Chart I. Tracks of Centers of Low Areas. December, 1893.

NOTES.

The Roman letters show number and order of centers of low areas. The figures within the circles show the days of the month; the letters (*a* and *p*) indicate, respectively, the 8 a. m. and 8 p. m., 75th meridian time, observations.

Within each circle is given the lowest barometric reading reported near the center.

The queries (?) on the track of No. XV show that the centers could not be located beyond the borders of the daily maps.

A wavy line indicates an axis of a trough or long oval area of low pressure.

The dotted shading (▒▒▒▒) indicates fog belts.

The crosses (× × × × × ×) indicate the position in which field-ice or icebergs were observed.

The progress of the front of the norther of December 2 and 3, 1893, is approximately shown by dotted lines.
