyde over bakken i løpet av natten (mellom kl. 19 og (8) 7) beregnet for 15 utvalgte stasjoner i 1970.

Sjøtemperaturen (T_s). — Måneds- og årsmidler for temperaturen i havoverflaten 1970 på 13 representative kyststasjoner finnes på side 19.

Pentademidler av lufttemperaturen. — Tabellene på side 124—130 viser temperaturmidlene i perioder på 5 dager for 109 utvalgte stasjoner i 1970. Midlene er beregnet av formelen

$$M = n - k(n - \overline{\text{Min}})$$

hvor n er midlet av observasjonene kl. (8) 7, 13 og 19 M. E. T., k en faktor som varierer med årstiden og fra stasjon til stasjon[1]) og $\overline{\text{Min}}$ den midlere minimumstemperatur i 5-dagers perioden.

Den relative solskinnstid. — I 1953 opprettet Geofysisk Institutts avdeling B ved Universitetet i Bergen et nett av stasjoner for registrering av solskinnstimer. En del av stasjonene i dette nettet ble overtatt av Meteorologisk Institutt i 1959. Antall timer med klart solskinn har hele tiden vært registrert med Campbell-Stokes solskinnsautograf. I årbok 1963 ble trykt månedsverdier for den relative solskinnstid, d.v.s. forholdet mellom den registrerte solskinnstid og den maksimalt mulige solskinnstid på vedkommende stasjon, uttrykt i prosent, for 8 stasjoner for årene 1953—63.

På side 131 er gitt de tilsvarende verdier for 1969 for 2 stasjoner og for 1970 for 19 stasjoner.

Jordtemperaturen. — Tabellene på side 164—167 gir midlere jordtemperatur i 5, 10, 20, 50 og 100 cm's dyp i perioden 1966—70 for 7 stasjoner.

Oslo, mai 1971.

[1] Jahrbuch des Norwegischen Meteorologischen Instituts für 1943, S. 96—97 og Norsk Meteorologisk Årbok 1949 S. 136—137 og 140—141.

and number of days with sunshine and mist have been omitted. As clear days are counted days on which the sum of the amount of cloud cover at (8) 7, 13 and 19^h C. E. T. is 4 (i.e. $^4/_8$) or less. Similarly, as an overcast day is taken any day when the sum of the cloud cover at (8) 7, 13 and 19^h C. E. T. is 20 (i.e. $^{20}/_8$) or more. Finally, a day with snow cover is a day on which $^3/_4$ or more of the ground is covered by snow.

Departures from normals. — The tables on p. 19 give the departures of the mean pressures at cistern level (ΔP) and the mean temperatures (ΔT) for 1970 from the mean values for the period 1931—60.

Mean grass minimum temperature during the night T_g. The table on p. 19 gives the mean monthly and annual grass minimum temperature during the night (from 19^h to (8) 7^h) at 15 selected stations in 1970.

Sea surface temperature (T_s). — Monthly and annual means of the sea surface temperature 1970 at 13 representative coastal stations are given on p. 19.

Five-day means of temperature. — The tables on pp. 124—130 give the mean temperature for consecutive periods of 5 days for 109 selected stations in 1970. The means are computed from the formula

$$M = n - k(n - \overline{\text{Min}})$$

where n is the mean of the observations at (8) 7, 13 and 19^h C. E. T., k a factor appropriate for the station and season[7]) and $\overline{\text{Min}}$ is the mean minimum temperature during the 5-day period.

Relative duration of sunshine. — In 1953 the Geophysical Institute, Section B, at the University of Bergen established a network of stations for recording of hours of sunshine. Some of the stations in this network were undertaken by the Norwegian Meteorological Institute in 1959. Hours of bright sunshine have all the time been recorded with Campbell-Stokes sunshine recorder. In the year book 1963 were printed monthly values of the relation in per cent between the recorded hours of sunshine and the maximum possible hours of sunshine at the respective stations for 8 stations during the years 1953—63.

On p. 131 are given the corresponding values for 1969 for 2 stations and for 1970 for 19 stations.

Soil temperature. — The tables on pp. 164—167 give mean soil temperature at the depths 5, 10, 20, 50 and 100 cm in the period 1966—70 for 7 stations.

Oslo, May 1971

SYMBOLER

Symboler som forekommer i rubrikkene for «Været ved observasjonstiden» og «Været siden forrige observasjon» på Ekstensotabellene samt i Måneds- og Årsoversiktene.

∞	Ølrøyk.	▲	Ishagl.
=	Tåkedis.	≤	Kornmo.
≡	Tåke.	⌈	Tordenvær
,	Yr.	+	Snøfokk.
•	Regn.	⌓	Dugg.
*	Snø.	◯	Ren luft.
⁂	Sludd.	⌴	Rim.
⛆	Kornsnø.	∾	Is-slag.
⛋	Iskorn.	⋁	Tåkerim.
⊷	Isnåler.	⊙	Solskinn.
⛉	Regnbyer.	⊕	Halo (værgard)
⛇	Snøbyer.	◐	Krans.
⛈	Sluddbyer.	◠	Regnbue.
⁑	Sprøhagl.	⌓	Nordlys.
△	Hagl.		

Andre symboler.

P	Lufttrykk.	H_s	Stasjonens høyde over havet.
T	Lufttemperatur.	H_p	Barometerets høyde over havet (overkant av kvikksølvkoppen), for gamle barometerstasjoner pr. 1. januar 1960.
T_x	Døgnets maksimumstemperatur.		
T_n	Døgnets minimumstemperatur.		
T_g	Grasminimumstemperatur.	h_t	Høyden over marka av termometerkula.
T_s	Sjøtemperatur.	h_a	Høyden over marka av vindhastighetsmåleren.
U	Relativ fuktighet.		
dd og D	Vindretning.	h_d	Høyden over marka av vindretningsmåleren (vindfløy, vaker).
v	Vindhastighet.		
F	Vindstyrke.	h_r	Høyden over marka av nedbørmålerens overkant.
F_x	Den maksimale vindstyrke.		
C	Vindstille.	m	som nedre indeks angir midlet av elementet.
V	Synsvidde.		
R	Nedbørhøyde.	—	over betegnelsen ($\overline{\text{Max}}$, $\overline{\text{Min}}$) blir benyttet for å angi at det er en middelverdi.
N	Skydekke.		
ww	Været ved obs.tiden i synopkoden 00-99.	Δ	Avvikelse.
φ	Geografisk bredde.	Σ	Sum.
λ	Geografisk lengde.	n	Antall observasjoner.
g	Tyngdens accelerasjon.	M	Månedsverdi.
		Dies	Døgnmiddel.

SYMBOLS

Symbols occurring in the columns «Været ved obs.tiden» and «Været siden forr. observ.» in the Ekstensotabell and in the «Monthly and Annual Summaries».

- Haze.
- Mist.
- Fog.
- Drizzle.
- Rain.
- Snow.
- Sleet.
- Granular snow.
- Grains of ice.
- Ice needles.
- Shower of rain.
- Shower of snow.
- Shower of rain and snow (sleet).
- Soft hail.
- Small hail.
- Hail.
- Distant lightning.
- Thunderstorm.
- Drifting snow.
- Dew.
- Pure air.
- Hoarfrost.
- Glazed frost.
- Soft rime.
- Sunshine.
- Solar halo.
- Solar corona.
- Rainbow.
- Aurora Borealis.

Further symbols.

- P Atmospheric pressure.
- T Air temperature.
- T_x Daily maximum temperature.
- T_n Daily minimum temperature.
- T_g Grass minimum temperature.
- T_s Sea surface temperature.
- U Relative humidity.
- dd and D Wind direction.
- v Wind speed.
- F Wind force.
- F_x Maximal wind force.
- C Calm.
- V Visibility.
- R Amount of precipitation.
- N Amount of cloud cover.
- ww Present weather according to the synop-code.
- φ Latitude.
- λ Longitude.
- g Acceleration of gravity.
- H_s Height of station above mean sea level.
- H_p Height of the barometer cistern above mean sea level, for old barometric stations per January 1. 1960.
- h_t Height above the ground of the thermometer bulb.
- h_a Height above the ground of the anemometer.
- h_d Height above the ground of the wind vane.
- h_r Height above the ground of the collecting surface of the precipitation gauge.
- m as subscript, indicate the mean value of an element.
- — (e.g. $\overline{\text{Max}}$, $\overline{\text{Min}}$) indicates a mean value.
- Δ Departures.
- Σ Sum.
- n Number of observations.
- M Monthly value.
- Dies 24-hour means.
