

For release            By Major A.H. Thiessen  
Dec. 18, 1939      Science Service Meteorologist

Meteorology as a career! People of many tastes may engage in weather work because it presents opportunities for those interested in physics, mathematics, research, instrument designing, making, repairing or calibrating, drawing, calculating, observational and clerical work. Those who have had high school including algebra and physics may undertake elementary work, while the college graduate having advanced physics and mathematics is equipped for advanced work. Those offering positions are the U.S. Weather Bureau, Army, Navy, airplane companies, colleges and research institutions.
