

For release By Major A.H. Thiessen
March 7, 1940 Science Service Meteorologist

Spring weather controls! Spring, like fall, is a season of transition. We have just passed from winter, when the weather was controlled by cyclones and anti-cyclones, or storm and fair weather pressure conditions, and are now on the way towards summer when the control will be largely by the sun. The weather controls of spring will vary from those of winter to those of summer: we may have a storm similar to the past winter or a condition somewhat similar to that of the coming summer. March weather strongly indicates this, being turbulent and changeable.
