General Situation

The pressure over Egypt has risen considerably and the high pressure area is well maintained over Upper Egypt. The depression still remains near the Aegean without change.

Forecast for 24 hours from noon to-day

Moderate winds between south and west, fresh on the coast. Clear or some high cloud. Mild by day cold by night.

General Situation.

The pressure over Egypt has risen considerably and is now above normal; the high pressure extends over the eastern Mediterranean.

Forecast for 24 hours from noon to-day

Light to moderate westerly and north-westerly winds. Clear at first, some low cloud later with possibility of light rain on the coast. Early morning mists. Warmer by day.

General Situation.

A depression has formed over Italy and there is a general fall of pressure over Egypt and the central Mediterranean. The high pressure over Egypt has weakened and the system is much disturbed.

Forecast for 24 hours from noon to-day

Light winds, mainly northwesterly today and southwesterly tomorrow. Much low cloud. Misty. Cool and unsettled. Light rain in the north probable.

General Situation.

The pressure over Egypt is rising, but the depression which is now centred over Syria is still affecting the weather of Egypt. An area of high pressure has been established over the Balkans.

Forecast for 24 hours from noon to-day

Moderate winds, southwesterly inland; northwesterly on the coast. Much low cloud. Further rain in the north. Cool and unsettled.

General Situation.

Although the pressure over Egypt has risen, the shallow depression is still situated off the coast. A second and deeper depression is approaching from the west and is now situated near Malta.

Forecast for 24 hours from noon to-day

Moderate to fresh southwest winds. Some high cloud at first, low cloud developing later. Light rain on the coast. Changeable. Cool.

General Situation.

The depression remains stationary over the eastern Mediterranean, but the pressure over Egypt has risen and the gradient has become steeper. Upper winds are very strong.

Forecast for 24 hours from noon to-day

Fresh to strong winds, between south and west. Clear at first; low cloud at intervals later. Further rain on the coast. Possibility of showers inland. Cool and unsettled.

2000		
3000		

General Situation.

Apart from a small rise in pressure in the west of Egypt there is no important change in the distribution. The depression remains near Cyprus and the systems of high pressure over the Balkans and over Upper Egypt remain.

Forecast for 24 hours from noon to-day

Fresh winds, southerly inland, westerly and northwesterly on the coast. Much low cloud. Rain in the north and possibility of rain inland. Continuing cool and unsettled.

General Situation.

The pressure over Egypt has risen considerably, but the eastern Mediterranean is still under the influence of the depression which is now situated over Syria. A second depression has made its appearance west of Malta.

Forecast for 24 hours from noon to-day

Moderate winds, southwesterly inland, westerly and northwesterly on the coast. At times much low cloud. Further light rain on the coast: Temperature slightly below normal today, warmer tomorrow. Early morning mist.

2000	30	NNE
3000		

General Situation.

The pressure over Egypt and the eastern Mediterranean has risen further, but there is a deep depression west of Malta and the high pressure over Egypt is likely to break down.

Forecast for 24 hours from noon to-day

Light winds, southerly on the coast, northeasterly inland, becoming southerly and freshening later. Mainly clear today, some high cloud tomorrow. Warmer by day. Local morning mists.

General Situation.

Although the pressure over Egypt has risen, and the depression is passing over Syria, the system is still disturbed. A further depression, now situated near Malta, is approaching.

Forecast for 24 hours from noon to-day

Moderate to fresh southerly winds. Much low cloud. Further light rain in the north, and possibility of showers inland. Cool. Local morning mists. Further outlook unsettled.

General Situation

9 15

60 WSW
90 WSW

The depression is situated off the coast and has deepened considerably, resulting in a very steep pressure gradient throughout Egypt and the eastern Mediterranean.

Forecast for 24 hours from 1500 today

Strong winds between south and west, reaching gale force in gusts, and becoming northwest on the coast tomorrow. Continuance of cold, dull and showery weather. Possibility of thunderstorm.

General Situation.

The pressure over Egypt has risen considerably but is not yet up to the normal. The depression is now moving away over northern Syria, but conditions are still disturbed.

Forecast for 24 hours from noon to-day

Fresh winds, strong in gusts, southwest inland, west and north-west on the coast. Clear at first, low cloud developing later. Further showers in the north. Remaining cool and unsettled.

General Situation.

Egypt is under the influence of a depression over southern Palestine, resulting in a fall of pressure over the Delta. West of Egypt the high pressure is maintained.

Forecast for 24 hours from noon to-day

Moderate northwest winds, freshening. Much low cloud. Weather unsettled, rain likely. Cooler tomorrow.

Although over Egypt the pressure has risen, the weather is still influenced by the depression, which is now over Syria.

Moderate winds, southerly inland, westerly on the coast. Much low cloud. Further showers. Weather still unsettled, but improving. Cool.

General Situation.

The pressure over Egypt has risen but is still below normal. An area of high pressure is centred over Upper Egypt. Over the Mediterranean the pressure is falling.

Forecast for 24 hours from noon to-day

Light winds between south and west. Some high cloud. Light showers on the coast. Cool. Early morning mists.

Upper Wind Observations at Helwan at 8h. 38m.

Height (metres)	Kms. Hr.	Direction
500	20	SW
1000	25	WSW
1500	40	W
2000	75	WSW
3000	45	W

General Situation.

The pressure over Egypt has risen, but is still much below normal and the shallow depression remains near Palestine. The Mediterranean depression is still near Malta.

Forecast for 24 hours from noon to-day

Light to moderate southerly winds. Clear or some high cloud. Warmer.

REMARKS: Halve all cloud observations at:—

(1) Merowe for the whole month, (2) El Fasher on 3, 4, 7, 8, 12, 13, 16, 17, 18, 19, 21. 22, 24, 30 and 31. Double all cloud observations at El Obeid from 20-27.

(3) Cancel Mongalla wind direction for the whole month.

Ministry of Public Works, Egypt.—Physical Department.

REPORT ON THE WEATHER AND STATE OF THE RIVER FOR JANUARY 1924.

The Weather.

For practically the whole of the month Egypt was influenced by the passage of depressions along the Mediterranean, and winds were almost always from between south and west. The weather was very unsettled and colder than usual.

At the beginning of the month a depression was situated over the central Mediterranean. On the 3rd there were showers on the coast and on the following day, when the depression had reached Cyprus, dull and showery weather prevailed throughout Lower Egypt. The high pressure over Egypt then weakened and the system was much disturbed. On the 7th, with a depression north of Egypt, there were fresh cold southerly winds, and light rain on the coast. The eastern Mediterranean remained an area of low pressure for more than a week and rough weather was experienced there. In Egypt there were frequent showers, but they were confined mainly to the coastal regions.

A high pressure subsequently formed but it did not last long, breaking down on the 19th before a depression which caused rainy weather throughout Egypt. This was followed by the deepest depression which has passed along the Mediterranean this winter, and on the 23rd conditions over Egypt and the eastern Mediterranean were very rough. In Cairo there was a dust storm from the south-west, and the velocity reached 70 kilometres per hour. Gusty and strong southerly winds and cold rainy weather were general for some days. On the 26th the distribution developed into an extensive but shallow depression over Egypt, and there was rain at Qena. This depression subsequently moved to Syria and rain fell in Egypt from the coast to the Fayum.

During the last week the northern Sudan was subjected to unusual disturbances. At Wadi Halfa on the 27th strong winds blew from the south-east, a very rare direction for the winter, and there appeared to be a depression to the west. There were strong winds, mainly from the north-east, at many places in the Sudan on the 27th and 28th, and light rain was reported at Khartoum and Wad Medani. Rain in measurable quantities has not fallen in this region in January during the 20 years for which observations exist, and on only two previous occasions, *viz.* in 1912 and 1919, have there been traces of rain in this month.

Throughout Egypt and the Sudan the mean pressure was much below normal. The mean temperature was below normal in Egypt and above normal in the Sudan. Towards the end of the month the nights were very cold; freezing point was reached in the Fayum on the 29th, and several times at Siwa. In Cairo (Giza) the lowest temperature was 1·4°C. In the Sudan maximum temperatures of 41°C. were reached at Kassala and 40° C. at Khartoum on the 26th; these are records for January.

The relative humidity at Giza was normal. The rainfall was above normal on the coast and slightly below inland.

TABLE SHOWING THE DEPARTURES FROM NORMAL FOR JANUARY 1924.

NOTE.—1,000 millibars is equivalent to 750·1 millimetres at 0° C. and mean gravity.

H. KNOX-SHAW,
Director, Meteorological Service.

State of the River.

The levels of Lake Albert for the first five days of the month were on the average 32 centimetres below the normal and 80 centimetres higher than the corresponding levels of last year.

The Bahr el Jebel fell at a normal rate during the whole month and was on the average 45 centimetres below the normal and 72 centimetres above last year's levels.

The White Nile fell at a much faster rate than the normal throughout the month, being 4 centimetres above the normal at the beginning of the month and 62 centimetres below it at the end. Its levels however remained higher than those of last year.

The Blue Nile at Roseires fell at a normal rate for the first 20 days, then somewhat slower till the end of the month. It was on the average 18 centimetres above the normal. At Khartoum it fell at almost normal rate and was slightly below the normal, but above last year's levels.

The Nile at Wadi Halfa was identical with the normal throughout the month.

The difference of the mean levels for January 1924 from those of last year and from the normal (1906-1920) are :—

General Situation.

The depression is now centred over the Syrian coast. It has deepened considerably, and a steep pressure-gradient over the eastern Mediterranean has resulted.

Forecast for 24 hours from noon to-day

Fresh to strong winds, southwesterly inland, westerly and northwesterly on the coast. Much low cloud. Further rain in the north; possibility of showers locally. Remaining cool and unsettled.

Upper Air Observations at 9 h. 30 m.

Height (metres)	Velocity	Direction
500	10	SSW
1000	20	NW
2000	45	NW
3000		

General Situation.

Throughout Egypt and the Mediterranean the pressure has risen. The depression has moved across northern Syria and its influence on the weather of Egypt is quickly decreasing.

Forecast for 24 hours from noon to-day

Light to moderate winds, southwesterly inland, northwesterly on the coast. At times much low cloud. Cool. Light rain in the north; local showers. Conditions becoming more settled.

Upper Wind Observations at Helwan at 8 h. 30 m.

Height (metres)	Kms. Hr.	Direction
500	20	WSW
1000	35	WNW
1500	40	WNW
2000	40	W
3000	35	NW

General Situation.

The pressure over Egypt has risen and the high pressure over Upper Egypt is maintained. The depression has now passed, but over the central Mediterranean the pressure is falling.

Forecast for 24 hours from noon to-day

Light to moderate southerly winds. Clear or occasional high cloud. Warmer but temperature still below normal. Local morning mists.

Upper Wind Observations at Helwan at 8 h. 30 m.

Height (metres)	Kms. Hr.	Direction
500	35	S
1000	45	SSW
1500	65	SW
2000	50	WSW
3000	45	WNW

General Situation.

A deep depression is situated over Greece and is approaching. Pressure over Egypt is rapidly falling and conditions are much disturbed. The pressure-gradient over the eastern Mediterranean is very steep.

Forecast for 24 hours from noon to-day

Fresh to strong south and southwest winds, at times reaching gale force. Gusty. High cloud at first, much low cloud later. Rain in the north and probability of rain locally. Unsettled. Cooler tomorrow.

45	W
60	W

General Situation.

The pressure has risen considerably but is still below normal, and there is now very little gradient over Egypt and the Mediterranean. Upper Egypt is the centre of an area of high pressure.

Forecast for 24 hours from noon to-day

Light to moderate winds between south and west. Occasional low cloud. Showers on the coast. Normal temperature.

General Situation.

Egypt and the eastern Mediterranean form an area of high pressure. Conditions in Upper Egypt, where rain has fallen, remain unsettled.

A deep depression is situated over the western Mediterranean.

Forecast for 24 hours from noon to-day

Light variable winds, mainly northerly at first, becoming southerly and freshening later. Some low cloud. Local showers probable.

General Situation.

The pressure over Egypt is falling particularly in the west, owing to the approach of the depression, which is now situated near Malta. Over Upper Egypt the pressure has risen.

Forecast for 24 hours from noon to-day

Moderate southerly winds, freshening. Clear at first, high cloud developing later. Warmer. Rain on the coast tomorrow. Further outlook, unsettled.

General Situation.

The depression is now situated north of Crete and is filling up. A secondary depression passed over Egypt during the early morning. Conditions are much disturbed and upper winds are very strong.

Forecast for 24 hours from noon to-day

Fresh winds, strong in gusts; southwesterly inland, westerly on the coast. Clear at first, low cloud later. Temperature about normal. Rain on the coast. Unsettled.

[illegible] Situation

Except in the west the pressure over Egypt has fallen but it is still slightly above normal. To the north of Egypt is an area of low pressure, while a high pressure extends over the western desert and the central Mediterranean.

Forecast for [illegible] hours from noon to-day

Light winds, northwest on the coast, variable inland. Mainly clear. Remaining warm.

General Situation.

The pressure is falling rapidly, particularly over the western Desert owing to the approach of a depression along the Mediterranean.

Forecast for [illegible] from noon to-day

Southerly winds, moderate at first, but strengthening during the day, and becoming westerly on the coast tomorrow. Gusty. High cloud increasing. Horner.

General Situation.

The pressure over Egypt has fallen considerably and the system is complicated. There is still a depression over the western Mediterranean and there appears to be also a shallow depression north of Egypt. Upper winds are very strong.

Forecast for 24 hours from noon to-day

Fresh southerly winds. Gusty. Much cloud. Cooler but still much above normal.

Upper Wind Observations at Helwan at 8 h. 30 m.

Height (metres)	Kms. Hr	Direction
500	25	SW
1000	50	WSW
1500	60	W
2000	40	W
3000		

General Situation.

Except in the west, the pressure over Egypt has fallen. Egypt is under the influence of a depression over Syria. The high pressure over the central Mediterranean has strengthened but there is still a depression in the west.

Forecast for 24 hours from noon to-day

Light to moderate winds, northwesterly on the coast, variable inland. Some high cloud. Remaining warm. Further outlook unsettled.

The pressure over Egypt is falling and the depression over the western Mediterranean has deepened. The pressure system is very disturbed.

Light southerly winds, freshening. Much high cloud at first, later partly clearing. Remaining warm. Unsettled.

Upper Wind Observations at Helwan at 8 h 30 m.

Height (metres)	Speed Km.	Direction
500	65	NNW
1000	50	NW
1500	30	WSW
2000	35	SW
3000		

General Situation.

The depression is now situated between Crete and Cyprus, and the pressure over Egypt is rising, but throughout Egypt and the Mediterranean it is still below normal.

Forecast for 24 hours from noon to-day

Moderate to fresh winds between south-west and northwest. Cooler, but temperature still much above normal. Some low cloud. Possibility of showers in the north.

The depression which was north of Egypt yesterday has passed across Syria but it is succeeded by a deeper depression which is now situated over the Aegean. Over Egypt the pressure remains below normal.

Winds fresh inland, fresh to strong on the coast; southerly today, becoming westerly or northwesterly tomorrow. Some high cloud at first, low cloud later. Possibility of showers on the coast. Cooler.

4000	60	H

General Situation.

A deep depression centred near Malta is approaching and consequently the pressure over Egypt, particularly in the west, is falling. A small area of high pressure is now centred over Sinai.

Forecast for 24 hours from noon to-day

Light southerly winds, freshening tomorrow. Clear today, high clouds tomorrow. Warmer.

Ministry of Public Works. [illegible] Meteorological Department.

REPORT ON THE WEATHER AND STATE OF THE RIVER FOR FEBRUARY 1924.

The Weather.

The weather was very unsettled, Egypt being visited by a larger number of depressions than usual. The outstanding feature was the hot weather of the latter half of the month.

At the beginning of the month a depression was situated north of Egypt. Subsequently it deepened and caused strong southerly winds, rough seas and heavy rain over the eastern Mediterranean littoral. The weather throughout Lower Egypt was very unsettled and there were showers as far south as the Fayum. In Cairo the wind reached gale force during the afternoons; skies were overcast and the weather was cold. This depression passed to the east on the 5th, and on the following day a deep depression appeared over the Balkans and in combination with a high pressure over Upper Egypt again caused cool southerly winds. This depression travelled south to Greece and then turned east to Cyprus, moving with a speed of forty kilometres an hour. It is a very rare occurrence for a depression to approach Egypt from so far north. In Egypt the winds increased in strength and during a considerable part of the 7th a gale was blowing from the south. The highest velocity recorded locally was 75 kilometres per hour at Heliopolis while from 8 o'clock in the morning until midnight an average velocity of 30 kilometres per hour was maintained. There were showers on the coast on the 8th and 9th. On the following day a high pressure formed over Egypt and the wind went round to the north. Conditions in Upper Egypt were unsettled, with showers at Assiut and Qena, and at Tor (Sinai). Fine warm weather succeeded, but on the 19th the system rapidly broke down before a depression and strong warm south winds resulted. This was the first khamsin depression of the year. Subsequently the pressure distribution became extremely complicated and on the 22nd there were no less than four distinct areas of low pressure in evidence. The hot weather continued and extended throughout Egypt and the Sudan. A temperature of 42° C. was reached at Kassala on the 23rd and 24th; this is a record for February and is interesting by reason of its contrast with the fact that this year also the lowest temperature on record for that station was experienced, *viz.* 7° C. on the 5th and 6th. By the 26th the temperature in Egypt had fallen to the normal but the approach of another depression brought typical khamsin conditions, and very strong hot southerly winds resulted. Temperatures were considerably above normal throughout Egypt. In Cairo the temperature on the 29th reached 33° C.; this is 11° C. above the normal and is a record for the month.

Throughout Egypt and the Sudan (with the exception of Port Sudan) the mean pressure was much below normal and the temperature much above normal. Record maximum temperatures for the month were observed at seven stations in Egypt and the Sudan. The rainfall was about normal. Relative humidity at Giza was 9 per cent below normal and there were only eight days in the month when the humidity exceeded the normal.

* Port Sudan only.

NOTE.—1,000 millibars is equivalent to 750·1 millimetres at 0° C. and mean gravity.

H. KNOX-SHAW,
Director, Meteorological Service.

State of the River.

The Bahr el Jebel fell at almost normal rate throughout the month.

The White Nile fell slowly during the first 19 days and faster than usual during the rest of the month.

The Blue Nile at Roseires was almost steady during the first ten days but fell sharply afterwards, being at the end only 12 centimetres above normal. At Khartoum, it fell practically at a normal rate throughout the month.

The Nile at Wadi Halfa fell sharply throughout the month. It was identical with the normal at the beginning of the month, but 34 centimetres below it at the end.

The differences of the mean levels for February 1924 from those of last year and from the normal (1906–1920) are :—

General Situation.

Over Egypt and the central Mediterranean the pressure continues to rise and is now above normal. The depression is passing over northern Syria but is still influencing the weather of Egypt.

Forecast for 24 hours from noon to-day

Moderate to fresh northwesterly winds. Some low cloud. Probability of light showers on the coast. Cool weather is likely to last for a few days.

Height in metres	Wind Force	Direction
[illegible]	20	NNE
[illegible]	25	N
[illegible]	30	NNW

General Situation.

Although there is a depression over the western Mediterranean and the pressure is falling there, over Egypt and the central Mediterranean the high pressure has strengthened.

Forecast for 24 hours from noon to-day

Light to moderate northwesterly winds. At times much low cloud. Continuing cool.

General Situation.

The wedge of high pressure extending from the Balkans to Egypt is maintained, but the pressure to the west of Egypt is falling owing to the approach of the depression, which is now situated south of Malta.

Forecast for 24 hours from noon to-day

Light to moderate northerly winds, becoming southerly on the coast tomorrow. Some high cloud. Warmer tomorrow.

General Situation

The depression is now situated over the western desert and is approaching. Over Egypt the pressure system is much disturbed. The high pressure over the Balkans is maintained.

Forecast for 24 hours from noon today

Moderate to fresh winds, northeasterly at first but becoming southerly during the course of the day. Gusty. At times much high cloud. Warm. Possibility of showers in the north.

General Situation.

The depression passed over Cairo during the morning and is travelling in a northeasterly direction. Upper winds are very strong. The high pressure over the central Mediterranean and the Balkans is maintained.

Forecast for 24 hours from noon to-day

Fresh winds, northerly on the coast, southerly inland and veering later to the northwest. Gusty. Much high cloud at first, low cloud developing later. Cooler tomorrow. Possibility of rain.

General Situation.

The depression which passed over Egypt on Thursday has been followed by a second depression which is approaching from the western desert and is now situated midway between Siwa Oasis and the Nile. Over the central Mediterranean the pressure remains high.

Forecast for 24 hours from noon to-day

Fresh winds, northeasterly at first, later becoming northwesterly and strengthening. Gusty. Considerable low cloud. Further local rain. Cool. Continuing unsettled.

Wind Observations at Aswan at h. m.

	Kms. per hr.	Direction

General Situation.

The depression has crossed Egypt and has deepened considerably. It is now situated east of the Canal. The pressure over Egypt is considerably below normal but is now rising and is much steadier.

Forecast for 24 hours from noon to-day

Moderate northerly and northwesterly winds, freshening. Weather improving during the day. Tomorrow some low cloud; probably fine in Cairo and light local showers in the north. Remaining cool. Conditions are becoming more settled.

General Situation.

The depression has now crossed southern Palestine and its influence on the weather of Egypt is rapidly diminishing. Over Egypt the pressure has risen considerably and the high pressure to the west is maintained, but to the north the pressure remains low.

Forecast for 24 hours from noon to-day

Light to moderate winds, mainly northwesterly. Much low cloud at first, decreasing later. Showers in the north. Warmer, but temperature remaining below normal.

Upper Wind Observations at Helwan at 8 h. 15 m.

Height (in Meters)	Kms. Hr	Direction
500	15	N
1000	15	NNW
1500	15	NW
2000	40	NW
3000	35	NNW
4000	50	NW

General Situation.

The pressure over Egypt and the eastern Mediterranean has risen considerably. Egypt is now an area of high pressure. There is little change in the distribution over the central and western Mediterranean.

Forecast for 24 hours from noon to-day

Light variable winds, mainly northerly. Some low cloud. Light early morning mists. Mild.

Upper Wind Observations at Helwan at 8 h 30 m

Height (metres)	Kms. Hr.	Direction
500	20	E
1000	35	NE
1500	25	E
2000	10	WNW
5000	15	WSW
4000	25	SW

General Situation.

The pressure over Egypt is falling before the approach of a shallow depression which is now centred over Crete, but the high pressure system has not yet broken down. Over the western Mediterranean the pressure is again rising.

Forecast for 24 hours from noon to-day

Light to moderate winds, northeasterly at first, veering to the South during the course of the day. Clear or occasional high cloud. Warmer.

General Situation

The pressure over Egypt and the eastern Mediterranean continues to fall and is now much below normal. The depression is situated over the Syrian coast. The rise in pressure over the western Mediterranean is maintained.

Forecast for 24 hours from noon to-day

Light to moderate winds, southerly at first, veering to the northwest later. Some low cloud. Warmer. Possibility of light rain on the coast.

General Situation.

The depression is now passing north of Egypt. Pressure over the central Mediterranean and the west of Egypt is again rising.

Forecast for 24 hours from noon to-day

Fresh to strong winds, southwest at first, veering to the west and northwest in the course of the day and moderating. Gusty. Much high cloud today; some low cloud tomorrow. Cooler tomorrow. Probability of light rain in the north.

General Situation.

The depression has passed to the northeast and has been followed by a rapid rise in pressure over Egypt although over the eastern Mediterranean the pressure is still low. An area of high pressure has been established in the west of Egypt.

Forecast for 24 hours from noon today

Light to moderate northwesterly winds. Much low cloud. Possibility of light rain on the coast. Cool. Light early morning mist.

General Situation.

Egypt and the eastern Mediterranean form an area of high pressure, but in the west the pressure is again falling and a depression, now situated south of Malta, is approaching.

Forecast for 24 hours from noon to-day

Northeasterly winds, moderate to fresh inland, light and becoming southerly tomorrow on the coast. Gusty. Some high cloud. Temperature below normal today, warmer tomorrow.

General situation.

The pressure over Egypt continues to fall and the system is much disturbed. There is a shallow depression in the west, and the pressure over southern Palestine has fallen considerably and is affecting the weather of Egypt.

Forecast for 24 hours from noon to-day

Moderate to fresh northerly winds. Much cloud. Changeable. Warmer. Possibility of rain.

General Situation.

The high pressure over Egypt and the central Mediterranean has weakened. There are indications of a shallow depression east of the Canal.

Forecast for 24 hours from noon to-day

Moderate to fresh northeasterly winds. Gusty. Mainly clear. Temperature about normal.

General Situation.

A deep depression, situated over the central Mediterranean, is approaching. A rapid fall in the pressure over Egypt will result.

Forecast for 24 hours from noon to-day

Light easterly winds, veering to the south and freshening. Clear at first, high cloud developing later. Temperature much above normal. Khamsin conditions.

General Situation.

A secondary depression passed over Egypt yesterday afternoon and has been followed by a rise in pressure. The main depression is now situated over the foot of Italy and has deepened.

Forecast for 24 hours from noon to-day

Light winds, southerly on the coast; northeasterly inland, becoming southerly and freshening later. Clear or occasional high cloud. Temperature remaining well above the normal.

General Situation.

The Mediterranean depression is less intense and is passing towards Asia Minor. Over Egypt the pressure is now rising but conditions are much disturbed.

Forecast for 24 hours from noon to-day

Fresh winds variable in direction, mainly southwesterly, veering later to the northwest. Gusty. Occasional high cloud. Temperature very high today, cooler but still above normal tomorrow.

Ministry of Public Works, Egypt.—Physical Department.

REPORT ON THE WEATHER AND STATE OF THE RIVER FOR MARCH 1924.

The Weather.

The month opened with cool weather following the passage of a depression along the Mediterranean, the maximum temperature in Cairo falling from 33 °C. on February 29, to 19 °C. on the 2nd. Two days later a depression appeared south of Malta and crossing the western desert reached Egypt on the morning of the 6th and passed between Cairo and the coast. Gusty south winds resulted and there was a rise in temperature. With the veering of the winds to the north the weather again became cool. On the 8th a depression appeared from the western desert and passed over Middle Egypt and the pressure system was much disturbed. The sky was overcast, winds were northerly and the weather was very cool, the maximum temperature in Cairo falling to 16 °C. Rain was general from the coast as far south as Minya and was heaviest in the central region. In Cairo rain fell more or less continuously from 8 h. on the 8th until 15 h. on the following day, the amount recorded being 23 millimetres, while at Suez 27 millimetres fell. By the 11th Egypt had become the centre of an area of high pressure, the sky was mainly clear and the weather warmer. Meanwhile a shallow depression advanced from the western Mediterranean and deepened on its arrival north of Egypt on the 13th. On this morning there was an unusually thick fog for the time of the year in Cairo district. With the veering of the winds the weather again became abnormally cool. A deep depression south of Malta began to influence the weather of Egypt on the 16th and gave rise to strong warm southerly winds and dust storms. The depression passed to the north on the following day and winds veered to the west and reached gale force on the coast and the weather was much cooler. There were rough seas throughout the central and eastern Mediterranean. High pressure with north-easterly winds and fine, rather cool, weather succeeded and was maintained for several days. On the 27th a deep depression appeared over the central Mediterranean, winds in Egypt blew from the south-east and the weather became much hotter. A shallow secondary depression passing over the Delta on the 29th brought the temperature in Cairo to 36° C., *i.e.* 10° C. above the normal, and within 2° C. of the record. The heat wave was maintained until the end of the month.

As in February the mean pressure for the month was much below the normal throughout Egypt and the Sudan, while in spite of the very cool weather in the earlier part of the month the temperature was considerably above the normal, particularly in the Sudan, where the temperatures at night were very high. In Cairo (Giza) the difference between the maximum temperatures on the warmest and coolest days of the month was 21° C. and has not been exceeded since 1905.

Over the Mediterranean and Red Sea coasts the rainfall was below normal; elsewhere it was above normal.

* Port Sudan only.

NOTE.—1,000 millibars is equivalent to 750·1 millimetres at 0° C. and mean gravity.

H. KNOX-SHAW,
Director, Meteorological Service.

State of the River.

The Bahr el Jebel fell at a normal rate, reaching a minimum on the 26th. It rose a few centimetres during the rest of the month.

The White Nile fell at normal rate during the first fortnight and rose a little afterwards. It was 33 centimetres below normal at the end of the month.

The Blue Nile at Roseires fell at a normal rate during the first 12 days, then rose gradually until the 23rd. Afterwards the levels fluctuated at about 40 centimetres above the normal and started to rise again on the 29th. At Khartoum it fell with small fluctuations at a little greater than normal rate.

The Nile at Wadi Halfa also fell at a little greater than normal rate throughout the month.

Early rains in Abyssinia have caused a rise in the Blue Nile very similar to that of last year.

The differences of the mean levels for March 1924 from those of last year and from the normal (1906–1920) are :—

STATIONS.	MEAN VALUES.	
	Difference from March 1923.	Difference from Normal.
	Metres.	Metres.
Mongalla	+ 0·70	— 0·45
Malakal	+ 0·30	— 0·49
Roseires	+ 0·03	+ 0·18
Khartoum	+ 0·16	— 0·36
Wadi Halfa	+ 0·25	— 0·35

General Situation.

The pressure has risen and a wedge of high pressure now extends from the Balkans to Egypt. Over the western desert the pressure is still low.

Forecast for 24 hours from noon to-day

Light to moderate winds, chiefly northeasterly. Mainly clear. Cooler but temperature remaining above normal.

General Situation.

Throughout Egypt pressure is again falling. The high pressure over the central Mediterranean has rapidly broken down owing to the advance of a depression from southern Italy. Over the western desert the pressure remains low.

Forecast for 24 hours from noon to-day

Light to moderate winds, chiefly southerly. Mainly clear. Temperature much above normal.

General Situation.

The pressure over Egypt has fallen; there are areas of low pressure over the western desert and over Palestine. Over the central Mediterranean a high pressure is forming but little gradient has so far been established.

Forecast for 24 hours from noon to-day

Light winds, variable in direction. Clear or occasional high cloud. Temperature much above normal, but less so tomorrow.

General Situation.

The high pressure area over the central Mediterranean has strengthened and the pressure over Egypt has risen and become normal for the first time since two weeks. The low pressure area near Palestine has deepened and thus the gradient is steeper.

Forecast for 24 hours from noon to-day

Moderate northerly winds, fresh at times. Clear or occasional high cloud. Temperature slightly above normal.

الحاله العموميه
General Situation.

Over the Central Mediterranean the high pressure has strengthened. There is little change in the pressure over Egypt, but over the western desert the pressure is falling.

قوي الضغط العالي على الجزء الاوسط من البحر الابيض - يوجد تغيير طفيف في الضغط على مصر - واما على الصحراء الغربيه فانه الضغط آخذ في الهبوط

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد
Forecast for 24 hours from noon to-day

Light winds chiefly northeasterly, later veering to the south. Mainly clear. Warmer.

رياح خفيفة شماليه شرقيه في الغالب - تتحول جنوبيه فيما بعد - صحو على العموم - الطقس ادفأ

500	30	ENE
1000	55	E
1500	15	E
2000	25	N
3000		

General Situation.

The pressure is high over Italy and decreases continuously towards Egypt. There is a depression over the western desert. Locally the pressure is much disturbed and there appears to be a shallow depression southeast of Cairo.

الحالة العمومية

الضغط مرتفع على ايطاليا ويتدرج فى النقص نحو مصر - يوجد انخفاض على الصحراء الغربية - هناك اضطراب وضغط شديد فى الضغط - ويظهر ايضا هناك انخفاض قليل

Forecast for 24 hours from noon to-day

Fresh to strong northeast winds, veering later to the south. Gusty. Much cloud. Warmer. Possibility of local thunderstorm. Khamsin conditions.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح شمالية شرقية بها العتدلة والشديدة تقبل جنوبا فيما بعد - هبات ريح - سحاب كثير - الطقس اوخا - يحتمل حدوث عاصفة رعدية محلية - حالات الخامسين

General Situation.

The depression which was situated over the western desert yesterday is now passing over Upper Egypt. The high pressure area over Italy is well maintained

الحالة العمومية

الانخفاض الذى كان واقفا البارحه على الصحراء الغربيه وصل فى سيره الى الوجه القبلى — منطقة الضغط العالى على ايطاليا لا تزال باقية .

Forecast for 24 hours from noon to-day

Fresh to strong northeasterly winds, becoming northwesterly later. Clear at first, some low cloud developing later. Possibility of light rain inland. Temperature about normal.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح شماليه شرقيه بيه النسيم والشديده تصير شماليه غربيه فيما بعد — صحو فى البدايه يعقبه سحاب منخفض احتمال سقوط مطر خفيف فى الداخل — درجه الحراره حول المعدل

General Situation.

There is a deep depression near Malta, separated from Egypt by a tongue of high pressure which extends from the Balkans. Pressure in the west is falling.

الحاله العموميه

يوجد انخفاض عميق بالقرب من مالطا يفصله عنه مصر نتوء من الضغط العالى الممتد من البلقان اما فى الغرب فالضغط فى هبوط.

Forecast for 24 hours from noon to-day

Moderate to fresh northeasterly winds, becoming southerly on the coast tomorrow. Occasional high cloud. Becoming rather warmer.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح شمالية شرقية بين المعتدلة والنسيم - تتحول الى جنوبية على الشاطئ غدا - سحاب مرتفع بين آونة واخرى تميل حرارة الطقس الى الارتفاع.

[illegible]	40	NNW

General Situation.

Over the central Mediterranean high pressure has formed. There appears to be a shallow depression over the Gulf of Suez and the pressure system is disturbed locally to a very unusual degree.

الحالة العمومية

تكونت منطقة ضغط عال على الجزء الاوسط من البحر الابيض - وعلى ما يظهر انه هناك انخفاض قليل العزر فوق خليج السويس - اما فى منطقة القاهرة فانه الضغط [illegible]

Forecast for 24 hours from noon to-da

Moderate winds, variable in direction, mainly northeasterly, strong in gusts. Much low cloud. Changeable. Probability of rain.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح معتدلة مختلفة الاتجاه غير انها شمالية شرقية على وجه العموم - هبات ريح شديدة - سحاب منخفض كثير - الطقس متقلب - المطر محتمل .

Ministry of Public Works, Egypt.—Physical Department.

REPORT ON THE WEATHER AND STATE OF THE RIVER FOR APRIL 1924.

The Weather.

Owing to the formation of high pressure over the central Mediterranean the heat wave prevailing at the end of March weakened, but by the 2nd of the month a depression over the western desert caused the winds to return to the south and the temperature again rose rapidly, reaching 40° C at Alexandria—a record for April—and Helwan; this is 14° C above the normal. The heat wave extended throughout Egypt and the Sudan. There was a break in the spell of hot weather from the 5th to the 7th during which period there was an area of high pressure in the west, with winds from the northwest, but on the following day a depression appeared south of Italy, pressure over the Mediterranean fell and the winds again went round to the south, very warm weather with clear skies was experienced for three days. The depression reached Syria on the 11th and the winds veered to the northwest; there was some low cloud and the temperature fell below normal. High pressure over the central Mediterranean and the Balkans and low pressure to the north of Egypt were maintained for nearly a fortnight, during which period the weather was cool and pleasant; the humidity was also generally below normal. From the 17th to the 19th there were very strong and gusty northeast winds. At noon on the 19th the sky was overcast with low cloud and a thunderstorm threatened but did not materialise. A shallow depression then passed from the western desert across Upper Egypt and on the 23rd the pressure system was disturbed to an unusual extent. Thoughout Lower Egypt the sky was overcast and lowering, but there were drops of rain only at Alexandria and Cairo. There were large local differences of temperature, which was below normal in Lower Egypt but much above normal in Upper Egypt. At the end of the month the weather was again becoming warmer, and the humidity was rather high.

The mean pressure was above normal on the Mediterranean coast, normal in Lower Egypt and below normal throughout Upper Egypt and the Sudan. The temperature was everywhere above normal. At Merowe 47° C was recorded on the 24th and 25th, a record for the month. The relative humidity in Cairo (Giza) was below normal almost continuously from the 8th to the 23rd. There was no measurable rain in Egypt. In the Sudan the rainfall was above normal, particularly in the south.

TABLE SHOWING THE DEPARTURES FROM NORMAL FOR APRIL 1924.

VII. South Sudan	—	—	—	—	—	—	—	—	133	+69

* Port Sudan only.

NOTE.—1,000 millibars is equivalent to 750·1 millimetres at 0° C. and mean gravity.

H. KNOX-SHAW,
Director, Meteorological Service.

State of the River.

The Bahr el Jebel rose gradually throughout the month with sharp flushes on the 3rd, 8th, 17th, 24th and 30th. The last of which reached a level of 49 centimetres above the normal.

Owing to the flushes on the River Sobat, the White Nile rose gradually during the first and last ten days of the month, while it fell during the second ten days. It varied from 33 centimetres below the normal at the beginning of the month to 6 centimetres above it at the end.

The Blue Nile at Roseires rose steadily during the first week, fell sharply until the 18th and rose again with some fluctuations for the rest of the month. It varied from 54 centimetres above normal at the beginning of the month to 68 at the end. At Khartoum it was almost steady during the first eight days, then rose until the 17th and fell slightly afterwards.

The Main Nile at Wadi Halfa fell until the 22nd and rose slightly during the rest of the month.

The levels of the Bahr el Jebel, Blue and Main Niles, were all higher than the corresponding levels of last year.

The differences of the mean levels for April 1924 from those of last year and from the normal (1906–1920) are :—

1500	*20*	*N*
2000	*30*	*NNW*
3000	*55*	*NNW*

General Situation.

The pressure north of Egypt remains low while the high pressure to the west has strengthened. There is very little gradient over Egypt.

الحالة العمومية

لا يزال الضغط منخفضا في شمال مصر - في حين ان منطقة الضغط العالي التي في غربية الغرب زادت شدة - واما انحدار الضغط فوق مصر فانه صغير جدا.

Forecast for 24 hours from noon to-day.

Light winds mainly northwesterly. Clear or occasional low cloud. Temperature rather below normal.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح خفيفة شمالية غربية على وجه العموم - صحو أو كاب منخفض بعيد آونة وأخرى - درجة الحرارة أقل من المعدل نوعا.

500	5	N
1000	10	N
1500	10	NNW
2000	25	NNW
3000	25	NNW

General Situation.

The high pressure west of Egypt is maintained. The depression north of Egypt and over Iraq has deepened.

الحالة العمومية

لو يزال الضغط العالى غرب مصر حافظا لكيانه. وقد ازداد الانخفاض شمال مصر وعلى العراق قليلا.

Forecast for 24 hours from noon to-day.

Light to moderate northwesterly winds. Some low cloud. There is not yet any indication of a breakdown of the cool weather.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح شمالية غربية بين الخفيفة والمعتدلة - قليل من السحاب المنخفض - ليس هناك ما يدل على تغيير فى حالة ميل الطقس الى البرودة.

Ministry of Public Works, Egypt.—Physical Department.

REPORT ON THE WEATHER AND STATE OF THE RIVER FOR MAY 1924.

The Weather.

The month was characterised by an unusual absence of depressions. The distribution f pressure over Egypt from the 3rd to the end of the month was generally of the ummer type with the exception of a shallow depression which formed south of Cairo on he 15th.

At the beginning of the month a depression which was situated near the Adriatic, assed well to the north of Egypt with little effect on Egypt except that the temperature as above normal.

From the 3rd to the 10th the pressure north of Egypt and over Syria was low, while here was an area of high pressure over the central Mediterranean. Consequently there ere fresh N.W. winds and a considerable amount of low cloud and the weather was ery cool and pleasant; from the 10th to the 14th the winds were mainly from the N. and .E. and the temperature was slightly above normal.

Throughout Egypt the pressure was above normal. In the Central Sudan it was elow normal. The mean temperature was above normal on the Mediterranean coast nd in the South Sudan. In Upper Egypt it was below normal. Except for the first hree days of the month and six days in the middle of the month the maximum temperature Cairo was continuously below the normal. During the warm spell in the middle of the nonth the relative humidity in Cairo was below the normal. After that it remained ontinuously above normal till the 30th. In the Central Sudan the rainfall was slightly elow normal and in the South Sudan much below normal.

TABLE SHOWING THE DEPARTURES FROM NORMAL FOR MAY 1924.

VII. South Sudan	—	—	35·8	+1·2	22·6	+1·5	29·2	+1·4	69	−54

* Sudan only.

NOTE.—1,000 millibars is equivalent to 750·1 millimetres at 0°C. and mean gravity.

H. KNOX-SHOW.
Director, Meteorological Service.

State of the River.

With the exception of the rises on the 4th, 5th and 27th the Bahr el Jebel fell slightl throughout the month.

The White Nile was almost steady during the first week, rose slightly during th second, then fell gradually until the 28th and rose again slightly for the last three days the month.

The Blue Nile at Roseires fell slightly but was above normal until the 19th and fluctua ed about normal during the rest of the month. At Khartoum it rose gradually durin the first nine days and became almost steady throughout the rest of the month.

The River Atbara fell steadily until the 25th and rose slightly afterwards.

The Main Nile at Wadi Halfa fell slightly below normal during the first fortnigh and rose gradually during the second. It was almost identical with the normal durin the last ten days of the month.

At the end of the month the Main and Blue Niles were about normal while the Whit Nile and Bahr el Jebel were some what lower than normal.

The differences of the mean levels for May 1924 from those of last year and from th normal (1906–1920) are :—

STATIONS.	MEAN VALUES.	
	Difference from May 1923.	Difference from Normal.

500	15	N
1000	20	NNW
1500	15	N
2000	20	NNW
3000	25	N

General Situation.

A shallow depression which formed on Tuesday in the neighbourhood of Cairo moved yesterday afternoon to the east causing some disturbance in the weather. The pressure over Egypt and the Mediterranean continues to fall and is now below normal. There is a low pressure area north of Egypt and a high one in the west.

الحالة العمومية

تحرك الانخفاض القليل العمق الذى تكون بجوار القاهرة يوم الثلثا جهة الشرق بعد ظهر البارحة واحدث تغيرا فى الطقس والضغط على مصر والبحر الابيض مستمر فى الهبوط وهو الآن دون المعدل ويوجد انخفاض فى شمال مصر وارتفاع فى الغرب.

Forecast for 24 hours from noon to-day.

Moderate to fresh northerly winds; occasional cloud. Temperature slightly below normal.

الرياح بالطقس من ظهر اليوم الى ظهر الغد

رياح شمالية بين المعتدلة والفسيحة - سحاب بين آونة واخرى - درجة الحرارة اقل من المعدل بقليل.

Upper Wind Observations at Helwan at 8 h 30 m.

Height (metres)	Kms./Hr.	Direction
500	15	E
1000	10	ENE
1500	10	NSW
2000	20	NSW
3000	35	W

General Situation.

The pressure distribution is complicated. There are areas of relatively high pressure over the north of the Delta and the western desert, and a shallow depression south of Cairo. The eastern Mediterranean is an area of low pressure.

الحالة العمومية

الضغط موزع بحالة معقده - فوق دلتا مصر وجهتها الضغط العالي النسبي على شمال الدلتا والصحراء الغربيه - هو وجود انخفاض ضغط ضحل فوق جنوب القاهره

Forecast for 24 hours from noon to-day.

Fresh winds chiefly easterly today and northwesterly tomorrow. Gusty. Occasional high cloud at first; low cloud later. Warmer; probably cooler tomorrow. Possibility of local thunderstorms.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

الرياح النسيم شرقي على العموم متحولة الى شمالي غربي في الغد

السحاب مرتفع بدايه آتيه واخري يتحول الى سحاب على دفعات -

الطقس حار اليوم ومحتمل ان تنقلع حرارته باكر

Ministry of Public Works, Egypt.—Physical Department.

REPORT ON THE WEATHER AND STATE OF THE RIVER FOR JUNE 1924.

The Weather.

At the beginning of the month there was an area of relatively low pressure south of Cairo and on the afternoon of the 4th a thunderstorm accompanied by light rain was experienced in that district. The weather remained warm. On the 10th pressure conditions off the Egyptian coast were disturbed, resulting in a thunderstorm with light rain at Sollum and a heavy shower at Matruh. On the following day a shallow depression was situated south of Cairo, and gusty north-east winds blew all day. The depression passed during the early morning and the wind backed to the north-west. Light rain was reported in the Faiyum. Cool weather succeeded with north-west winds and considerable low cloud. Heavy rain fell at Matruh on the following day. It is interesting to note that at 8h. on the 18th every station from the coast to Khartoum covering a distance of over 1,500 kilometres reported clear sky. On the 26th there were southerly winds throughout Lower Egypt, the weather was very hot and a dust storm accompanied by strong winds was experienced, the effect of a shallow depression passing along the coast. It is very rare that such khamsin conditions occur so late in the year. With the passage of the depression the winds veered to the north-west; there was much low cloud and a considerable fall in temperature.

Except over the Red Sea Coast, the pressure throughout Egypt and the Sudan was below normal. In the Central Sudan the temperature was normal; elsewhere temperatures were everywhere above normal, particularly at night. In Cairo the temperature was well above the normal on every night except the 30th. The relative humidity was normal. In the Central Sudan the rainfall was much above normal but elsewhere it was deficient, particularly in the south.

H. KNOX-SHAW,
Director, Meteorological Service.

State of the River.

With the exception of a rise on the 25th, the Bahr el Jebel was almost steady throughout the month and much below the normal and slightly above last year.

At Malakal the White Nile rose steadily but was below both the normal and last year.

The Blue Nile at Roseires fluctuated somewhat above the normal for the first ten days of the month and somewhat below the normal during the second ten days. It rose sharply with fluctuations towards the end of the month. At Khartoum the Blue Nile was below the normal for most of the month but was rising at about the normal rate. During the the last few days of the month however it rose rapidly and finished the month a little above normal.

The River Atbara at Khashm el Girba while starting the month at lower levels than the normal rose fairly rapidly during the first twenty days and very rapidly later.

The Main Nile at Wadi Halfa rose slowly during the month. The level was about normal at the beginning of the month but below normal at the end.

The differences of the mean levels for June 1924 from those of last year and from the normal (1906–1920) are :—

STATIONS.	MEAN VALUES.	
	Difference from June 1923.	Difference from Normal.
	Metres.	Metres.

REMARKS: Halve all cloud observations at MEROWE, EL OBEID and MALAKAL.

Ministry of Public Works, Egypt.—Physical Department.

REPORT ON THE WEATHER AND STATE OF THE RIVER FOR AUGUST, 1924.

The Weather.

At the beginning of the month the temperature was falling and until the 5th was below normal. With falling pressure the temperature increased but after three days a spell of comparatively cool weather, lasting for a week, was experienced. From the middle of the month until the end the pressure was very low, and the weather very hot and at times damp. For five successive days a temperature of 38°C. or over was recorded in Cairo. On the 25th there was a thick mist in Cairo lasting from about 6 h. to 8 h. The highest temperature reached in Lower Egypt was 42° C. at Helwan on 23rd and 24th, while at Qena a temperature of 48° C. and at Aswan 49°C were attained on the 24th and 25th respectively. Both are records for August. On the 30th a shallow depression passed over the Dleta and the wind was from the south, an extremely unusual direction for the time of the year.

On the coast the barometric pressure was normal while elsewhere it was below normal. Everywhere except in the northern Sudan, the temperature was much above normal. On only one occasion during the last three months has the temperature at night in Cairo fallen below the normal. For the month as a whole the relative humidity was normal. The rainfall was well above the normal in the central and southern Sudan, but was in deffect in the northern Sudan.

* For 30 days only.

L. J. SUTTON,
Acting Director, Meteorological Service.

State of the River.

The Bahr el Jebel was almost steady during the first nine days. It then rose fairly sharply until the 13th, after which date it again fell and fluctuated below both the normal and last year's levels. It was 48 centimetres below normal at the end of the month.

The White Nile at Malakal rose steadily and at slightly less than normal rate throughout the month. Its levels were below those of both the normal and last year and it was 39 centimetres below the normal at the end of the month.

The Blue Nile at Roseires was on the whole continually fluctuating above the normal. There were four big flushes during the month, the highest reaching the gauge reading 20·84 metres on the 15th and the next highest was 20·62 metres on the 20th but the levels were appreciably below the normal for three days only *i.e.* 23rd to 25 th. At the end of the month the gauge reading was 20·32 metres *i.e.* 132 centimetres above normal. At Khartoum the Blue Nile rose almost normally with very slight fluctuations until the 14th. It then rose at a sharper rate until the 23rd after which date it fell for a few days and rose again reaching the normal level at the end of the month. The maximum gauge reading was 15·84 metres on the 23rd *i.e.* 28 centimetres above normal, but on the whole the levels were below those of last year.

The River Atbara fluctuated about the normal during the first and last ten days of the month, but was well above it during the second ten days. It reached a maximum reading of 16·04 metres on the 15th and was then 162 centimetres above the normal.

The Main Nile at Wadi Halfa rose faster than normal until the 22nd and fell slightly for the rest of the month. The maximum reading of the month was 8·06 metres on the 22nd *i.e.* 87 centimetres above normal. Throughout the month the levels were above normal but lower than those of last year.

The differences of the mean levels for August, 1924 from those of last year and from the normal (1906–1920) are :—

REMARKS: Halve all cloud observations at MEROWE, EL FASHER and EL OBEID.

Ministry of Public Works, Egypt.—Physical Department.

REPORT ON THE WEATHER AND STATE OF THE RIVER FOR SEPTEMBER, 1924.

The Weather.

The pressure distribution and weather during the month were generally of the usual summer type. Outstanding features were a continuance of the abnormally warm nights practically throughout the month, a sharp shower of rain at Sollum on the 20th, and the occurrence of thick mists on the mornings of the 14th and 28th.

Until the 5th of the month the pressure was high and cool weather was experienced. A long spell of low pressure accompanied by warm weather followed, although there were no very hot days. The pressure rose on the 17th and temperatures during the day-time fell below normal, although night temperatures were still higher than usual for the time of the year. There was evidence of a very shallow depression off the Mediterranean coast on the following day, and a fall of 3 millimetres of rain was recorded at Sollum. From the 26th until the end of the month the pressure was low and the weather cool.

For the month as a whole the pressure was below normal except in the Northern Sudan, where it was about normal. The mean temperature was considerably above normal in Egypt and slightly below in the Sudan. Not since May has the temperature for the month fallen below the normal. The relative humidity at Giza was above normal two days out of three on the average but the departures were small. Rainfall in the Sudan was above normal except in the south.

TABLE SHOWING THE DEPARTURES FROM NORMAL FOR SEPTEMBER, 1924.

3000		

General Situation.

The pressure over Egypt continues to rise and is now above normal. To the east the pressure has fallen; otherwise there is little change.

الحالة العمومية

الضغط على مصر مستمر فى الارتفاع وقد فاق المعدل الآن. وفيما عدا انخفاض فى الشرق فليس هناك تغيير يذكر فى توزيع الضغط.

Forecast for 24 hours from noon to-day

Moderate northerly winds. Occasional low cloud. Cooler. Light morning mist.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح شمالية معتدلة. سحاب منخفض بعيد آنه و آخر. الطقس أميل للبرودة. يحدث ضباب خفيف فى الصباح.

1000	25	NE
1500	40	NNE
2000	5	NNE
3000	15	WSW

General Situation.

There is a shallow depression near Matruh. Over Italy and the central Mediterranean a system of high pressure has developed.

الحالة العمومية

يوجد انخفاض قليل العمق قريبا من مطروح وأما على ايطاليا وأواسط البحر الابيض المتوسط فقد تكونت منطقة ضغط عال.

Forecast for 24 hours from noon to-day.

Moderate to fresh winds mainly northeasterly. Some low cloud. Rain on the coast probable.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح بين المعتدلة والنسيم أغلبها شمالية شرقية - قليل من السحاب المنخفض - يحتمل حدوث مطر على الساحل.

2000	15	NNW
3000	40	WSW

General Situation.

The pressure over Egypt has slightly risen and is now above normal. The depression near Matruh has moved slowly towards the northeast. Over Italy the high pressure area is well maintained.

الحالة العمومية

ارتفع الضغط قليلا على مصر وقد فاق المعدل. اما الانخفاض القريب من مطروح فقد تحرك نحو الشمال الشرقي - ولا تزال منطقة الضغط العالى فوق ايطاليا على حالتها الاولى

Forecast for 24 hours from noon to-day.

Moderate northerly winds. Some low cloud. Possibility of further light rain on the coast. Cooler.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح شمالية معتدلة - قليل من السحاب المنخفض - يحتمل ان تمطر مرة اخرى على الساحل - الطقس اميل للبرودة.

1000	35	N
1500	45	N
2000	20	NNW
3000		

General Situation.

The depression has slightly deepened and remains stationary over the eastern Mediterranean; otherwise there is no change in the general distribution of pressure.

الحالة العمومية

زاد الانخفاض عمقا ولا يزال ثابتا على الجزء الشرقي من البحر الابيض المتوسط وفيما عدا ذلك فليس هناك تغيير في توزيع الضغط عموما.

Forecast for 24 hours from noon to-day.

Moderate northerly winds becoming westerly on the coast tomorrow. Mainly clear today low cloud tomorrow. No change in temperature. Further outlook unsettled.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح شمالية معتدلة اليوم تصير غربية على الساحل غدا. الطقس صحو اليوم وتظهر سحب متفرقة باكرا - درجة الحرارة لا تتغير. ينتظر تغيير الطقس فيما بعد.

500	15	S
1000	20	W
1500	20	NNW
2000	35	NNW
3000	55	NNW

General Situation.

The pressure over Egypt and the eastern Mediterranean has fallen considerably due to the deepening of the depression which is now situated over Cyprus. An area of high pressure still exists over Italy.

الحالة العمومية

نقص الضغط كثيرا على مصر والجزء الشرقي من البحر الابيض المتوسط بتأثير ازدياد عمق الانخفاض الذي تحول الآن الى جهة قبرص . ولا تزال منطقة الضغط العالي فوق ايطاليا .

Forecast for 24 hours from noon to-day.

Light, southerly winds today becoming westerly tomorrow. Clear at first, low cloud developing later with possibility of light rain tomorrow.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح جنوبية خفيفة اليوم تصير غربية غدا - الطقس صحو اولا ولكنه يتكون سحاب منخفض فيما بعد مع احتمال سقوط مطر خفيف بعدا .

Upper Wind Observations at Helwan at 8 h 30 m.

Height (metres)	Kms. Hr.	Direction
500	15	NNE
1000	10	N
1500	25	NW
2000	20	WNW
3000	60	W

General Situation.

The depression which has partly filled up caused very heavy rain on the western coast. Although there is a general rise in the pressure over Egypt, it is much disturbed.

الحالة العمومية

انخفاض الذي امتلأ جزئيا وسبب امطارا غزيرة على الساحل الغربي - والضغط قد ارتفع على مصر الا انه لا يزال مضطربا

Forecast for 24 hours from noon to-day.

Light to moderate variable winds chiefly northerly. Much high cloud at first, low cloud later. Further light rain in the north.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح متناوبة بين الخفيفة والمعتدلة شمالية في الغالب يظهر سحاب مرتفع اولا ثم يصير منخفضا فيما بعد ويسقط المطر مرة اخرى في الجزء الشمالي من الدلتا

Upper Wind Observations at Helwan at 8 h 30 m

Height (in metres)	Kms. hr.	Direction
600	35	NNN
1000	25	N
3000	30	N
5000	5	NNE
10000	10	N

General Situation.

The pressure to the east of Egypt continues to fall, a high pressure area is now situated over the Aegean sea and a deep depression has made its appearance in the western Mediterranean.

الحالة العمومية

الضغط مستمر فى الانخفاض على شرقه مصر وقد تكونت على بحر الارخبيل منطقة ضغط مرتفع وظهر انخفاض عميق على الجزء الغربى من البحر الابيض المتوسط.

Forecast for 24 hours from noon to-day.

Moderate northerly winds, fresh at times. Occasional low cloud. Remaining cool and unsettled. Early morning mist.

يتنبأ بالطقس من ظهر اليوم الى ظهر الغد رياح شمالية معتدلة تنشط احيانا. يظهر سحاب منخفض بين آونة وأخرى. يستمر الطقس مائلا الى البرودة وغير ثابت. سابورة خفيفة فى الصباح الباكر.

500	40	NE
1000	20	NE
1500	40	NE
2000	35	NE
3000	40	ENE

General Situation.

The depression has passed to the east and an area of high pressure has been established over Crete. Over Palestine the pressure is relatively low.

الحالة العمومية

بارج الانخفاض مرتفع نحو الشرق وتكونت على جزيرة كريت منطقة منخفض مرتفع - وقد انخفض الضغط انخفاضا نسبيا على فلسطين.

Forecast for 24 hours from noon to-day.

Moderate northeasterly winds, fresh at times. Occasional high cloud. Remaining warm, with early morning mist. Becoming unsettled.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح شمالية شرقية معتدلة تنشط احيانا - يظهر السحاب العالى بين آونة واخرى - لا يزال الطقس دافئا وتظهر الشابورة فى الصباح مرة اخرى - ينتظر تغيير الطقس

Comparison of Temperatures

Fahrenheit: 120° 110° 100° 90° 80° 70° 60° 50° 40° 32°

Upper Wind Observations at Helwan at 8 h. 30 m.

Height (metres)	Kms./Hr.	Direction
500	40	S
1000	35	S
1500	30	S
2000	35	SSW
3000	20	SW

General Situation.

The two depressions have coalesced forming a fairly deep one situated now near Crete. To the east of Egypt an area of high pressure exists.

الحالة العمومية

اتحد الانخفاضان فكونا انخفاضا آخر عميقا موقعه الآن قريبا من جزيرة كريت - وأما في شرق مصر فتوجد منطقة ضغط مرتفع.

Forecast for 24 hours from noon to-day.

Moderate southerly winds becoming westerly later. Clear or some high cloud. Warm. Remaining unsettled.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح جنوبية معتدلة تصير غربية فيما بعد - السماء صحو او يظهر بها سحاب عال - الطقس حار - ويشبه الى الخامسة - مثل الطقس سابقا

Ministry of Public Works, Egypt.—Physical Department.

REPORT ON THE WEATHER AND STATE OF THE RIVER FOR OCTOBER, 1924.

The Weather.

As a result of a shallow depression orginating at Sîwa on September 29, and reaching Cyprus on October 1, the month opened with an unusually heavy rainfall of 10 millimetres at Port Said.

This depression soon disappeared and an area of high pressure was then formed near Egypt and in consequence the weather settled and the temperature was about normal till the 7th.

On the 8th, another depression made its appearance at Sollum causing southerly winds to blow over the coastal region on the following day. The depression remained stationary for a day, after which it moved rapidly in a north-easterly direction and in consequence the wind veered to the west, but only for a short spell, as another deeper depression between Sollum and Matruh formed on the evening of the 10th, which caused light rain on the western coast on three consecutive days.

This depression reached the vicinity of Cyprus on the 15th and caused southerly winds to blow over Lower Egypt generally, accompanied by rain over the eastern Mediterranean and northern Egypt.

On the 16th the depression advanced towards Palestine, causing the wind to veer to the north and more rain at Alexandria and Port Said. It remained stationary for a few days during which cool northerly winds accompanied by low cloud prevailed.

The pressure began to rise and a high pressure area was established near Egypt on the 22nd, the weather settled and became warmer. These conditions lasted till the 28th. A shallow depression formed over the eastern Mediterranean on the 27th, causing heavy rainfall on the coast of Palestine, but had no effect on the weather in Egypt.

Meanwhile another depression formed near Malta. This split into two parts, one advancing towards Egypt and causing a heavy rainfall of 20 millimetres at Sollum.

Reuniting, the two parts formed a deep depression which remained stationary over Crete till the end of the month.

This caused southerly hot khamsîn winds to blow over Egypt. The temperature was 9° C. above normal at Port Said and 7° C. at both Qasr el Gebali and Minya on the 30th.

The pressure was below normal in the Central Sudan, above normal on the coast, and about normal elsewhere.

Temperature was about normal both in Egypt and the Sudan.

Except in the Northern Sudan and Middle Egypt, the rainfall was above normal.

TABLE SHOWING THE DEPARTURES FROM NORMAL FOR OCTOBER, 1924.

* Port Sudan only. † Mongalla only. NOTE.—1000 millibars is equivalent to 750·1 millimetres at 0°C. and mean gravity.

MAHMÛD HAMED MOHAMMED,
Acting Director, Meteorological Service.

State of the River.

The Bahr el Jebel at Mongalla fluctuated a little but there was no great rise or fall until the 26th. Between the 26th and the 29th there was a rise of 81 centimetres followed by a fall of 43 centimetres during the last two days of the month.

The White Nile at Malakal rose steadily at about normal rate throughout the month but its levels remain considerably below both the normal and last year.

The Blue Nile at Roseires started the month a little above normal but fell rapidly with very slight fluctuations until the 22nd, when its level was 40 centimetres below normal. From the 22nd the river rose considerably with some fluctuations until the end of the month, when it was 58 centimetres above normal. At Khartoum the Blue Nile fell rapidly until the 27th and from this date until the end of the month the rise mentioned at Roseires began to be felt.

The River Atbara fell faster than normal rate and was almost identical with last year until the 24th, after which date it rose sharply and then varied slightly about the normal.

The Main Nile at Wadi Halfa was almost normal in its levels and rate of fall during the first fortnight. Afterwards it fell much faster than normal and its levels were consequently below both the normal and last year.

The differences of the mean levels for October, 1924, from those of last year and from the normal for 1906–1920 are given in the following table. It will be observed that the river was everywhere below normal.

General Situation.

The depression is stationary near Crete. Egypt has become a centre of high pressure area, and another high pressure area has been established over Italy.

الحالة العمومية

لا يزال الانخفاض في موقعه قريبا من جزيرة كريت وقد صار شمال مصر الآن مركزا لمنطقة ضغط مرتفع وكذلك تكونت على ايطاليا منطقة ضغط مرتفع أخرى.

Forecast for 24 hours from noon to-day.

Light winds, westerly inland, southerly on the coast and freshening later. Clear at first much cloud tomorrow. Warm and unsettled.

التنبؤ بالطقس لهذا اليوم الى ظهر الغد

رياح خفيفة غربية في الداخل. جنوبية على الساحل وتنشط فيما بعد. السماء صحو في الابتداء ويظهر بها سحاب كثير بعد الغد. الجو حار وتقلبي.

3000	30	SSW

General Situation.

The depression which has particularly filled up, has advanced slowly towards the east and is situated now off the coast of Egypt. The high pressure areas over Egypt and Italy are maintained. A shallow depression has formed near Suez.

الحالة العمومية

قد ملأ الانخفاض وتحرك ببطء نحو الشرق ويقع الآن قريبا من ساحل مصر. ولا يزال الضغط العالي فوق مصر وايطاليا وقد تكون انخفاض آخر قريبا من السويس.

Forecast for 24 hours from noon to-day.

Light variable winds chiefly westerly. Clear or some low cloud. Warm today mild tomorrow. Remaining unsettled.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح خفيفة متغيرة الاتجاه غربية على وجه العموم. السماء صحو أو يظهر بعض السحاب المتفرقة. الطقس حار اليوم ومعتدل باكرا ولكن لا يزال تابلا للتغيير.

Comparison of Thermometric Scales

Fahrenheit — Centigrade

120° 110° 100° 90° 80° 70° 60° 50° 40° 32°

Upper Wind Observations at Helwan at 8 h 45 m.

Height (metres)	Kms./Hr.	Direction
500	25	ENE
1000	10	ESE
1500	10	ENE
2000	10	E
3000	20	E

General Situation.

The pressure over Egypt has fallen due to the deepening of the depression over Sinai. Another depression appears to be developing over the western desert, the pressure system is very much disturbed.

الحالة العمومية

نقص الضغط على مصر وزيادة عمق الانخفاض على شبه جزيرة سيناء. وهناك دلائل على تكون انخفاض آخر غرب الصحراء الغربية وبالتالي الضغط غير مضطرب جداً

Forecast for 24 hours from noon to-day.

Moderate northerly and northeasterly winds, fresh at times. Much low cloud at intervals. Possibility of thunderstorm and light rain inland particularly in the canal zone. Further outlook unsettled.

التنبؤات للغد من ظهر اليوم الى ظهر الغد

General Situation.

The depression over Sinai, which has disturbed the weather of Egypt for the last three days has partially filled up, but is stationary. An area of high pressure has been established over the Balkans.

الحالة العمومية

استمرار الانخفاض الموجود على شبه جزيرة سينا والذي كان سببا في اضطراب الطقس على مصر ثلاثة ايام متوالية استمر جزئيا ولكنه لا يزال باقيا هناك. وقد تكون منطقة ضغط مرتفع على البلقان

Forecast for 24 hours from noon to-day.

Moderate northerly and northwesterly winds. Much low cloud at times. No sign of improvement of the weather. Still a threat of thunderstorms.

التوقعات للغاية من ظهر اليوم الى ظهر الغد

رياح شمالية أو شمالية غربية معتدلة. يظهر في السماء كثير من السحاب المنخفض في بعض الاوقات. ليس هناك ما يدل على تحسن الطقس ولا يزال مرجحا للعواصف الرعدية.

General Situation.

The depression to the east of Egypt, causing the disturbance of the weather has not changed its position. The high pressure area over the Balkans has intensified.

الحالة العمومية

لم يبرح الانخفاض الذى كان سبباً فى اضطراب الطقس موقعه شرقى مصر وقد قويت منطقة الضغط المرتفع على البلقان

Forecast for 24 hours from noon to-day.

Moderate northerly winds, fresh at times. Much low cloud at intervals. Further thunderstorms and light rain over the Delta. Weather conditions remain disturbed.

الجو بالطقس من ضفة البوغاز الى ضفة النيل رياح شمالية معتدلة تنشط احياناً. تظهر فى السماء كثرة السحب المختلفة فى بعض الاوقات. تحدث عواصف رعدية مصحوبة بمطر خفيف فى بعض انحاء الوجه البحرى. والاحوال الجوية على ما هى عليه

3000	25	NW

General Situation.

A wedge of high pressure area extends from the Balkans to Egypt. The depression to the east has disappeared. Another deep depression has made its appearance near Malta.

الحالة العمومية

يمتد نتوء من الضغط العالى من البلقان الى مصر وقد أختفى الانخفاض الشرقى وظهر انخفاض اخر عميق بالقرب من مالطه

Forecast for 24 hours from noon to-day.

Light variable winds, becoming southerly tomorrow on the coast. Mainly clear today, some high cloud tomorrow. Possibility of morning mist. Temperature about normal. Light rain near Solloum.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح خفيفة مختلفة الاتجاه تصير جنوبية فى الشاطئ الساحلى - السماء صحو غالبا اليوم وظهورا سحب عالية باكر - تكون ضباب صباحا - درجة الحرارة قريبة من المعتاد

3000	10	S

General Situation.

Though the pressure over Egypt and the Balkans has risen and is now over Egypt above normal, yet an area of relatively low pressure has formed over Sinai. The Mediterranean depression appears to have receded to the west of Italy. الحالة العمومية ارتفع الضغط عموماً على البلقان وروسيا وقد صار الآن فوق القطر المصري في البلاد الجوية الا انه قد تكون انخفاض جوي في سيناء وانخفاض البحر الابيض المتوسط فيظهر انه أخذ غرب ايطاليا

Forecast for 24 hours from noon to-day.

Moderate northerly and northeasterly winds. Much high cloud. Probability of light rain on the coast. No change in temperature.

الهواء بالقطر مع شمالي ليوم الى قليل الشد رياح معتدلة شمالية وشمالية شرقية. كثير غيوم السماء العالية في السماء ويحتمل أن تمطر خفيفاً على الساحل ولا يوجد تغيير مهم في درجة الحرارة.

500	30	NNE
1000	20	N
1500	20	SW
2000	60	SW
3000	25	SW

General Situation.

The pressure over Egypt continues to rise and is now much above normal. There are two shallow depressions one over Cyprus and the other near Suez. Otherwise there is no change in the general distribution of pressure.

الحالة العمومية

الضغط على مصر مستمر في الزيادة وقد صار الآن كثيراً فوق المعتاد. ويوجد انخفاضان ضحلان أحدهما على قبرص والآخر بالقرب من السويس. وفيما عدا ذلك فلا يوجد تغيير يذكر في توزيع الضغط العام.

Forecast for 24 hours from noon to-day.

Moderate northerly winds. Much cloud at times. Mild. Possibility of morning mist.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح معتدلة شمالية. تظهر بالسماء سحاب كثير في بعض الأوقات. الطقس معتدل. ويرجح ظهور شابورة في الصباح المبكر.

Comparison of Thermometric Scales

Upper Wind Observations at Helwan at 8 h. 30m.

Height (metres)	Kms./Hr.	Direction
500	25	SW
1000		
1500		
2000		
3000		

General Situation.

A very extensive and deep depression is now situated north of Egypt. The pressure is much disturbed and is below normal. A high pressure area has formed over Italy.

الحالة العمومية

يوجد الآن انخفاض واسع عميق وشديد في شمال القطر والضغط فوقه منتظم وغير كثيرا ودون المعدل - وقد تكونت منطقة ضغط مرتفع على ايطاليا.

Forecast for 24 hours from noon to-day.

Fresh winds between south and west, strong at times. Much low cloud. Further rain likely; cold. There is not yet any sign of improvement in the weather.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح مابين الجنوب والغرب تكون قوية احيانا وكثير من السحب المنخفضة تكون بالسماء تتبعها امطار - وينتظر سقوط مطر آخر - الجو بارد - ولم تظهر للآن علامات تدل على تحسن الطقس

General Situation.

The depression is now situated near Cyprus and is moving away although the weather in Egypt is still under its influence. The pressure has risen considerably.

الحالة العمومية

يتبع الانخفاض الجوي الآن بالقرب من قبرص وينتظر ان يبتعد عنا ولكن لا يزال الجو في مصر تحت تأثير هذا الانخفاض وقد ارتفع الضغط كثيرا.

Forecast for 24 hours from noon to-day.

Moderate to fresh winds, southerly at first, veering to the west later. Some low cloud. Further showers likely on the coast. Weather becoming warmer and more settled.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح معتدلة والنسيم جنوبية أولا ثم تصير غربية فيما بعد. قد يكون بالسواحل قليل من السحاب المنخفض مع امطار متفرقة. الجو يصير أدفأ وأكثر استقرارا.

Ministry of Public Works, Egypt.—Physical Department.

JAN 15 1925

REPORT ON THE WEATHER AND STATE OF THE RIVER FOR NOVEMBER, 1924.

The Weather.

The weather during November was characterised by two main features, namely a succession of thunderstorms—which were not however accompanied by heavy rain—in various parts of Lower Egypt during the first week, and secondly the rainy weather and strong southerly winds which prevailed over Egypt from the 21st to the 25th, together with a remarkable cold wave which affected Egypt and the Sudan even south of Khartoum.

Disturbed weather commenced when a shallow depression near Suez, and another near Cyprus formed on the 2nd, resulting in showery weather over the Delta and the coast. The rainfall was particularly heavy at Sollum, where 32 millimetres were recorded. On the following day the depressions joined and deepened. Fresh northerly winds blew and there was considerable thunder and lightning in the desert east of Cairo. The depression subsequently remained stationary over Palestine for three days, and there were further thunderstorms, particularly over the Canal Zone and the Delta.

On the 7th an area of high pressure extending from the Balkans to Egypt was established and settled warm weather with occasional morning mists prevailed until the middle of the month. On the 16th a depression, which had developed over the eastern Mediterranean on the previous day, deepened, resulting in fresh cold southerly winds, and there was a shower of rain at Port Said. The high pressure system however was re-established on the following day, and settled weather was experienced for four days.

A depression appeared near Malta on the 19th, and reached Cyprus two days later. The wind became southerly and the weather throughout Egypt was cold and rainy. Conditions became more disturbed when the depression deepened on the 22nd, giving rise to gales and heavy rain on the coast. The wind velocity reached 83 kilometres per hour at Alexandria. The storm was at its height in Cairo on the 24th, when the weather was very cold, the maximum temperature being 10° C. below normal. This was the coldest day on record in November since observations commenced in 1904. The rainfall, which was very heavy on the coast and light near Cairo, was widely distributed.

Following the passage of the depression on the 26th the weather became settled but the temperature remained below normal.

The mean pressure was above normal except in Middle Egypt, and the temperature below normal except over the Central Sudan and Red Sea Province. Rainfall was above normal except in the central and southern Sudan.

TABLE SHOWING THE DEPARTURES FROM NORMAL FOR NOVEMBER, 1924.

* Port Sudan only. † Mongalla only. NOTE.—1000 millibars is equivalent to 750·1 millimetres at 0°C. and mean gravity.

L. J. SUTTON,
Director, Meteorological Service.

State of the River.

The Bahr el Jebel fell gradually throughout the month and was much below normal and slightly below the levels of last year.

The White Nile at Malakal rose very slowly throughout the month but was still below the normal and last year's levels.

The Blue Nile at Roseires continued its rise of last month, reaching a peak 121 centimetres above normal on the 3rd and fell sharply afterwards. At the end of the month it was 29 centimetres above normal; at Khartoum it fell slightly during the first three days, then rose until the 8th and fell again at faster than normal rate for the rest of the month.

The river Atbara remained steady during the first six days and fell sharply until the 12th, after which date it was almost identical with the normal.

The Main Nile at Wadi Halfa fell and was below normal until the 15th, then the rise which commenced at Roseires towards the end of last month began to appear and the river rose until the 23rd, after which date it fell again at almost normal rate, but above normal throughout the second half of the month.

The differences of the mean levels for November 1924 from those of last year and from the normal (1906–1920) :—.

Comparison of Thermometric Scales: Fahrenheit / Centigrade

Upper Wind Observations at Helwan at 8 h. 30 m.

Height (metres)	Kms. Hr.	Direction
500	30	NE
1000	40	NNE
1500	25	NNE
2000	35	N
3000	25	W

General Situation.

The pressure over Egypt has fallen owing to the formation of a shallow depression over Palestine. The Central Mediterranean is now an area of high pressure.

الحالة العمومية

انخفض الضغط على مصر بالنسبة لتكوين انخفاض قليل العمق على فلسطين وقد صار الآن الجزء الأوسط من البحر الأبيض المتوسط منطقة ضغط مرتفع.

Forecast for 24 hours from noon to-day.

Moderate to fresh northerly and northeasterly winds. Much low cloud at times with possibility of light rain on the coast tomorrow. Temperature slightly below normal.

الرياح بالقسم من هذا اليوم الى غد الشمالية
رياح شمالية أو شمالية شرقية معتدلة والنسيم. يتلبد بالسحاب كثير من السحاب المنخفض في بعض الاوقات مع امكان سقوط مطر يأكر على الساحل ودرجة الحرارة غدا دون المعتاد قليلا.

500	30	NE
1000	15	E
1500	20	NE
2000	15	NE
3000	5	WNW

General Situation.

The depression to the east has partially filled but the pressure has fallen in the west of Egypt. No information from the Mediterranean is available.

الحالة العمومية

استمرار الانخفاض في الشرق استمر جزئيا ولكن انخفض الضغط ثانيا في غرب مصر. ولم تصلنا انباء اليوم من البحر الابيض المتوسط.

Forecast for 24 hours from noon to-day.

Moderate winds mainly northerly. Much cloud at times. No change in temperature. Early morning mist.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح معتدلة شمالية في الغالب. تلبد بالسماء سحاب كثير في بعض الاوقات. ولا يوجد تغيير لهم في درجة الحرارة. وينتظر ظهور شابورة في الصباح الباكر.

500	10	NE
1000	10	E
1500	20	ESE
2000	10	ESE
3000	10	SW

General Situation.

Upper Egypt is an area of high pressure, while over Cyprus also the pressure is high. There is a shallow depression off Port Said. Over the western Mediterranean a very deep depression has appeared.

الحالة العمومية

ضغط الجو مرتفع فوق مصر العليا وكذا الحال في قبرص بينما يوجد انخفاض قليل العمق قريبا من بورسعيد وآخر عميق جدا على الجزء الغربي من البحر الابيض المتوسط

Forecast for 24 hours from noon to-day.

Variable winds, chiefly northerly today but becoming southerly and freshening later. Clear at first, high cloud developing. Further outlook unsettled.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح مختلفة الاتجاه - شمالية في الغالب اليوم تتحول الى جنوبية وتشتد غدا - السماء صحو اولا وتتكون السحب العالية فيما بعد - والمنظر انه لا يبشر الطقس على حاله

500	20	S
1000	20	S
1500	15	S
2000	15	SSW
3000	35	S

General Situation.

The pressure over Egypt is falling particularly in the west. There appears also to be a very shallow depression near Cairo.

الحالة العمومية

الضغط على مصر آخذ فى الهبوط خصوصا فى الغرب. ويظهر ان هناك انخفاض قليل العمق قريبا من القاهرة.

Forecast for 24 hours from noon to-day.

Variable winds mainly from the south. Much low cloud. Possibility of rain. Changeable.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح مختلفة - الاتجاه يغلب ان تكون جنوبية - سحاب كثير منخفض - الطقس متغير ويحتمل ان تمطر

Upper Wind Observations at Helwan at 8 h. 30 m.

Height (metres)	Kms./Hr.	Direction
500	20	SW
1000	25	SW
1500	40	W
2000	45	W
3000	75	W

General Situation.

The depression is still situated over the eastern Mediterranean but the pressure over Egypt is now rising.

الحالة العمومية

لم يزال الانخفاض واقعا على الجزء الشرقي من البحر الابيض المتوسط ولكن الضغط على مصر في حالة صعود الآن.

Forecast for 24 hours from noon to-day.

Winds between south and west, moderate inland, fresh to strong on the coast. Some low cloud. Possibly showers in the north. Cool.

التنبؤ بالطقس من ظهر اليوم الى ظهر الغد

رياح بين الجنوب والغرب معتدلة في الداخل. وبين النسيم والشديدة على الساحل. قطر بالسماء فيما بعد بعض السحاب المنخفض مع امطار محتملة في شمال الدلتا. والطقس

REPORT ON THE WEATHER AND STATE OF THE RIVER FOR DECEMBER, 1924.

The Weather.

During the first week the weather was generally fine but cloudy, with rather thick mist forming every morning in Cairo and in some places in the Delta and Upper Egypt. During this period an area of high pressure extended from the Balkans to Egypt with an area of relatively low pressure over Sinai. On the morning of the 7th a shallow depression appeared south of Siwa and during its approach light showers were experienced in the afternoon at Helwan, Qasr el Gebali, and Alexandria. Moving slowly towards the north-east this depression reached Cyprus on the 10th, and remained in its neighbourhood till the end of the second week, causing southerly winds to prevail over Lower Egypt throughout this period; light rain fell on the coast on the 13th. This depression was quickly followed by a deeper one which approached from the western desert on the 16th. On the 19th the depression reached Cyprus, and from this day until the end of the month the eastern Mediterranean remained an area of low pressure. As a result very cold weather prevailed over Egypt during the latter half of the month, and there were showers on several days. In Cairo district the rainfall was light but at Alexandria, where rain fell every day from the 18th to the end of the month, 65 millimetres were recorded in this time. This spell of rainy weather is longer than any experienced in Alexandria at least since 1904. During the last week the weather from the northern coast of Egypt to the southern extremity of the Sudan was abnormally cold, maximum temperatures of 9° C. below normal being encountered in the northern Sudan.

Throughout Egypt and the Sudan the pressure for the month was below normal, while the temperature was above, particularly in the northern Sudan. The rainfall exceeded the normal over the coast but elsewhere was deficient.

TABLE SHOWING THE DEPARTURES FROM NORMAL FOR DECEMBER, 1924.

DISTRICTS.	BAROMETER.		TEMPERATURE.						RAINFALL.

VI. Central Sudan	1011·6	−1·9	35·8	+0·6	17·0	+1·0	26·4	+0·8	0	0
VII. South Sudan	†1008·6	−1·3	36·2	+0·9	19·2	+0·7	27·7	+0·8	2	− 1

* Port Sudan only. † Mongalla only. NOTE.—1000 millibars is equivalent to 750·1 millimetres at 0°C. and mean gravity.

L. J. SUTTON,
Director, Meteorological Service.

The Bahr el Jebel fell gradually and was below normal throughout the month. Its levels were identical with those of last year during the first half of the month and slightly below them during the second.

The White Nile at Malakal was nearly steady during the first fortnight, the levels being below both the normal and last year. During the second fortnight it fell almost normally but was still below last year's levels.

The Blue Nile fell almost identically with last year at both Roseires and Khartoum, the levels being on the average 25 centimetres above normal at the former place and 16 centimetres below normal at the latter.

As is usual the River Atbara was negligible during December.

The Main Nile at Wadi Halfa fell at a normal rate throughout the month and its levels were slightly above both the normal and last year.

The differences of the mean levels for December 1924 from those of last year and from the normal (1906–1920) are :—
