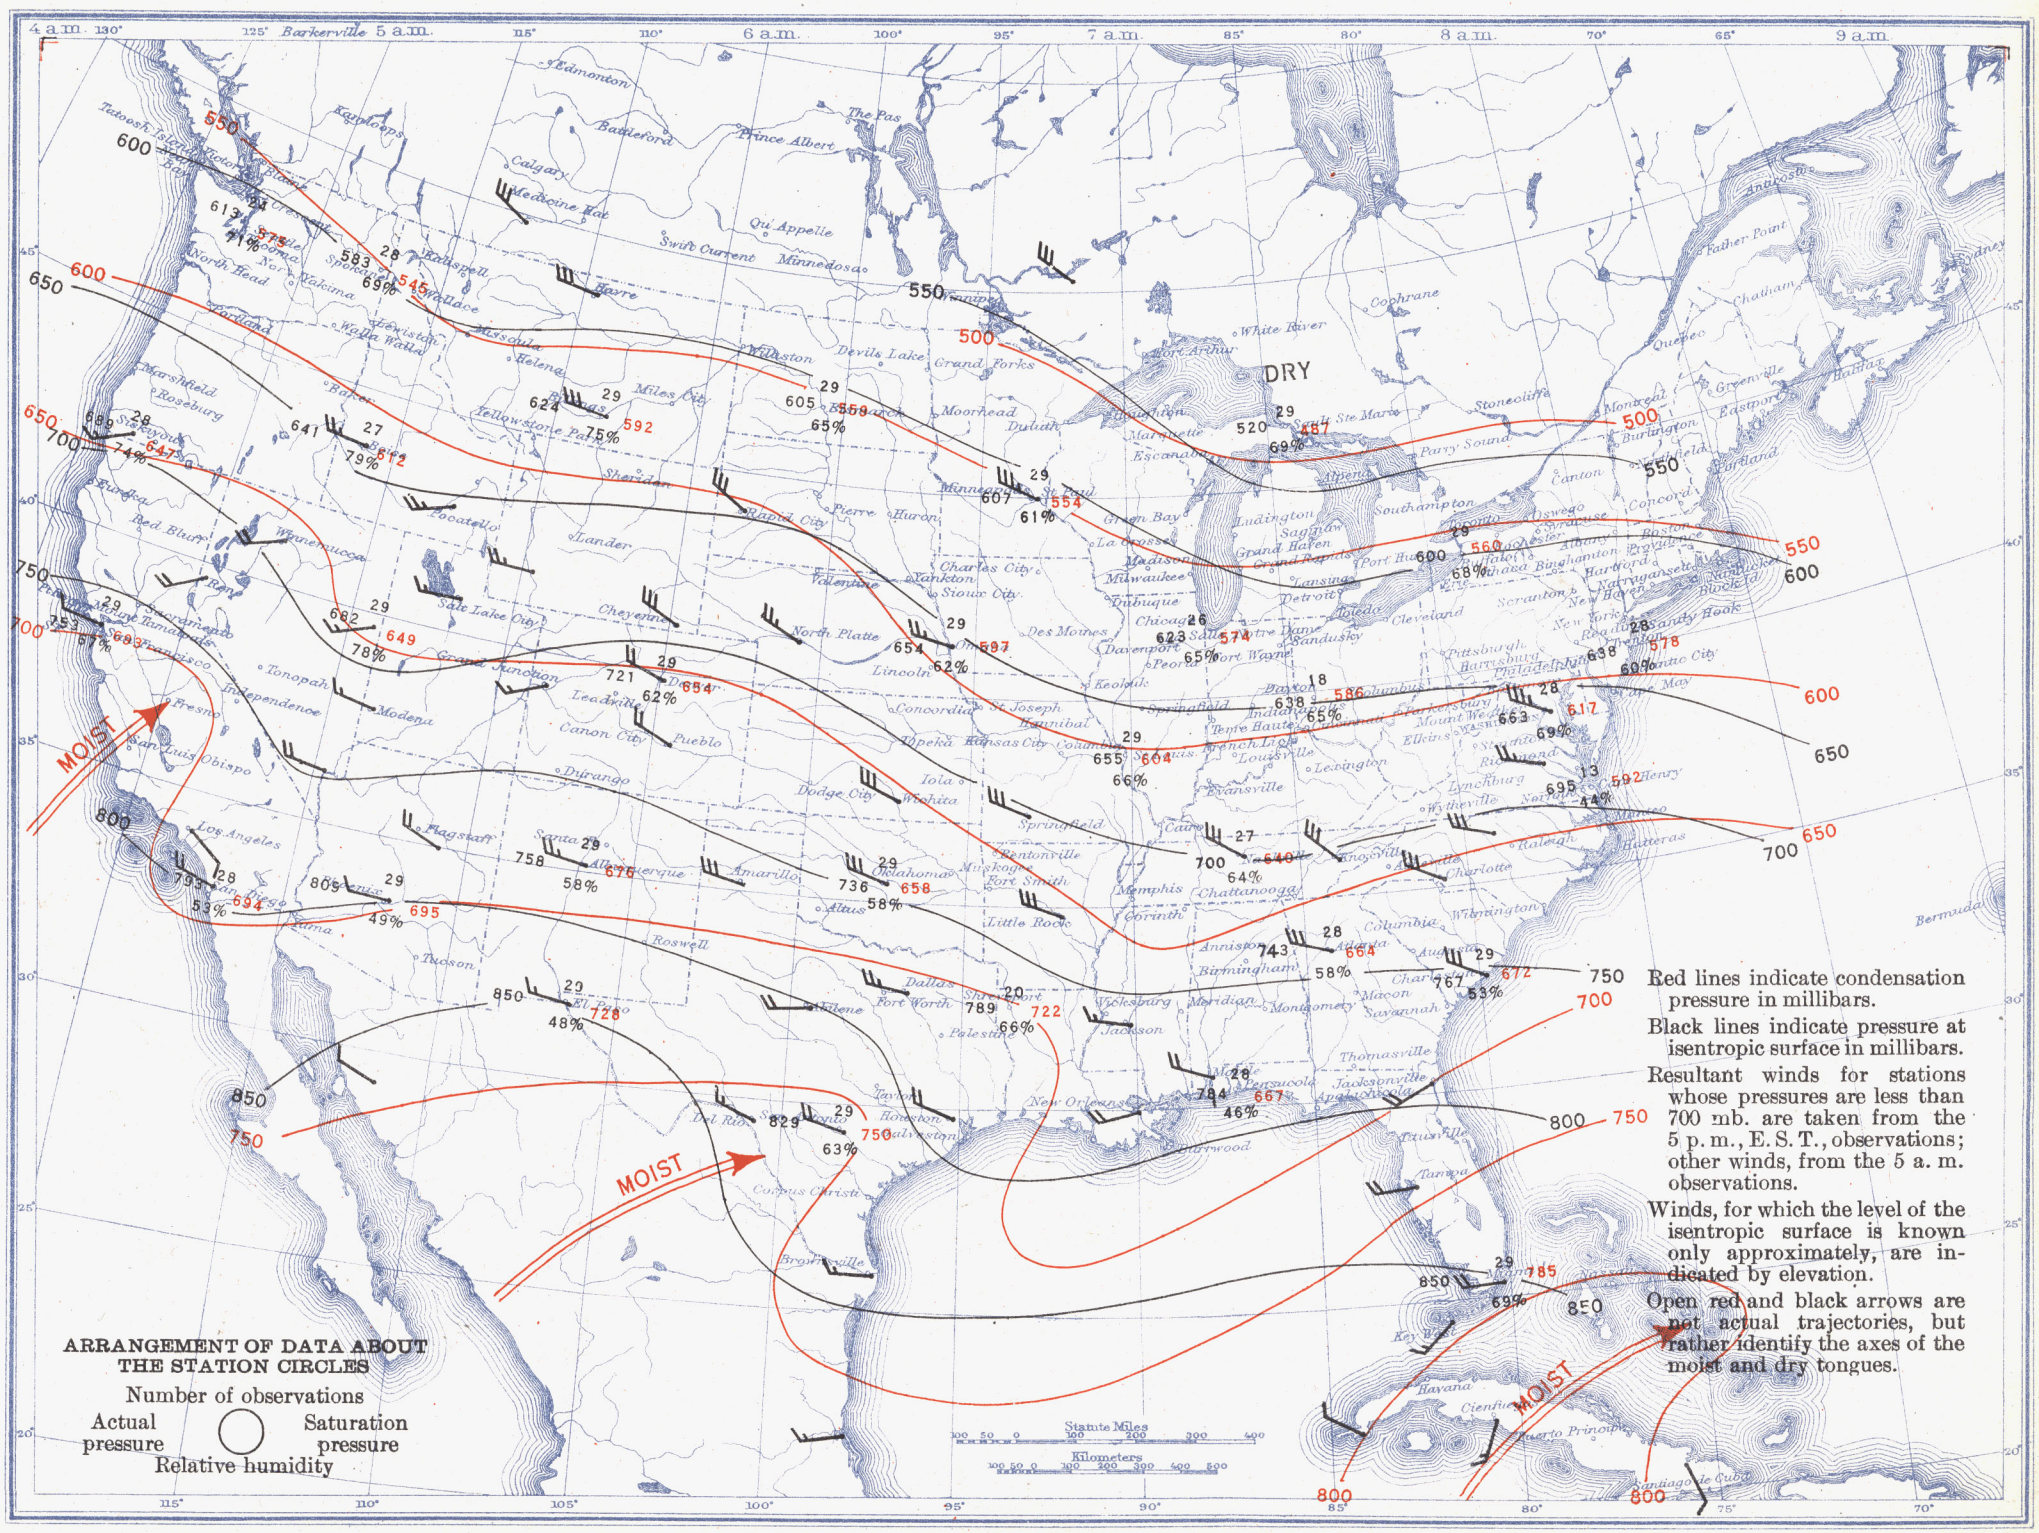
Chart XII. Mean Isentropic Chart, February 1940 (Potential Temperature 296° A.)



Red lines indicate condensation pressure in millibars.

Black lines indicate pressure at isentropic surface in millibars.

Resultant winds for stations whose pressures are less than 700 mb. are taken from the 5 p. m., E. S. T., observations; other winds, from the 5 a. m. observations.

Winds, for which the level of the isentropic surface is known only approximately, are indicated by elevation.

Open red and black arrows are not actual trajectories, but rather identify the axes of the moist and dry tongues.
