? WHY THE WEATHER ?

By Dr. Charles F. Brooks
of Clark University.

THE ERRORS OF MR. AND MRS. CAMPER

It was a bright sunny morning with a few, big fluffy clouds moving rapidly across the sky. Mr. Camper had finished breakfast and felt energetic. The air was still, the ground wet with dew. Just the morning to burn brush in that upper clearing, he thought. Mrs. Camper looked out at the smooth blue water. She decided to paddle down the lake and spend the morning with a friend. She didn't like canoeing on windy days. But now the young Camper, who was an extraordinarily intelligent boy, looked at the sky and planned to go sailing. With clouds moving like that he knew a good breeze would soon spring up.

Mr. Camper started his fire with difficulty, then the wind freshened, soon he found the blaze getting away from him and had to send a hurry call to the village for help. Mrs. Camper was much surprised to find the lake so rough by noon that she could not handle the canoe alone. But the young Camper, who really was, as we have said, an extraordinarily intelligent boy, brought her home in the sail boat.

Moral - On a sunny day the lower air will soon mix with air somewhat higher up. If low clouds are moving fast in the early morning you may expect some of this upper wind to reach the surface by ten or eleven.
