By Maj. A. H. Thiessen  
Science Service Meteorologist

Airplanes in war! The weather is perhaps more important to the aviation branch of an army than to any other. Not only is the weather important in getting from place to place but it oftens plays an important part in the success or failure of an airplane expedition, even though flying conditions are good. For instance, bombers in starting out may fly for a considerable distance in a cloud layer, then emerge and meet above, re-form and go through the cloud to their objectives. After performing their mission, they rise and again take advantage of the cloud layer to hide their movements.
