March 12, 1940 Science Service Meteorologist

Changeable weather! Everyone speaks now and then of the changeable weather. The weather has always been changeable; the weather of one month is never exactly like that of corresponding months in past or later years; neither are all years alike. Many of them (months and years) do, however, average very much alike. Of the distant past there are records made by nature indicating that then as now the weather was changeable. A study of the rings of trees and of the deposits left by glaciers indicates that people living then may have greeted one another with the familiar expression: "What changeable weather we are having!"
