By Major A. H. Thiessen
Science Service Meteorologist

Temperature and work! Everyone knows how weather affects our desire to work. But of all the weather elements temperature is the most important in this regard. These warm July days are not specially adapted to work and the cold days of January are not so good either. Temperatures from 60 to 65 degrees are most conducive to the greatest output of physical energy, but for intellectual activity 38 degrees outside temperature seems to be the best. It is thought that when the great civilizations of Egypt, India, China and Greece were developing, their climates were more like those of New York and California than at present. -----
